The Complete Manual Series

Mac Studio

Welcome to our amazing guide to your Studio Mac, and its operating system, macOS 12: Monterey. Over the next 200 pages, we bring you a guide to your amazing new Mac Studio hardware and software, what it can do, how to get the most from it.

First of all, there's an in-depth guide to Apple's latest and quite possibly greatest computer, the Mac Studio. What's special about it? What are your connectivity options? What processors does it use? We answer you all this and more. Whether you've already bought a Mac Studio or are thinking about doing so, we tell you all you need to know. The Mac Studio comes with the latest Mac operating system, Monterey, already installed, so our next section tells you all about it. There's a guide to setting up from scratch, getting to grips with the basics, learning to use the in-built apps and going further with Monterey with some advanced tips.

Apple's productivity apps, Pages, Numbers and Keynote, are also free with your new Mac, so we show you how to get started with these too. There's a guide to each of these apps, showing you how to use its basic features and also its advanced functions as well.

We round off with a couple of reference guides, to keyboard shortcuts and a glossary of terms we've used in the exclusive digital magazine. Whatever your issue or your question, it's all in the Complete Mac Studio Manual!

Welcome

The Mac Studio is arguably the most exciting new product Apple have delivered to their Mac desktop range for a long time. It's a hugely powerful prosumer Mac that's ideal for those with high needs.

“The Mac Studio is a powerful beast aimed at high-needs users. It’s a similar shape to a Mac mini, but taller, and it runs on top-of-the-range M1 Max and M1 Ultra chips”

Power to the People! The Mac Studio Is Here

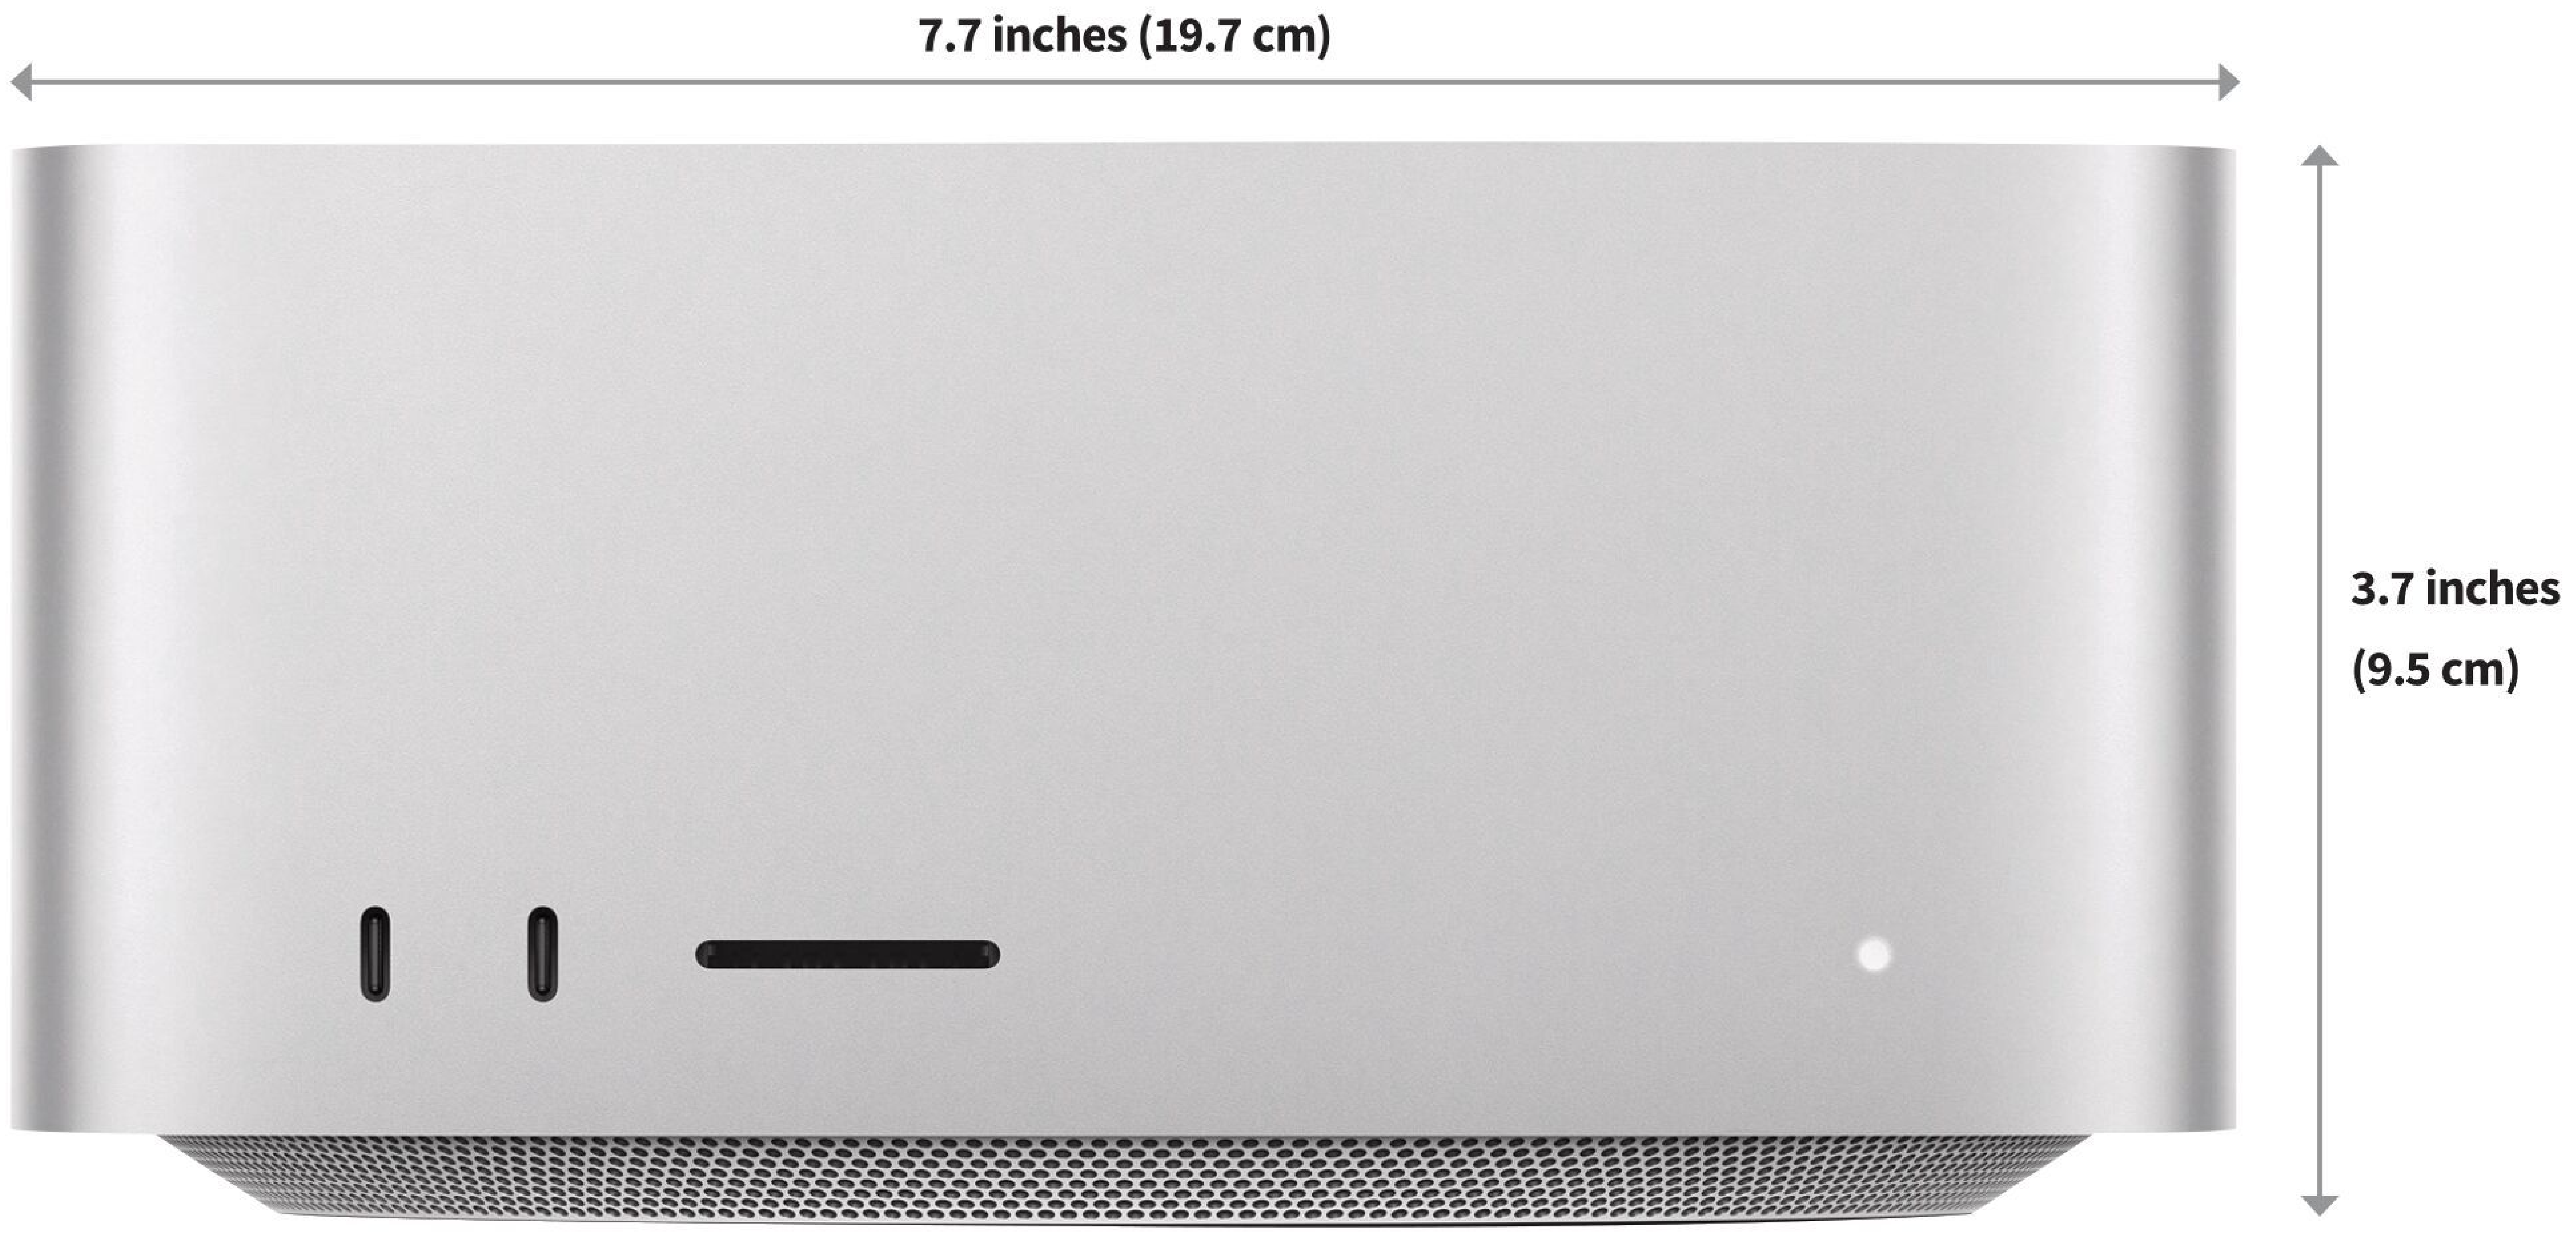
The Mac Studio is a high-performance Mac like no other...

The most exciting product to come out of the Applew is a brand new addition to the Mac family. The Mac Studio is a powerful beast aimed at high-needs users. It's a similar shape to a Mac mini, but taller, and it runs on top-of-the-range M1 Max and M1 Ultra chips. But what's the story behind the new Mac Studio, and why should we be excited?

> *"We couldn't be more excited to introduce an entirely new Mac desktop and display with Mac Studio and Studio Display. Mac Studio ushers in a new era for the desktop with unbelievable performance powered by M1 Max and M1 Ultra, an array of connectivity, and a compact design that puts everything users need within easy reach."*
>
> *Greg Joswiak, Apple's senior vice president of Worldwide Marketing*

A Brand New Design

The Mac Studio offers a completely new form factor.



Tale of the Tape

The Mac Studio is a surprisingly small device considering its power. It looks a little like a Mac mini, though at 3.7 inches (9.5 cm), it's over two and a half times as tall. Both the Mac Studio and the Mac mini have a square footprint, with sides of 7.7 inches (19.7 cm), so if you imagine two Mac minis stacked one on top of the other, the Mac Studio is a similar size but just over half a Mac mini taller.

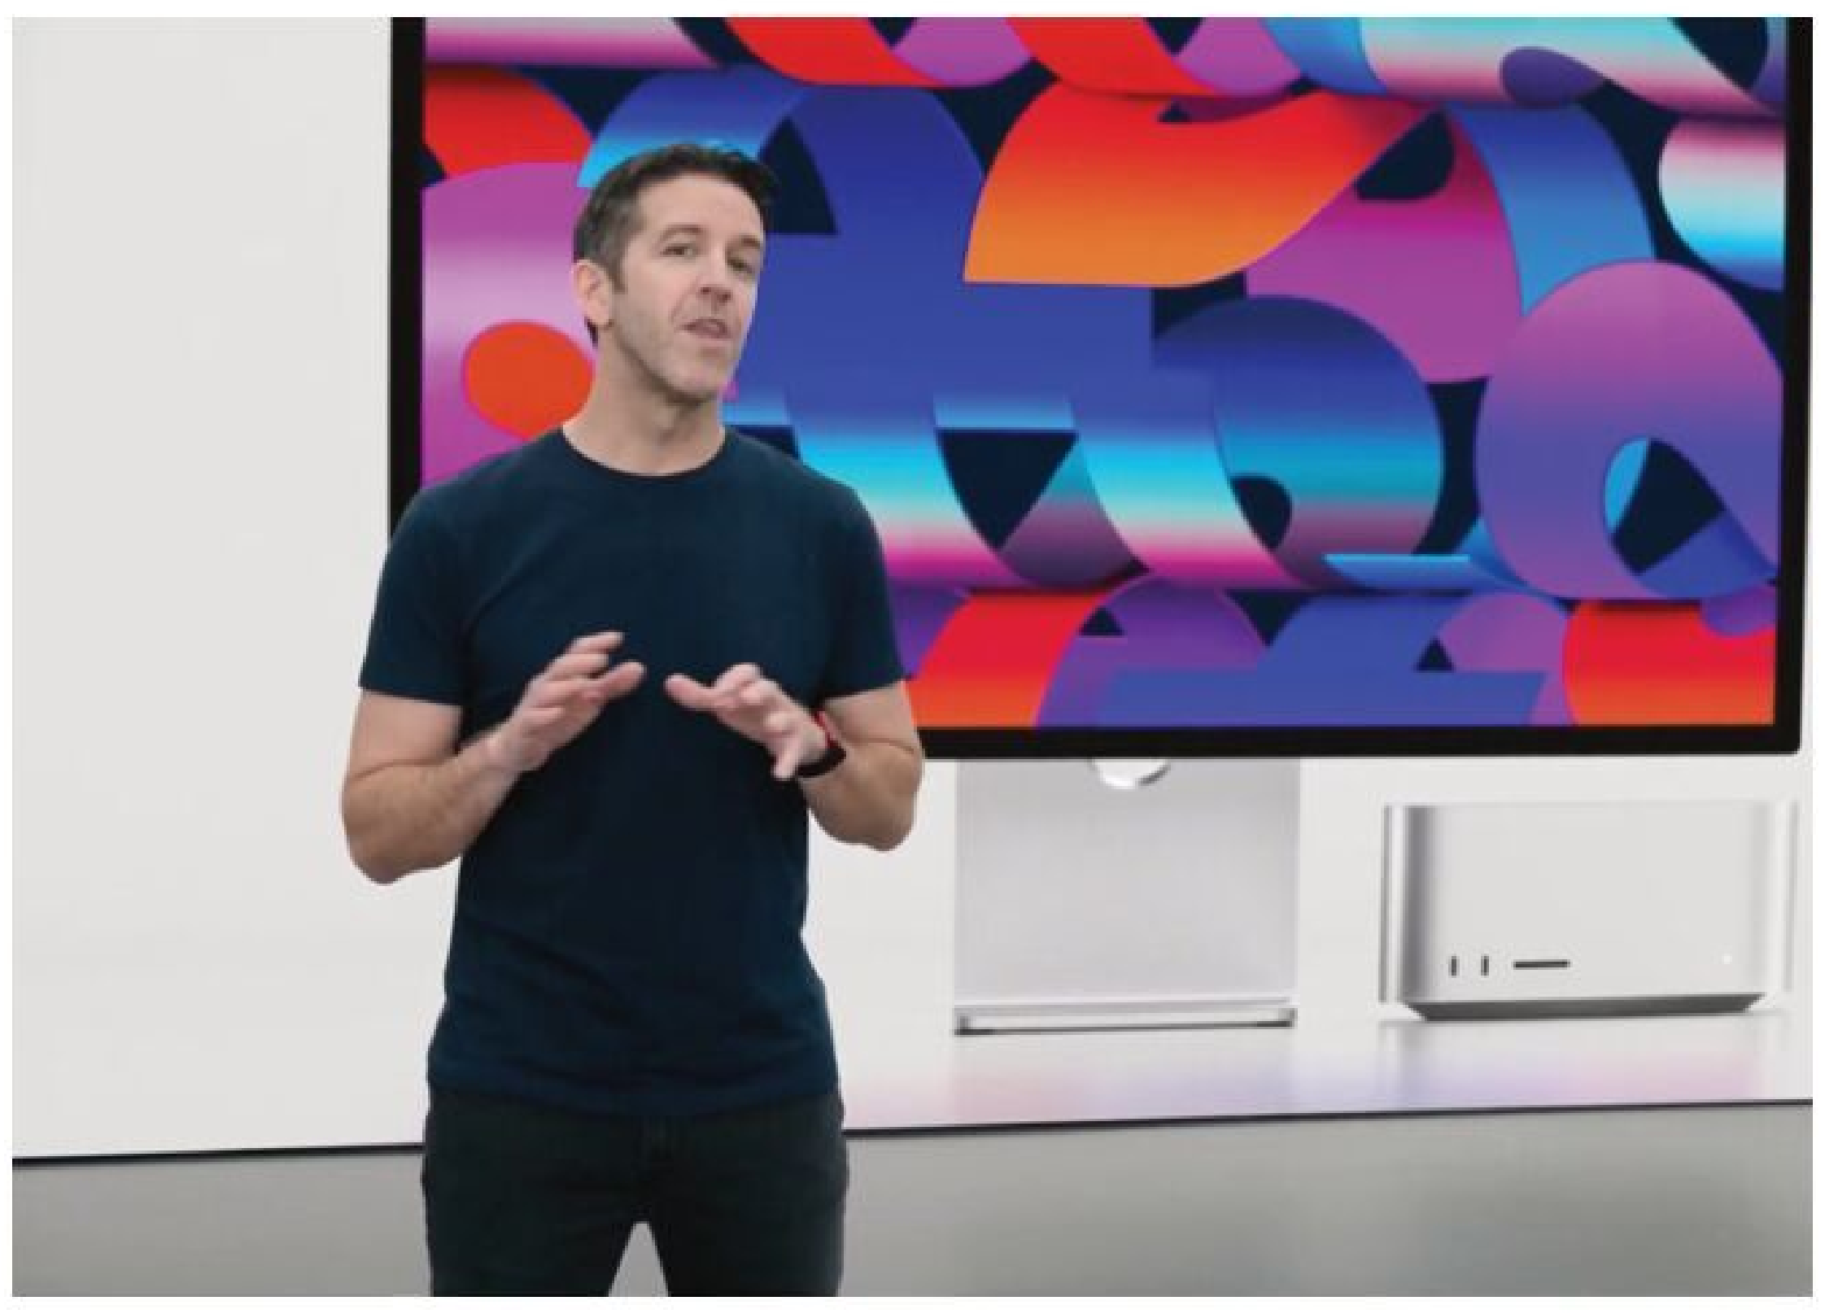
7.7 inches
(19.7 cm)
7.7 inches (19.7 cm)

The Mac Studio has a small, square-shaped footprint, just like the Mac mini. It is, however, over two and a half times as tall.

Aluminium Enclosure

The Mac Studio's chassis is milled from a single piece of aluminium, making it very strong. This process was developed for the first unibody Mac notebooks back in 2008, and proved immediately successful. Lack of joints made the chassis stronger, without adding to the weight of the device. It's since been successfully used in the Mac mini, and now makes its way to the Mac Studio.

The Mac Studio is based on a unibody design, milled from a single block of aluminium.



John Ternus, Apple's SVP of Hardware Engineering, introduces the Mac Studio.

Accessories Sold Separately

Like the Mac mini which it resembles, the Mac Studio is sold without input devices; all you get in the box is the Mac Studio itself and a power cord. If you don't already have a keyboard and a mouse or trackpad, you have to buy them separately.

A new set of accessories has been released to complement the Mac Studio. Featuring a brushed aluminium finish and black keys. The new wireless keyboard has a Touch ID button for fingerprint detection. The Magic Trackpad and Magic Mouse have a similar black and aluminium aesthetic too.

The Mac Studio looks great on your desk, especially when paired with the new Studio Display.

New accessories have been released to complement the Mac Studio.

Power and Performance

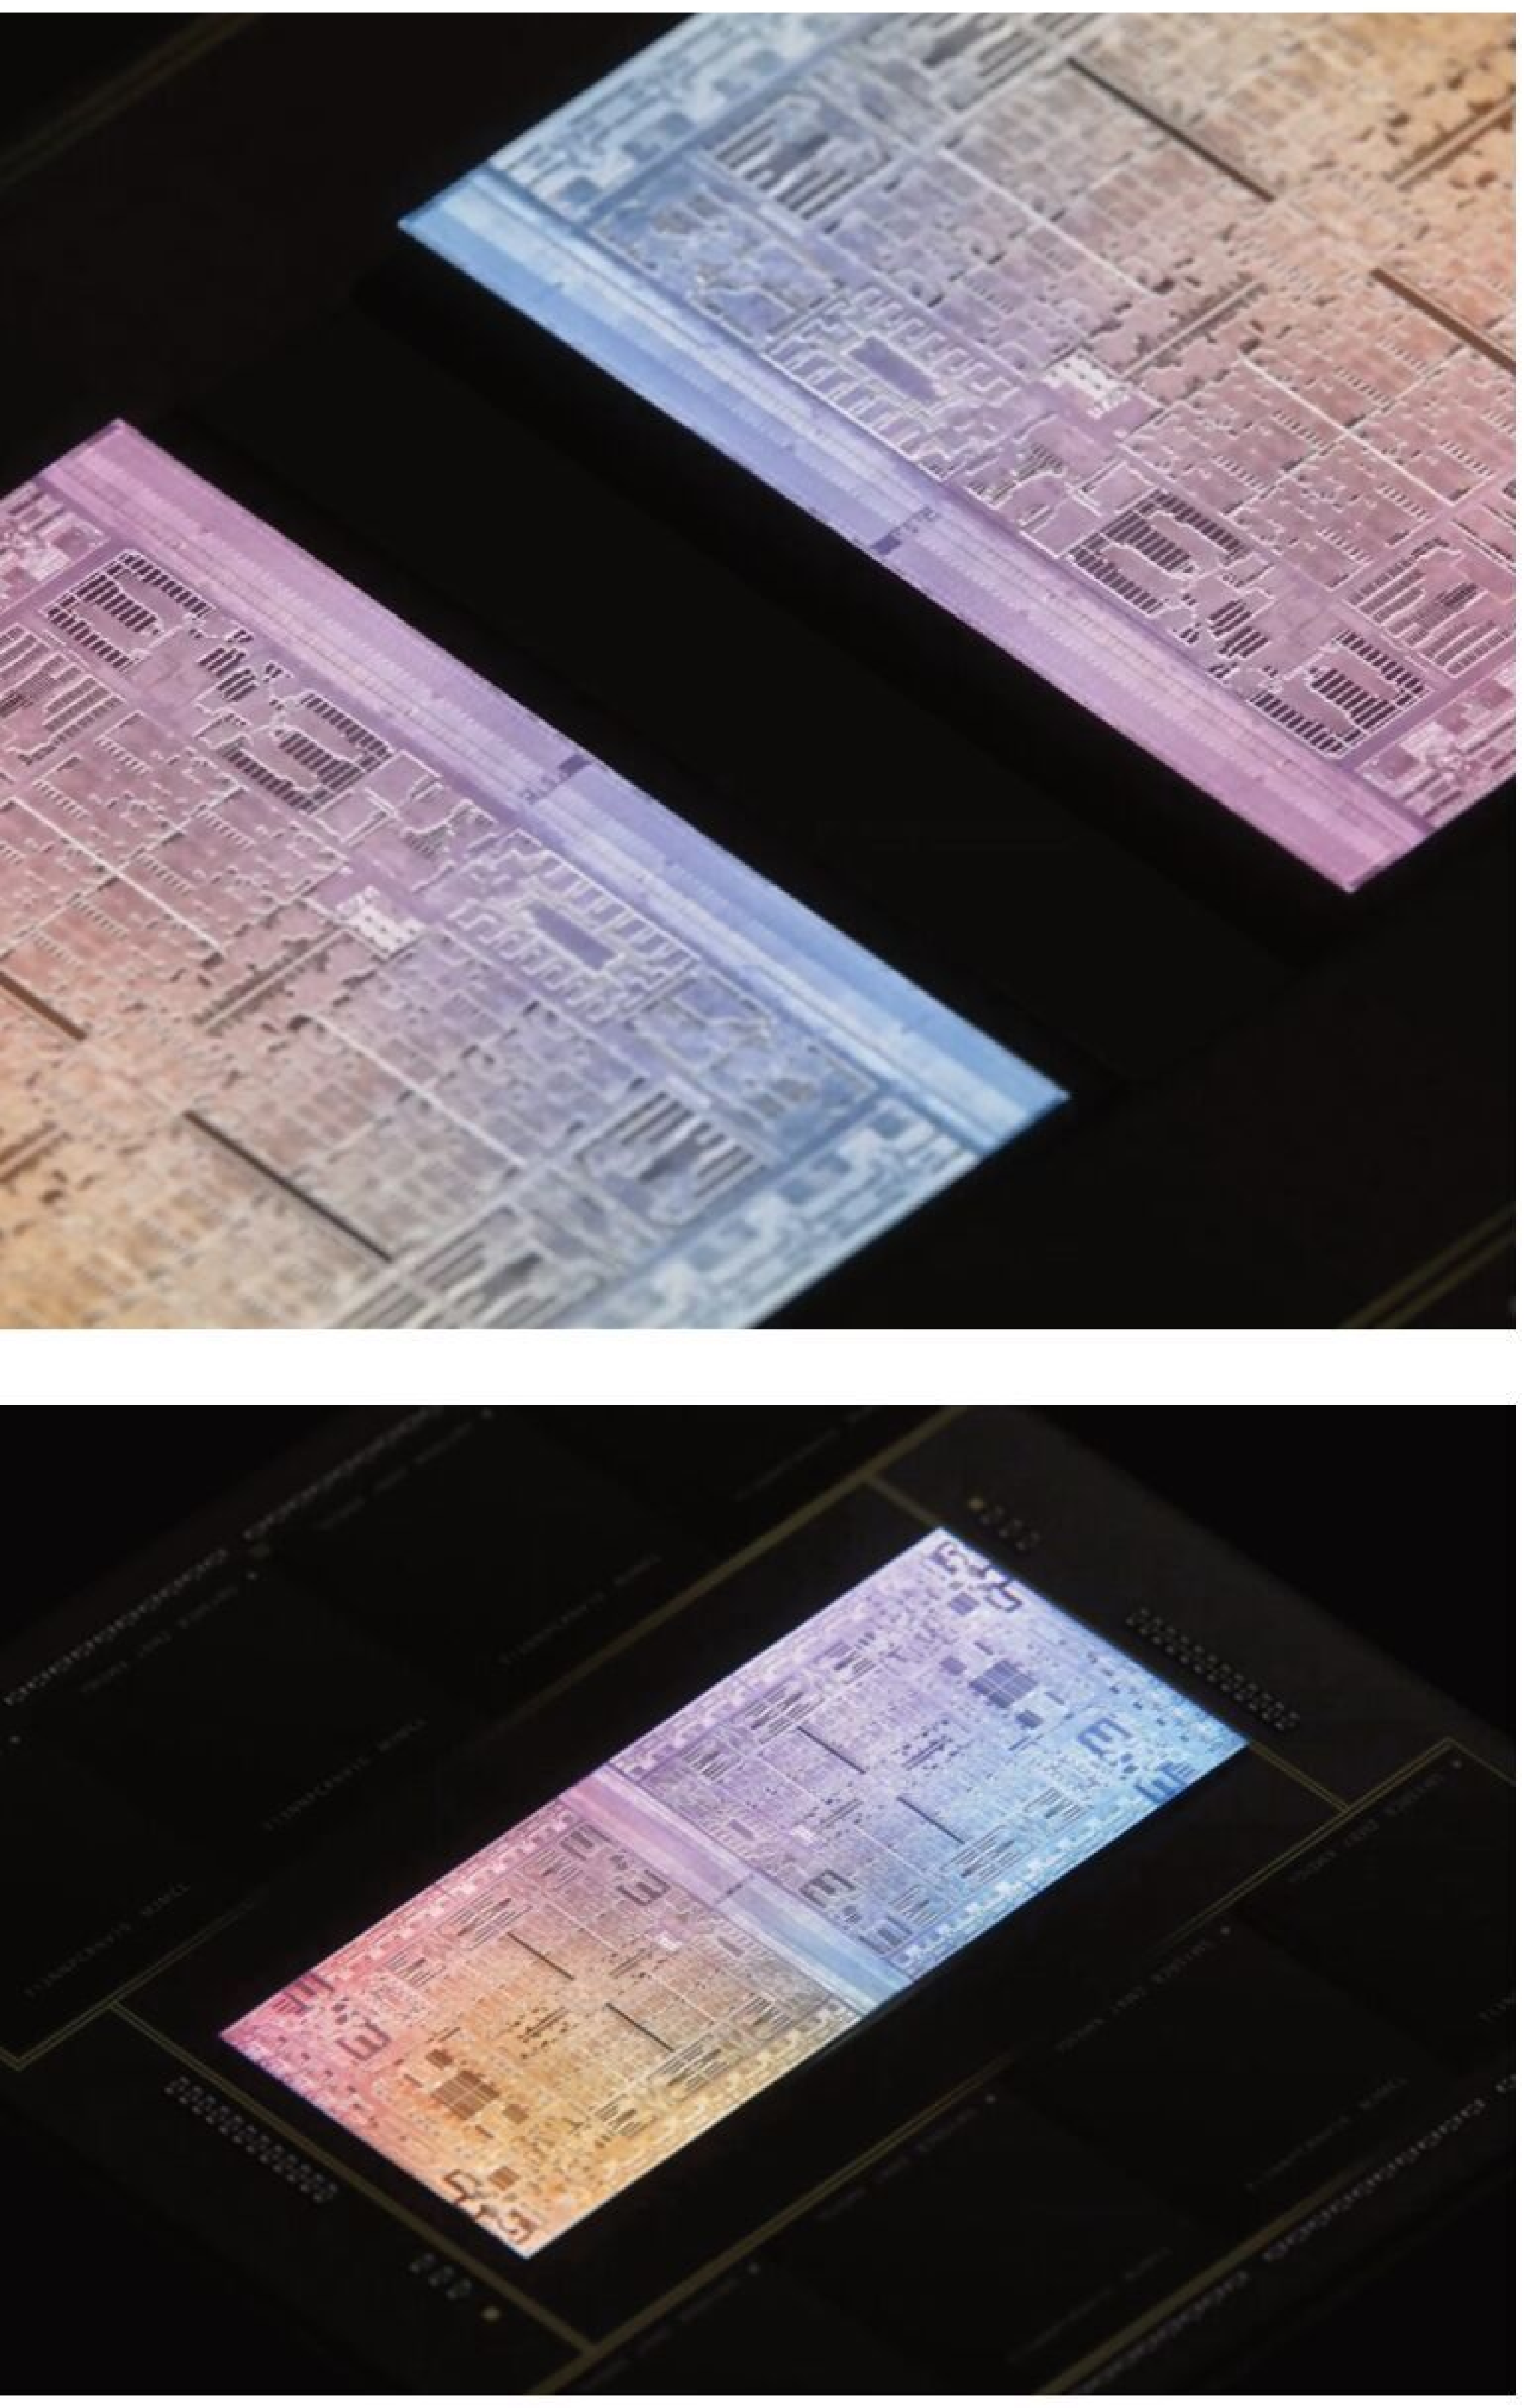
What makes the new Mac Studio such a powerful machine?

A New Apple Silicon Processor

Before the March keynote, there were three Apple Silicon M-series processors; M1, M1 Pro and the top-of-the-range M1 Max. A fourth has now been added; the M1 Ultra, the most powerful Apple Silicon chip yet. Mac Studio runs on the M1 Ultra or M1 Max, depending on which model you choose.

According to Johny Srouji, Apple's SVP, Hardware Technologies, the M1 Ultra is "the next breakthrough for Apple Silicon." While the chip architecture was scaled up from the M1, to M1 Pro and M1 Max, the M1 Ultra takes a new approach. According to Srouji, there are challenges in creating a die that's larger than the M1 Max. The usual approach is to use two chips, and connect them on the motherboard. Unfortunately, this increases latency, reduces bandwidth and demands increased power consumption. So instead, the M1 Ultra uses a hidden feature in the M1 Max that was previously kept secret.

The new Apple Silicon M1 Ultra is the company's most powerful chip to date.



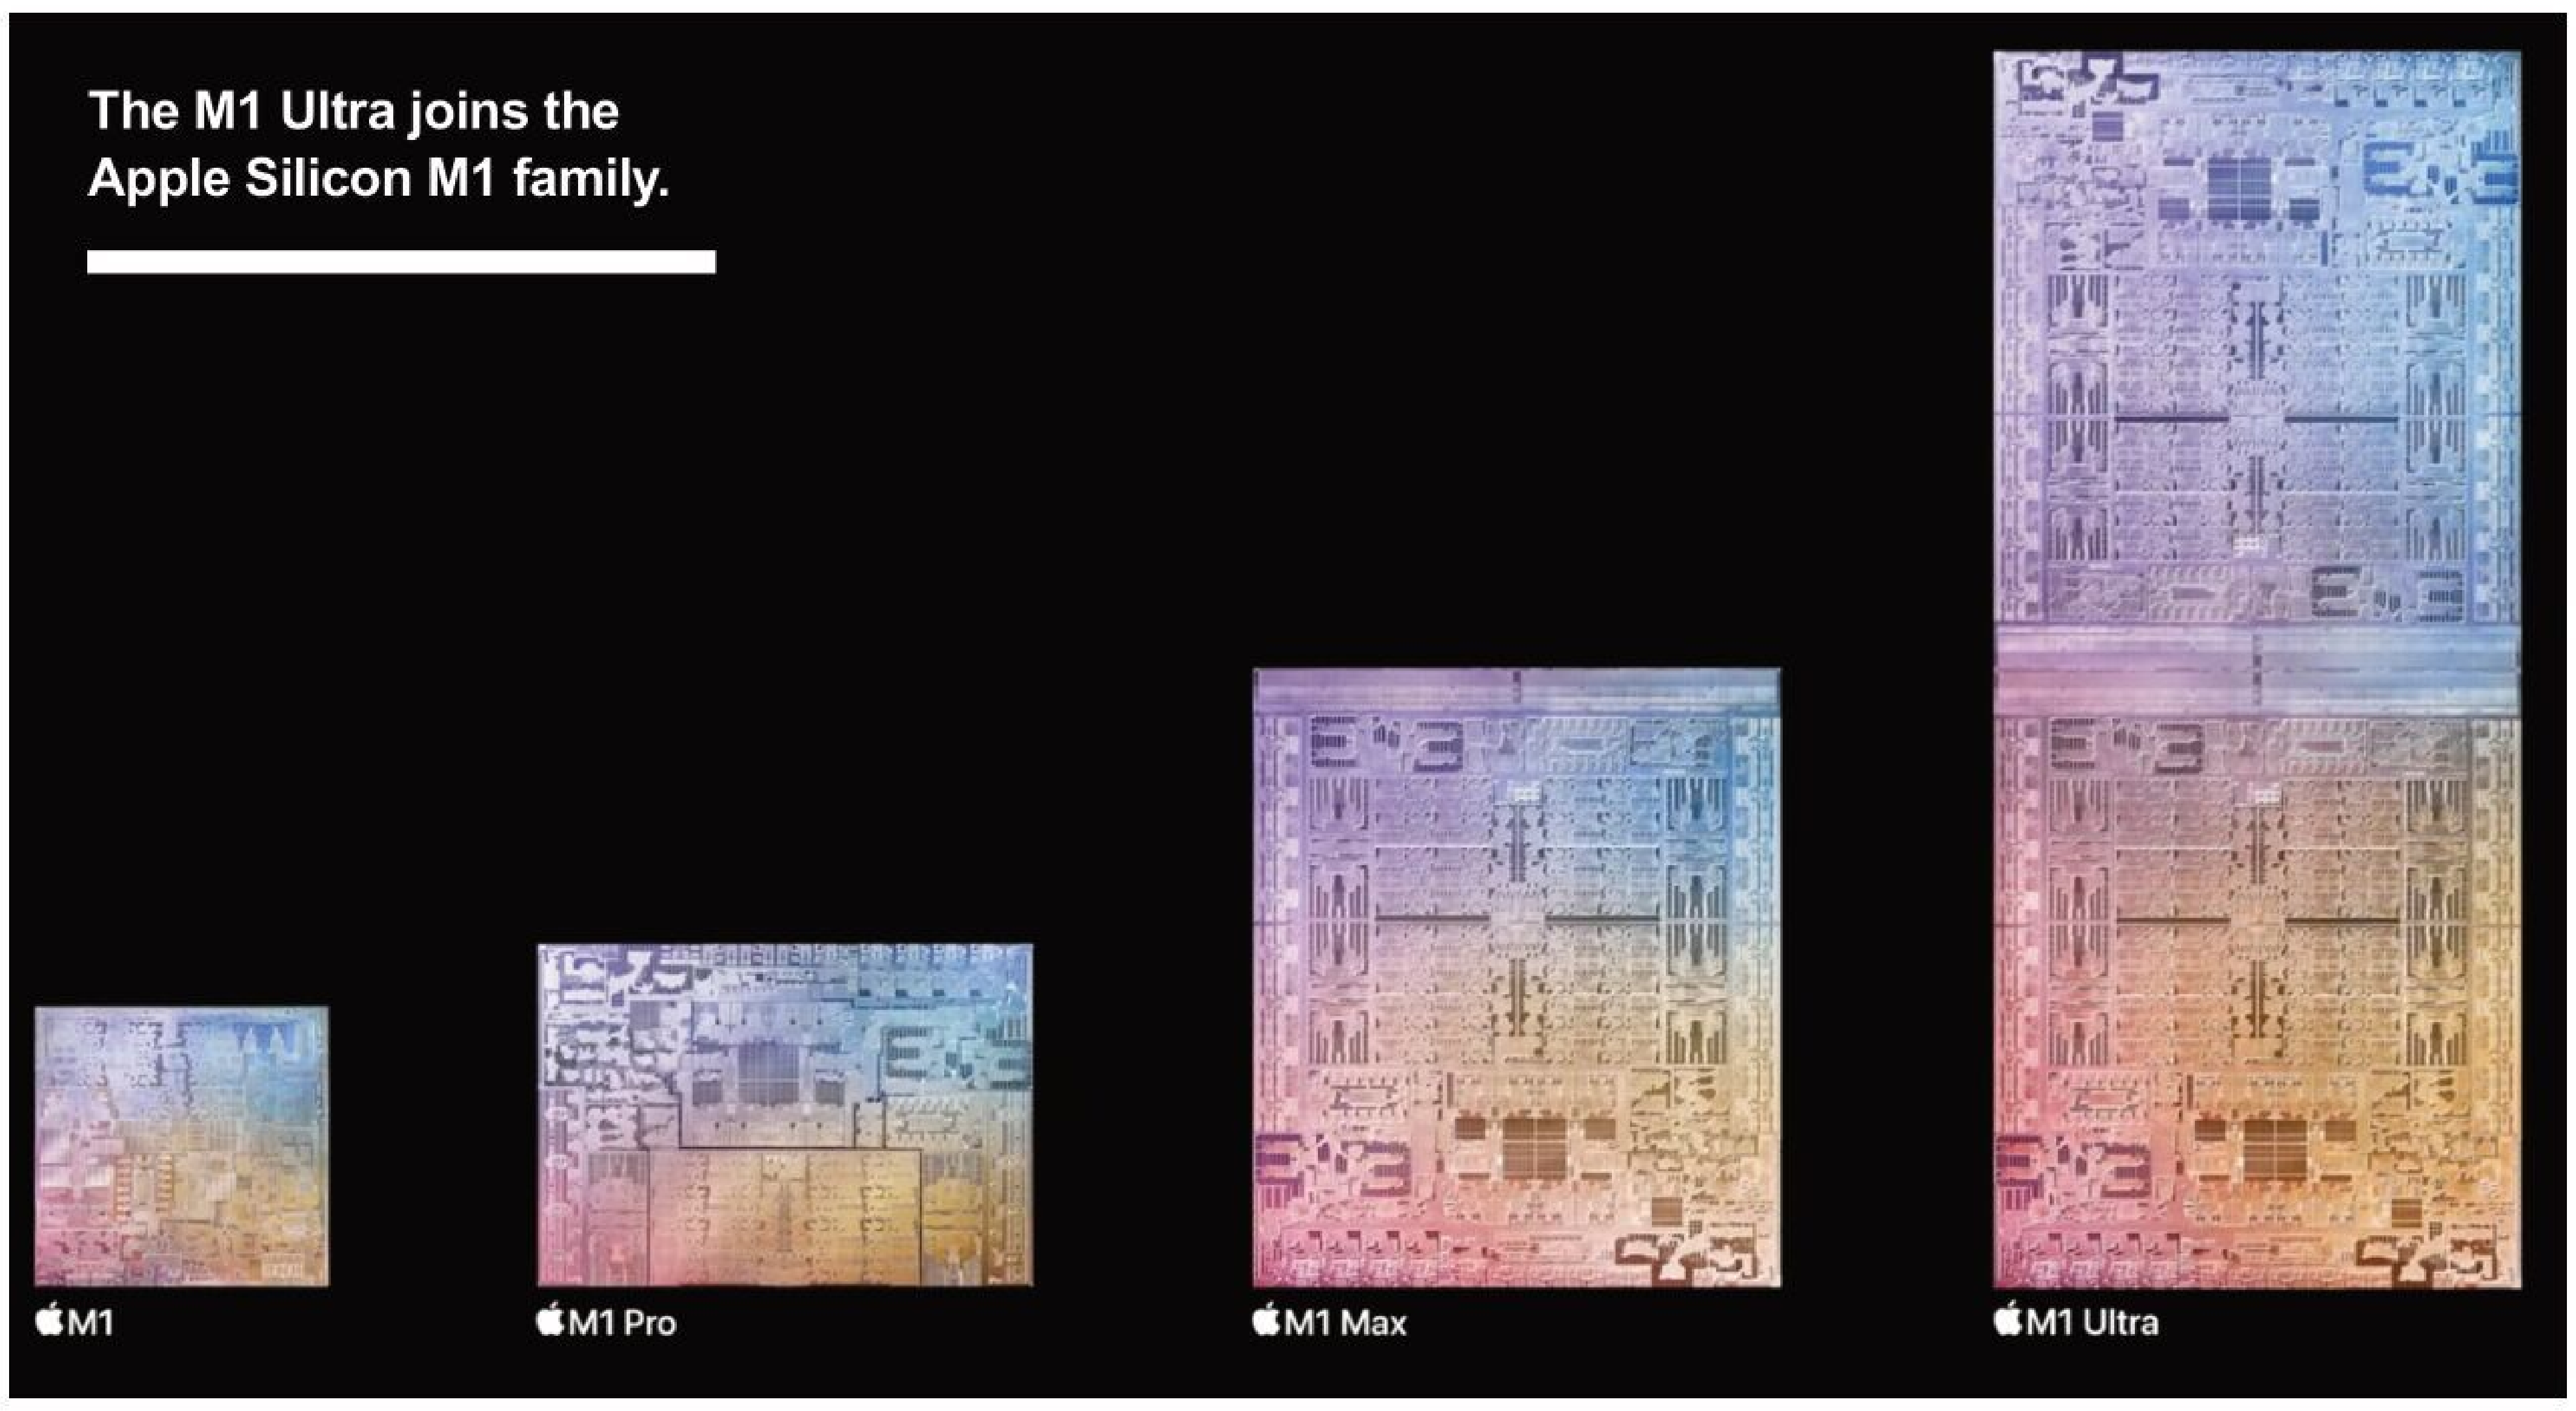
By connecting two M1 Max processors, using Apple's new multi-die architecture, the M1 Ultra gives double the performance.

Introducing UltraFusion

The M1 Max has a 'groundbreaking die-to-die interconnect technology,' which means you can use two M1 Max chips connected directly to each other, rather than through the motherboard. And that's what the M1 Ultra is; two M1 Max processors linked together for double the power. This new technology, which Apple calls UltraFusion, connects over 10,000 signals and provides 2.5TB per second of interprocessor bandwidth. This greatly reduces latency, for an all-round speedy performance; and uses very little power.

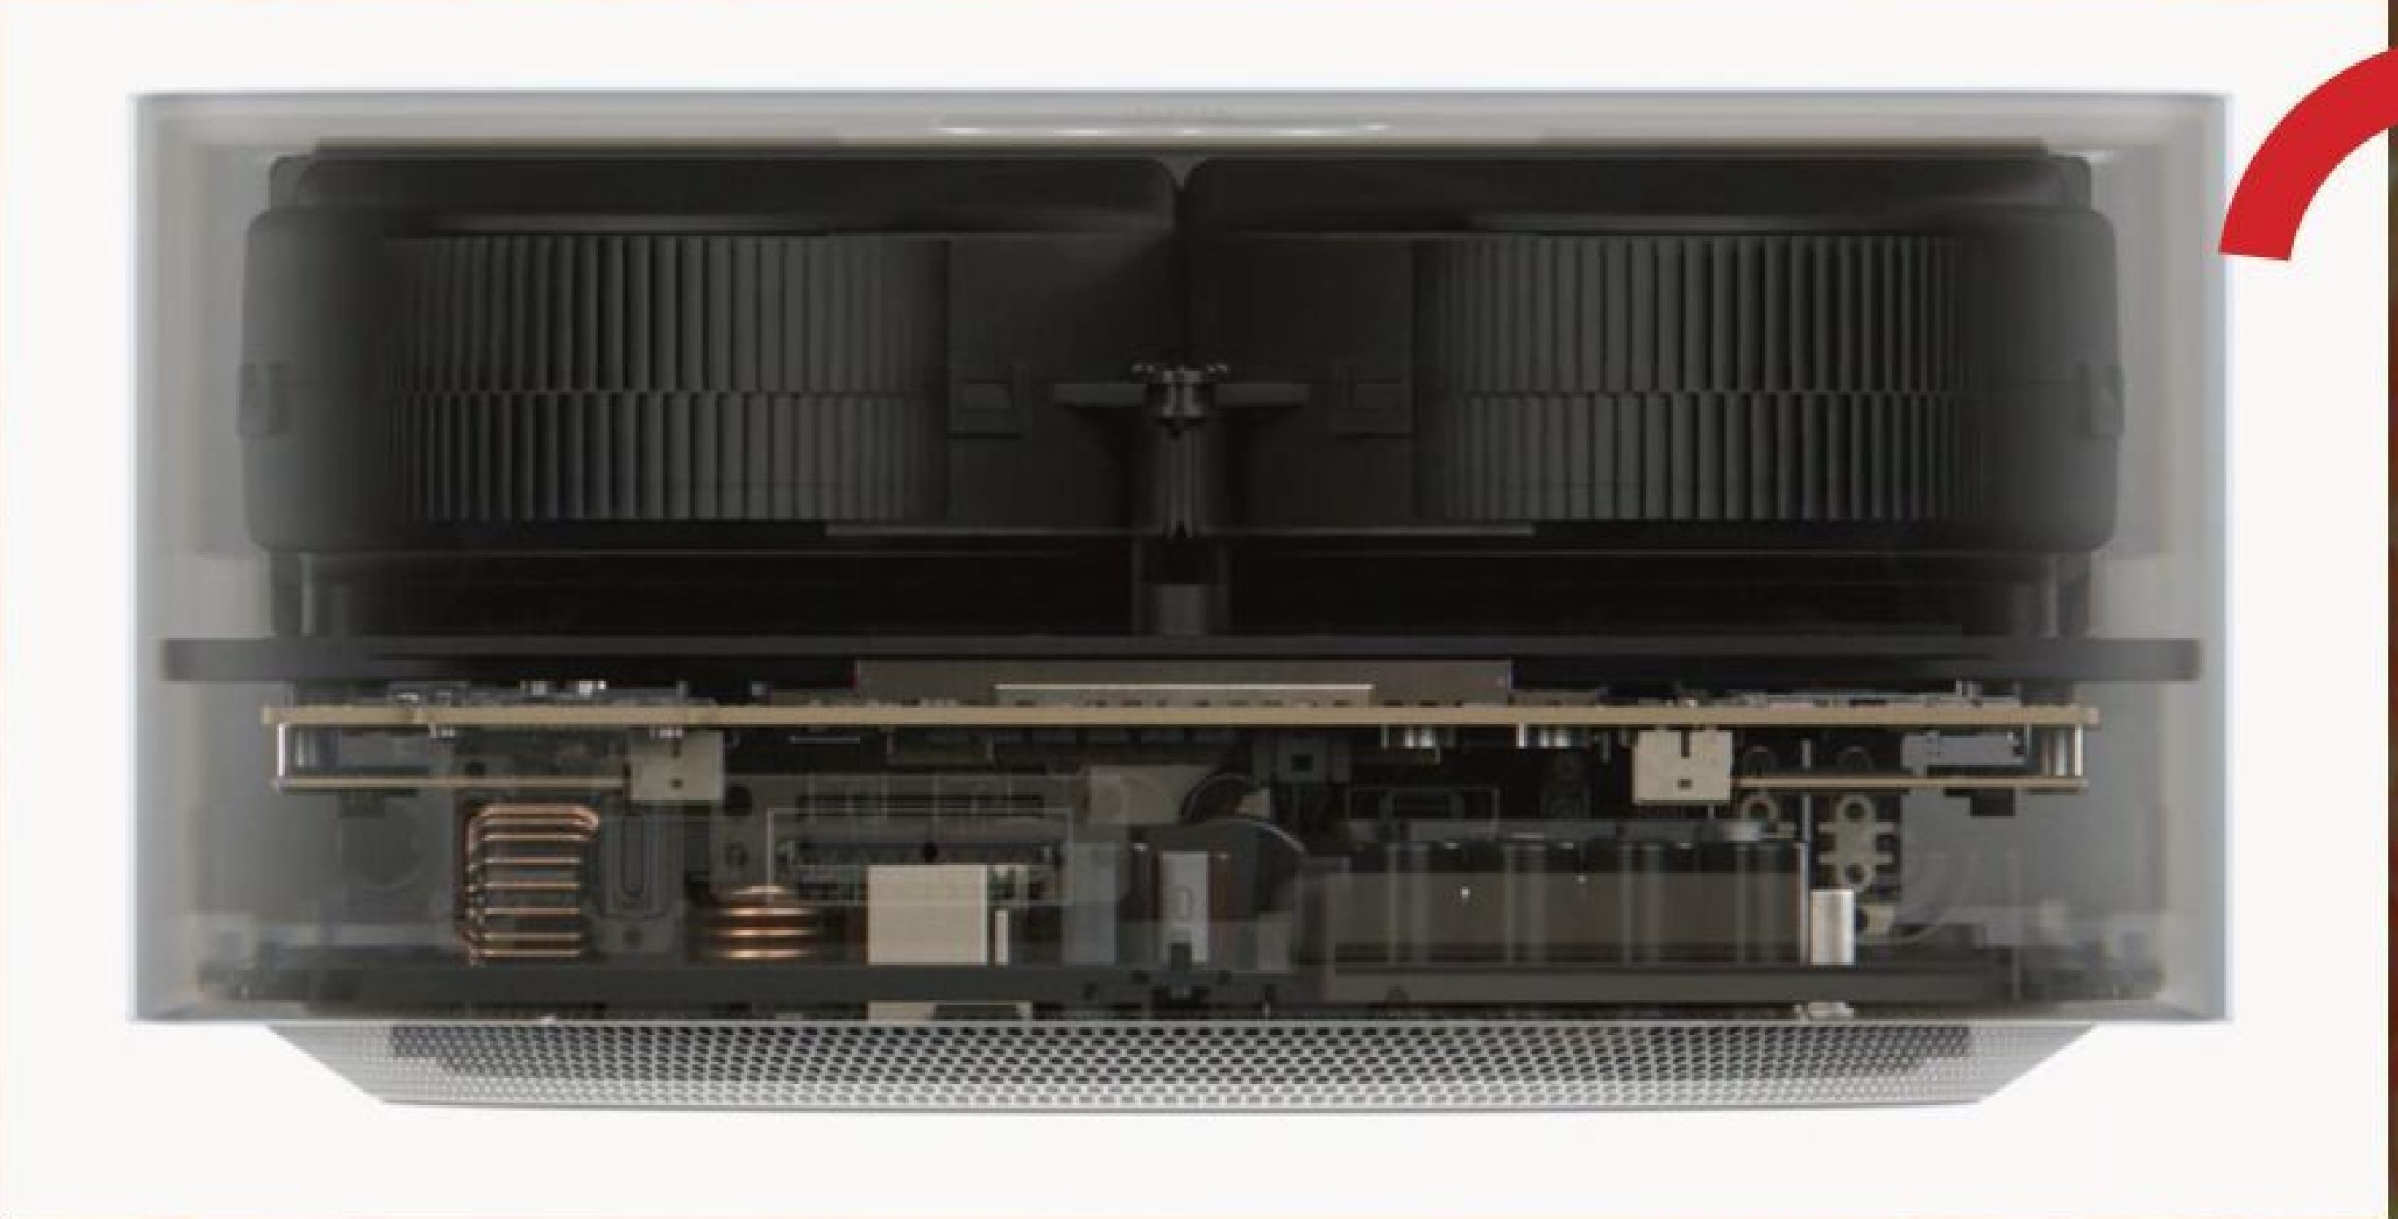
The M1 Ultra has 114 billion transistors, which is seven times more than the M1 and the most ever in a personal computer chip; and it can support up to 128GB of unified memory. It has a 20-core CPU with 16 high-performance cores and four high-efficiency cores, and a 64-core GPU, which makes it up to eight times faster than the M1 for graphical performance. Its Neural engine has 32 cores, and is capable of 22 trillion operations per second.

The M1 Ultra joins the Apple Silicon M1 family.

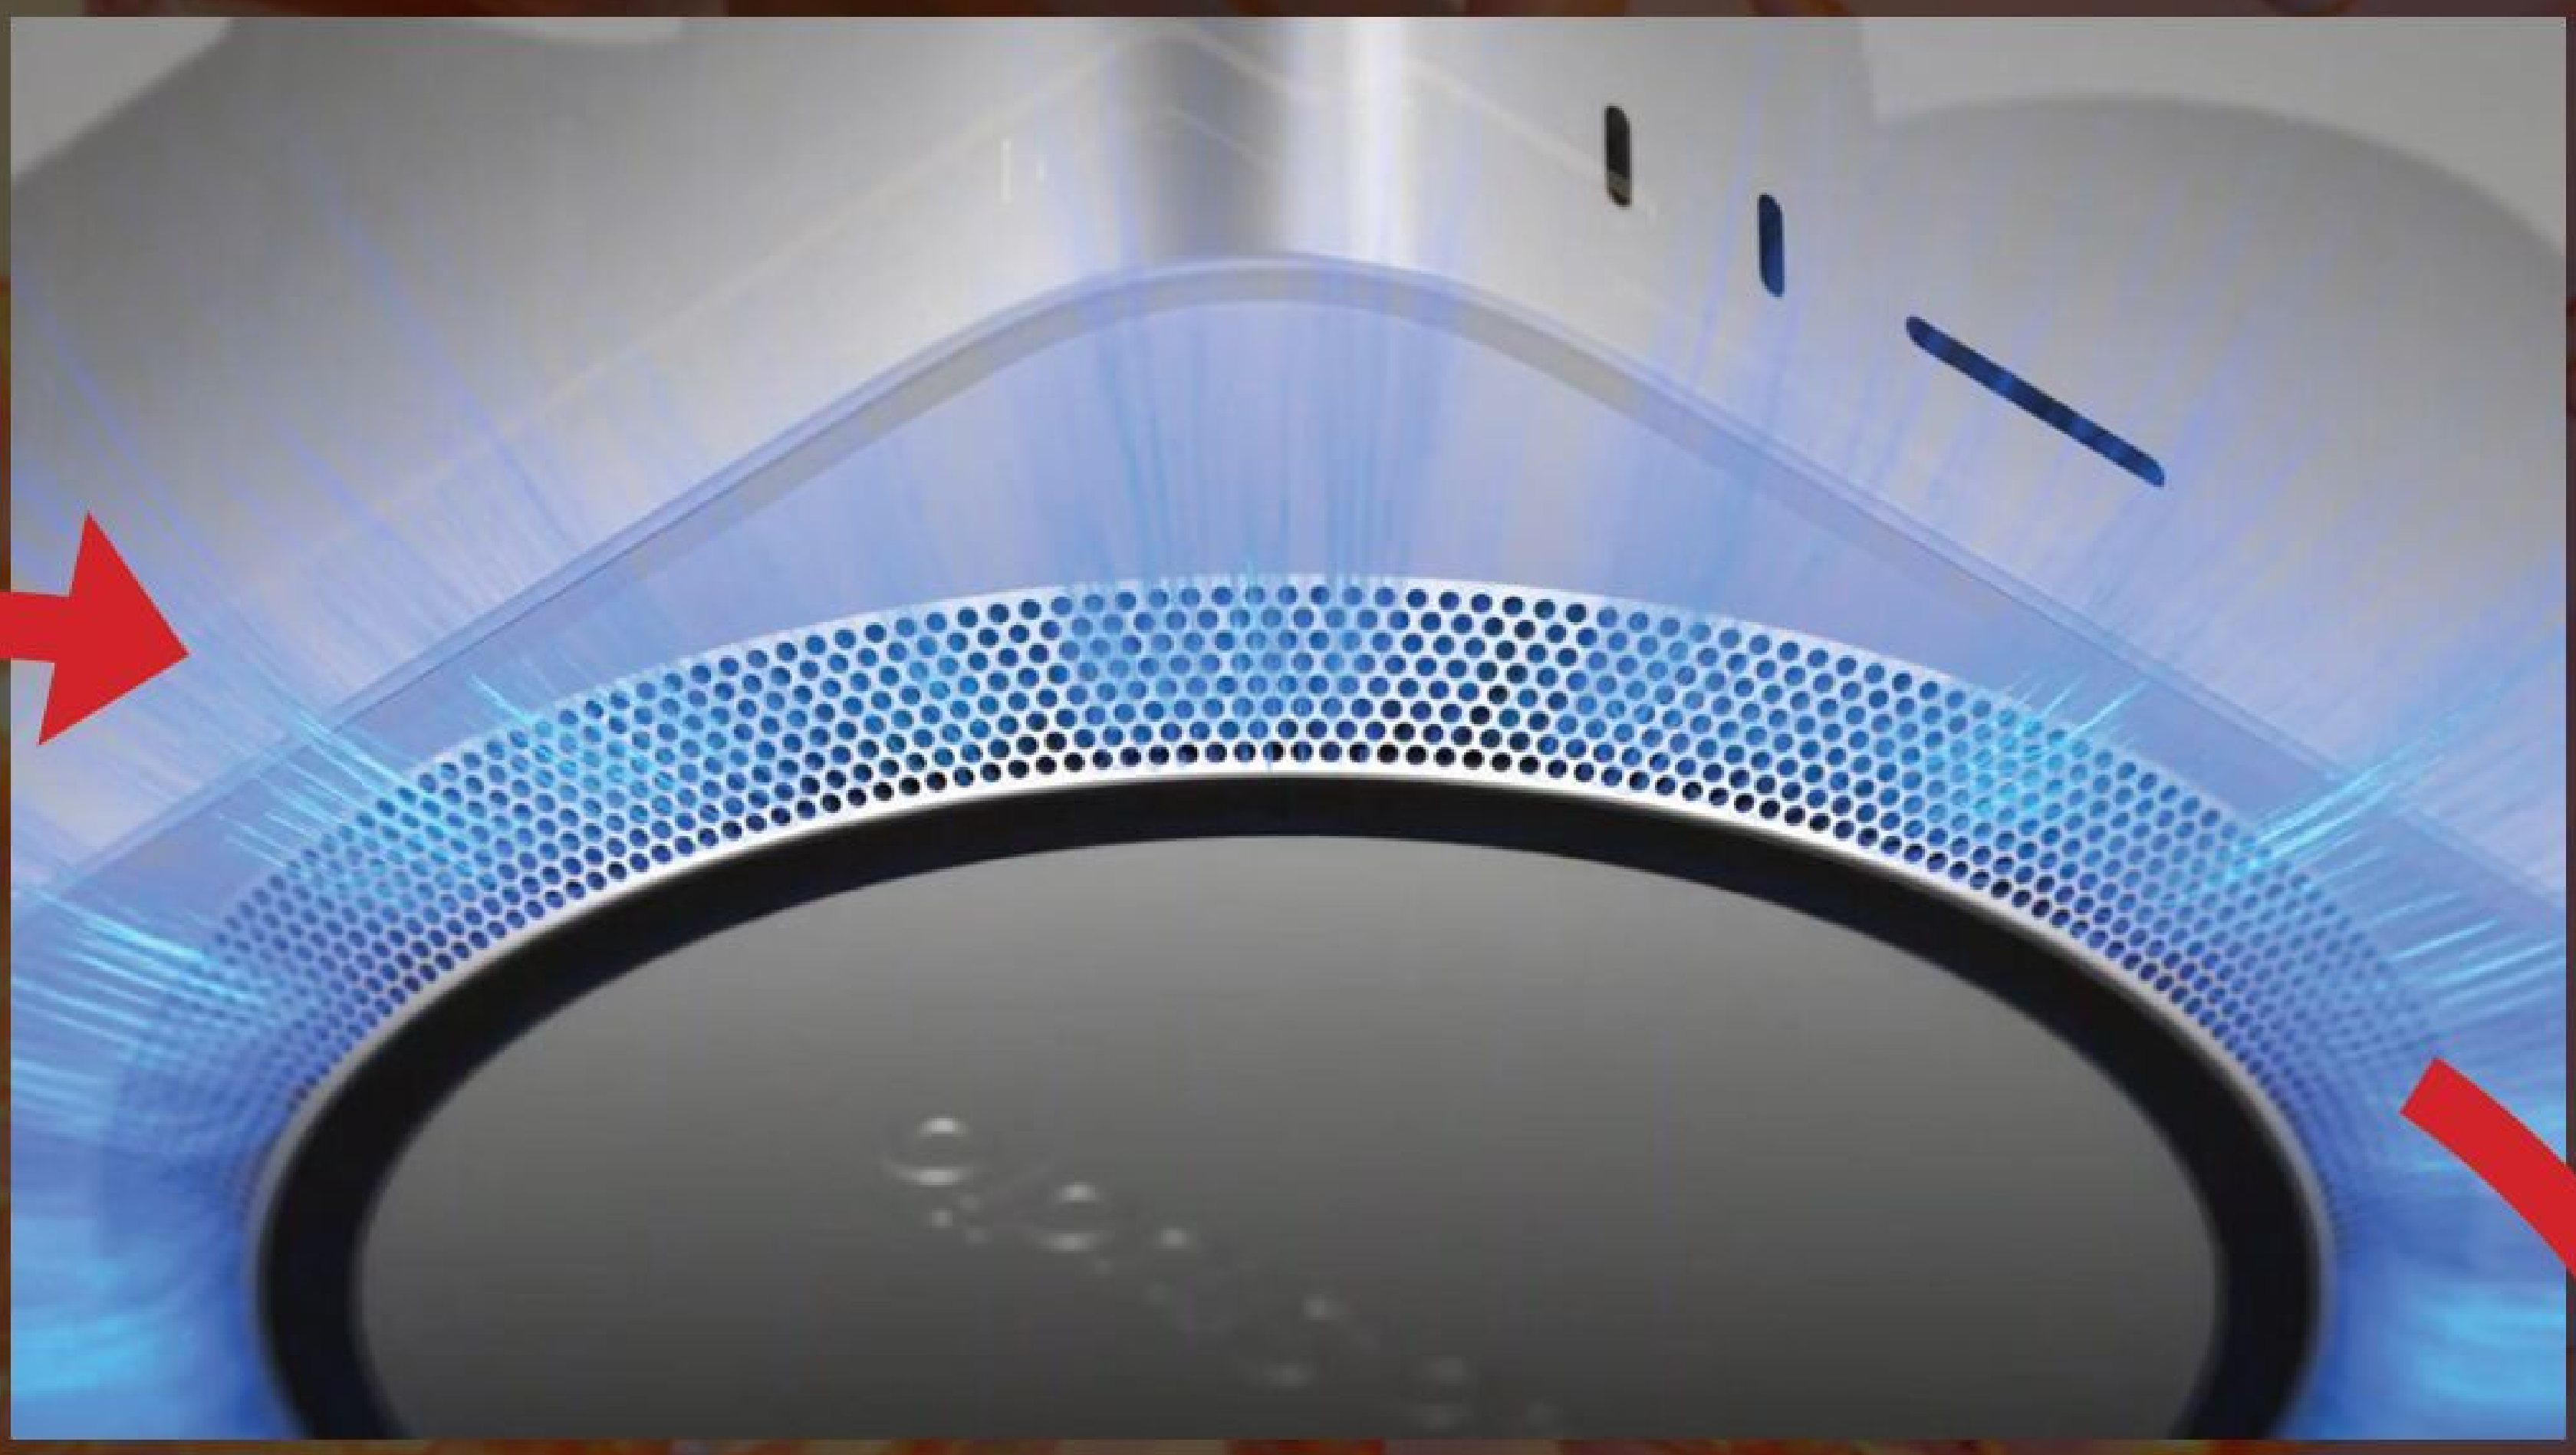


Wearing its Thermals

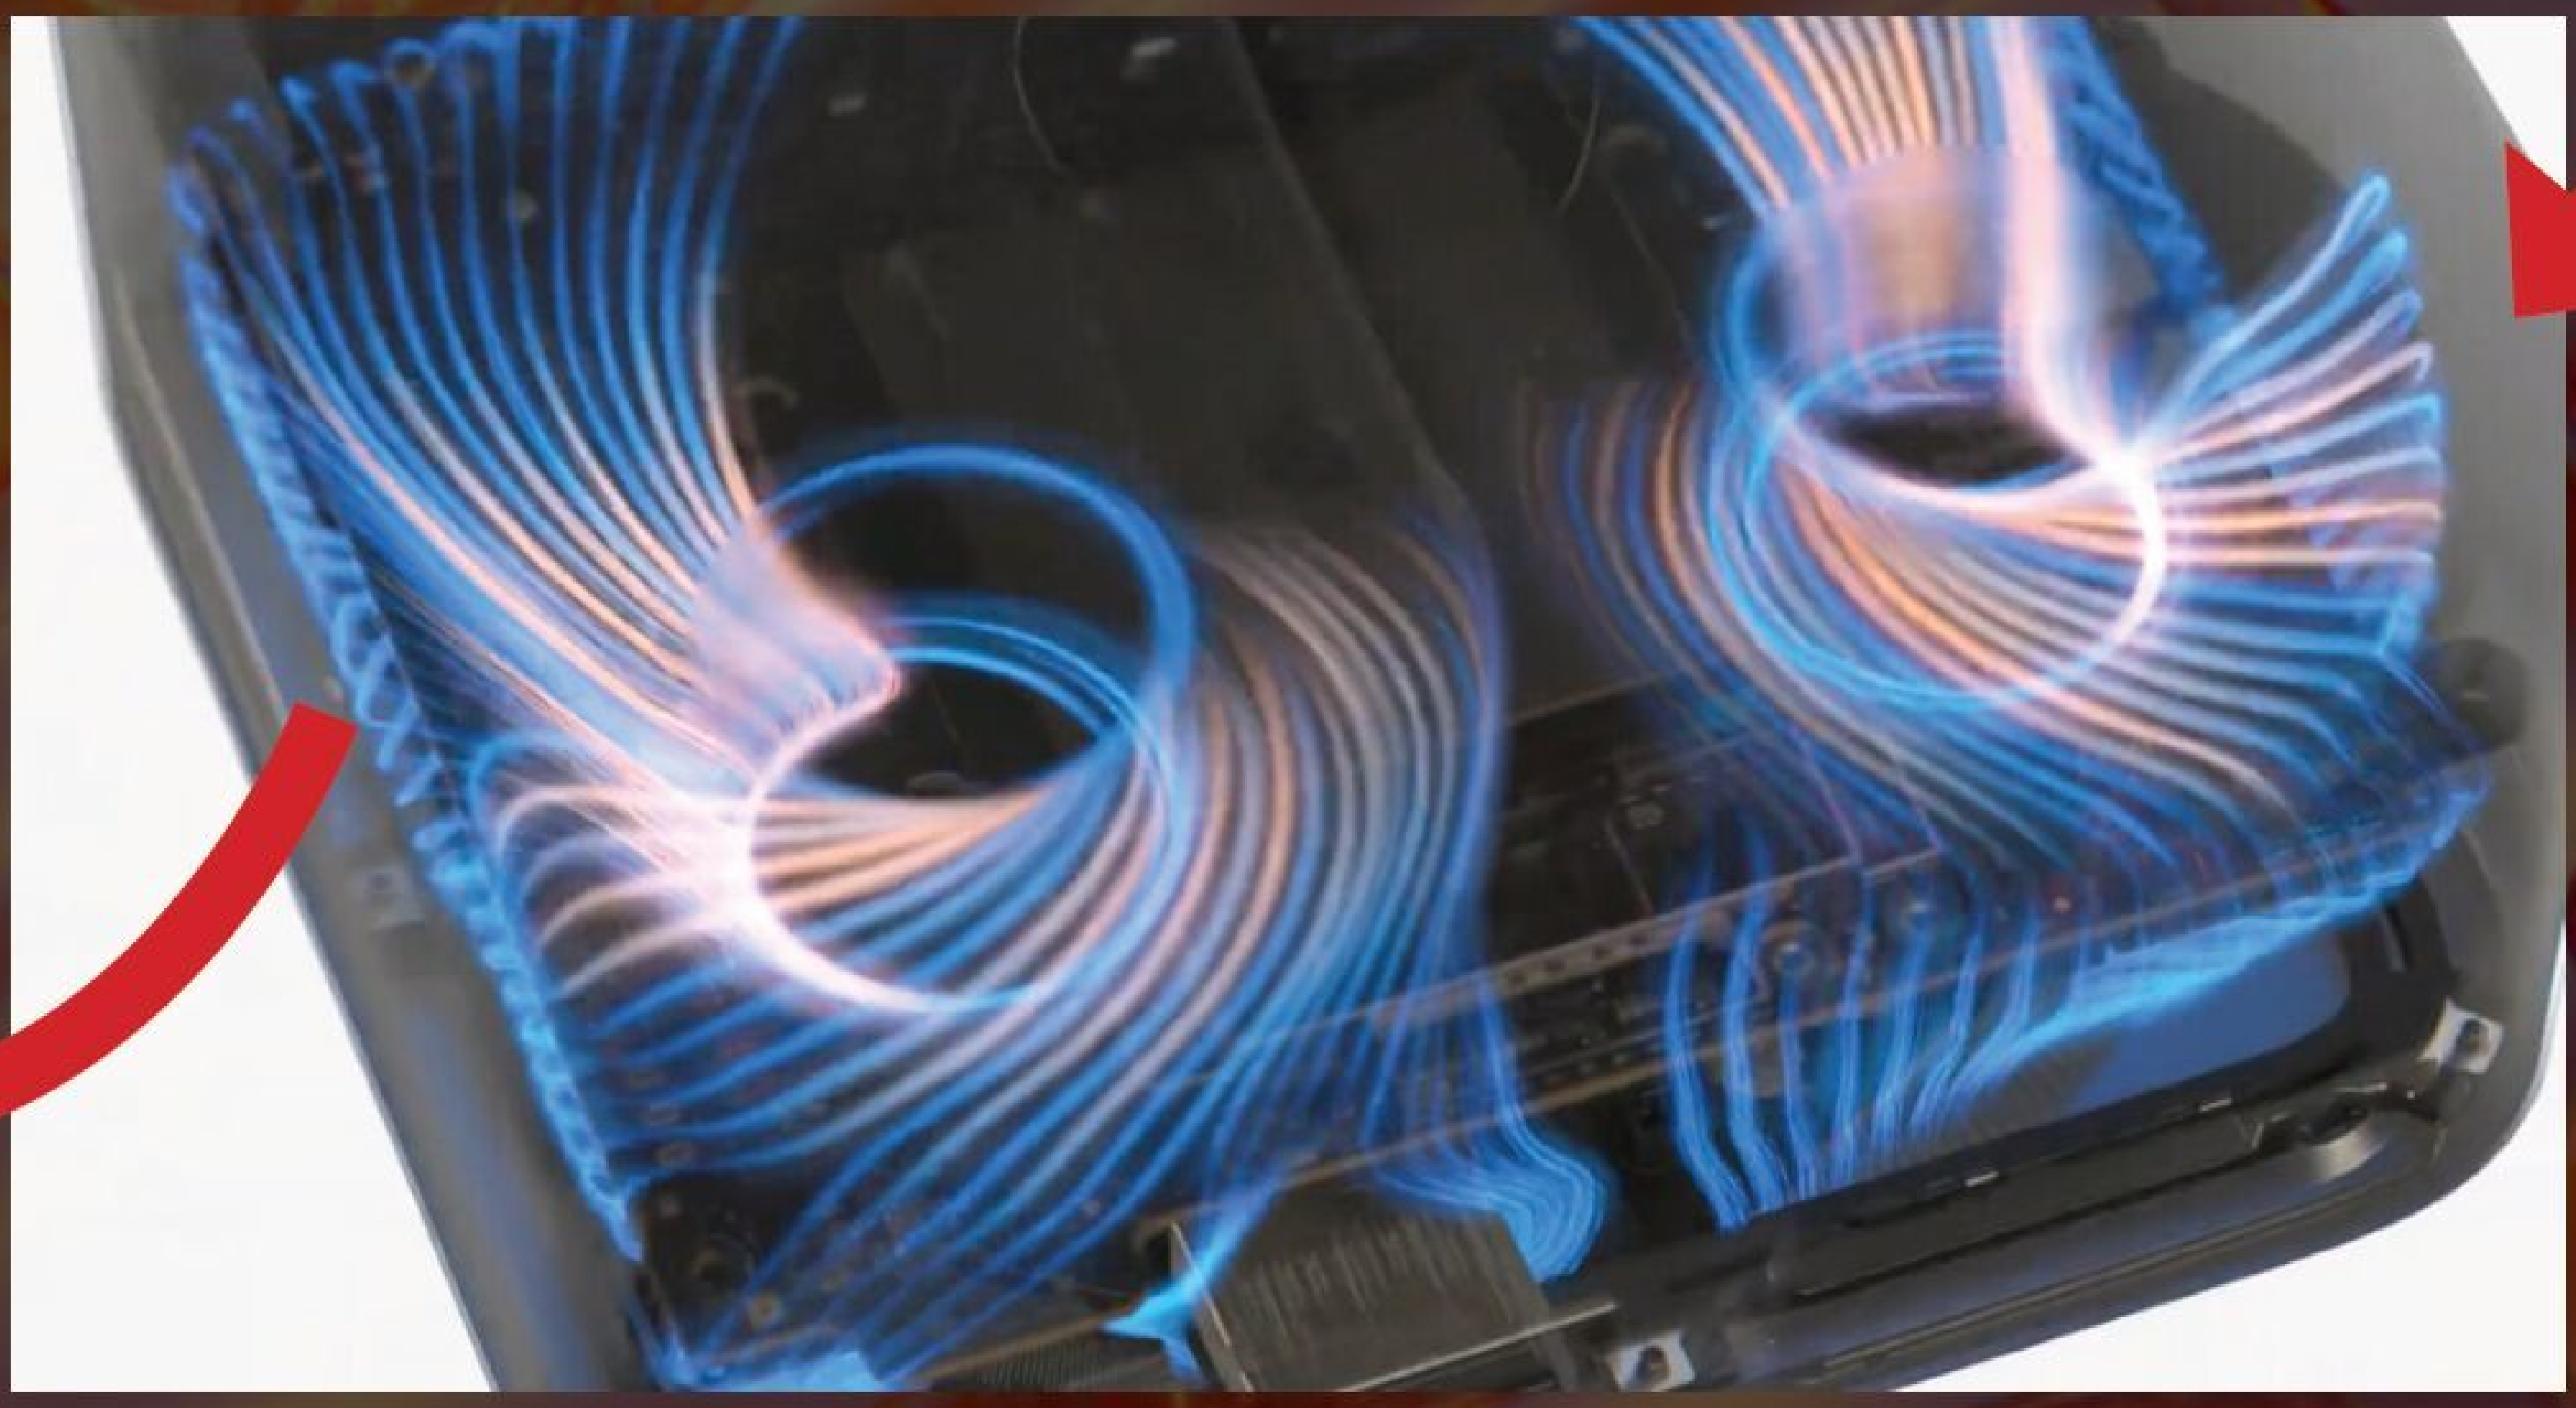
Such a powerful new processor demands a powerful new cooling system, and the Studio Mac does not disappoint.



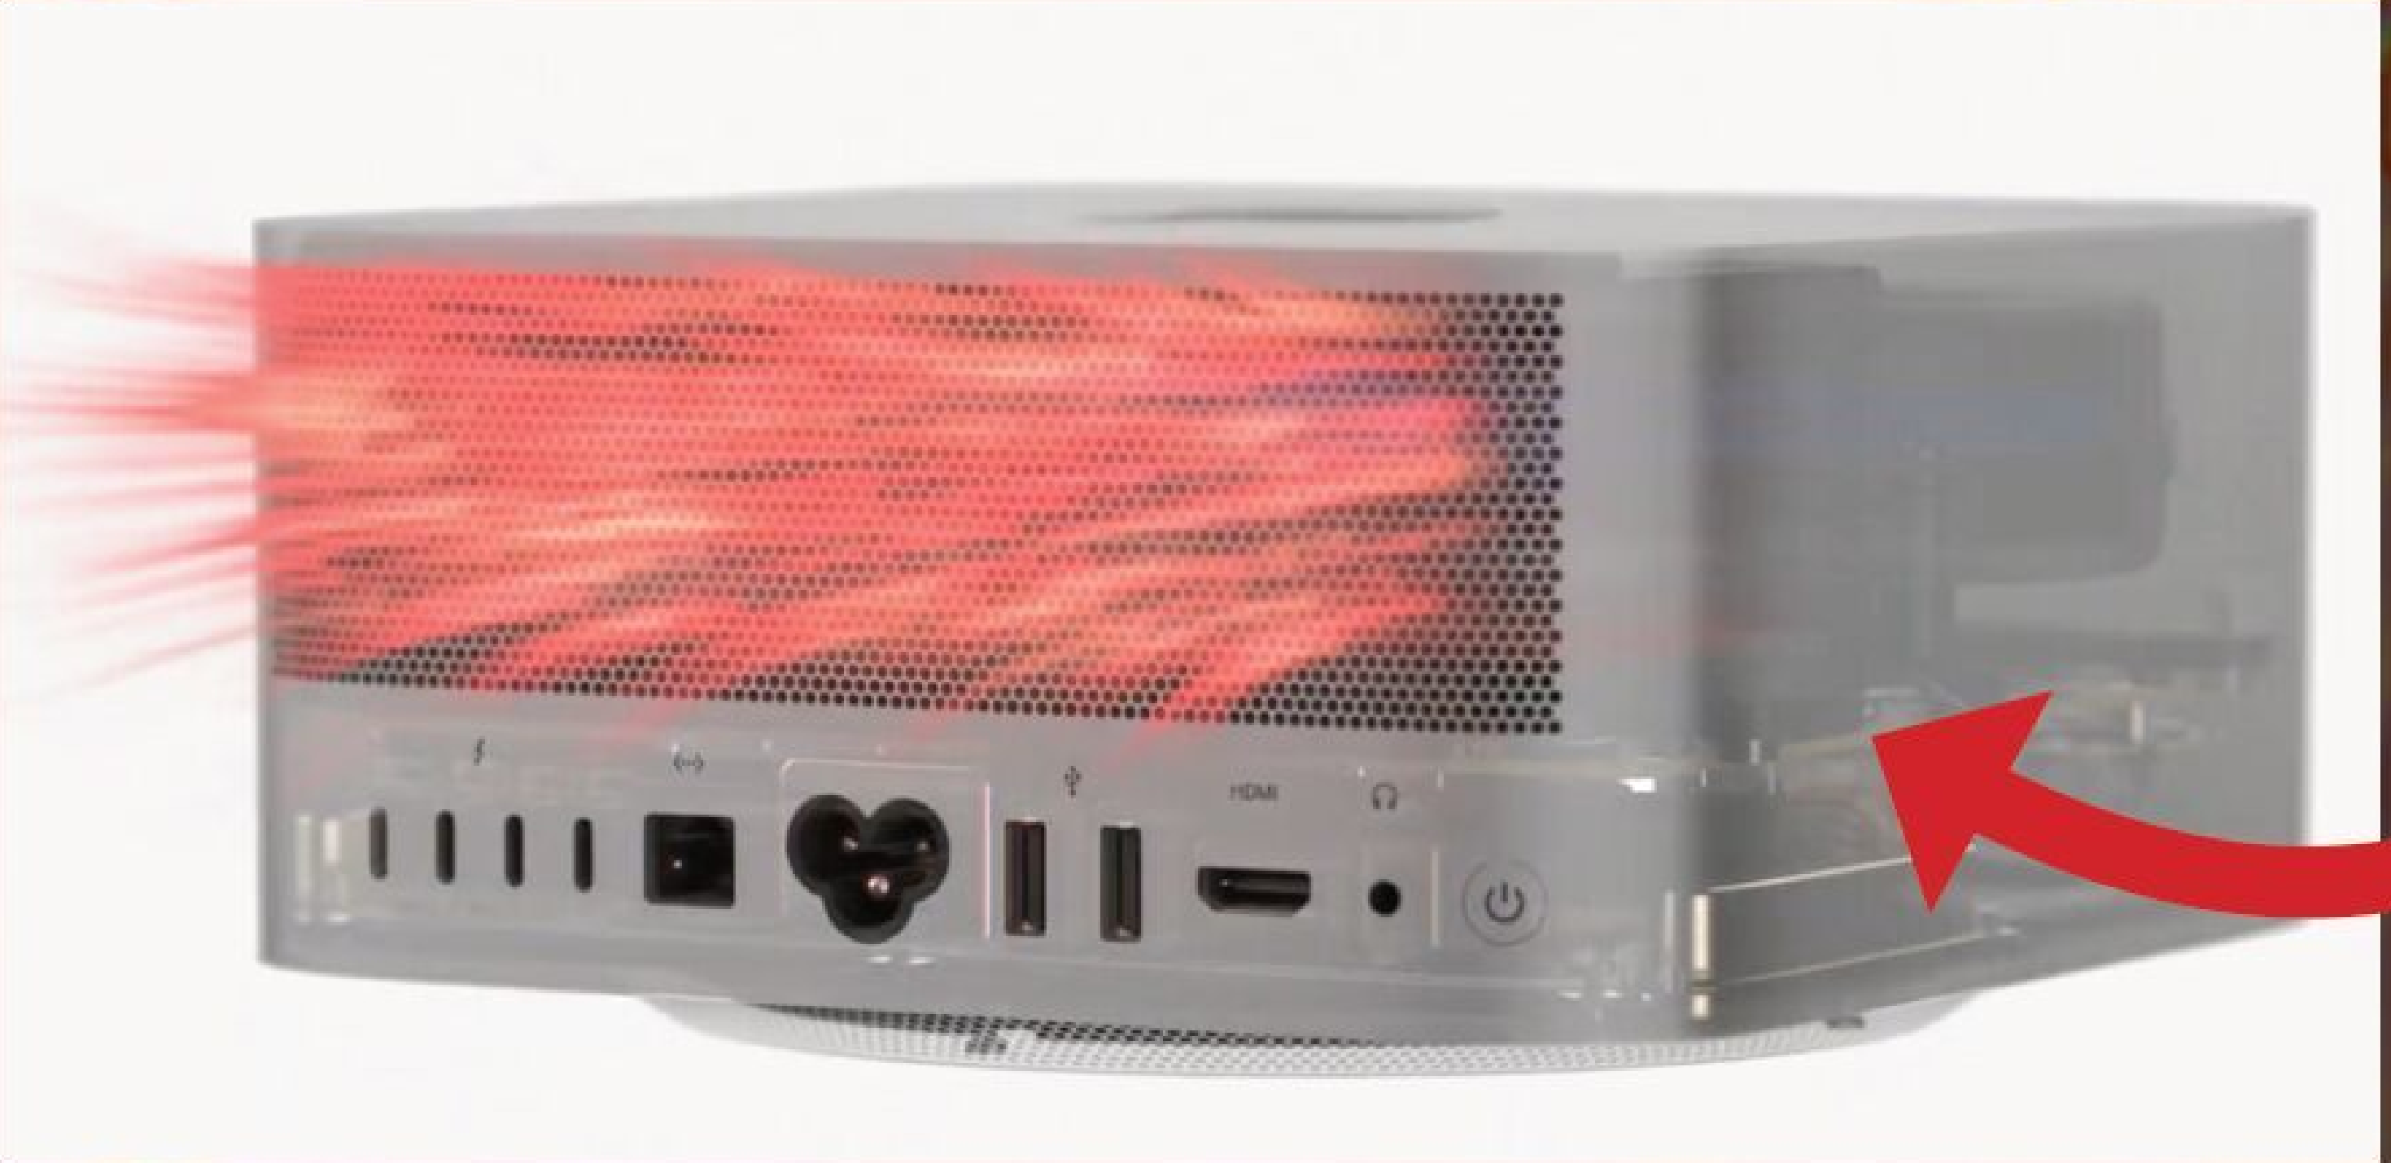
Two large fans sit atop the boards and chips, drawing up air.



Air is sucked in through the entire circumference of the perforated aluminium base.



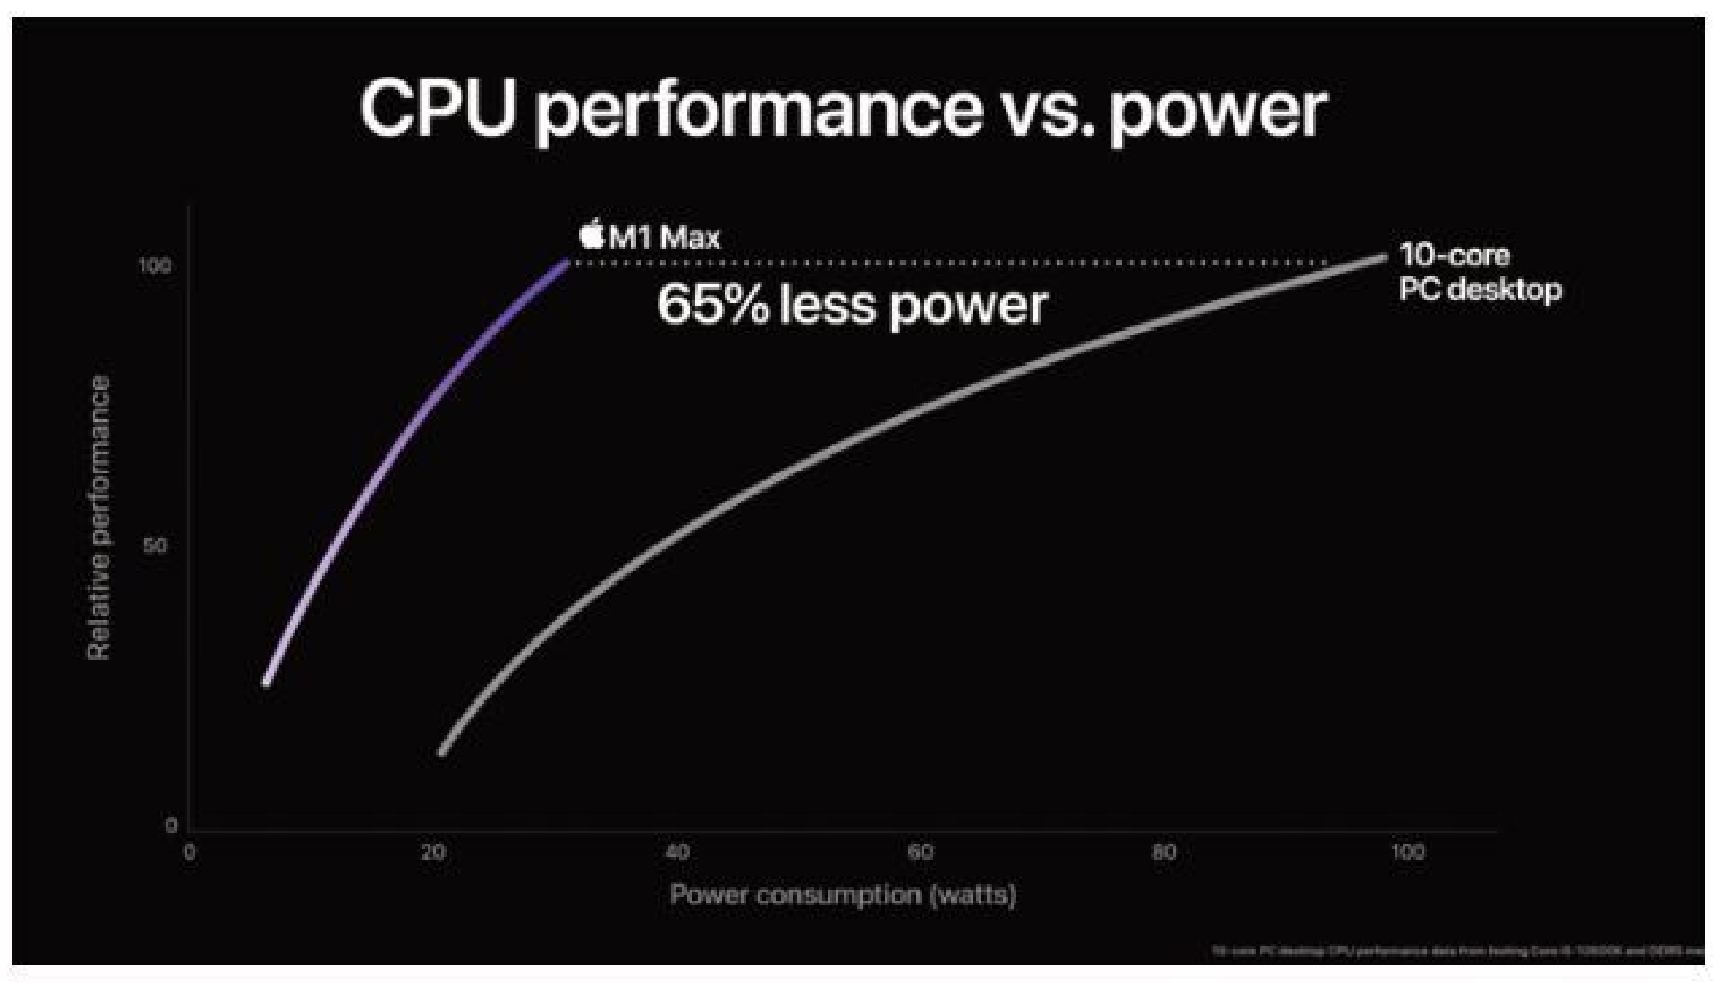
Precise channels guide the air over the boards to the chips' thermal modules.



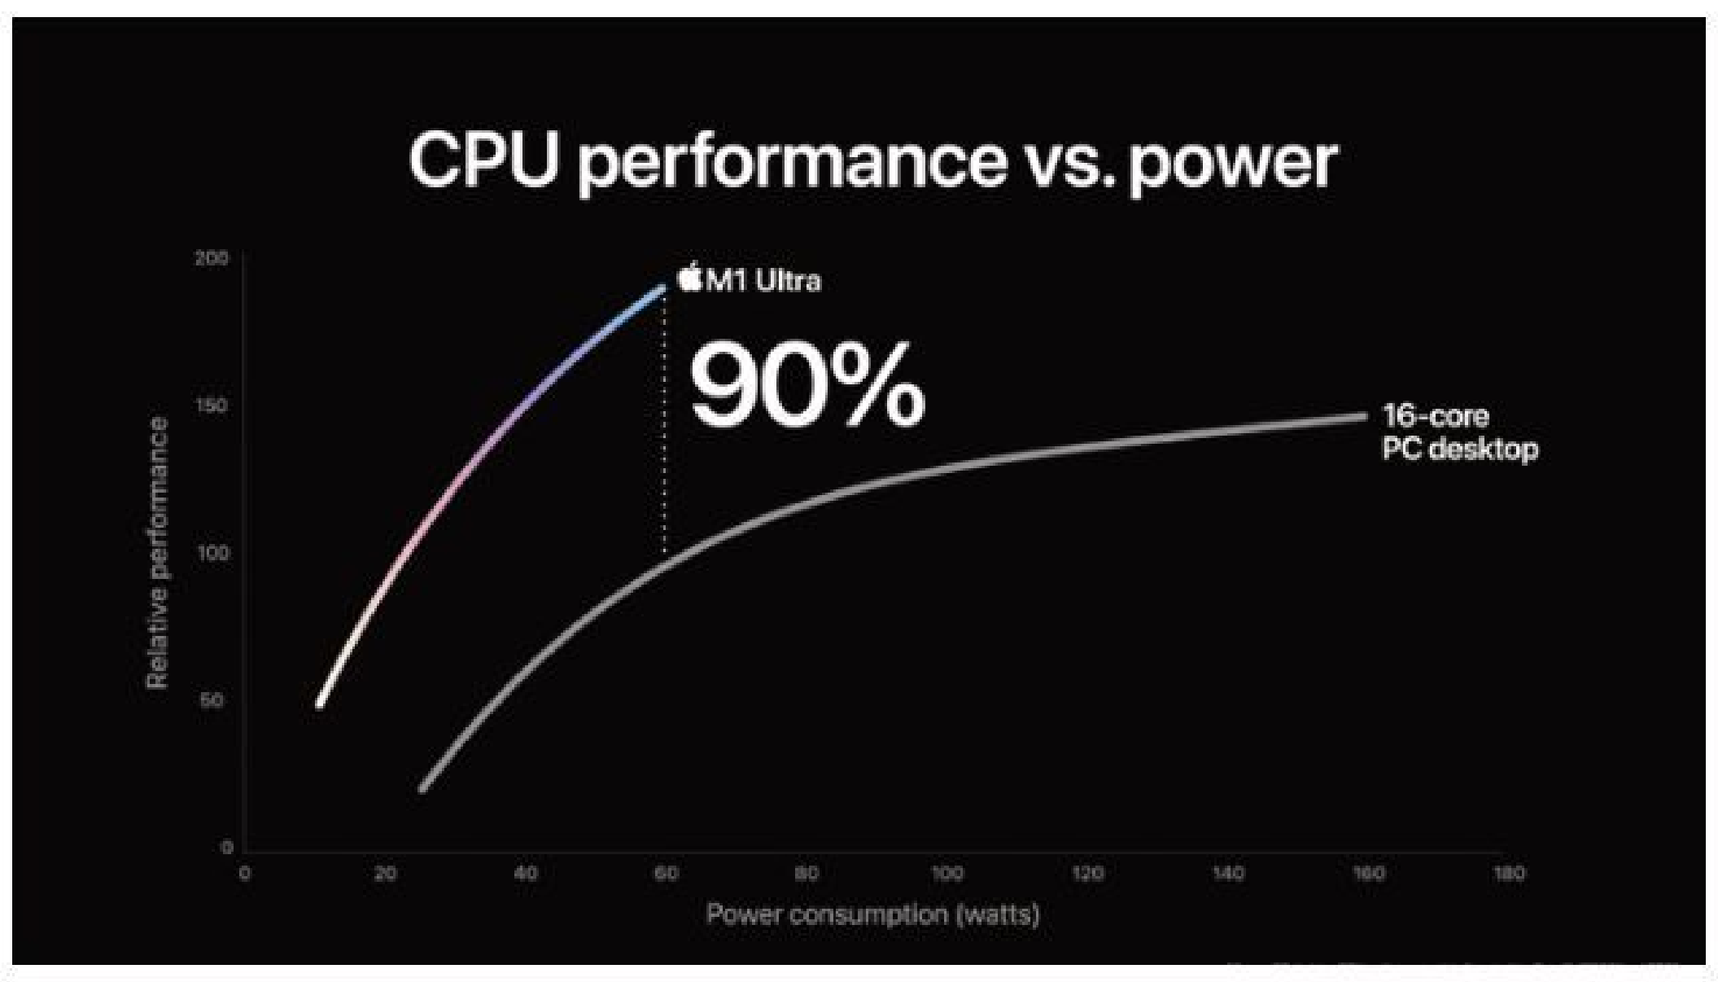
Hot air is expelled through 2000 perforations at the rear.

The Power of the M1 Max and Ultra Chips

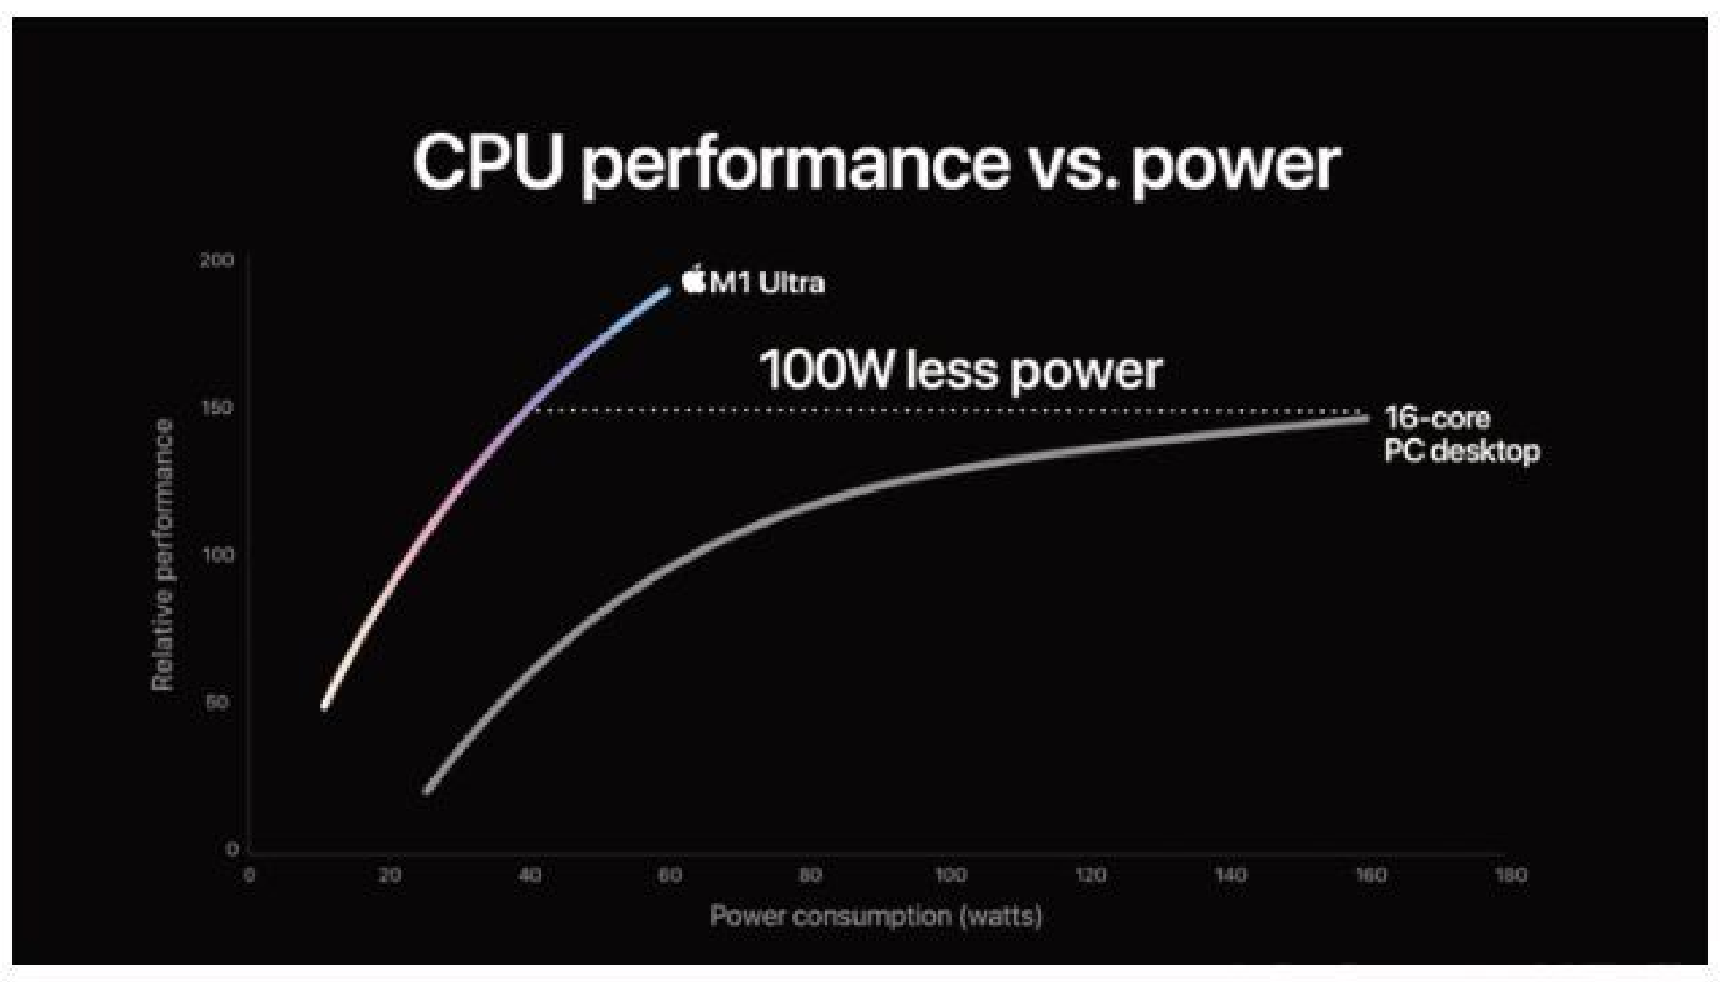
Apple's M1 Max and M1 Ultra offer industry-leading performance when compared to their PC rivals.



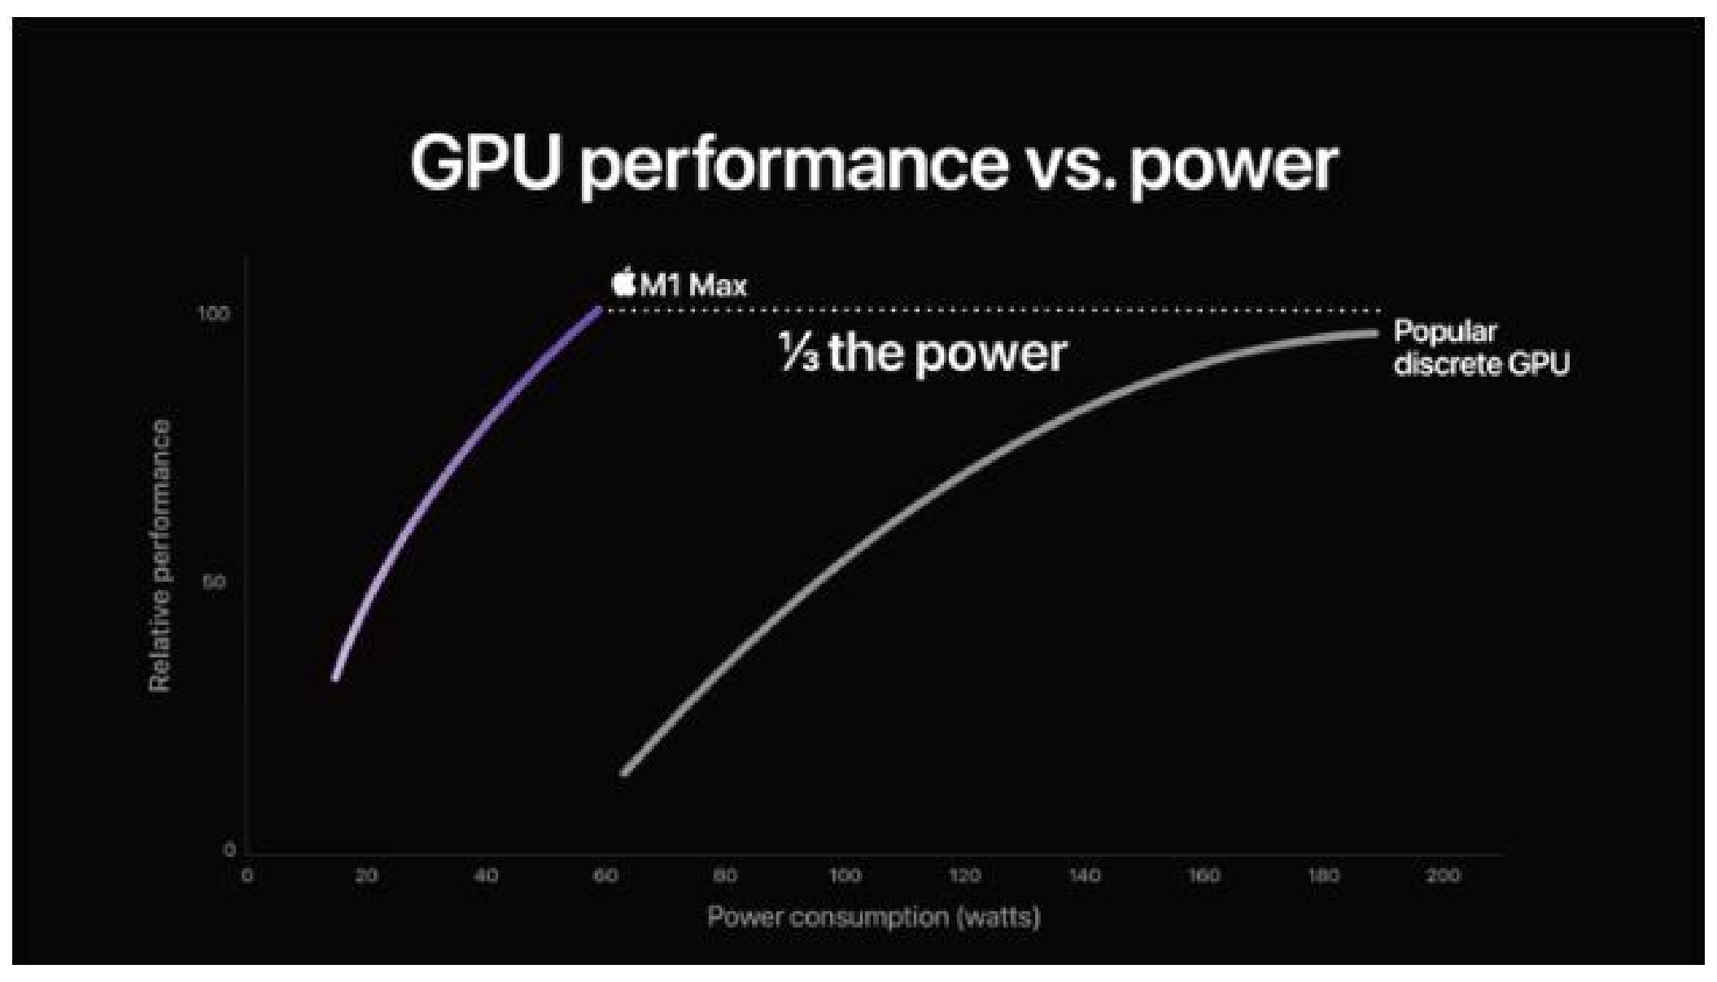
The M1 Max chip offers the same performance as a 10-core PC desktop processor, but uses 65% less power.



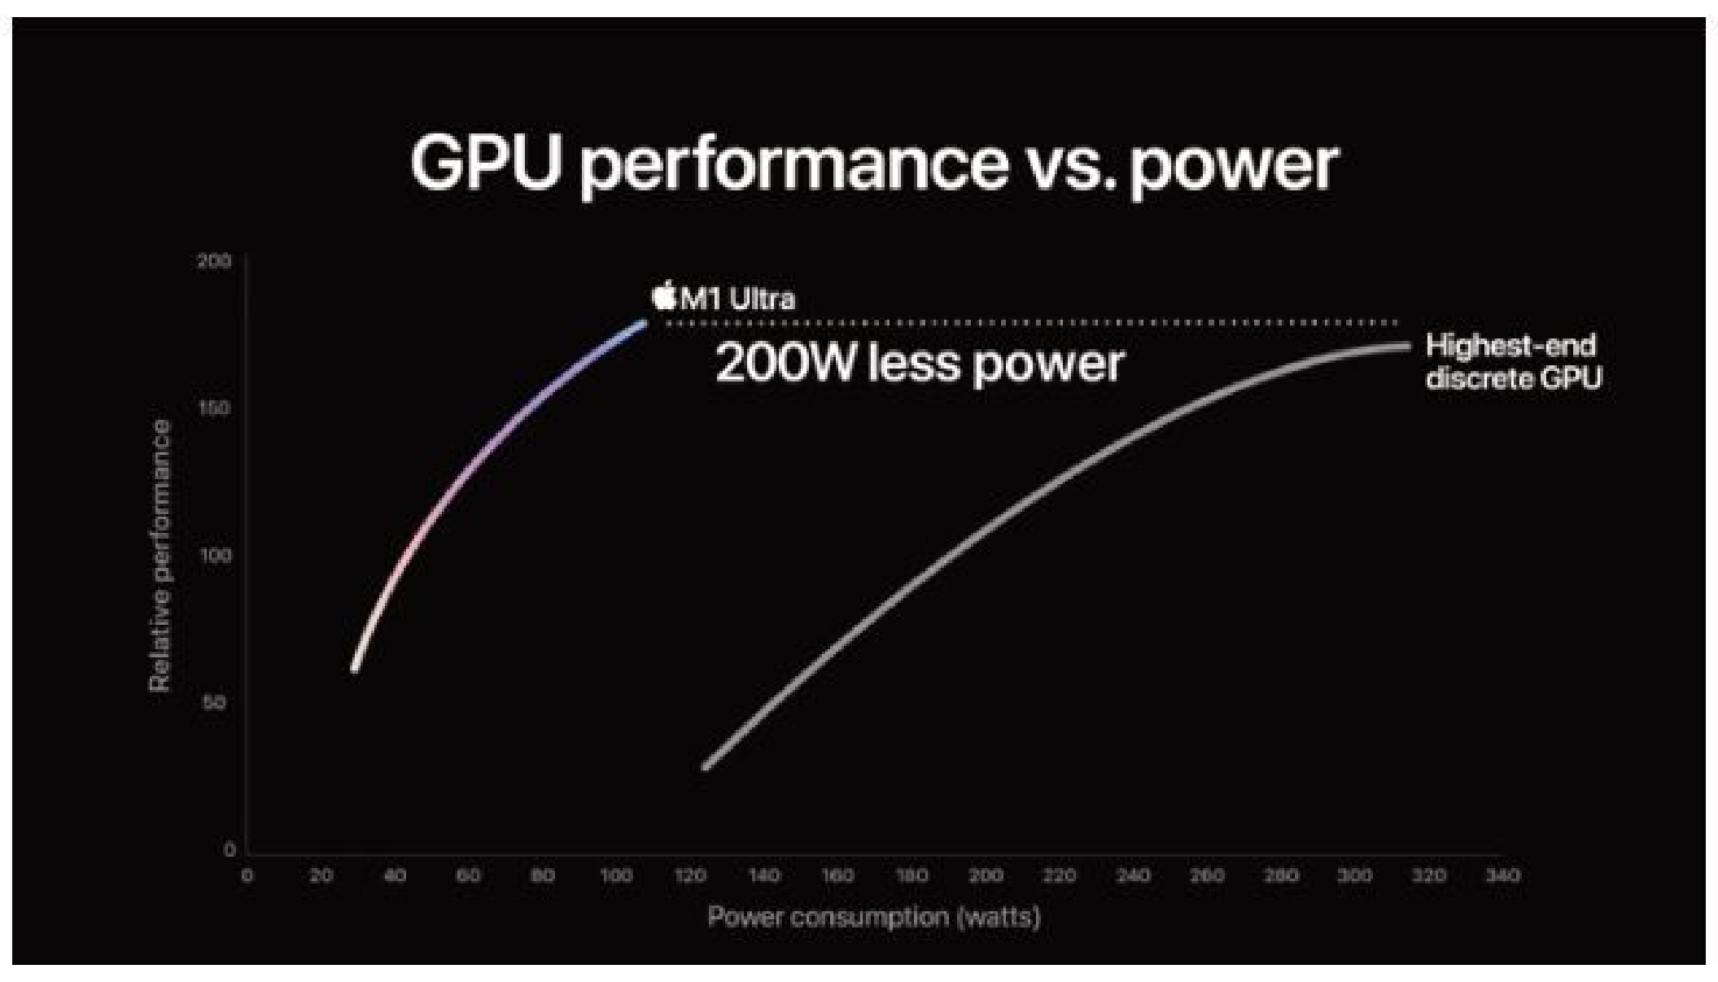
Compared to the fastest 16-core PC processor available, the M1 Ultra delivers 90% faster performance at 60 watts.



The M1 Ultra can match the fastest PC Desktop processor for performance, while using 100 watts less power.



The M1 Max can outperform a popular discrete GPU while using 1/3 of the power.



The M1 Ultra outperforms the best discrete graphics processor while using 200 watts less power.

The Mac Studio can support up to four Pro Display XDR screens and a 4K TV, all at once. That's nearly 90 million pixels.

A New Monitor Too

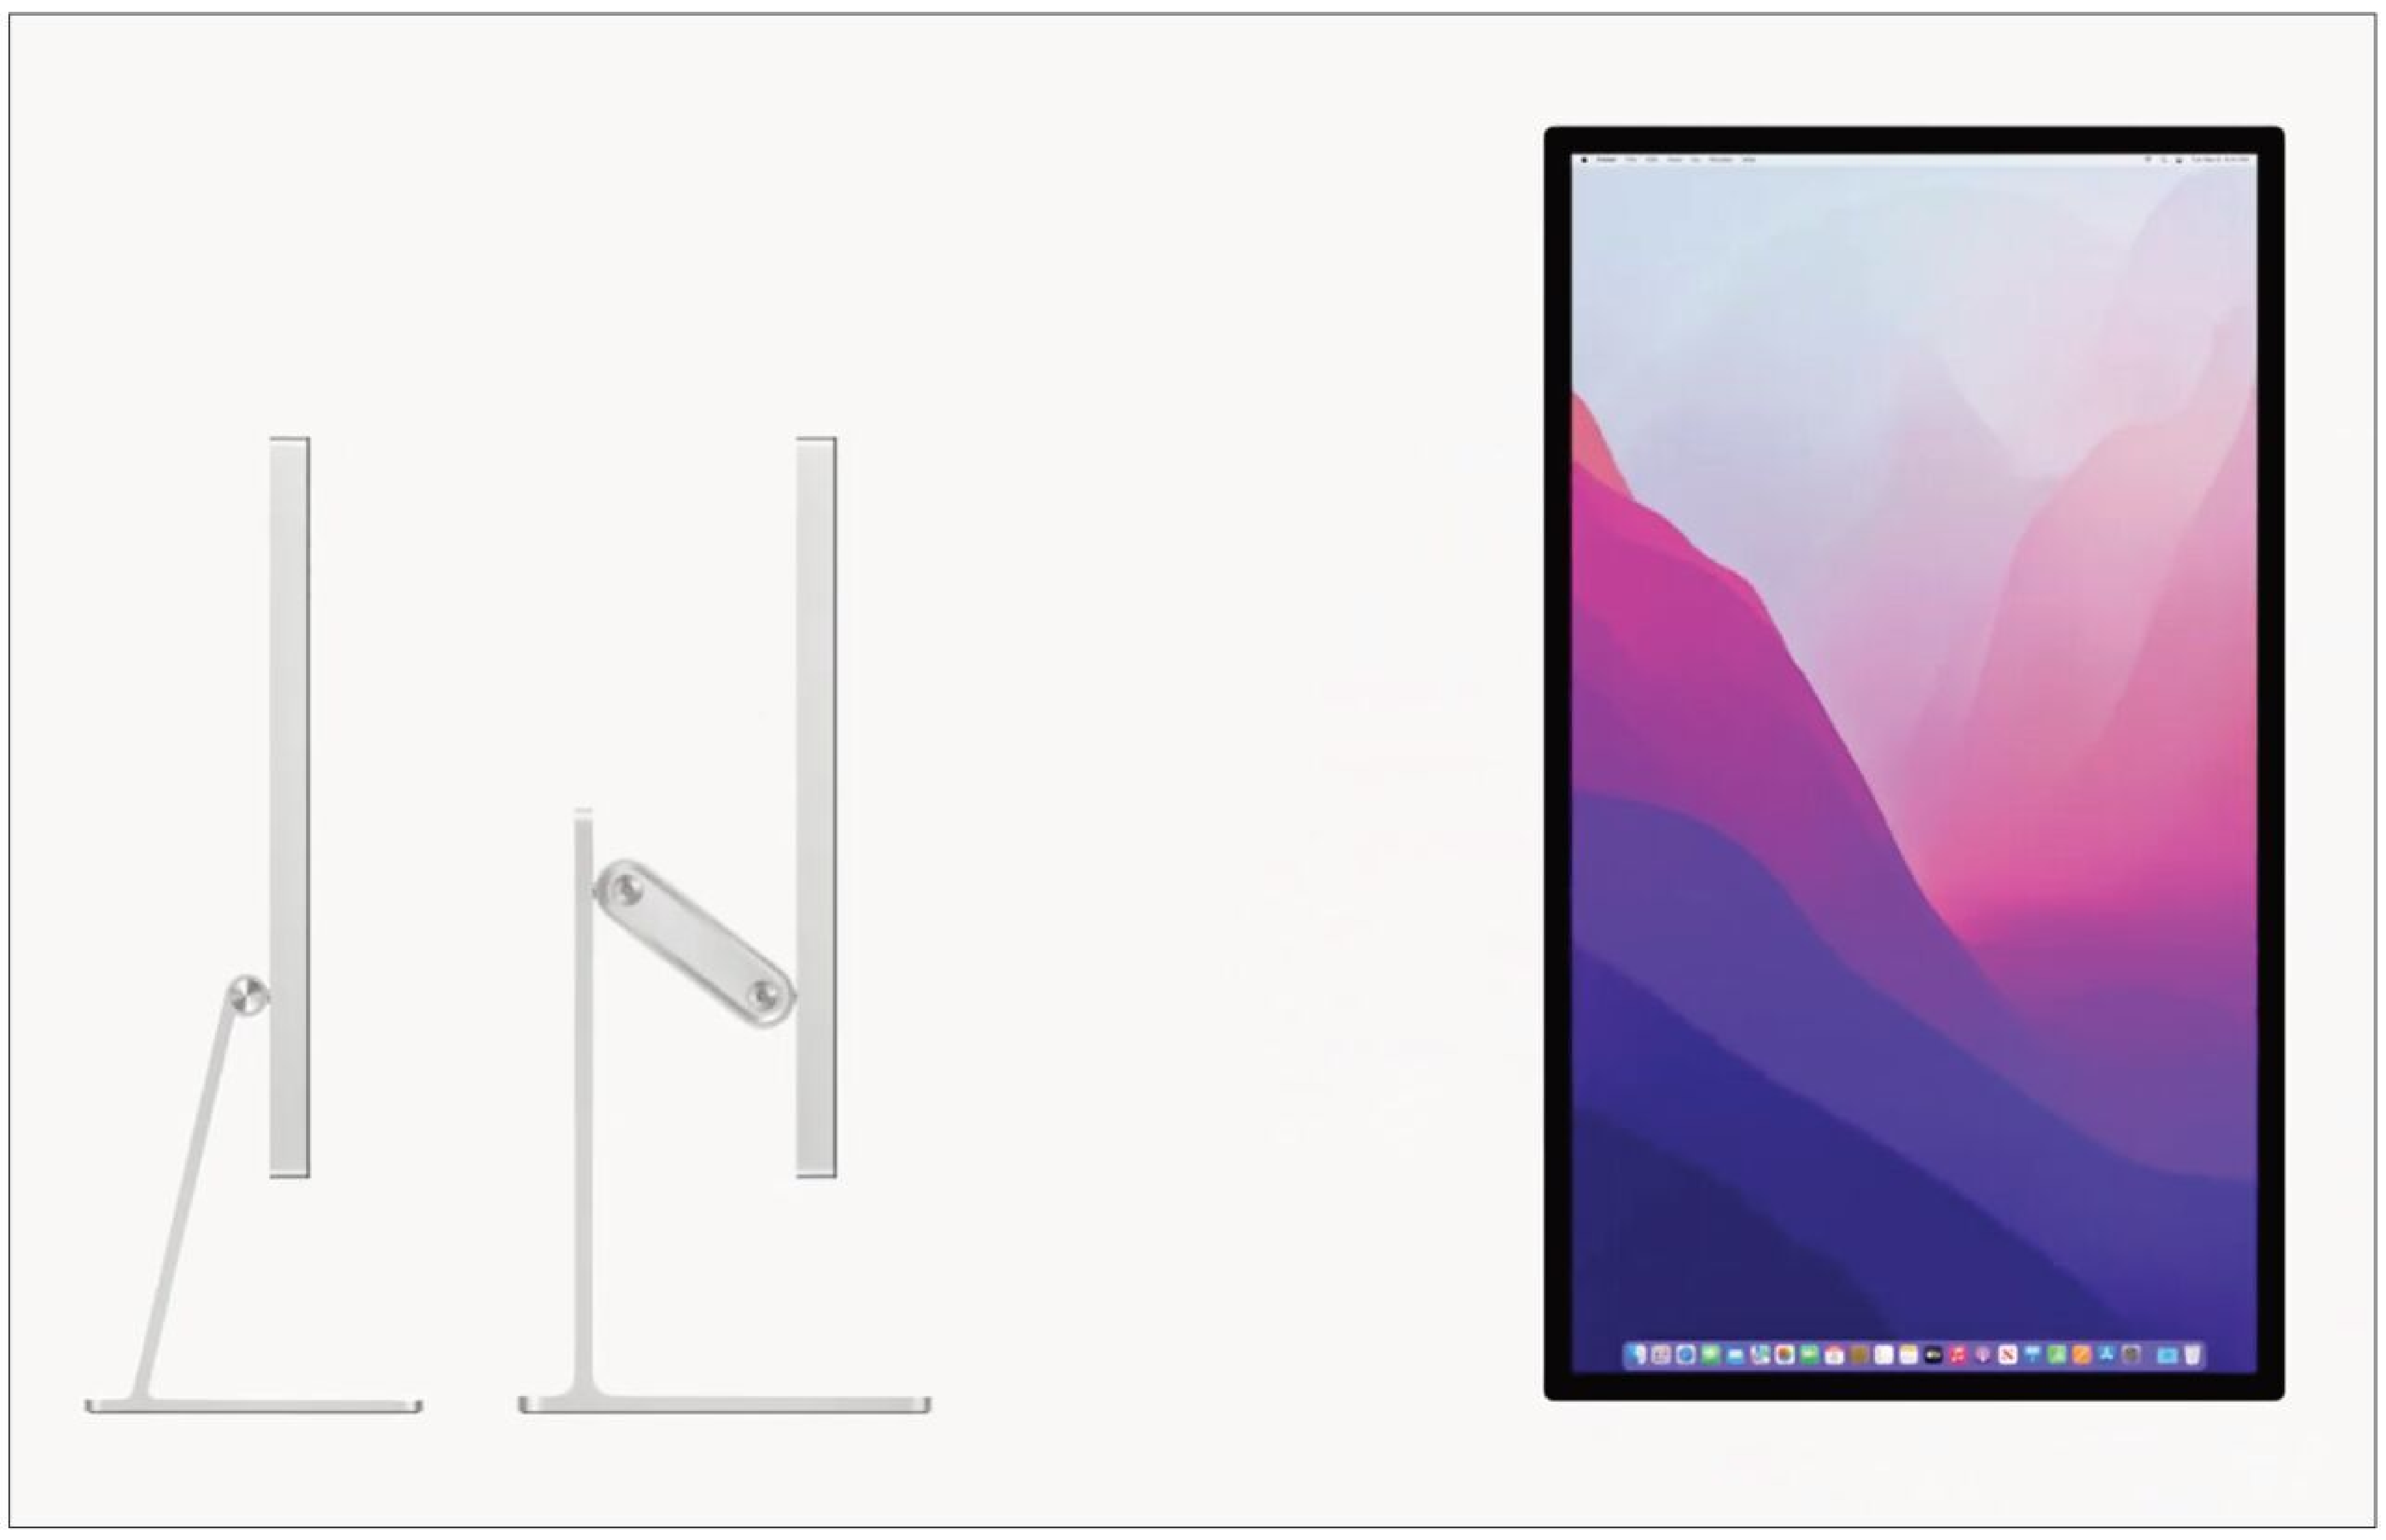
Apple's latest Studio Display sits very well with the Mac Studio.

The new Studio Display has very narrow borders, maximising screen space.

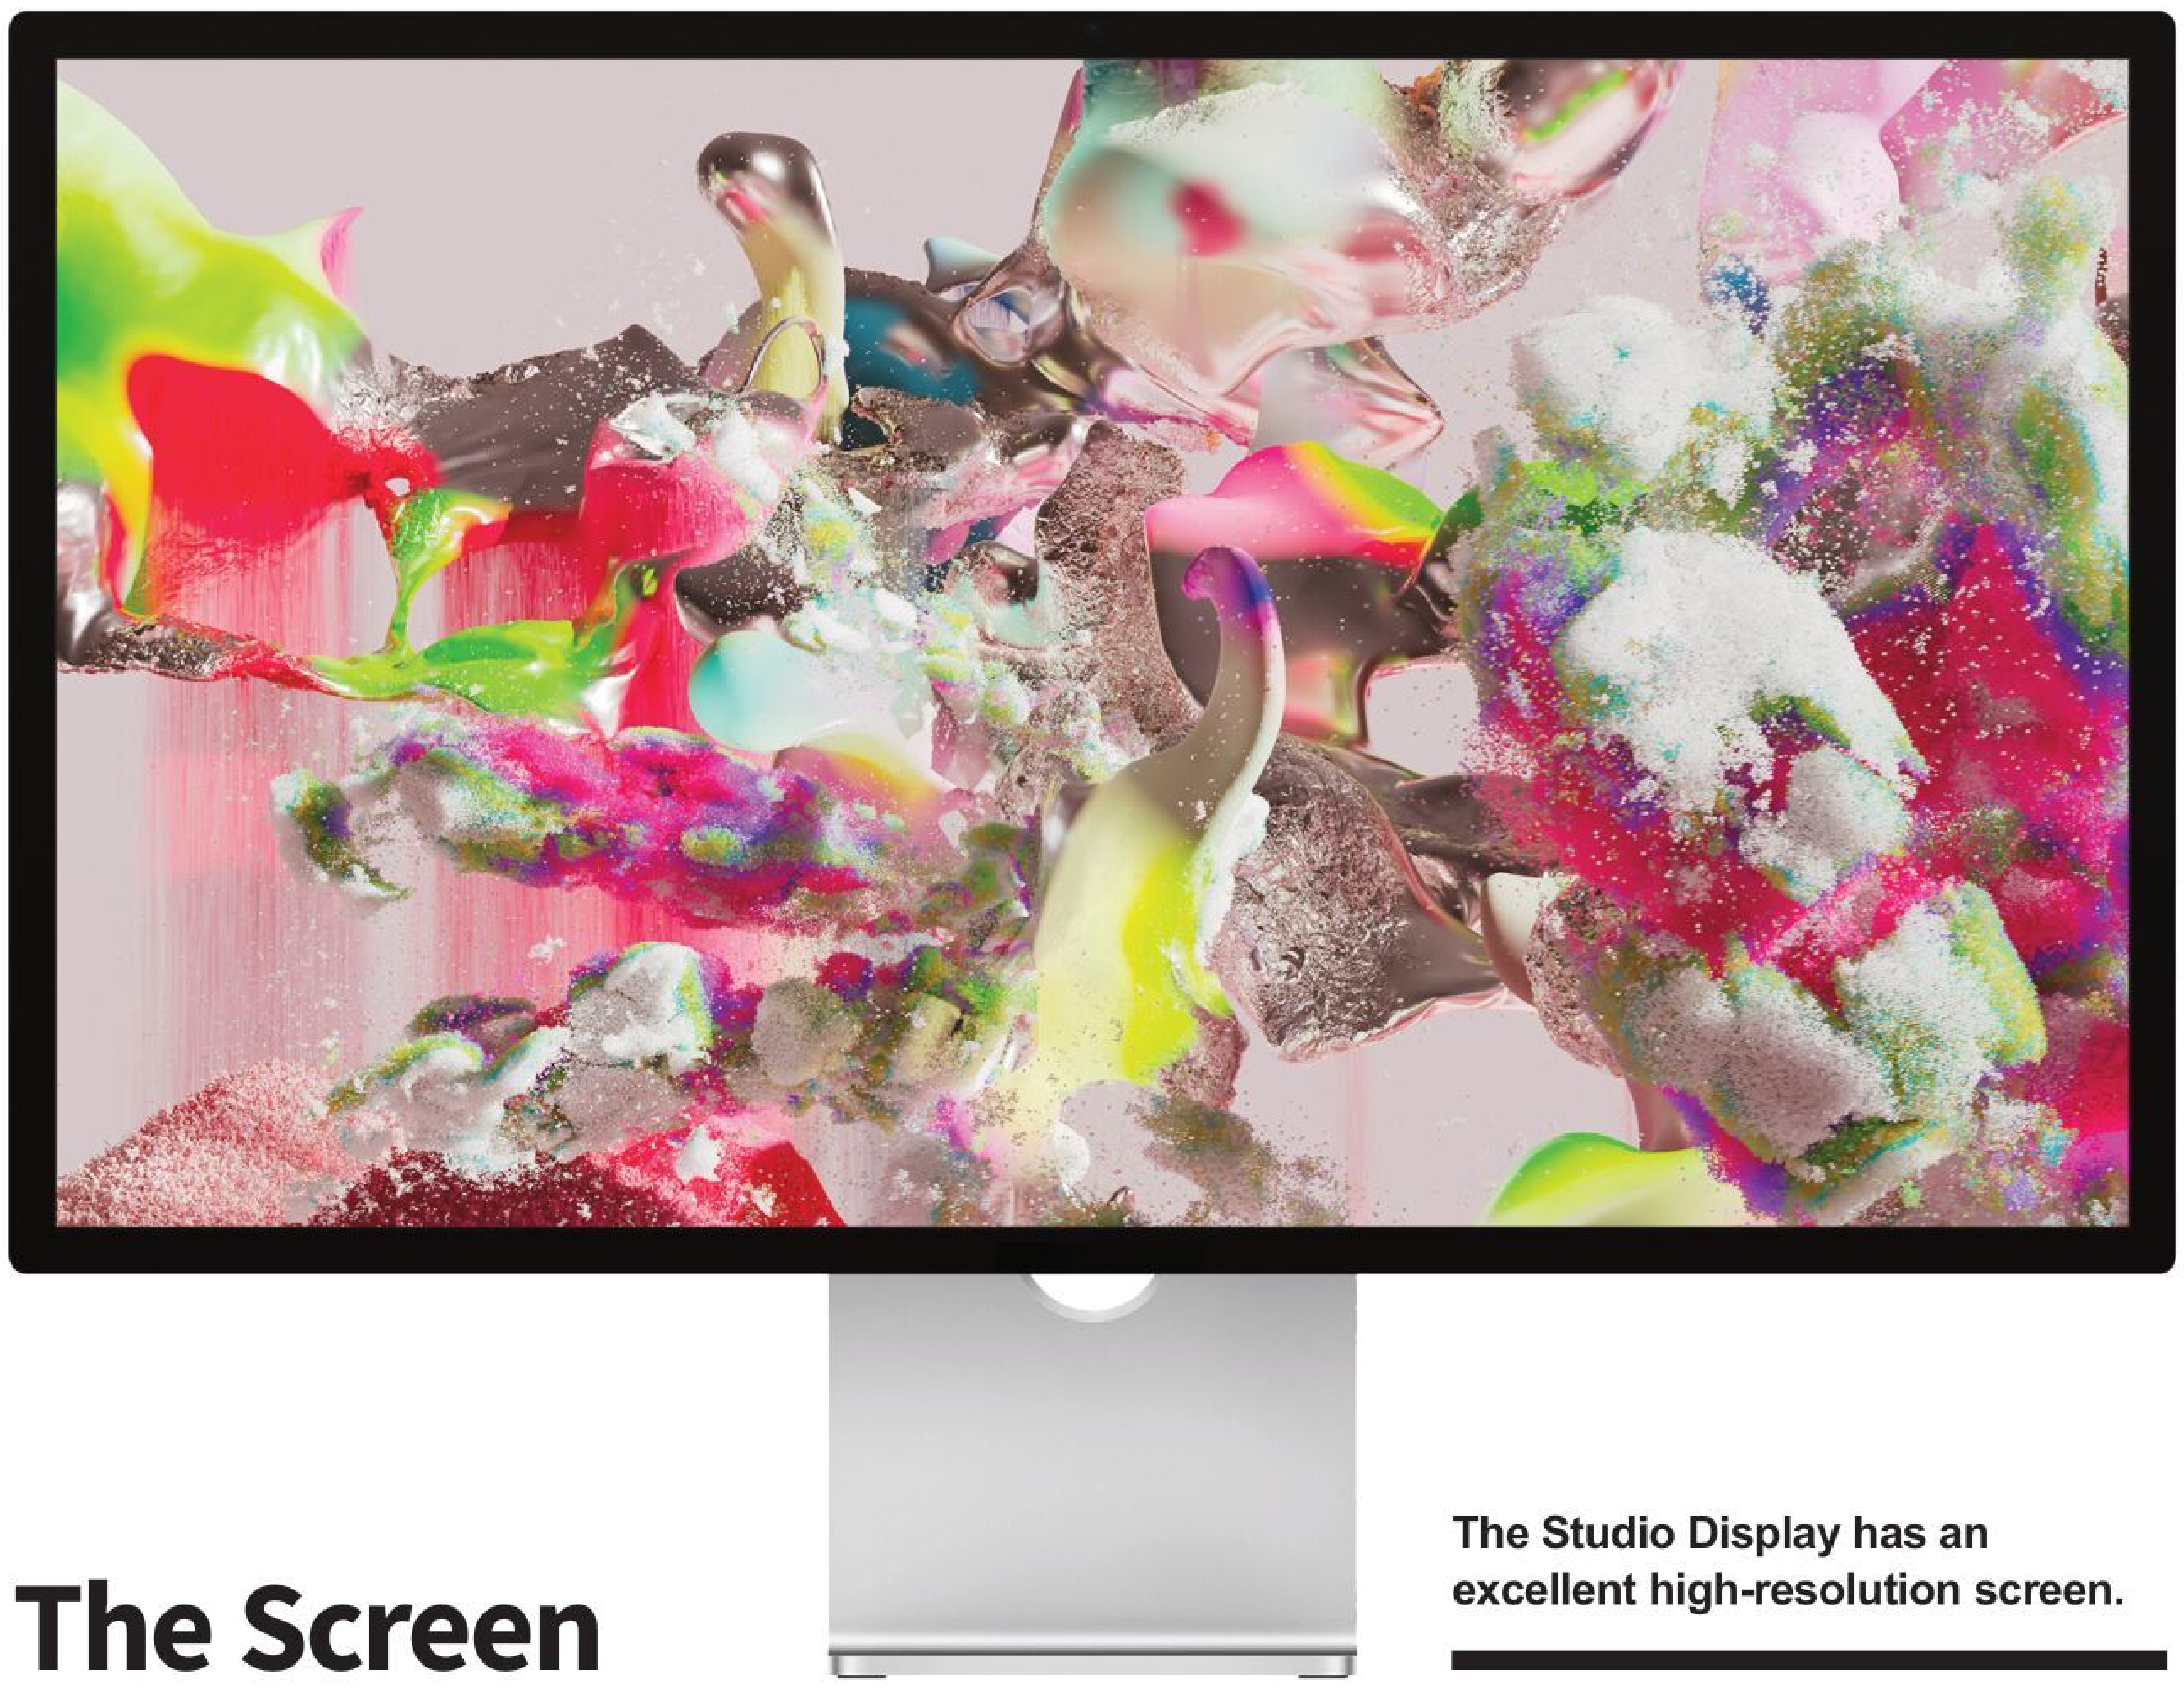
The New Studio Display

Alongside the new Mac Studio, Apple also lifted the lid on its latest monitor; the Studio Display. It's an all-screen design, with very narrow surrounding bezels. It also features an all-aluminium enclosure that crams a lot of technology into its slim profile.

There are two different stands on offer. The basic stand lets you tilt the display up to 30 degrees, but if you need more mobility there's the tilt and height-adjustable version, with a counterbalancing arm that makes the screen feel weightless. A VESA mount adapter option, which supports landscape or portrait orientation for even more flexibility, is also available.



The Studio Display offers a choice of mounts; a stand that lets you tilt the screen 30%, a Tilt and height-adjustable stand option, and a VESA mount that lets you set up your Studio Display in portrait or landscape mode.



The Studio Display has an excellent high-resolution screen.

The Screen

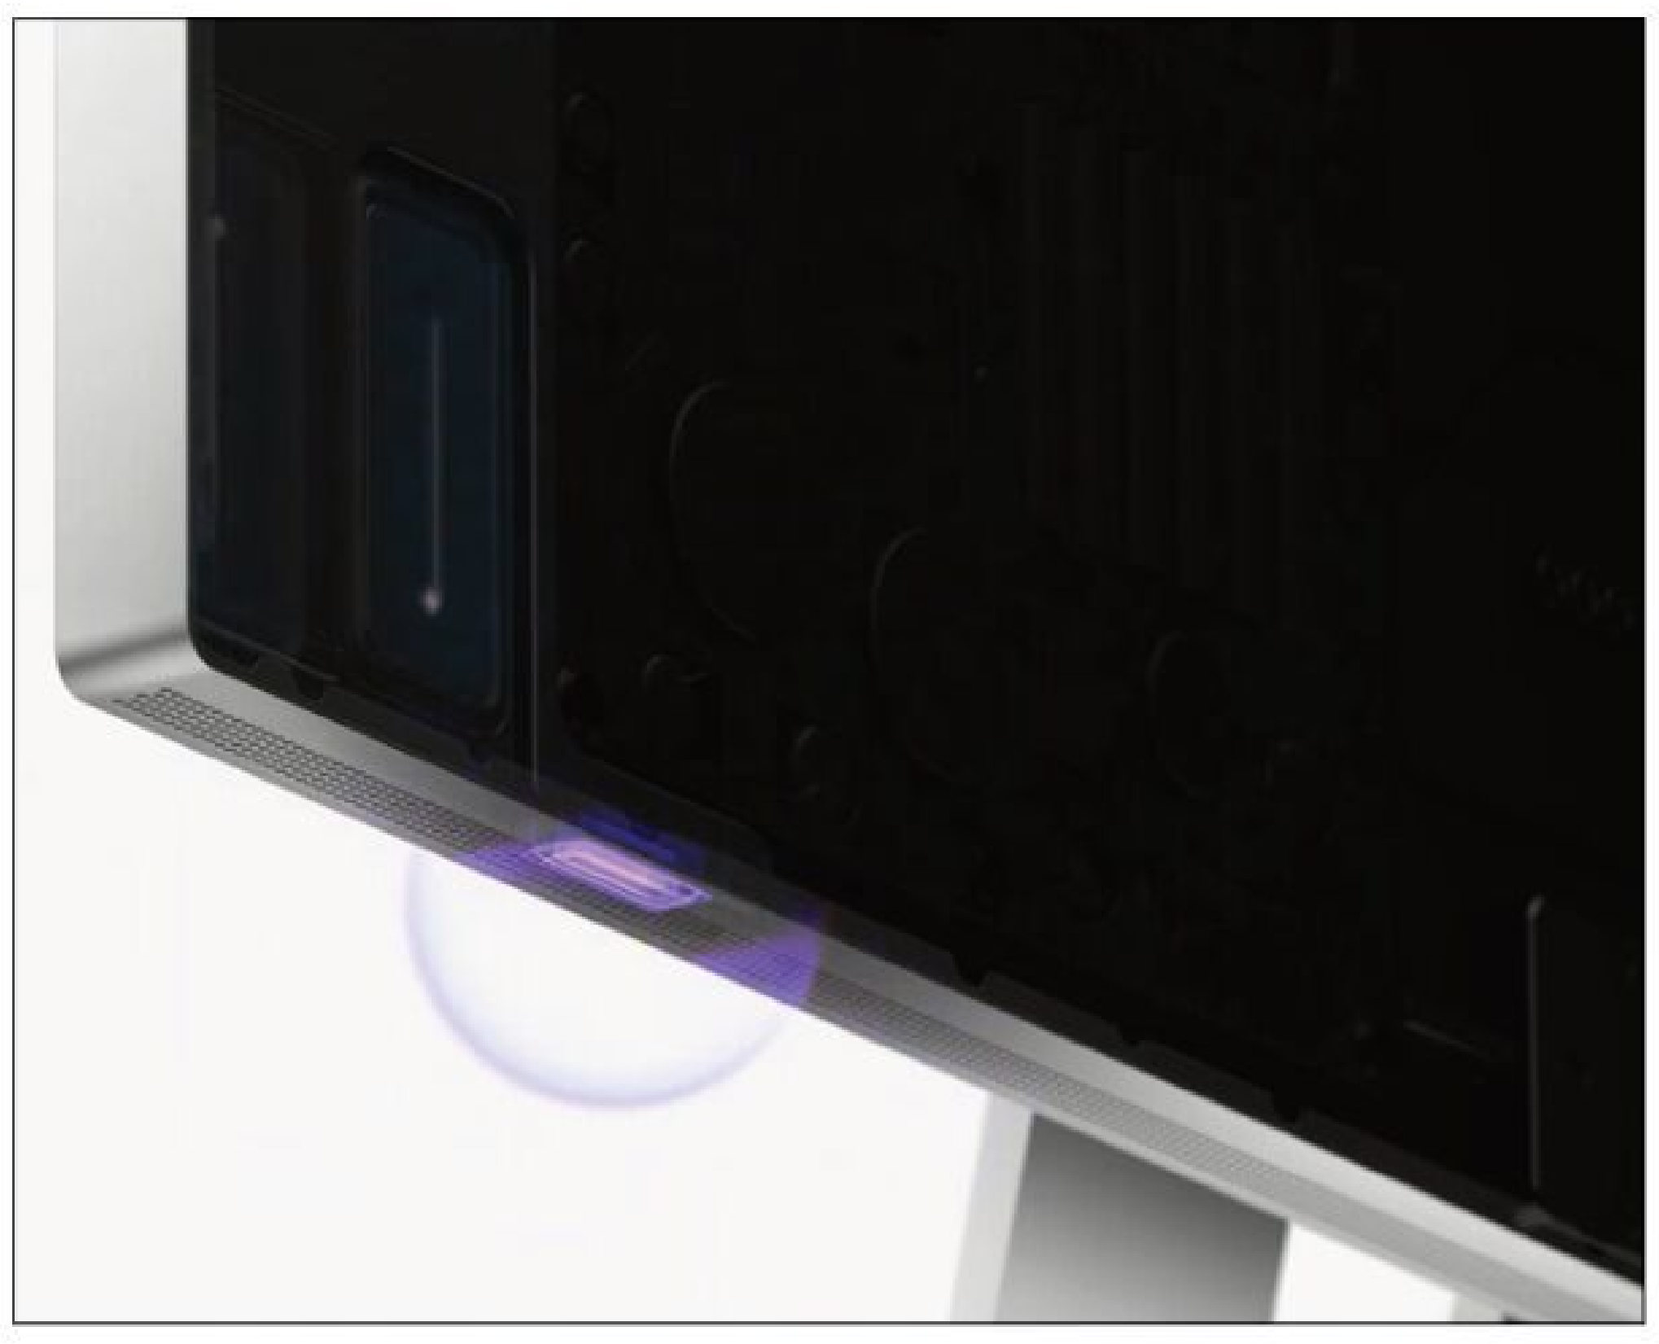
As you'd expect, the Studio Display has an excellent screen. It's 27 inches corner to corner and features 5K definition. As Nicole Kordes, Apple's Engineering Program Manager for Mac, said, "It brings images to life with spectacular detail." With 14.7 million pixels and one billion colours on offer, it's no wonder.

The screen also offers TrueTone, which automatically adjusts the display's colour temperature according to ambient light, for a more natural viewing experience. An 'industry-leading' anti-reflective coating greatly reduces reflections, and a nano-texture glass option makes the display far easier to use in bright light. Nano-texture glass, first introduced on the Pro Display XDR, scatters light to further minimise glare while delivering outstanding image quality.

Outstanding Audio

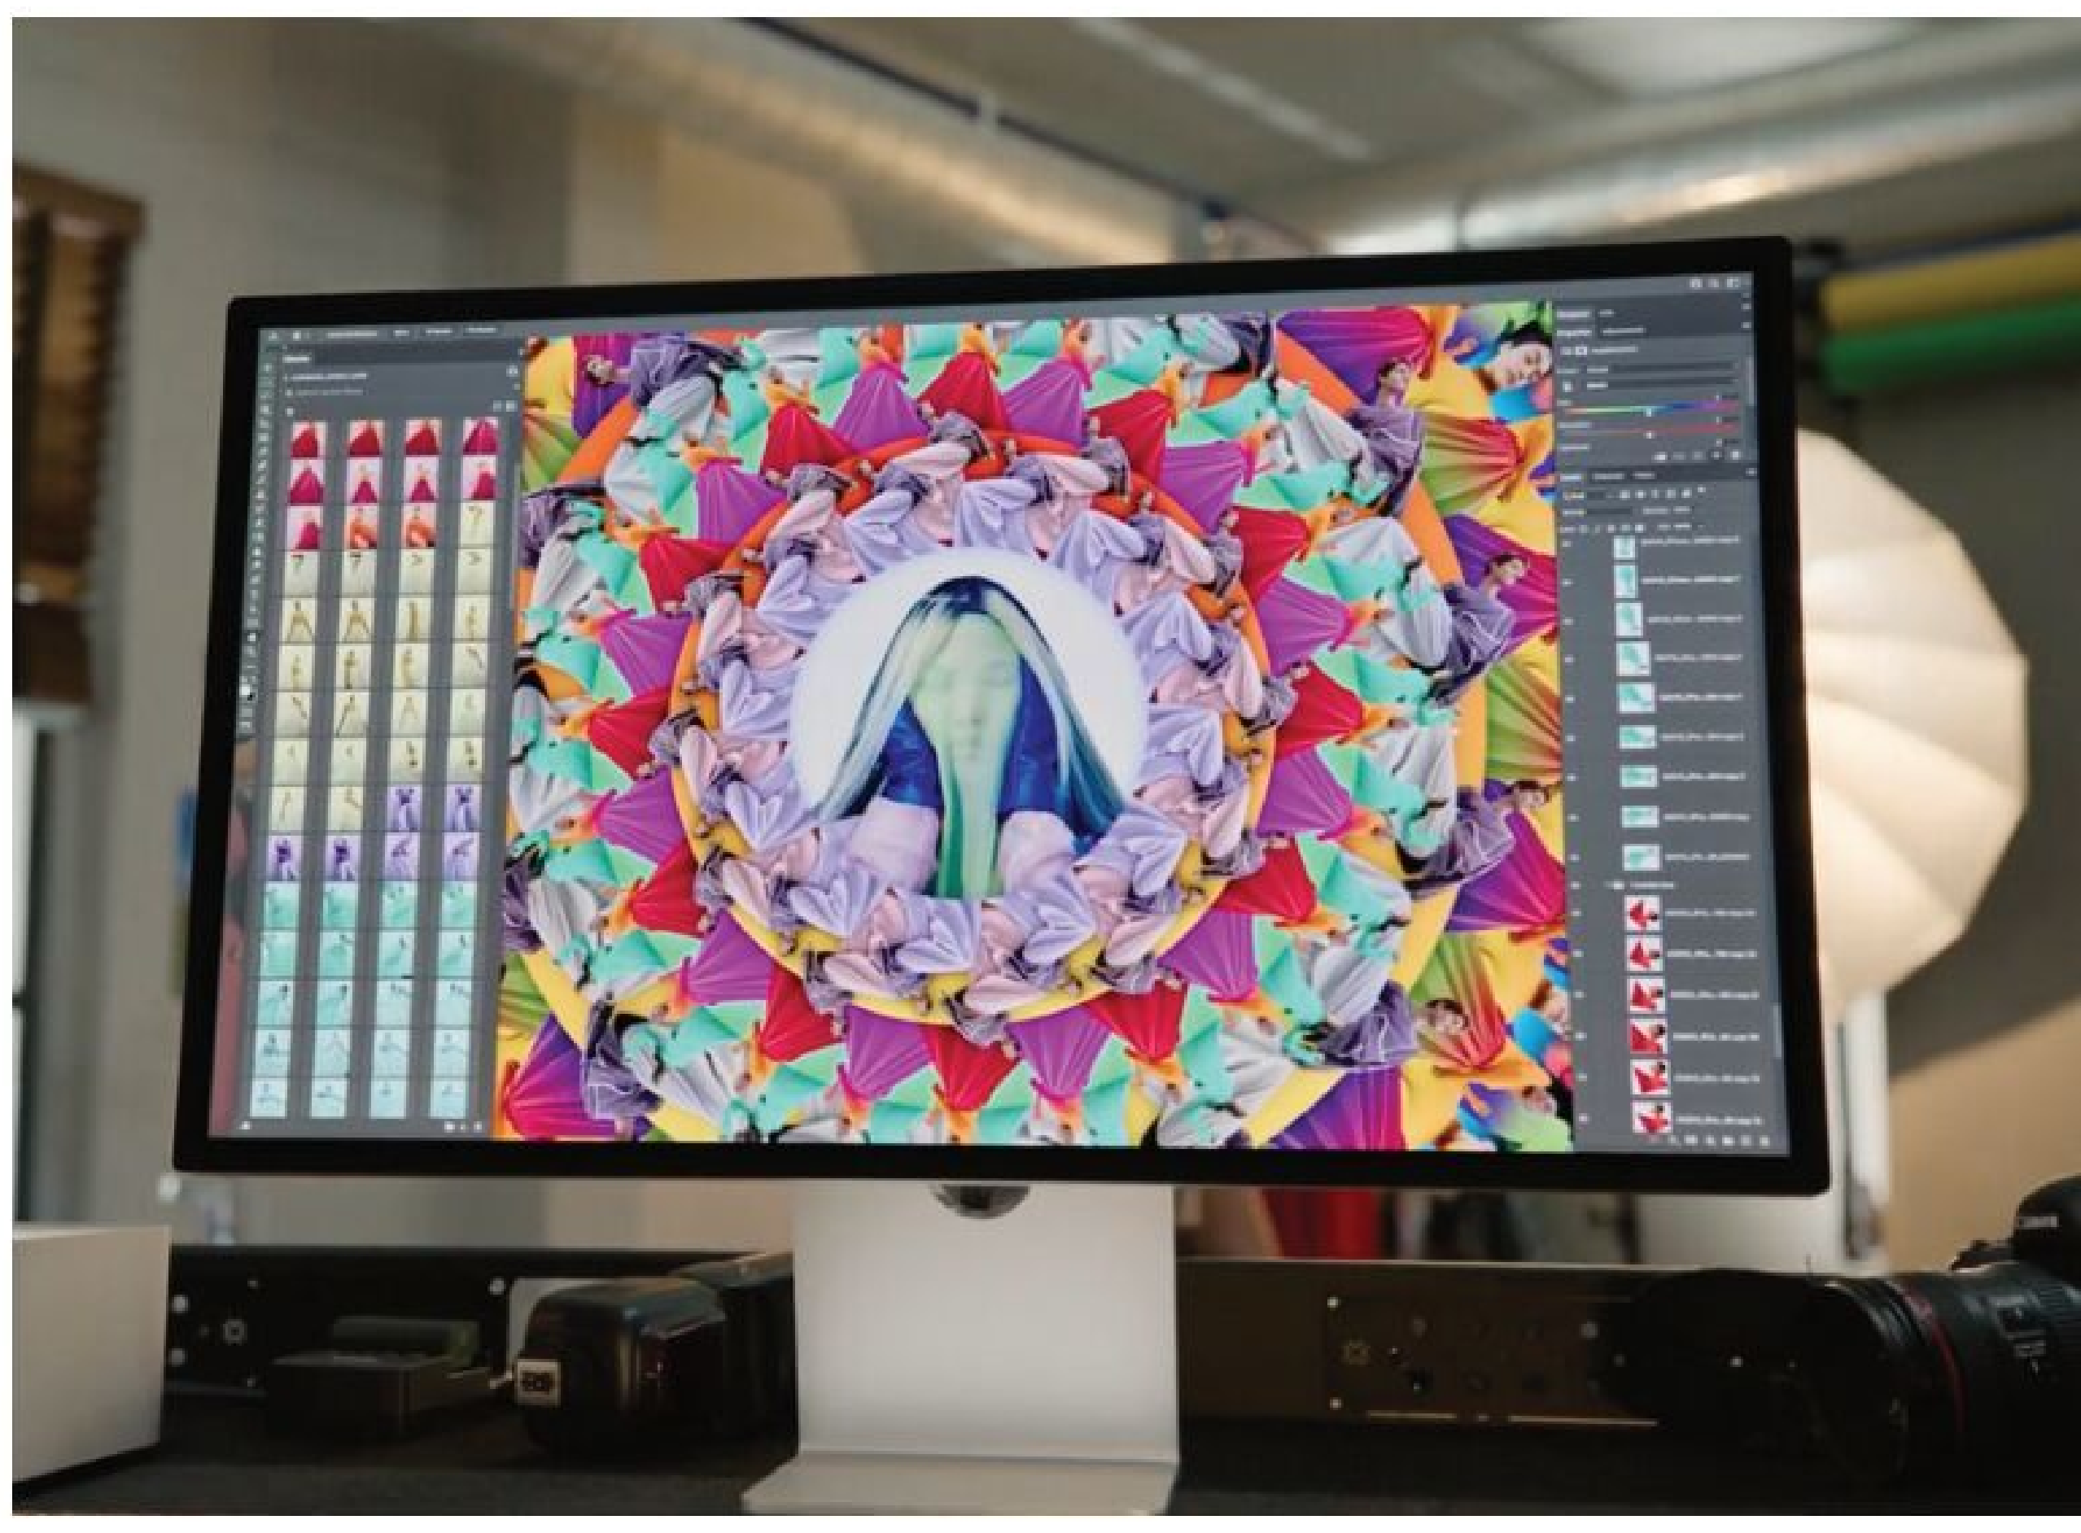
With a high-fidelity six-speaker sound system, the Studio Display sounds as good as it looks. It has four noise-cancelling woofers for the deeper sounds, and two tweeters for sharp, accurate mid and high-tones.

Harnessing the power of the display's A13 Bionic chip, the Studio Display supports Spacial Audio, whereby the sound is shaped in 3D, so movie effects and dialogue appear to come from the correct direction. It's the next best thing to surround sound.

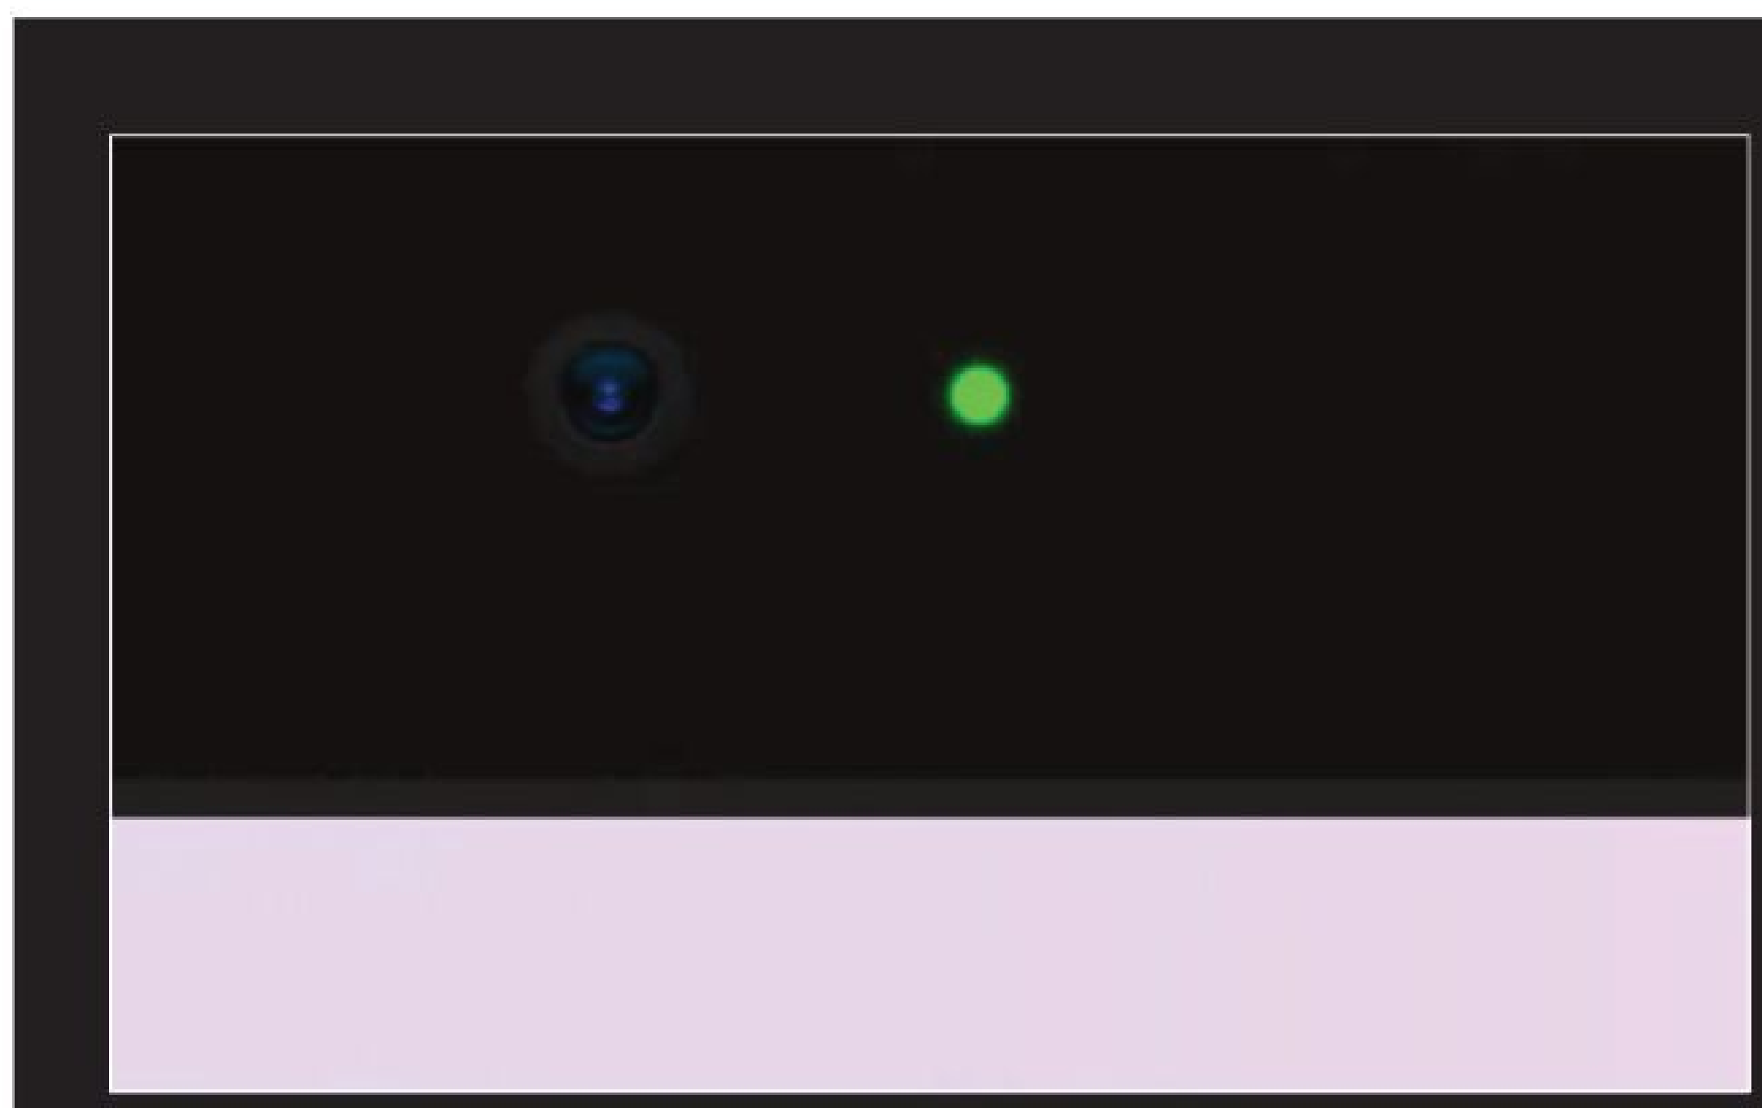


The Studio Display has a six-speaker audio system; four woofers and two tweeters.

The Studio display has a slim design and an all-aluminium body.



In a studio with bright lights, the nano-texture glass option is a must.



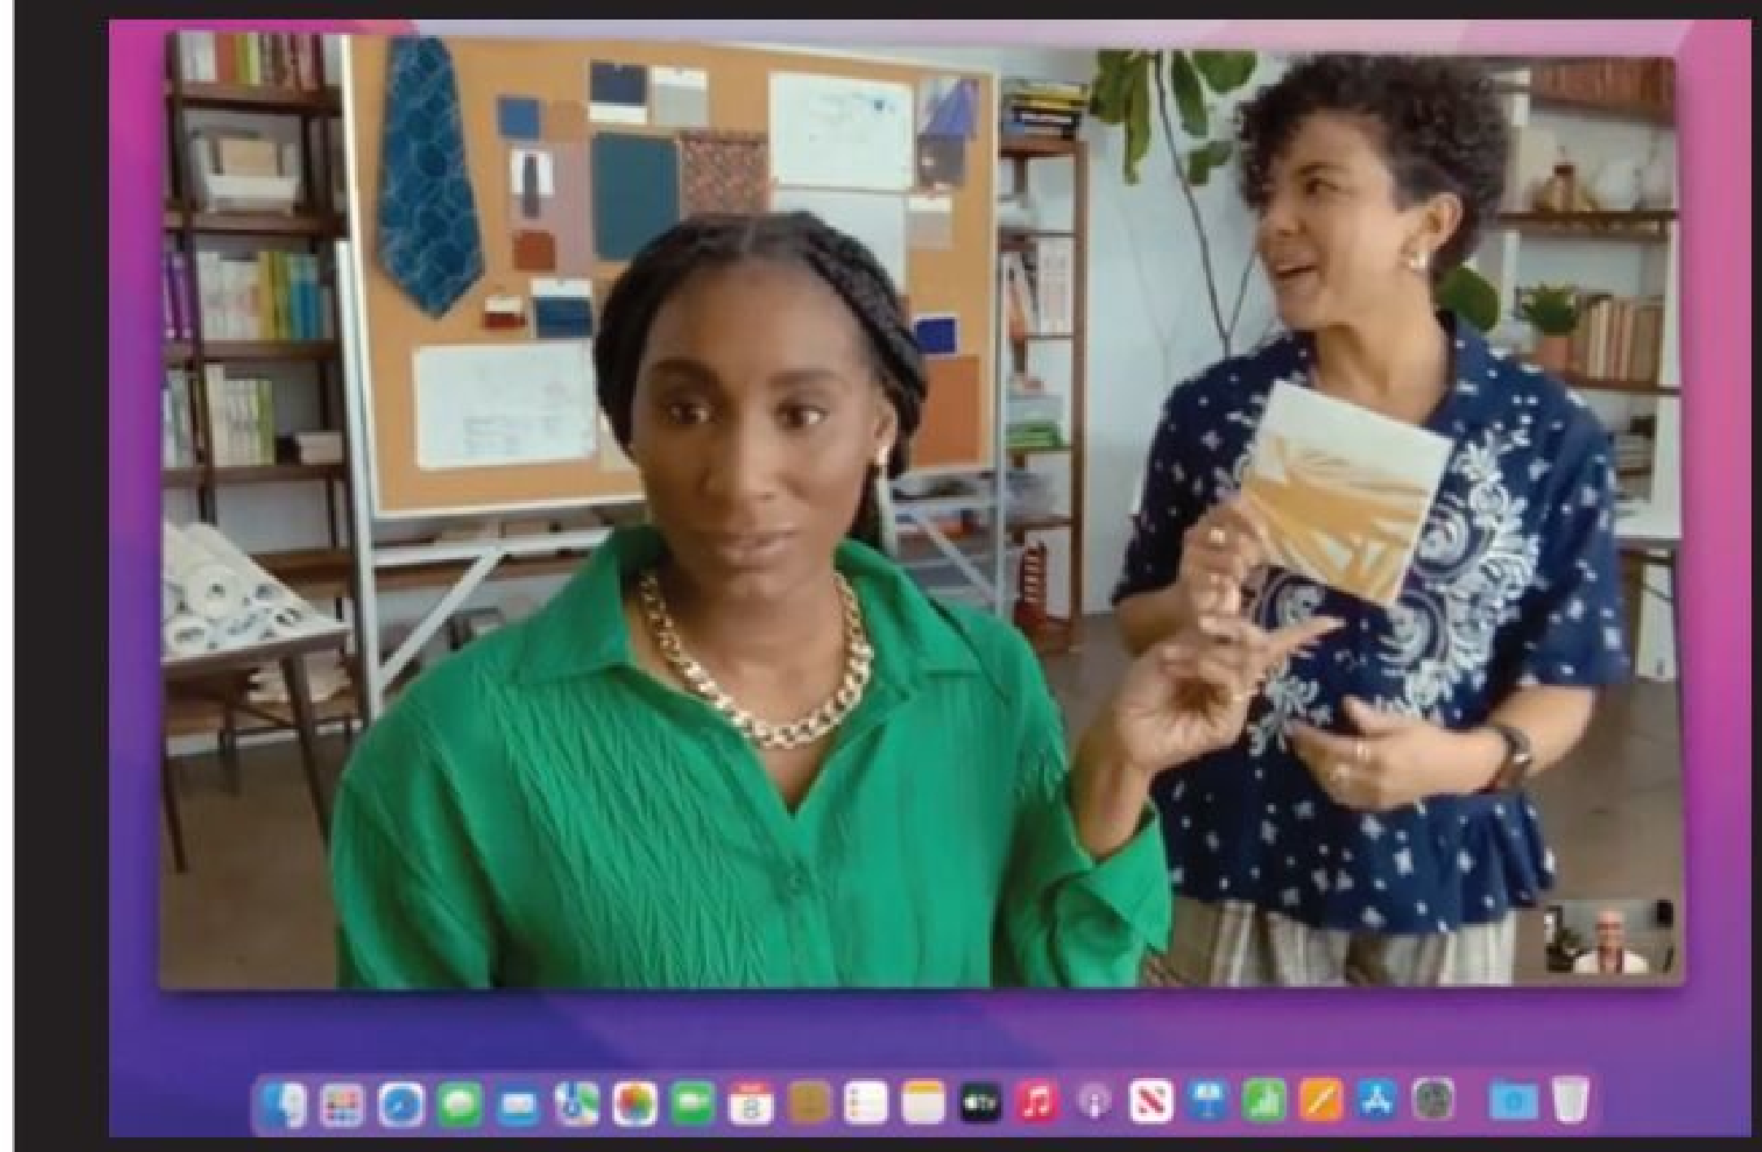
The Studio Display boasts a 12MP Ultra Wide camera.

Advanced Camera

The Studio Display has a powerful camera mounted in the top bezel. It's a 12MP Ultra Wide camera with a 122-degree field of view and a ƒ/2.4 aperture.

The Studio Display has an A13 Bionic chip inside, which works with the monitor's webcam to enable all sorts of features. For example, Apple's great Centre Stage, which keeps the subject, or subjects, in the centre of the screen during video chats. This is a first for the Mac.

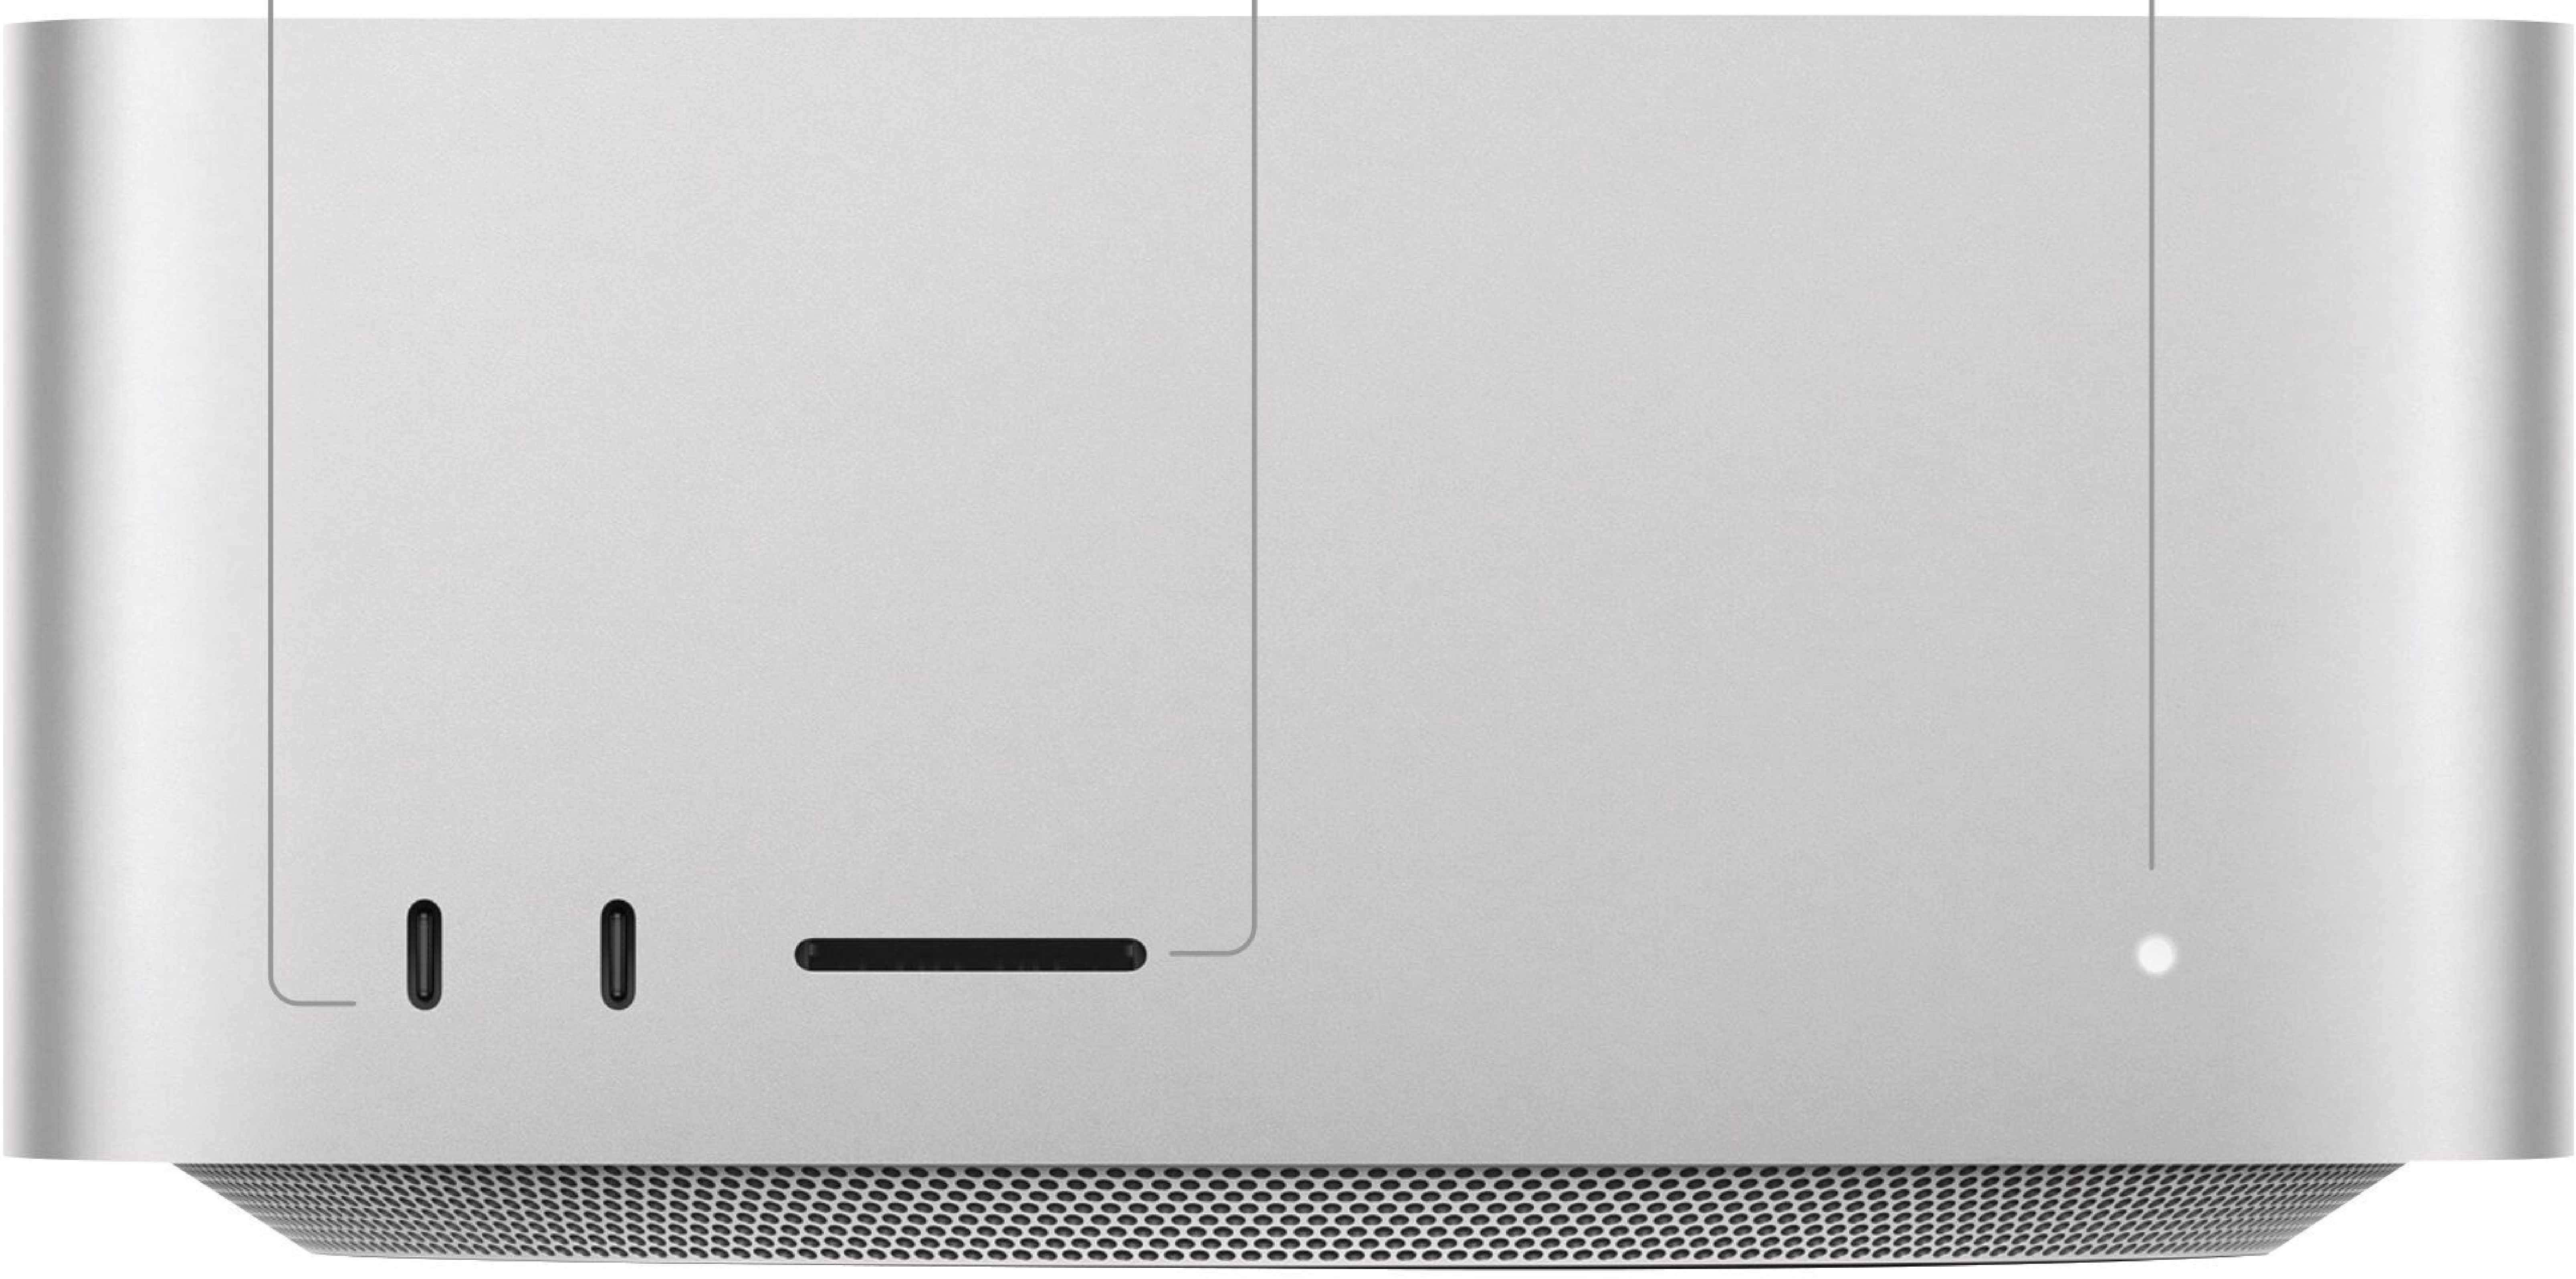
Also, for video conferencing, atop the screen there's an array of three studio-quality mics, with a very low noise floor for crystal clear calls.



Centre Stage makes the Studio Display ideal for making video calls.

Hardware Explained

The Mac Studio has great expansion potential. Let's take a look at its ports.



There are two USB-C outlets on the front of the Mac Studio. On the models that have M1 Ultra processors, they're also Thunderbolt 4 compatible. Being on the front of the Mac Studio, they're ideal for plugging in devices like external drives or thumb drives, which you later want to unplug and take away with you.

An SDXC card reader. Slot in an SD card, or a microSD card in an adapter, and you can read and write to it just like an external thumb drive or hard drive. It's ideal for reviewing pictures and videos taken on your digital camera.

This LED is the power indicator, showing you whether your Mac Studio is switched on or off.

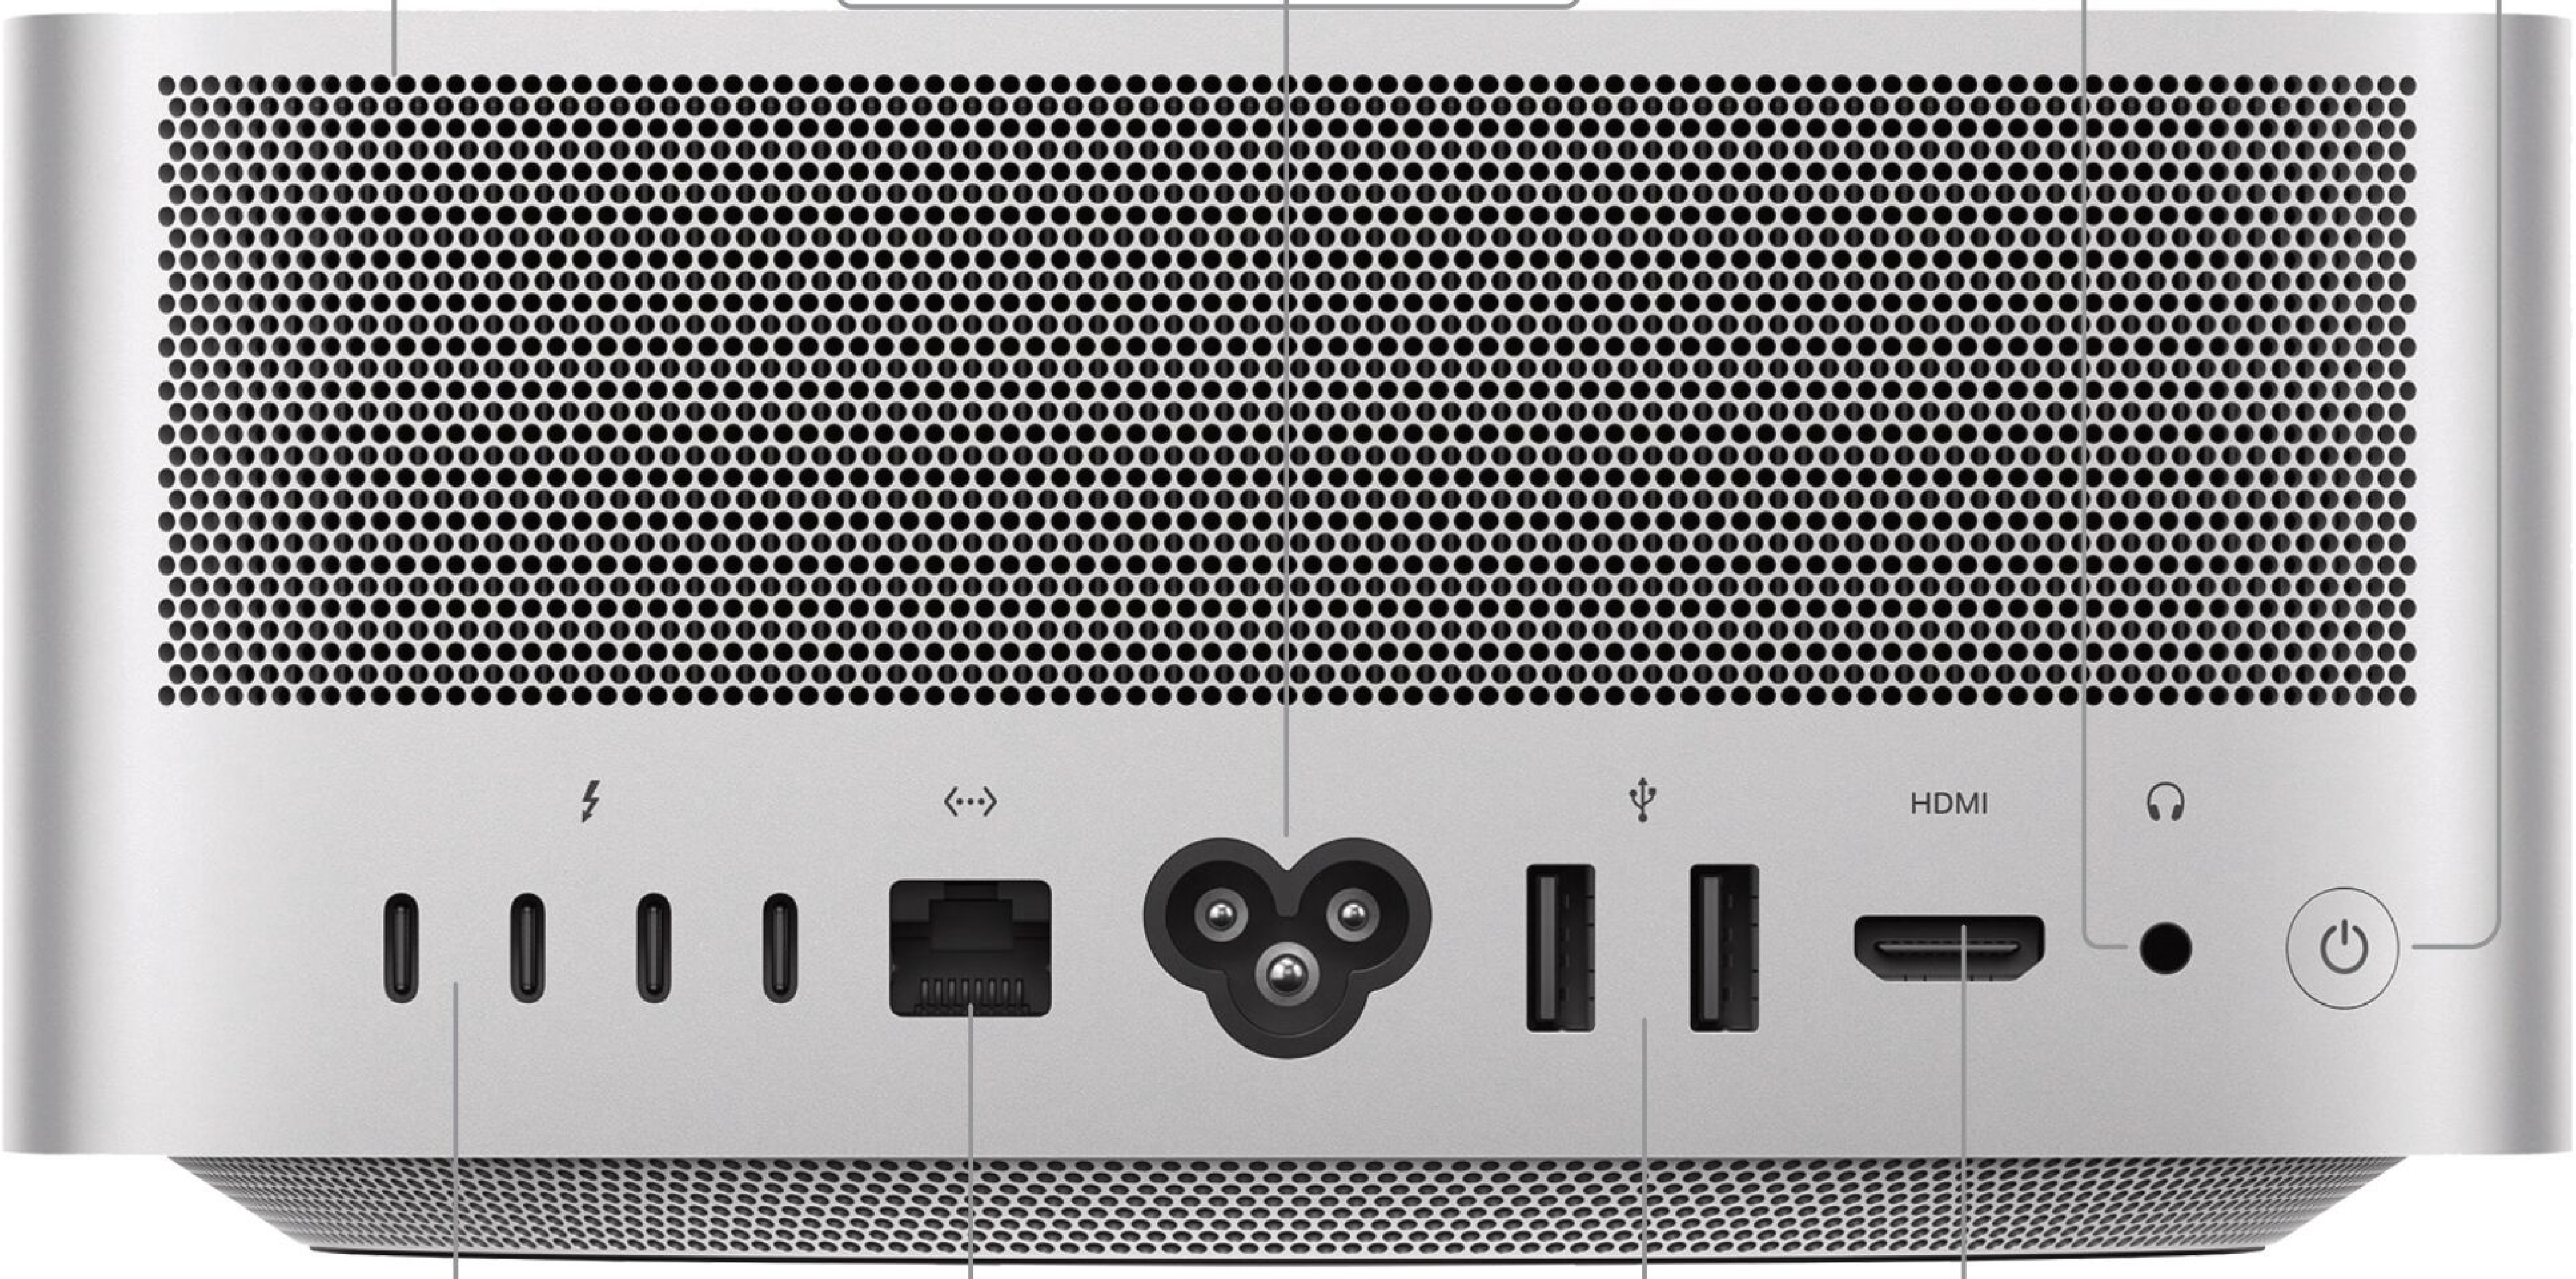
These precisely milled holes are the air intake. Fans at the top of the Mac Studio suck cool air through these holes, which extend around the full circumference of the unit's circular stand, and draw it over the circuit boards to cool them down.

Two thousand milled holes at the rear of the Mac Studio allows air drawn in through the base for cooling to exit the body of the computer. Make sure you don't block these holes when installing your Mac Studio.

The power socket. The power cable is in the box when you buy your Mac Studio, but no other accessories are included. If you need a keyboard, mouse and/or trackpad, you have to buy them separately.

A 3.5mm jack port.

The power button. Press it to turn your Mac Studio on.



Four Thunderbolt 4 ports. These are excellent for plugging in peripherals such as hard drives, displays and more. They're also compatible with USB-C devices, of course.

The Mac Studio's Ethernet port offers ten gigabit speeds. You can use an Ethernet cable to connect your Mac Studio directly to your router, or through extensions such as a HomePlug setup. This gives a cabled network and Internet connection.

Two USB-A sockets. They're USB 3.1 Gen 2, with speeds of up to 10Gb/s. These ports are ideal for devices like printers or scanners, which don't need the extra speed offered by USB-C or Thunderbolt.

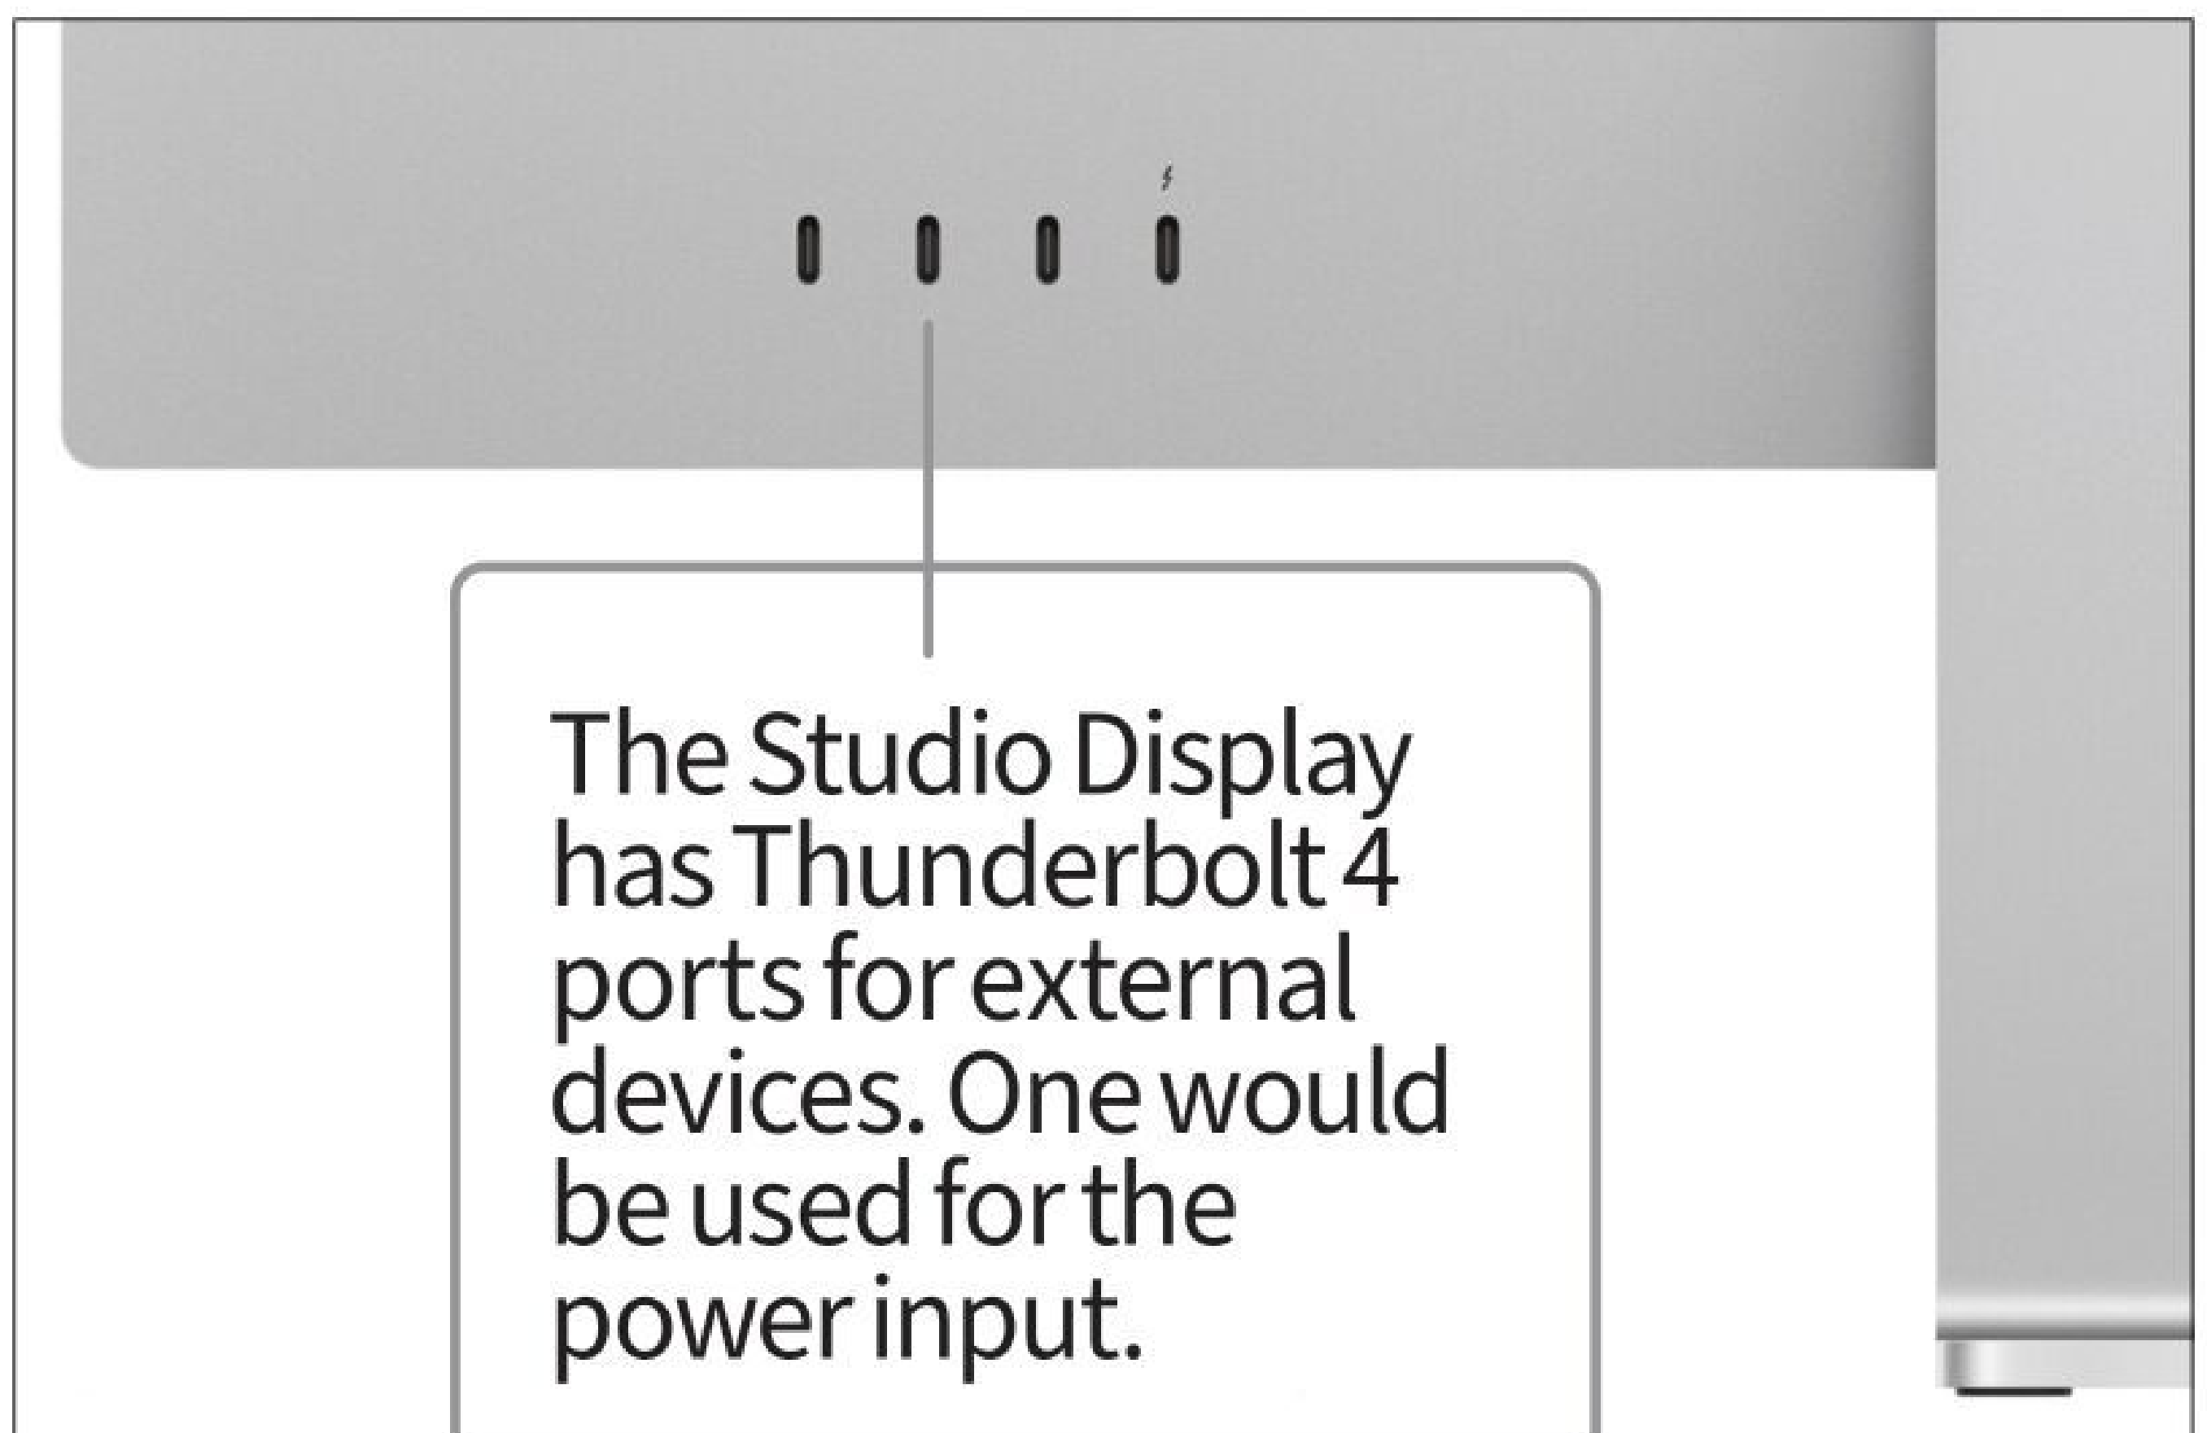
The High-Definition Multimedia Interface (HDMI) port is, of course, for monitors. It's ideal if you want to connect a screen that doesn't have a Thunderbolt option. It carries the sound as well as a picture, so if your HDMI display has speakers, this single connection is all you need.

Wireless Communications

The Mac Studio also conforms to the latest wireless standards.

Wi-Fi: The Mac Studio has 802.11ax Wi-Fi 6 wireless networking. It's backwards compatible with standards IEEE 802.11a/b/g/n/ac, so you can use existing Wi-Fi products with it too.

Bluetooth: The Mac Studio's Bluetooth chip is Bluetooth 5.0 for low energy consumption and dual audio, which means you can stream to two compatible Bluetooth devices at once. It is, of course, backwards compatible with older versions of Bluetooth.



The Studio Display has Thunderbolt 4 ports for external devices. One would be used for the power input.

In Comparison...

Let's look at how the various models of the Mac Studio compare with older Macs and with each other.

	Mac Studio, M1 Max	Mac Studio, M1 Ultra	24-inch iMac (most expensive version)	Mac Pro (most expensive configured version)	iMac Pro (most expensive version)	Mac mini M1

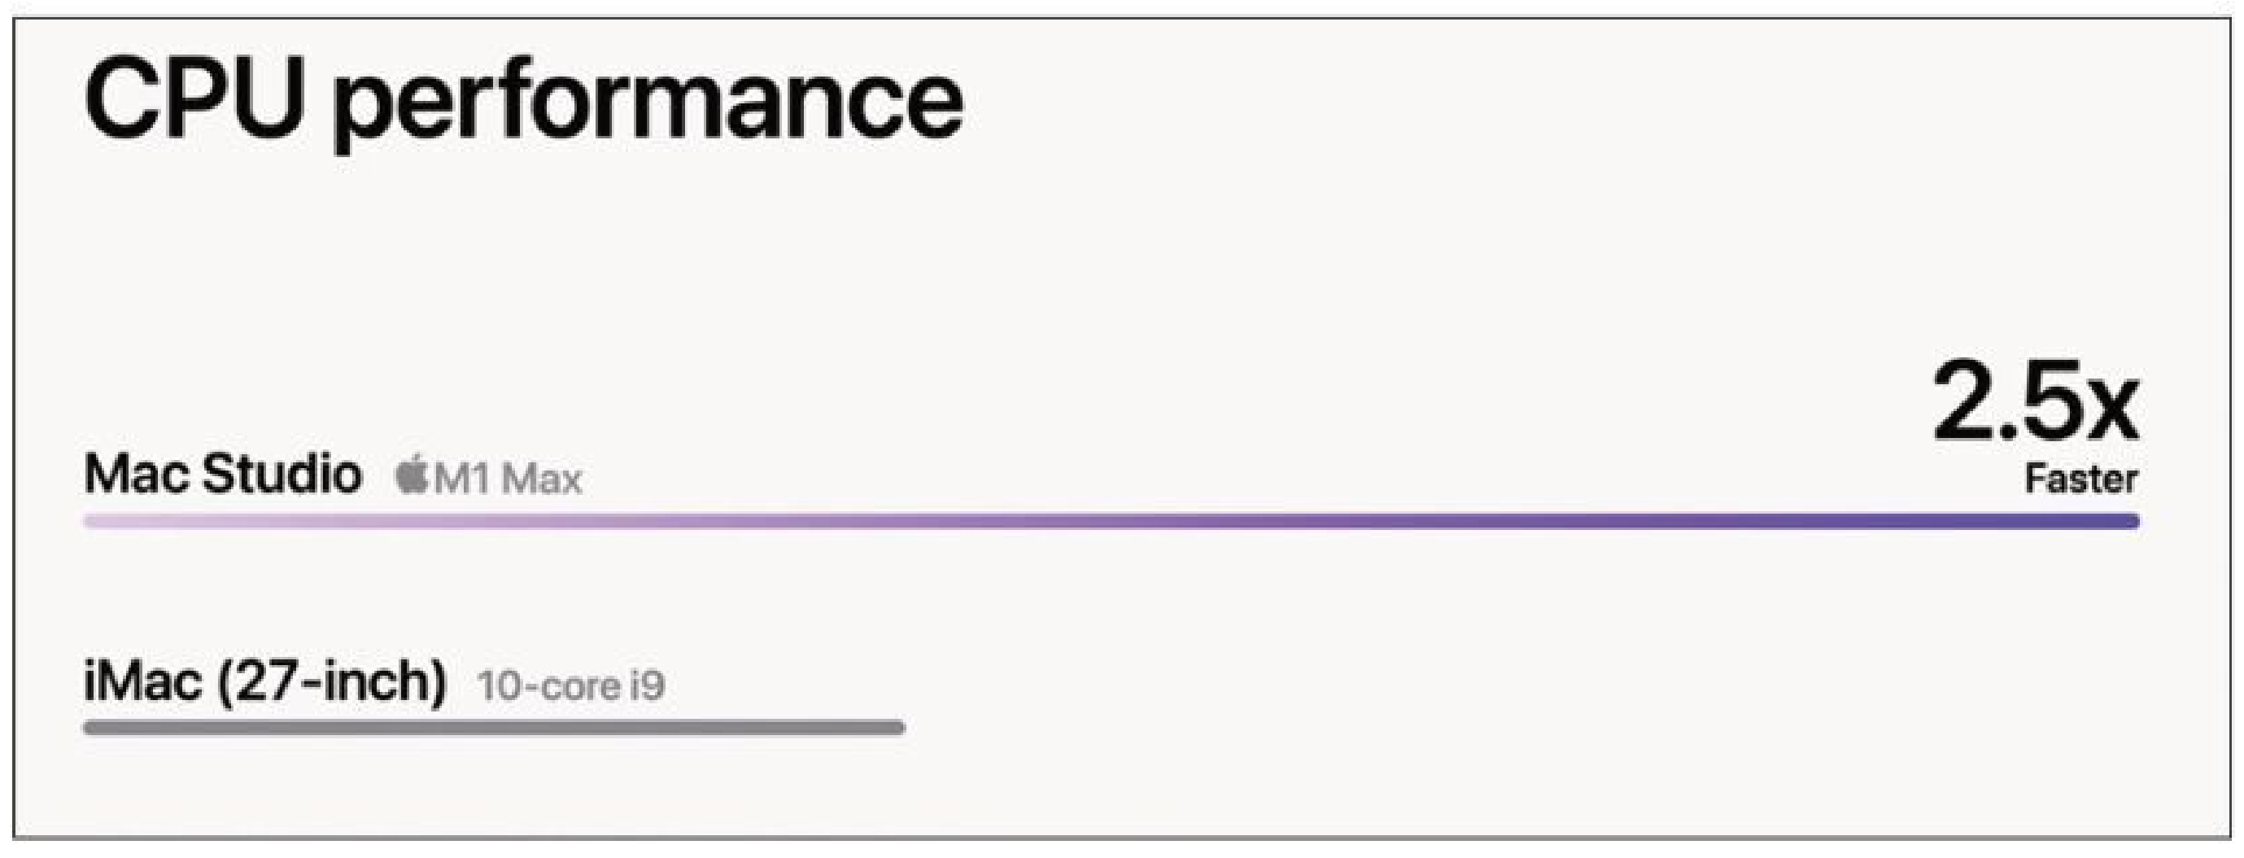
Price and Availability

The new Mac Studio and Studio Display are available online and in Apple Stores from 18th March, 2022. Pricing is as follows;

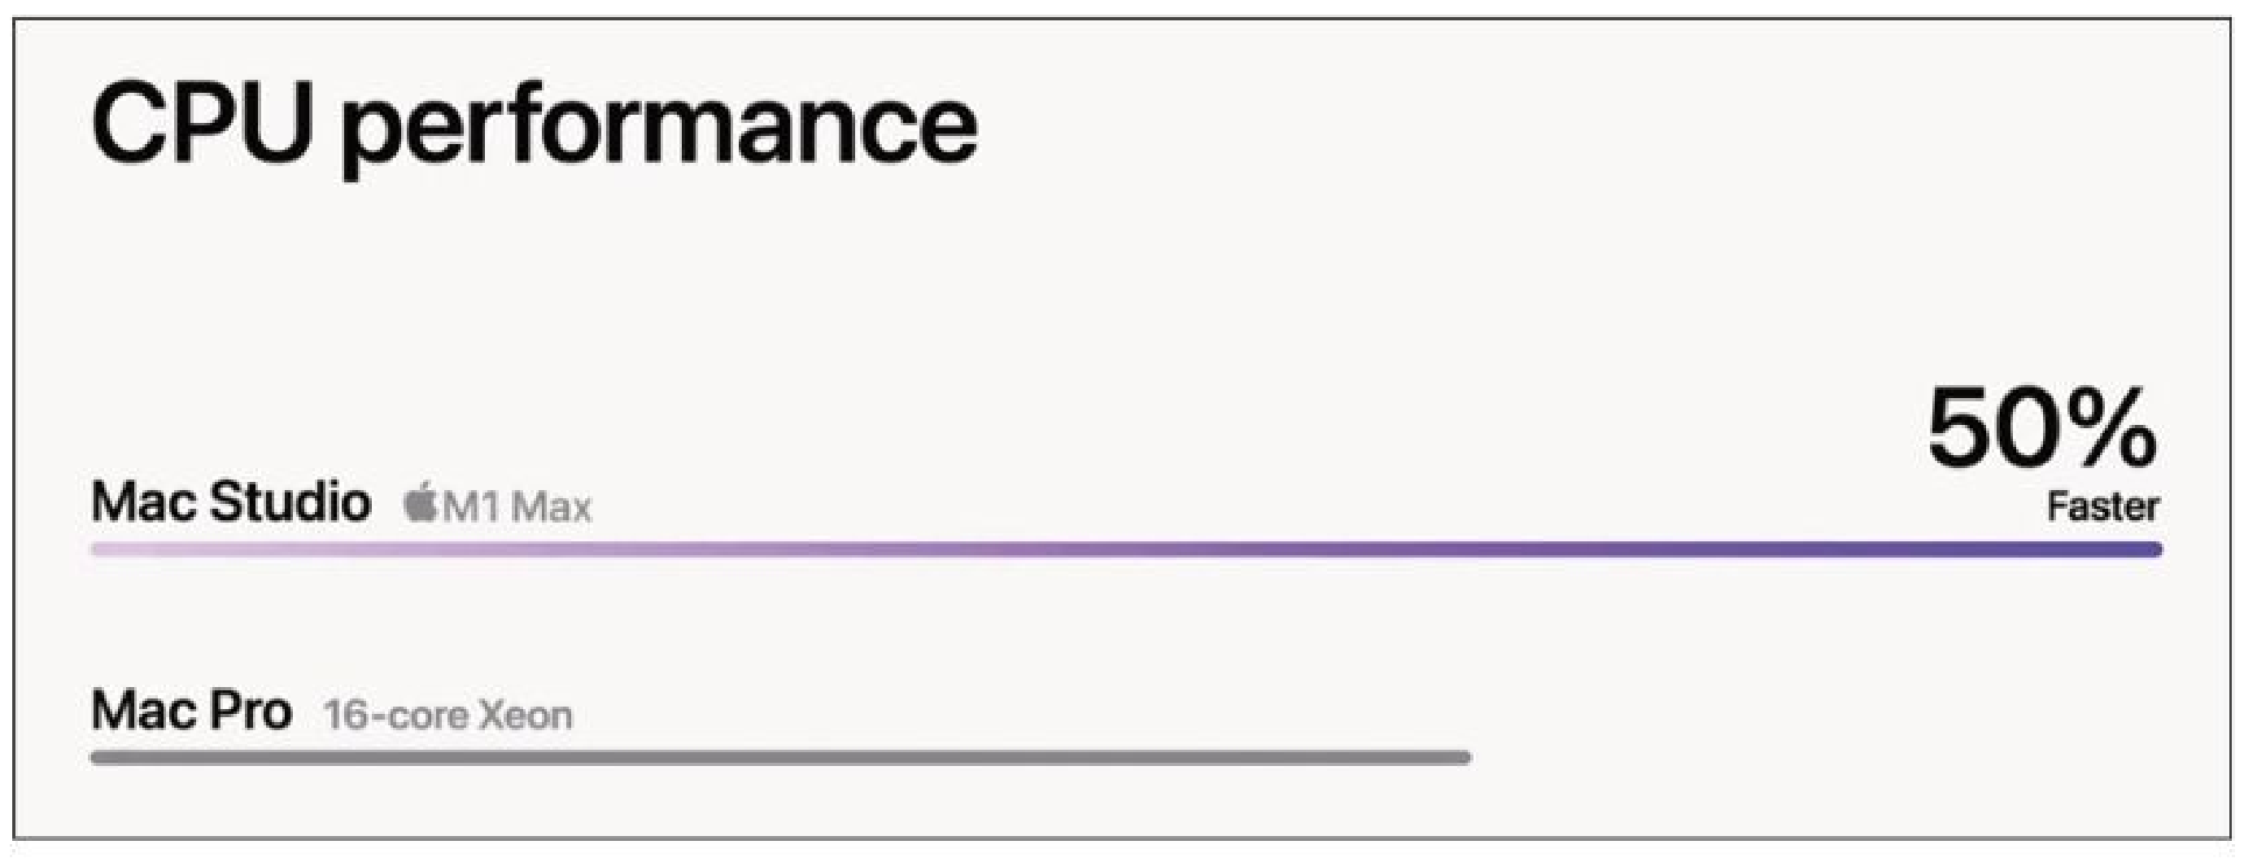
Mac Studio
M1 Max: £1,999, $1,999, 2,299 €
M1 Ultra: £3,999, $3,999, 4,599 €

Studio Display (basic version)
£1,499, $1599, 1,749 €

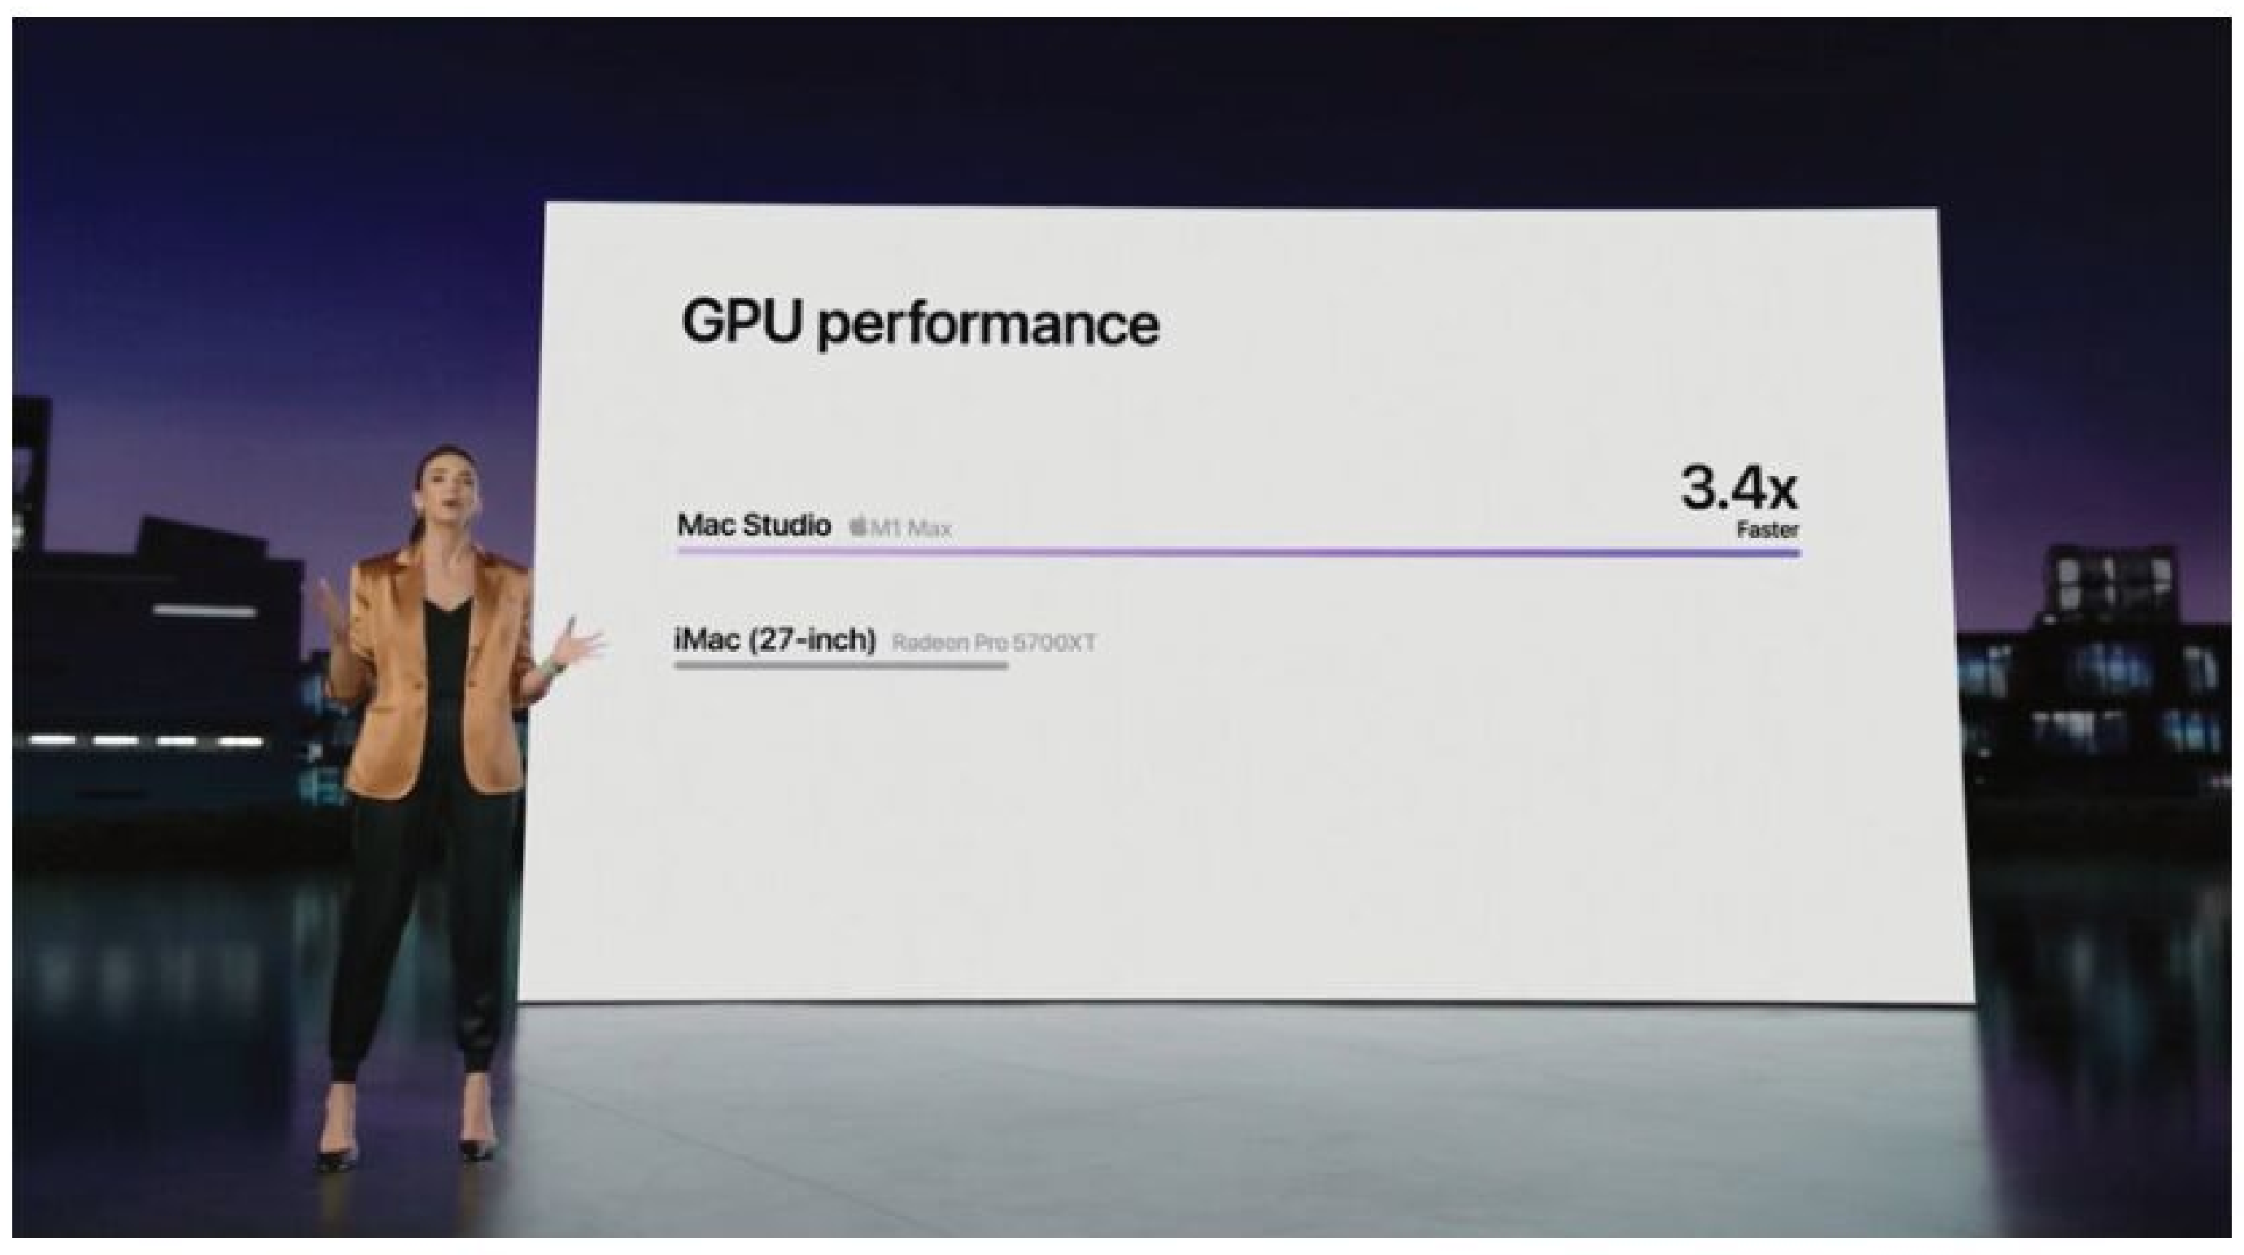
The Mac Studio with an M1 Max Processor



A Mac Studio with an M1 Max chip is up to 2.5 times faster than the fastest 27 inch iMac.

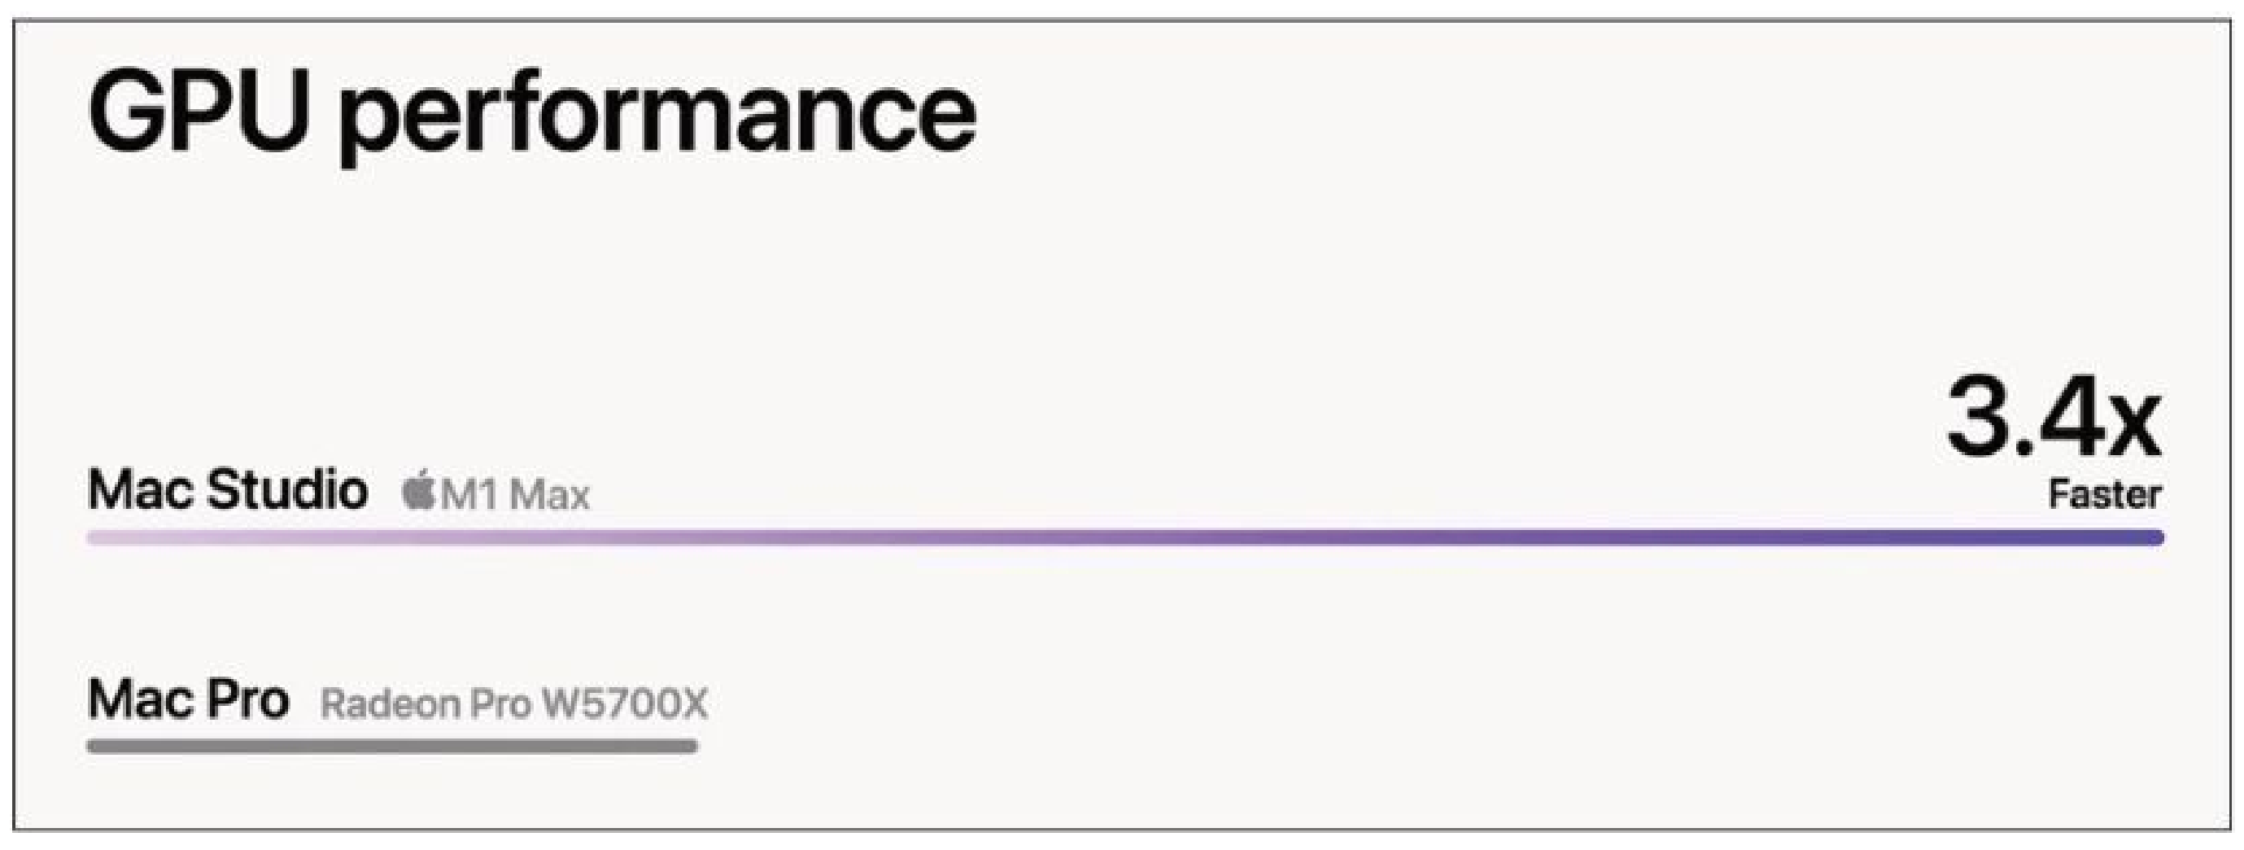


Even the M1 Max Mac Studio, the slower of the two models, is up to 50% faster than the 16-core Mac Pro.



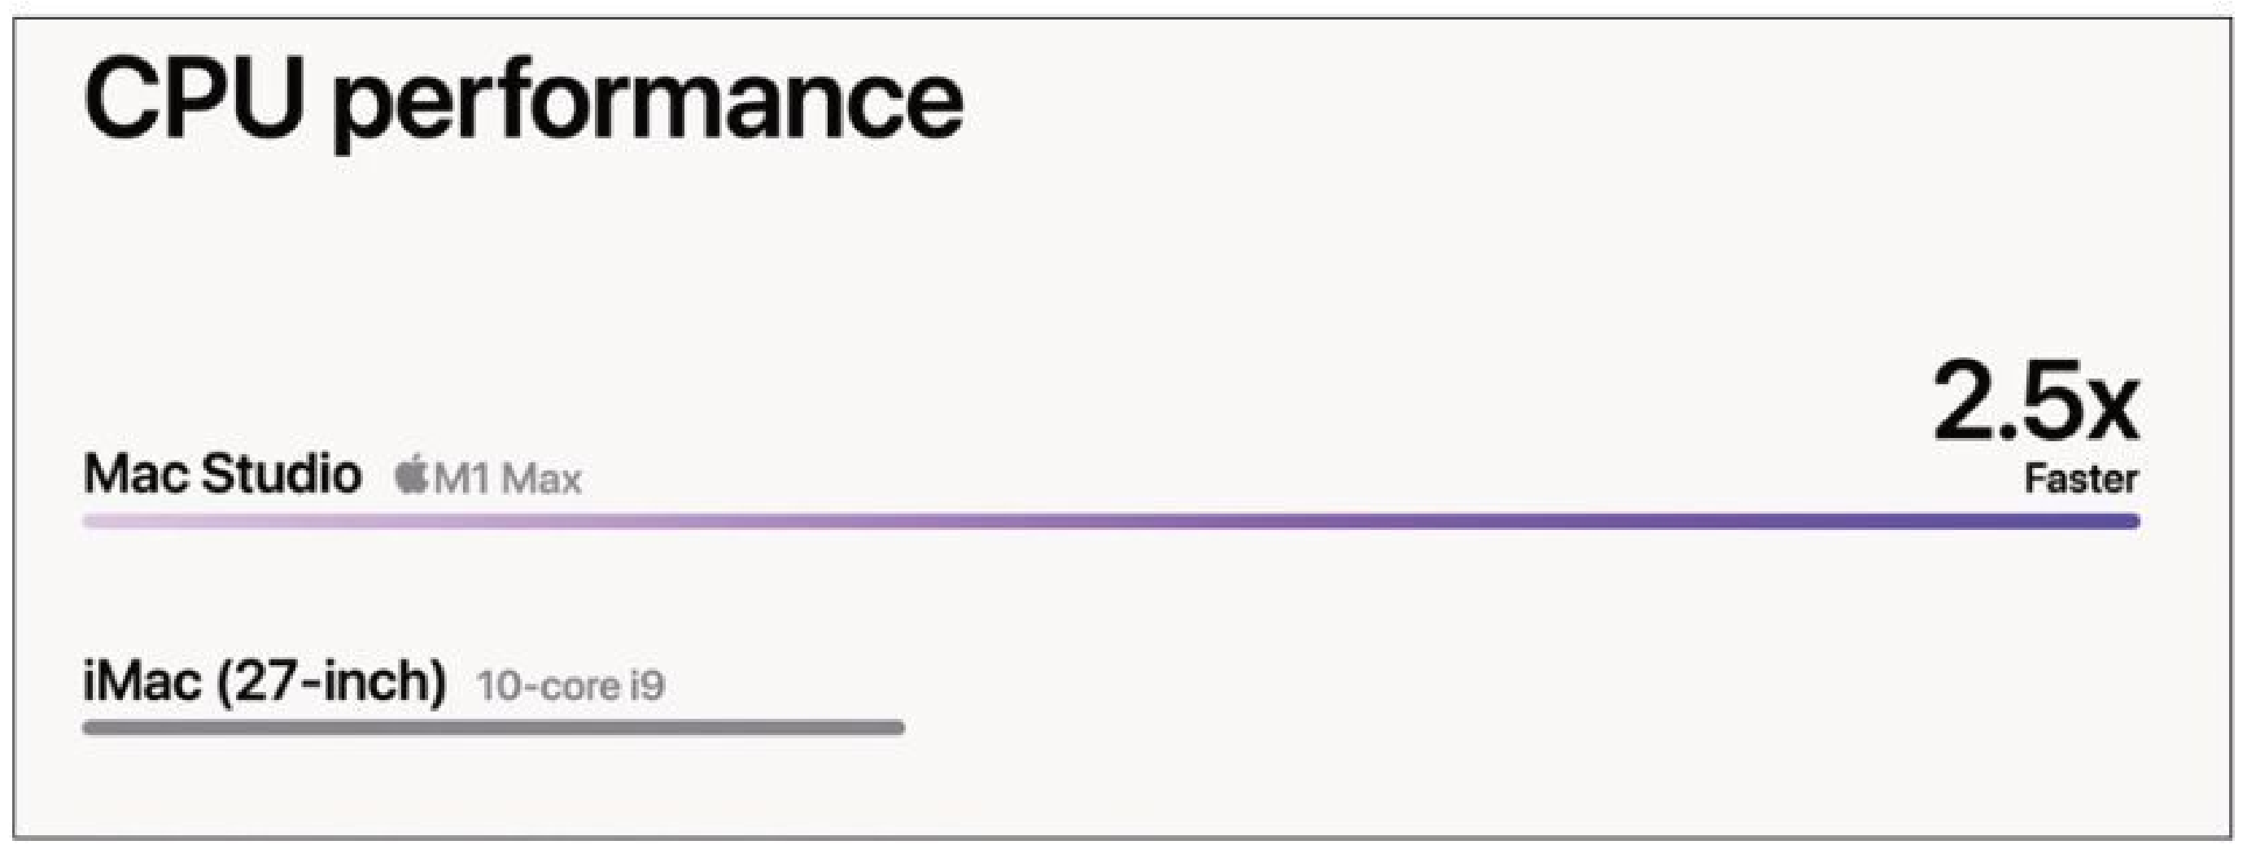
GPU performance
Mac Studio M1 Max
3.4x
Faster
iMac (27-inch) Radeon Pro 5700XT

The M1 Max's graphical performance makes it up to 3.4 times faster than the 27 inch iMac with a Radeon Pro 5700XT.

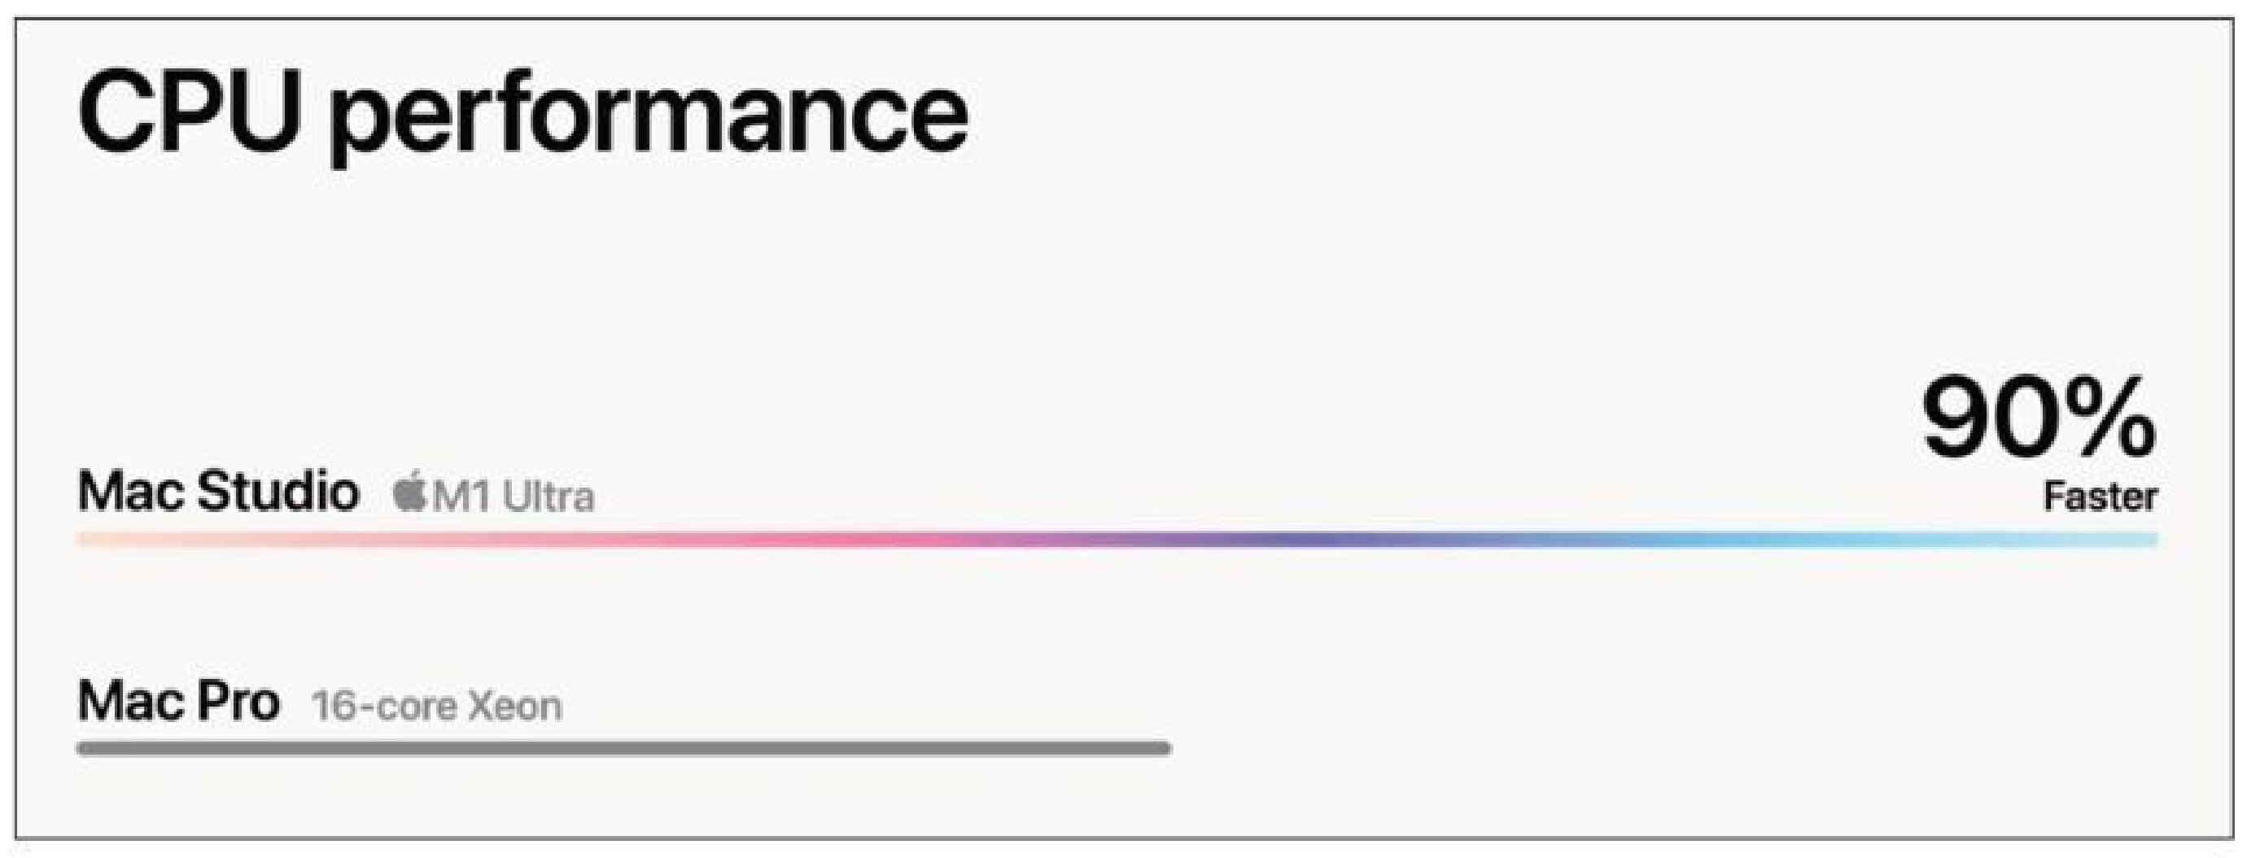


The M1 Max Mac Studio even outperforms the Mac Pro's most popular graphics card, the Radeon Pro W5700X.

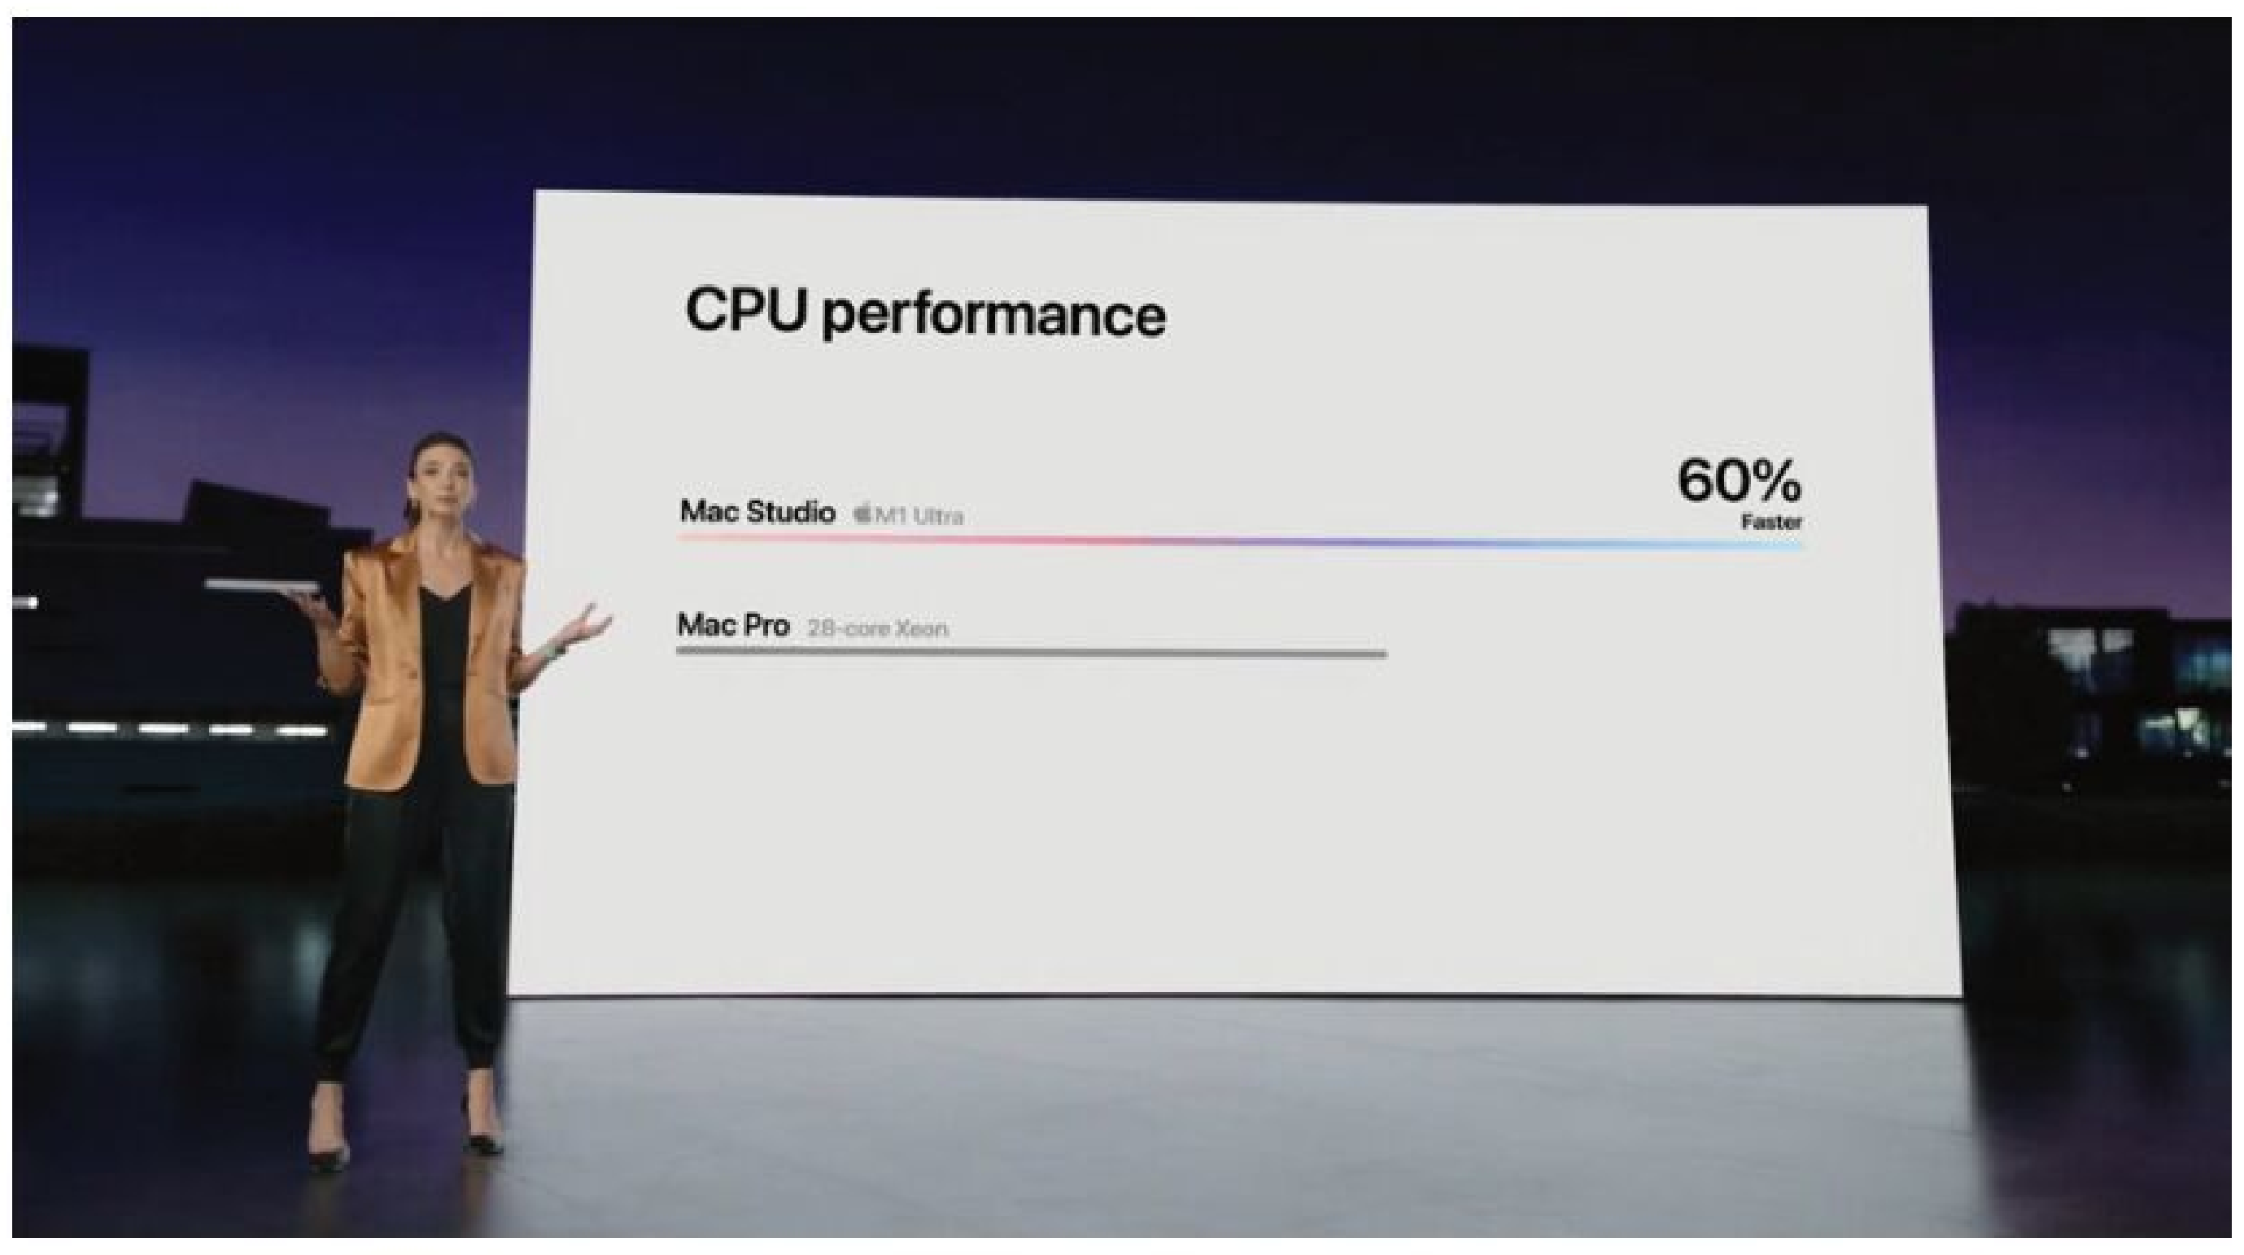
The Mac Studio with an M1 Ultra Processor



With an M1 Ultra processor, the Mac Studio's CPU performance is up to 3.8 times faster than the speediest 27 inch iMac.

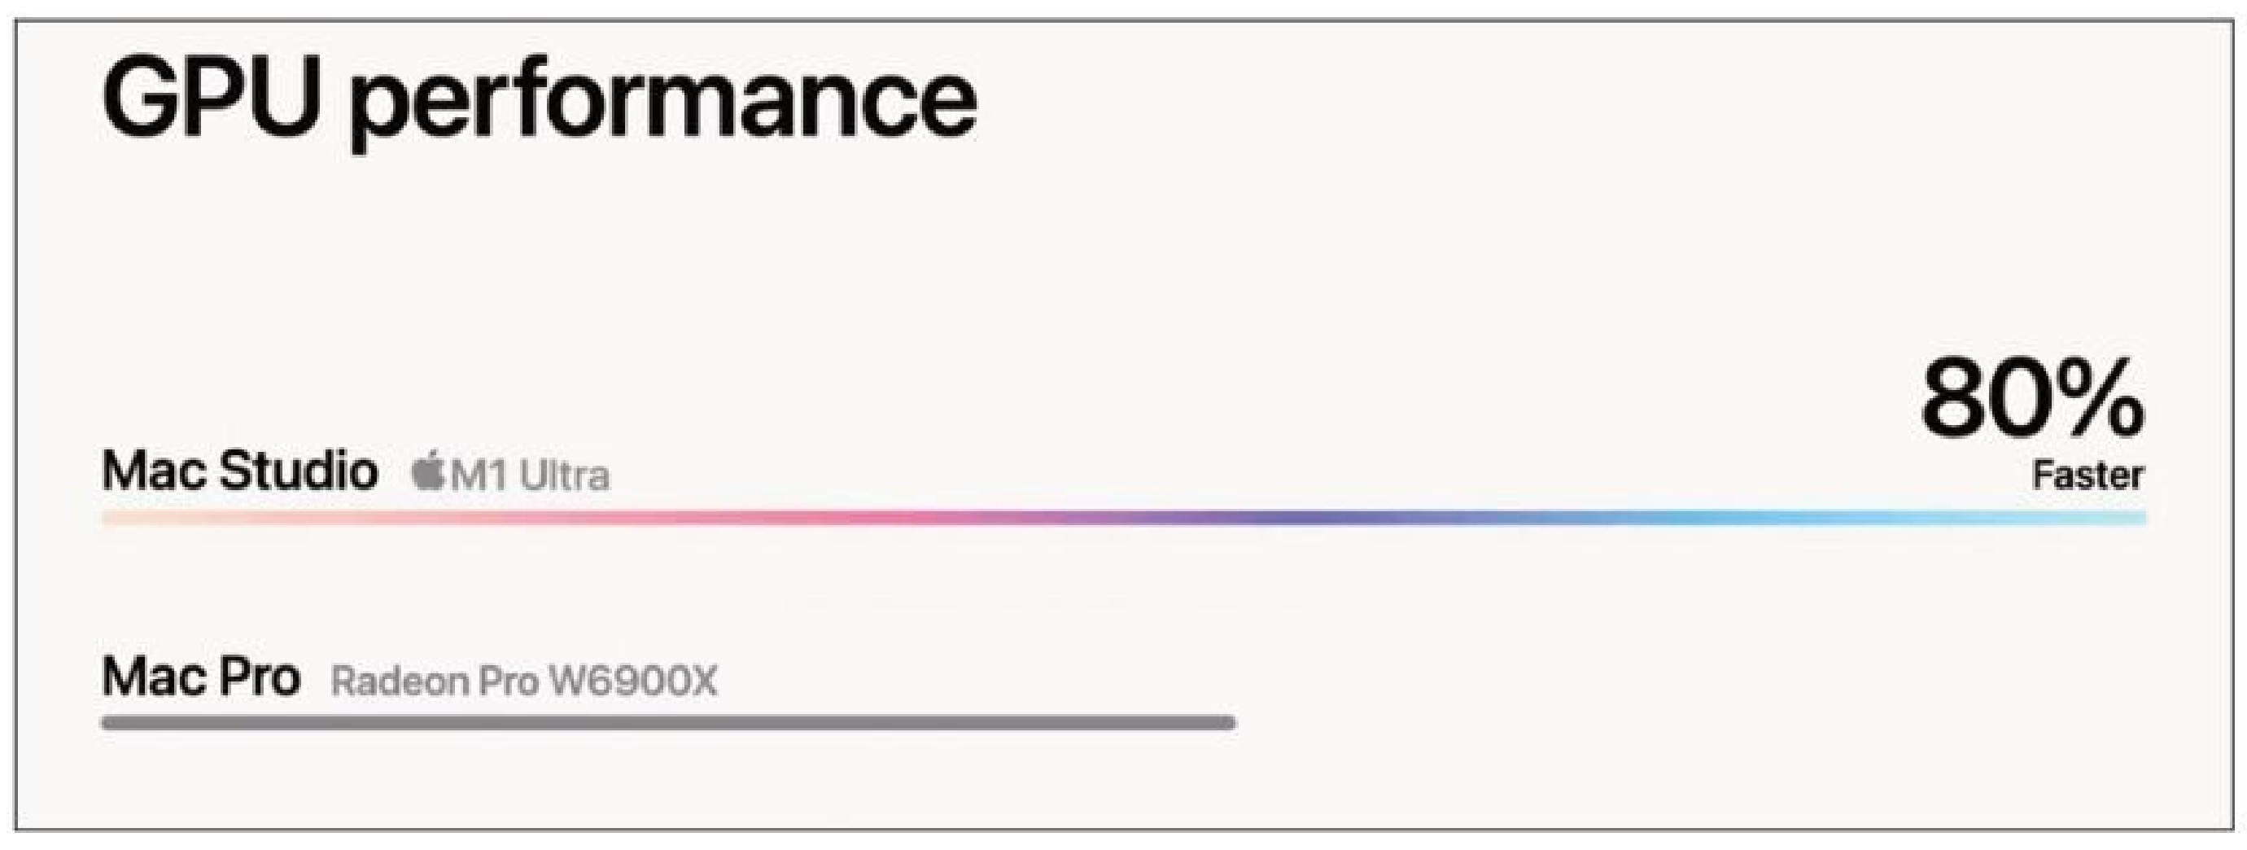


The M1 Ultra Mac Studio is up to 90% faster than the 16-core Mac Pro.



CPU performance
Mac Studio M1 Ultra
60%
Faster
Mac Pro 28-core Xeon

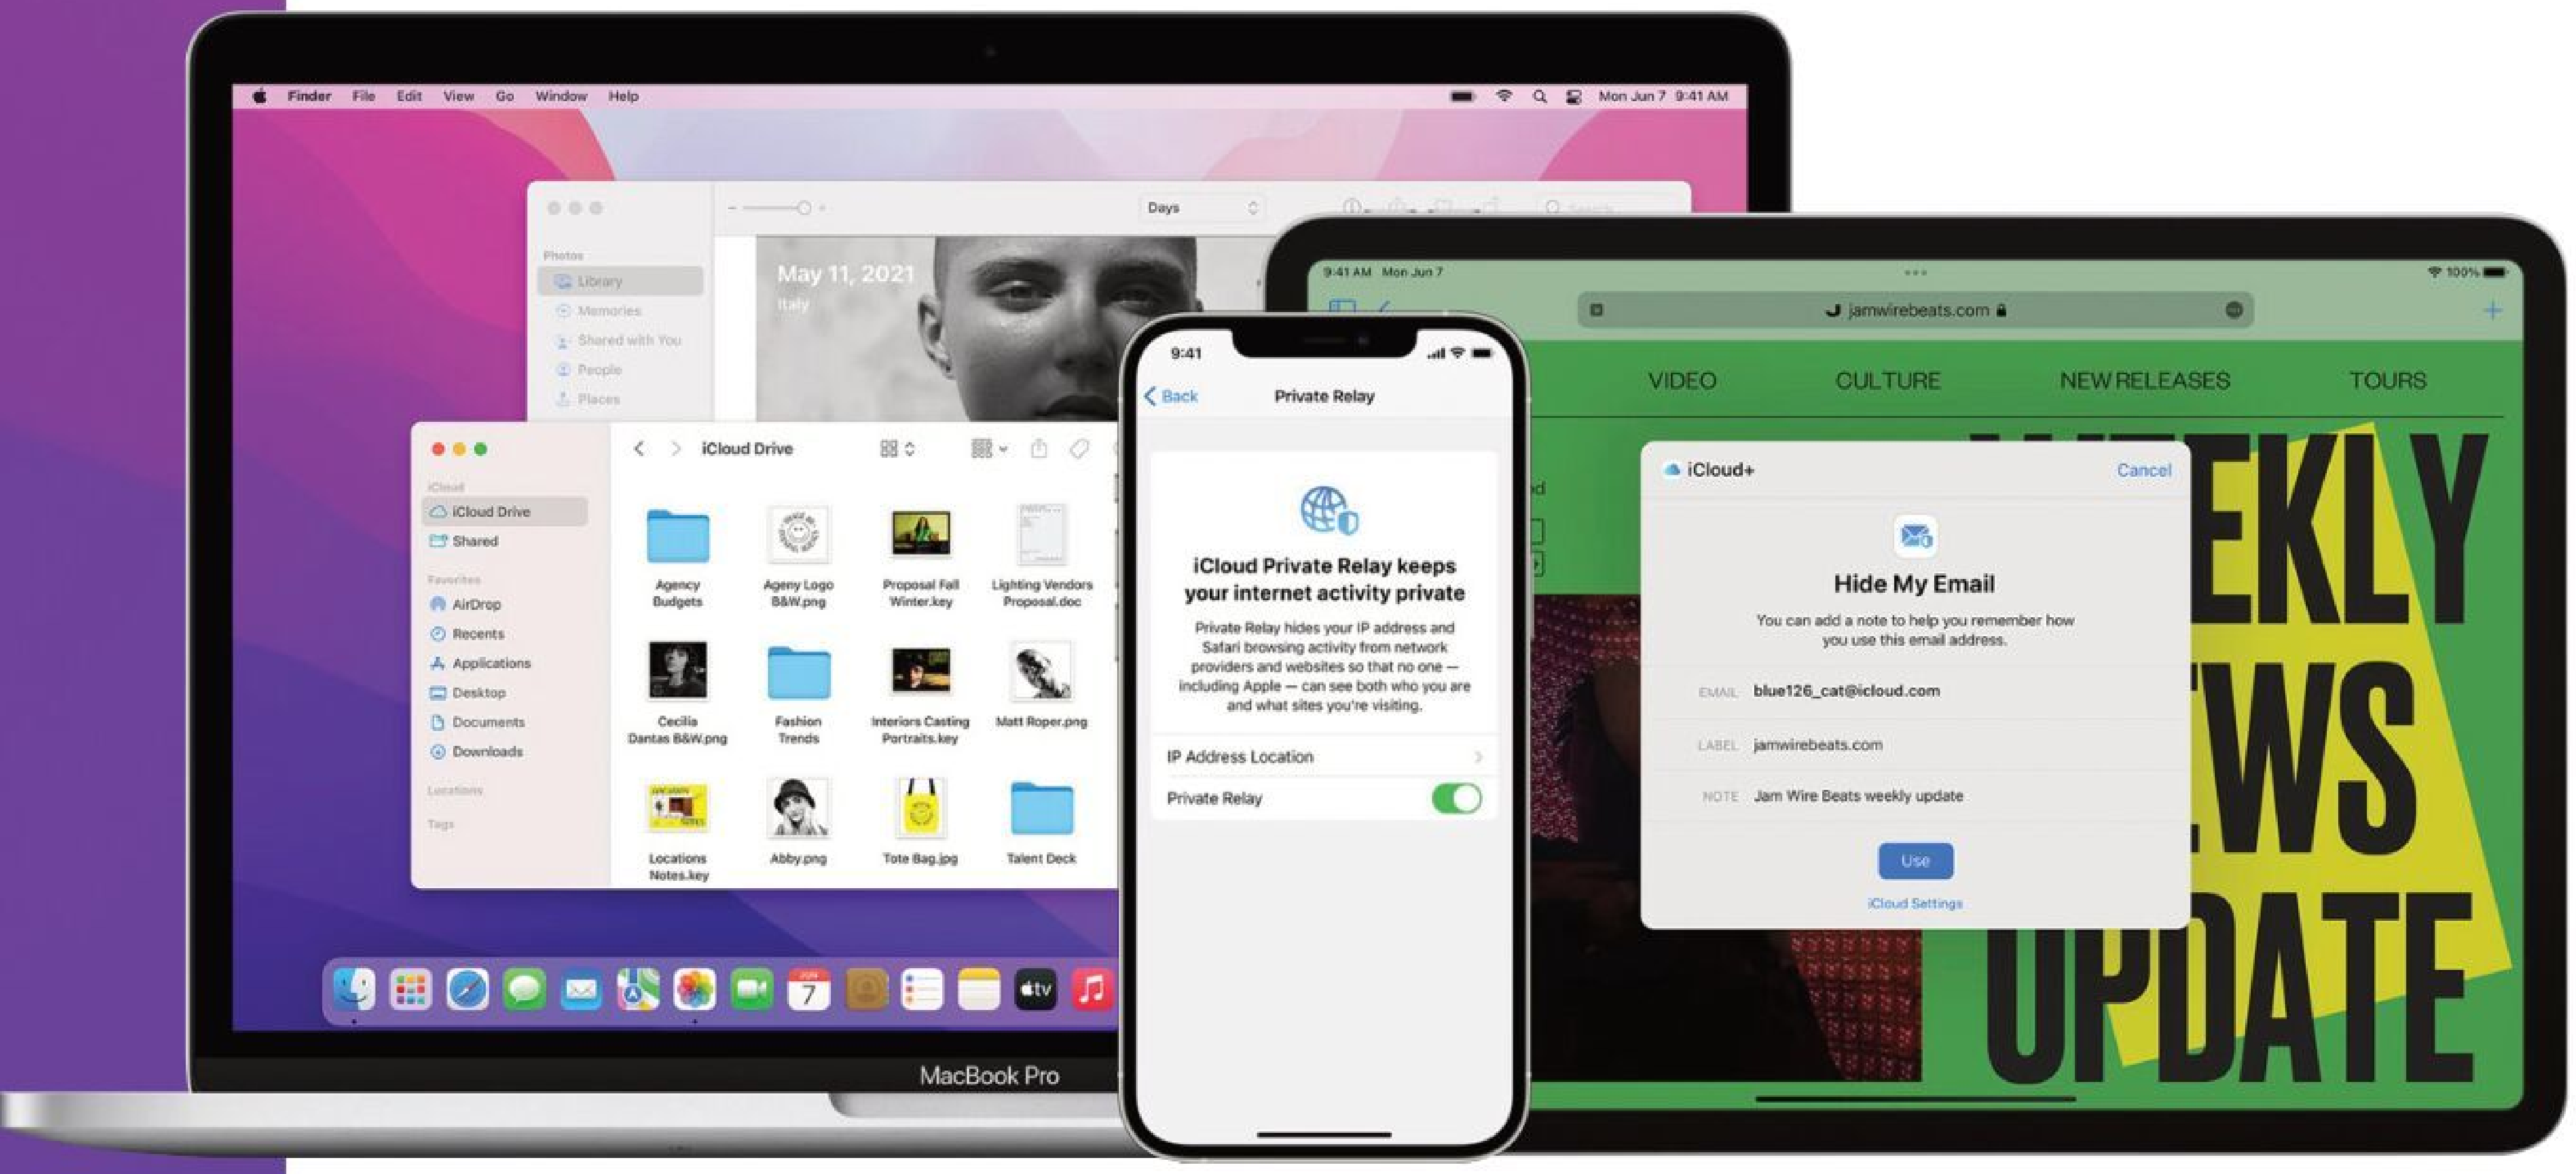
The Mac Studio with the M1 Ultra even outperforms the 28-core Mac Pro, by up to 60%.



The Mac Studio with the M1 Ultra even crushes the graphical performance of a Mac Pro with a Radeon Pro W6900X, its fastest graphics card, by up to 60%.

An Introduction to macOS Monterey

macOS Monterey is the latest release of Apple's Mac Studio operating system, and it boasts some great new features. Let's take a look at what Monterey can do for us, and why we should be excited about it.



The new features associated with Apple's iCloud+ service are available across all your Apple devices, including Macs running the new macOS Monterey.

iCloud+

iCloud+ is a new service covering our Macs and mobile devices. Previously, the only benefit in subscribing to iCloud as opposed to enjoying the free 5GB of storage you get for free is the greater capacity it offers. But Monterey introduces iCloud+, free features for those who pay for iCloud.

How many times have you wanted to enter an online competition, but didn't do so because you feared getting endless spam emails afterwards? With Hide My Email you can create a randomly generated email address that's unique to you. Emails sent to this address are automatically forwarded to your own address. So if you enter that competition and win, you get the message. If they send unwanted adverts, you can disable the Hide My Email address you used, so the spam no longer reaches your inbox.

Other iCloud+ features include iCloud Private Relay and expanded HomeKit Secure Video support, which lets you upload even more footage from security cameras to your cloud storage.

Shortcuts

Shortcuts was already a big feature on the iPhone and iPad, and with Monterey it arrived on the Mac. Shortcuts helps you automate everyday tasks. Open the Shortcuts app and you can use a huge range of pre-built actions designed just for Mac to build routines to carry out all sorts of tasks. You can make shortcuts to instantly share files, make animated GIFs, and so much more too. You can activate a shortcut from the Mac's menu bar, or by asking Siri to do it. You can even import existing Automator workflows into Shortcuts and be up and running right away.

Not everyone will bother with Shortcuts, but if you take time to write some decent routines that fit the way you use your Mac, it's a rewarding and useful tool.

Shortcuts is coming to the Mac with macOS Monterey.

Quick Note

Notes is a hugely popular app. It's a great way of keeping your jottings handy, and always on your person. You might forget to carry a notebook with you, or leave a scrap of paper in your trouser pocket and wreck it in the wash, but you never leave home without your phone, right? With Monterey, Notes got a great new feature – Quick Note – which lets you jot down anything you like, from anywhere on your Mac.

Whichever app you're working on, you can open a Quick Note and jot something down. You can copy and paste text into a Quick Note, add web links and more, and in compatible apps you can even add a link to a Quick Note, so it appears when you open the app or document you were working on when you made the note. Your Quick Notes can be found in the Notes app, and are synced in Notes on your iPhone and iPad too.

Quick Note is a feature that will show its strengths over time, but even after a couple of weeks it's proving useful. After a couple of months with Monterey, when you've got into the habit of using it, Quick Note should prove invaluable.

Based on your listening.
MacBook Pro

Make a Quick Note from anywhere on your Mac, and review it in the Notes app.

Also on iPhone and iPad.

macOS Monterey also brings to the Mac some great features that are shared with iOS and iPadOS.

The FaceTime app gets SharePlay, a feature that lets you chat to friends and family while you all listen to the same music or watch the same movie or TV show, with your media playing in sync. It's a great way to have a film evening without being in the same house. Spacial Audio means during FaceTime group conversations, the sound comes from the direction of the person who's speaking, making conversations more natural, and you can choose a Mic Mode that cuts ambient noise or lets it in, depending on your needs. You can have a group chat using a grid view and schedule a chat with Calendar events too.

In the Messages app, the Shared with You feature makes it easy to find media that's been shared in Message chats in their native apps. These are offered in Shared with You sections in Podcasts, Photos, Apple News, Safari and more.

Talking of Safari, it's had a major overhaul on the Mac and Apple mobile devices, making it much more intuitive to use. If you open a lot of tabs, you'll love Tab Groups, for example.

You can design your own Do Not Disturb setups using the Focus feature, and Universal Control lets you use your Mac and iPad in unison, using your Mac's keyboard and mouse/trackpad. It's all in macOS Monterey.unique to the Mac.

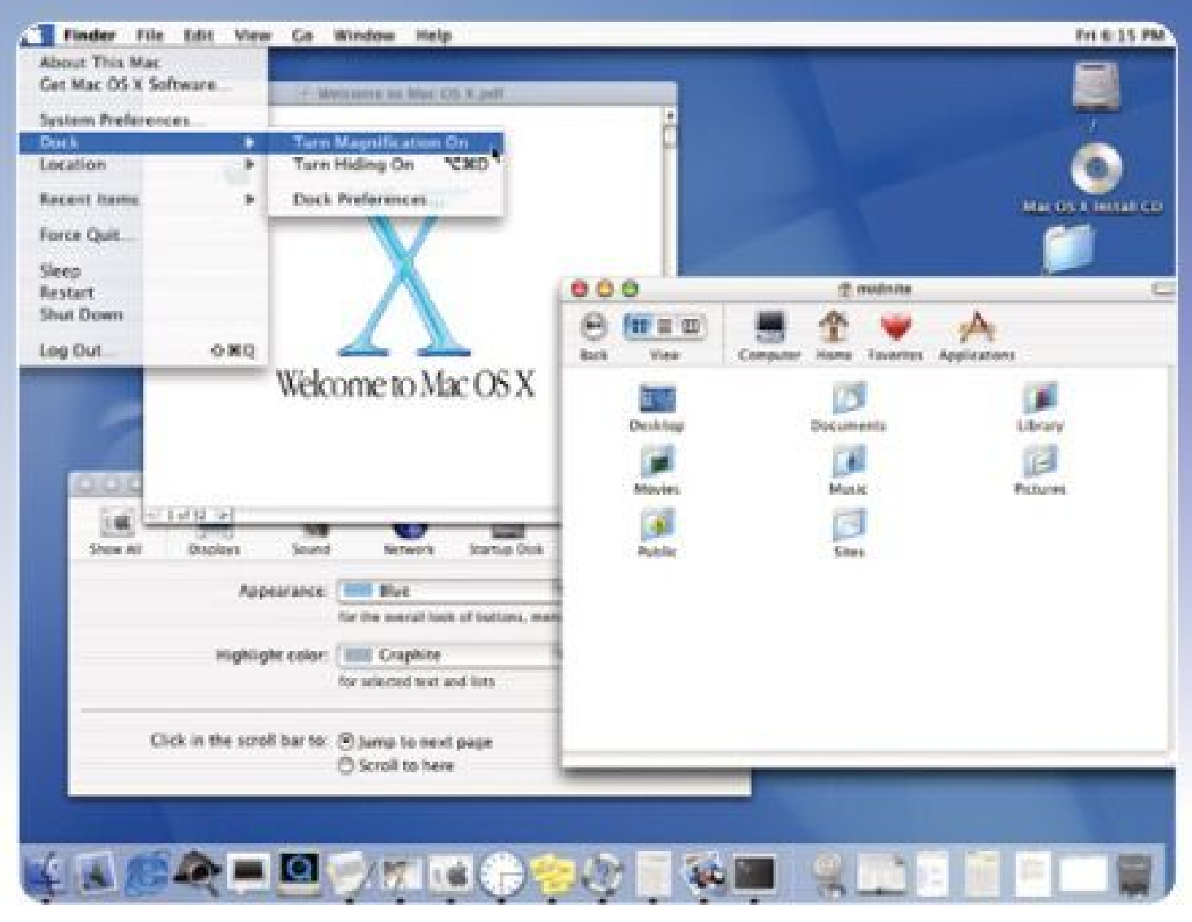
The Road to Monterey

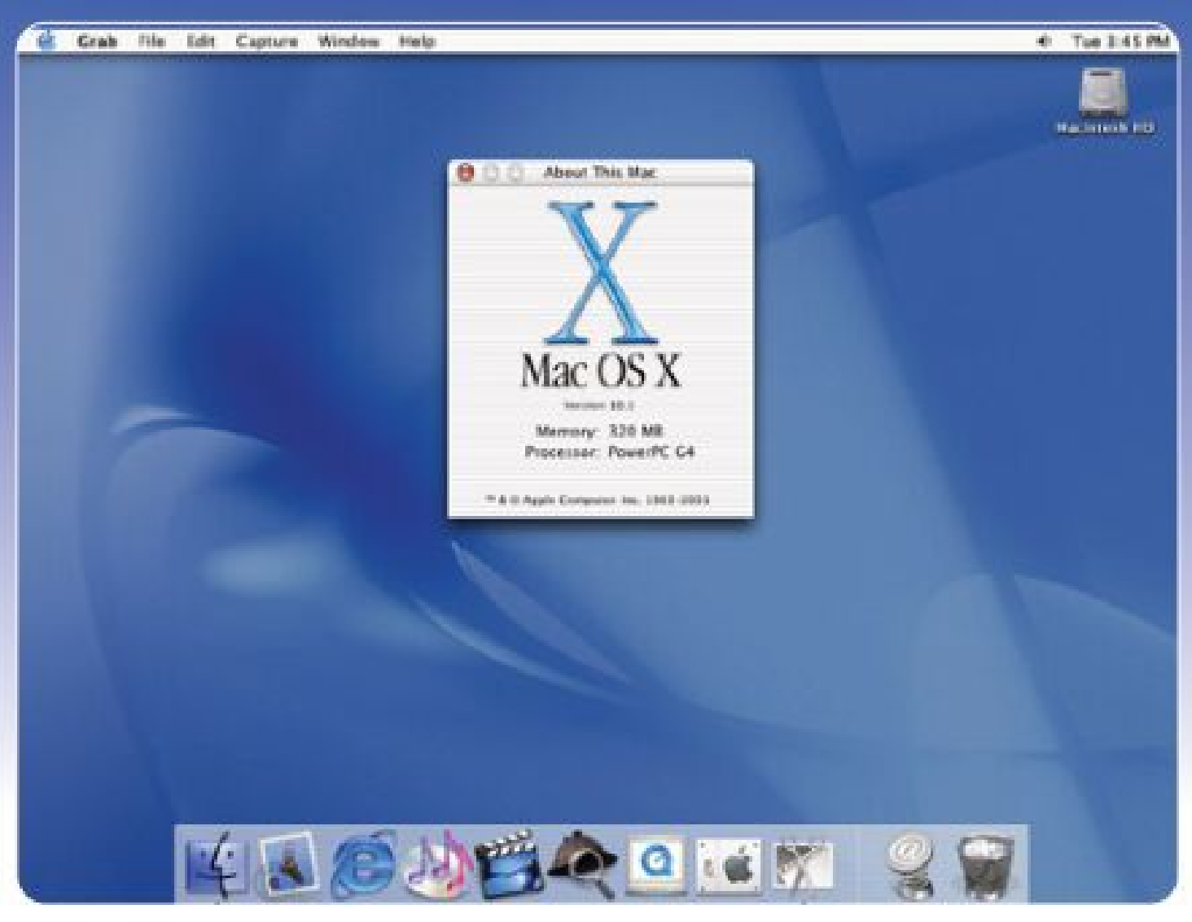
From OS X Cheetah in 2001 to macOS Monterey 20 years later, the Mac's operating system has quite a history. Here's a guide to how we got from there to here, and the signposts on the way.



2001

Version: Mac OS X 10.0
Codename: Cheetah
Date: March 24th, 2001

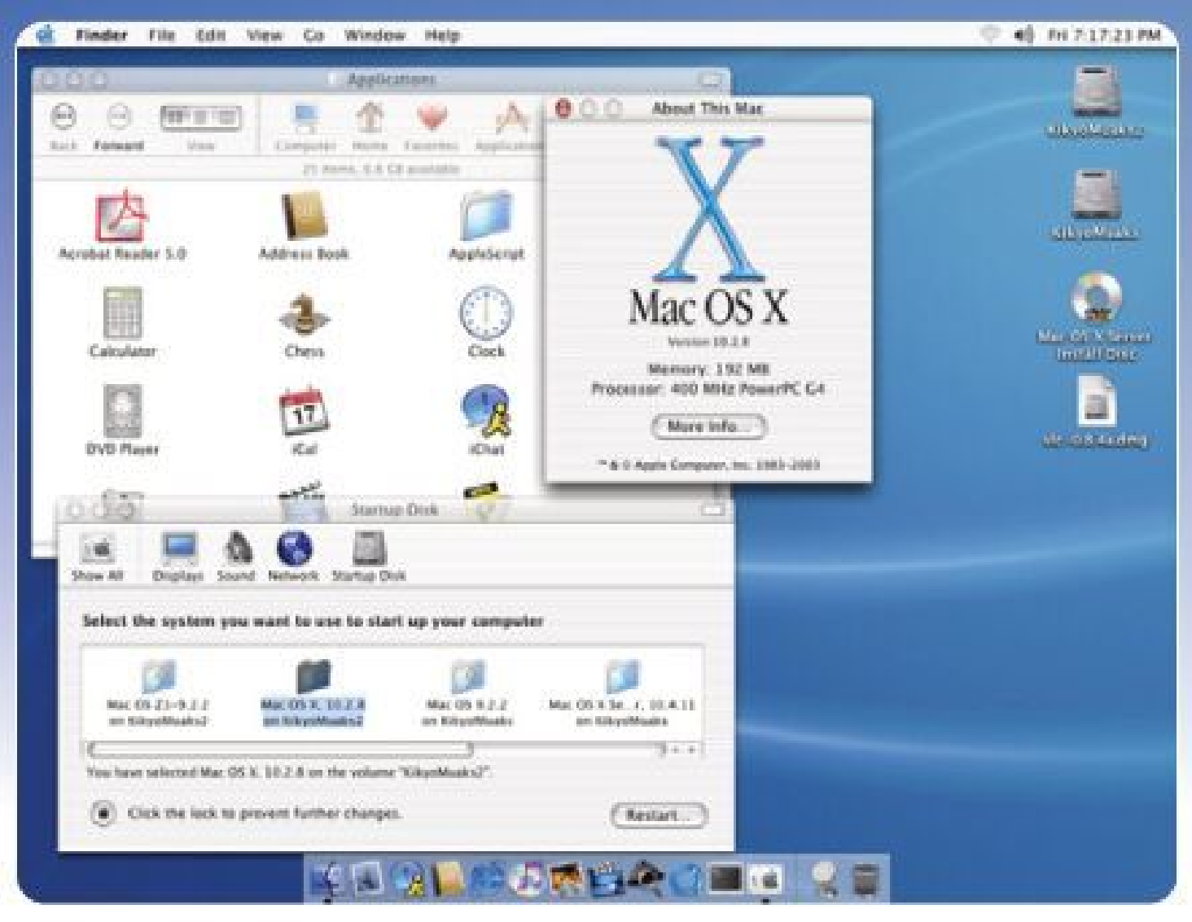
Steve Jobs famously said "We made the buttons on the screen look so good, you'll want to lick them," when describing the new Aqua User Interface with the release of Mac OS X. While we may not have licked them, they were certainly new, fresh and good to look at.



2001

Version: Mac OS X 10.1
Codename: Puma
Date: September 25th, 2001

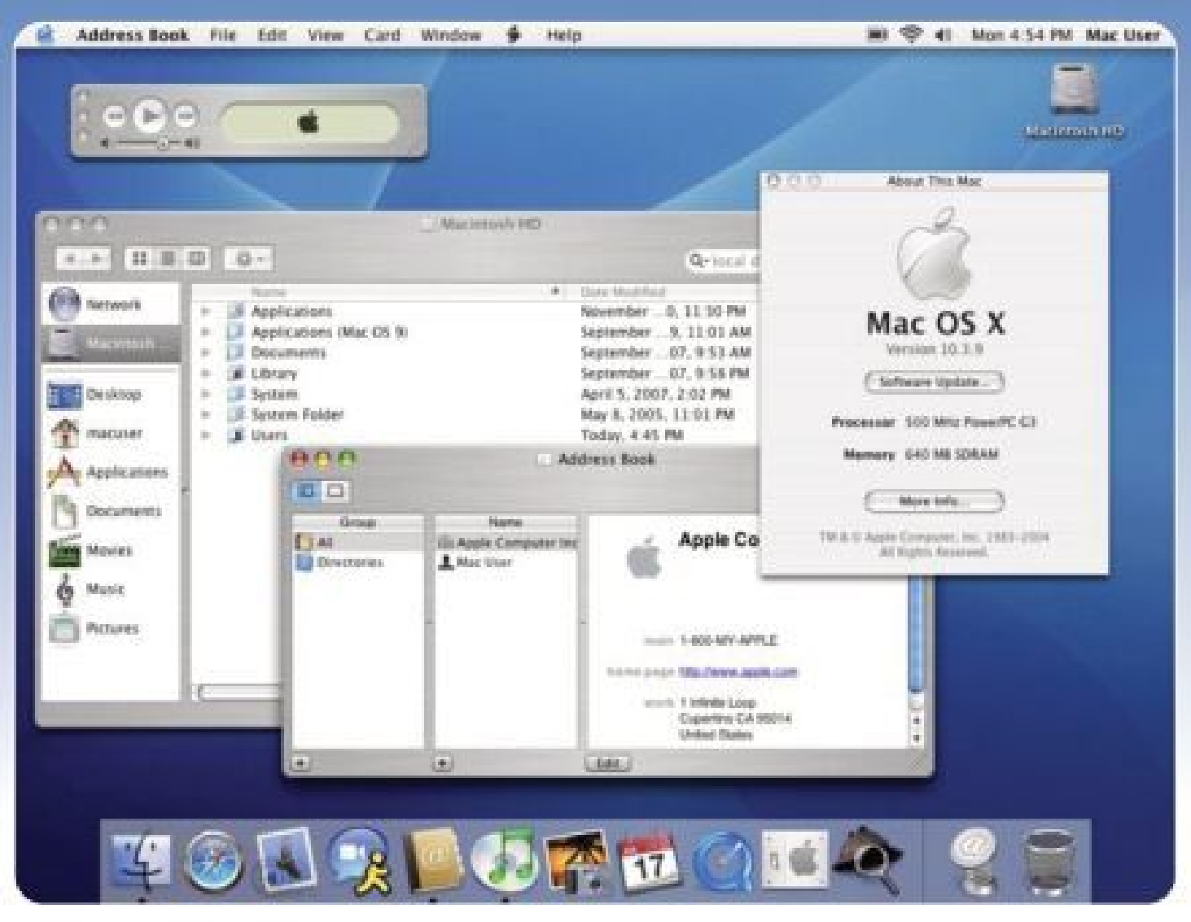
Less of a functional update with Puma and more of a performance enhancement. Puma introduced better handling of optical disc burning, file management and improved responsiveness throughout.



2002

Version: Mac OS X 10.2
Codename: Jaguar
Date: August 23rd, 2002

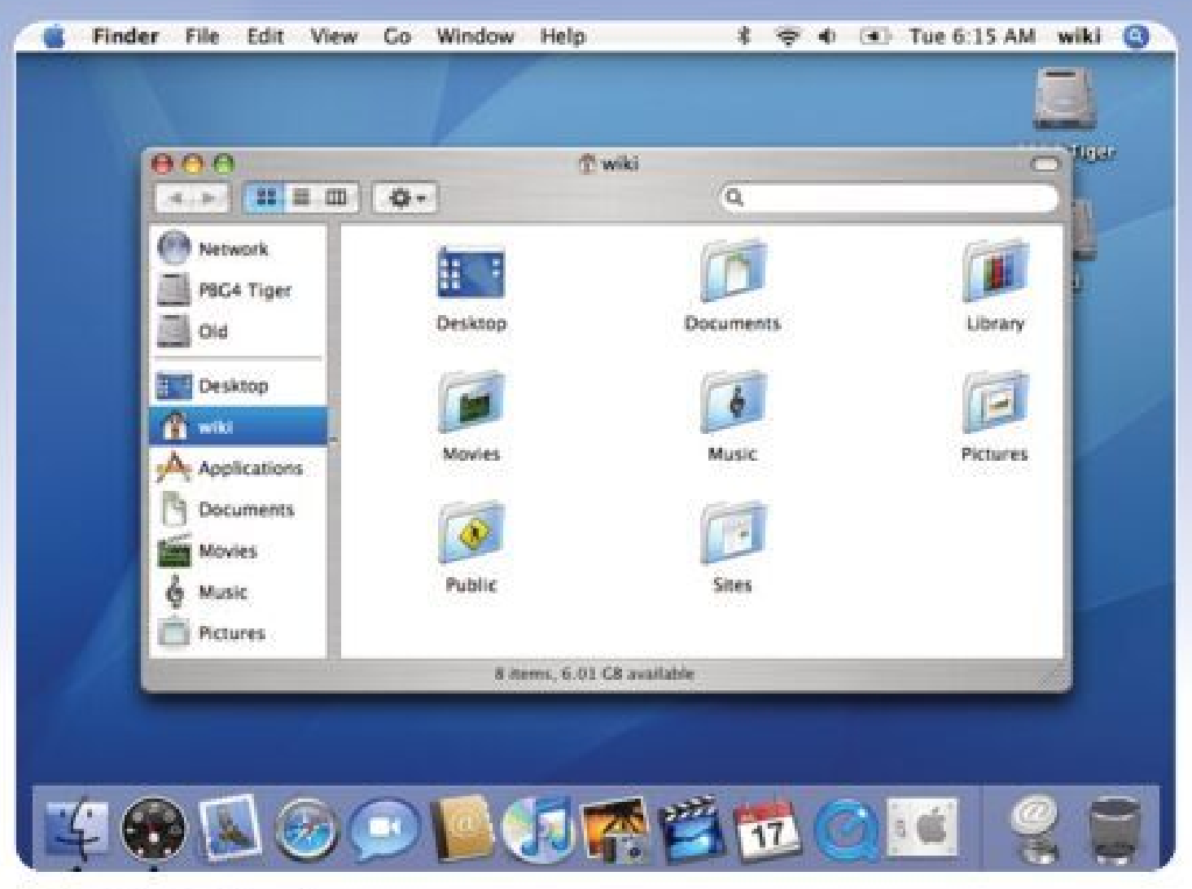
The release of Jaguar saw a new Apple logo (the large grey version), better search functionality and Universal Access. iChat and the Address Book were also introduced with this version.



2003

Version: Mac OS X 10.3
Codename: Panther
Date: October 24th, 2003

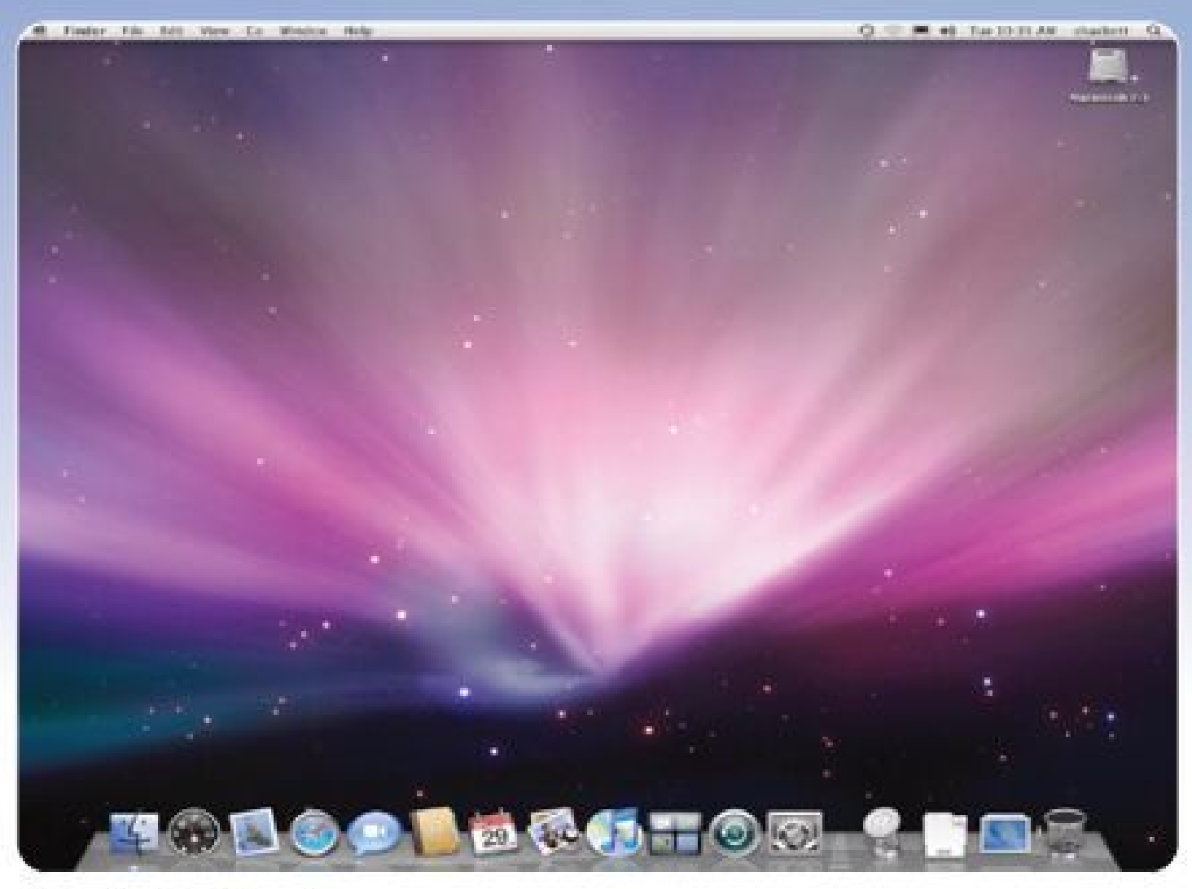
We saw Safari becoming the default Internet browser with the launch of Panther, alongside Exposé and some much-needed performance enhancements.



2005

Version: Mac OS X 10.4
Codename: Tiger
Date: April 29th, 2005

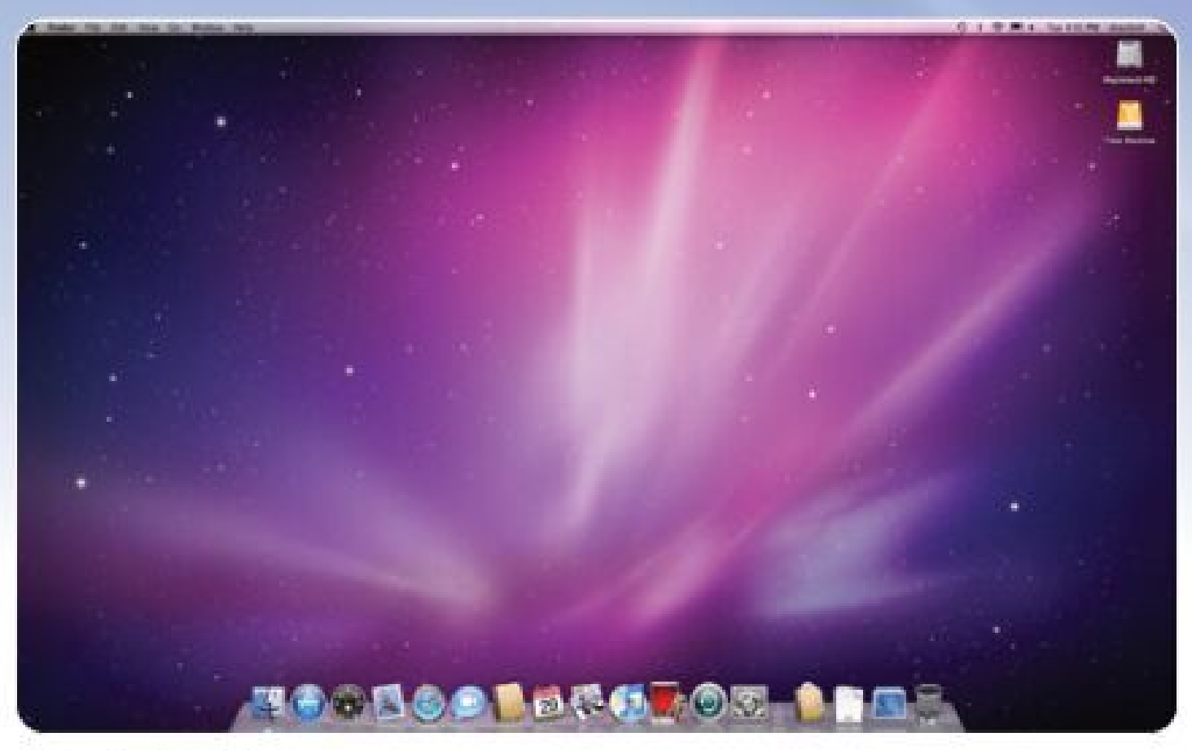
One of our favourite new versions of Mac OS X. Tiger was a hefty release with over 200 new features, including Apple TV, Spotlight and Dashboard.



2007

Version: Mac OS X 10.5
Codename: Leopard
Date: October 26th, 2007

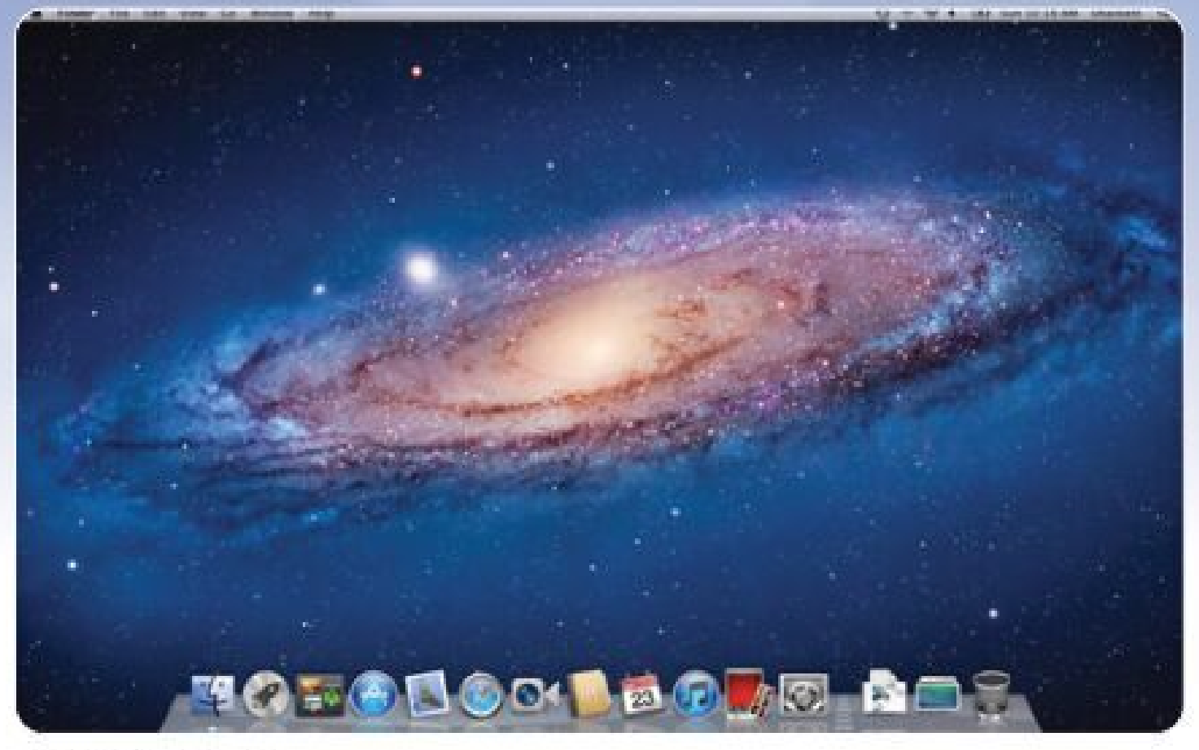
Leopard was a long time coming but when it did it brought with it one of the most impressive leaps in desktop technology. Time Machine, Boot Camp and full 64-bit support were all introduced in 2007's OS.



2009

Version: Mac OS X 10.6
Codename: Snow Leopard
Date: August 28th, 2009

Another two years apart and Snow Leopard brought us the Mac App Store, 64-bit apps and many more refinements that made it an excellent upgrade for those wanting more from their Macs.



2011

Version: Mac OS X 10.7
Codename: Lion
Date: July 20th, 2011

Apple adopts this whole cloud thing back in 2011, with the introduction of iCloud alongside a number of refinements, performance enhancements and core OS improvements.

2012

Version: Mac OS X 10.8
Codename: Mountain Lion
Date: July 25th, 2012

Despite the fact that the world was set to end in 2012, it didn't stop Apple from adding a lot of enhancements to 2011's Lion. This is one of the first OS X versions to start integrating iOS perks.

2013

Version: Mac OS X 10.9
Codename: Mavericks
Date: October 22nd, 2013

The first OS X not to be named after a big cat, instead a surfing location in North California, Mavericks introduced Maps, iBooks and iCloud Keychain encryption technology.

2014

Version: Mac OS X 10.10
Codename: Yosemite
Date: October 16th, 2014

Yosemite was an impressive upgrade, with a new sleek look and design that's paved the way for better iOS and OS X interaction – which culminates eventually with Big Sur.

2015

Version: Mac OS X 10.11
Codename: El Capitan
Date: September 30th, 2015

There were various improvements introduced with El Capitan, including dual-window functionality and Split Views alongside an upgraded Safari, Mail and other apps.

2016

Version: macOS 10.12
Codename: Sierra
Date: September 20th, 2016

Many see Sierra as the version that finally killed of OS X, since the OS is no longer referred to as Mac OS X and is from this point on known as, macOS. Siri is introduced with this version and support for the Apple Watch.

2017

Version: macOS 10.13
Codename: High Sierra
Date: September 25th, 2017

High Sierra was more of a performance improvement rather than an upheaval of the apps. The main reason for the increase in speed in the OS is down to the use of the Apple Fie System and video standard HEVC.

2018

Version: macOS 10.14
Codename: Mojave
Date: September 24th, 2018

Dark Mode and Dynamic Desktop were the two main updates on everyone's lips with the release of Mojave. Visual improvements aside, we also see some iOS apps being migrated across in the form of News, Home, Voice Memos and more.

2019

Version: macOS 10.15
Codename: Catalina
Date: October 7th, 2019

Catalina put the cat among the pigeons, with Apple dropping 32-bit apps. However, the move proved to be a good one in the long run, with better performance throughout.

2020

Version: macOS 11
Codename: Big Sur
Date: November 12th, 2020

Big Sur was the first operating system written for the new Apple Silicon processors, as well as Intel chips. It also featured a redesigned Notification Centre and a new Control Centre.

2021

Version: macOS 12
Codename: Monterey
Date: Autumn, 2021

macOS Monterey introduced Shortcuts for the Mac, as well as Quick Notes, Live Text and more. The Safari app was completely overhauled, and new features were added to FaceTime.

macOS Monterey

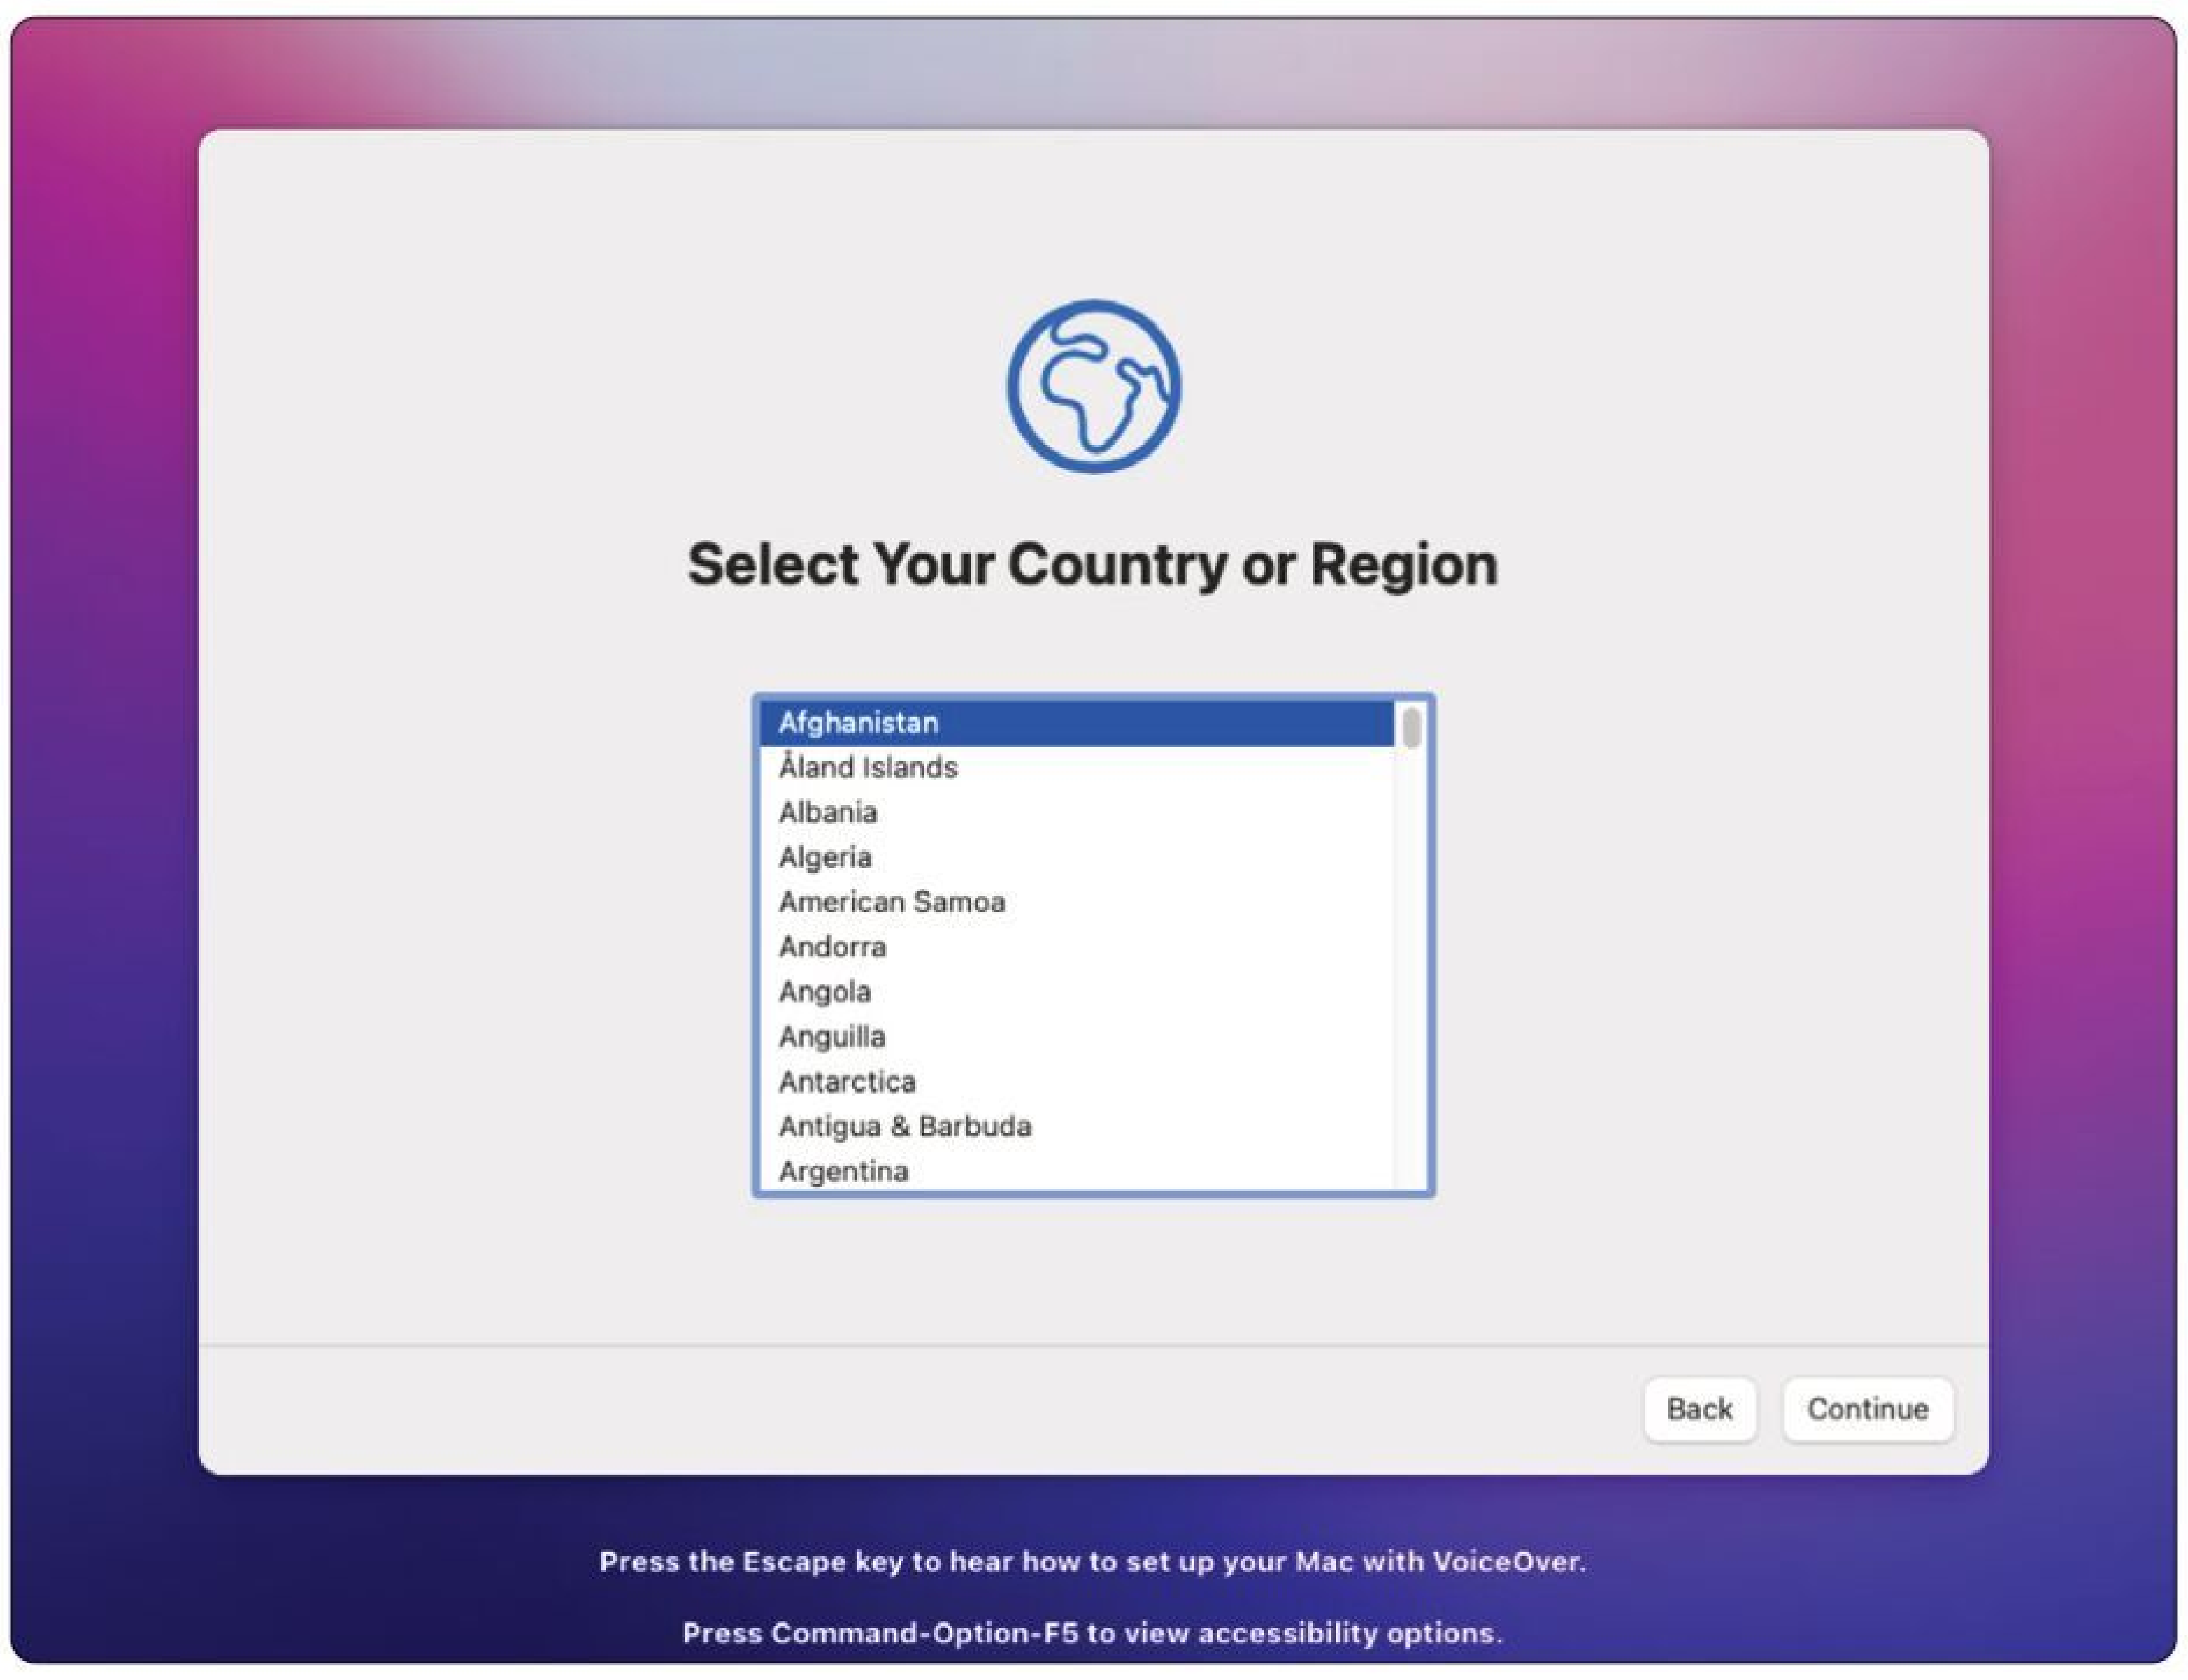
First Steps with the Mac Studio

This section is designed for people who are new to the Mac Studio, or intermediate users who would like to know more about its features such as Widgets, Finder, Menus, Gestures, Dock and more. If you haven't yet set up your Mac, there's a guide to getting started straight out of the box, and when you're ready to install more apps, you can learn how to do that too.

Learn more >

Set Up Your Mac For the First Time

If you have a new Mac Studio but have not yet set it up, follow this guide. It's nothing to be afraid of; follow the guide and the on-screen instructions, and step by step, you get to set your Mac Studio's language, take it onto the Internet with your Wi-Fi network, sign in with your Apple ID and more.

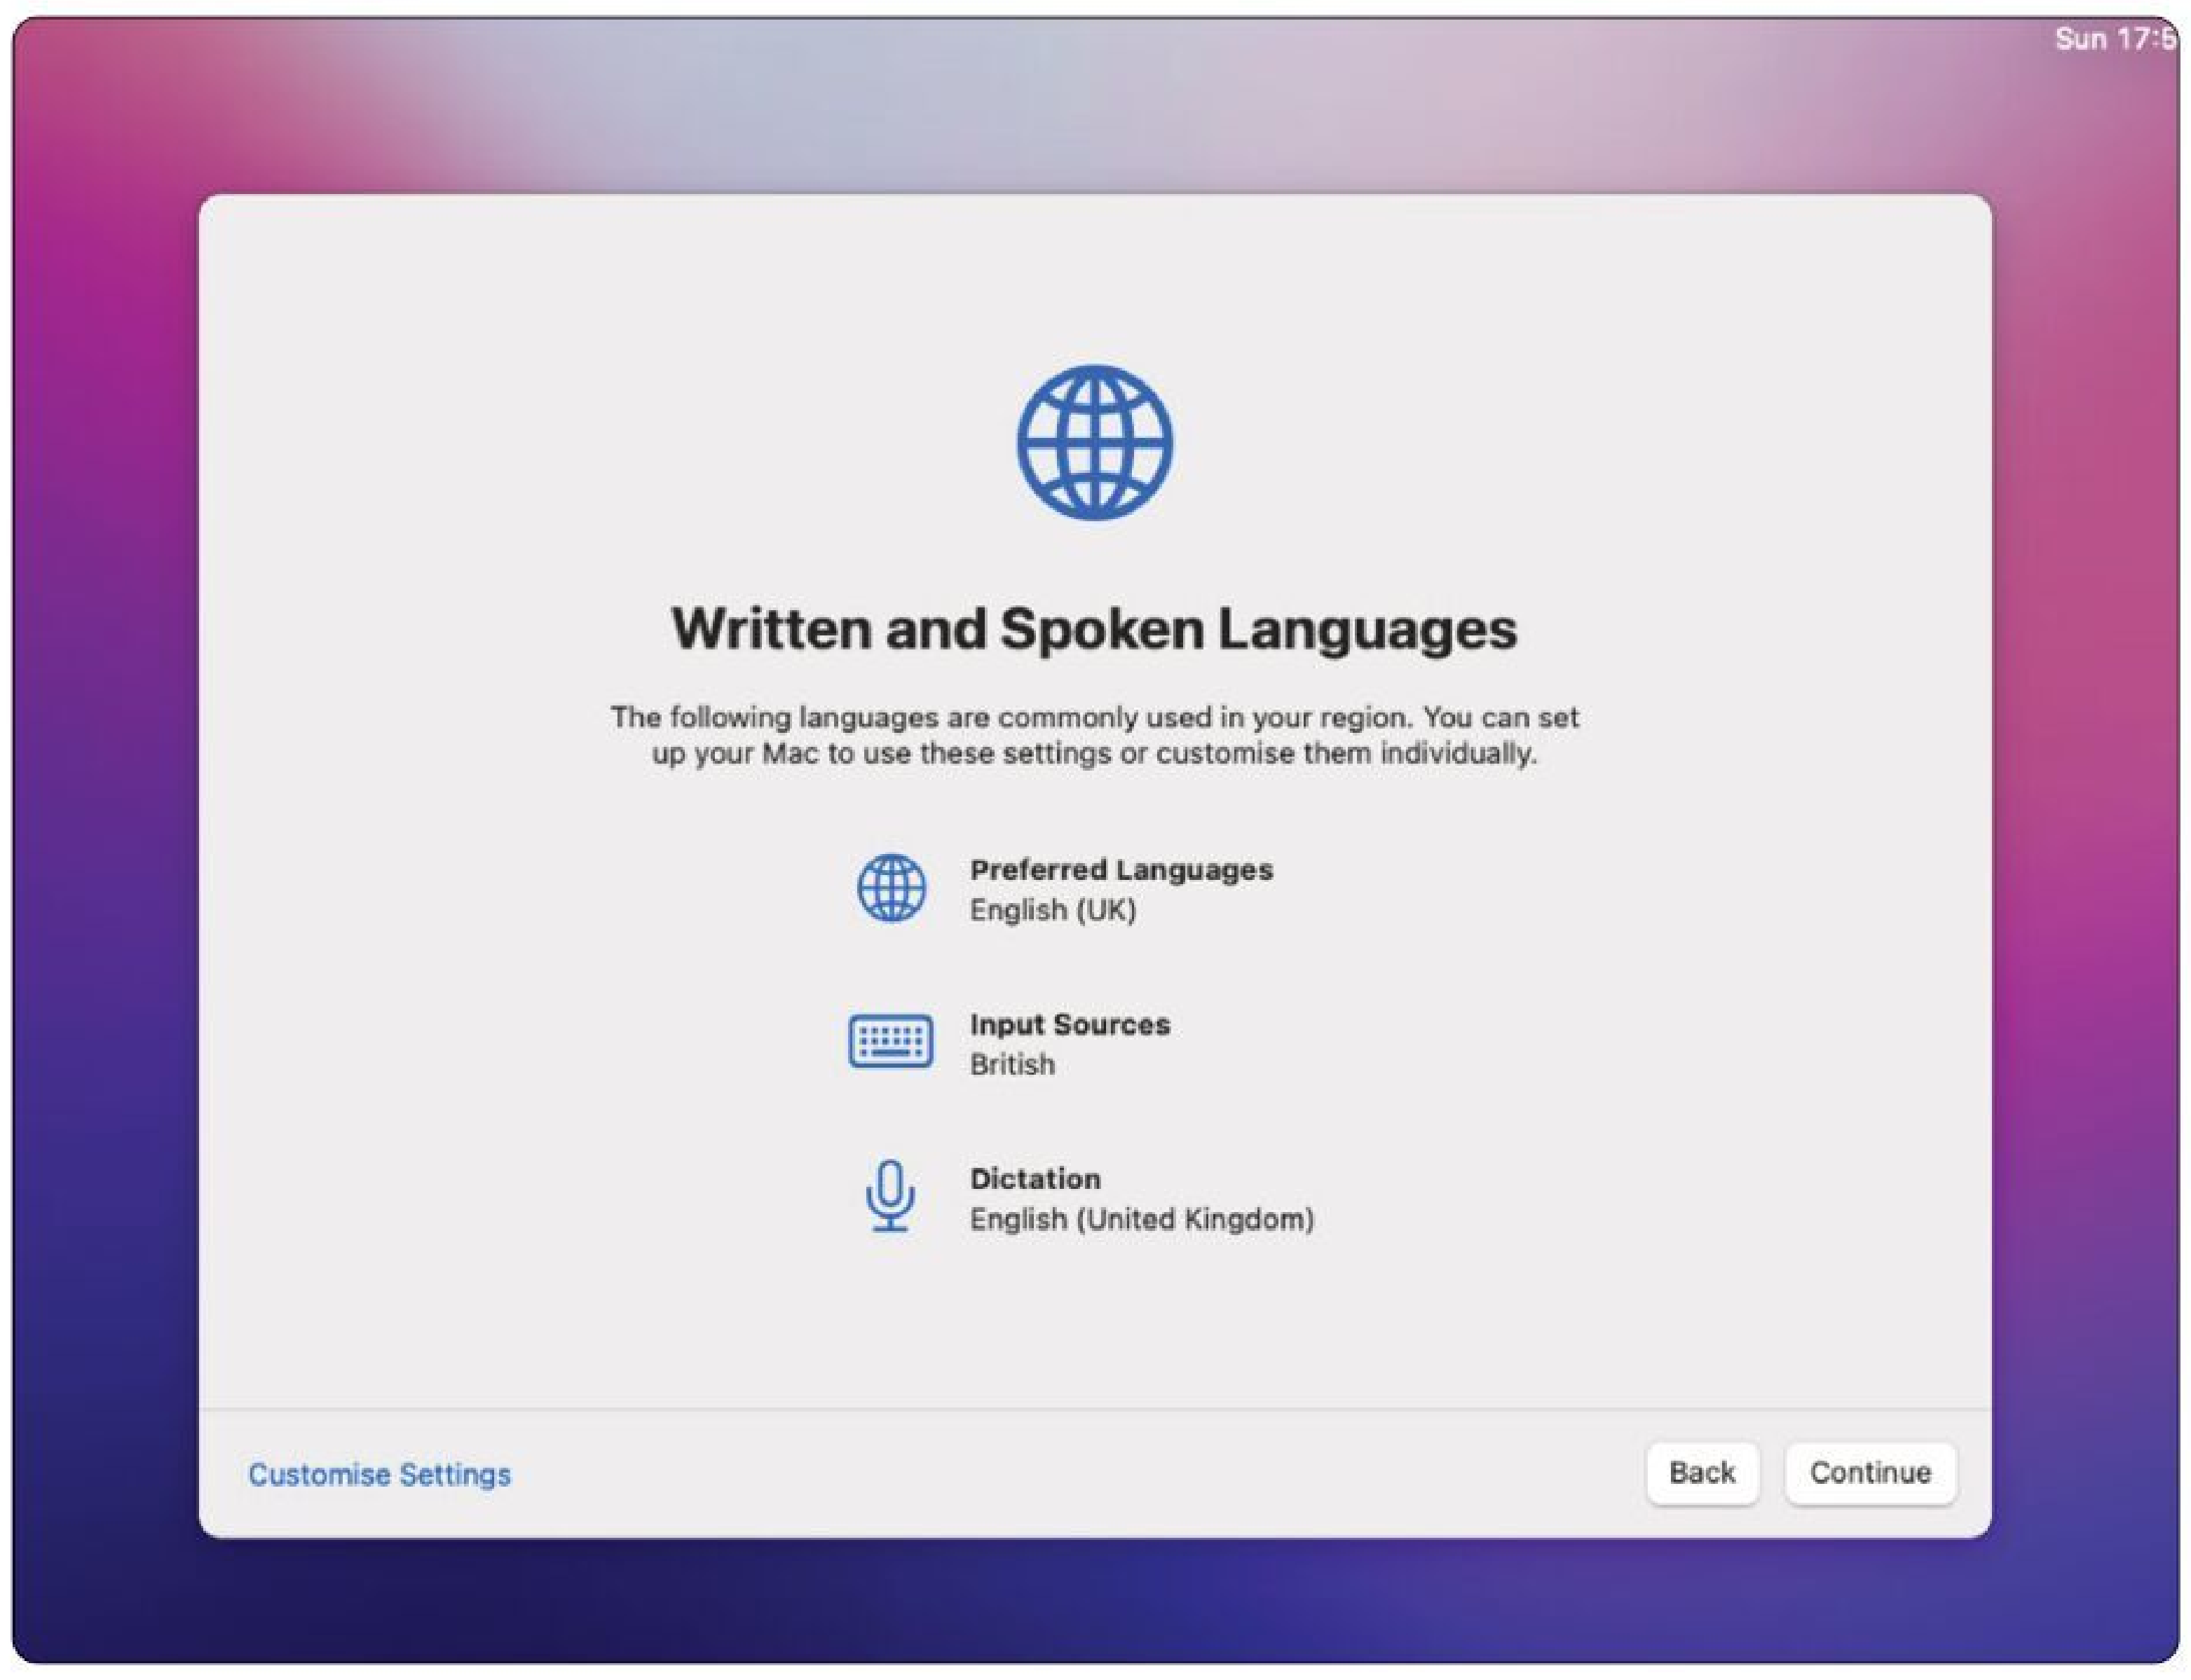


Select Your Country or Region

Press the Escape key to hear how to set up your Mac with VoiceOver.

Press Command-Option-F5 to view accessibility options.
Afghanistan
Åland Islands
Albania
Algeria
American Samoa
Andorra
Angola
Anguilla
Antarctica
Antigua & Barbuda
Argentina
Back
Continue

1 Your first step is to choose your territory, that is, where you live and will be using your Mac. You can scroll the list of countries up and down to find your own, or start to type it to get there quicker. Click your country to highlight your choice, then click Continue.

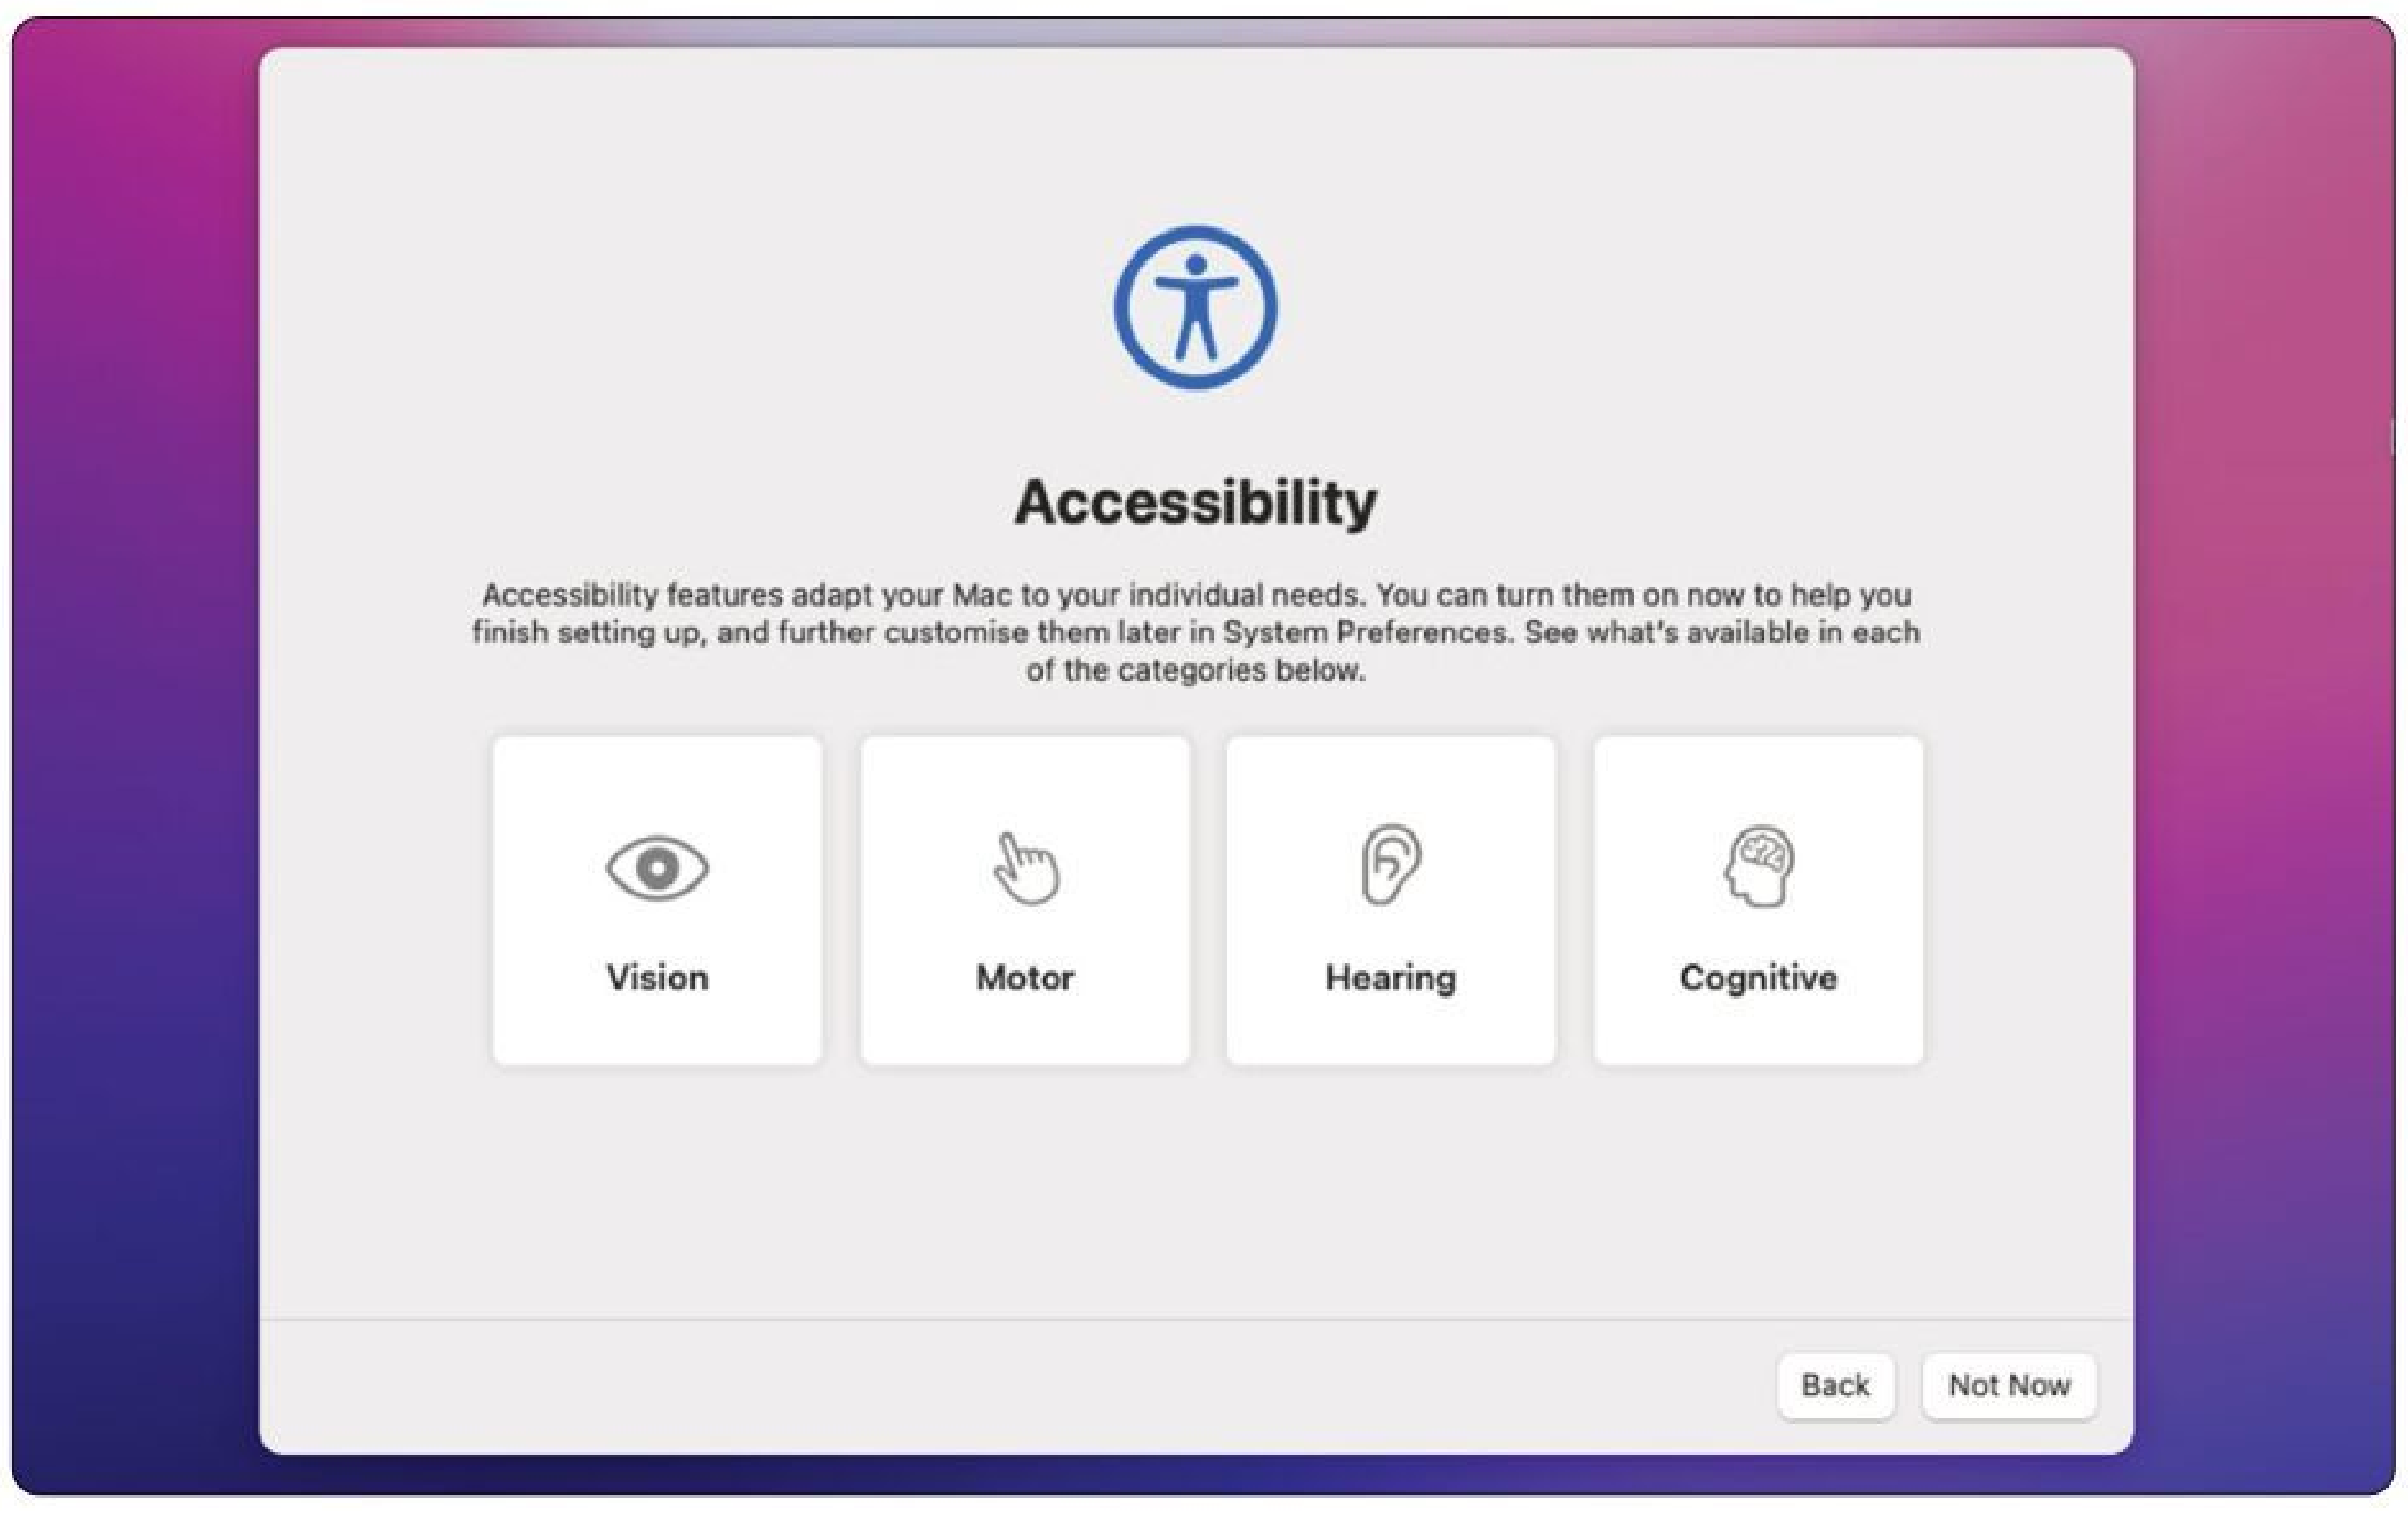


Written and Spoken Languages

The following languages are commonly used in your region. You can set up your Mac to use these settings or customise them individually.

Preferred Languages: English (UK)
Input Sources: British
Dictation: English (United Kingdom)
Sun 17:5
Customise Settings
Back
Continue

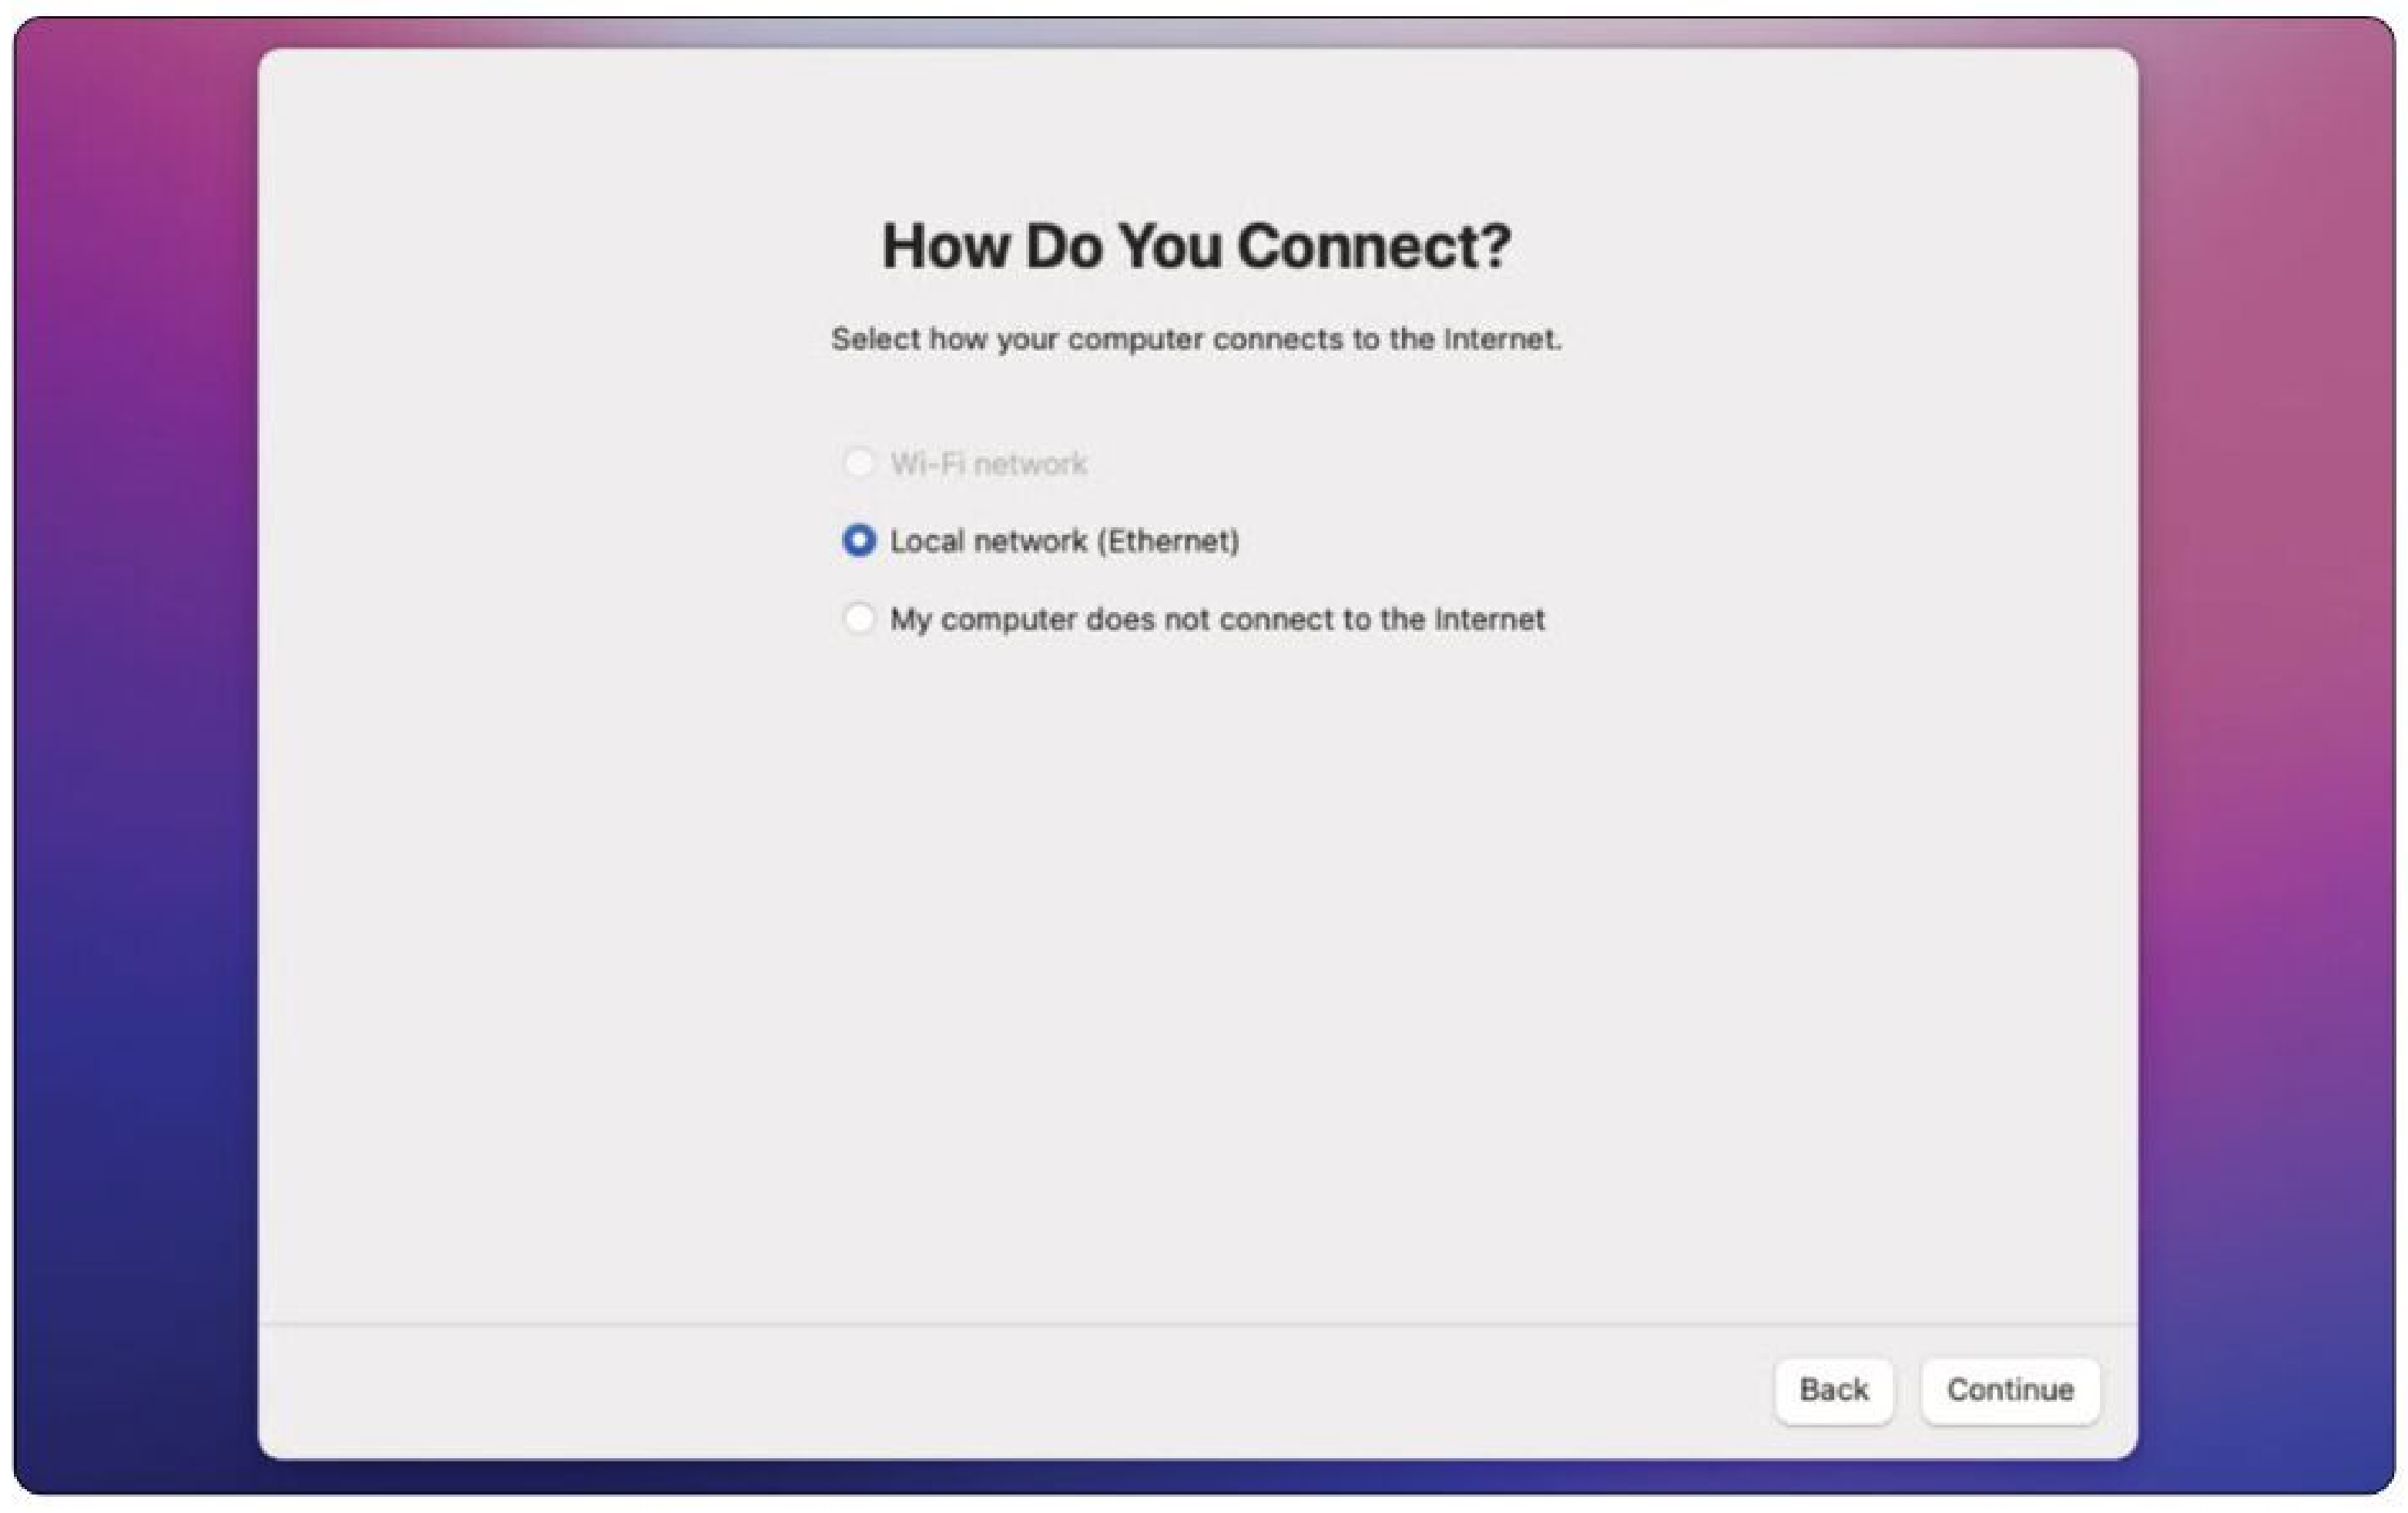
2 Now select your language and input source. The default ones for your chosen territory are offered, but if you want to change them, click Customise Settings and set the language your Mac uses and the keyboard layout to suit your specific needs.



Accessibility

Accessibility features adapt your Mac to your individual needs. You can turn them on now to help you finish setting up, and further customise them later in System Preferences. See what's available in each of the categories below.
Vision
Motor
Hearing
Cognitive
Back
Not Now

3 If you have a disability that makes it harder to use a computer, the Mac's Accessibility tools could be of interest. If you want to set up your Accessibility settings now, click one of the buttons. If not, click Not Now – you can do it later in Settings.

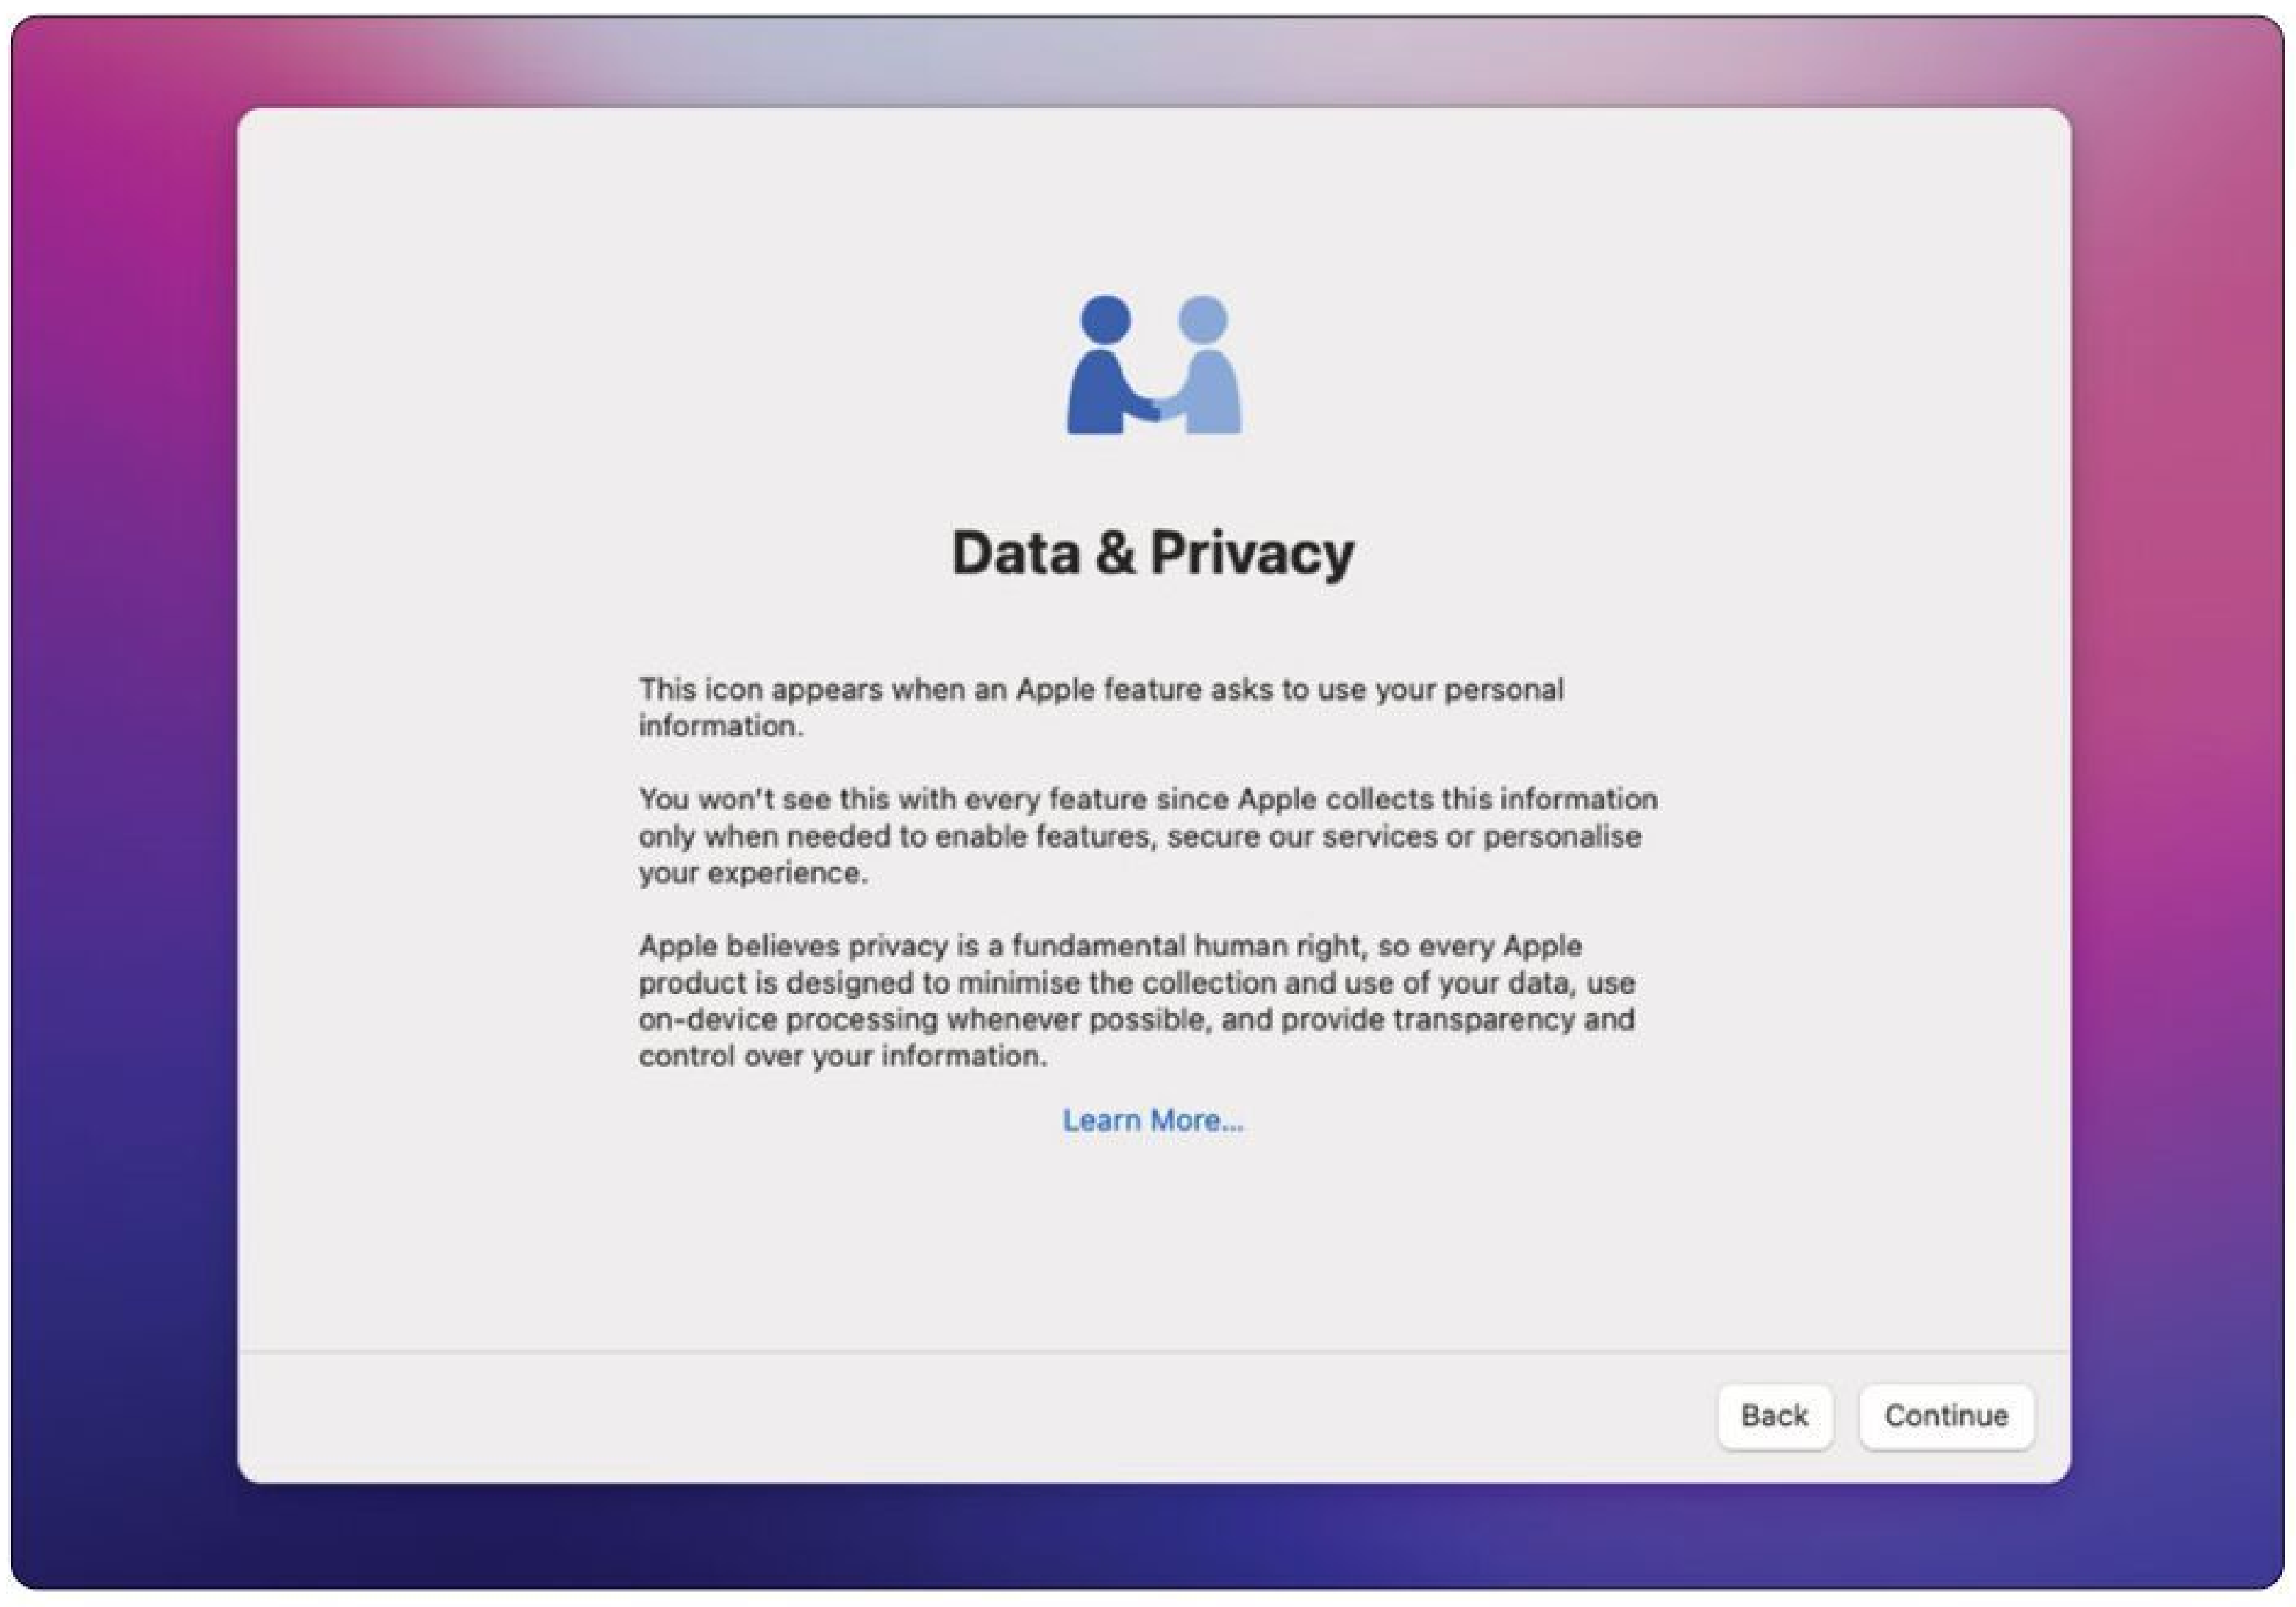


How Do You Connect?

Select how your computer connects to the Internet.

○ Wi-Fi network
● Local network (Ethernet)
○ My computer does not connect to the Internet
Back
Continue

4 Choose how you want to connect to the Internet. If you use Ethernet, there's nothing else to do, but if you use Wi-Fi, you then need to follow the on-screen instructions on finding your own network and entering your password. Keep your router instructions handy.



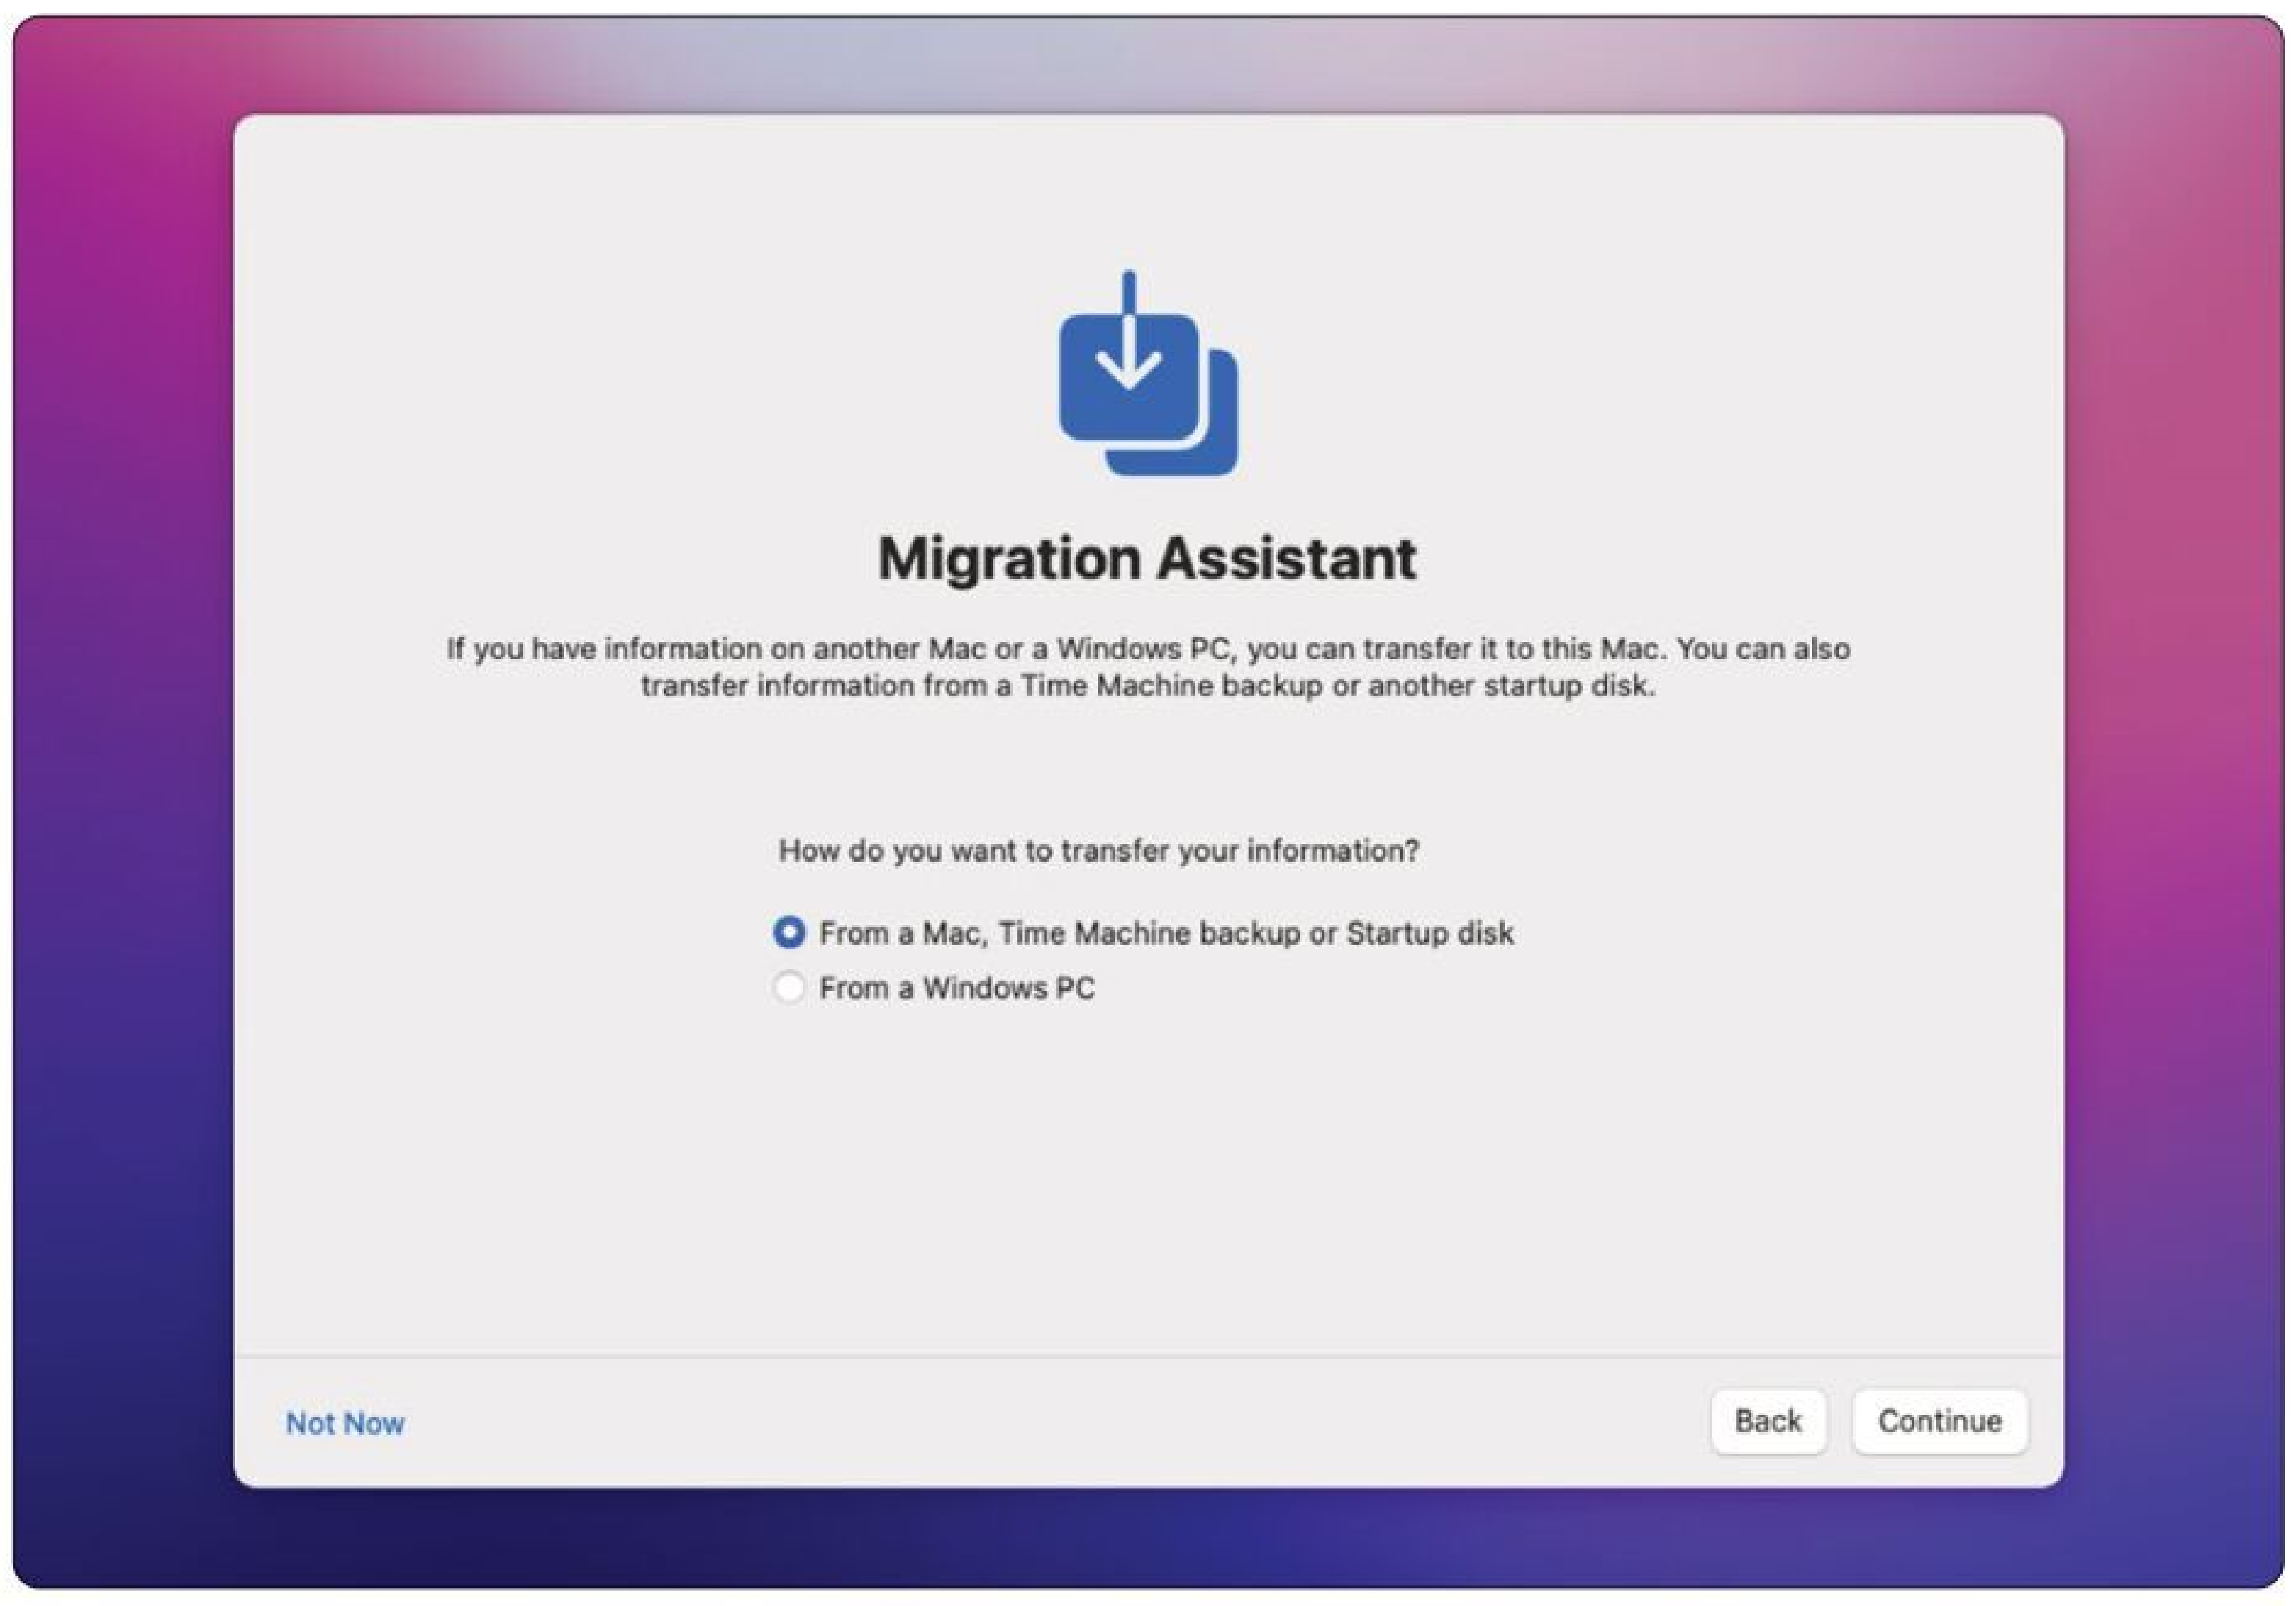
Data & Privacy

This icon appears when an Apple feature asks to use your personal information.

You won't see this with every feature since Apple collects this information only when needed to enable features, secure our services or personalise your experience.

Apple believes privacy is a fundamental human right, so every Apple product is designed to minimise the collection and use of your data, use on-device processing whenever possible, and provide transparency and control over your information.

5 Next comes the Data & Privacy screen. You're shown an icon that appears when an Apple feature collects information, and needs your permission. There's nothing you need to do on this screen, just read it for reference and move on once more.



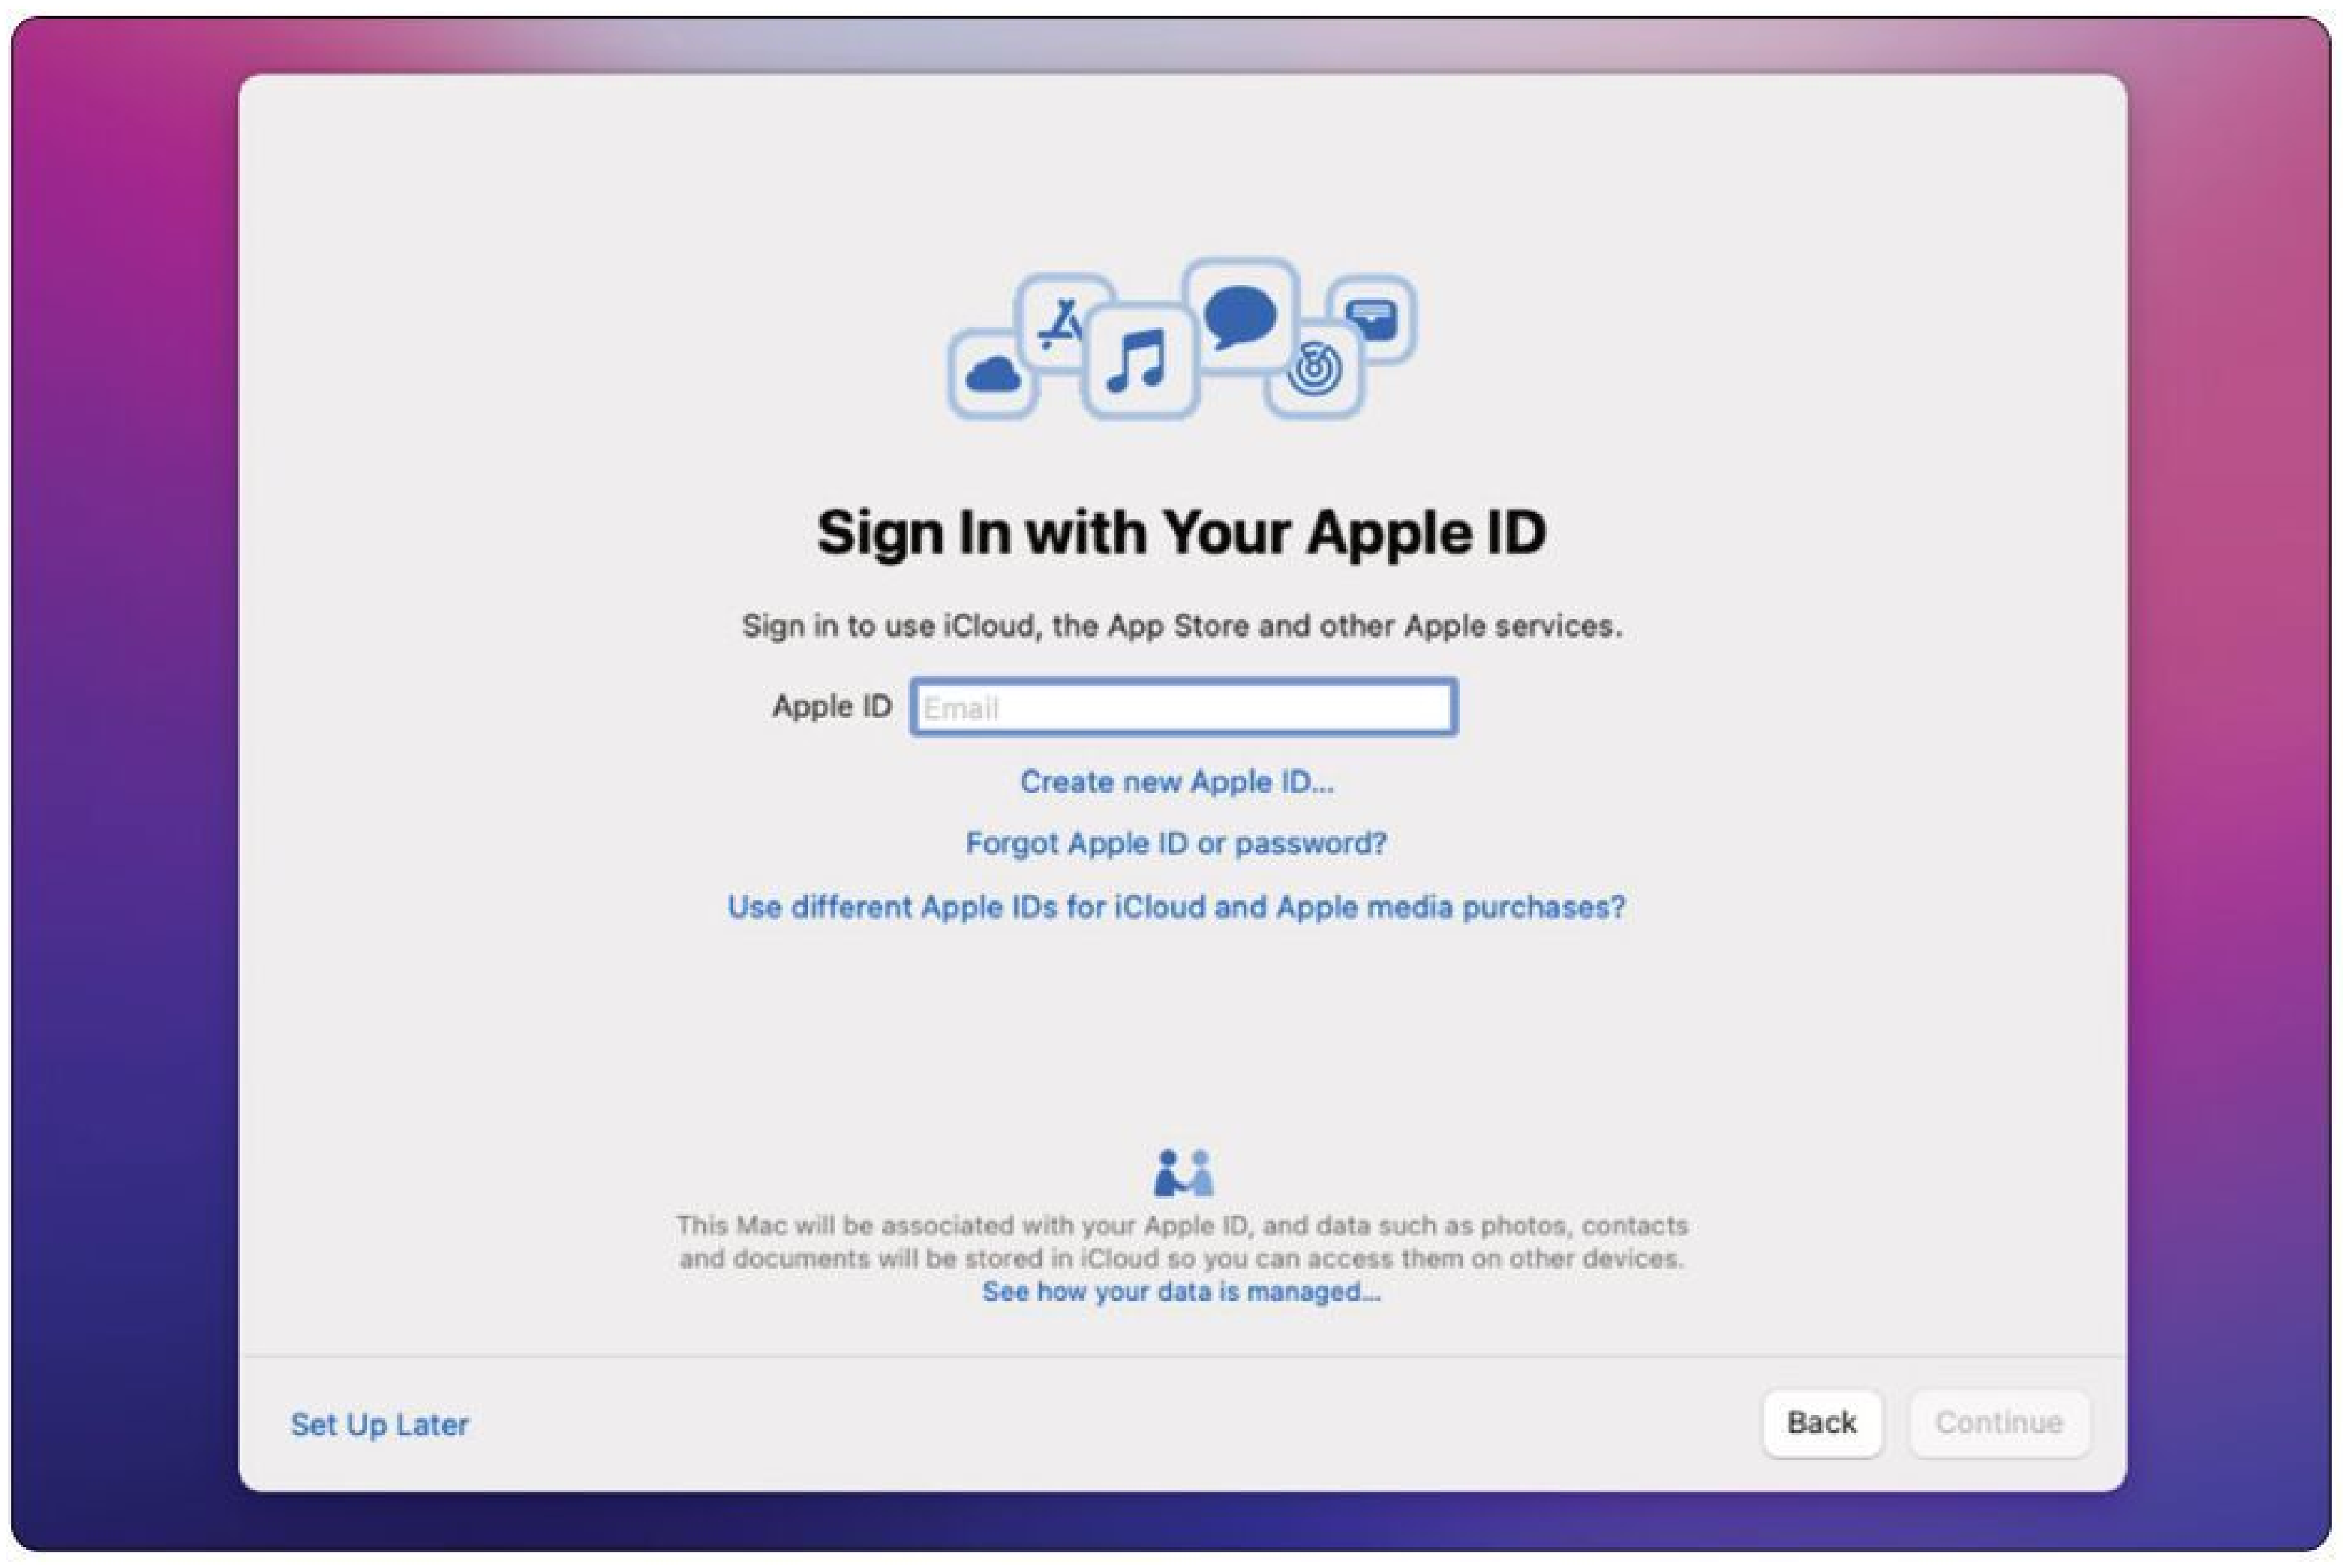
Migration Assistant

If you have information on another Mac or a Windows PC, you can transfer it to this Mac. You can also transfer information from a Time Machine backup or another startup disk.

How do you want to transfer your information?

● From a Mac, Time Machine backup or Startup disk
○ From a Windows PC

6 You're invited to transfer information from a Mac or Time Machine backup, a Windows PC or not at all. To transfer data from your old computer, choose the correct option and follow the on screen instructions. Otherwise, choose the last option to start afresh.



Sign In with Your Apple ID

Sign in to use iCloud, the App Store and other Apple services.

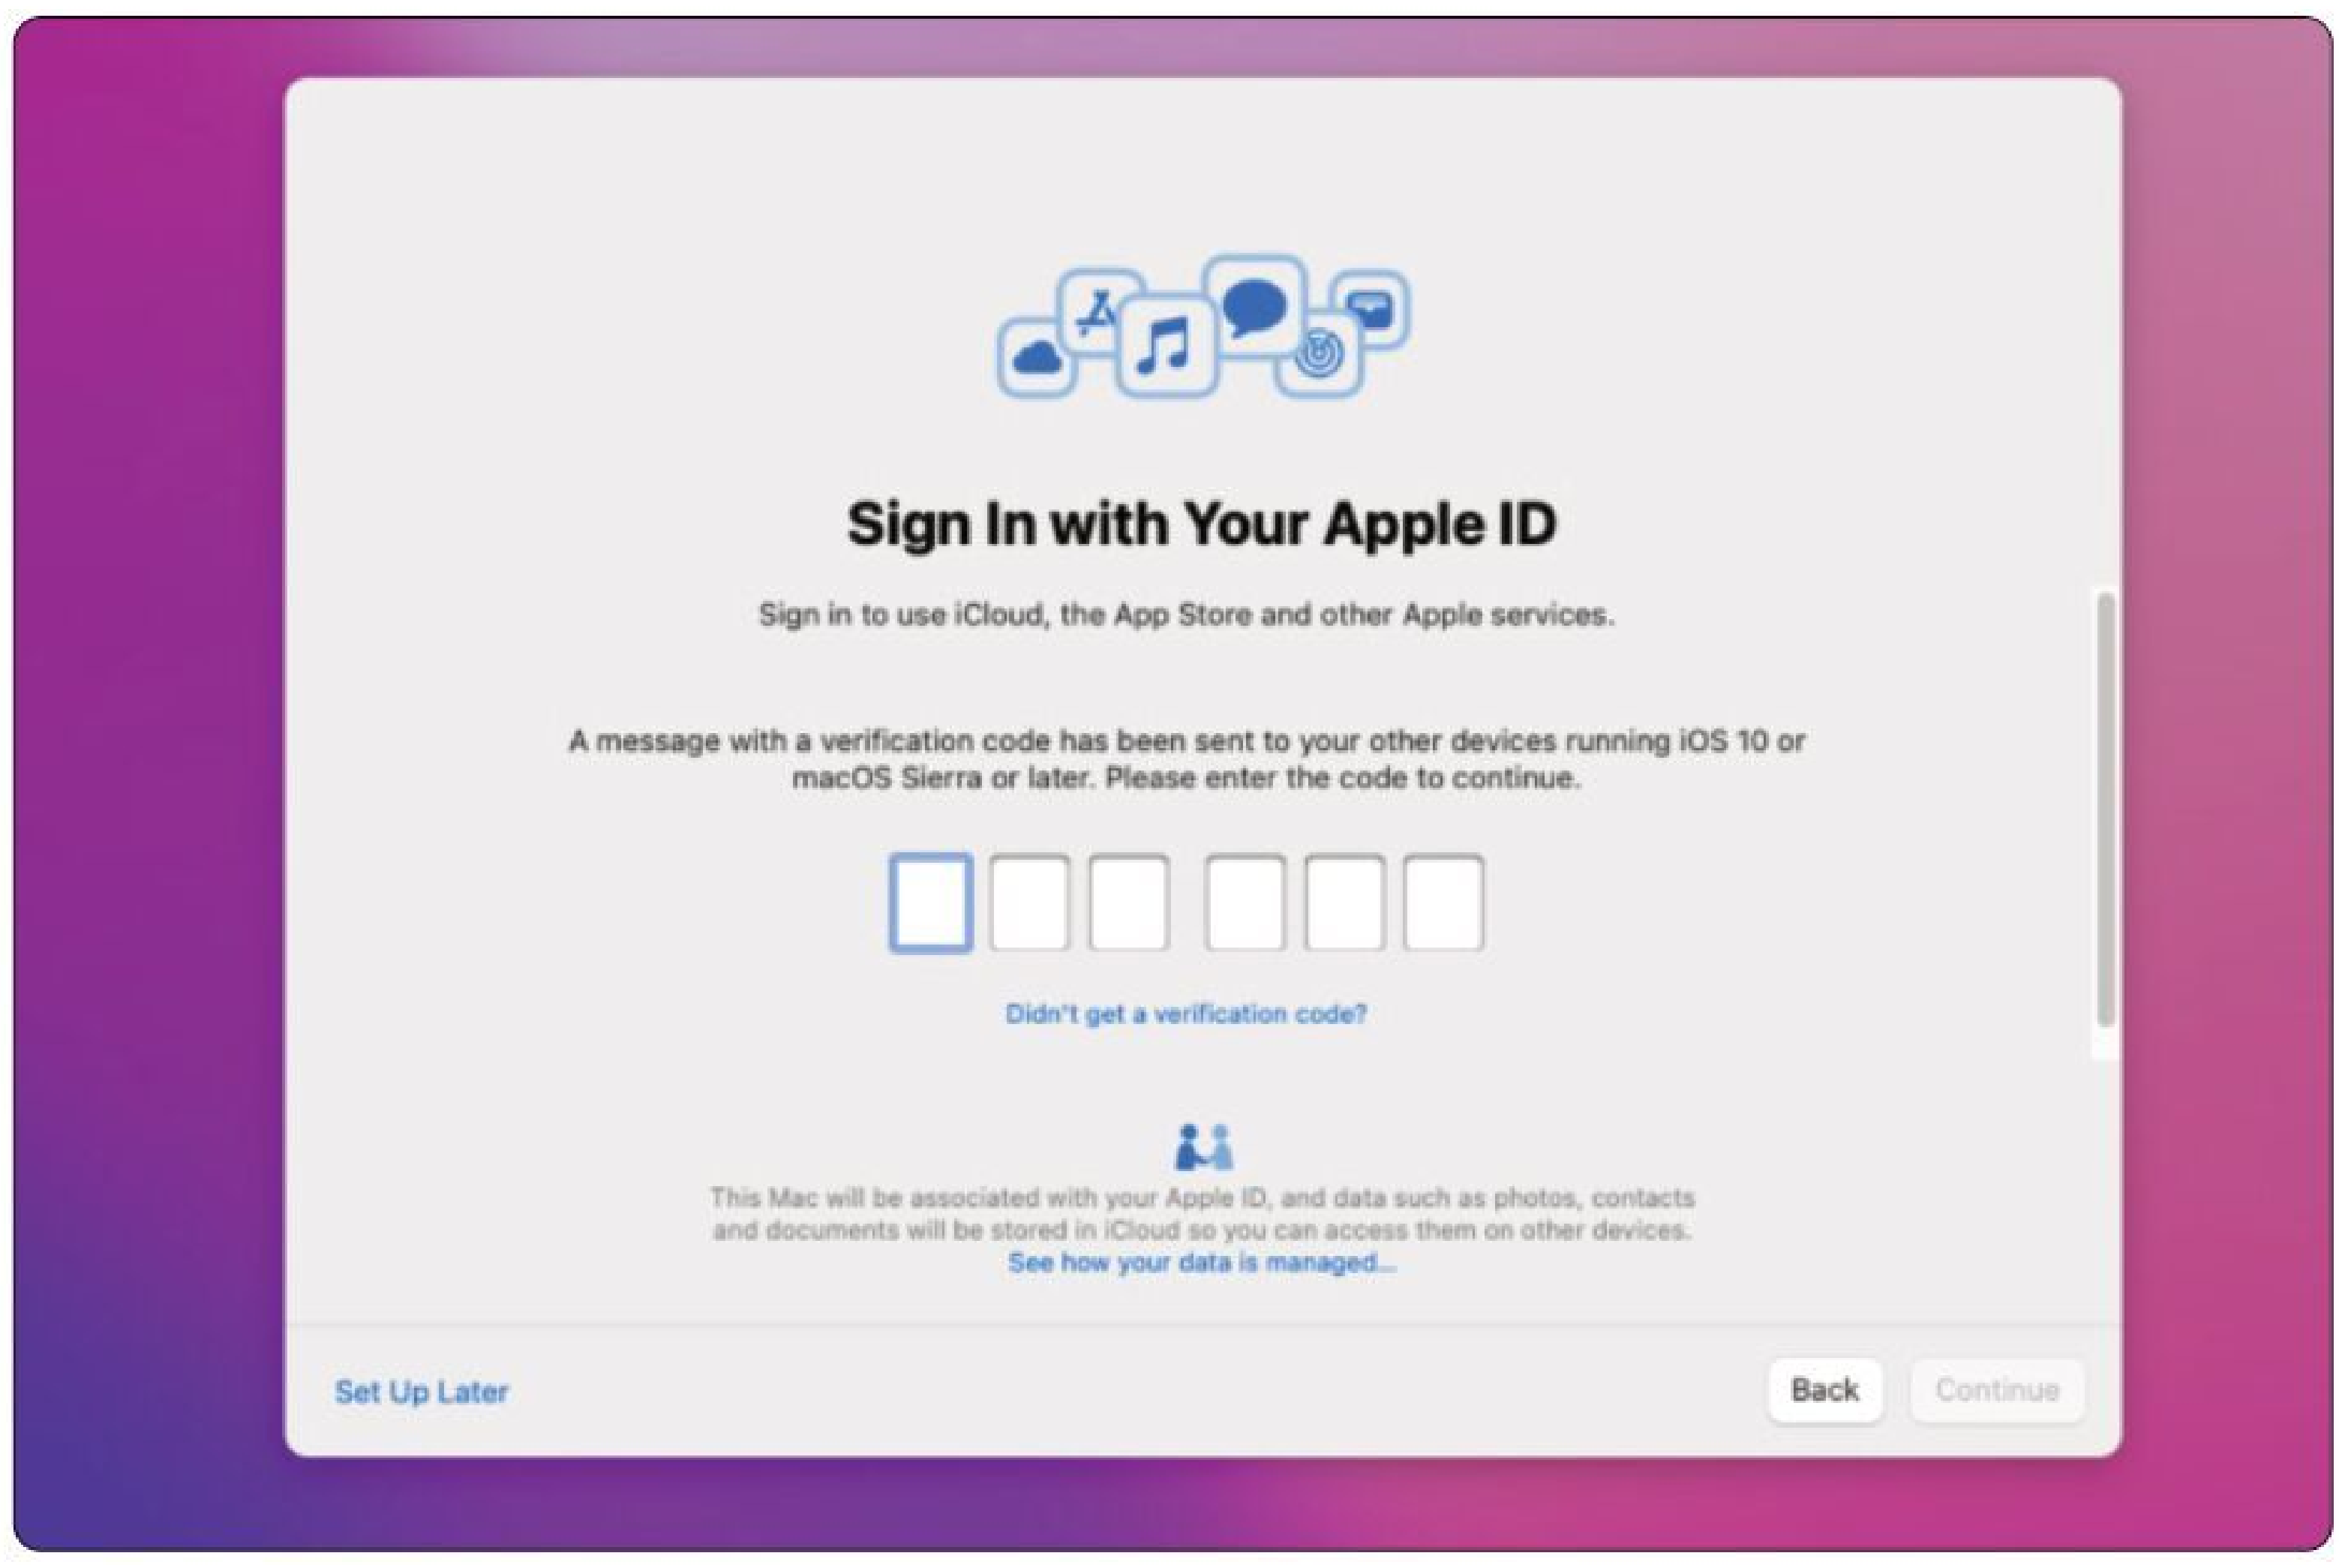
Apple ID: Email

Create new Apple ID...
Forgot Apple ID or password?
Use different Apple IDs for iCloud and Apple media purchases?

This Mac will be associated with your Apple ID, and data such as photos, contacts and documents will be stored in iCloud so you can access them on other devices.

See how your data is managed...
Set Up Later
Back
Continue

7 Now it's time to sign in with your Apple ID. If you already have an Apple ID, sign in now with your password. If you don't, click the Create New Apple ID link and follow the on-screen instructions. There's also a link for if you've forgotten your Apple ID.



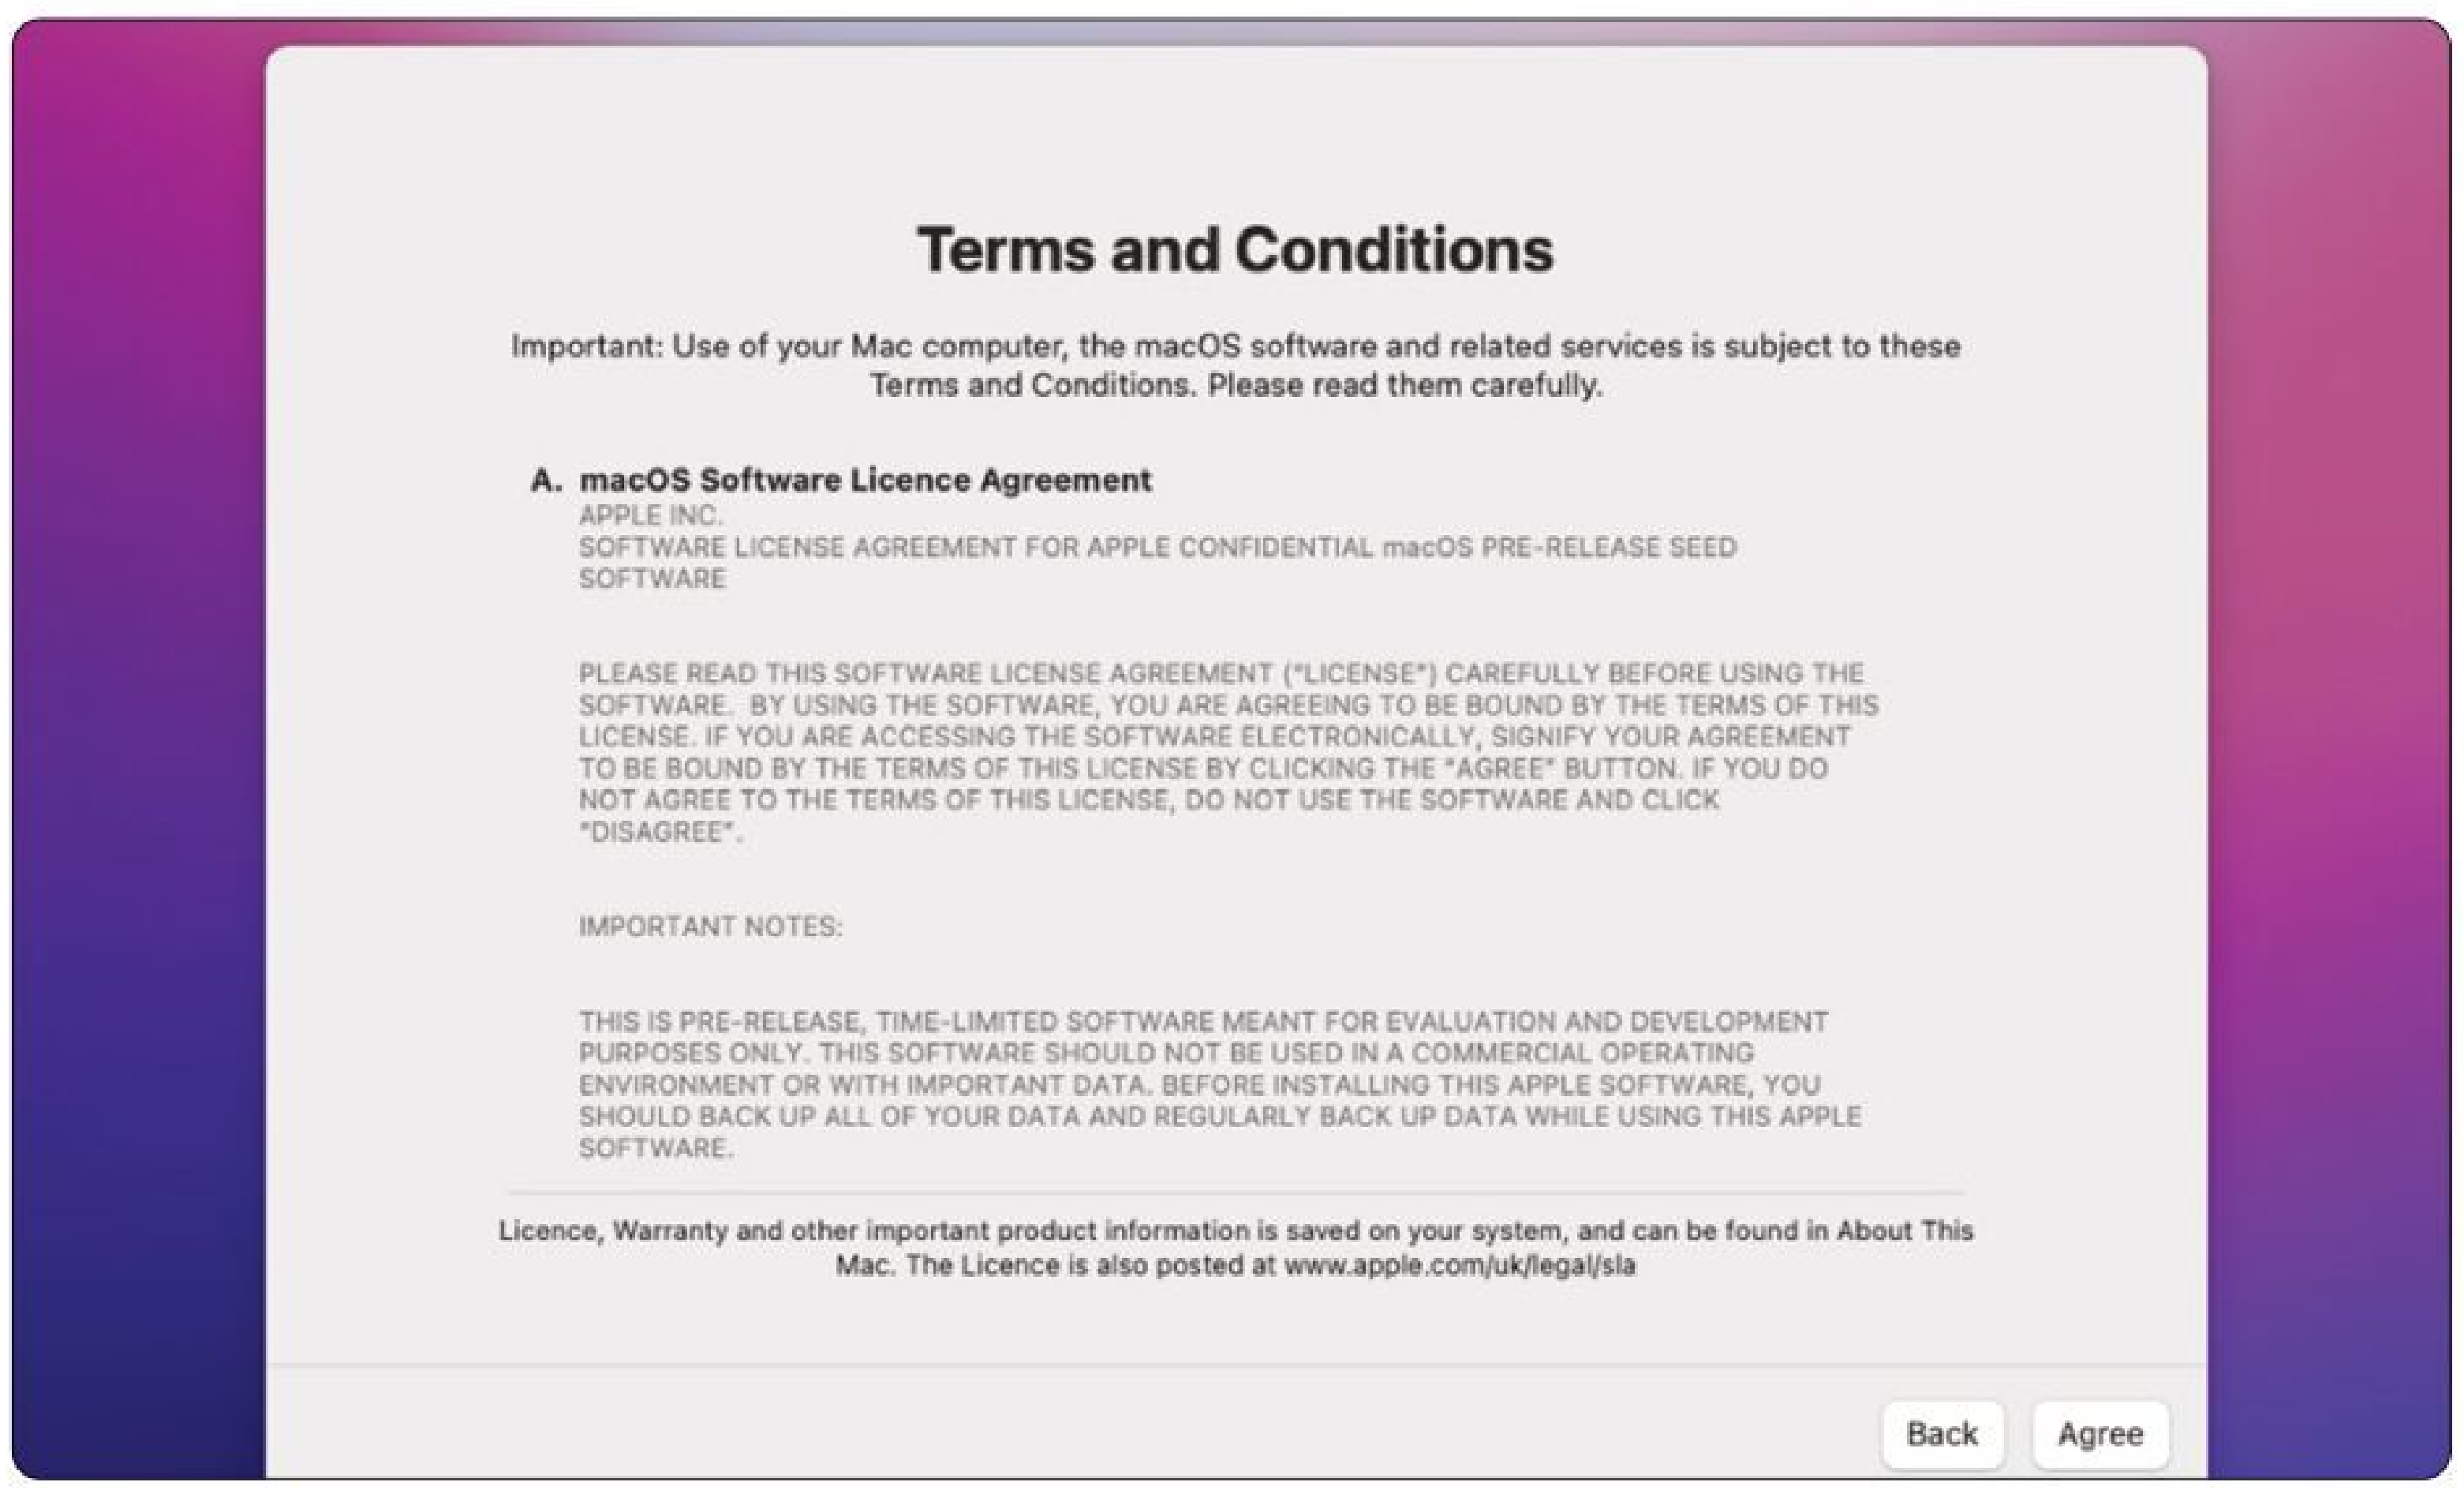
Sign In with Your Apple ID

Sign in to use iCloud, the App Store and other Apple services.

A message with a verification code has been sent to your other devices running iOS 10 or macOS Sierra or later. Please enter the code to continue.

This Mac will be associated with your Apple ID, and data such as photos, contacts and documents will be stored in iCloud so you can access them on other devices.

8 If you already have an Apple device, a pop-up window appears asking you to allow the new log-in. Do so, and a six-figure number is sent, which you must type now. If it doesn't arrive, click the link under the number fields and follow the instructions. Otherwise, type the numbers and proceed.



Terms and Conditions

Important: Use of your Mac computer, the macOS software and related services is subject to these Terms and Conditions. Please read them carefully.

A. **macOS Software Licence Agreement**
APPLE INC.
SOFTWARE LICENSE AGREEMENT FOR APPLE CONFIDENTIAL macOS PRE-RELEASE SEED SOFTWARE

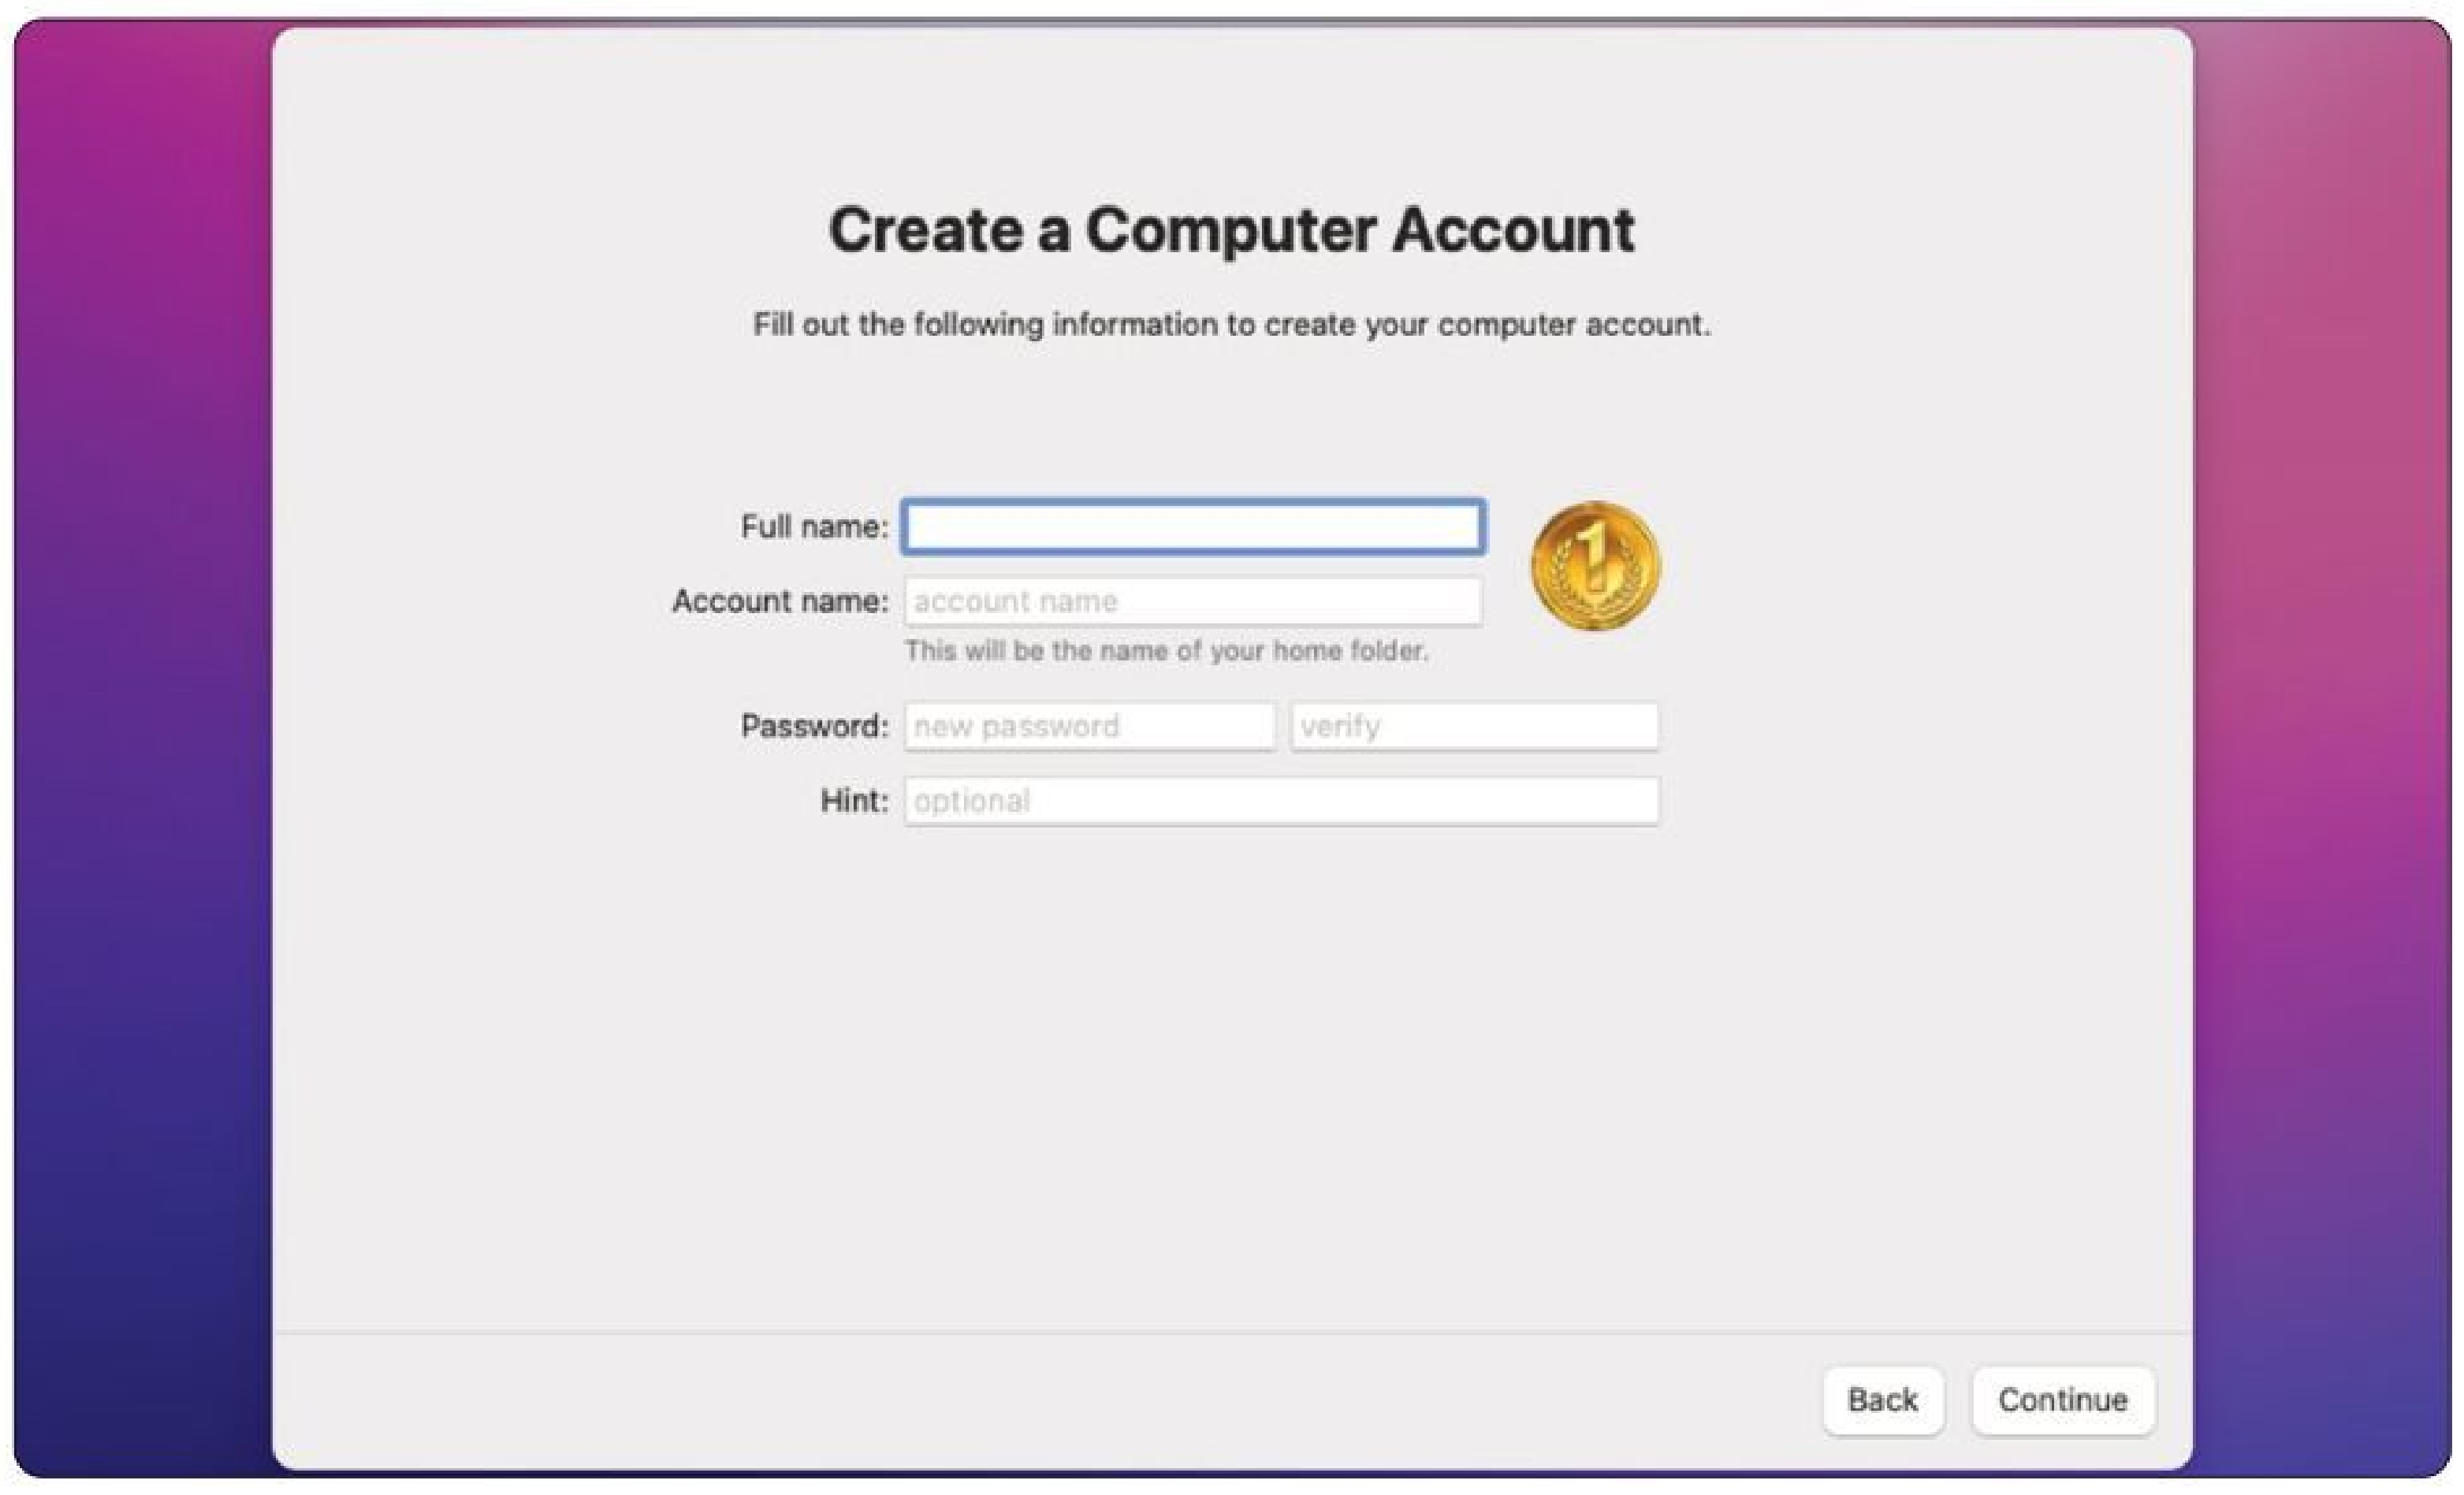
PLEASE READ THIS SOFTWARE LICENSE AGREEMENT ("LICENSE") CAREFULLY BEFORE USING THE SOFTWARE. BY USING THE SOFTWARE, YOU ARE AGREEING TO BE BOUND BY THE TERMS OF THIS LICENSE. IF YOU ARE ACCESSING THE SOFTWARE ELECTRONICALLY, SIGNIFY YOUR AGREEMENT TO BE BOUND BY THE TERMS OF THIS LICENSE BY CLICKING THE "AGREE" BUTTON. IF YOU DO NOT AGREE TO THE TERMS OF THIS LICENSE, DO NOT USE THE SOFTWARE AND CLICK "DISAGREE".

IMPORTANT NOTES:

THIS IS PRE-RELEASE, TIME-LIMITED SOFTWARE MEANT FOR EVALUATION AND DEVELOPMENT PURPOSES ONLY. THIS SOFTWARE SHOULD NOT BE USED IN A COMMERCIAL OPERATING ENVIRONMENT OR WITH IMPORTANT DATA. BEFORE INSTALLING THIS APPLE SOFTWARE, YOU SHOULD BACK UP ALL OF YOUR DATA AND REGULARLY BACK UP DATA WHILE USING THIS APPLE SOFTWARE.

Licence, Warranty and other important product information is saved on your system, and can be found in About This Mac. The Licence is also posted at www.apple.com/uk/legal/sla

9 You're shown a screen of Terms and Conditions, which you can read by scrolling if you wish. When you're ready, click the checkbox labelled 'I have read and agreed to the iCloud terms and conditions', then click the Agree button in the bottom-right.

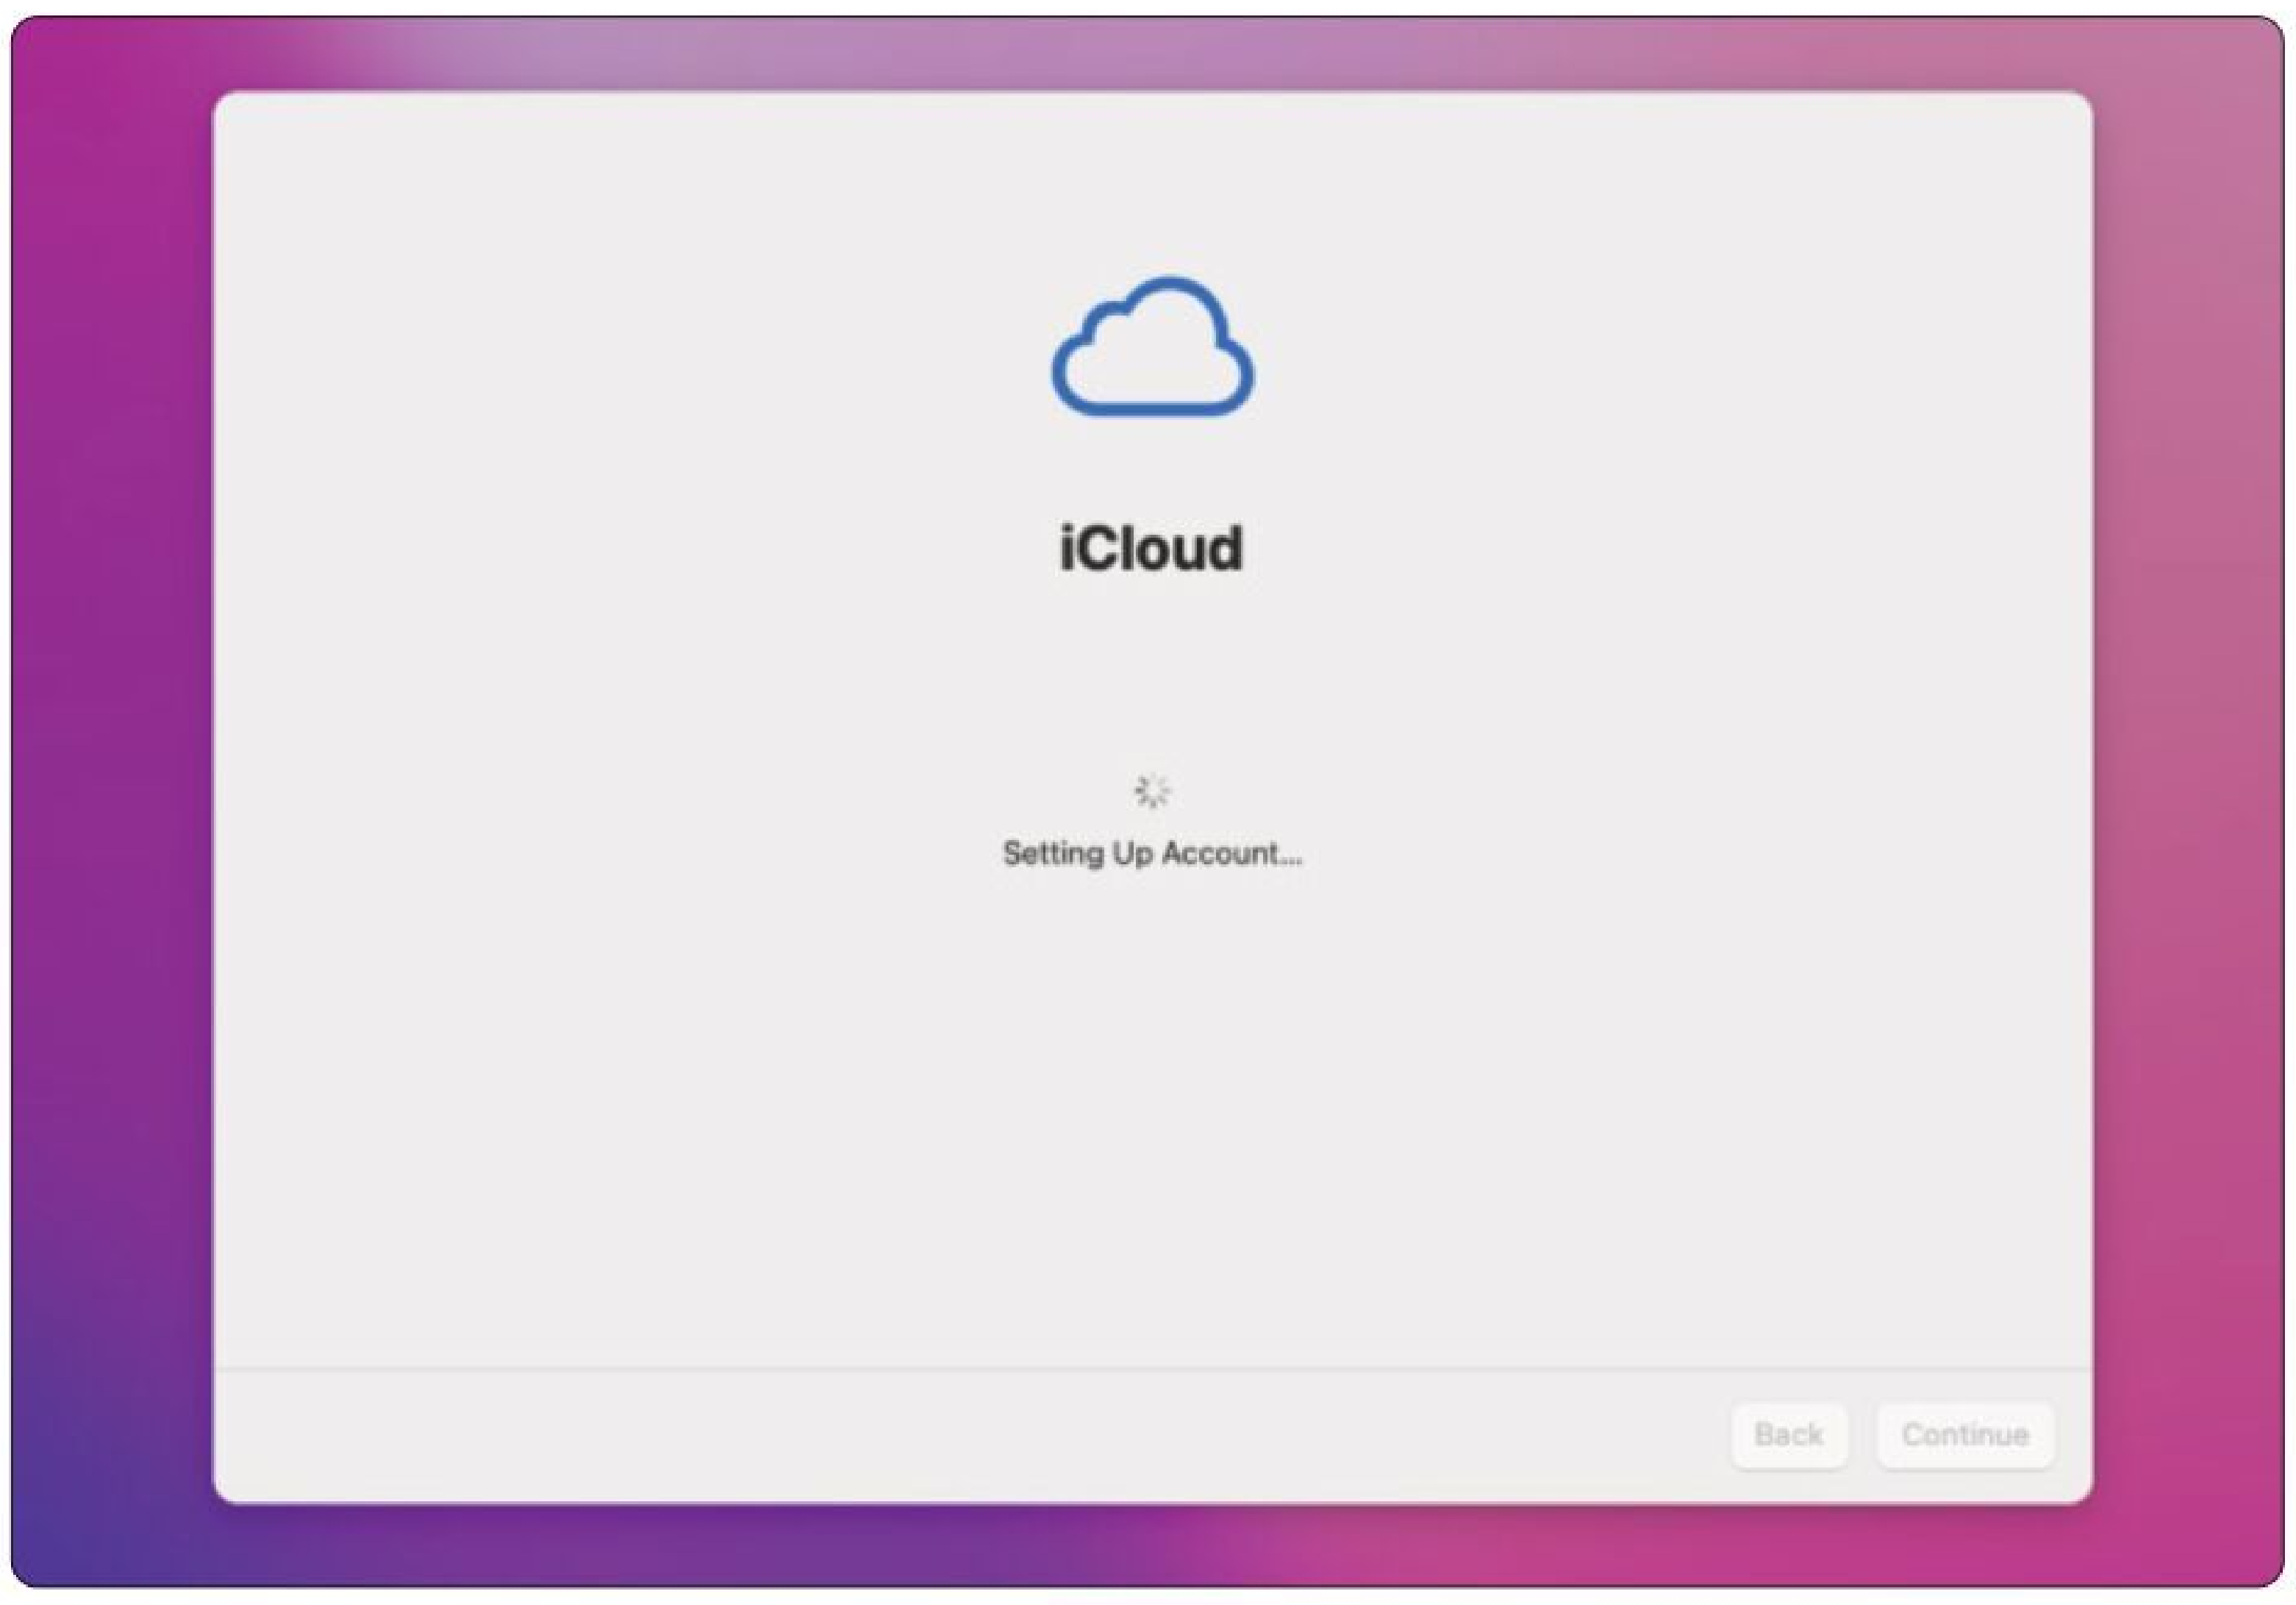


Create a Computer Account

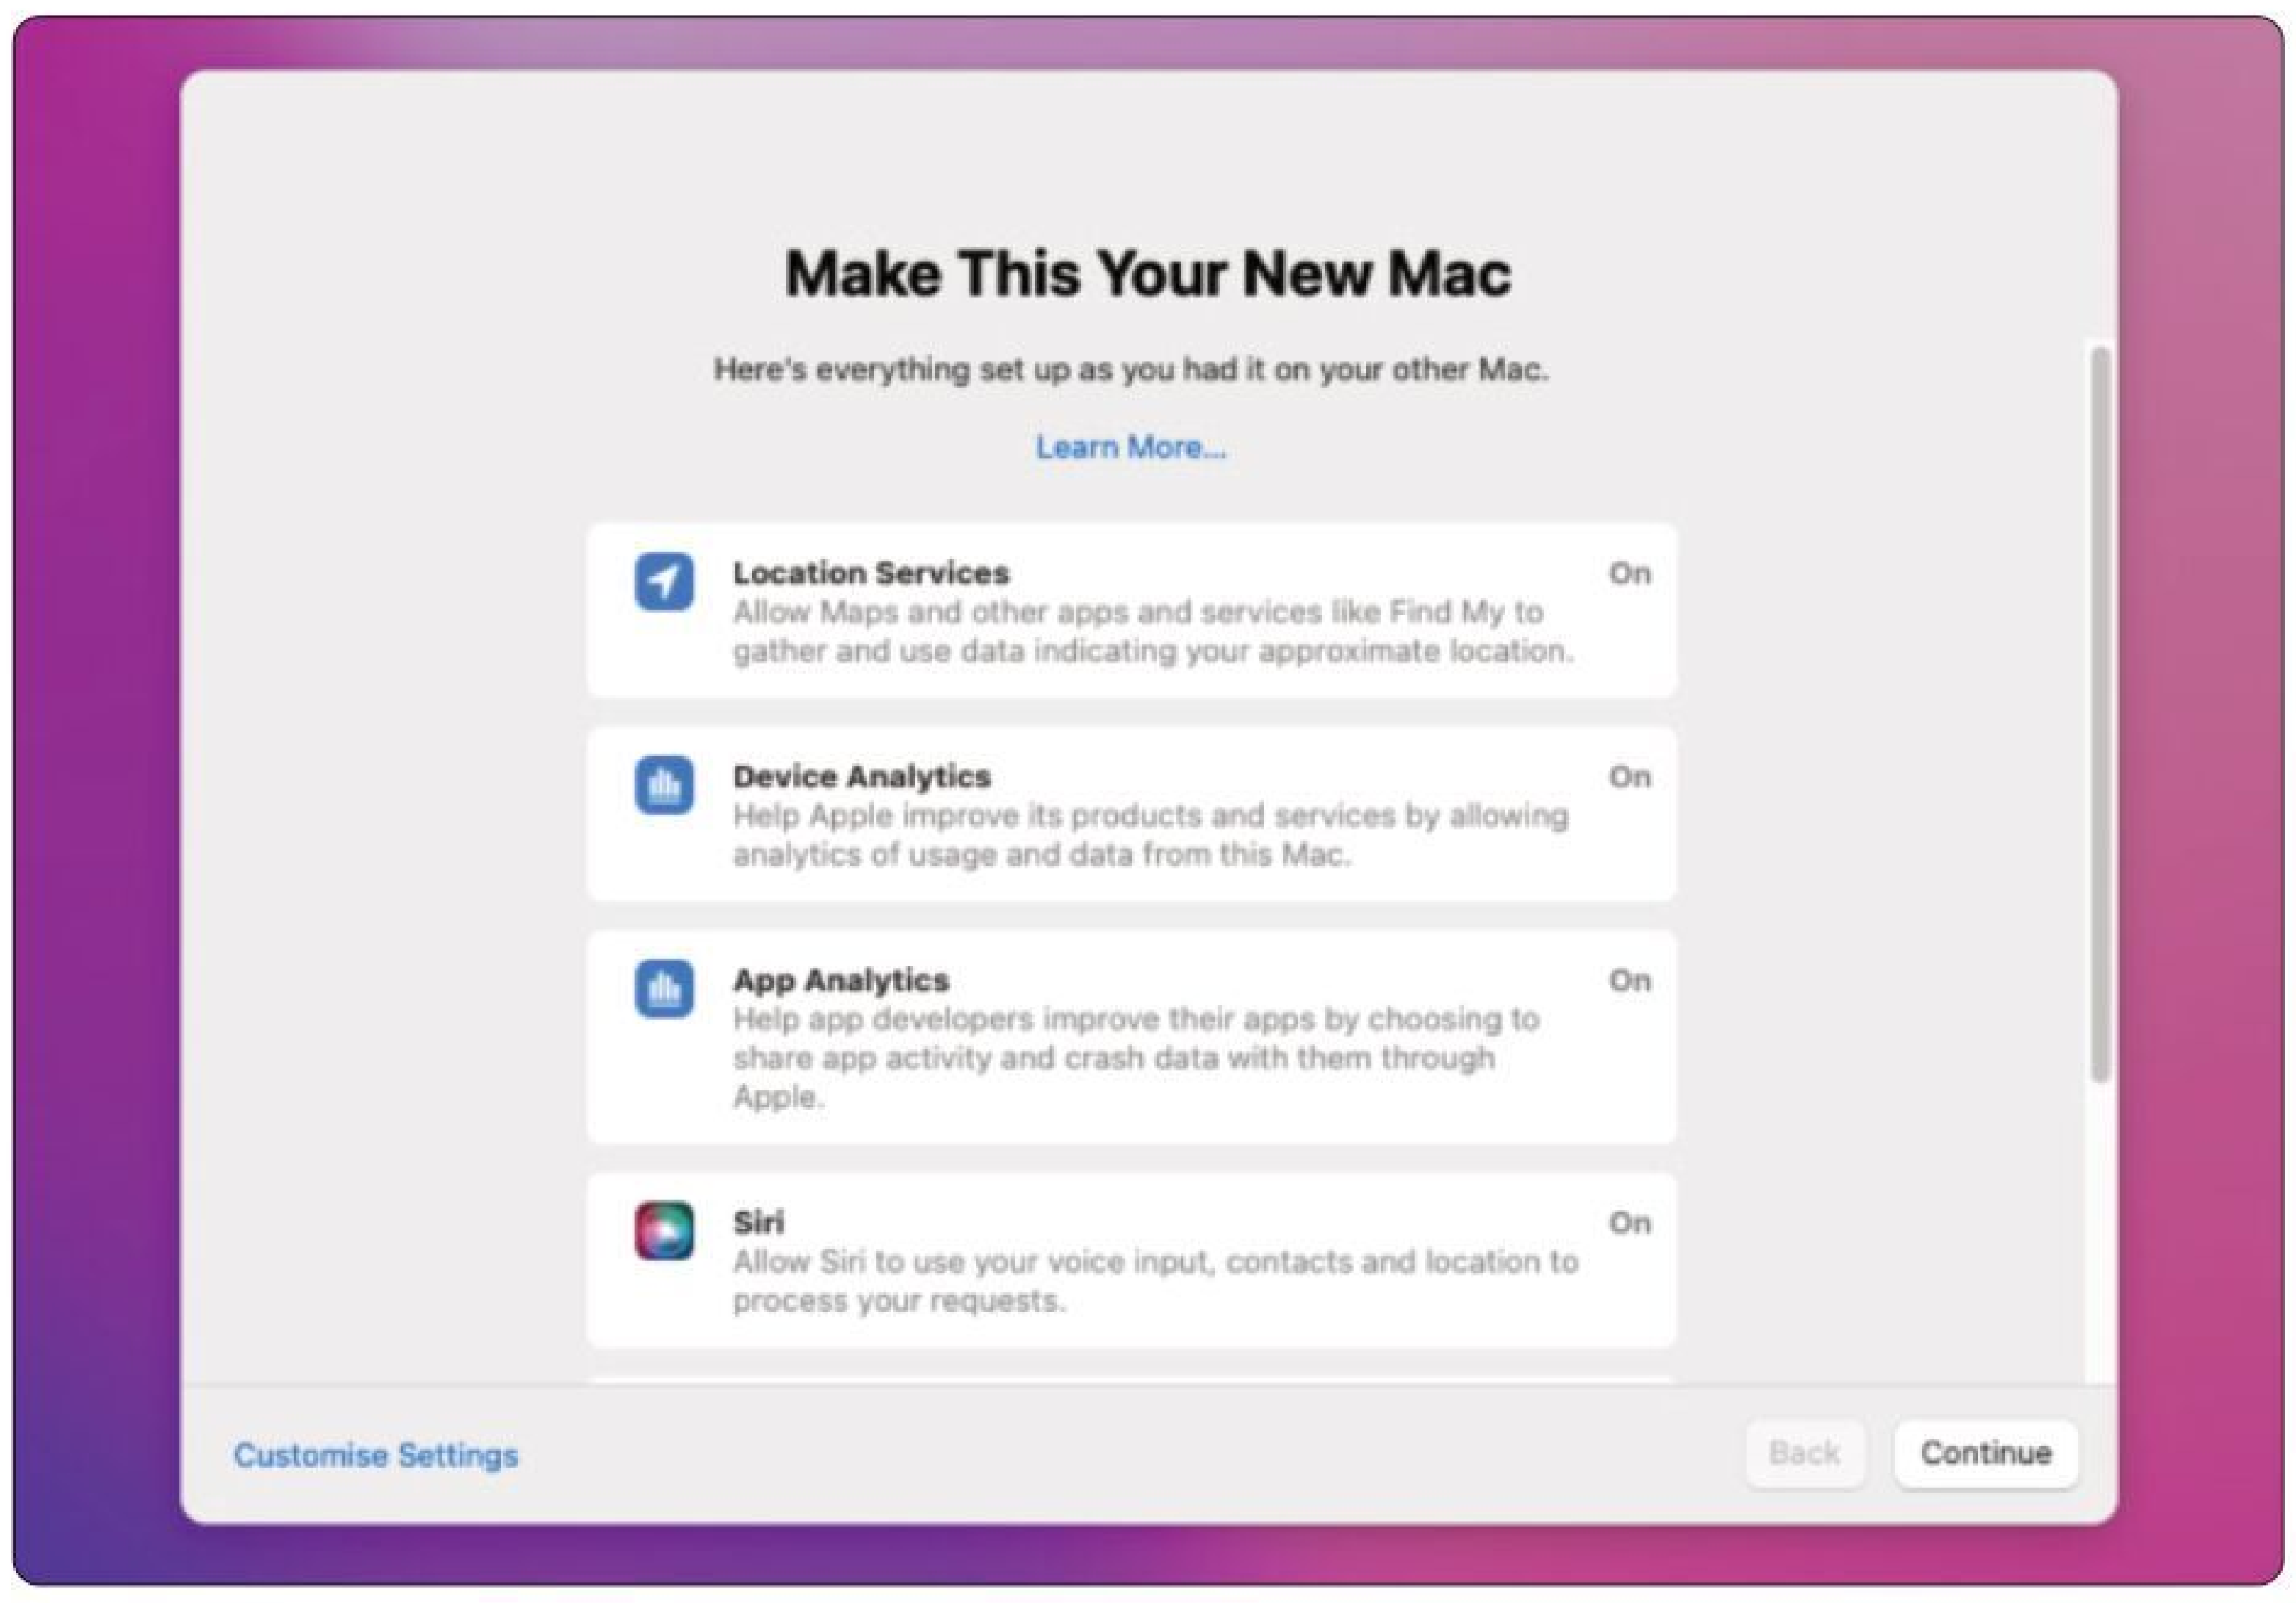
Fill out the following information to create your computer account.

Full name:
Account name: account name
This will be the name of your home folder.
Password: new password verify
Hint: optional

10 Your account name is based on your Apple ID name but your password, which unlocks the computer, should be chosen now. Choose something you can remember and enter a hint in case you forget. Click the small picture to choose a different one, or take a photo using the Mac's camera.



11 The Mac now sets up your iCloud account on your computer. This is the screen you see while it's working things out. You don't have to do anything; just sit and wait. It takes just a few minutes, so don't assume it's got stuck and try to interrupt or restart it.



Make This Your New Mac

Here's everything set up as you had it on your other Mac.

Learn More...

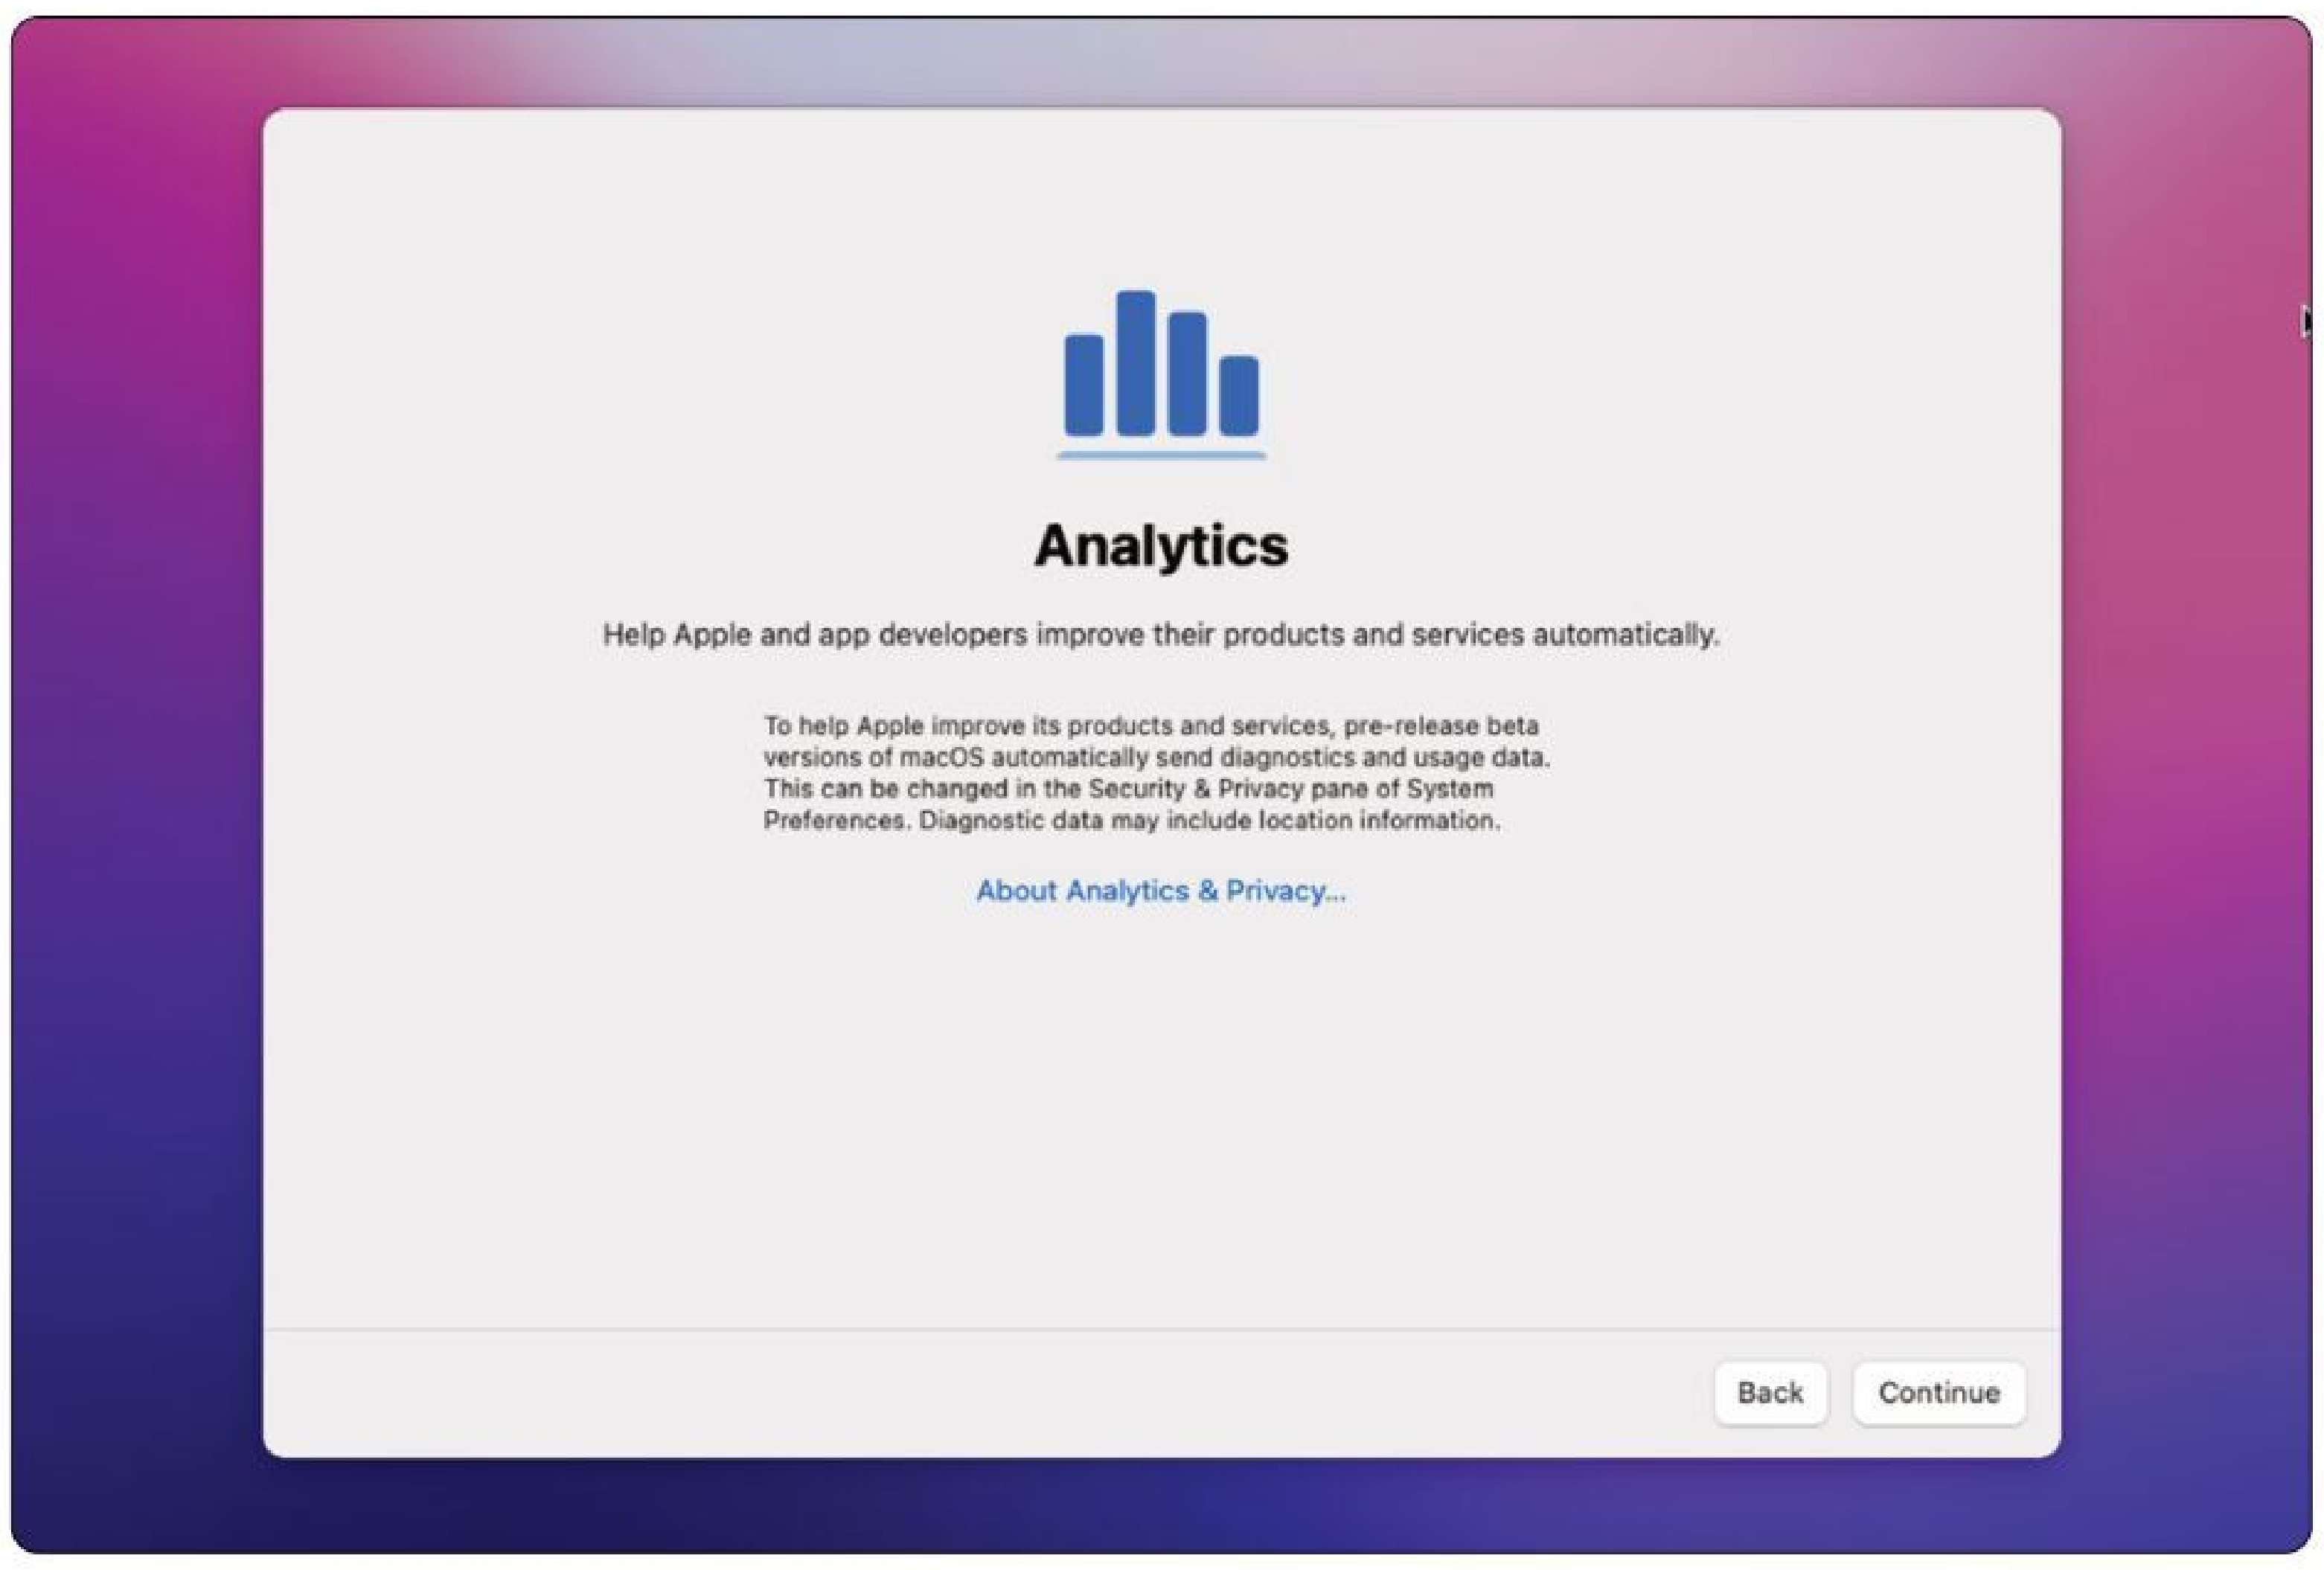
Location Services – On
Allow Maps and other apps and services like Find My to gather and use data indicating your approximate location.

Device Analytics – On
Help Apple improve its products and services by allowing analytics of usage and data from this Mac.

App Analytics – On
Help app developers improve their apps by choosing to share app activity and crash data with them through Apple.

Siri – On
Allow Siri to use your voice input, contacts and location to process your requests.

12 On the Make This Your Mac screen, you can set up your Mac quickly, by allowing predetermined settings to take effect, for things like Siri and Maps. You can customise these settings by clicking the link; we suggest you just click Continue instead.

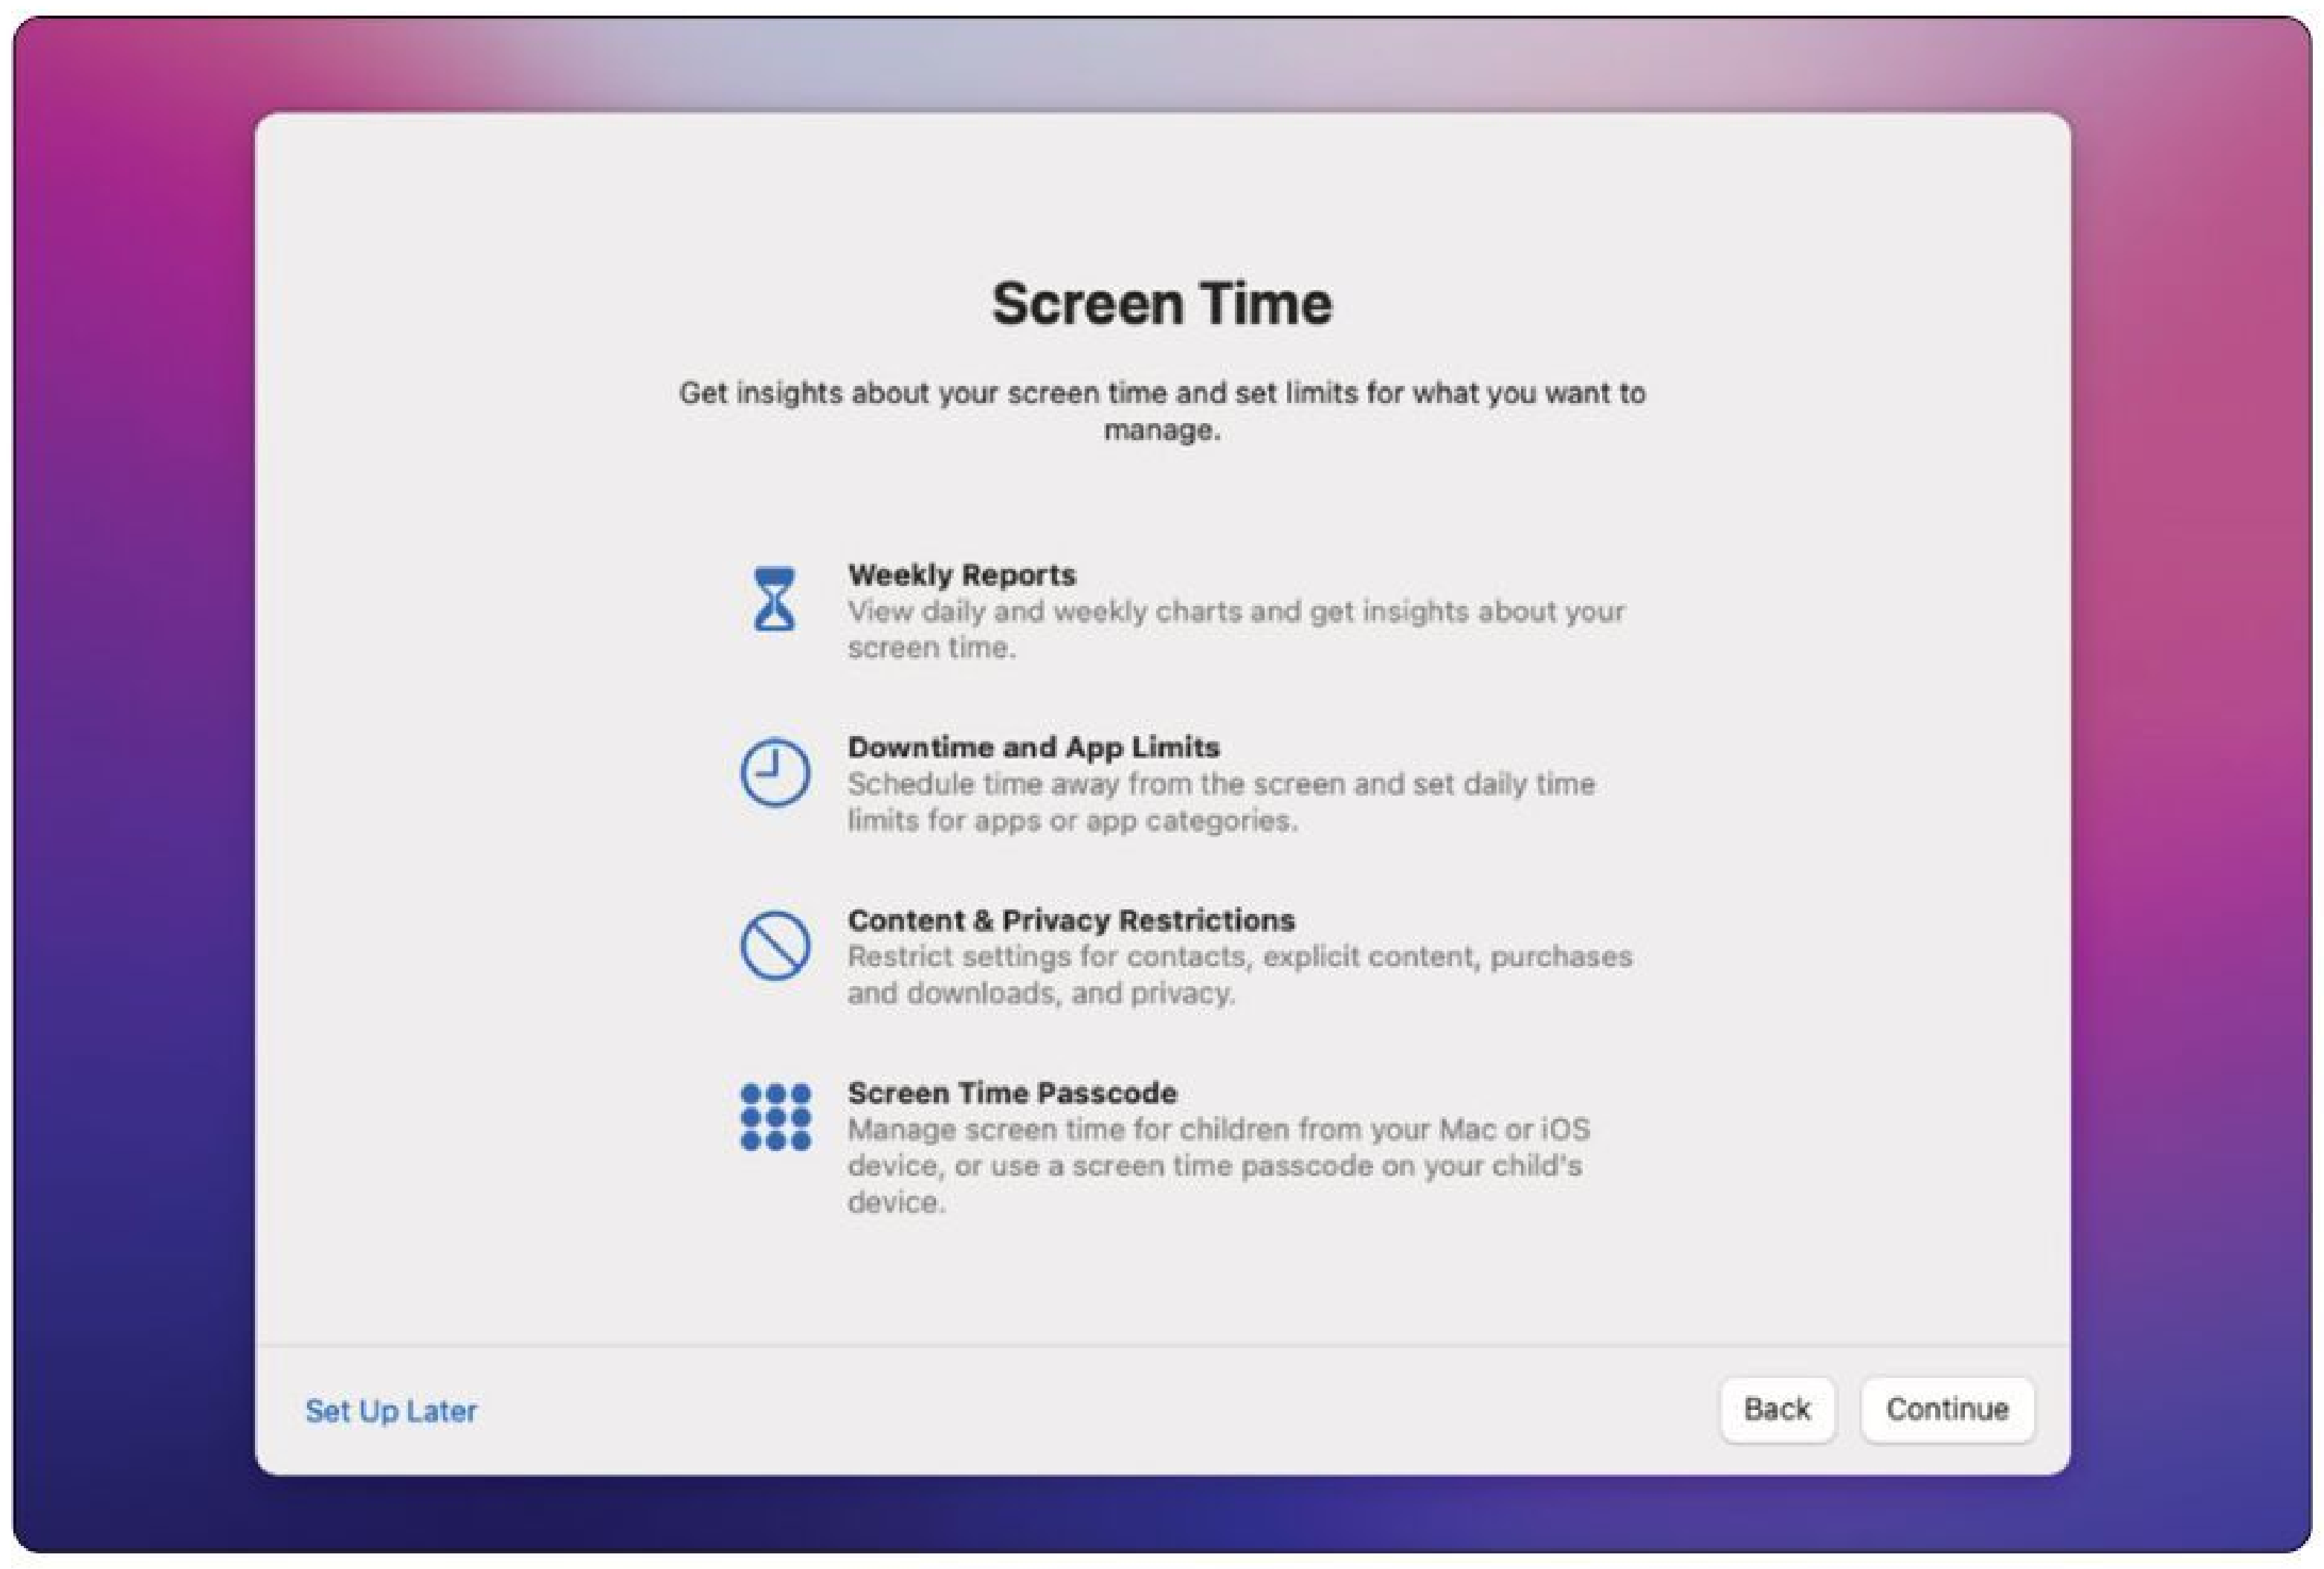


Analytics

Help Apple and app developers improve their products and services automatically.

To help Apple improve its products and services, pre-release beta versions of macOS automatically send diagnostics and usage data. This can be changed in the Security & Privacy pane of System Preferences. Diagnostic data may include location information.

13 You can now choose whether you allow analytic information to be sent to Apple and/or third-party software developers so they can improve their products. If you're concerned about privacy, you can decline, but it's helpful if you agree to share.



Screen Time

Get insights about your screen time and set limits for what you want to manage.

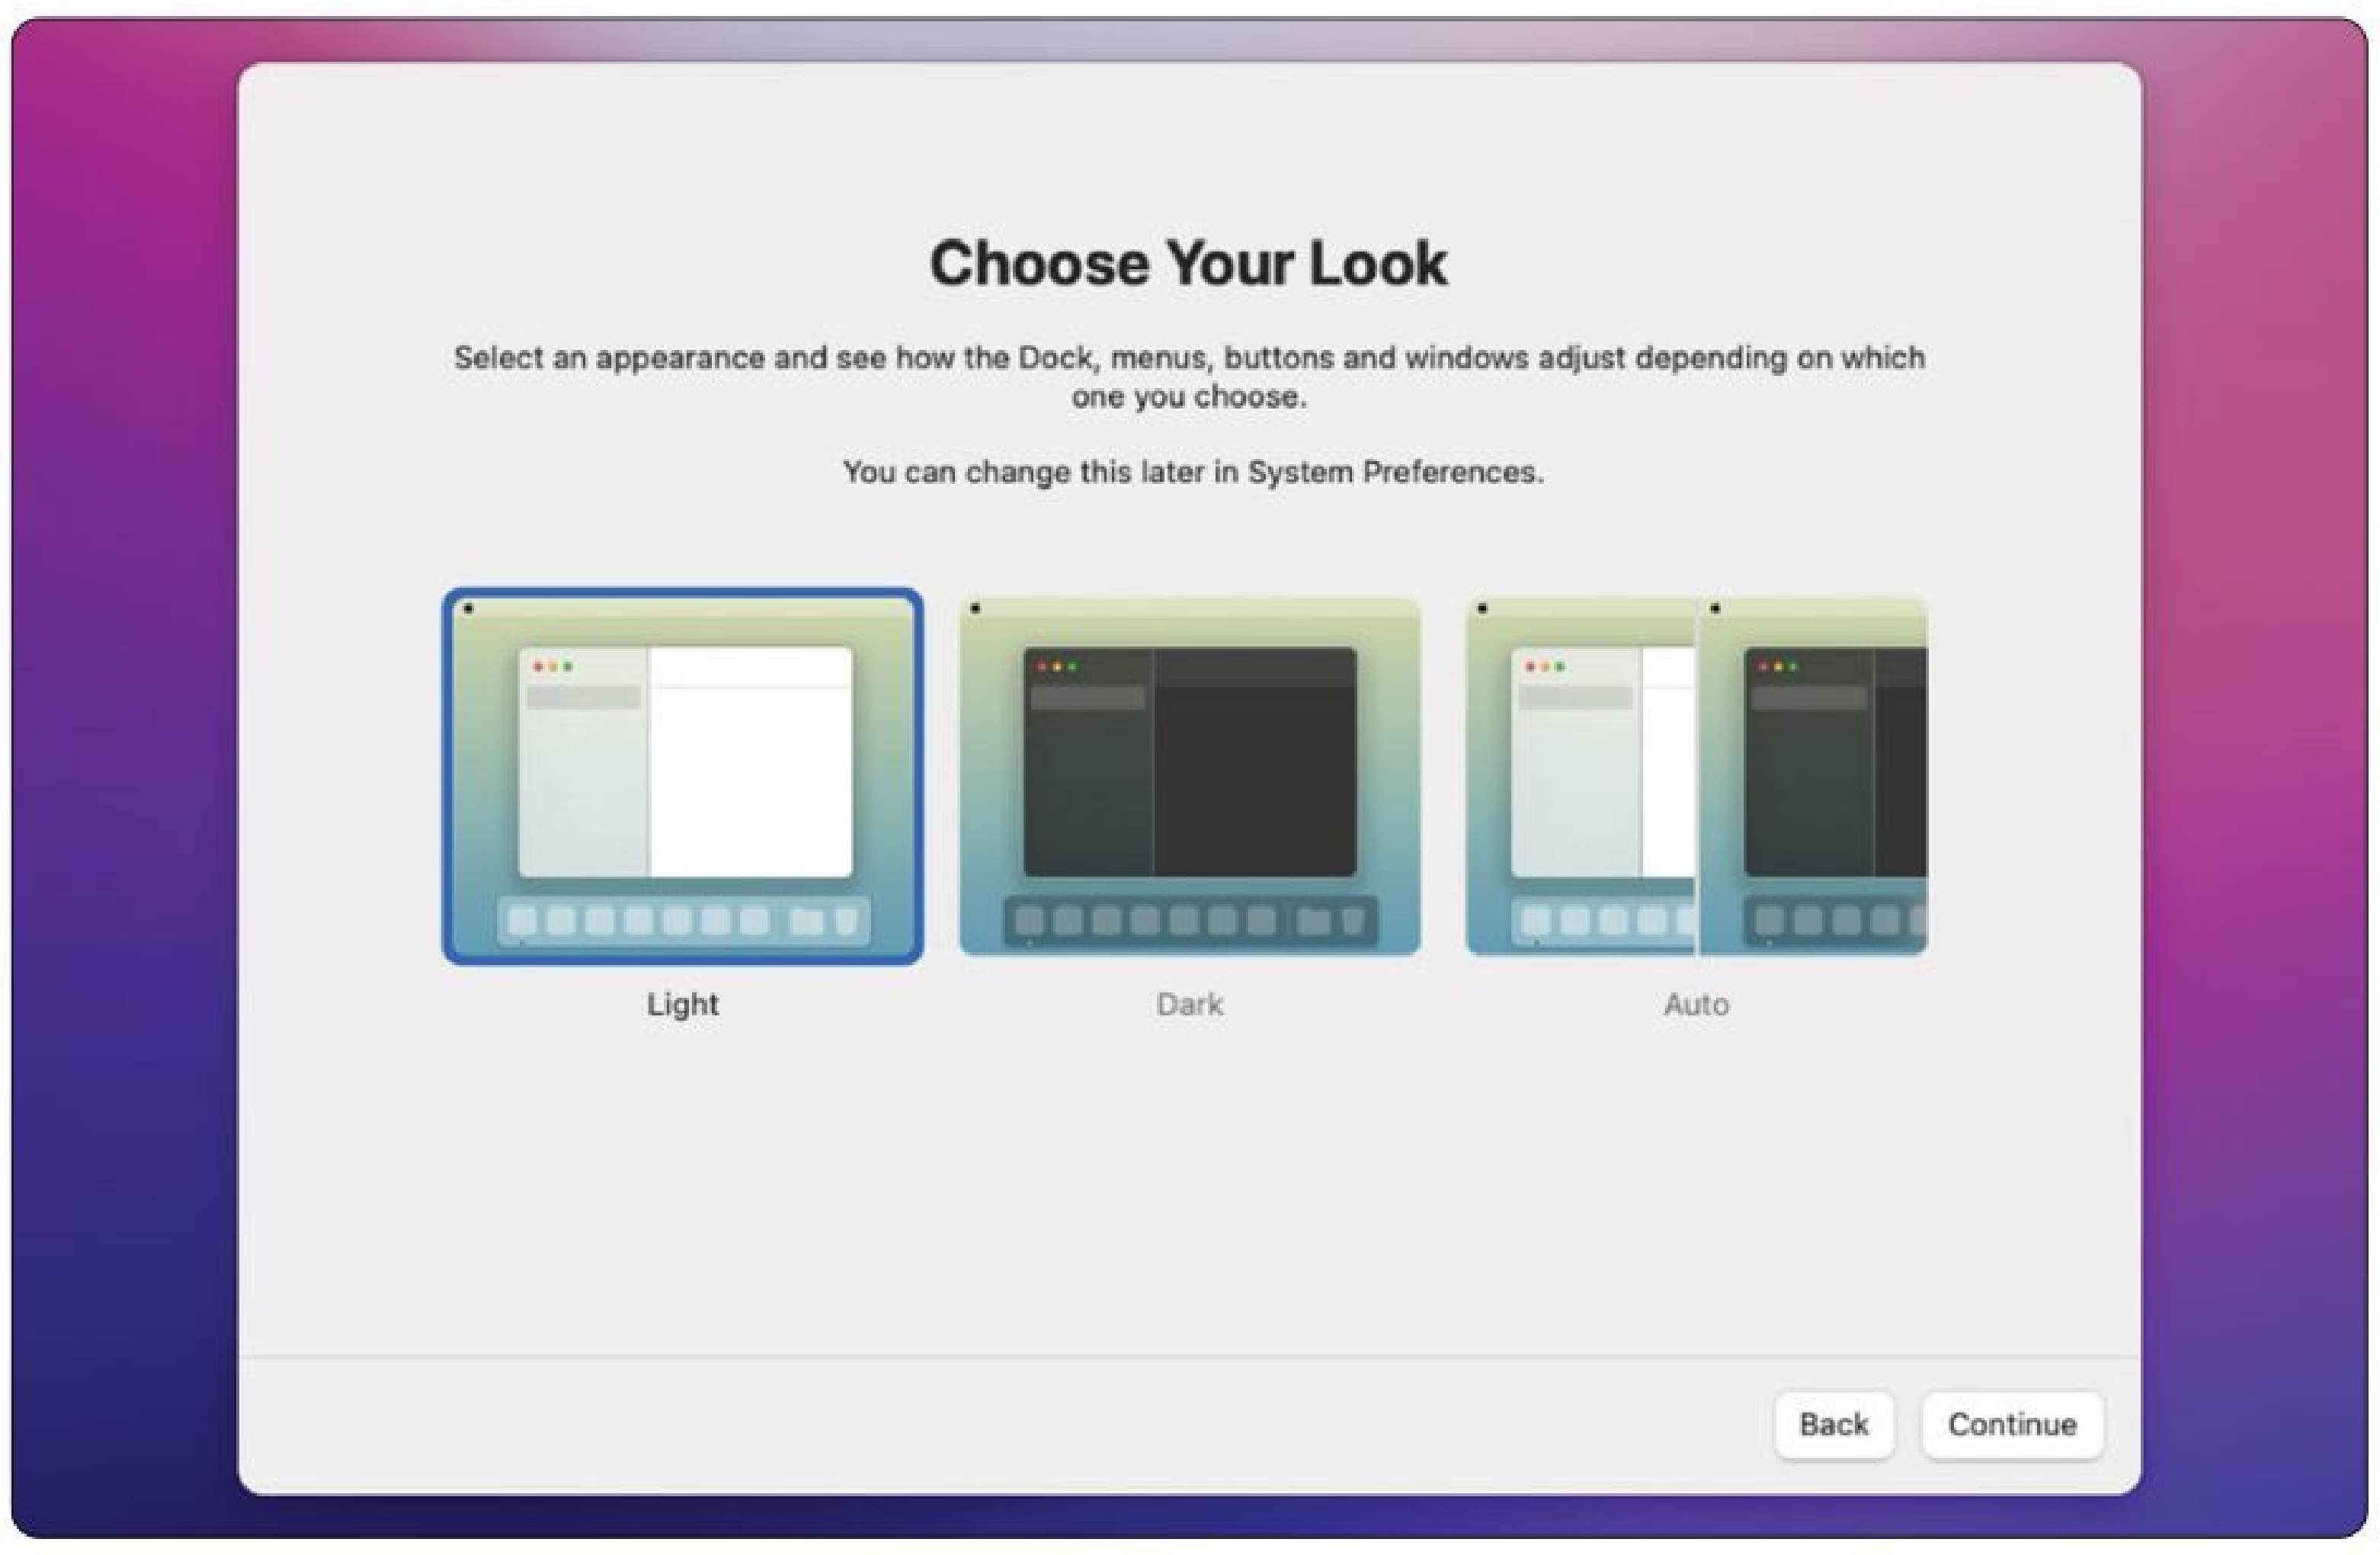
Weekly Reports
View daily and weekly charts and get insights about your screen time.

Downtime and App Limits
Schedule time away from the screen and set daily time limits for apps or app categories.

Content & Privacy Restrictions
Restrict settings for contacts, explicit content, purchases and downloads, and privacy.

Screen Time Passcode
Manage screen time for children from your Mac or iOS device, or use a screen time passcode on your child's device.

14 You now decide whether or not you want to set up Screen Time. Click Continue to have Screen Time give you updates on how you're using your Mac, or the Set Up Later link at the top to leave it be for now. You can activate it later in System Preferences.

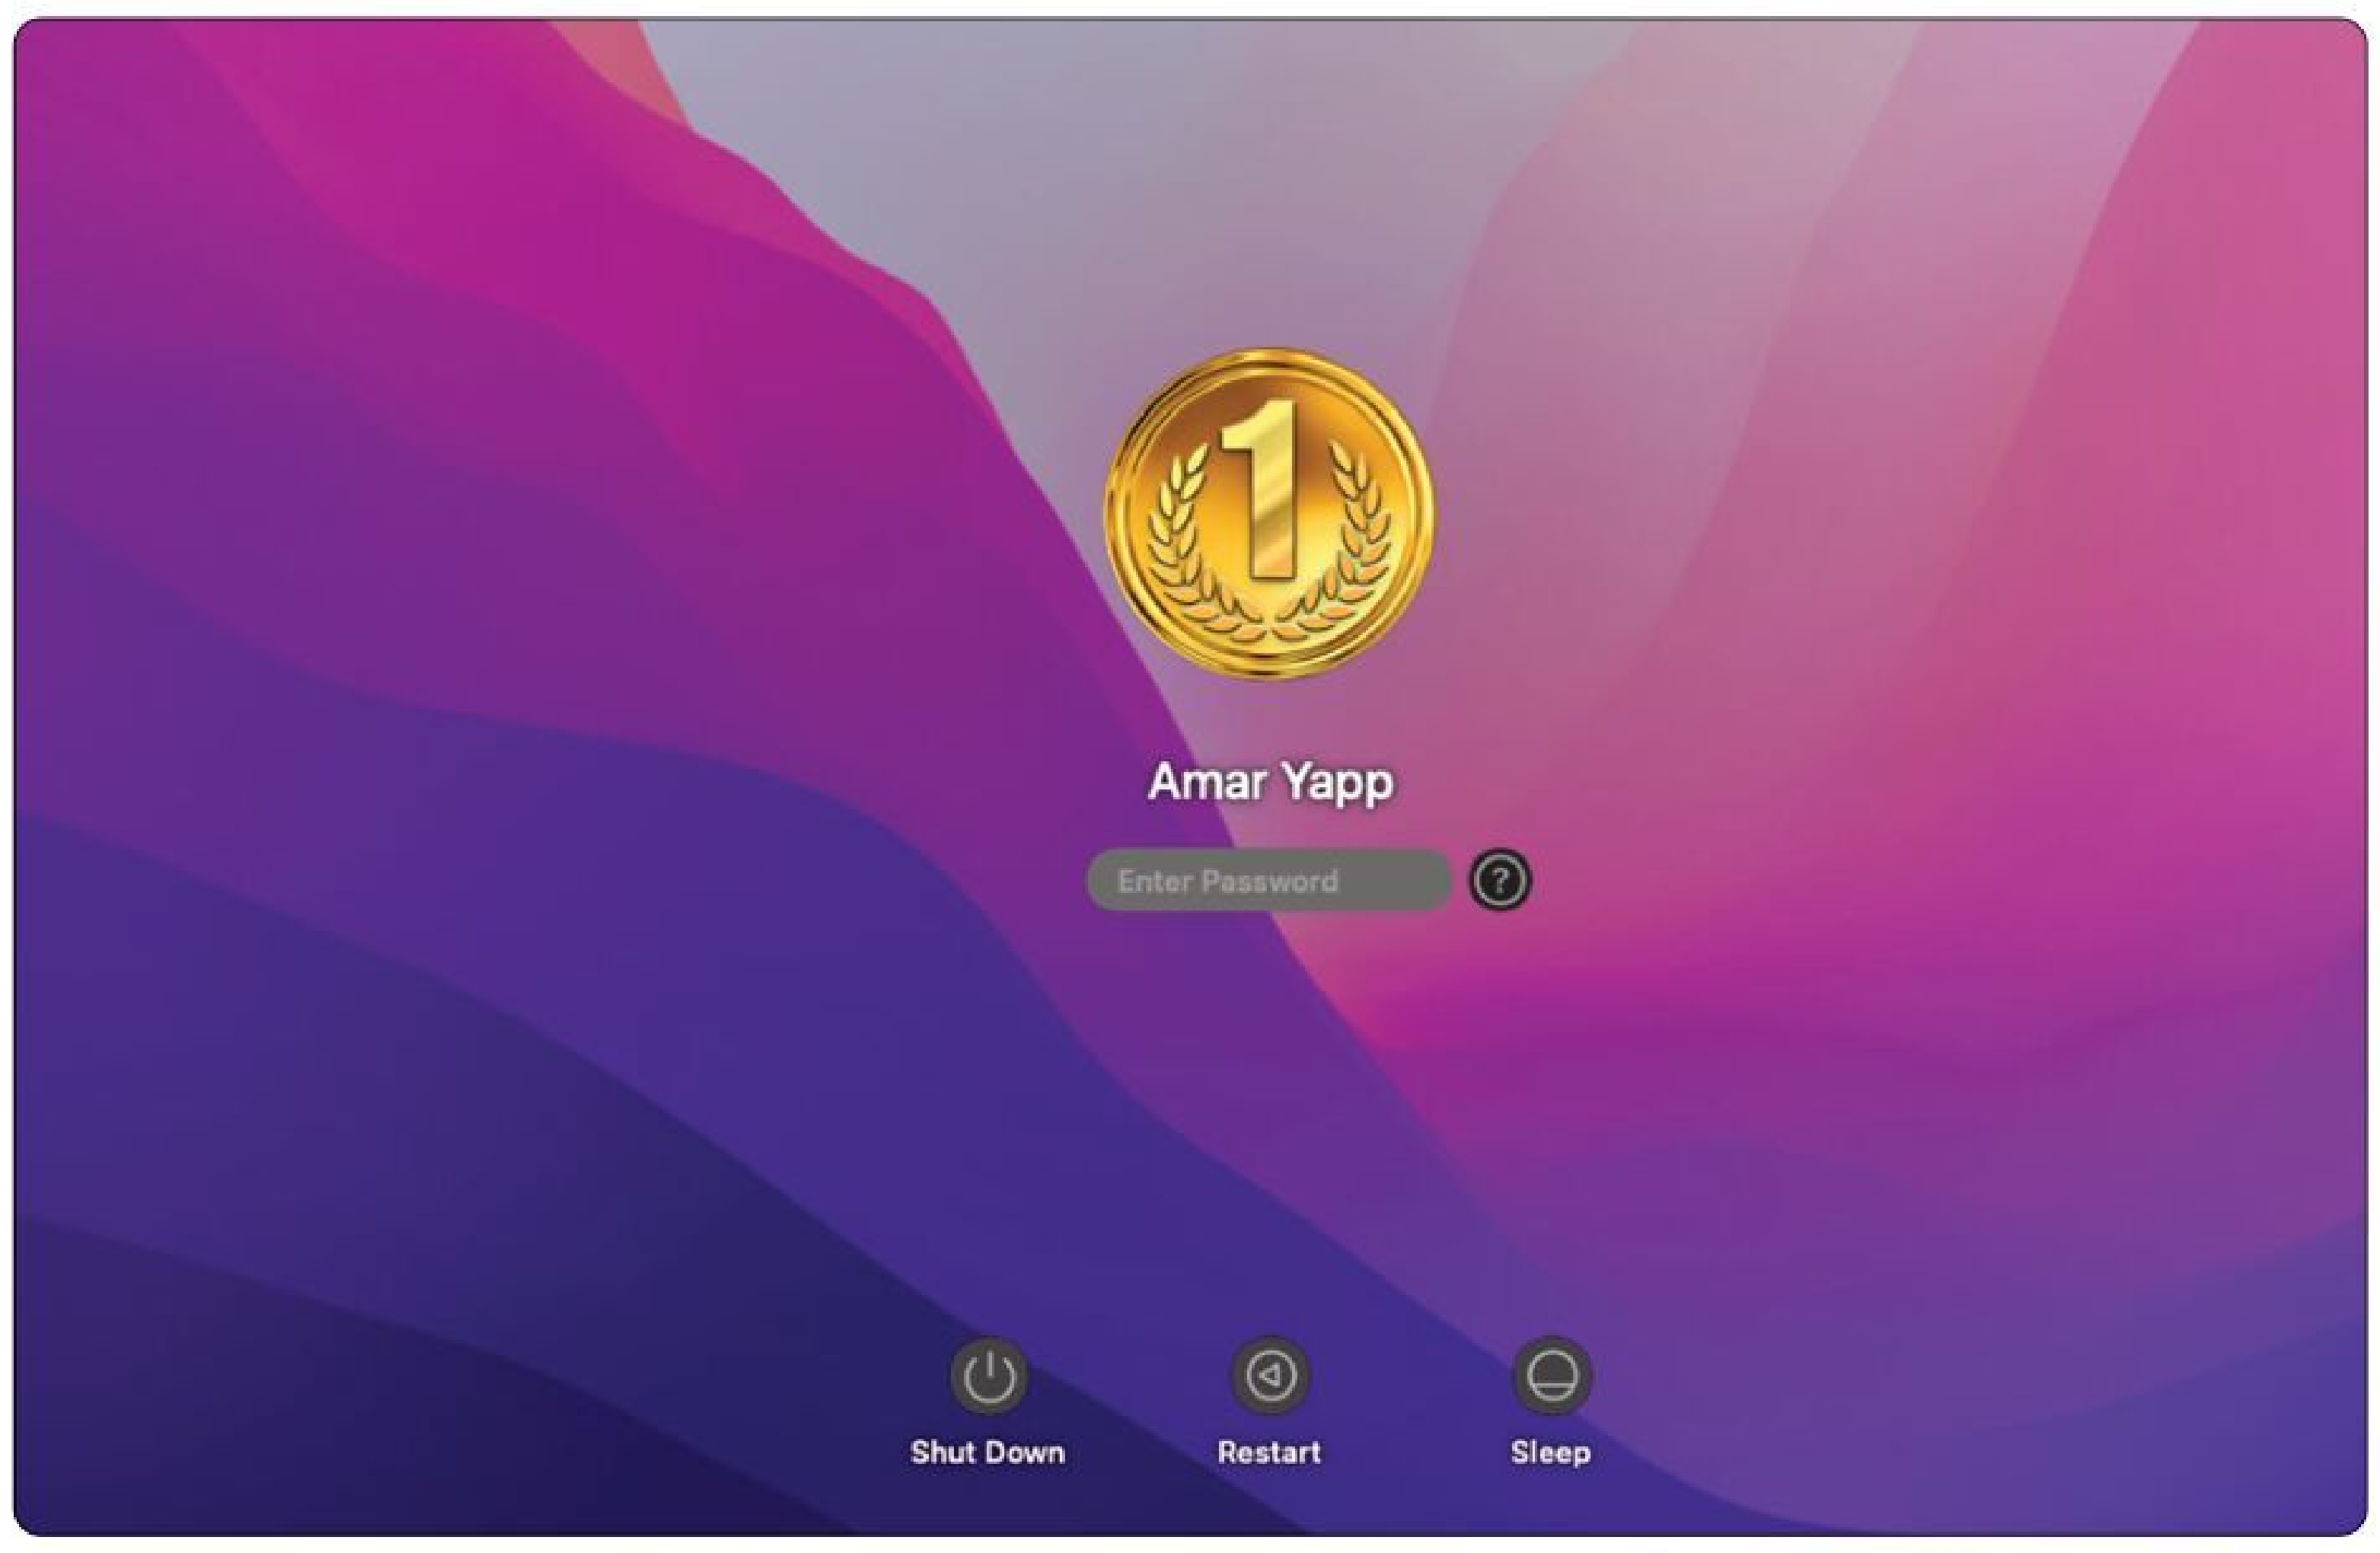


Choose Your Look

Select an appearance and see how the Dock, menus, buttons and windows adjust depending on which one you choose.

You can change this later in System Preferences.

15 Choose how your Mac will look when in use. You can go for the default light look, with white as the predominant background colour, or dark, with black backgrounds. Auto switches between light and dark depending on the ambient light.



16 Your Mac then sets up, and launches into the lock screen. Type the password you set up earlier, and your Mac and Big Sur are ready to use. Congratulations, you've successfully set up your Mac. We hope you enjoy using it.

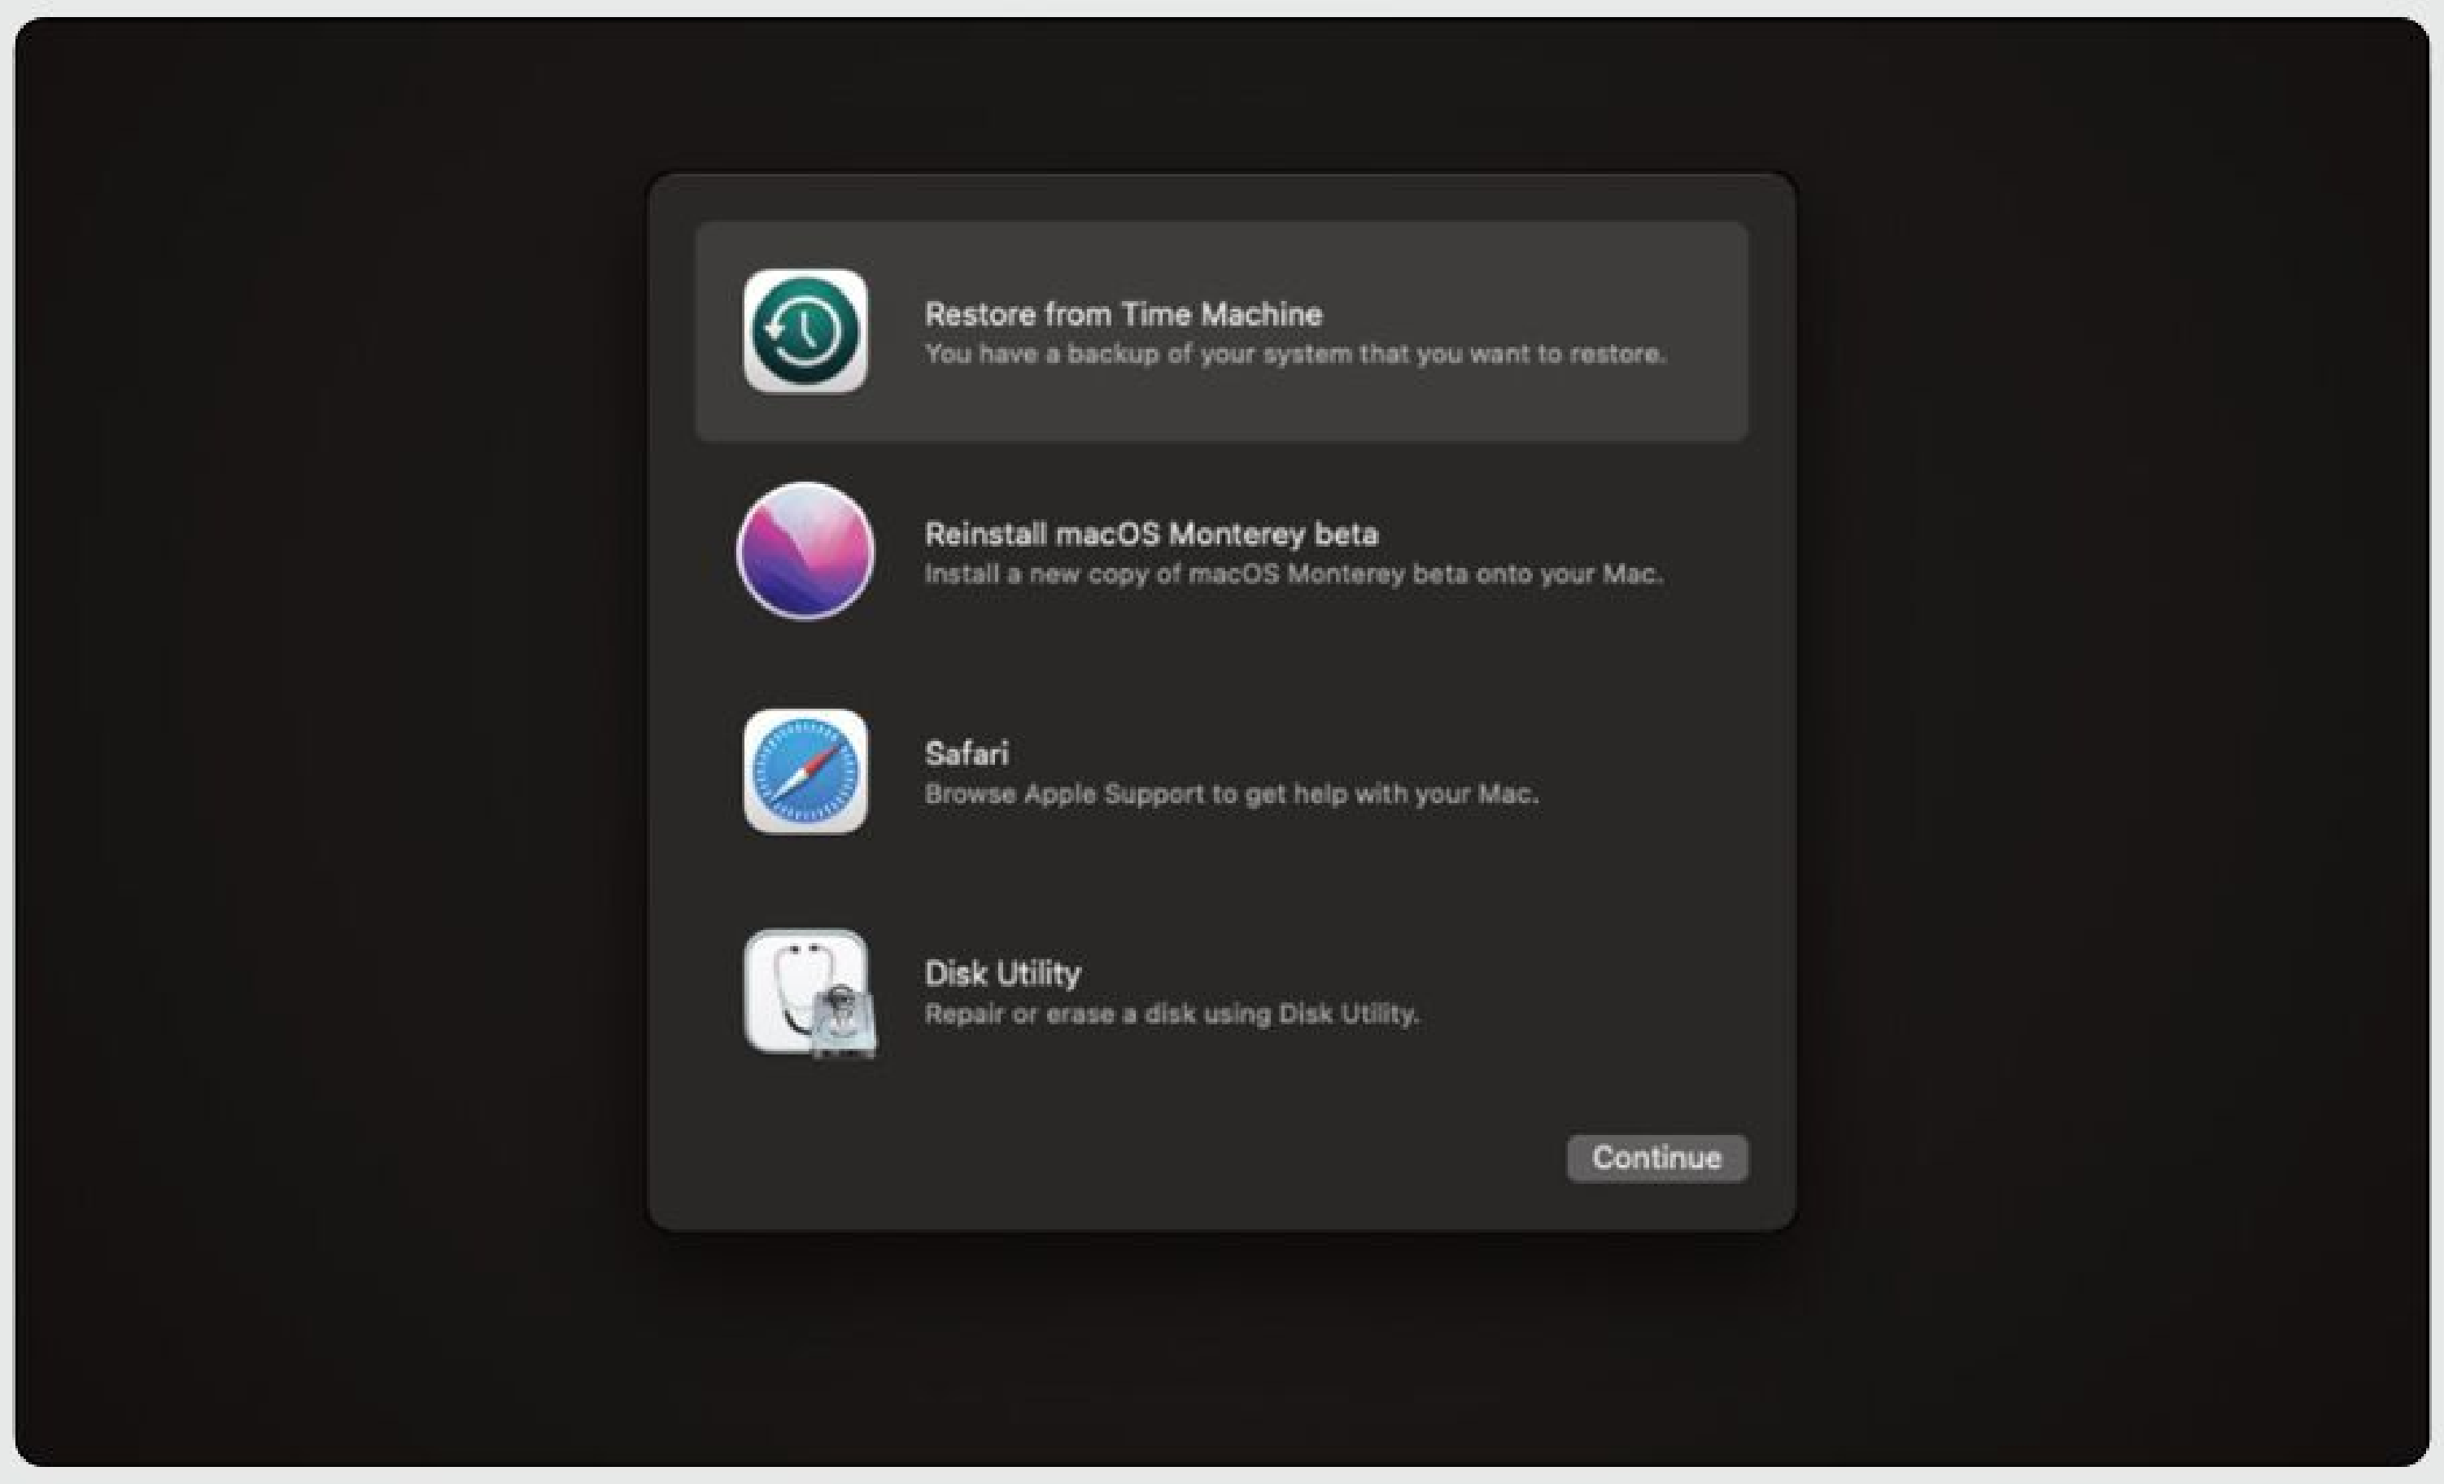
2 To change the Analytics option, use the Security & Privacy pane. Click Privacy and select Analytics & Improvements to access your options. Other preference panes that let you change options you previously set up include; Language & Region, Accessibility and the General pane.

Reset to Factory Conditions.

If you acquired your Mac second hand, you might want to wipe it clean and start again. Just follow this guide.



Restore from Time Machine
You have a backup of your system that you want to restore.

Reinstall macOS Monterey beta
Install a new copy of macOS Monterey beta onto your Mac.

Safari
Browse Apple Support to get help with your Mac.

Disk Utility
Repair or erase a disk using Disk Utility.

First, restart your Mac whilst holding down cmd-Shift-Alt-R; keep them held until you see the Apple logo, then let go of the keys. The Mac continues to boot, but instead of the regular desktop, a window appears showing four options as seen here.

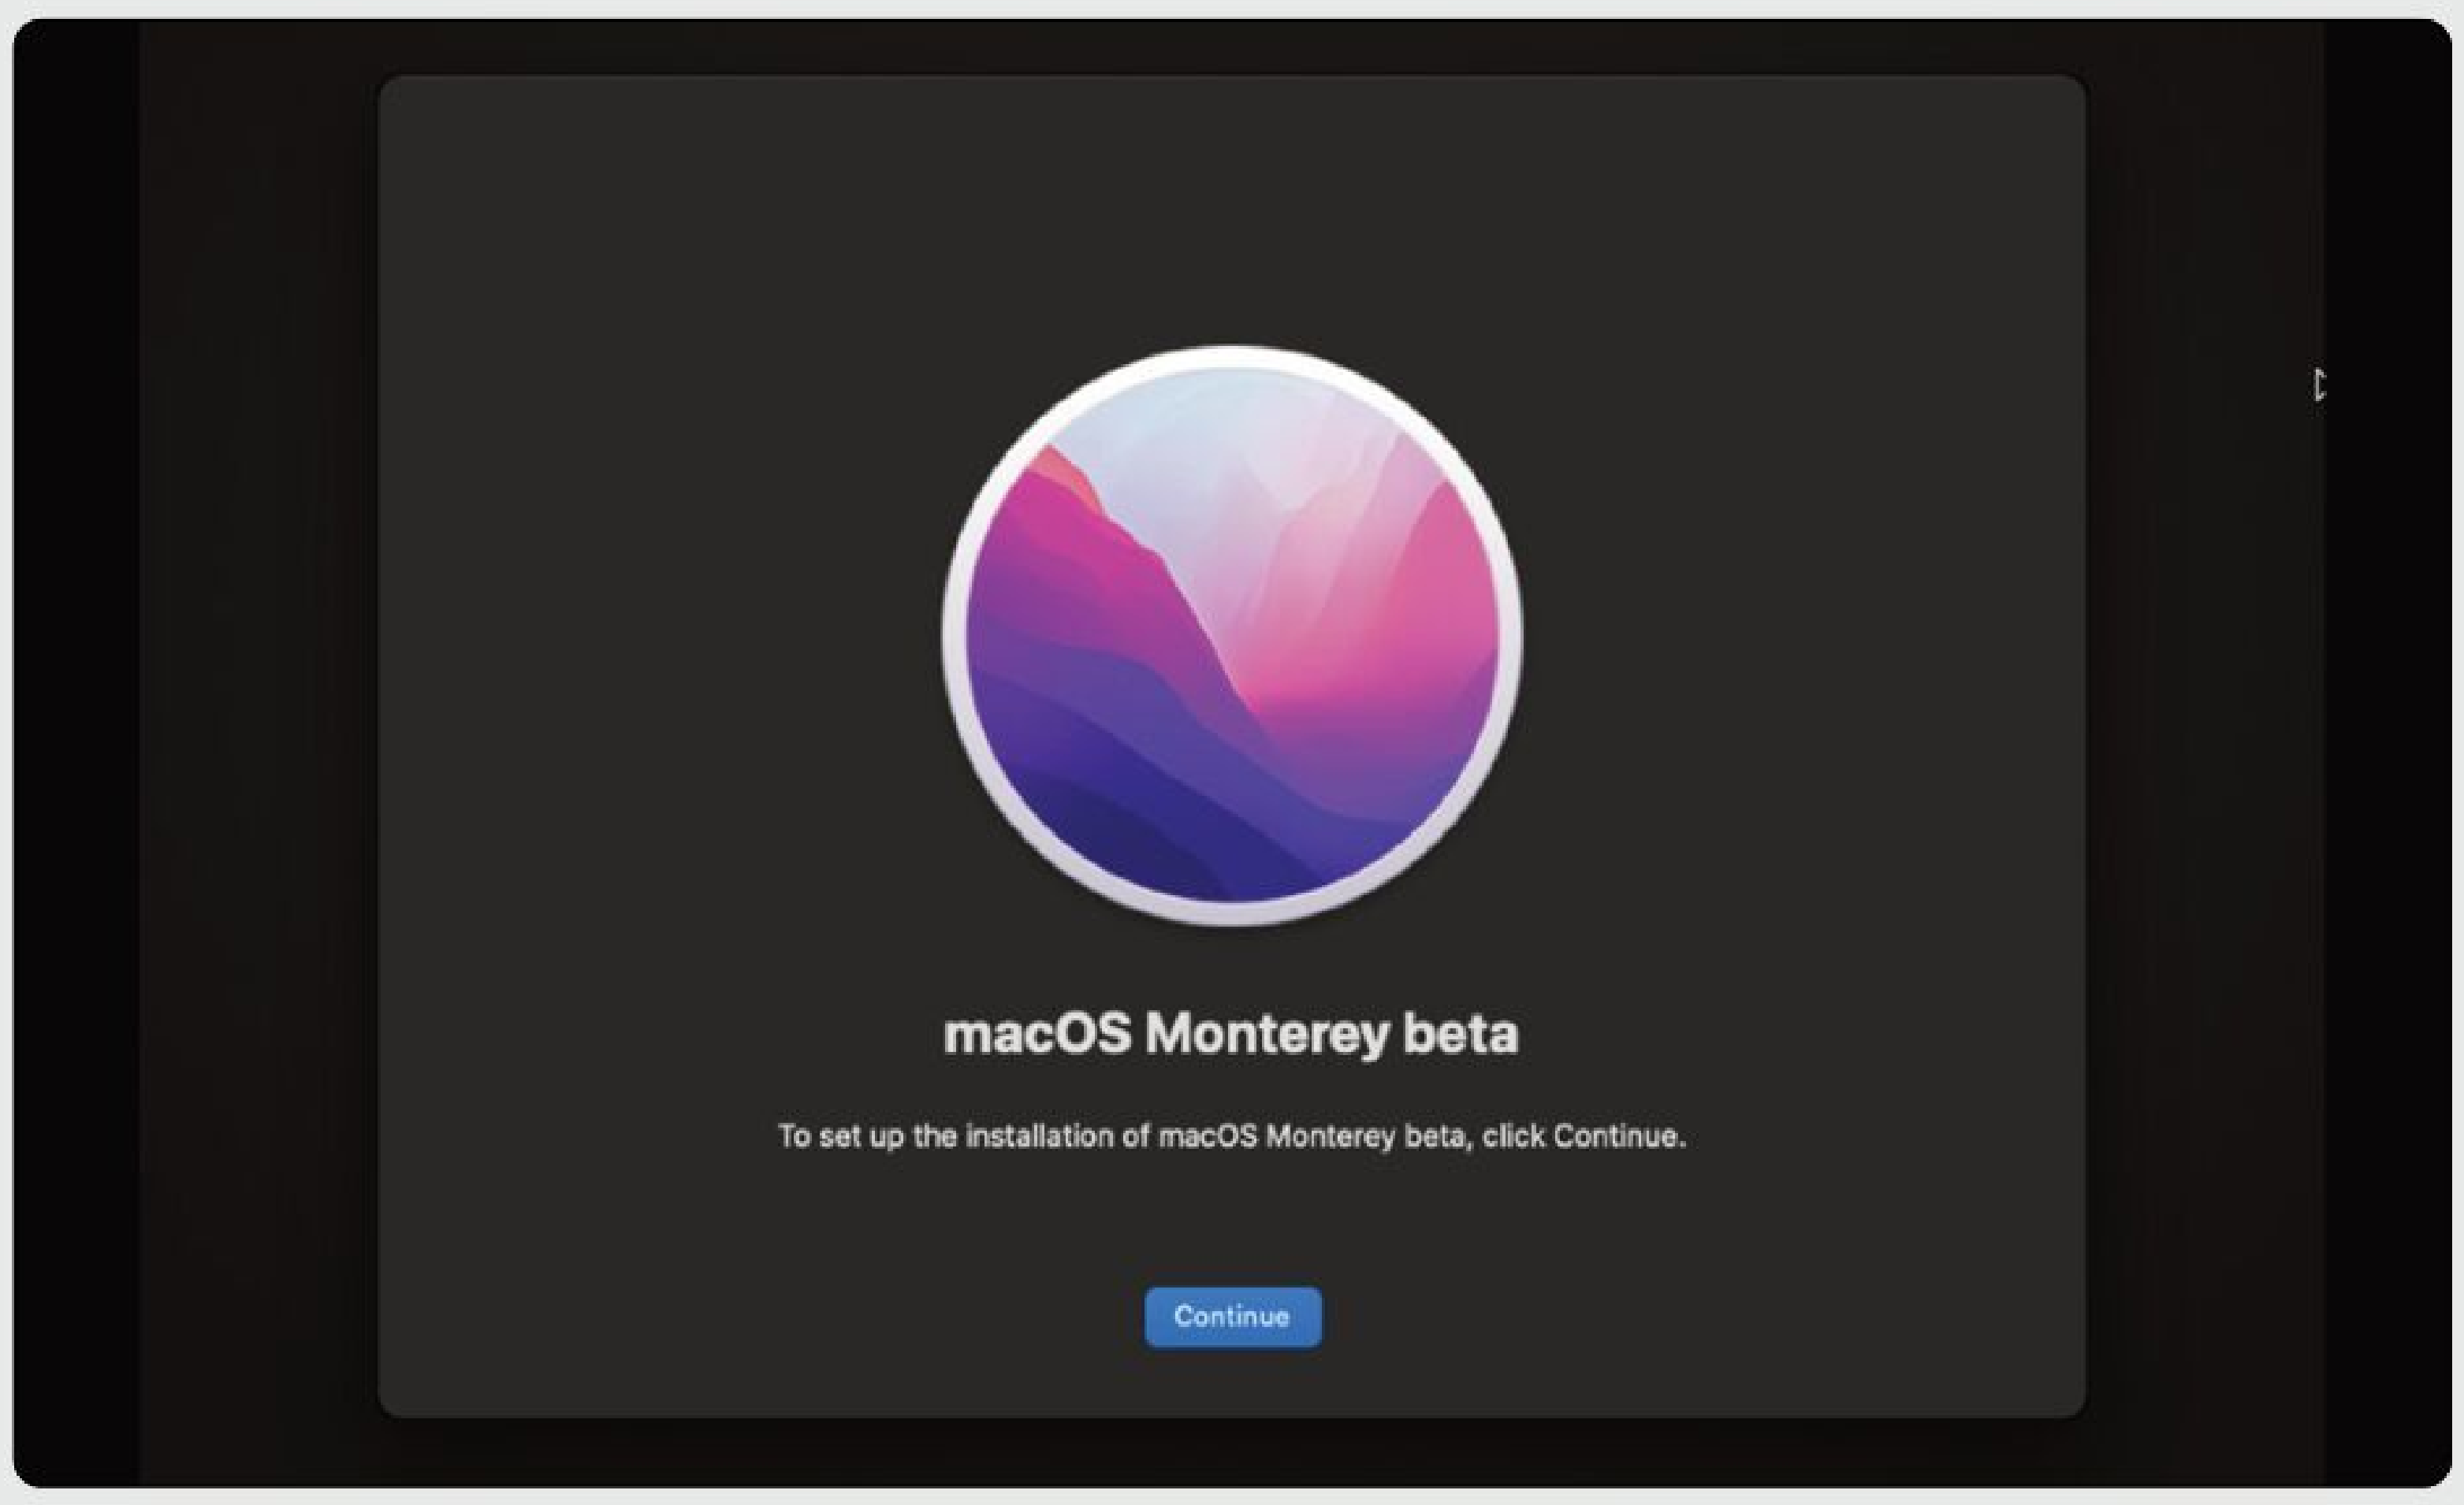
Erase "Macintosh HD"?
Erasing "Macintosh HD" will permanently erase all data stored on it. You can't undo this action.
Name: Macintosh HD
Format: APFS

On the next screen, the Format pull-down menu should read APFS if it's available or Mac OS Extended (Journaled) if it isn't. Select the appropriate option and click Erase to wipe your boot drive. When it's finished, click Done, then quit Disk Utility (cmd-Q).



macOS Monterey beta
To set up the installation of macOS Monterey beta, click Continue.

Now choose to install macOS and continue. When invited to install the operating system, do so; you might have to click on the Wi-Fi icon in the menu bar and rejoin your wireless network. Agree to T&Cs, select your main drive and click Install to start afresh.

Using Touch ID On the Latest Macs

Touch ID has long been a stalwart on the iPhone and iPad, but it recently came to the Mac, with the latest notebook and iMac releases; look for a Touch ID sensor on the keyboard. You can use Touch ID to unlock your Mac, input passwords and make purchases, all by using your fingerprint.

Setting Up Touch ID

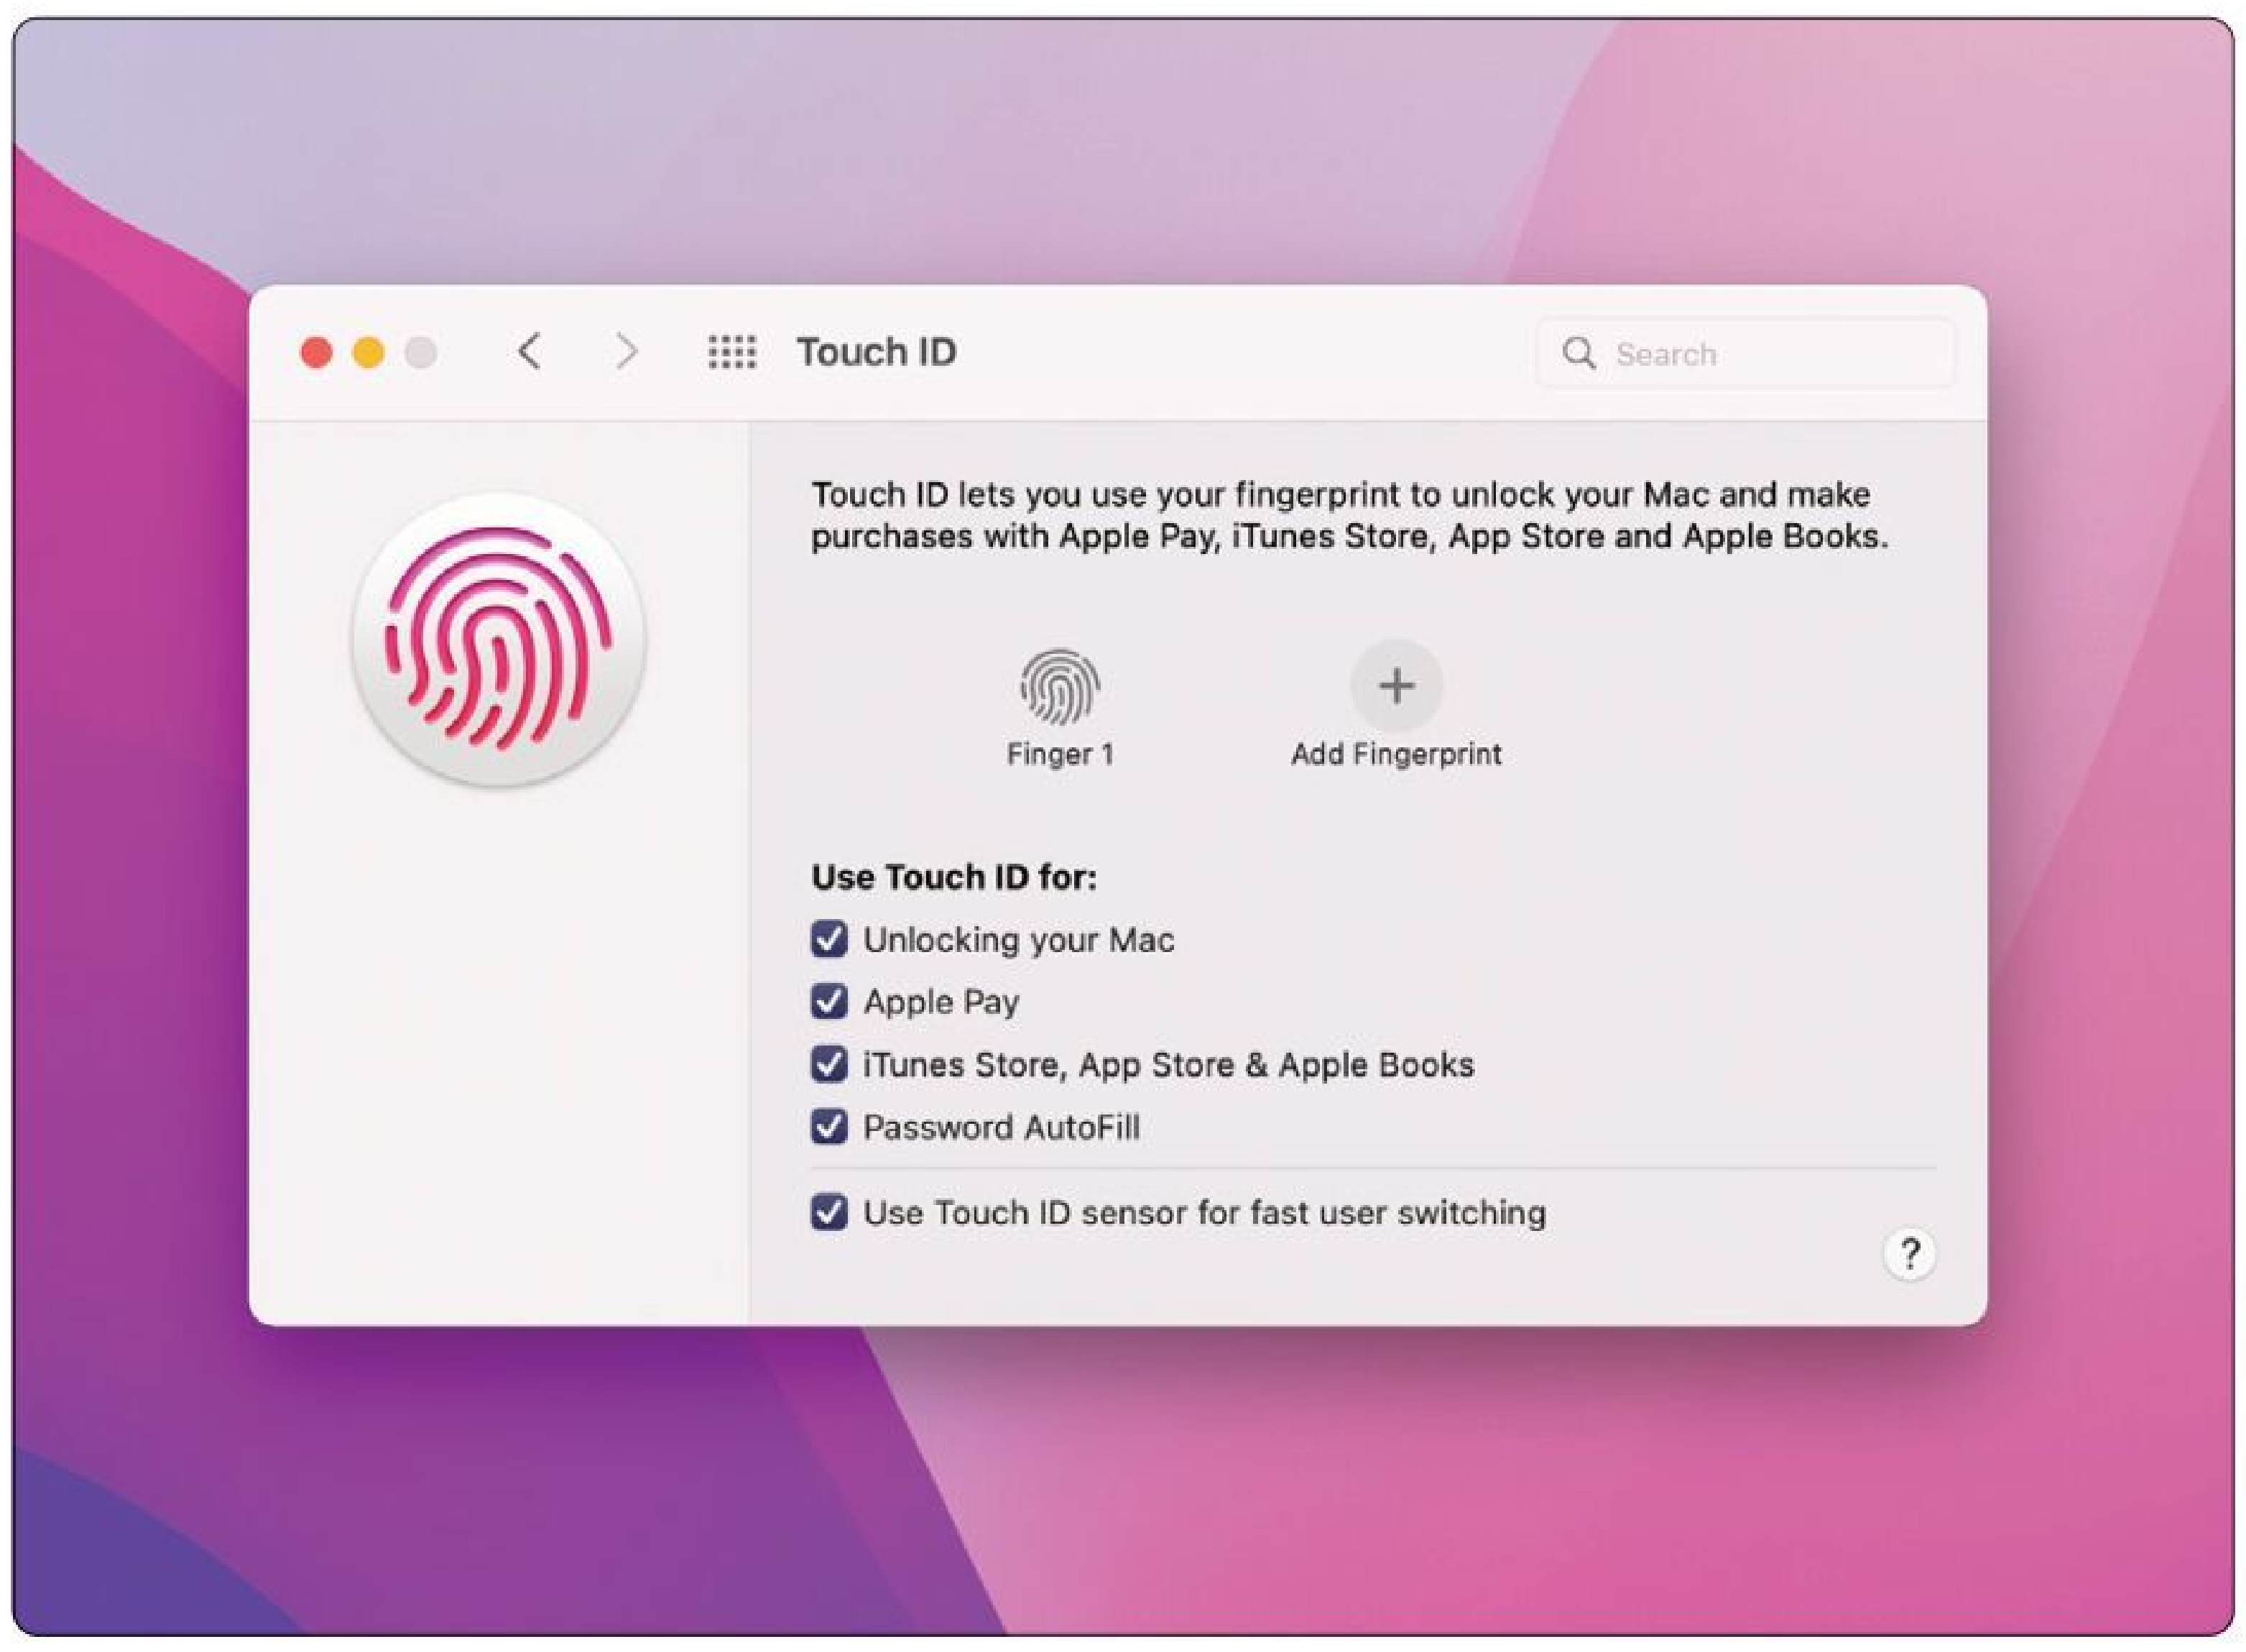
NTFS for Mac

1 First of all, open the System Preferences window. Click on Touch ID. If this option isn't there, your Mac doesn't have Touch ID as it's a feature on newer Macs.



Touch ID
Search
Finger 1
Add Fingerprint
?

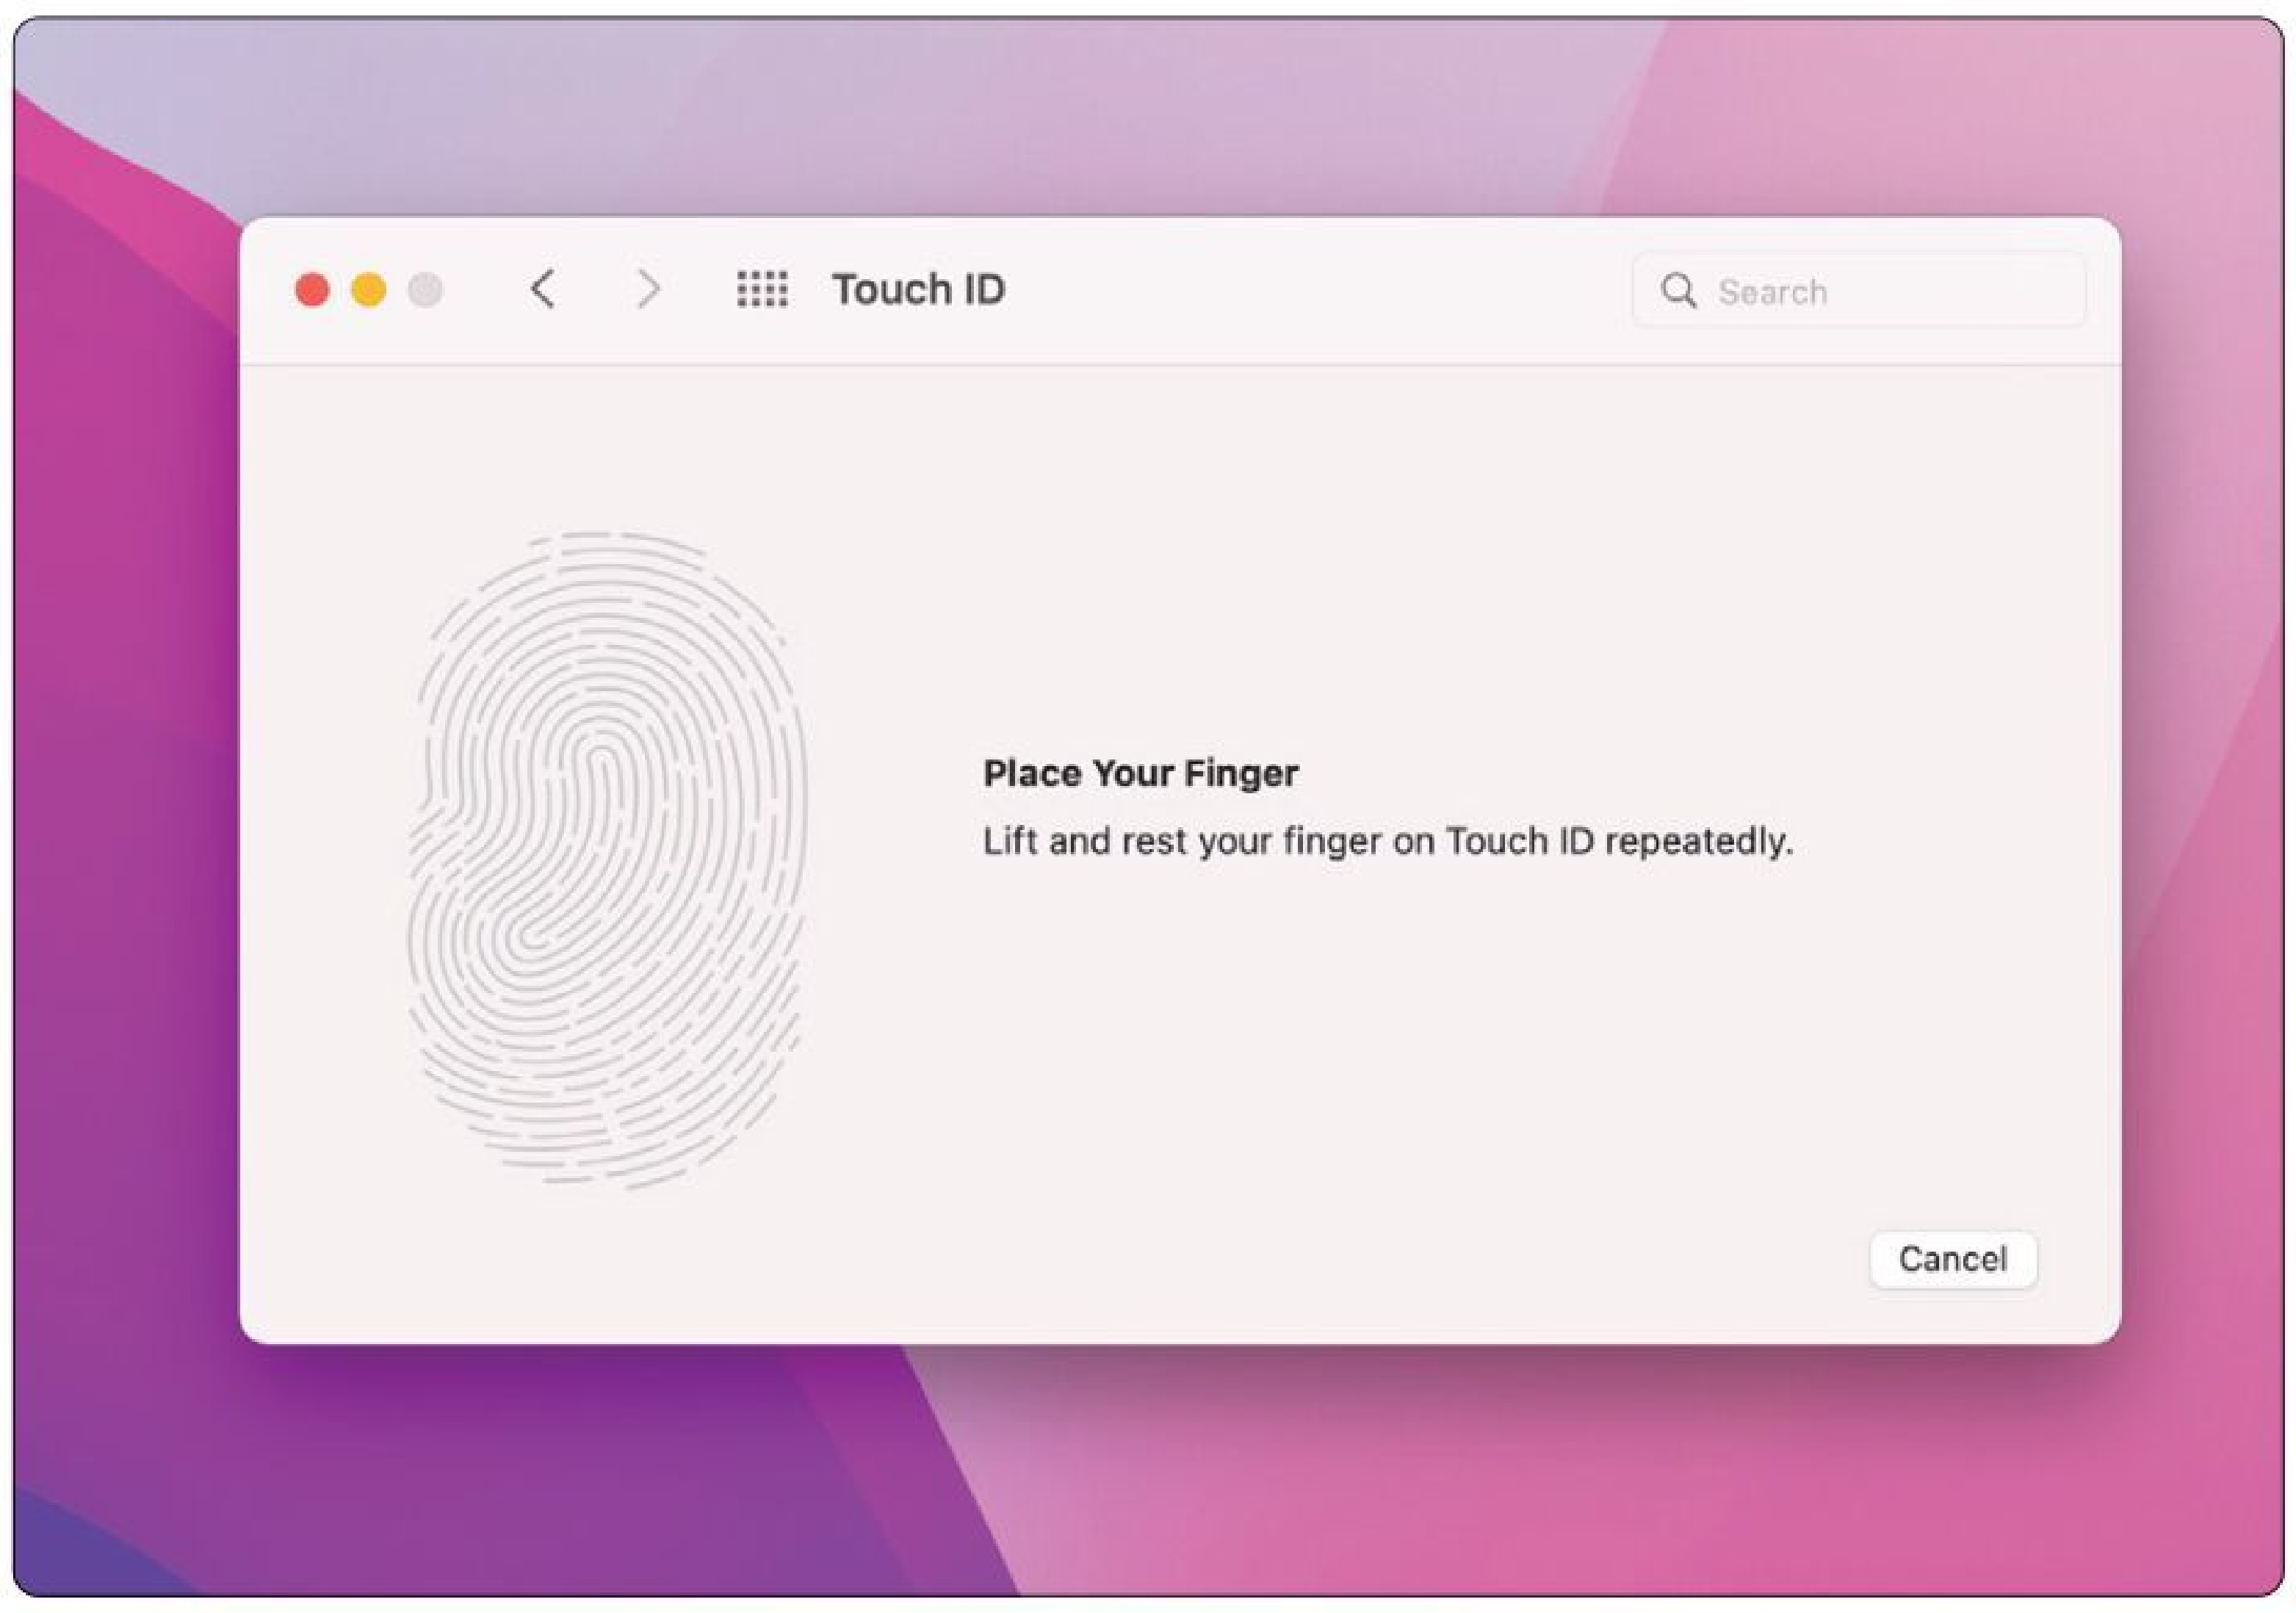
Touch ID lets you use your fingerprint to unlock your Mac and make purchases with Apple Pay, iTunes Store, App Store and Apple Books.

Use Touch ID for:

☑ Unlocking your Mac
☑ Apple Pay
☑ iTunes Store, App Store & Apple Books
☑ Password AutoFill

☑ Use Touch ID sensor for fast user switching

2 If your Mac does have Touch ID, to get started, click on the + icon captioned 'Add Fingerprint'. You can add more than one print; here, this is our second.



Touch ID
Search
Cancel

Place Your Finger

Lift and rest your finger on Touch ID repeatedly.

3 Type your admin password when asked, the one you use to unlock your Mac. As instructed, you must now place the finger you intend to register on the Touch ID sensor, on the top-right of the keyboard.

Fast User Switching

If two people have accounts on your Mac, and you've enabled Fast User Switching from the menu bar, you can use your Touch ID to switch between users too.

Welcome to the Mac Studio Desktop

The desktop is at the heart of your Mac Studio. Everything you do takes place on the desktop, including opening apps, interacting with files and folders and using the Dock. Here we show you how to use your desktop, app and folder windows, the top bar menu and other key features.

1 From the Apple menu you can log out, shut down, restart or put the computer into sleep mode, get comprehensive information on the computer's hardware and software, access the System Preferences and open items you've recently closed.

2 The menu bar running along the top of the desktop gives access to functions and controls for the app you currently have open at the time. The app currently in use is shown to the right of the Apple icon. In this case it's Finder. Open or click on an app and its name is shown here instead; and its menus are listed in the menu bar.

3 The Command Centre is where you can access Bluetooth, Wi-Fi settings, display brightness, volume, keyboard brightness, Screen Mirroring and much more.

4 Application windows come in all shapes, sizes and designs. Your Mac's applications can be launched from the Launchpad, the Dock, from Spotlight or using Applications window in Finder.

5 This is a Finder Window. The Finder utility is the central point for navigation and file manipulation. You can browse and navigate applications, documents, external drives and even access other computers; as long as they're connected to the same network (cabled or wireless).

6 This is your Mac Studio's Desktop. Click on it to access the Finder controls in the menu bar. You can change the picture (or wallpaper) used for the Desktop in System Preferences > Desktop & Screen Saver. 'The one we have here is the standard macOS Monterey desktop, but there are plenty of others to choose from, including wallpapers from older versions of macOS.

7 In macOS, folders work just like their real-world counterparts. You can use them to store files, data and even other folders. You can call them anything you like; click on a folder's name and type in a new one.

8 The Dock offers quick and easy access to your favourite applications, documents, folders and even the Bin. It's easily edited and customised to make the most of the way you work. Apps you currently have open are always shown in the Dock.

9 You can also put folders in the Dock, as shown here. Click on a folder to open it within the dock, and then click on something inside the folder to open or launch it.

10 The Bin, formerly called the Trash. To delete a file, folder or application, drag it into here, then right-click on it and choose 'Empty Trash' from the menu.

If you'd prefer the pictures were used in a random order, check the box at the foot of the screen. The pull-down above the pictures lets you choose how the images will fill the desktop space.

Gesture Controls On Your Trackpad

You can navigate your Mac using gesture controls, just like you do on your iPhone or iPad. These gesture controls can be performed on a Mac notebook's trackpad or on the Mac Studio's Magic Trackpad, which is available for their powerful desktop hardware.

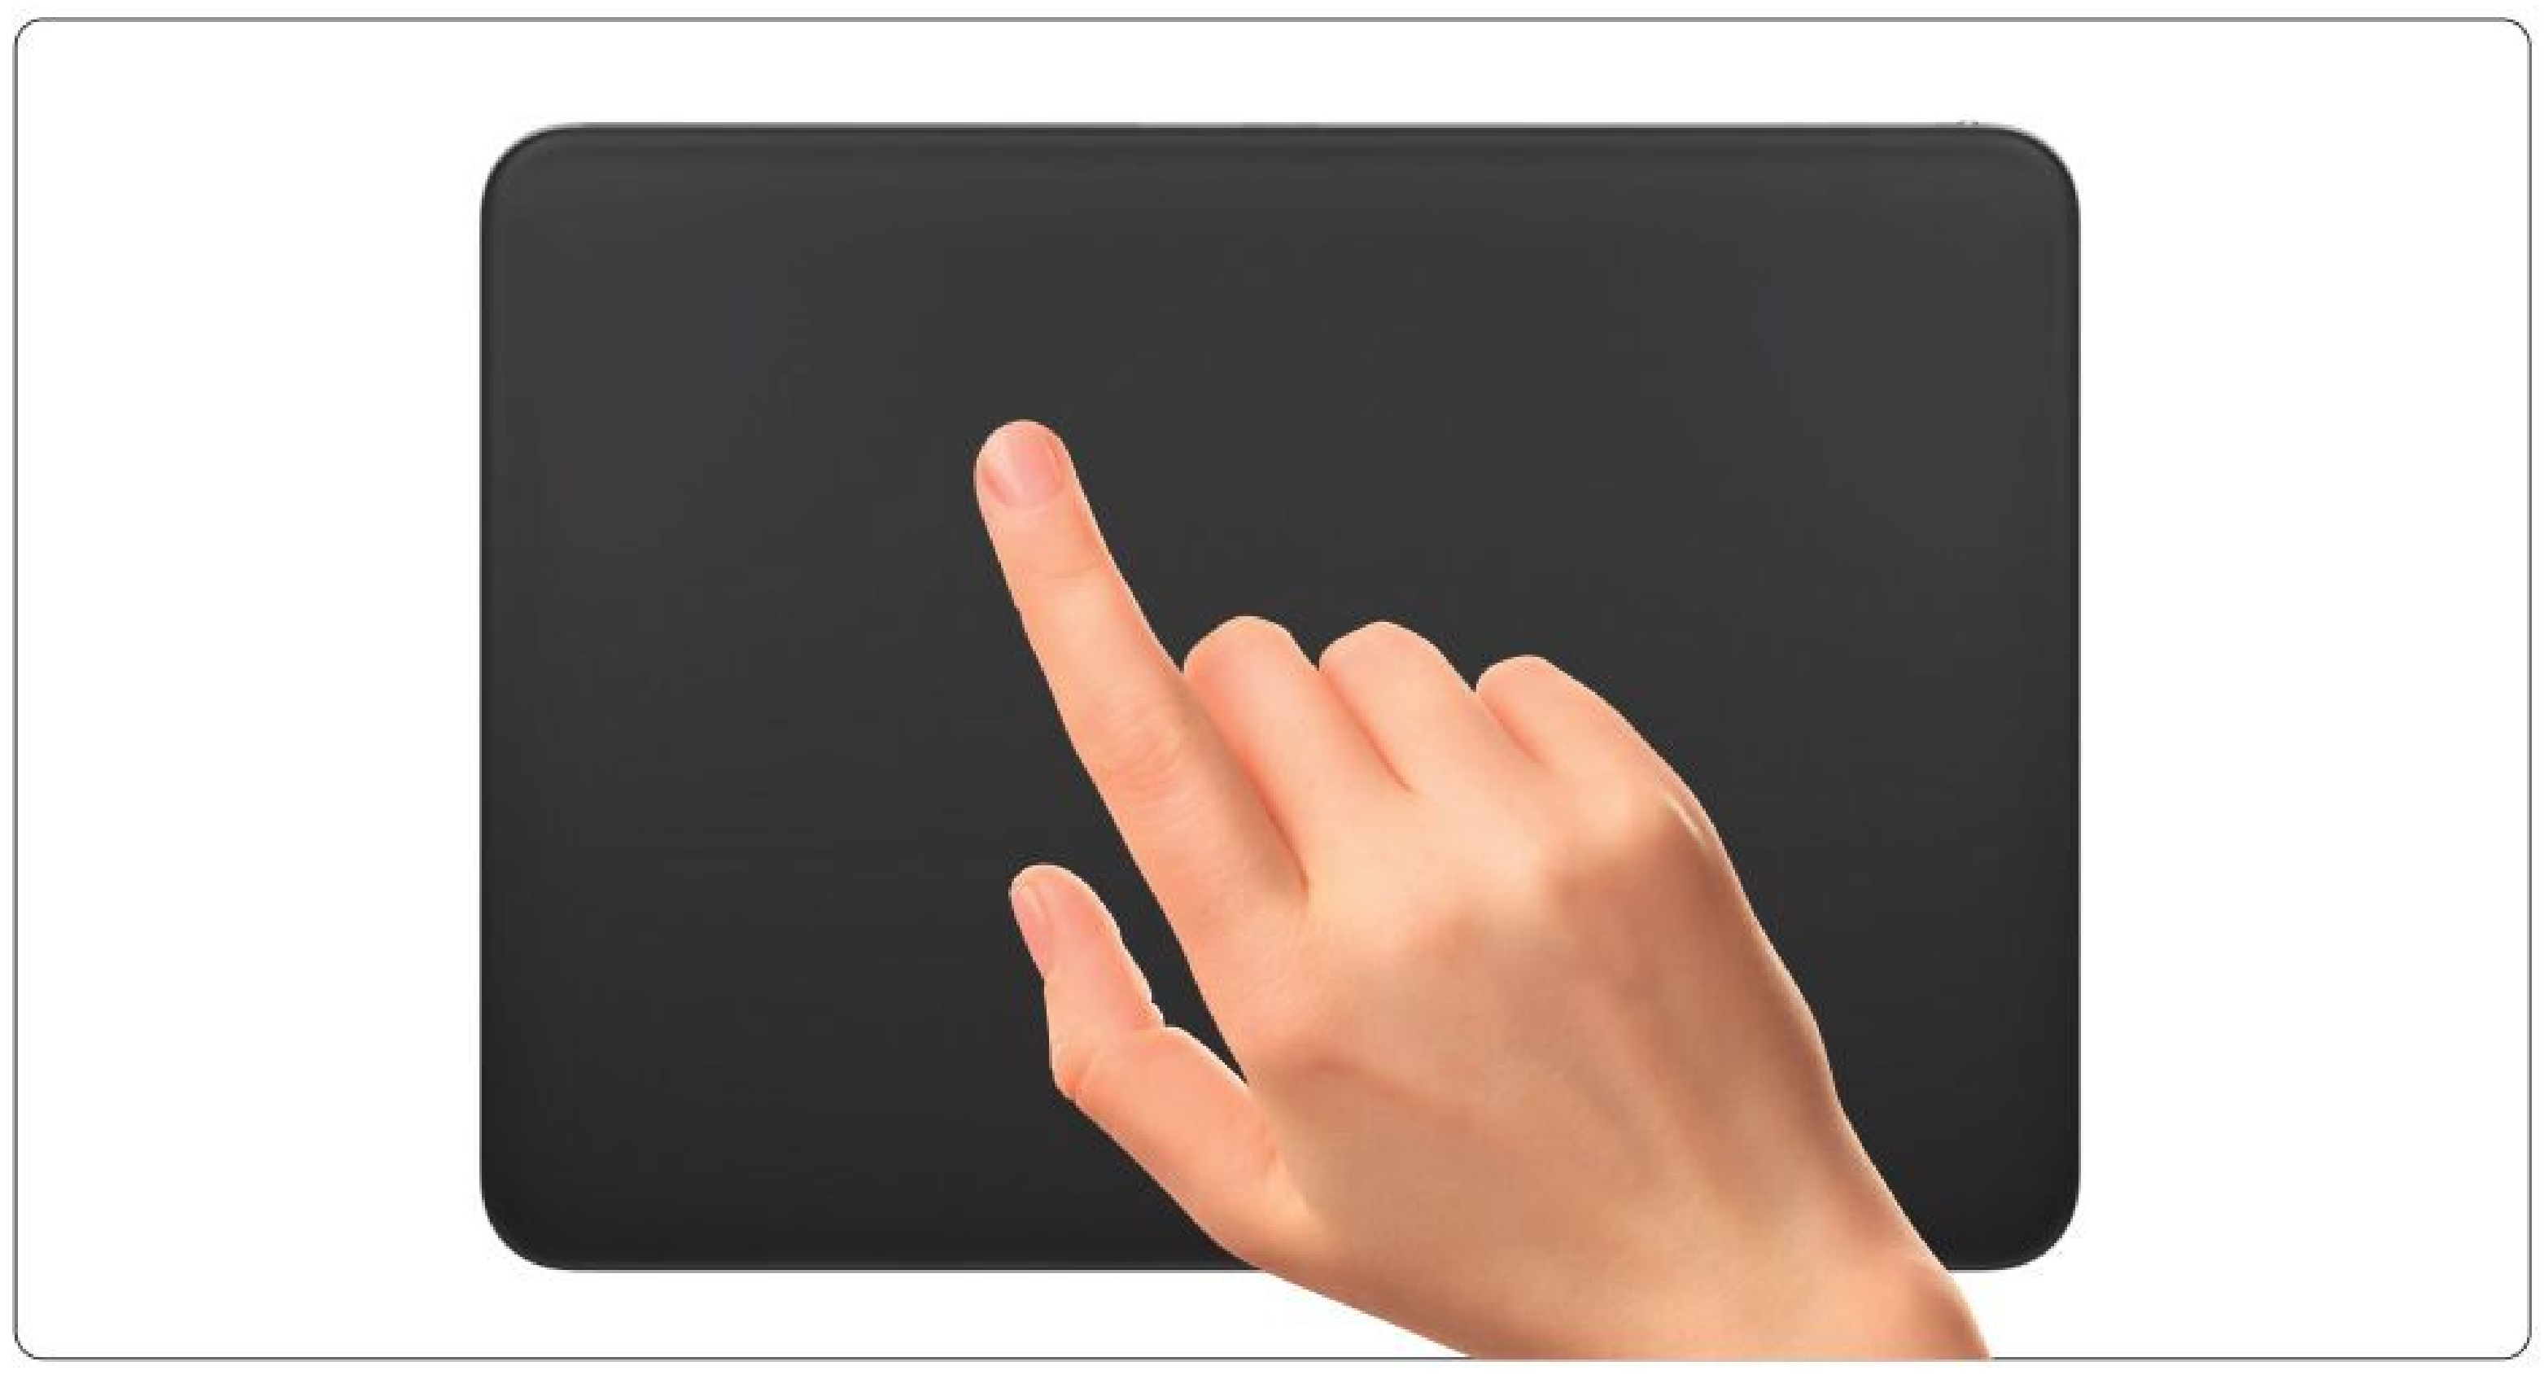
One of the things that makes the Mac such a pleasure to use is its large and responsive MacBook multi-touch trackpad or the desktop Mac's Magic Trackpad. You can use the trackpad in much the same way as you would use the touchscreen of an iPhone or iPad: to quickly and easily access menus, sort through stacks of pictures or documents, scroll through documents and to zoom in and out of displayed images. Once you get used to it, you'll find that it's a very easy and intuitive way of controlling your Mac and that it can do far more than just scrolling.

Secondary Clicking.

Some people like to use a two-button mouse with their Mac, and this can be handy for quick access to shortcut menus by secondary clicking or right-clicking. To set up two-finger secondary clicking using the trackpad, select Secondary Click in the Point & Click pane of Trackpad preferences. To set up a one finger secondary click zone in the bottom left or right corner of the trackpad or mouse, select Secondary Click in the Point & Click pane of Trackpad preferences, and choose an option from the pop-up menu.

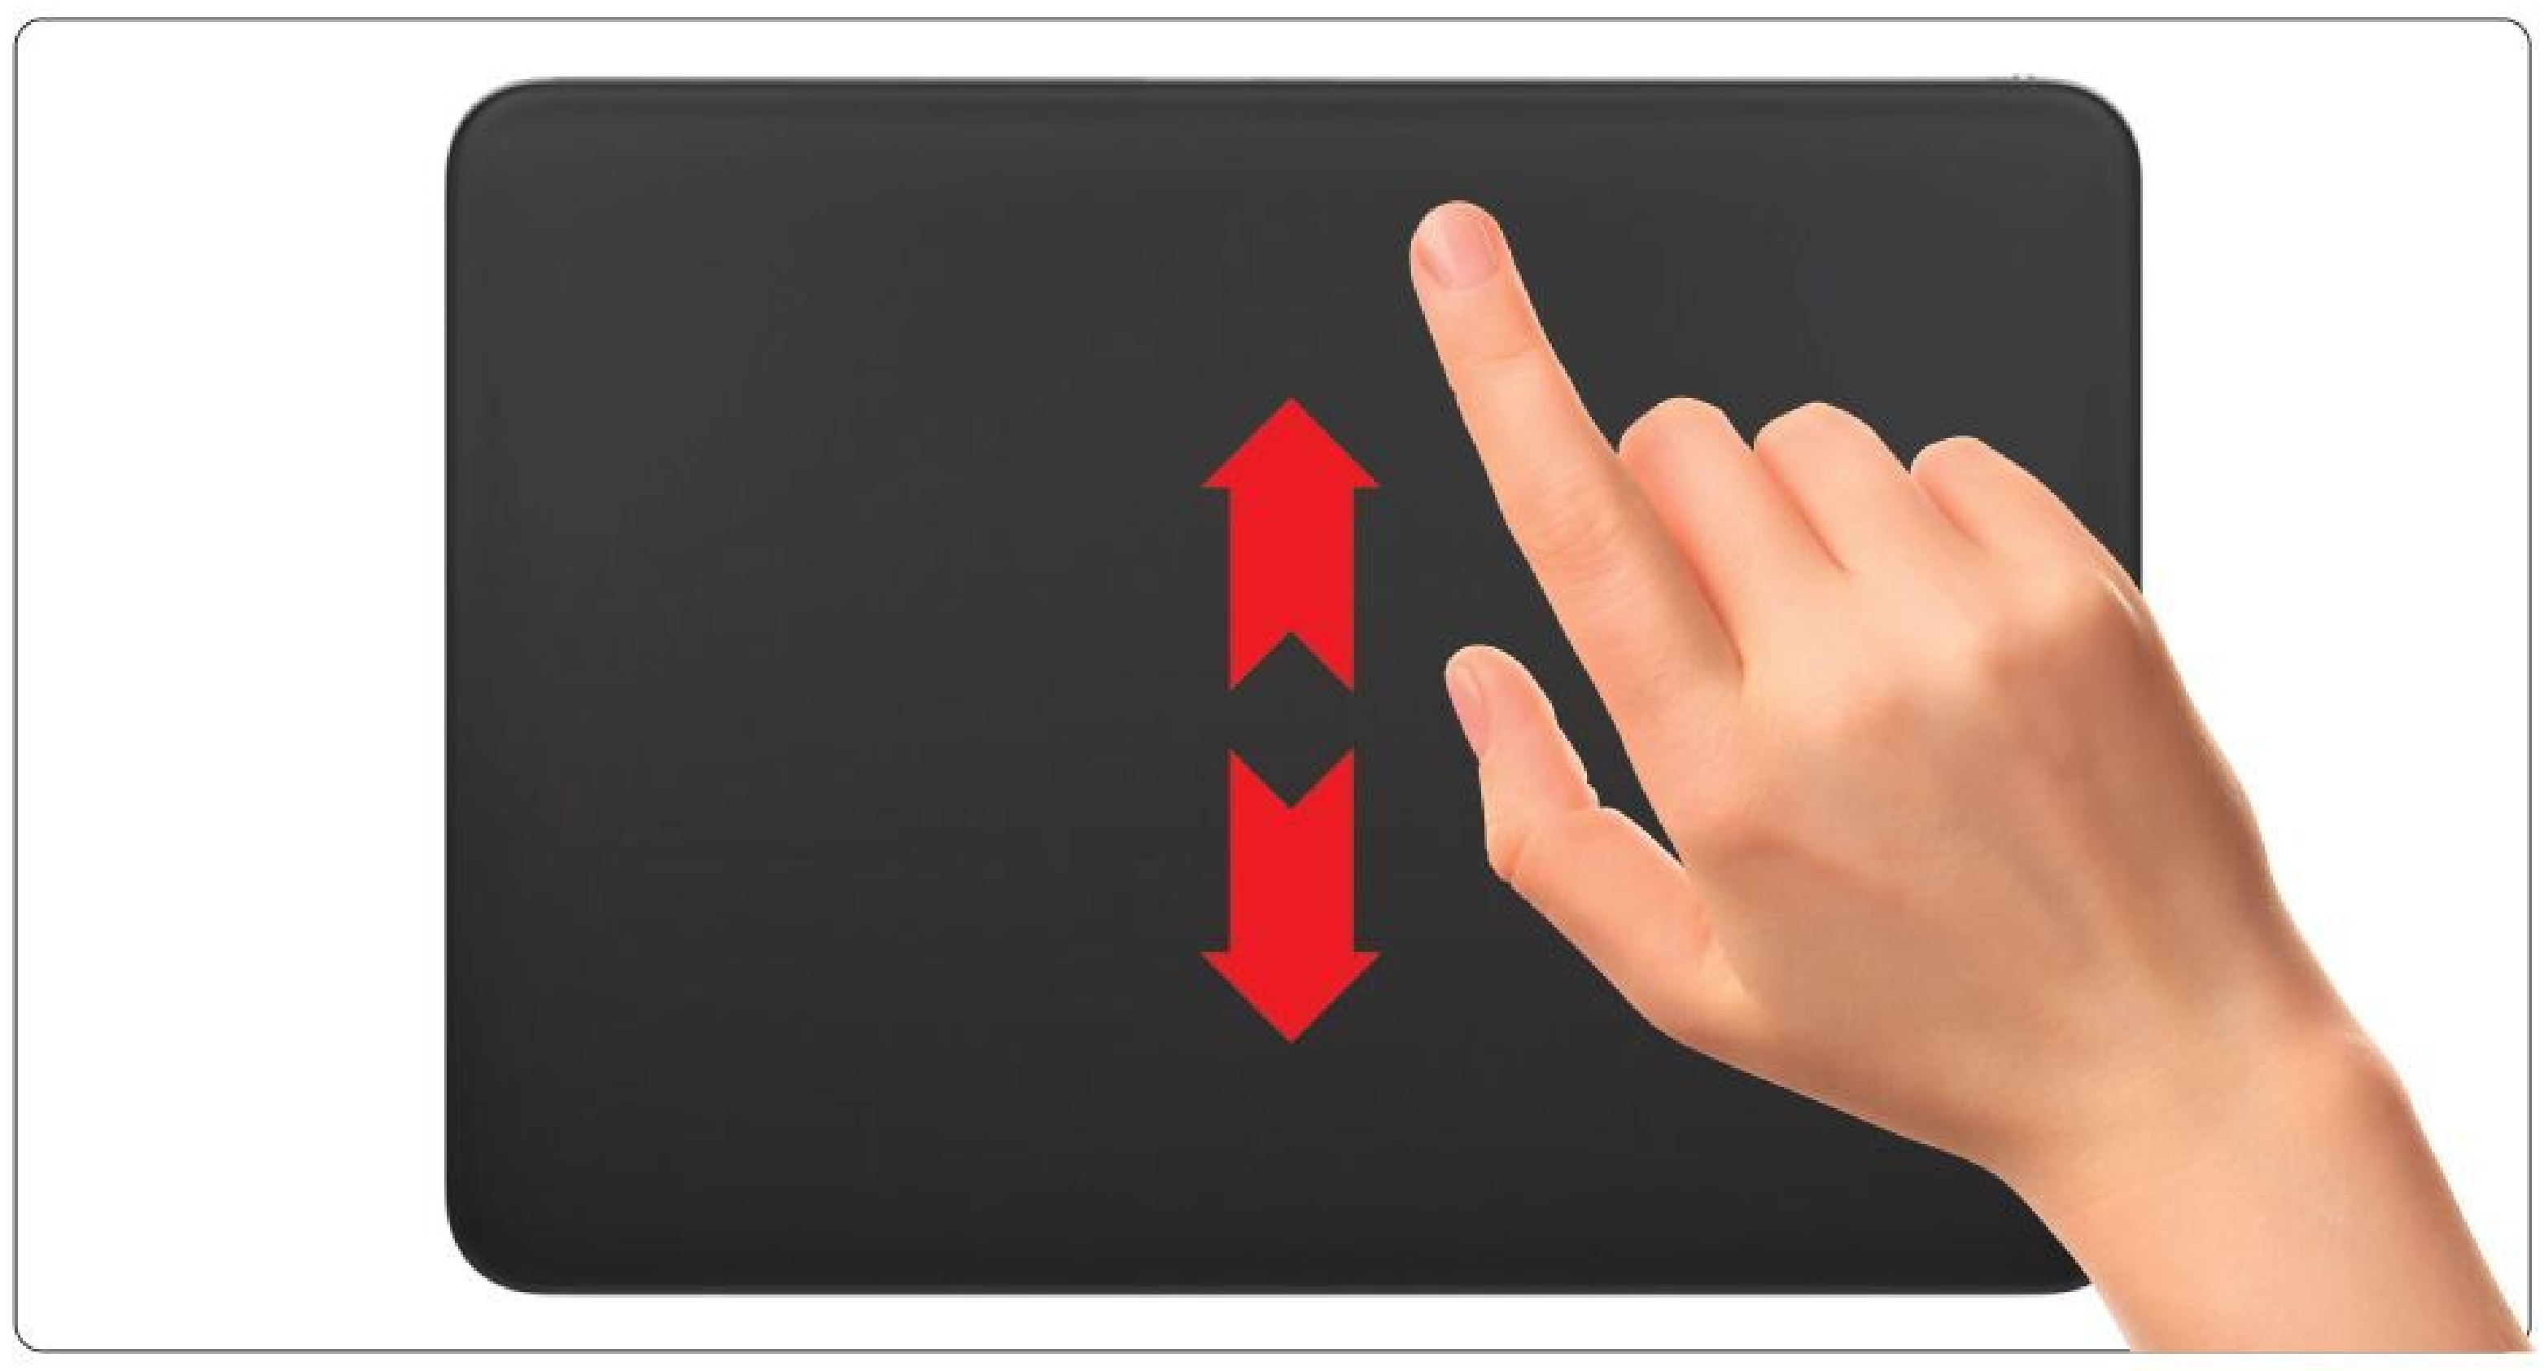
Multi-touch Gestures.

The MacBook's advanced trackpad supports the Multi-touch gestures. They might seem a bit complicated at first but once you get used to them and have had a bit of time to practise, they quickly become second nature. Before long you'll wonder how you ever managed without them. The trick to using the trackpad properly is to practise using more than one finger at once. Some gestures use two fingers, whilst others use three. You need to apply light, firm pressure and move your fingers smoothly and evenly, all at the same time. Like we said, it takes a little practice but you quickly become proficient at it. To enable Multi-touch gestures, view instructional videos of the gestures and set up various other trackpad options, choose Apple > System Preferences and then click Trackpad.



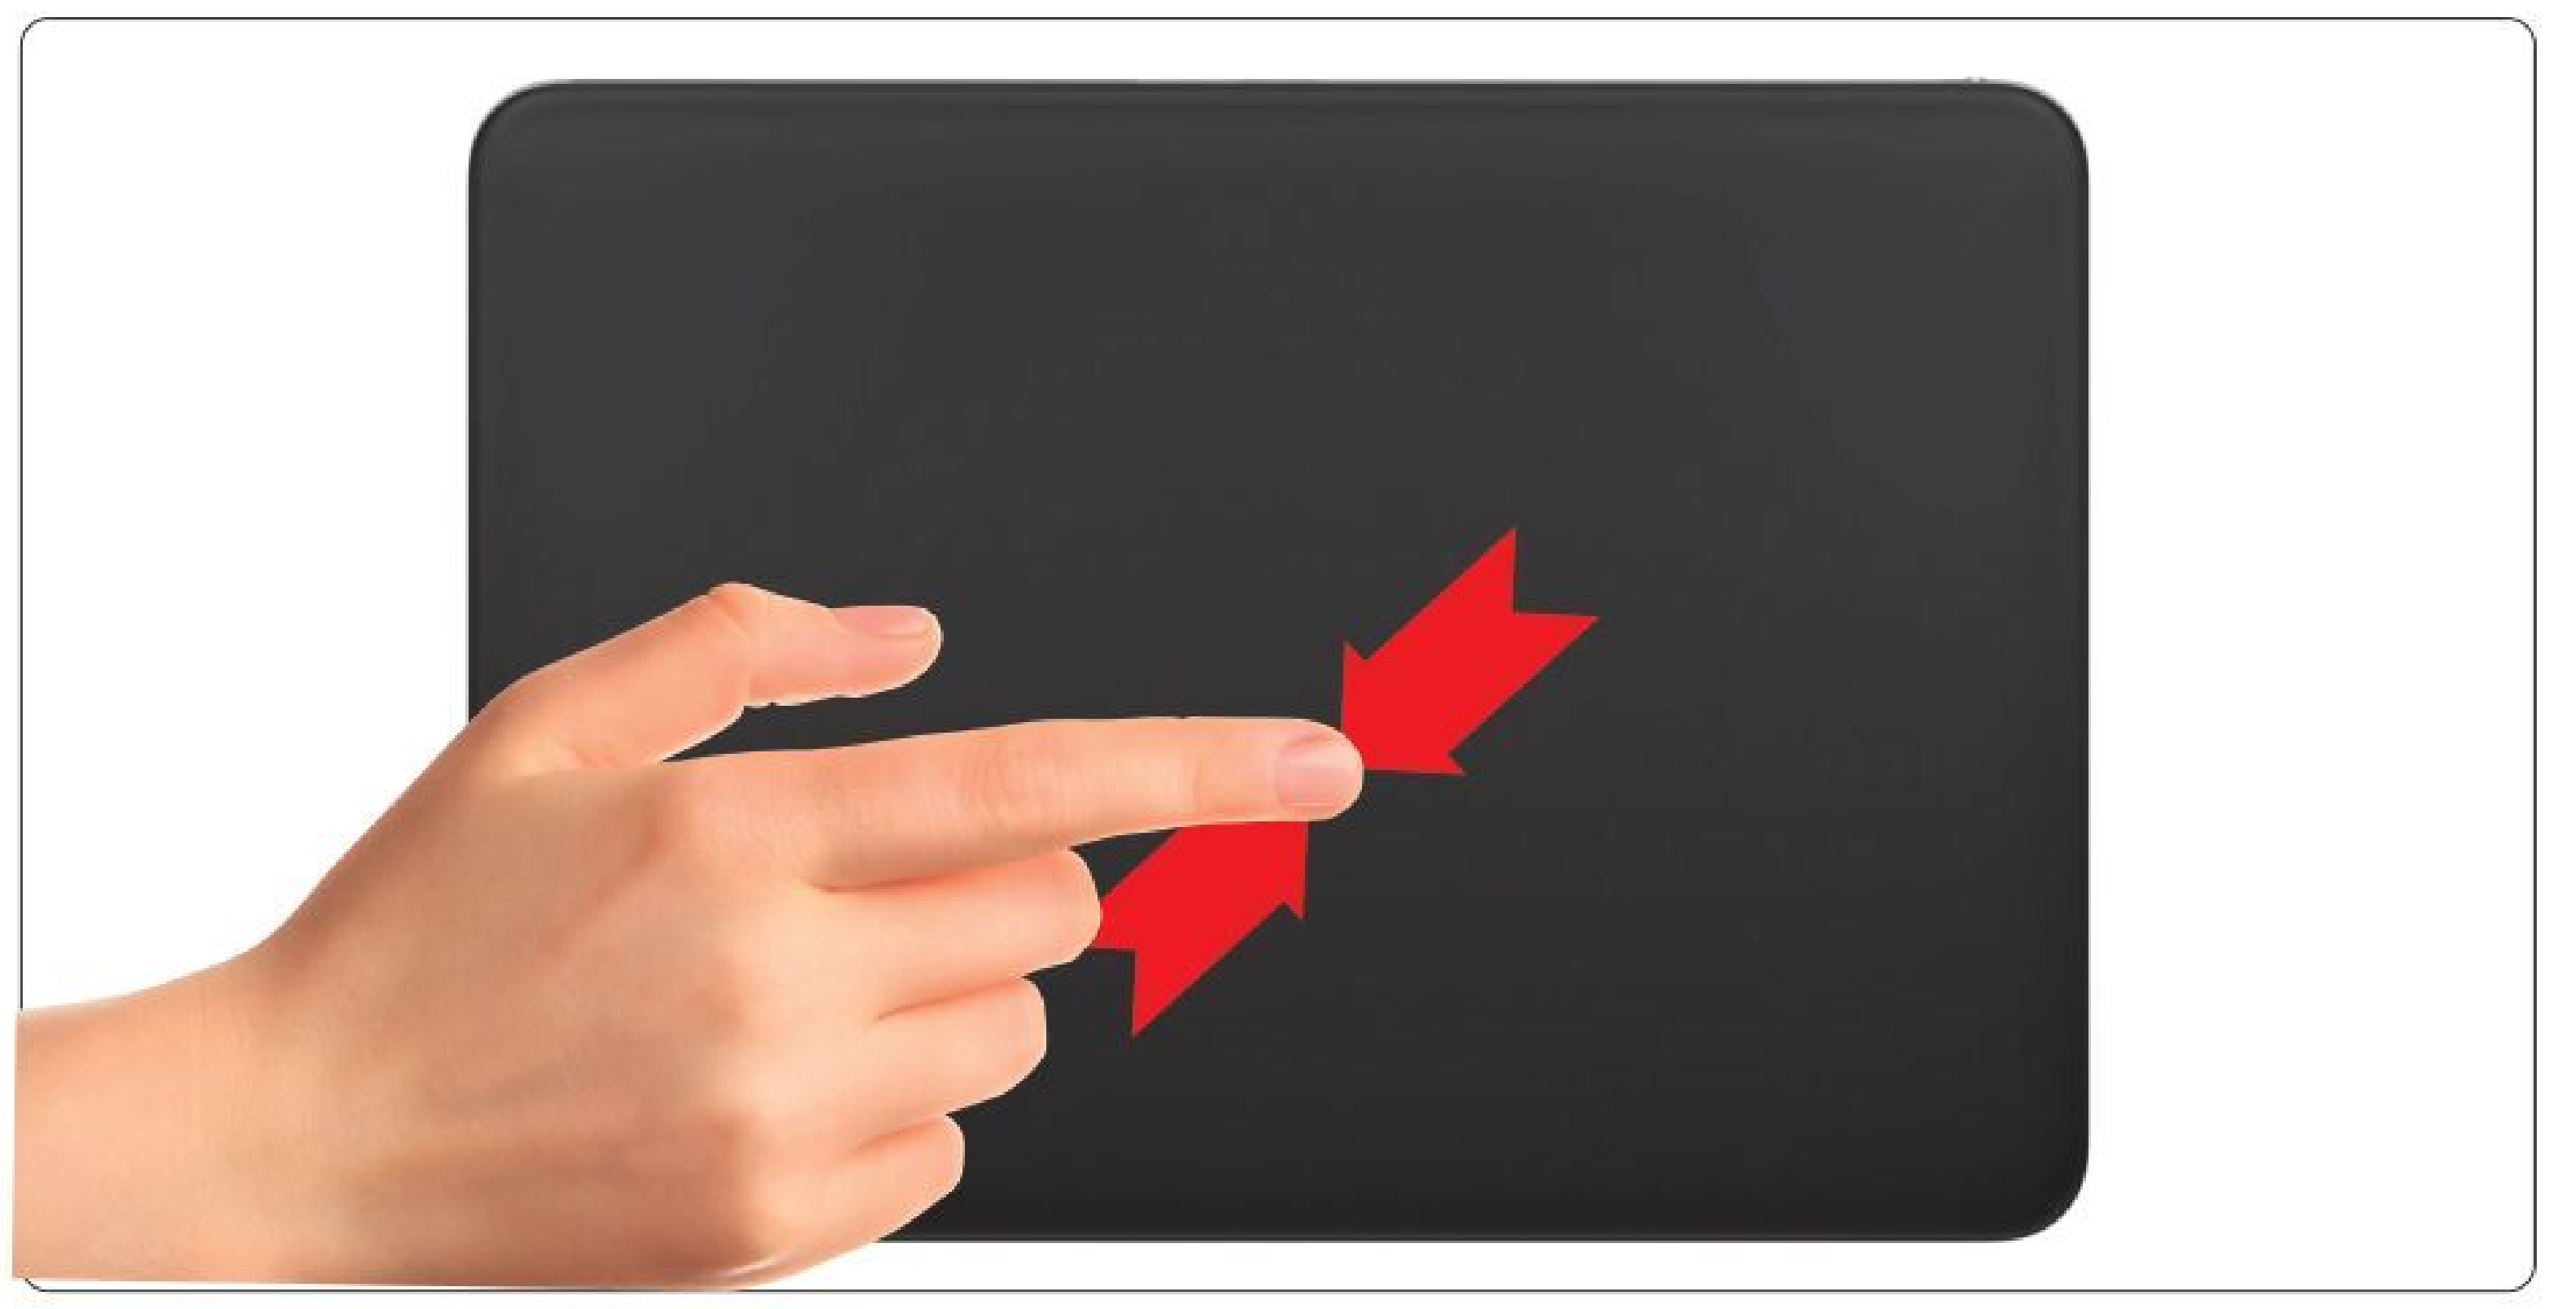
Single Click

Unlike most other trackpads, the entire MacBook trackpad works the same as the mouse button; and you can click anywhere on the track pad to activate apps and select icons.



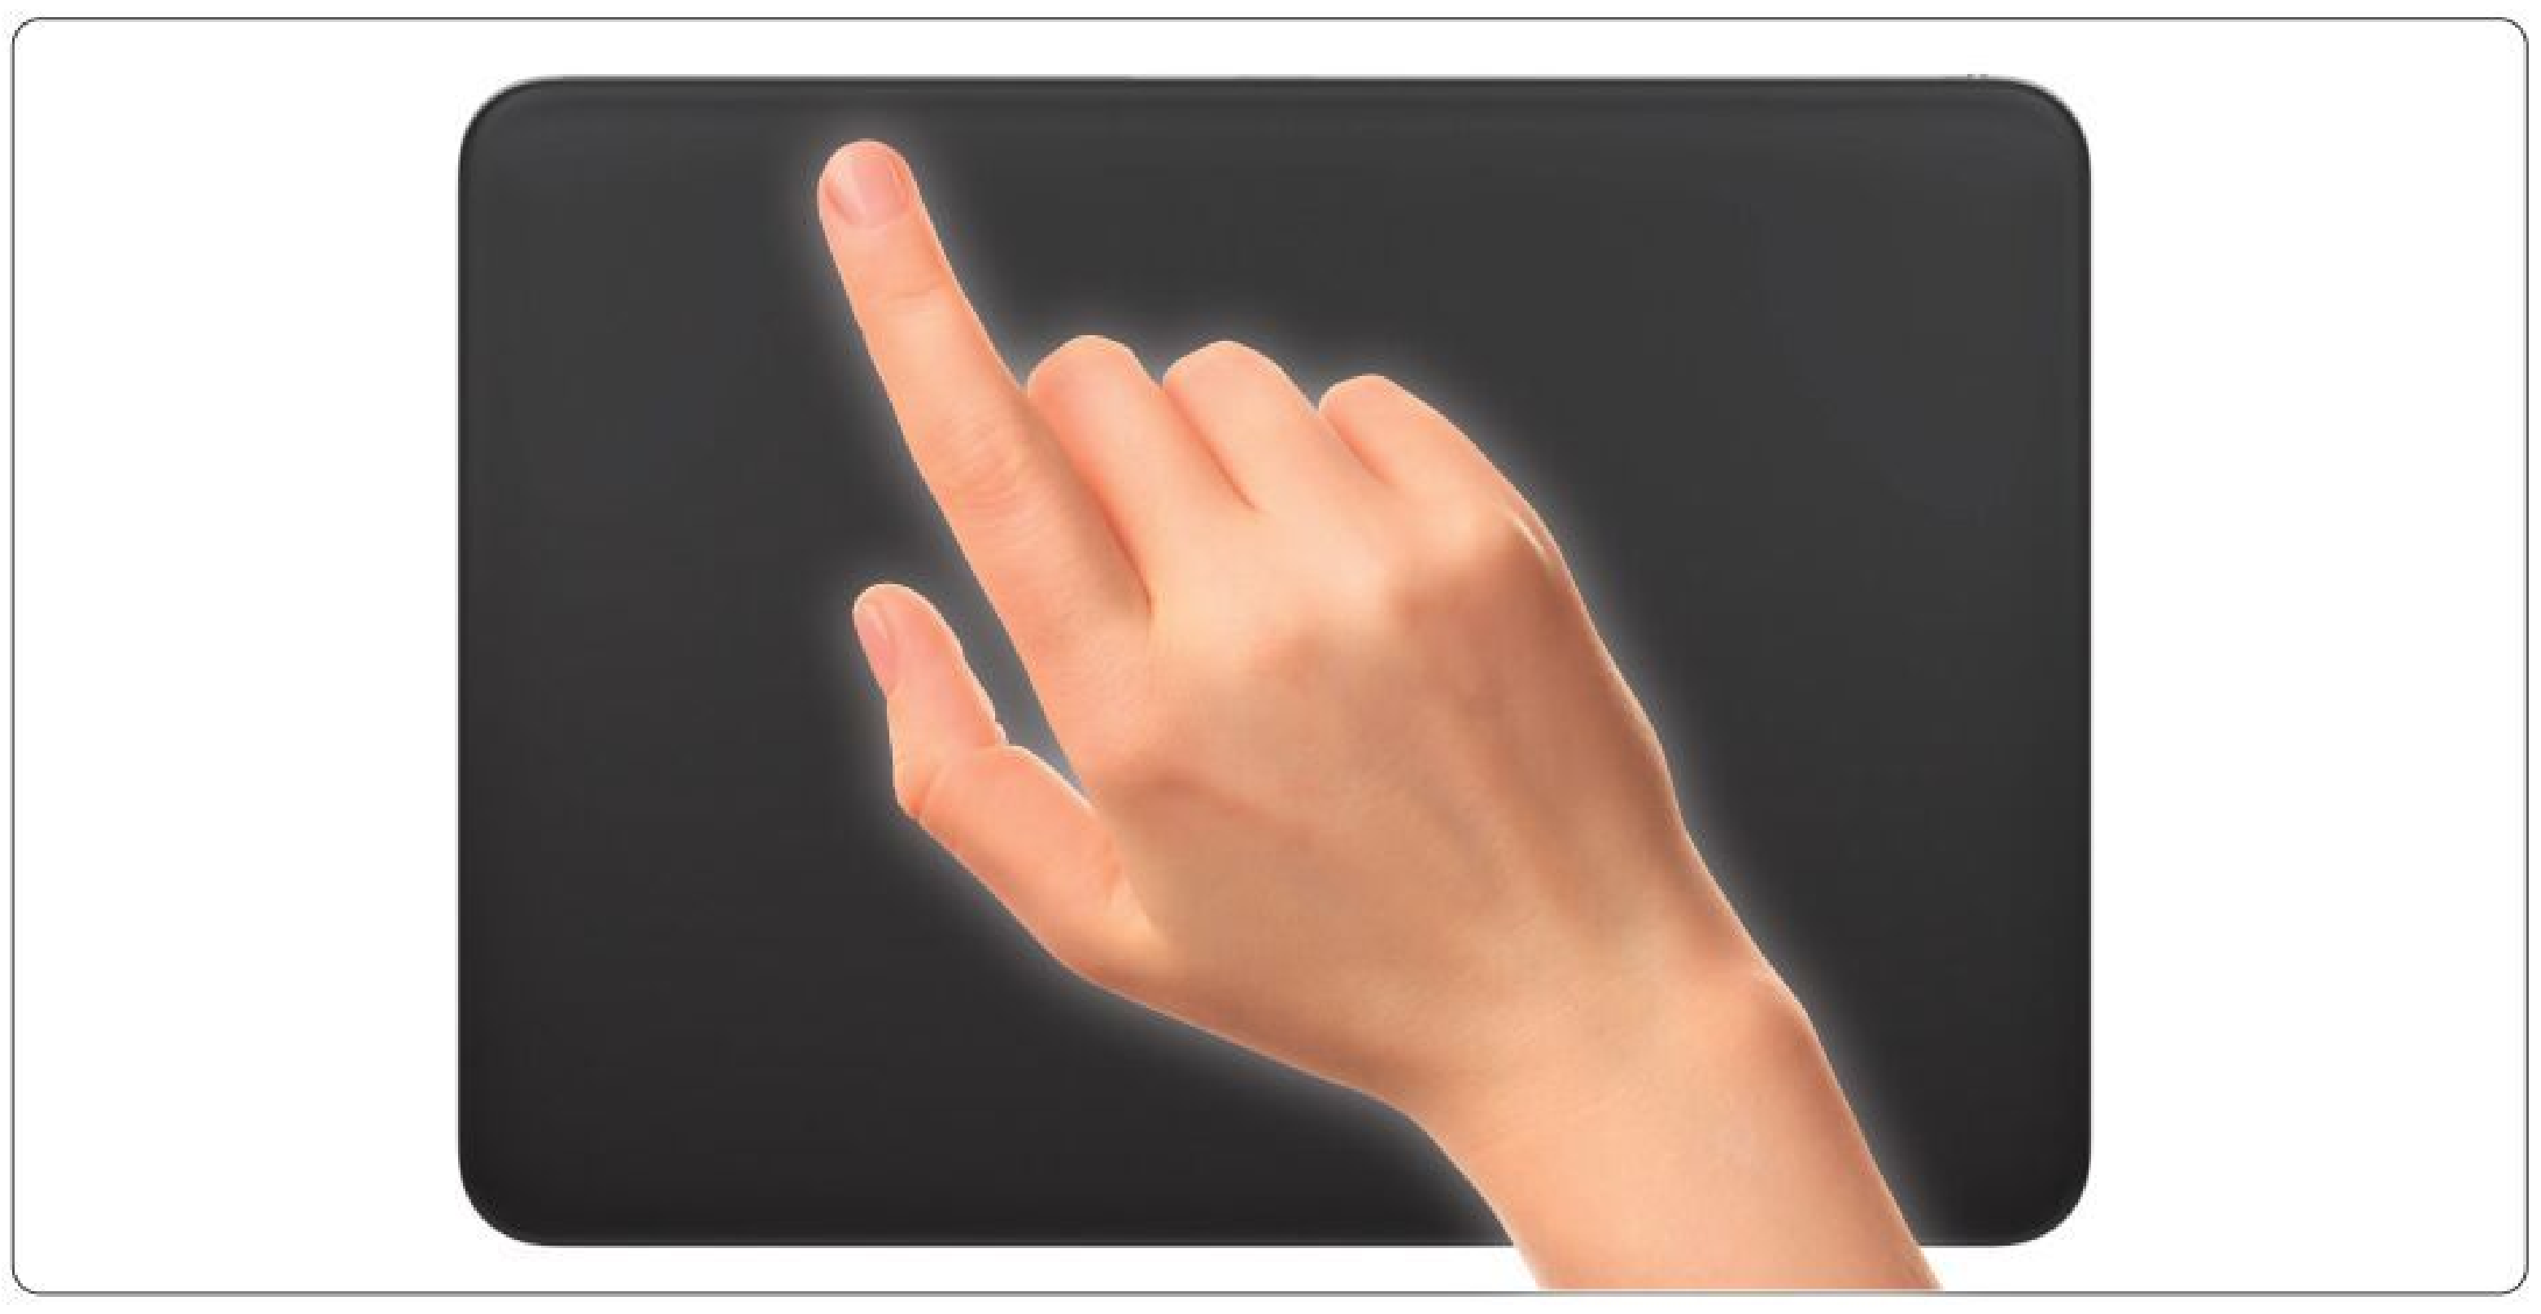
Scroll Vertically

Place two fingers together on the trackpad, then move them up or down. This will scroll vertically up or down the document or web page you're currently viewing.



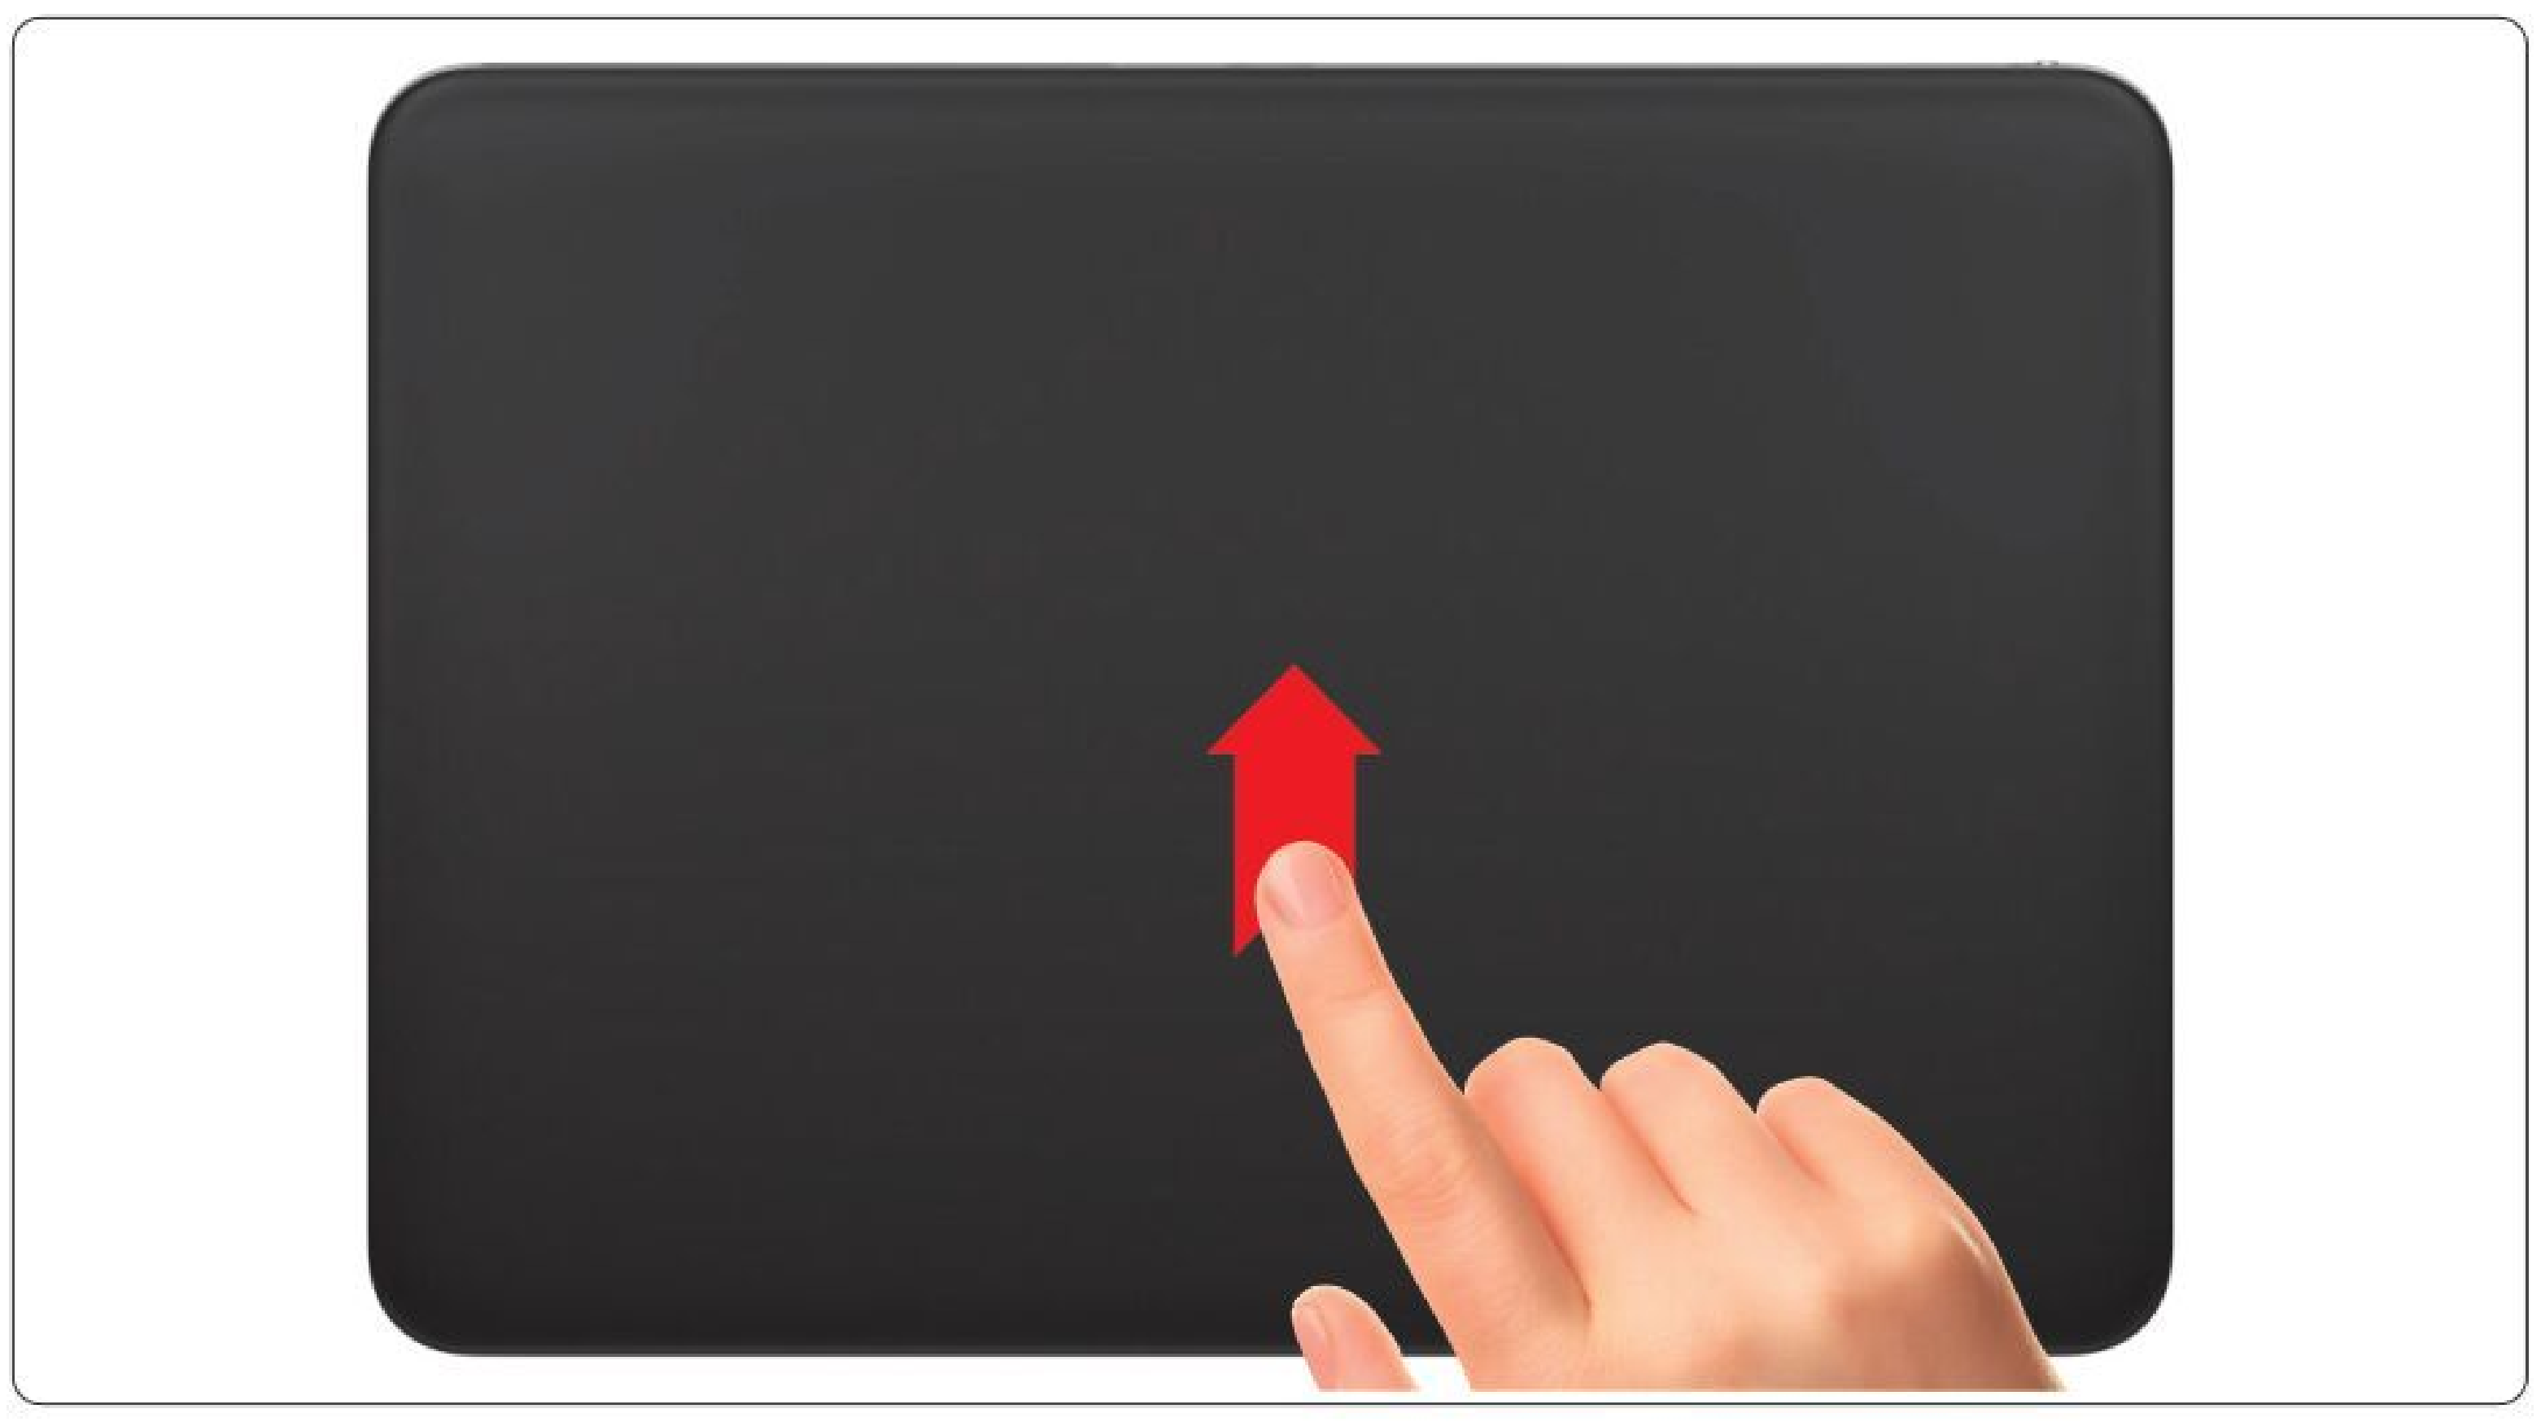
Zoom In and Out

Two-finger pinching lets you zoom in or out on PDFs, images, photos, and other large visual documents or web pages. Place two fingers on the trackpad, then move them apart to zoom in, or together to zoom out. The quicker you move your fingers, the more you'll zoom.



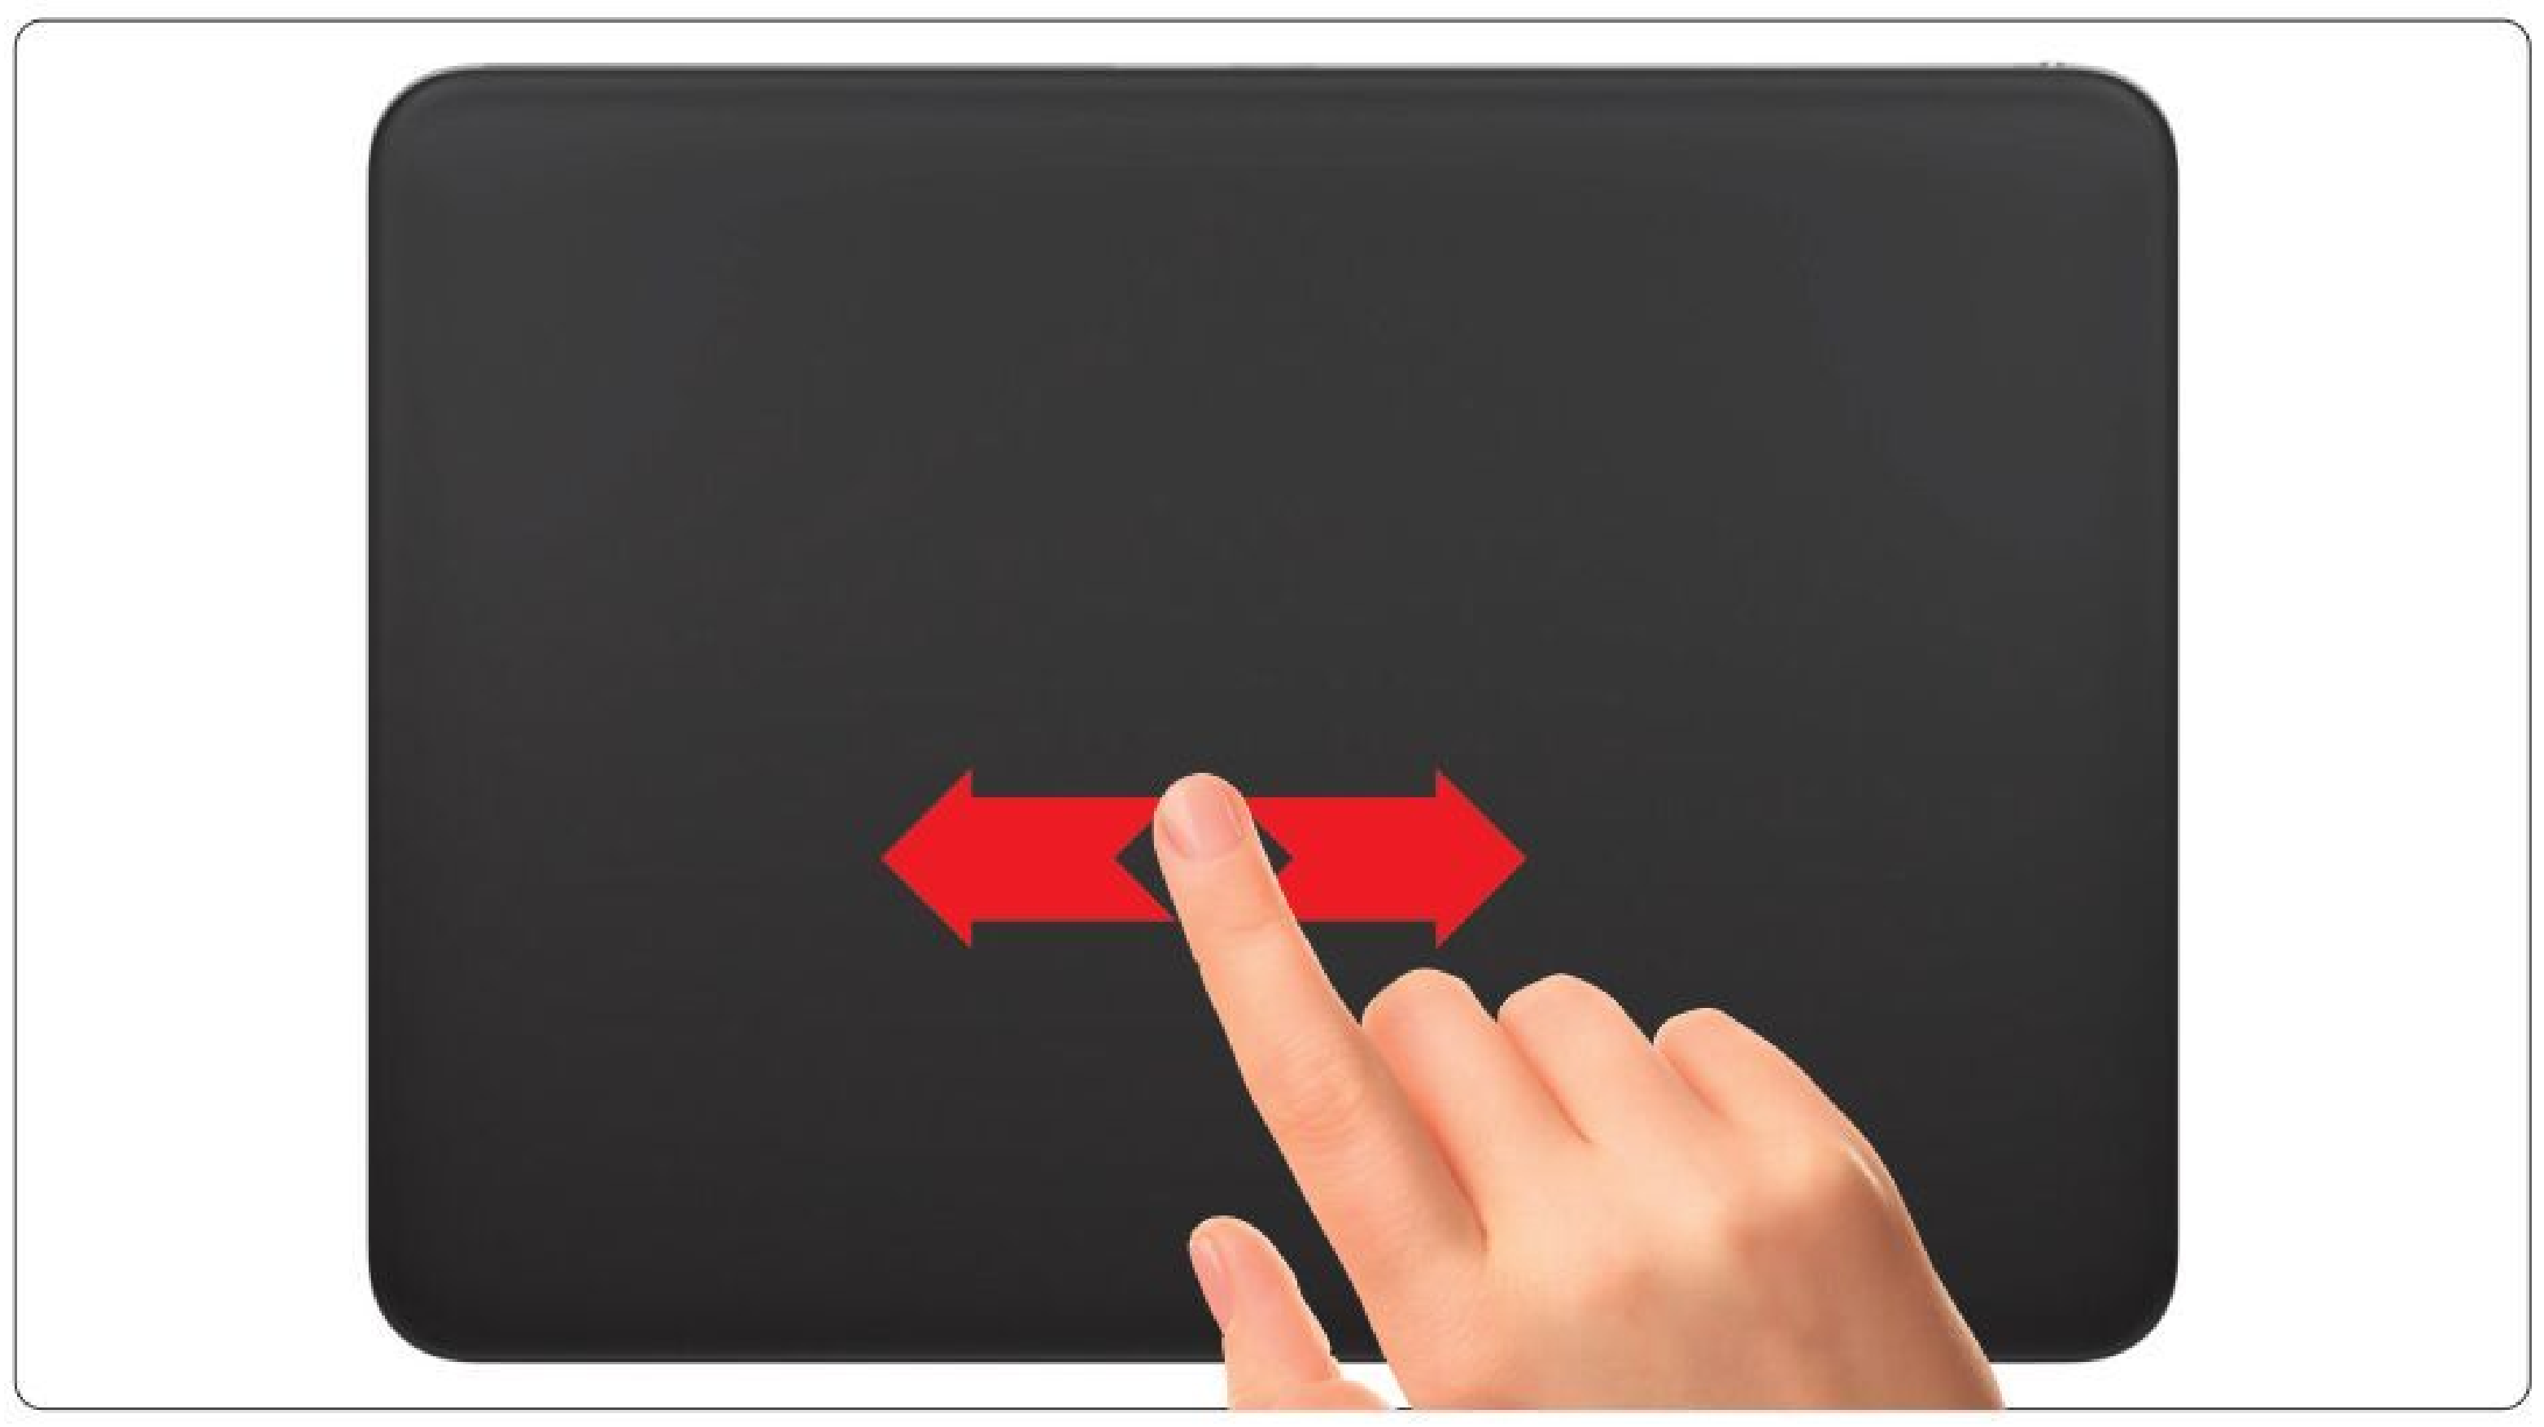
Rotating Images

You can rotate images by placing two fingers on the trackpad and then turning your hand so that your fingers both move in a curve. It can be a little awkward on the wrist at first but you'll soon get used to it. With practice, you wonder how you ever did without it.



Access Mission Control

You can access the macOS Mission Control at any time, even if you've got a full-screen app open. Simply place three fingers at the bottom of the trackpad and move them quickly upwards and Mission Control appears.

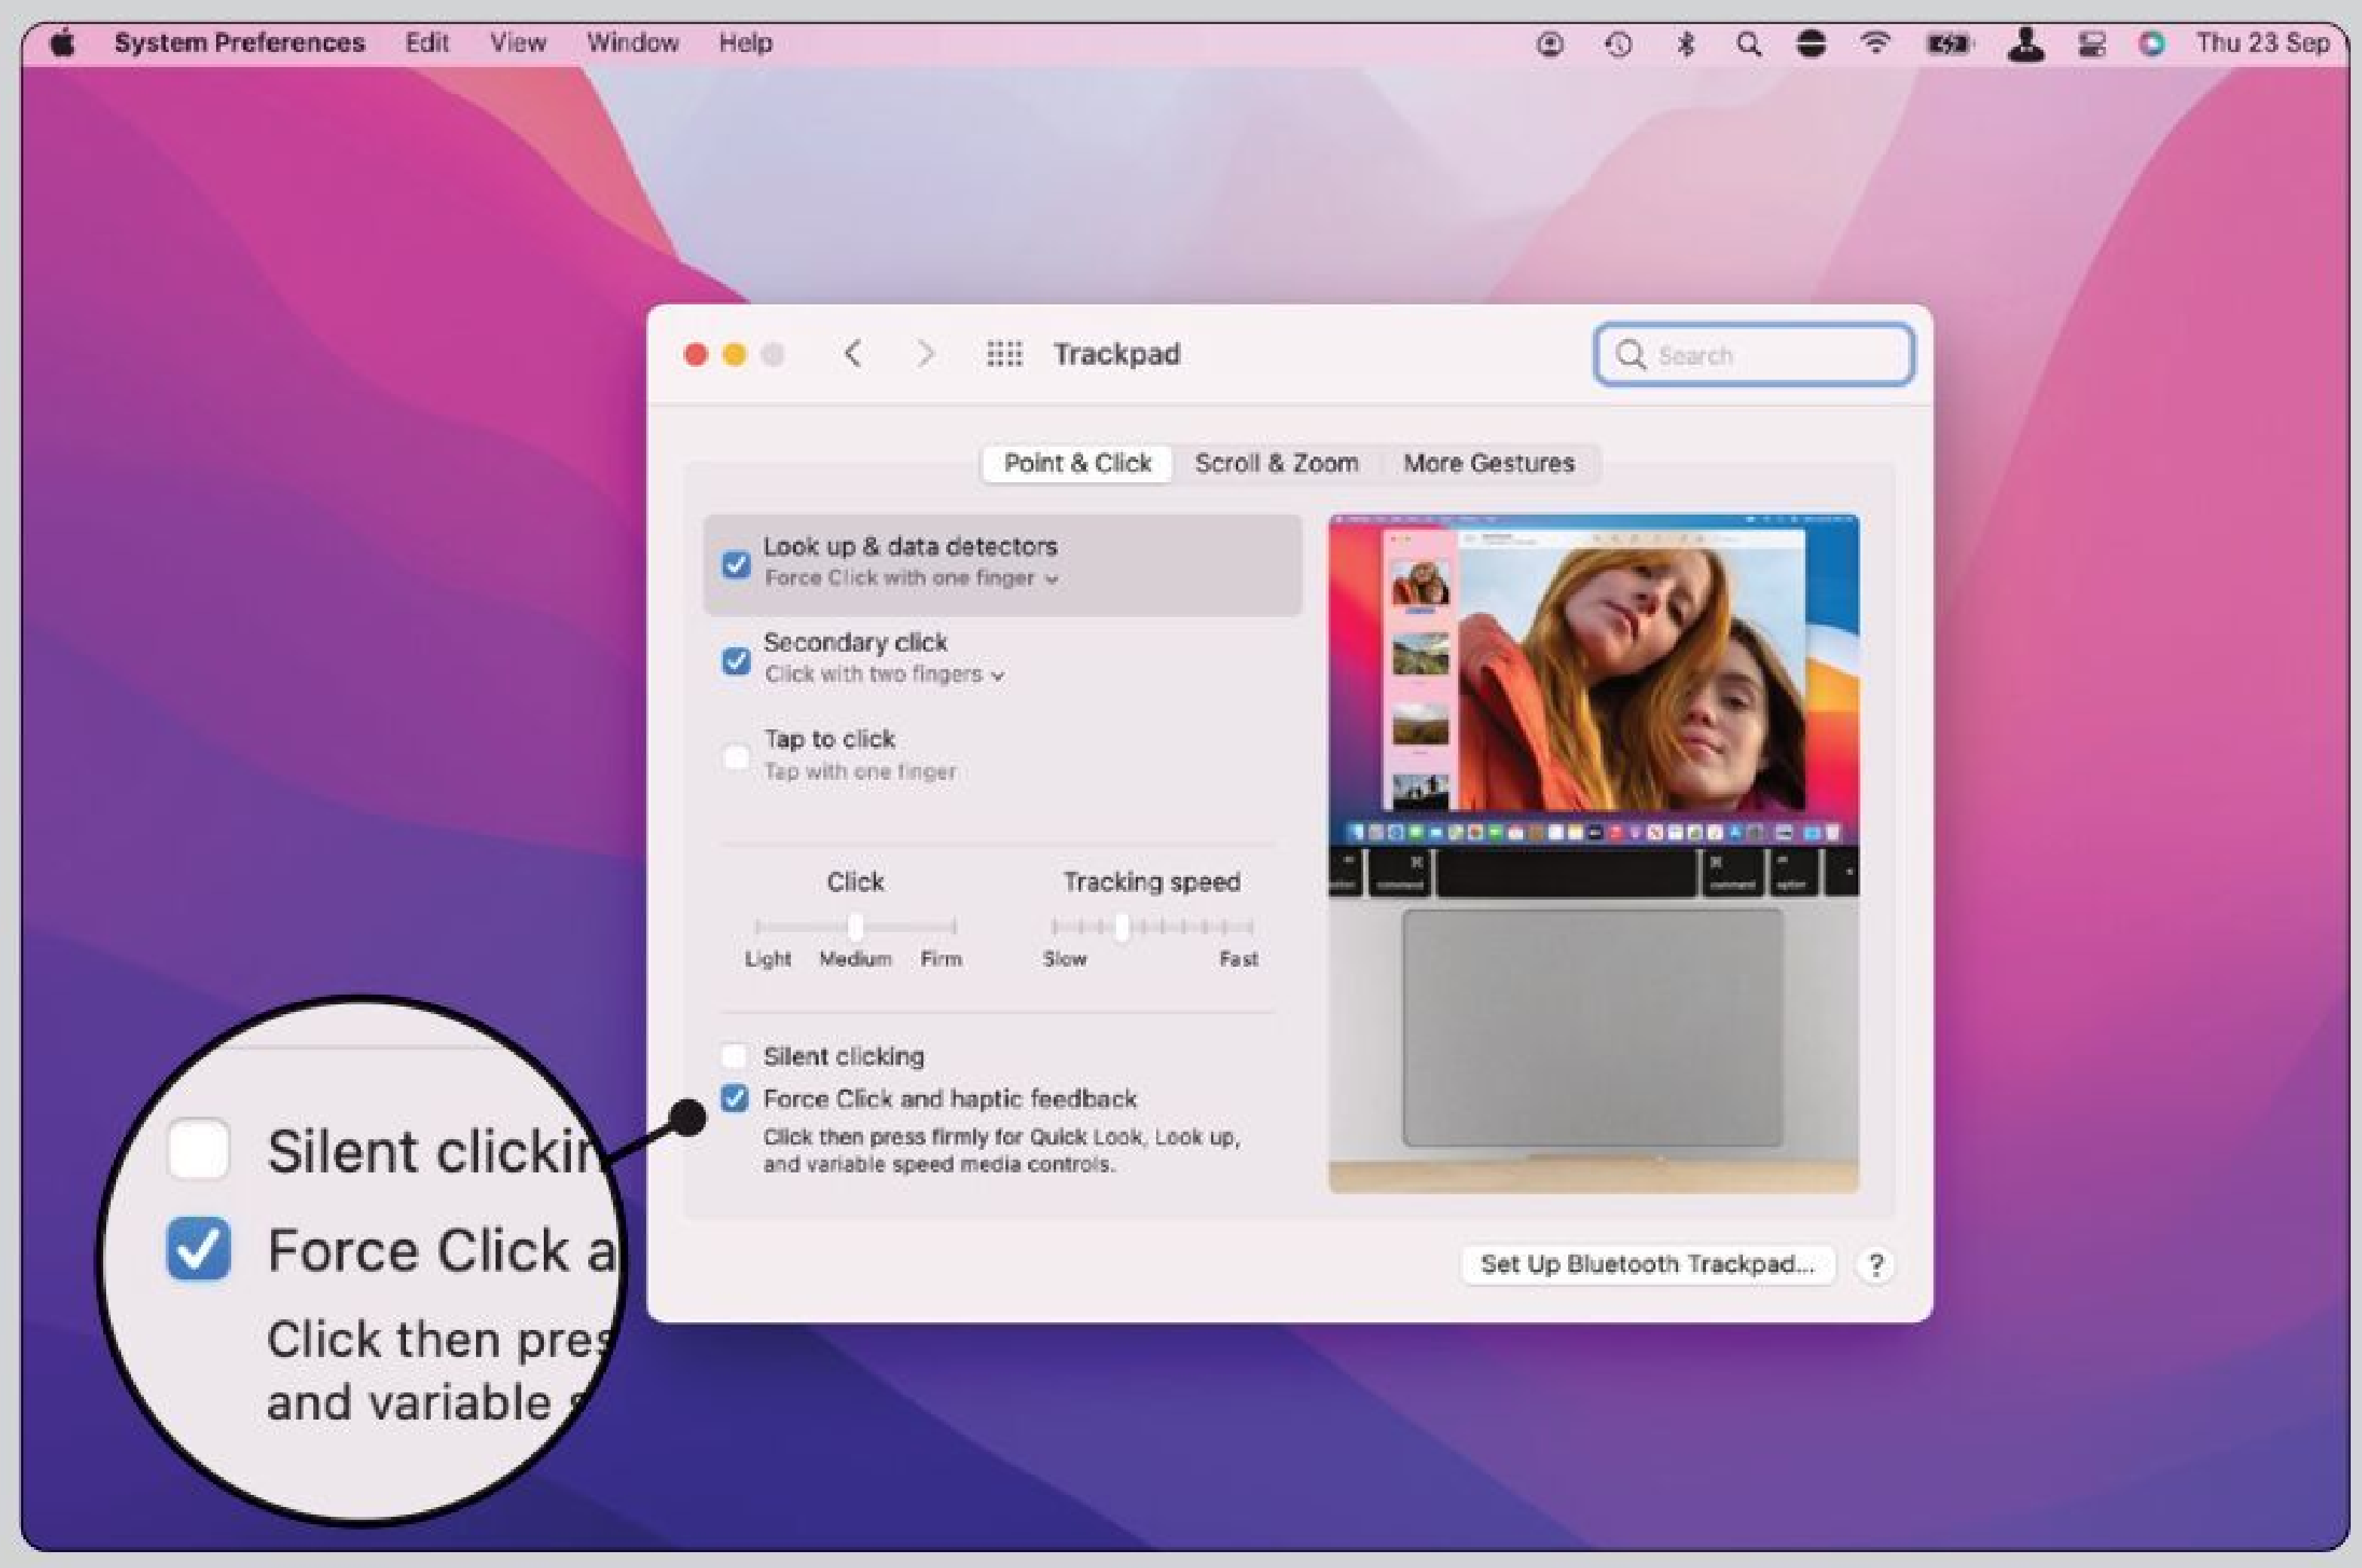


Switching Between Full-screen Apps

If you've got several apps open full screen at once, you can quickly flip between them using a gesture. Place three fingers on the trackpad and quickly slide them to the left or right. This will scoot the current app aside, revealing the next in line.

Force Click

The very latest Apple notebooks feature Force Touch trackpads, which can tell a soft tap from a hard tap. A hard tap, or Force Click, can be used to preview a file, drop a pin in Maps, preview a Safari link, rename a file or folder and more. It's a concept that should prove very familiar to those who have used the latest iPhone models.



☑ Look up & data detectors
Force Click with one finger

☑ Secondary click
Click with two fingers

☐ Tap to click
Tap with one finger

Click: Light Medium Firm

Tracking speed: Slow Fast

☐ Silent clicking

☑ Force Click and haptic feedback
Click then press firmly for Quick Look, Look up, and variable speed media controls.

Turn Off Force Click

If you dislike the Force Click gesture, and find it gets in the way of your workflow, it's easy to turn it off. Open System Preferences (under the Apple menu in the top left corner), and go to the Trackpad pane. Under the first tab, Point & Click, you see a checkbox labelled 'Force Click and haptic feedback'. Uncheck it to turn off this feature.

Dark Mode And Night Shift

If your screen's too bright, there's a couple of great desktop features that help. Dark Mode inverts the Mac's colour scheme, making it much darker, and Night Shift Mode changes the colour hue, reducing blue light that can keep you awake if you use your Mac before going to bed.

Night Shift...

Display preferences control the resolution and colour of your iMac's displays and their arrangement with any nearby Mac or iPad signed in to your Apple ID.

Night Shift automatically shifts the colours of your display to the warmer end of the colour spectrum after dark. This may help you get a better night's sleep.

Schedule: Off

Manual: ☑ Turn On Until Tomorrow

Colour Temperature:

Warmer settings may affect the appearance of some onscreen motion.

To rearrange displays, drag them to the desired position. To mirror displays, hold Option while dragging them on top of each other. To relocate the menu bar, drag it to a different display.

2 With Night Shift Mode enabled, the colour spectrum shifts from blue to yellow. If you use your Mac late at night, too much blue light can interfere with sleep patterns, so using Night Shift Mode when on your Mac close to bedtime can prevent this.

Desktop Stacks For Organisation

If your Mac's desktop regularly gets cluttered with folders, file icons and other such material that you're currently working on, there's a solution at hand in macOS. With a click of your mouse or trackpad, you can organise them into stacks, grouped according to their file type. Here's how to do it.

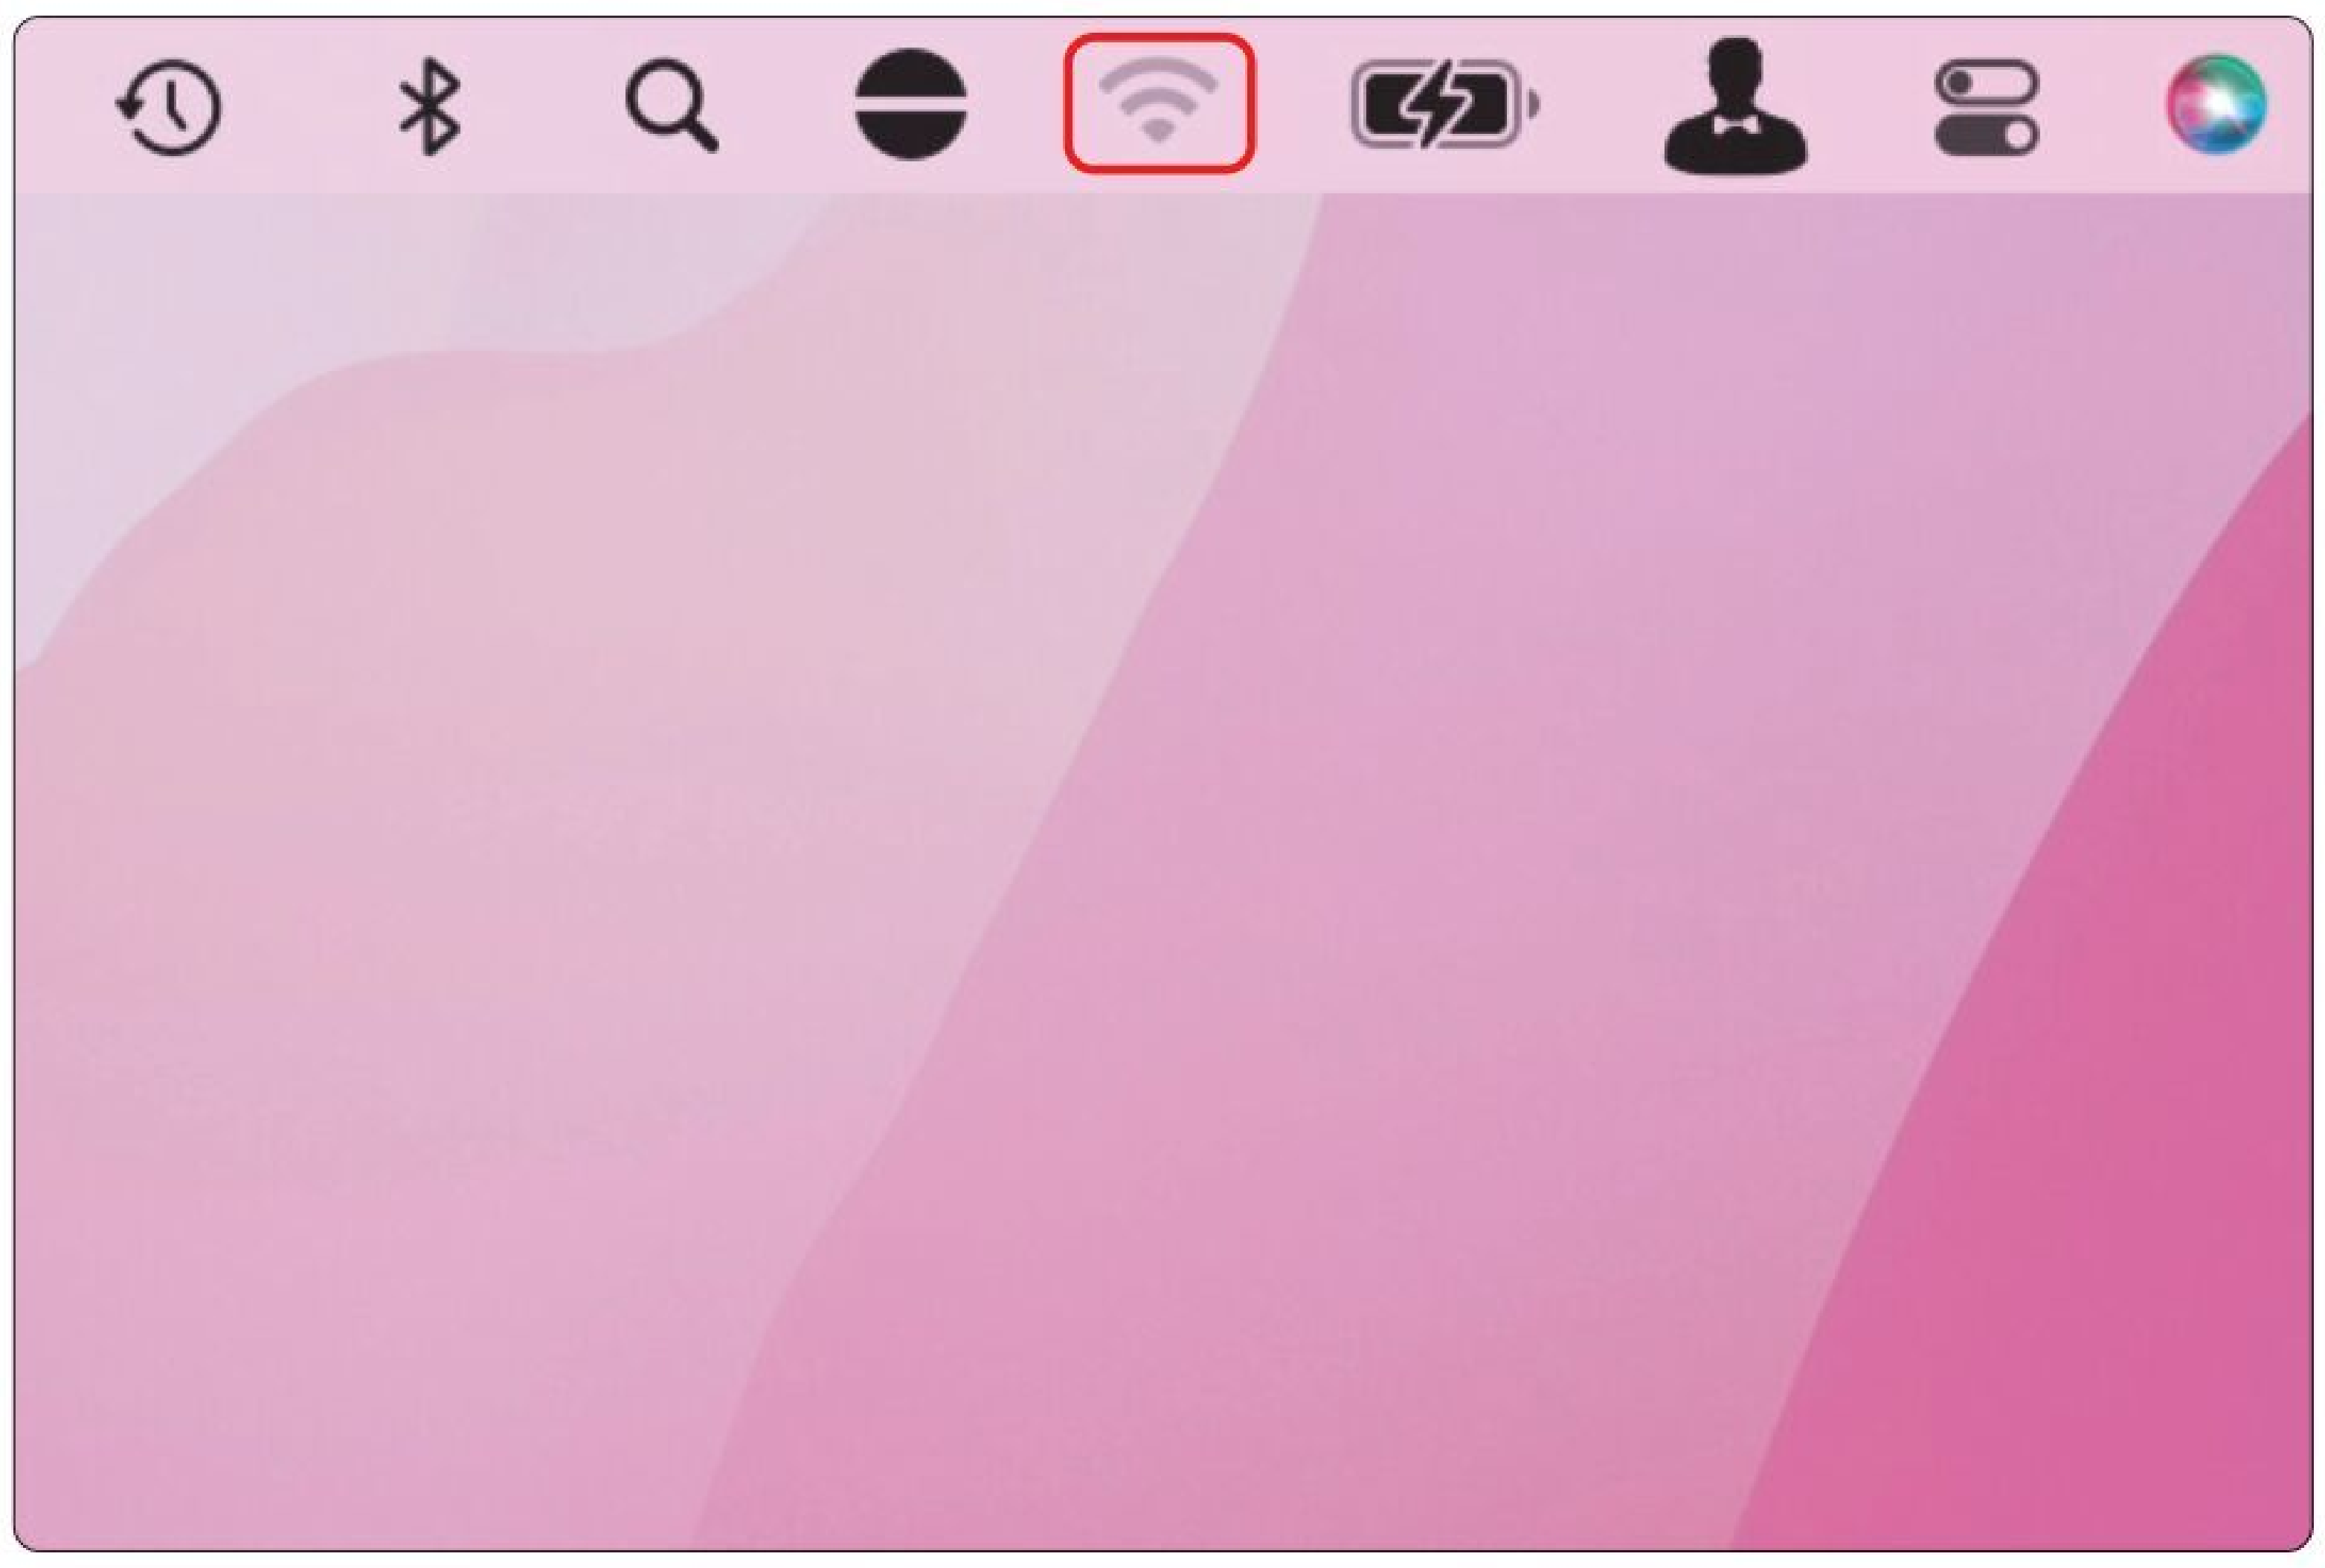
4 You can choose how you group your stacks. In View, go to Group Stacks By and then pick an option. If you use finder tags (see later in this book) to identify files from the same project, for example, grouping by Tags keeps them together and easier to find.

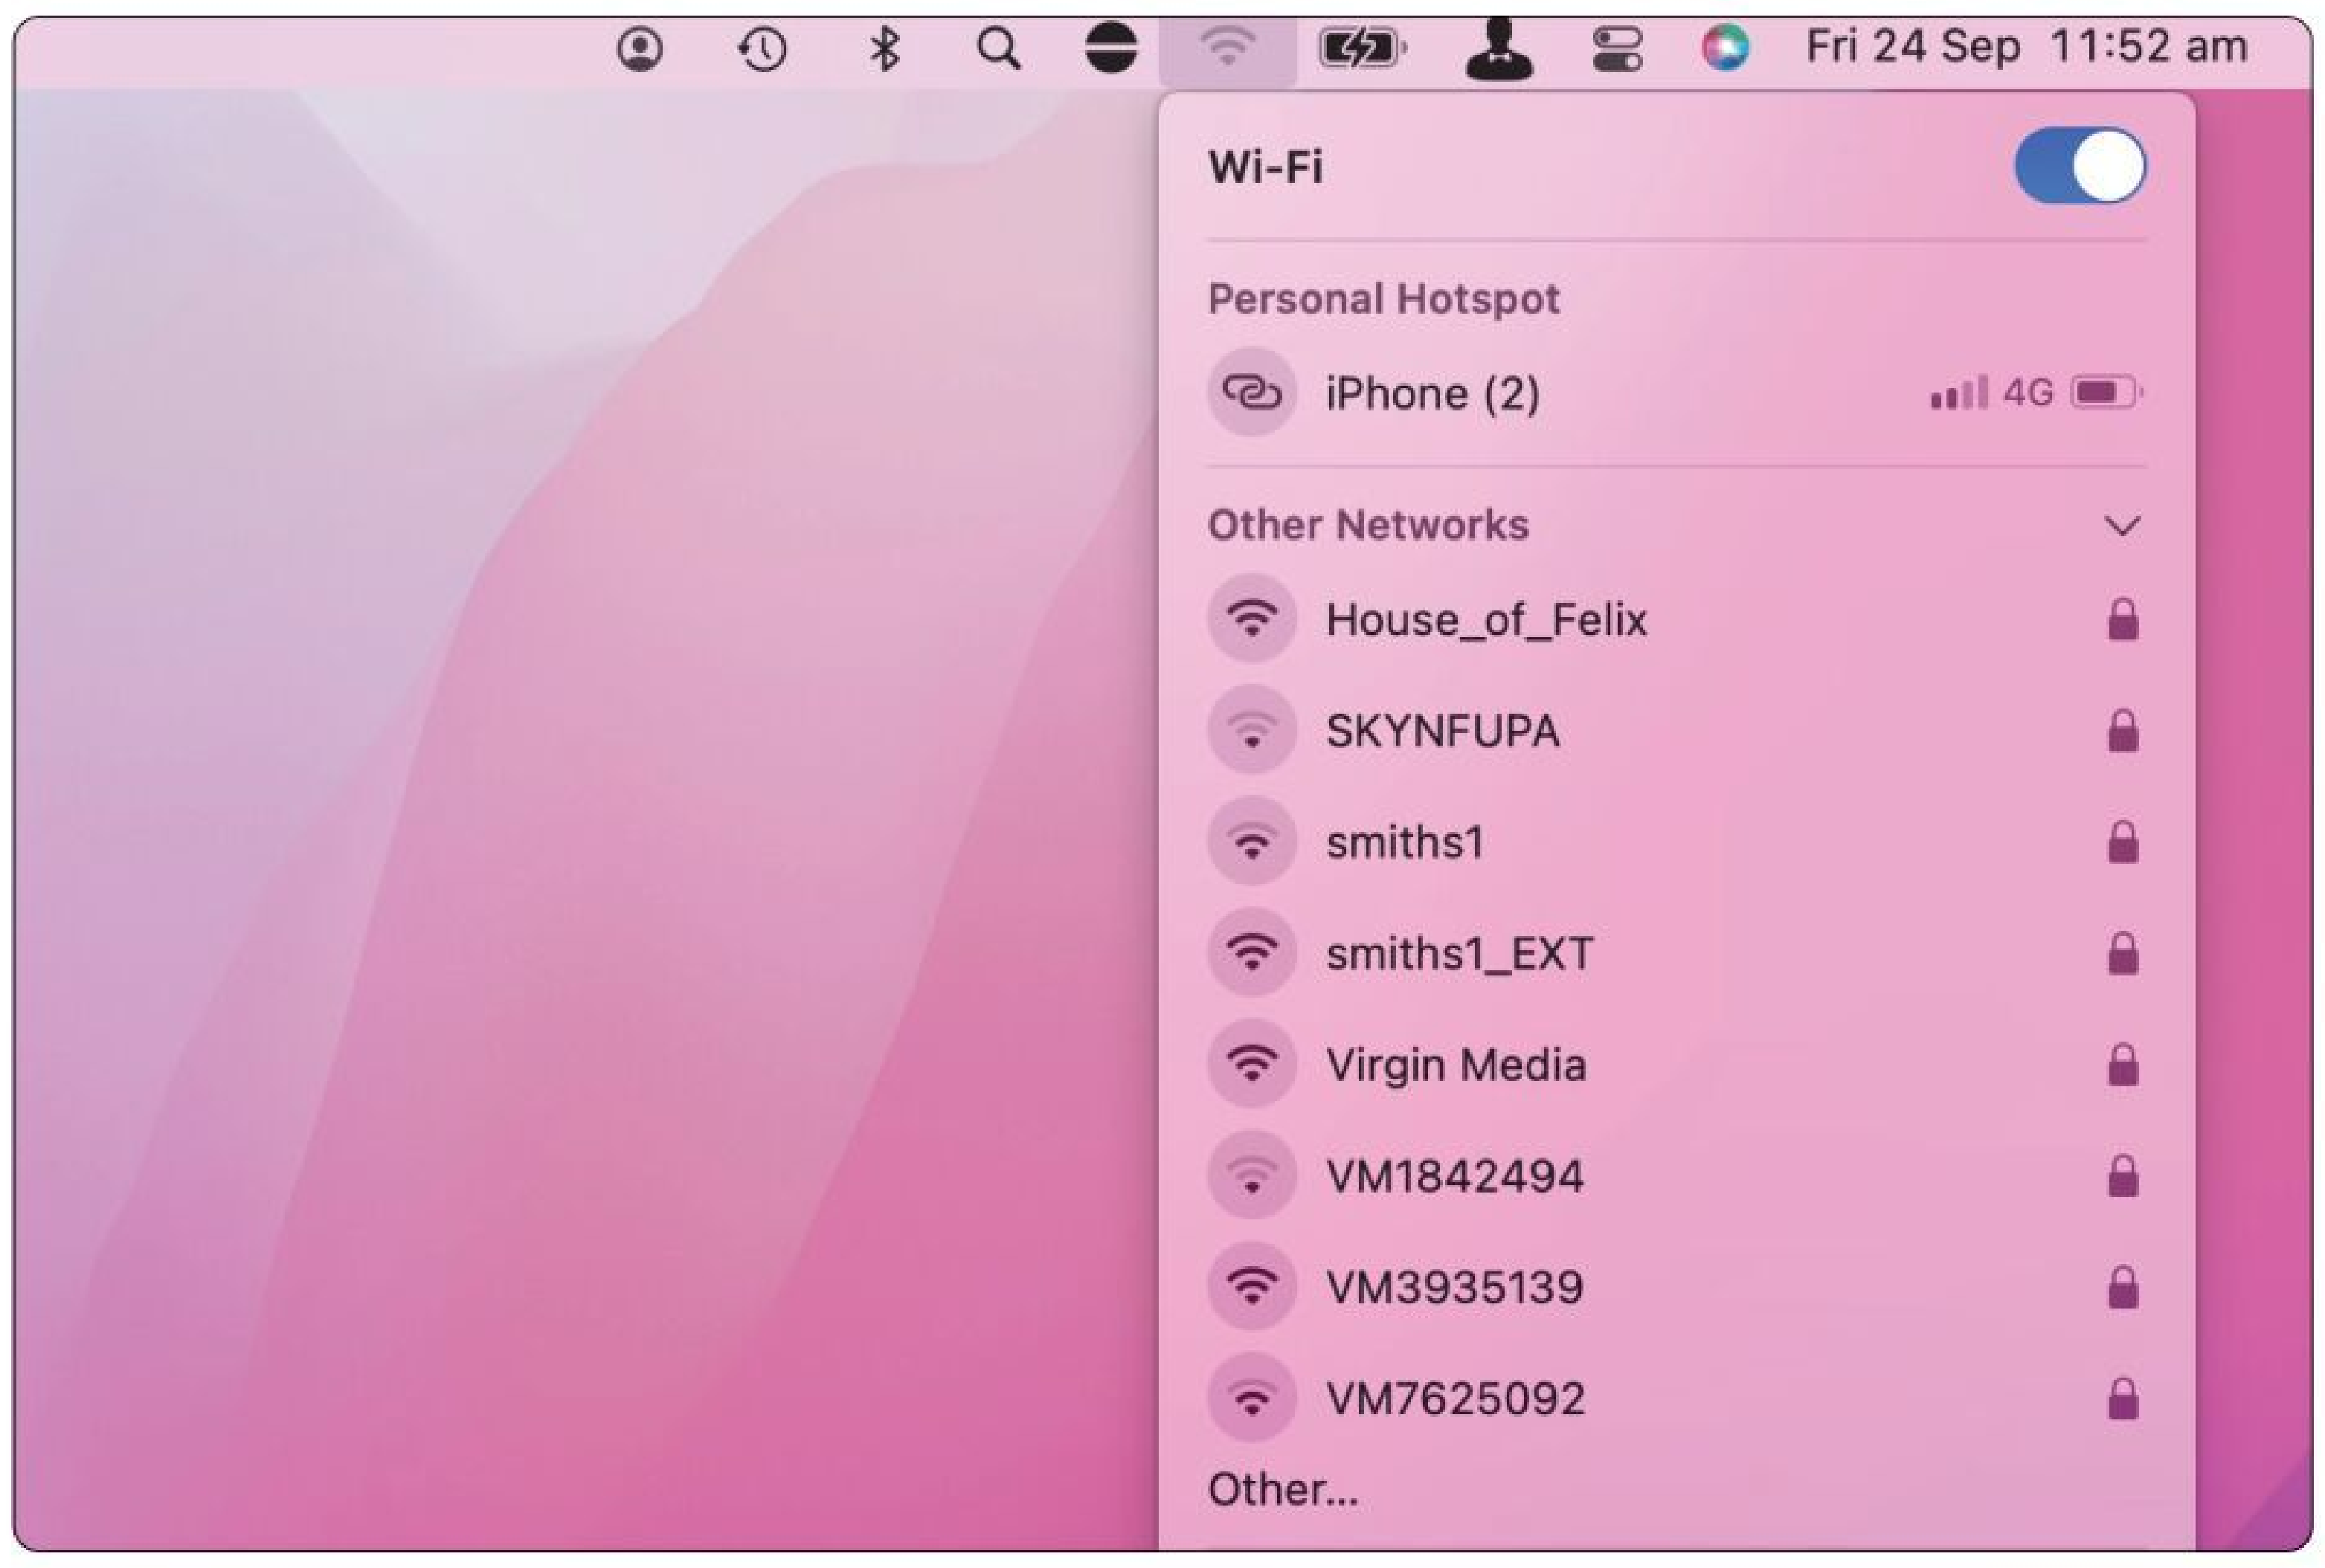
Getting Online With Wi-Fi or Ethernet

As is the case with any modern operating system, access to the Internet is a vital component for upgrading and getting hold of new apps that will help you get the most from your Mac. Getting online in Monterey is remarkably easy and here's how to do it both wirelessly and with a cabled connection.

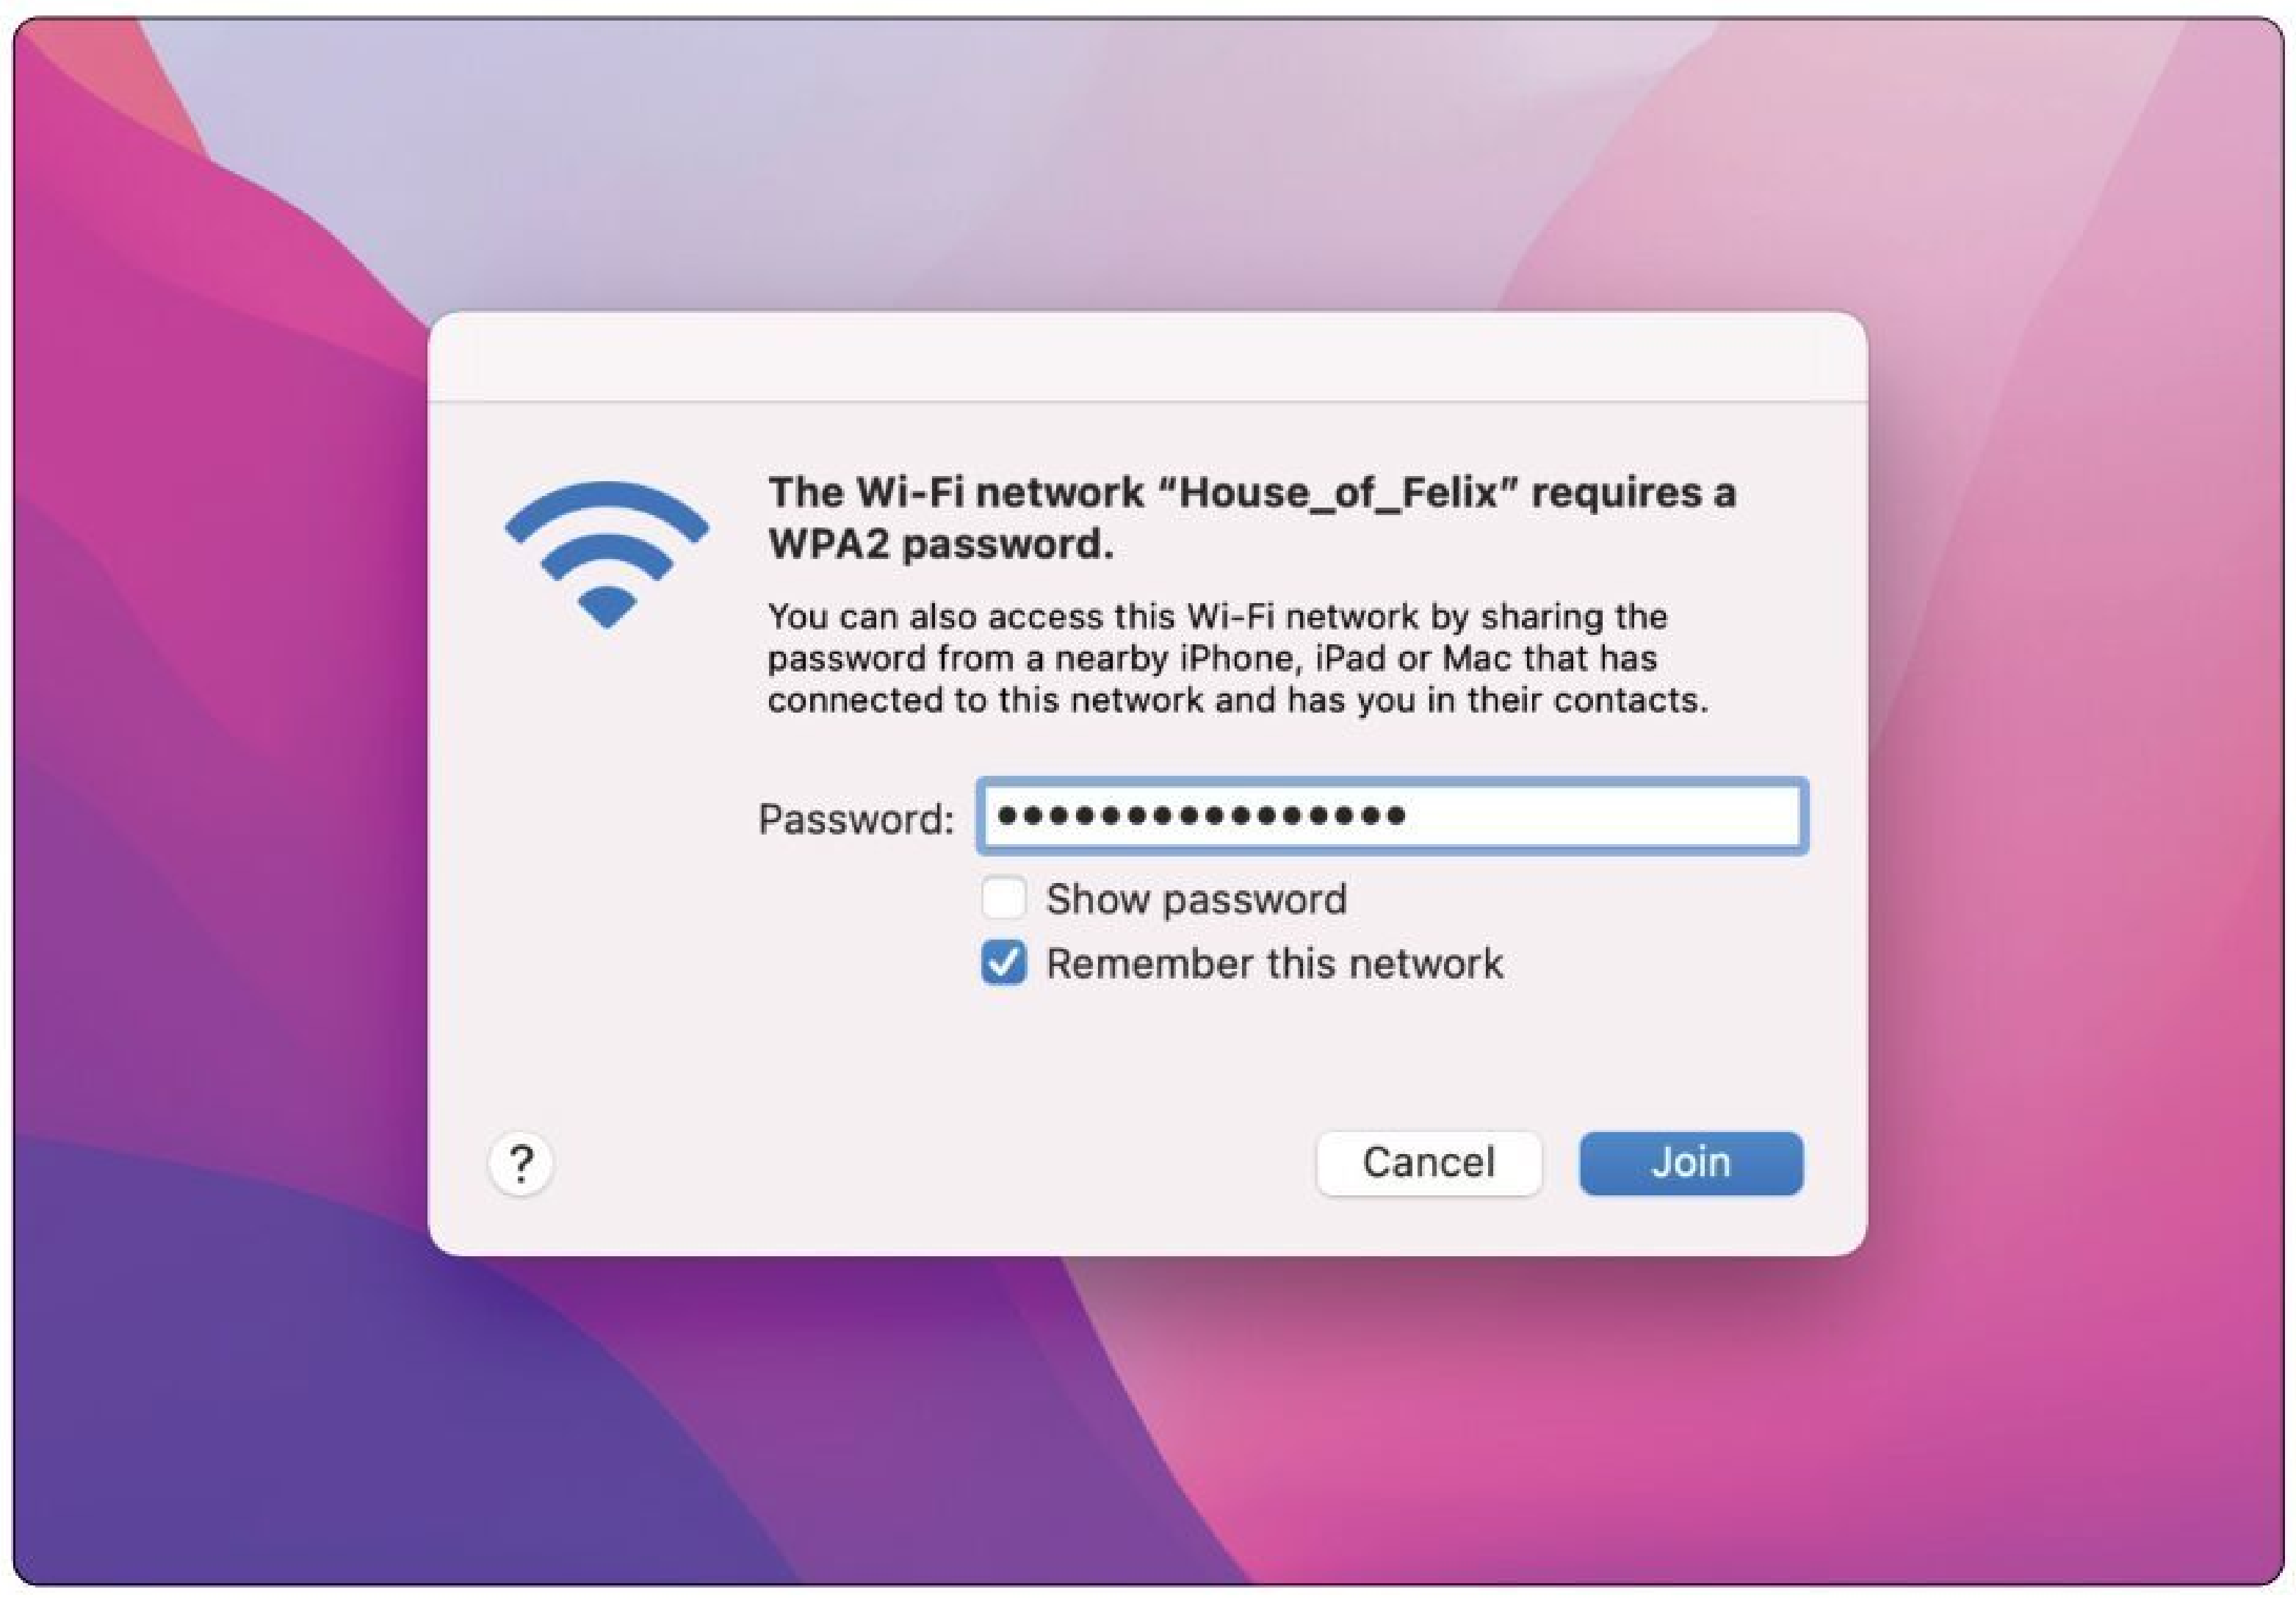
Connecting with Wi-Fi



1 Make sure that your Mac is within range of your wireless router's Wi-Fi signal, then click on the Wi-Fi icon in the top menu bar. You'll see a list of Wi-Fi networks. If your Wi-Fi is off click the switch to turn it on.



2 You'll see a list of Wi-Fi networks available in your area. A lock to the right shows a password is required to join it. Click on the network you wish to join, whether it's your own router or a public Wi-Fi in a cafe or bar.



The Wi-Fi network "House_of_Felix" requires a WPA2 password.

You can also access this Wi-Fi network by sharing the password from a nearby iPhone, iPad or Mac that has connected to this network and has you in their contacts.

Password: ••••••••••••••••

☐ Show password

☑ Remember this network

3 If a password is required (it probably is), a window appears. Enter the password here. If you're setting up at home, the password is probably supplied with your router. Your Mac then joins the network, and remembers it so you don't have to add the password every time you go online.

Using Public Wi-Fi.

Some high street locations such as libraries, bars and restaurants offer free Wi-Fi to their customers. There are many different ways you can access public Wi-Fi. Some locations may have an unsecured connection, some require you to ask for their Wi-Fi password, and for others you have to register via their pop-up website; just open Safari while in such a Wi-Fi zone and then follow the on-screen instructions that appear when your Mac connects to the network.

Router: 192.168.178.1

DHCP Client ID: (If required)

Configure IPv6: Automatically

Router:

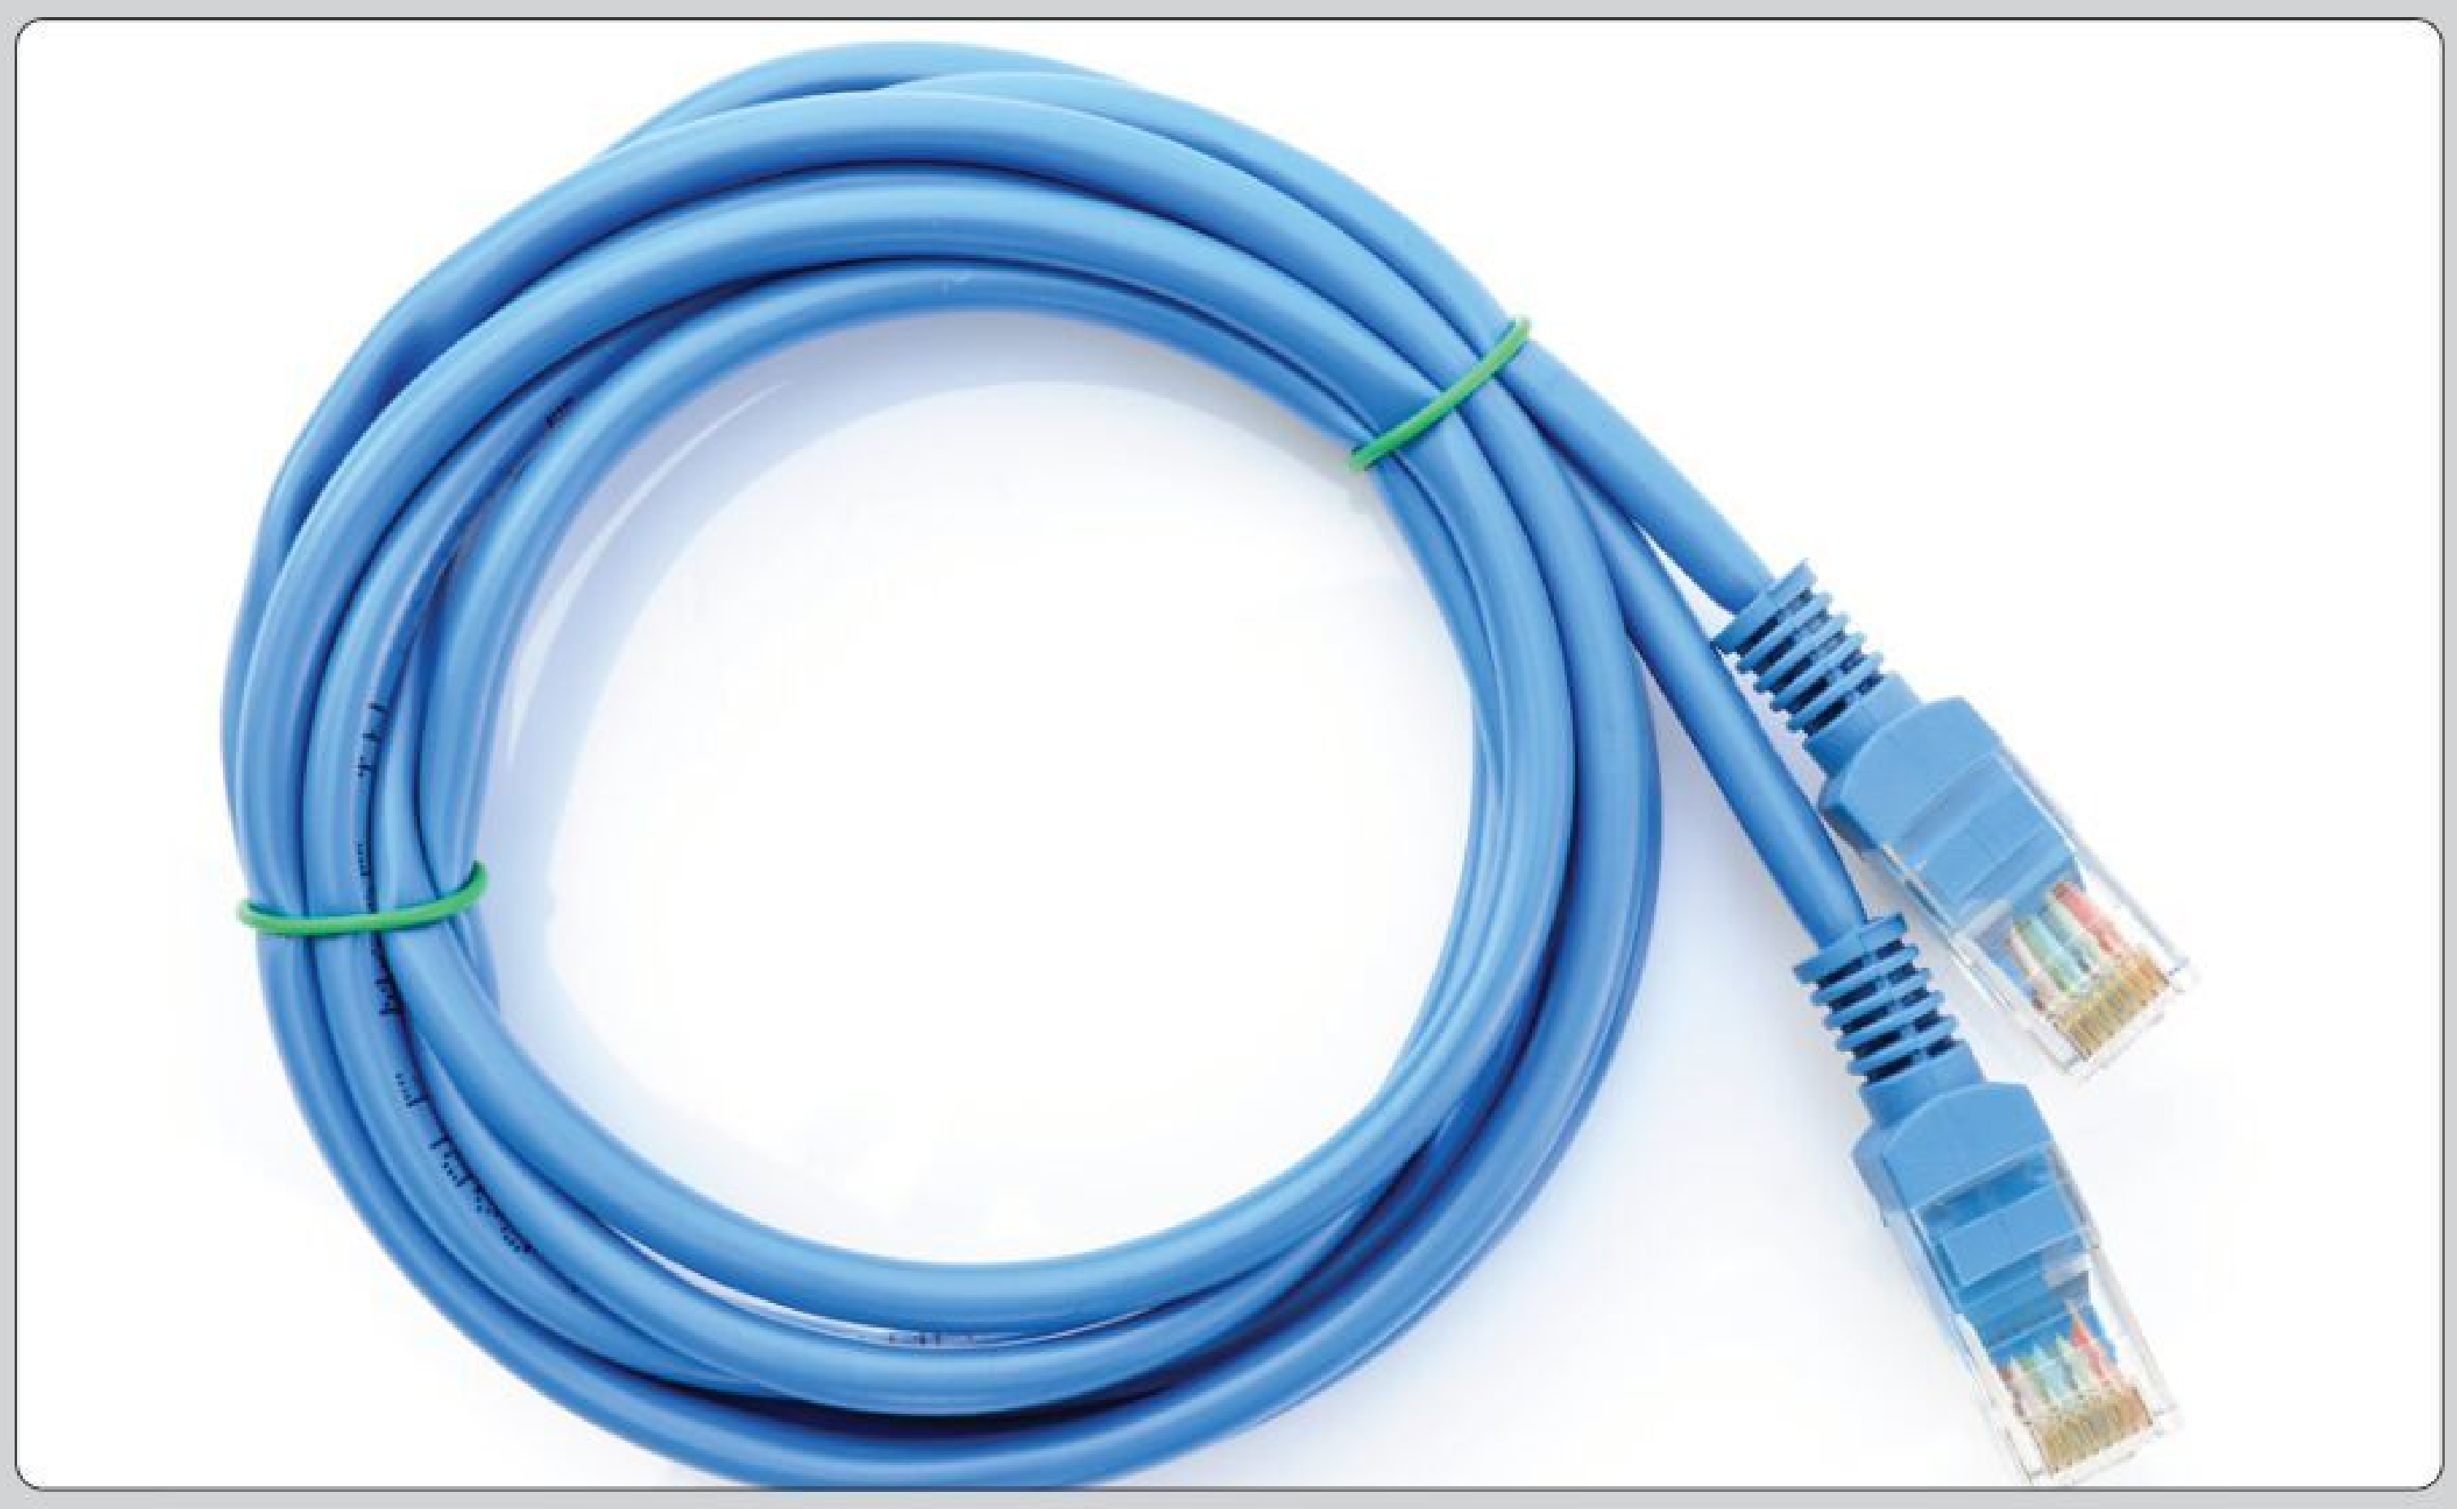
IPv6 Address:

Prefix Length:

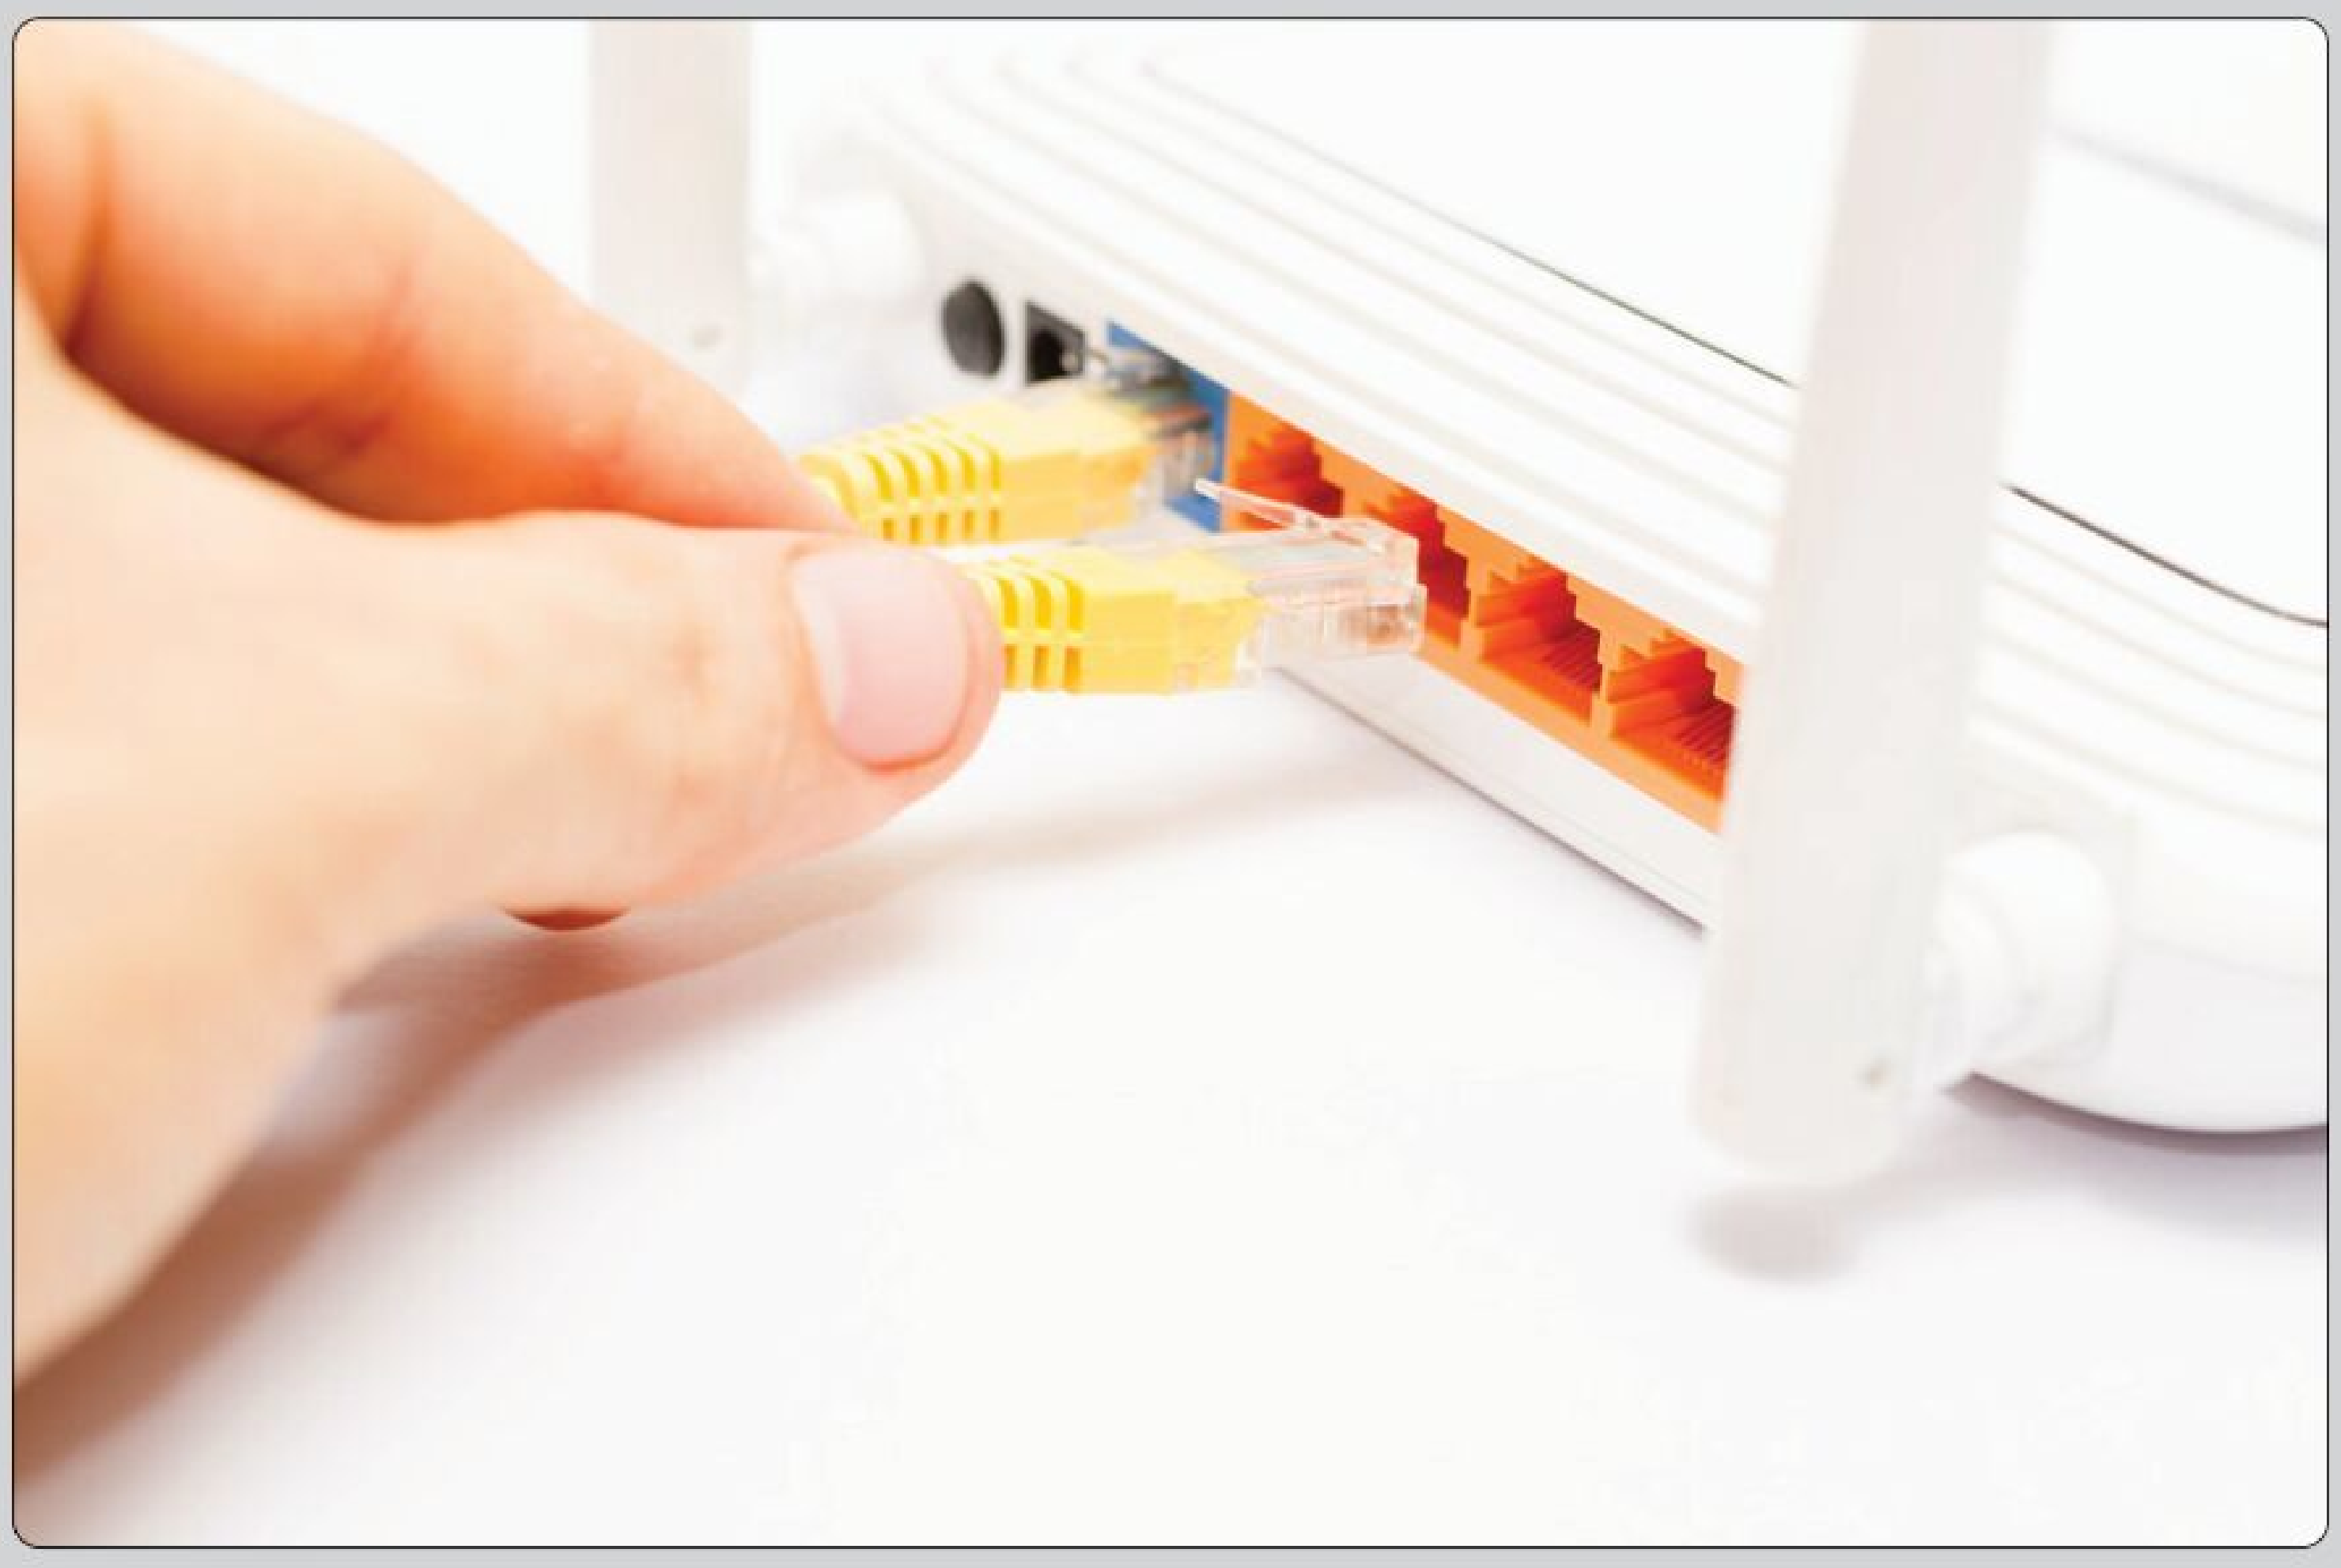
3 In the TCP/IP tab, you're able to see what IP address your Wi-Fi router has allocated to your Mac; handy if you ever need to connect remotely from another computer. You can also edit these settings and create your own, static IP address.

Going Online with Ethernet.

If you prefer the stability and speed offered by a cabled, Ethernet connection, here's how to set this up.



Once you've set up your router according to the instructions supplied with the device, getting online using Ethernet is relatively easy. First of all, you need a cable that looks like this. There should be at least one supplied with your router.



Plug one end of the cable into your Mac and the other end into one of the router's Ethernet ports: it doesn't matter which one. If your Mac doesn't have an Ethernet port, you need an adapter. You can get one online or from an Apple Store.

If your router isn't close enough to your Mac to support a cabled connection, consider using Home Plug AV instead. This uses your household electrical wiring to send data. Ask at your local computer store about a Home Plug AV starter kit. There are many different brands of HomePlug AV devices to choose from, and as HomePlug AV is an industry standard, they're all compatible with each other.

Monterey's Menus
A Key Mac Feature

Whether it's a pull-down menu accessed by clicking on the top bar of your desktop or a contextual menu found by right-clicking or ctrl-clicking on a file or folder, you need to know how to use your menus if you are to get the most out of your Mac and Monterey. Here's a guide to your Mac's menus.

The Apple Menu

1 The Apple menu is found in the top left corner of the desktop. To open it, click on the Apple icon once, then choose an option. It's always there, whatever it is that you're doing on your Mac.

2 About This Mac shows you technical information about your computer. Tabs at the top of this window let you delve further, looking at its Display, Storage and more; you can get a full report by clicking the System Report button.

3 The System Preferences option opens the Mac's System Preferences, which we discuss later in this book.

4 This option opens the App Store. If updates are available for your Mac or any of its apps.

5 Hover your pointer over the Recent Items option to see the sub-menu showing apps, documents and servers you've recently used.

6 Click here for the Force Quit window. This window lists all currently open applications and notes if any of them are unresponsive, that is, they've crashed. You can force a crashed app to quit from here.

7 Click here to put your Mac into Sleep Mode. This saves energy and password-protects your Mac while you're away from your keyboard for any time.

8 Click here to restart your Mac. This is useful if you've installed new software or your Mac isn't behaving as it should.

9 Click to shut down your Mac, that is, switch it off.

10 Lock screen brings up your password screen. You have to enter your password to continue to use your Mac. It's useful if you're leaving your Mac for a while.

11 Click here to log yourself out but not shut down your Mac. This is useful if you have more than one user account on your Mac. You can then log out so another user can log in.

12 By hovering over the Recent Items option, you get this sub-menu. This is a list of the applications you've recently used. Click on one of them to open it again rather than use the Dock.

13 These are the documents you've recently used. If you need to open one again, this menu is a quick and easy way to do so.

14 Servers you've recently accessed on your wireless or Ethernet network appear here. To open one again, simply click on it.

15 Click here to completely clear the entire Recent Items sub-menu.

Contextual Menu

Files and folders have a Contextual Menu that you can access by right-clicking or ctrl-clicking on the item, or clicking with two fingers on a trackpad. This menu gives a range of options, which change according to what it was you clicked on. There's usually a Share and a Move to Bin option in there, and the Get Info option brings up an information window.

Application Menus

Each application has its own unique set of menus located next to the Apple menu. They will change when an application is active and will revert back to the Finder menu when no apps are active. Each is clearly labelled to make it easier. We'll add specific details for application menus when we look into the applications themselves later.

Right-clicking and ctrl-clicking.

Mac mice and trackpads only have one button, so how do you make a right-click? It's actually easier than you think.

Using Finder
Files, Folders & Apps

Finder is the main app that underpins everything you do in macOS, so it's worth taking the time to discover its features and functions. On these pages you'll see how Finder works and how you can use the Finder window; including its navigation controls, viewing tabs and more, to get the most from it.

1 **Window Control Options:** Use the gumdrops to close or minimise the window or open it in full-screen mode. We'll cover this on the next page.

2 **Navigation Controls:** The chevron buttons in the top left corner of the window take you forwards or backwards through your navigation history.

3 **View Options:** These four buttons let you set-up how you view the files and folders in the Finder window; whether as icons, a list, in columns or as a cover flow which gives you a much larger visual preview.

4 **Item Arrangement List:** Click on the button shown here to order the contents of the window; according to date, alphabetically and more.

5 **Share Button:** The Share button is found in many places throughout macOS. Here you can highlight a file or folder and click the button to send it by email, AirDrop etc.

6 **Tags Button:** You can tag a file or folder to make it easier to spot or group it with other documents and folders. An item can have more than one tag. Click on a tag in the sidebar to show items labelled with that particular tag.

7 **Perform Tasks and Search:** The Perform Tasks icon enables you to perform certain tasks within the folder or highlighted file, such as create a New Folder, Move to Bin, Duplicate and more. Next to this is the Search bar. If you're looking for a specific item, type its name or contents into the Search field and press Enter.

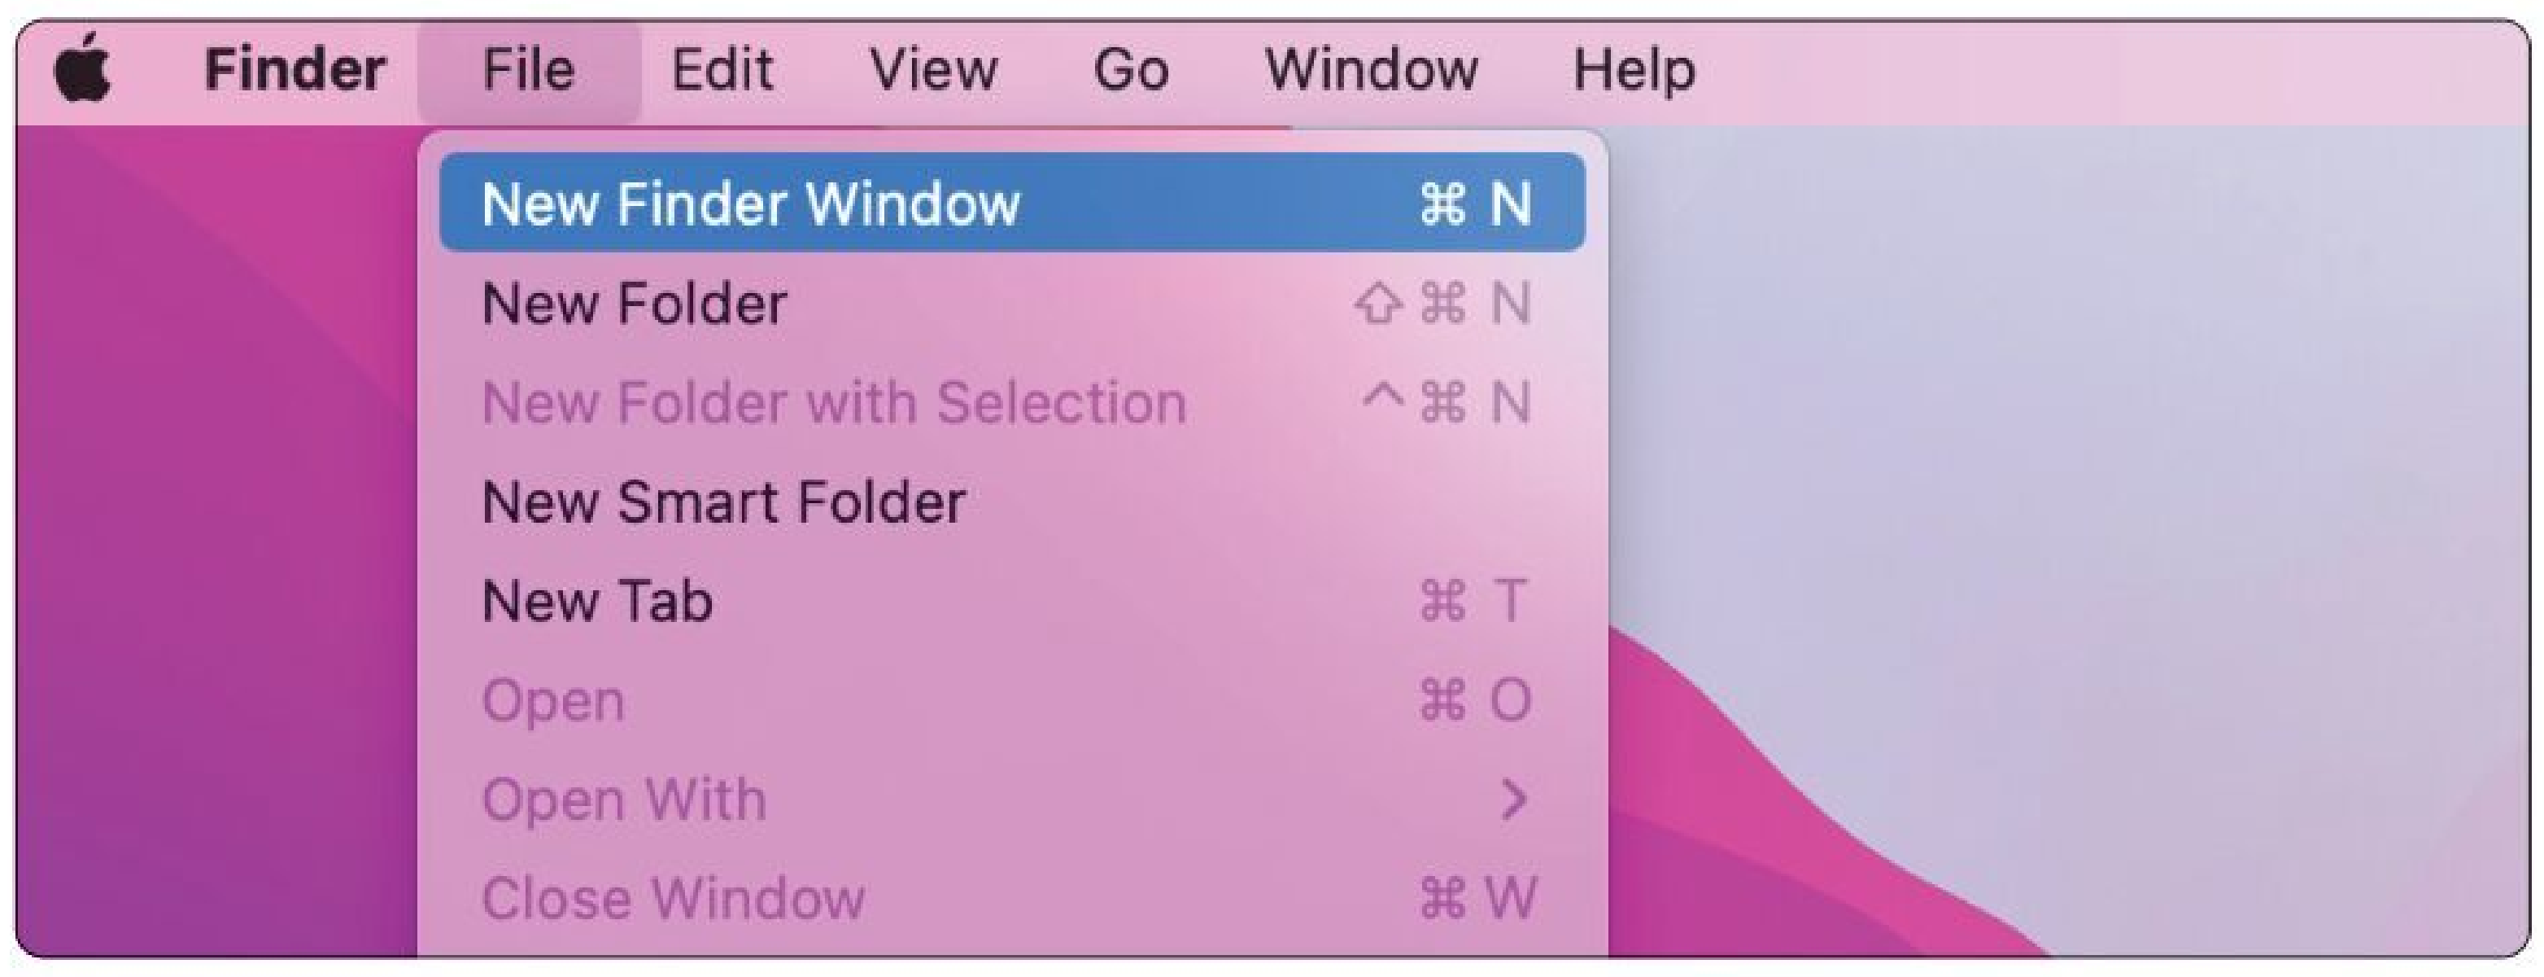
8 **Sidebar:** There are various options on the Finder window's sidebar. You can open specific folders like Documents or Downloads, access external or network drives and more. To hide and show the sidebar, use the View menu to toggle it on or off or enter ctrl-cmd-S.

9 **File/Folder View:** This shows the files and folders contained in the currently open folder. They're shown in the format chosen in the View Options (see feature number 3). Here, as you can see, we've gone for the icon view.

10 **Preview:** This is a preview of the currently selected file in the main window. It shows the title, file size and various details about it. There are also options at the foot of the Preview sidebar, such as rotating or marking up a graphic or creating a PDF from a document. The preview sidebar is optional but useful; you can close it in the View menu or by pressing Shift-cmd-P.

Displaying a Finder Window

There are several ways of opening a new Finder window on your Mac's desktop. Let's take a look at each in turn.



Using Menus

Click a clear space on the desktop once, open the File menu and select New Finder Window. A window then appears.

Shortcut Keys

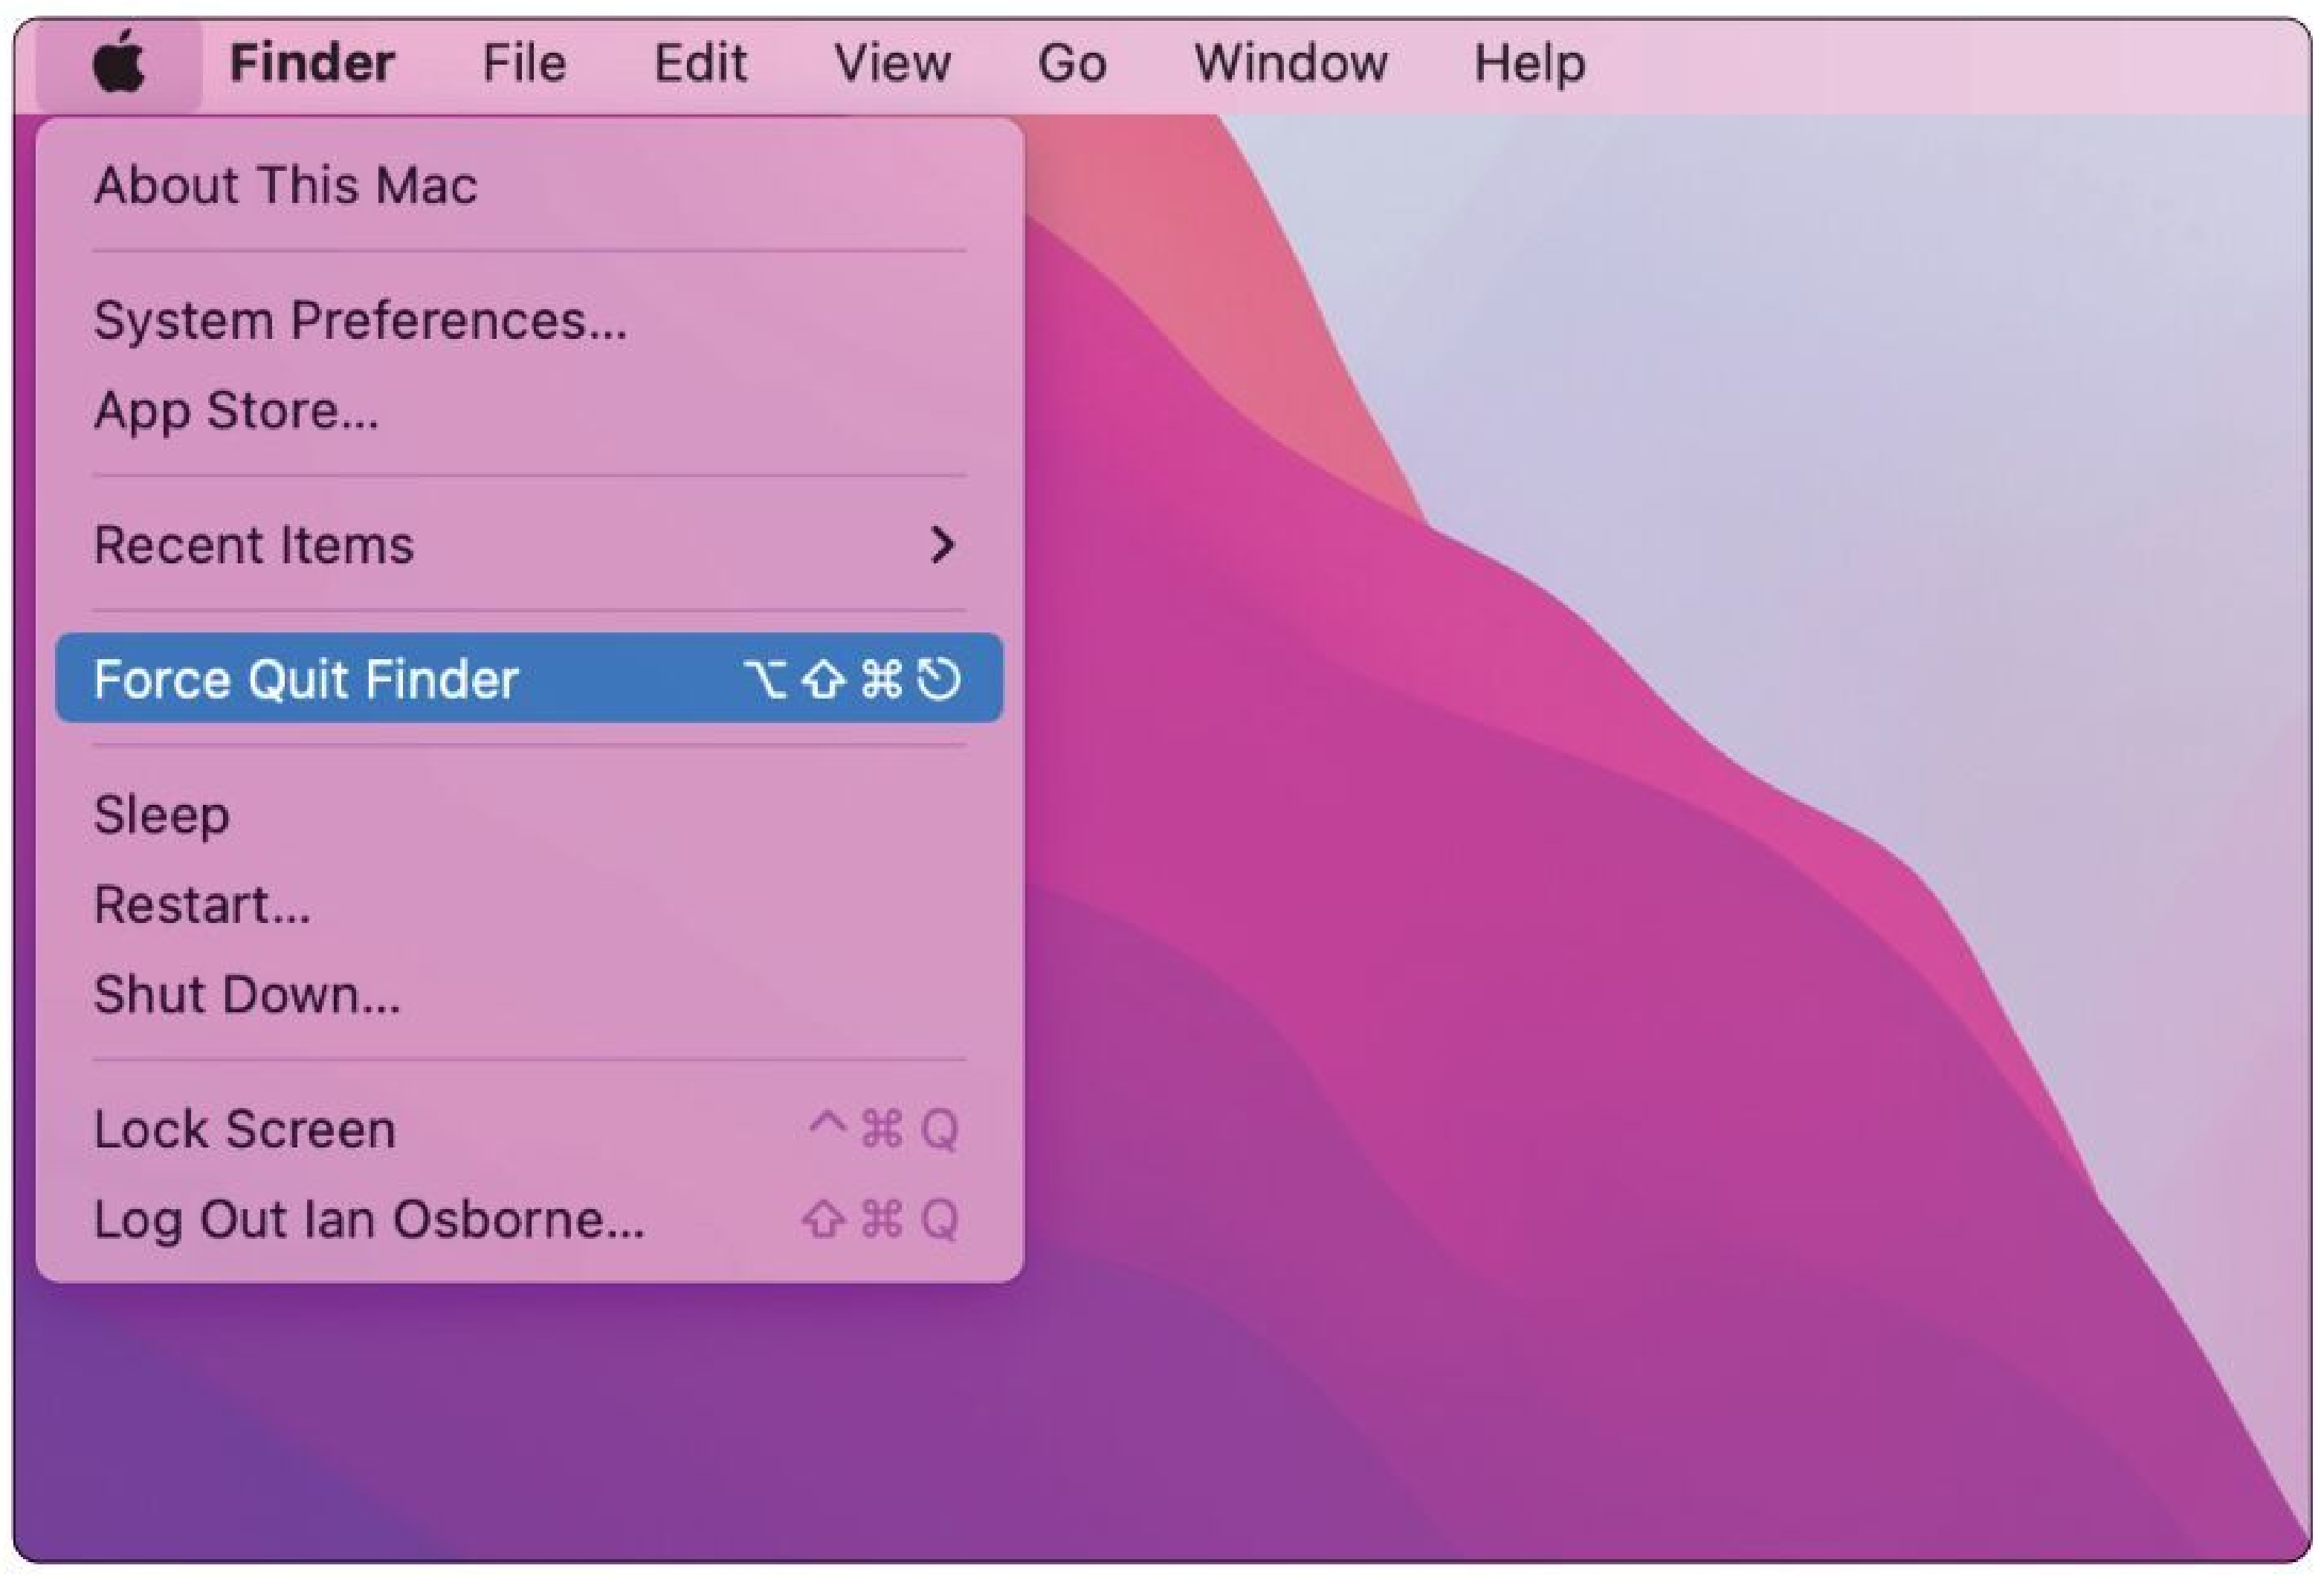
Click a clear space on the desktop once to make sure you're in Finder, then press cmd-N together. A new Finder window appears on the desktop.

Using the Dock

If it isn't already displayed, move your mouse cursor to the bottom of the screen to open the Dock. Click the Finder Window to create a new window.

How to Relaunch Finder

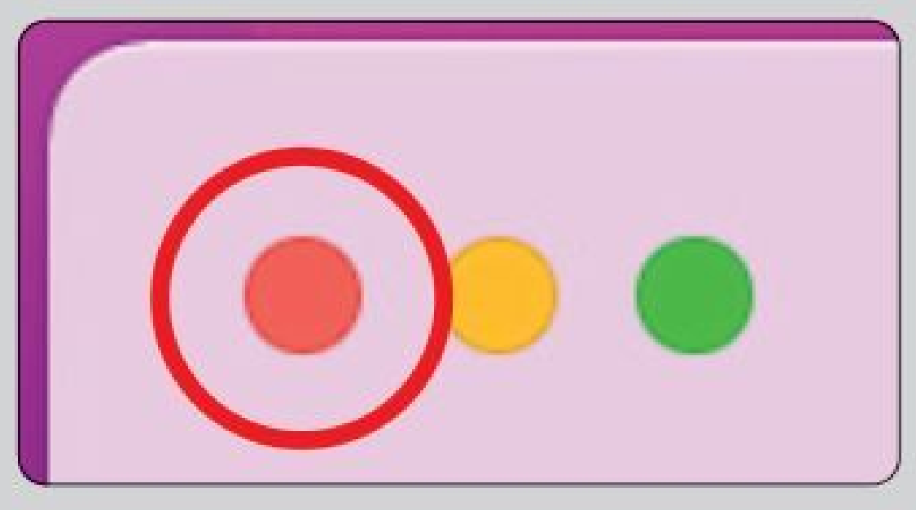
If the Finder has crashed or isn't behaving as it should, follow this tip to close it like a crashed app and relaunch it.



If the Finder crashes, you can relaunch it like you would with any other crashed app. The easiest way to do this is to click on the desktop to make sure you're in Finder, hold down the Shift key and click on the Apple menu. The Force Quit option has become Force Quit Finder. Incidentally, you can use this method to quit any running app. Just click on one of its windows to bring it to the fore, hold Shift and click on the Apple menu.

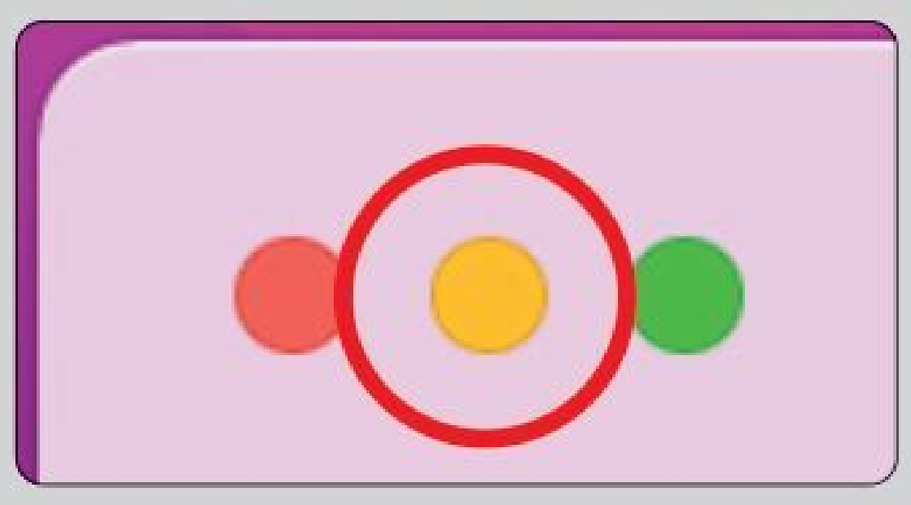
Window Controls Options.

The coloured buttons, or gumdrops, are found in the top left corner. Hover over them and a symbol appears in each of them.



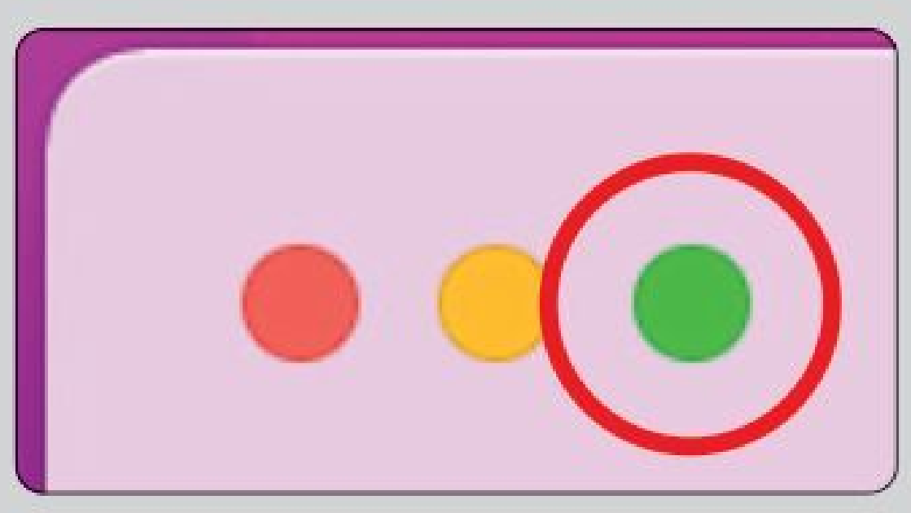
Close

Click once on the red button containing a cross. This will work with the majority of windows and applications.



Minimise

Click the orange button containing a '-' sign. Again this will work with almost all windows and apps.

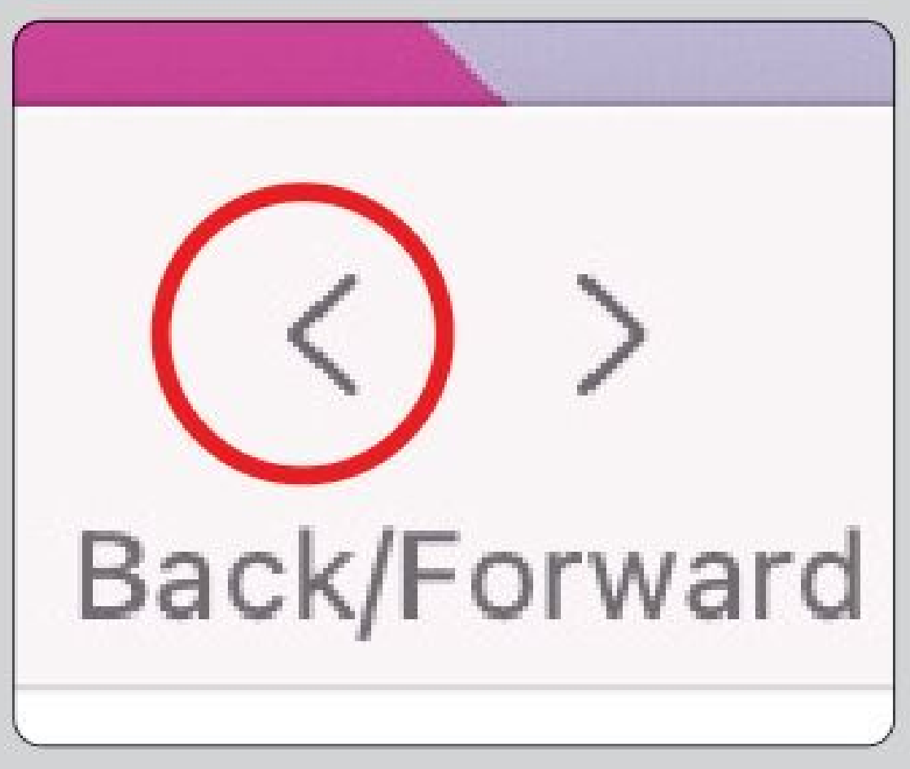


Full Screen

Click the green button with two triangles. This will full-screen most windows.

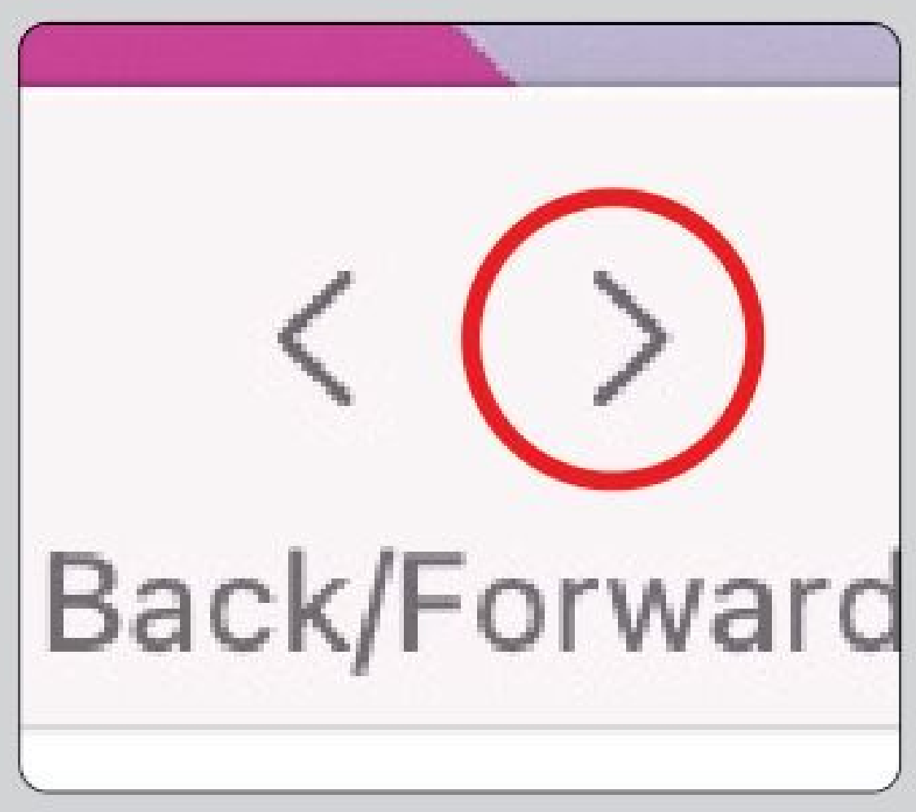
Navigation Controls.

These simple controls allow you to retrace your steps backwards and forwards through Finder.



Navigate to a Previous Page

Click the left hand arrow. To continue stepping backwards, repeat step one as many times as necessary.



Using the Forward Control

If you've moved to a previous page, this button offers step-by-step navigation to your original starting point. Simply click the right-hand arrow as many times as needed.

Change the Way Items are Arranged.

As well as changing the way the items are displayed, you can also change the way they are arranged.

Name: Alphabetical. Displays numbers first, then A-Z.

Kind: This groups each type of item together.

Application: Groups together items according to the application in which they were created or are opened.

Date Last Opened: Groups according to time and date they were opened.

Date Added: Displays items in order of when they were added to the folder.

Date Modified: Displays items in the order they were last modified or edited.

Date Created: Displays the items according to when they were created.

Size: Arrange the files according to their size.

Tags: Files are arranged according to tags you've added

More Sidebar Functions.

If your sidebar is getting cluttered, you can show or hide its listed items by hovering over the title (Favourites, Locations, iCloud, Tags) and clicking the small down-facing chevron or right-facing chevron – the right-facing chevron appears when the title is hidden, and the down-facing chevron when they're expended. You can also eject external drives, CDs and disk images from the sidebar; by clicking the eject icon next to the device or image you wish to remove.

1 You can view a Finder window and indeed an application window, in full-screen mode. Click on the green Enlarge button in the upper left corner of the window and it gives you the option to expand to fill the entire screen. Alternatively, use the View pull-down menu or press ctrl-cmd-F.

2 In full-screen mode, the menus usually found at the top of the Mac desktop are still there but they're hidden away until you need them. To see them, move the mouse cursor to the top of the screen and the menu bar slides into view and disappears when the cursor is moved away.

OK

"Flow" needs to be updated.

The developer of this app needs to update it to work with this version of macOS. Contact the developer for more information.

In macOS Monterey, you can no longer open applications made for older 32-bit processors (modern processors are 64-bit). If you have such an app on your Mac, it appears in the Applications window, or Launchpad, with a crossed-out icon atop it.

Try to open a 32-bit app and you get a message saying it's not compatible with this version of macOS. Check with its developer whether the app has since been updated to 64-bit, but if it hasn't by now, it might well have been abandoned.

Here we’ve opened the Pages iOS app on an iPad. As you can see, the documents in the Mac’s Pages iCloud Drive folder are also available to open and edit here.

Monterey's Dock For Most-used Apps

The macOS Dock is a feature that greatly speeds your workflow. It's perfect for gaining quick access to the most relevant and frequently used applications, documents and folders. It's customisable too, which means you'll come to personalise your Dock to best fit your own unique needs. Here's how it works.

Accessing Your Applications from the Dock

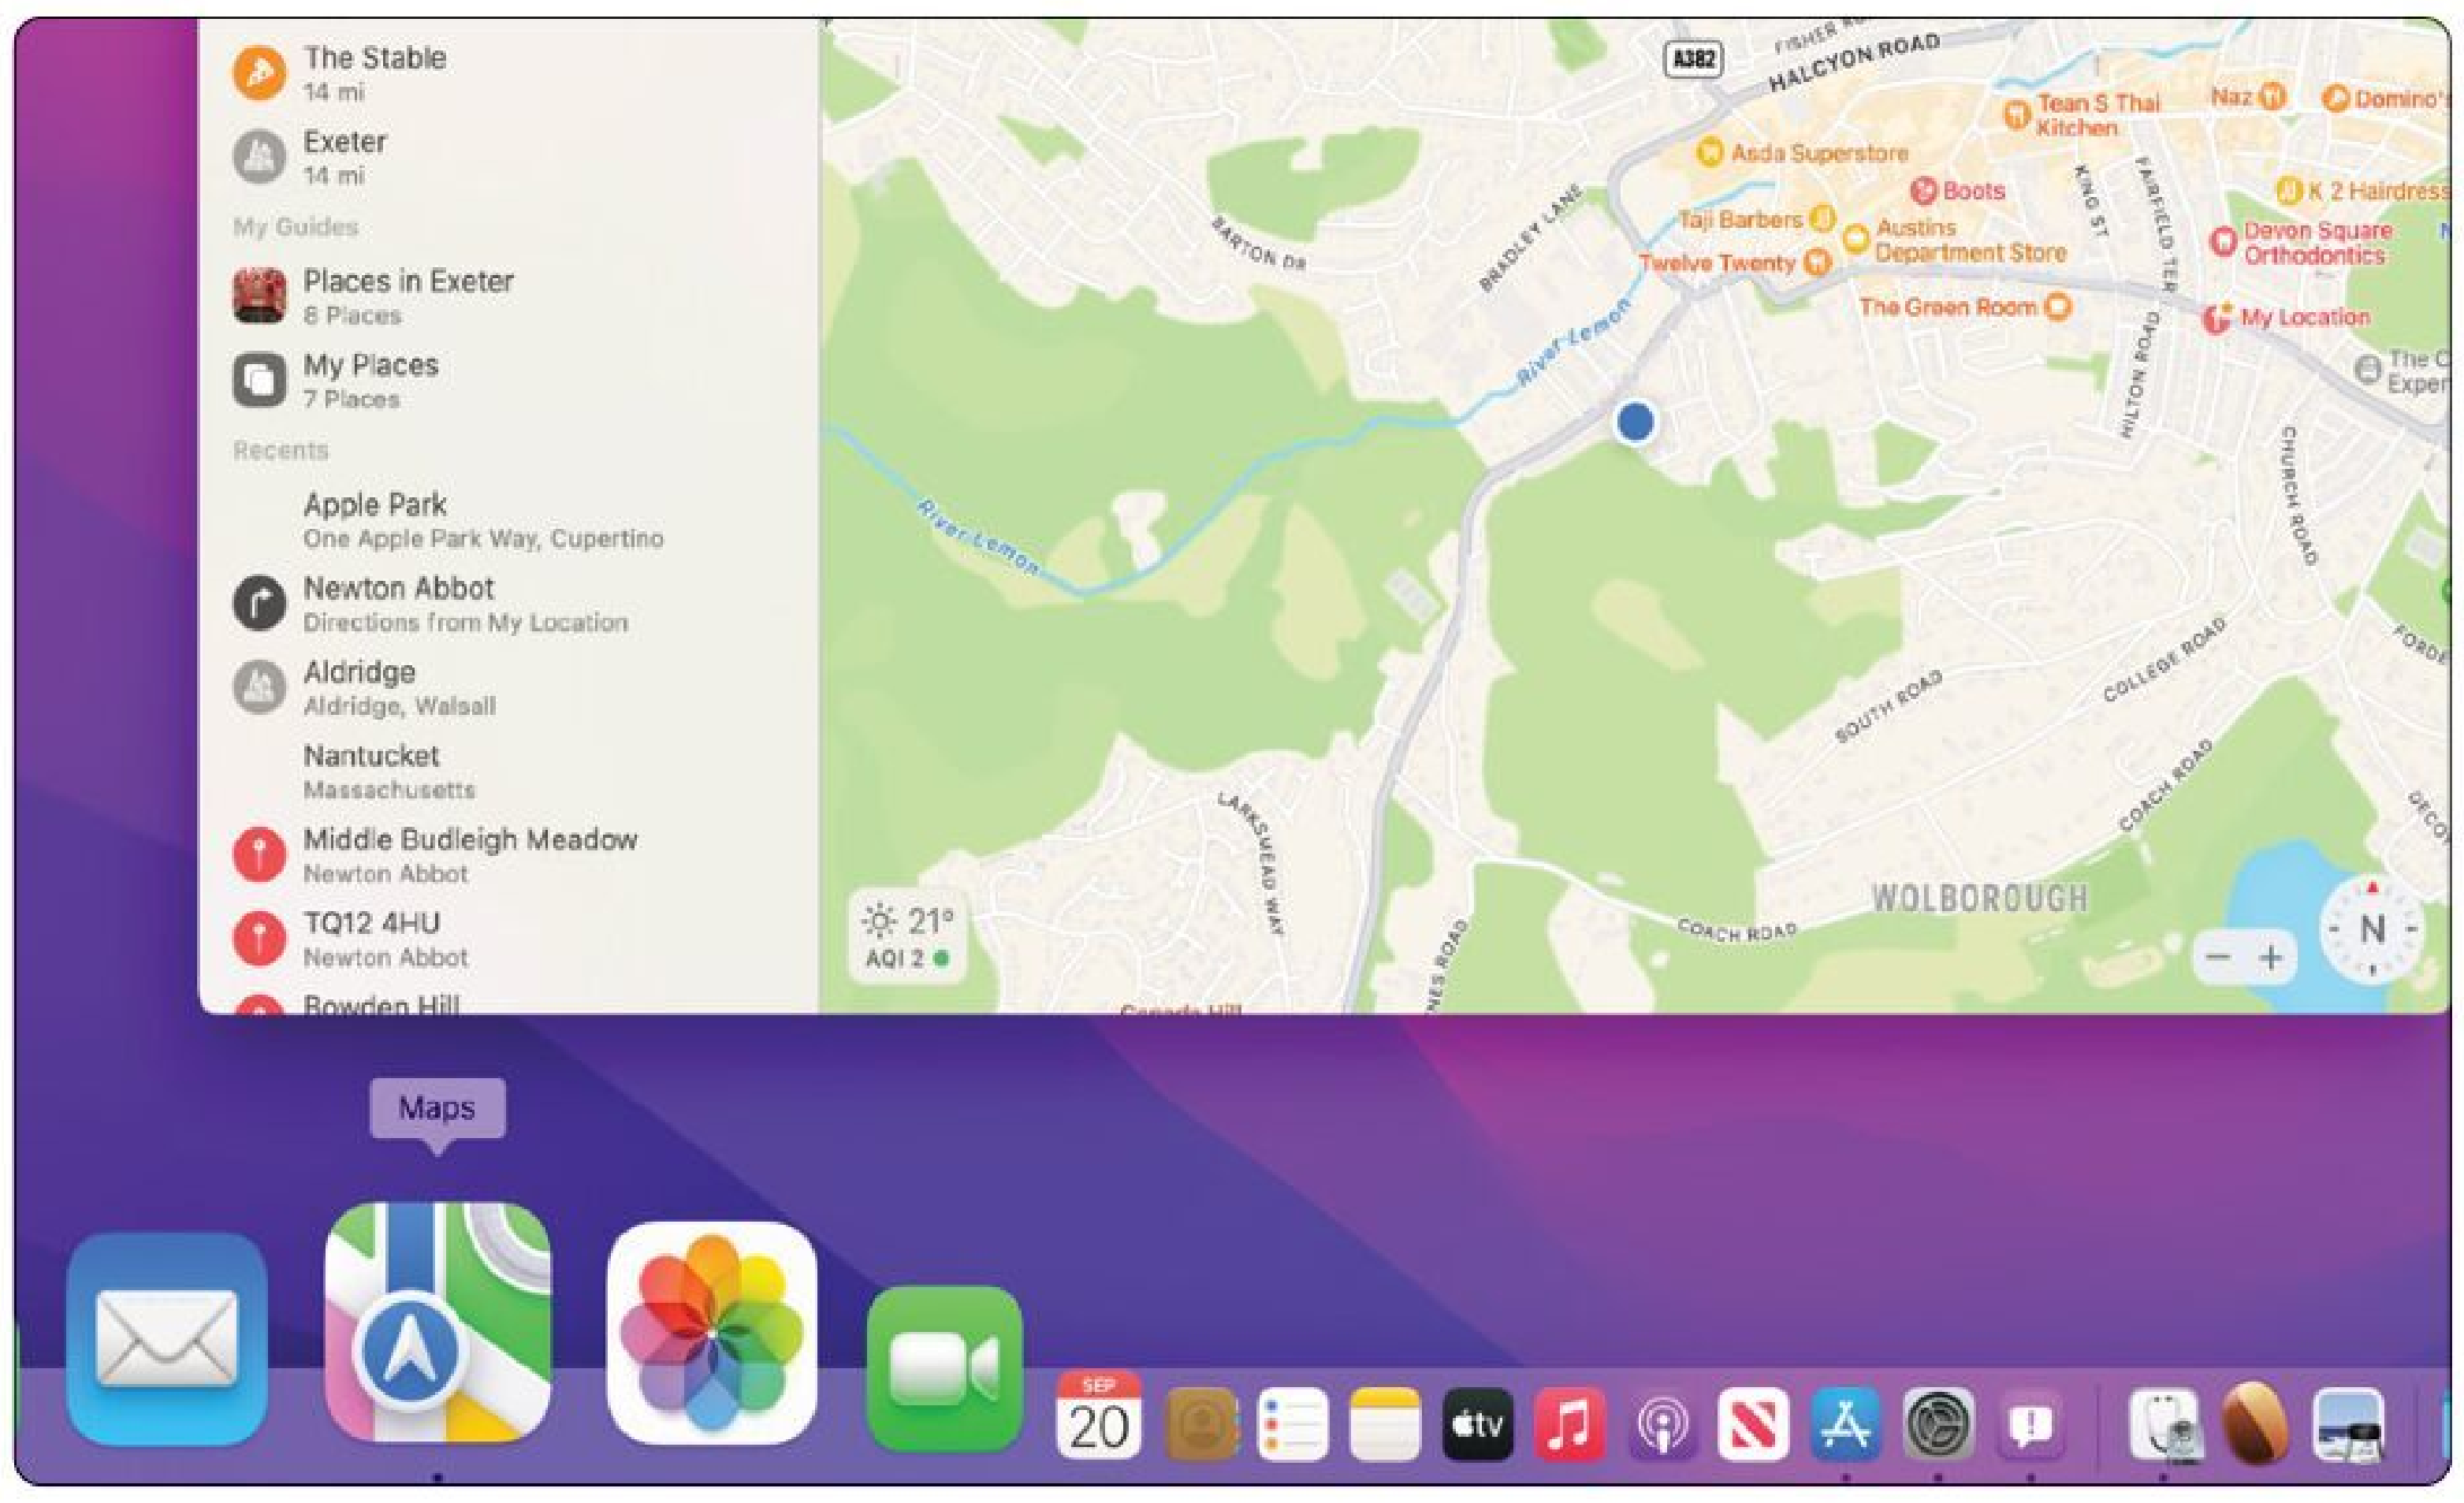
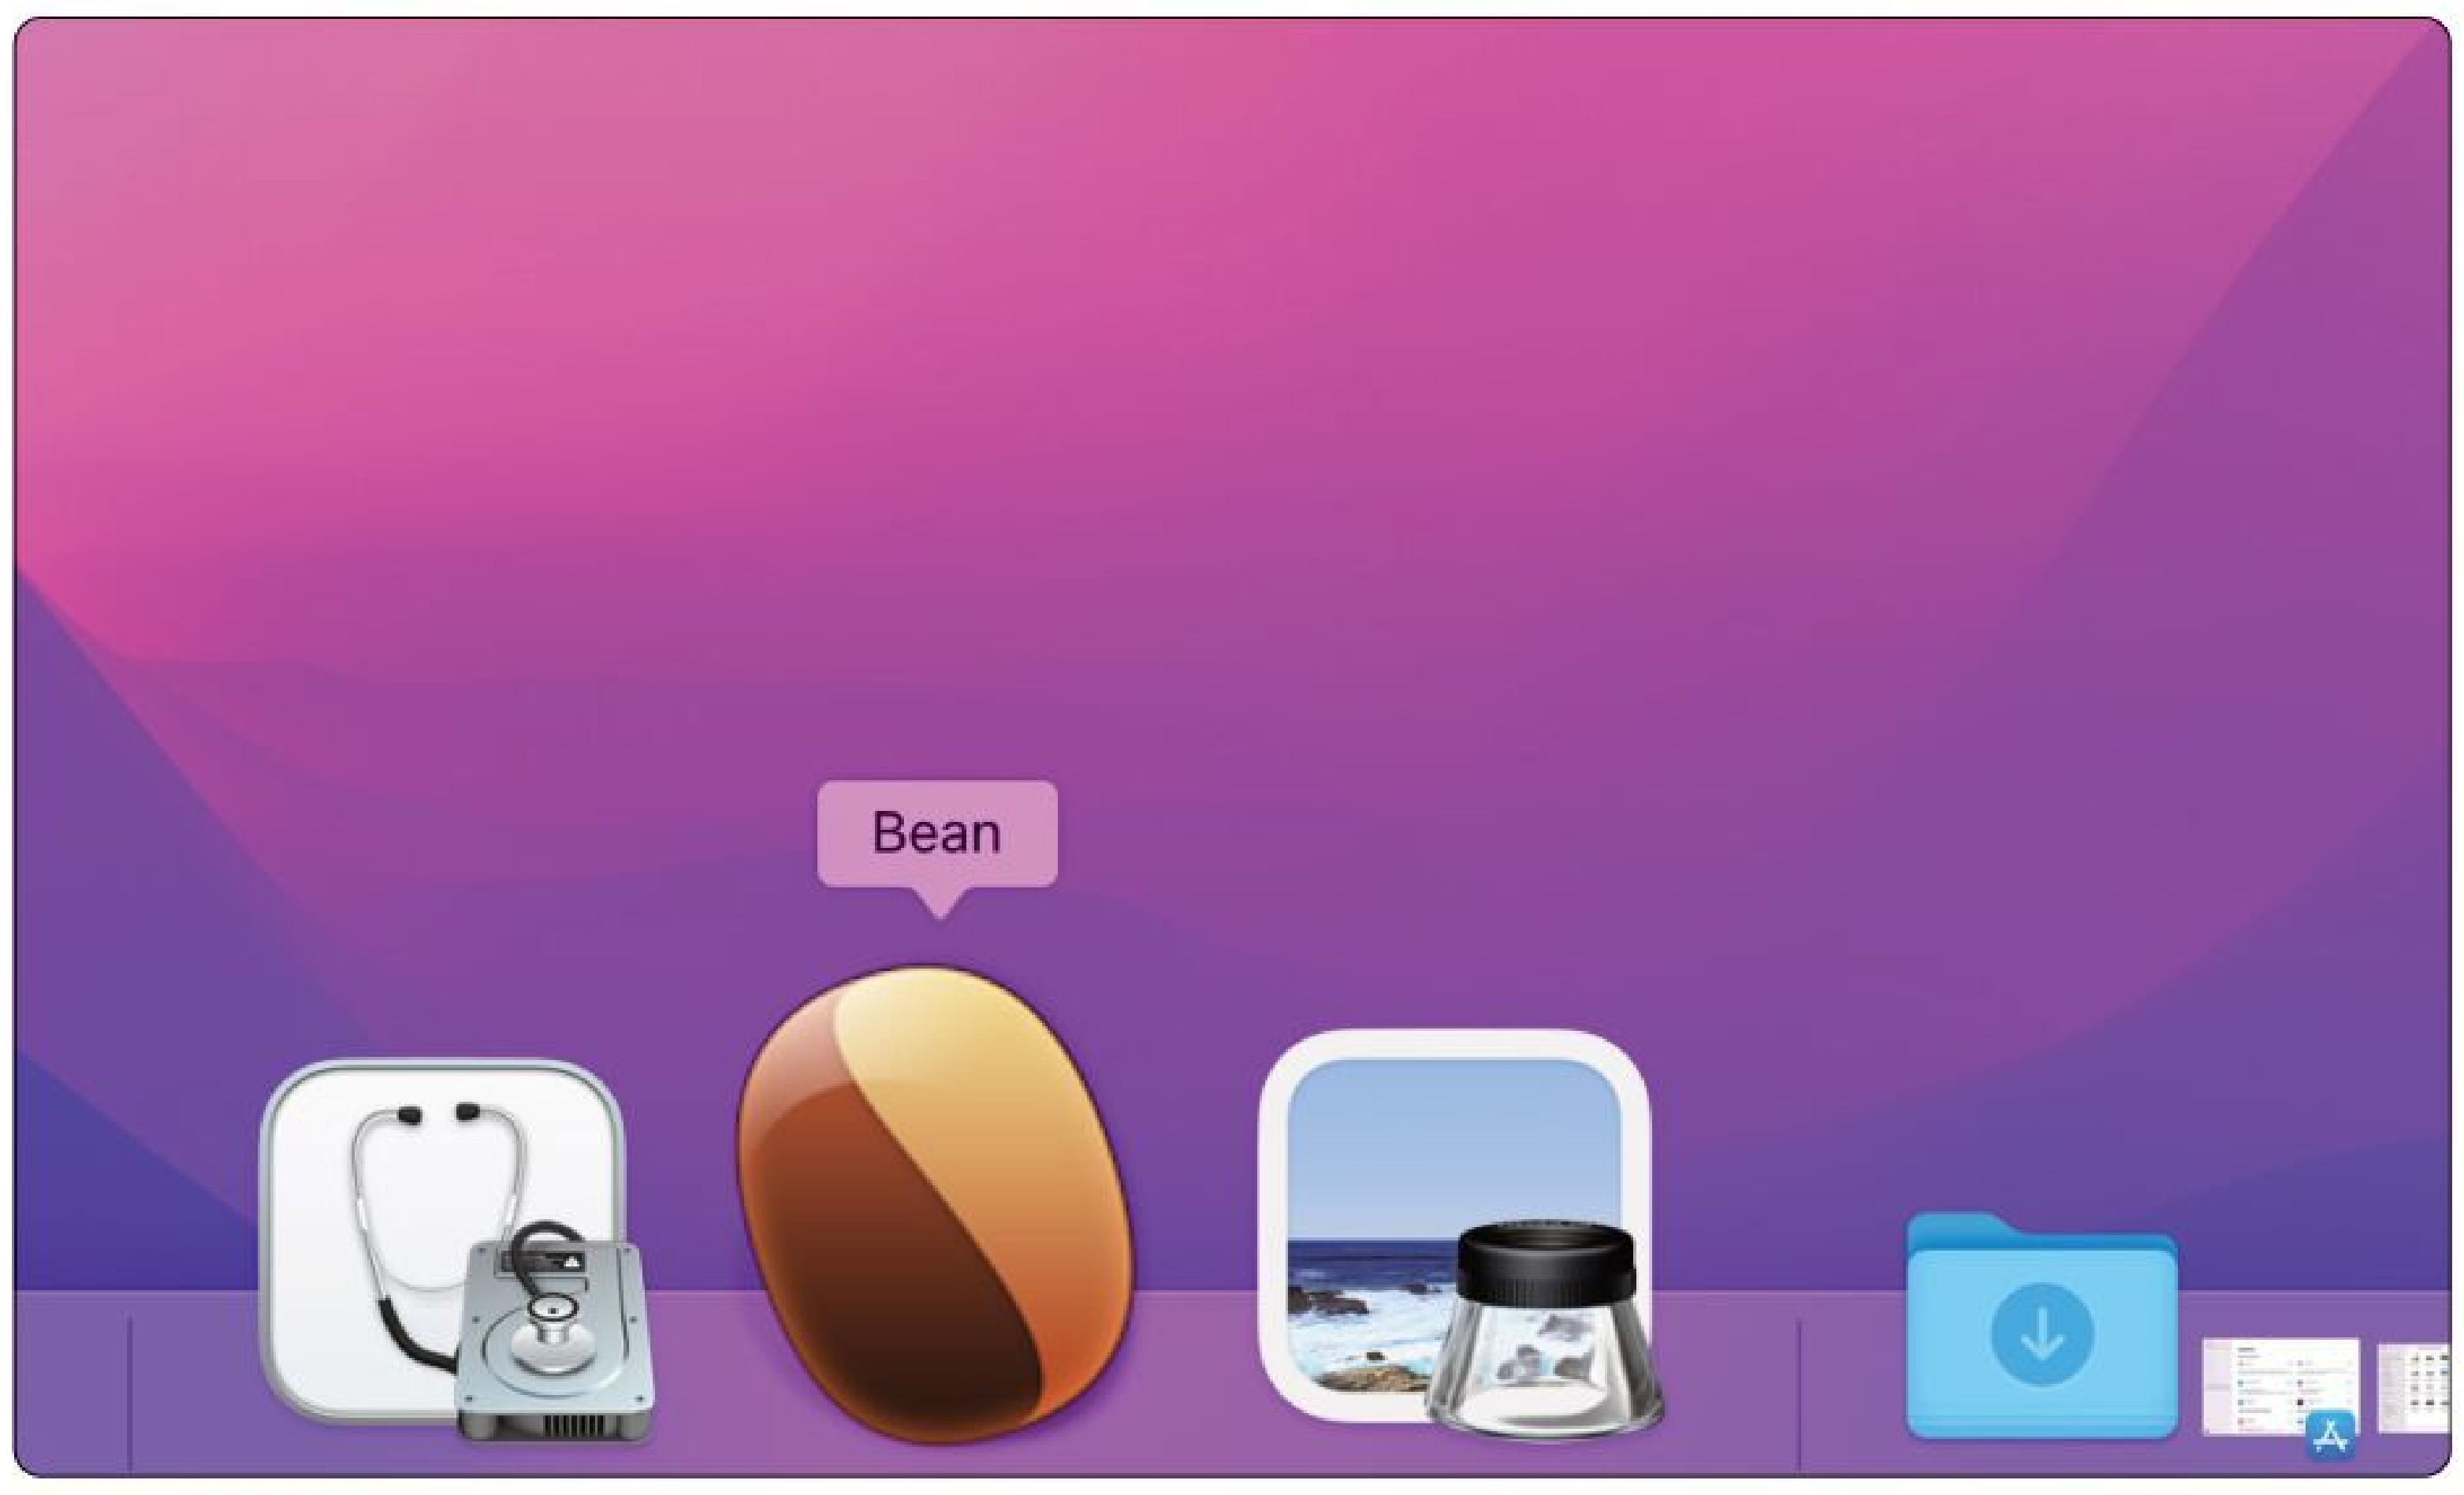
Add or Remove an Application

To add an app, first click the icon filled with multicoloured boxes on the left-hand side of the Dock to bring up Launchpad. Then, click and drag the item you want onto the Dock. To remove it, just drag it out.

Move an Application

To move an item to a new location in the Dock, click and drag to the required position. As you move the item the adjacent applications will move aside to allow you to drop the icon into its intended place.





Open an Application

To open an application that's in your Dock, simply move the mouse pointer onto the Dock and click on its icon. Notice that the app icon slightly bounces as the application opens before the main app opens.

Recently Used Applications

Applications you've recently used are shown in their own section in the right-hand side of the Dock, from where they can be used like any other Dock app. A divider separates permanent and recent apps.

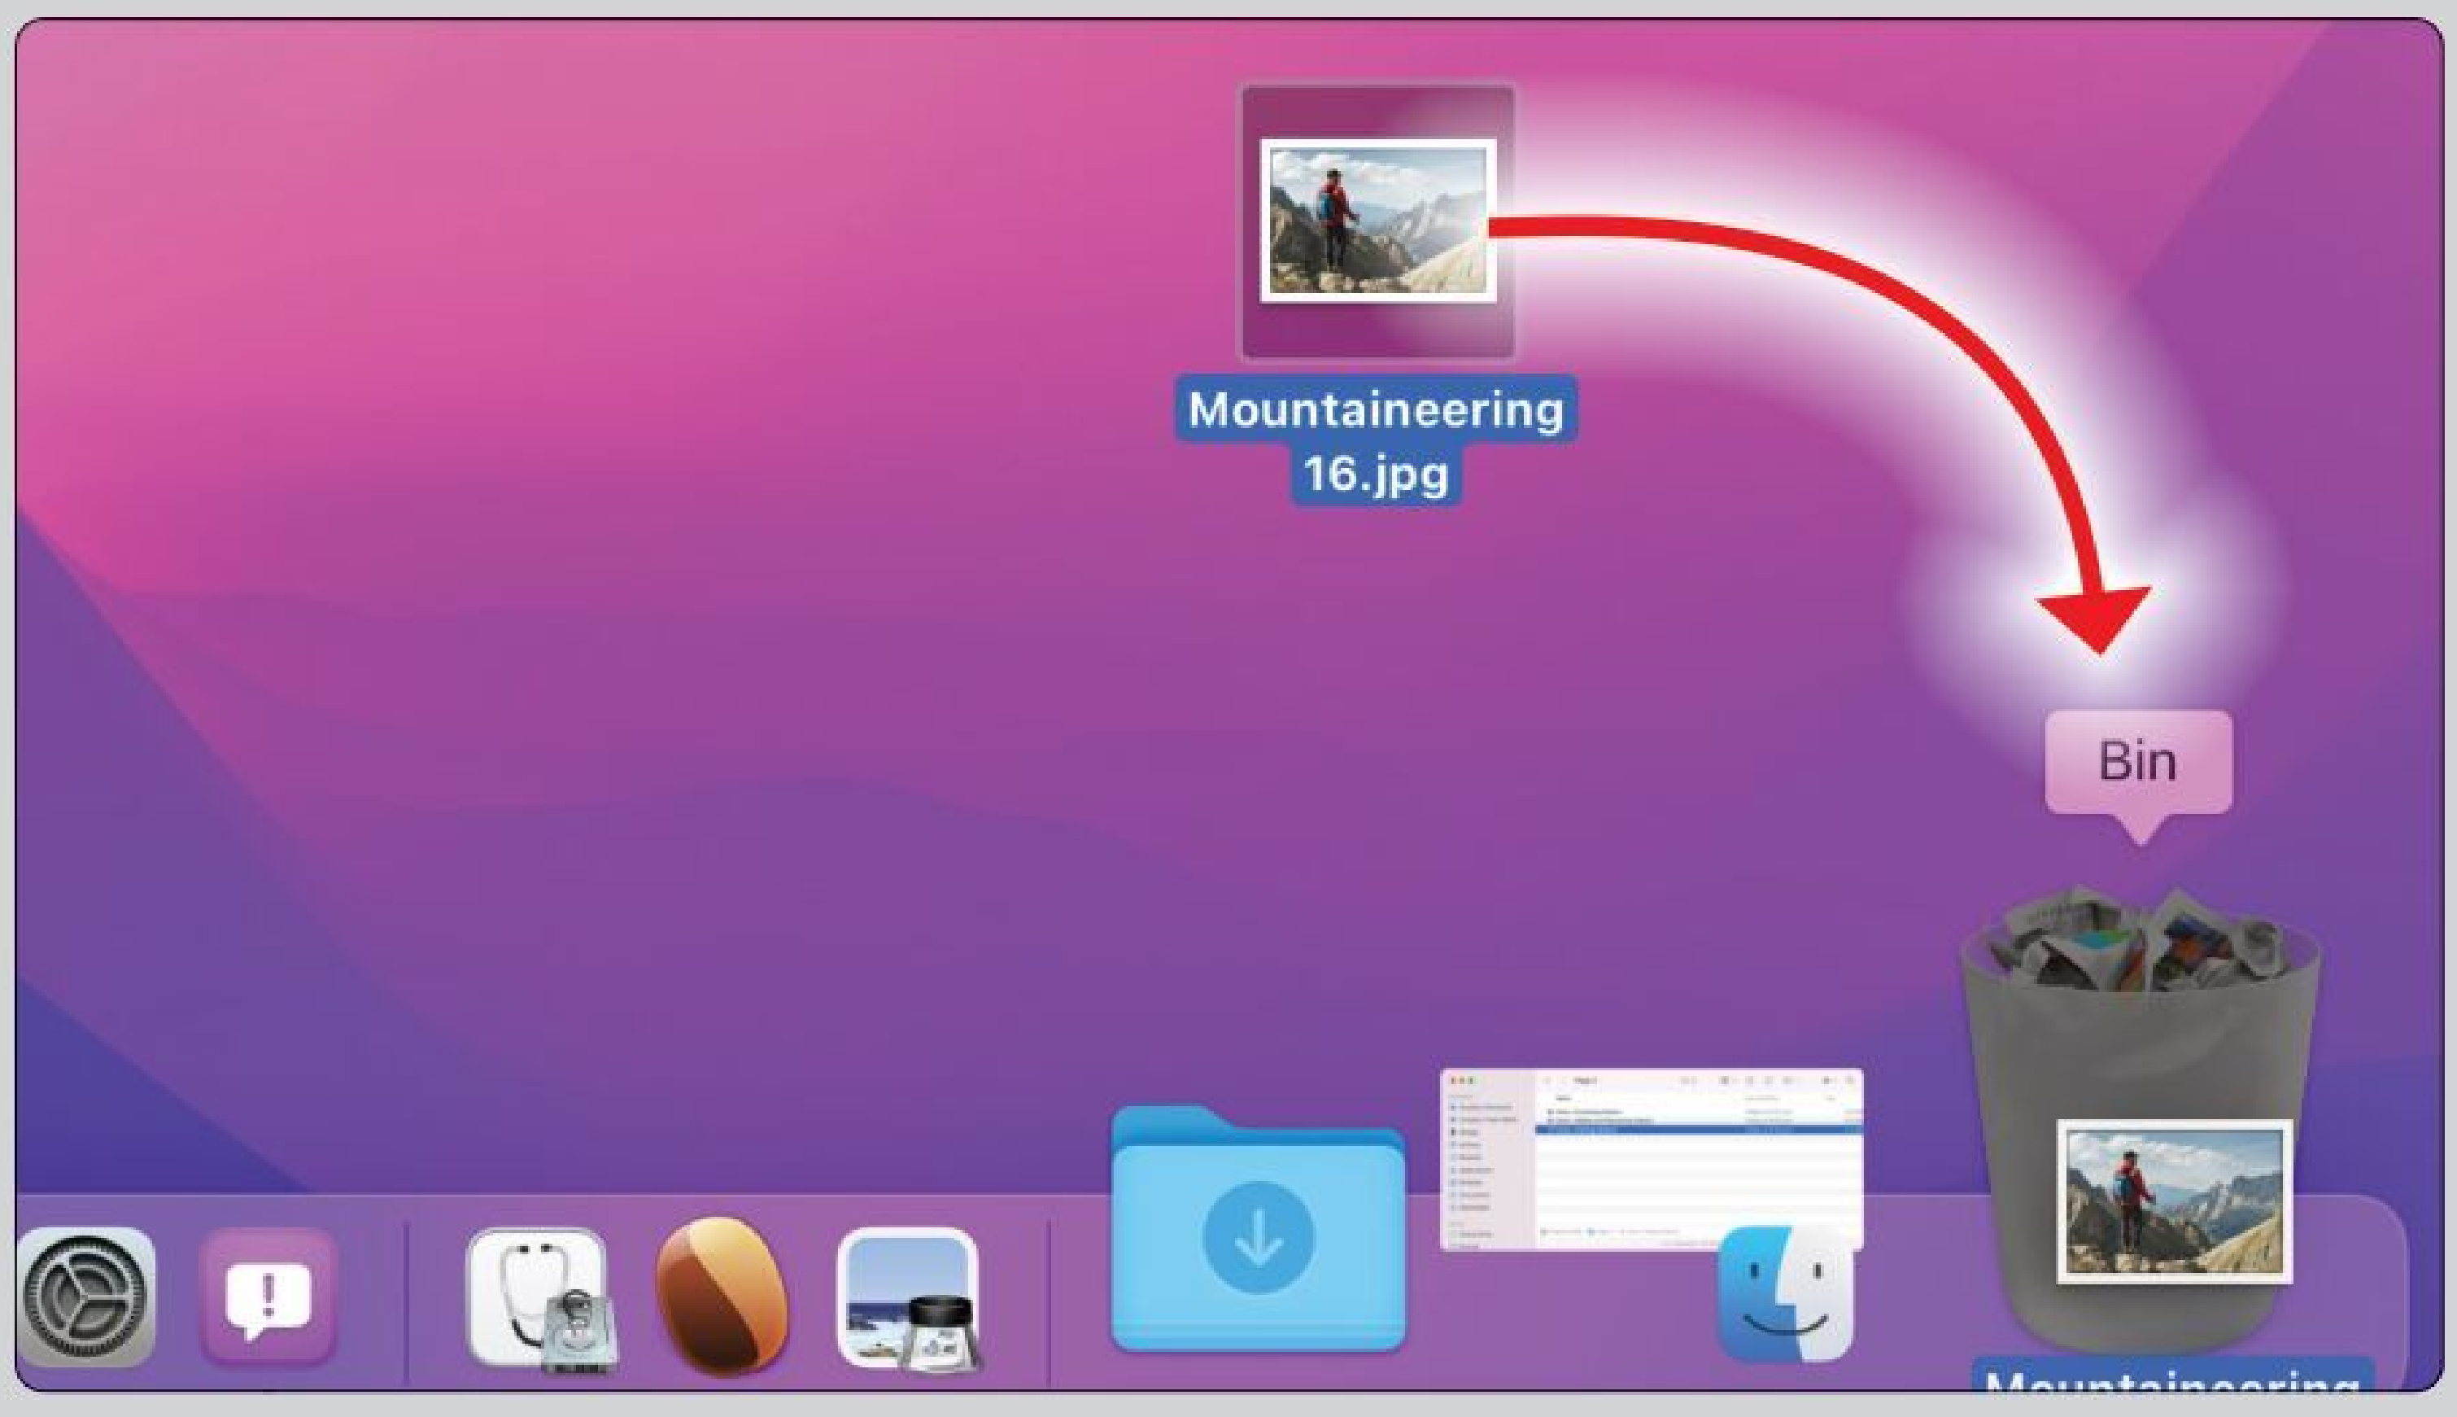
Viewing Options

Right-click or ctrl-click on a Stack for a pop-up menu with a range of options. You can show your files as a Stack (a pile of files) or as a folder. You can also choose how they're displayed when you click the Stack.

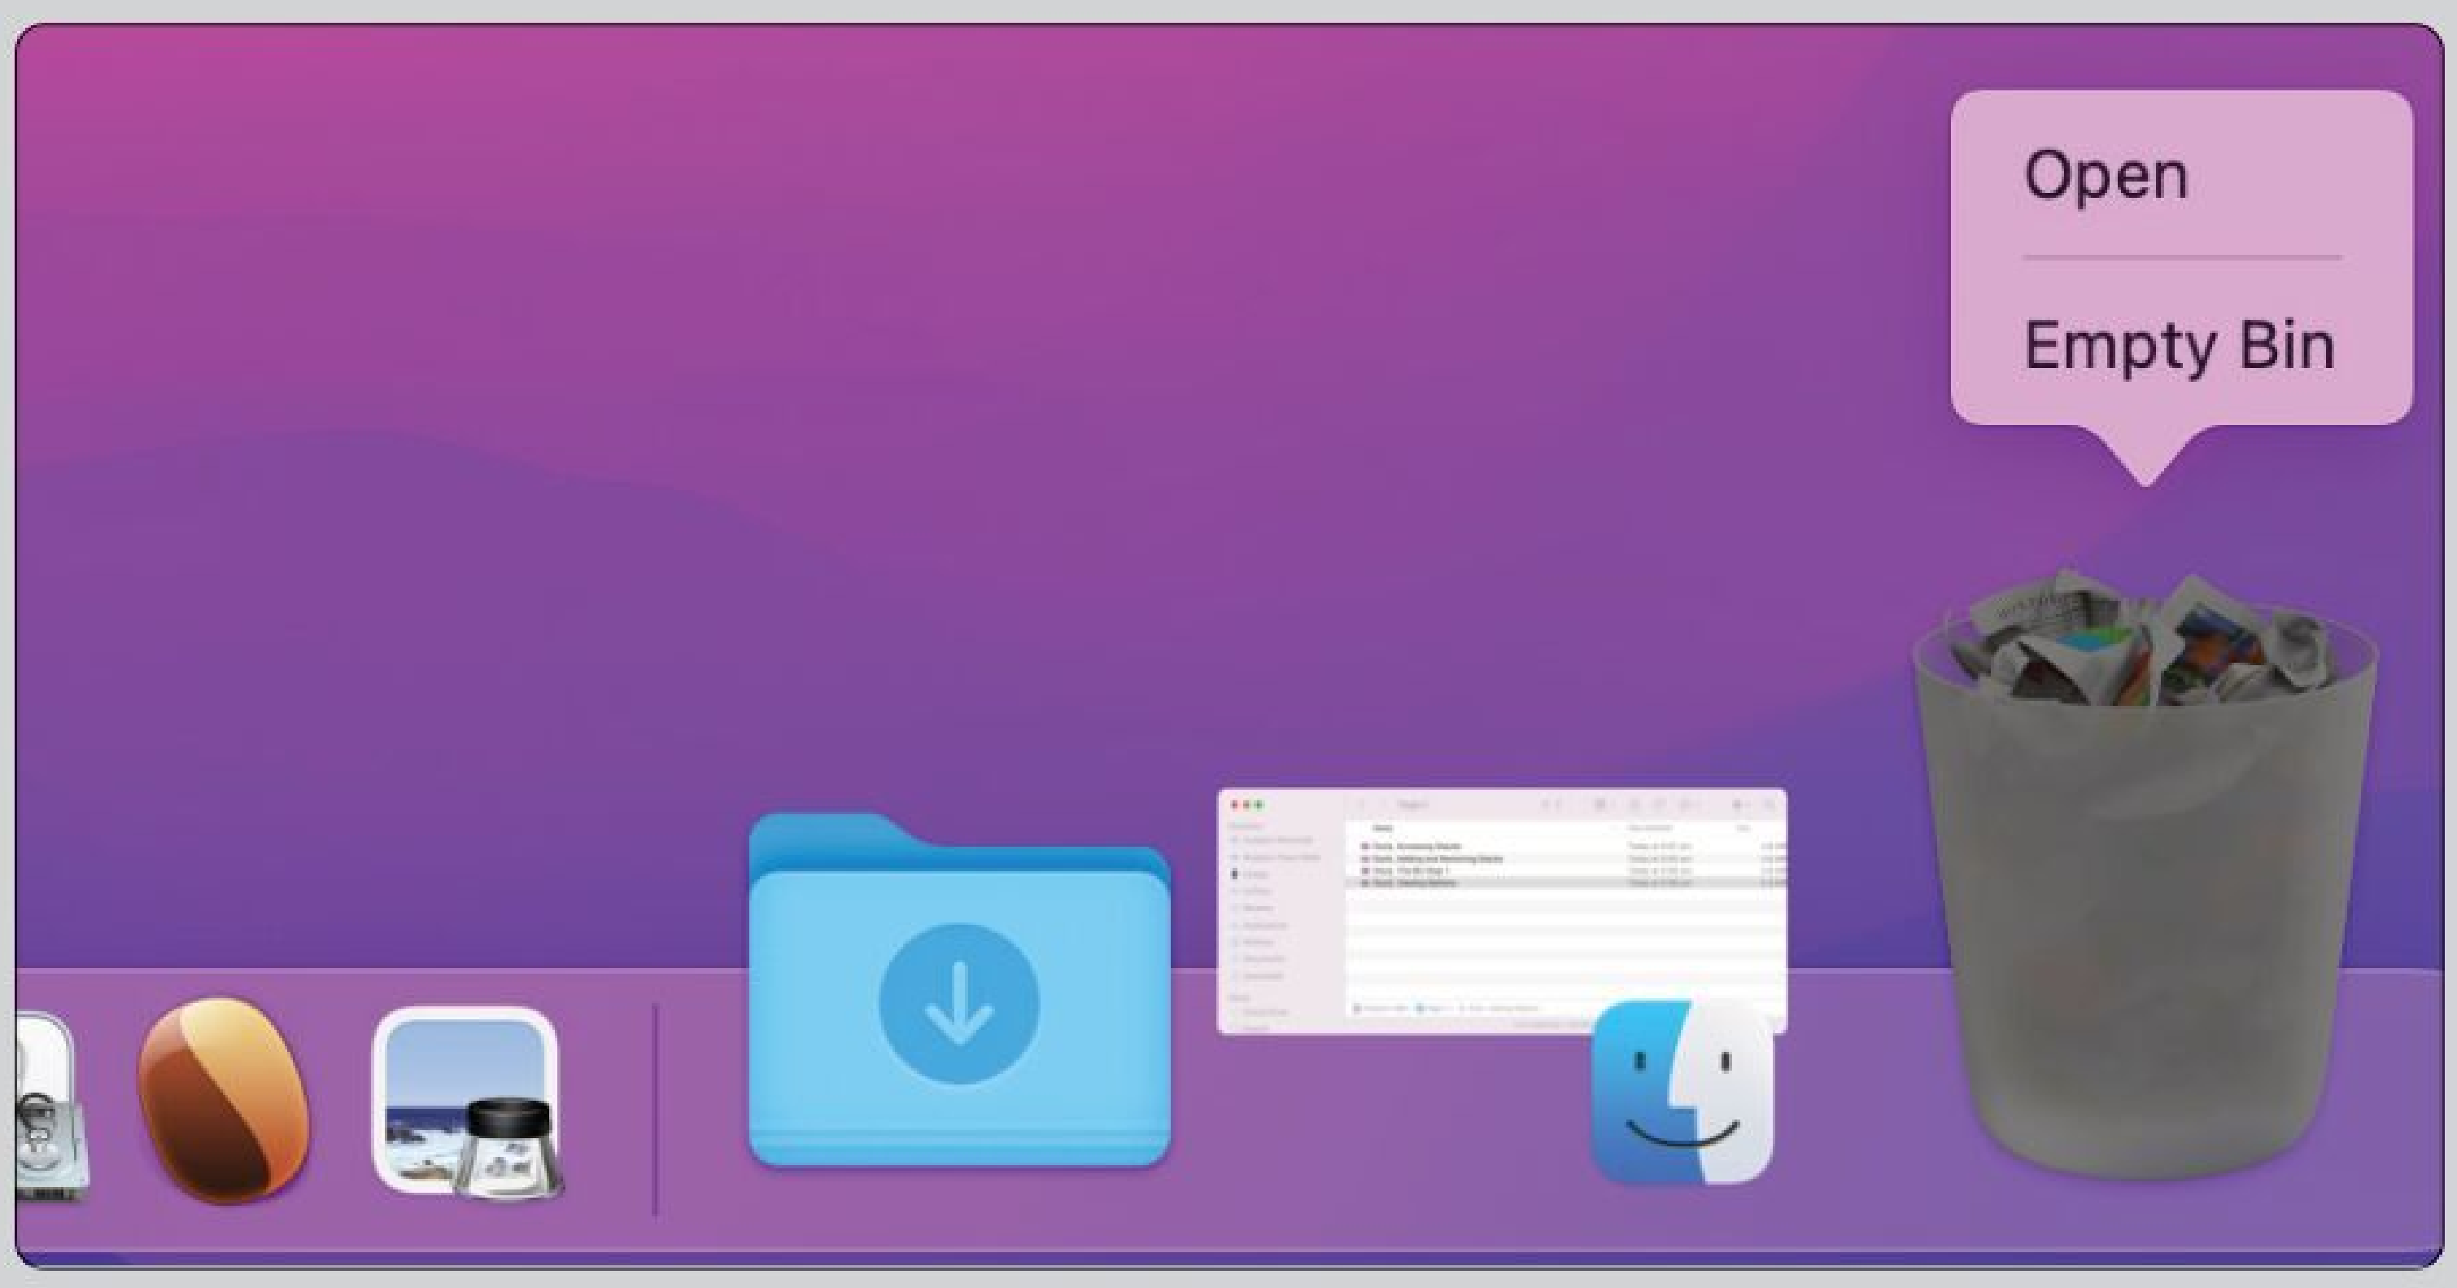
The Bin.

The Bin icon is located at the far right of the Dock and can be filled and emptied just like a real rubbish bin.



Mountaineering 16.jpg
Bin

You can delete a file, folder or app by dragging it into the Bin on the right-hand side of the Dock. Alternatively, right-click or Ctrl-click on it and select Move to Bin from the contextual menu that appears.



Open
Empty Bin

To retrieve a file from Bin, click on the Bin icon in the Dock to open it in Finder, then drag the file out of the Bin window. To empty Bin, right-click on it and choose 'Empty Bin', or in the Bin window, click on the Empty button (top right).

Customising the Dock.

You can customise your Dock in System Preferences from the Apple menu and selecting Dock & Menu Bar. From here, you can place the Dock on the right, left or bottom of the screen, opt to show and hide it, change its size, change its magnification, choose a minimisation effect and more.

Notifications

See What's Going On

Apps and functions on your Mac can send you notifications, which let you know what's going on. When you receive a message or an email, for example, you can get a notification telling you that it's arrived. You can customise them too.

If you came to Monterey from a pre-Big Sur version of macOS, you might look for the Notification Centre icon in the top-right corner of the screen. However, it's not there. Instead, Apple has integrated Notifications into the Date/Time and Widgets zone.

Cross-Trainer

Moving notifications to the Date and Time and combining them with widgets is a clever move on the part of Apple. All you need to do to view your notifications is to click on the Date and Time in the top-right of the desktop. If there are any, they appear at the top of the slide-in area that appears from the right-side of the screen.

Notifications are grouped together depending on the app they're coming from. For example, the News app displays notifications based on what news channels you've decided can send alerts to you. If you click on a notification in the group, the rest expand so you can see all the available notifications of that group. And clicking on a notification, whether it's from Messages, News and so on, opens up the corresponding app.

This makes viewing notifications a much more efficient process, since there's a minimal need for mouse clicks, and it's easy to see which notification belongs to which app. If you're on the lookout for an important news flash report, for example, you can quickly get the information you need when it appears on your screen.

1 Adding and removing app notifications is as simple as navigating to System Preferences > Notifications & Focus. It's the 'Bell' icon on the right-hand side of the System Preferences window as it opens.

From there, click the Notifications tab and you're presented with all the available apps installed on your Mac that can provide a notification of some sort. Scroll through the list of apps on the left pane of the Notifications window until you find the app you want to setup Notifications for, and click on the name of the app.

3 Within the Notifications window, you can set a number of options for how you want to review any Notifications from the app you've activated. For example, the Alert Style can be adjusted to None, Banners (the default, and the one that most folk will use), and Alerts. You can also opt to display Notifications on the lock screen – although this is considered a security risk if you leave your Mac unattended. There's also options to play a sound when a Notification comes in and you can set the Notification Grouping to Automatic, By App or Off.

4 As you continue to use your Mac, so the number of Notifications you generate will increase, over the course of a week or even a day. You'll quickly come to appreciate the Notifications layout and design and how it greatly improves the process of discovering alerts and notifications.

Working with Monterey's Widgets

Widgets are a useful way of getting quick and easy access to an app's functionality, without having to open the app itself. You can, for example, see today's calendar events or weather, or check the latest news stories from the Apple News app. You can edit your widgets to suit your needs too.

Ministers to hold urgent talks on

3 You can drag widgets out of their current position and drop them into a new place, just like you do with app icons in Launchpad. Reorder them to suit; maybe move the most used widgets to the top of the column.

5 Some third-party apps have widgets. Sometimes an unused third-party widget is blank until you open its associated app. If you're interested in that widget, just open the app and return to the Edit Widgets feature.

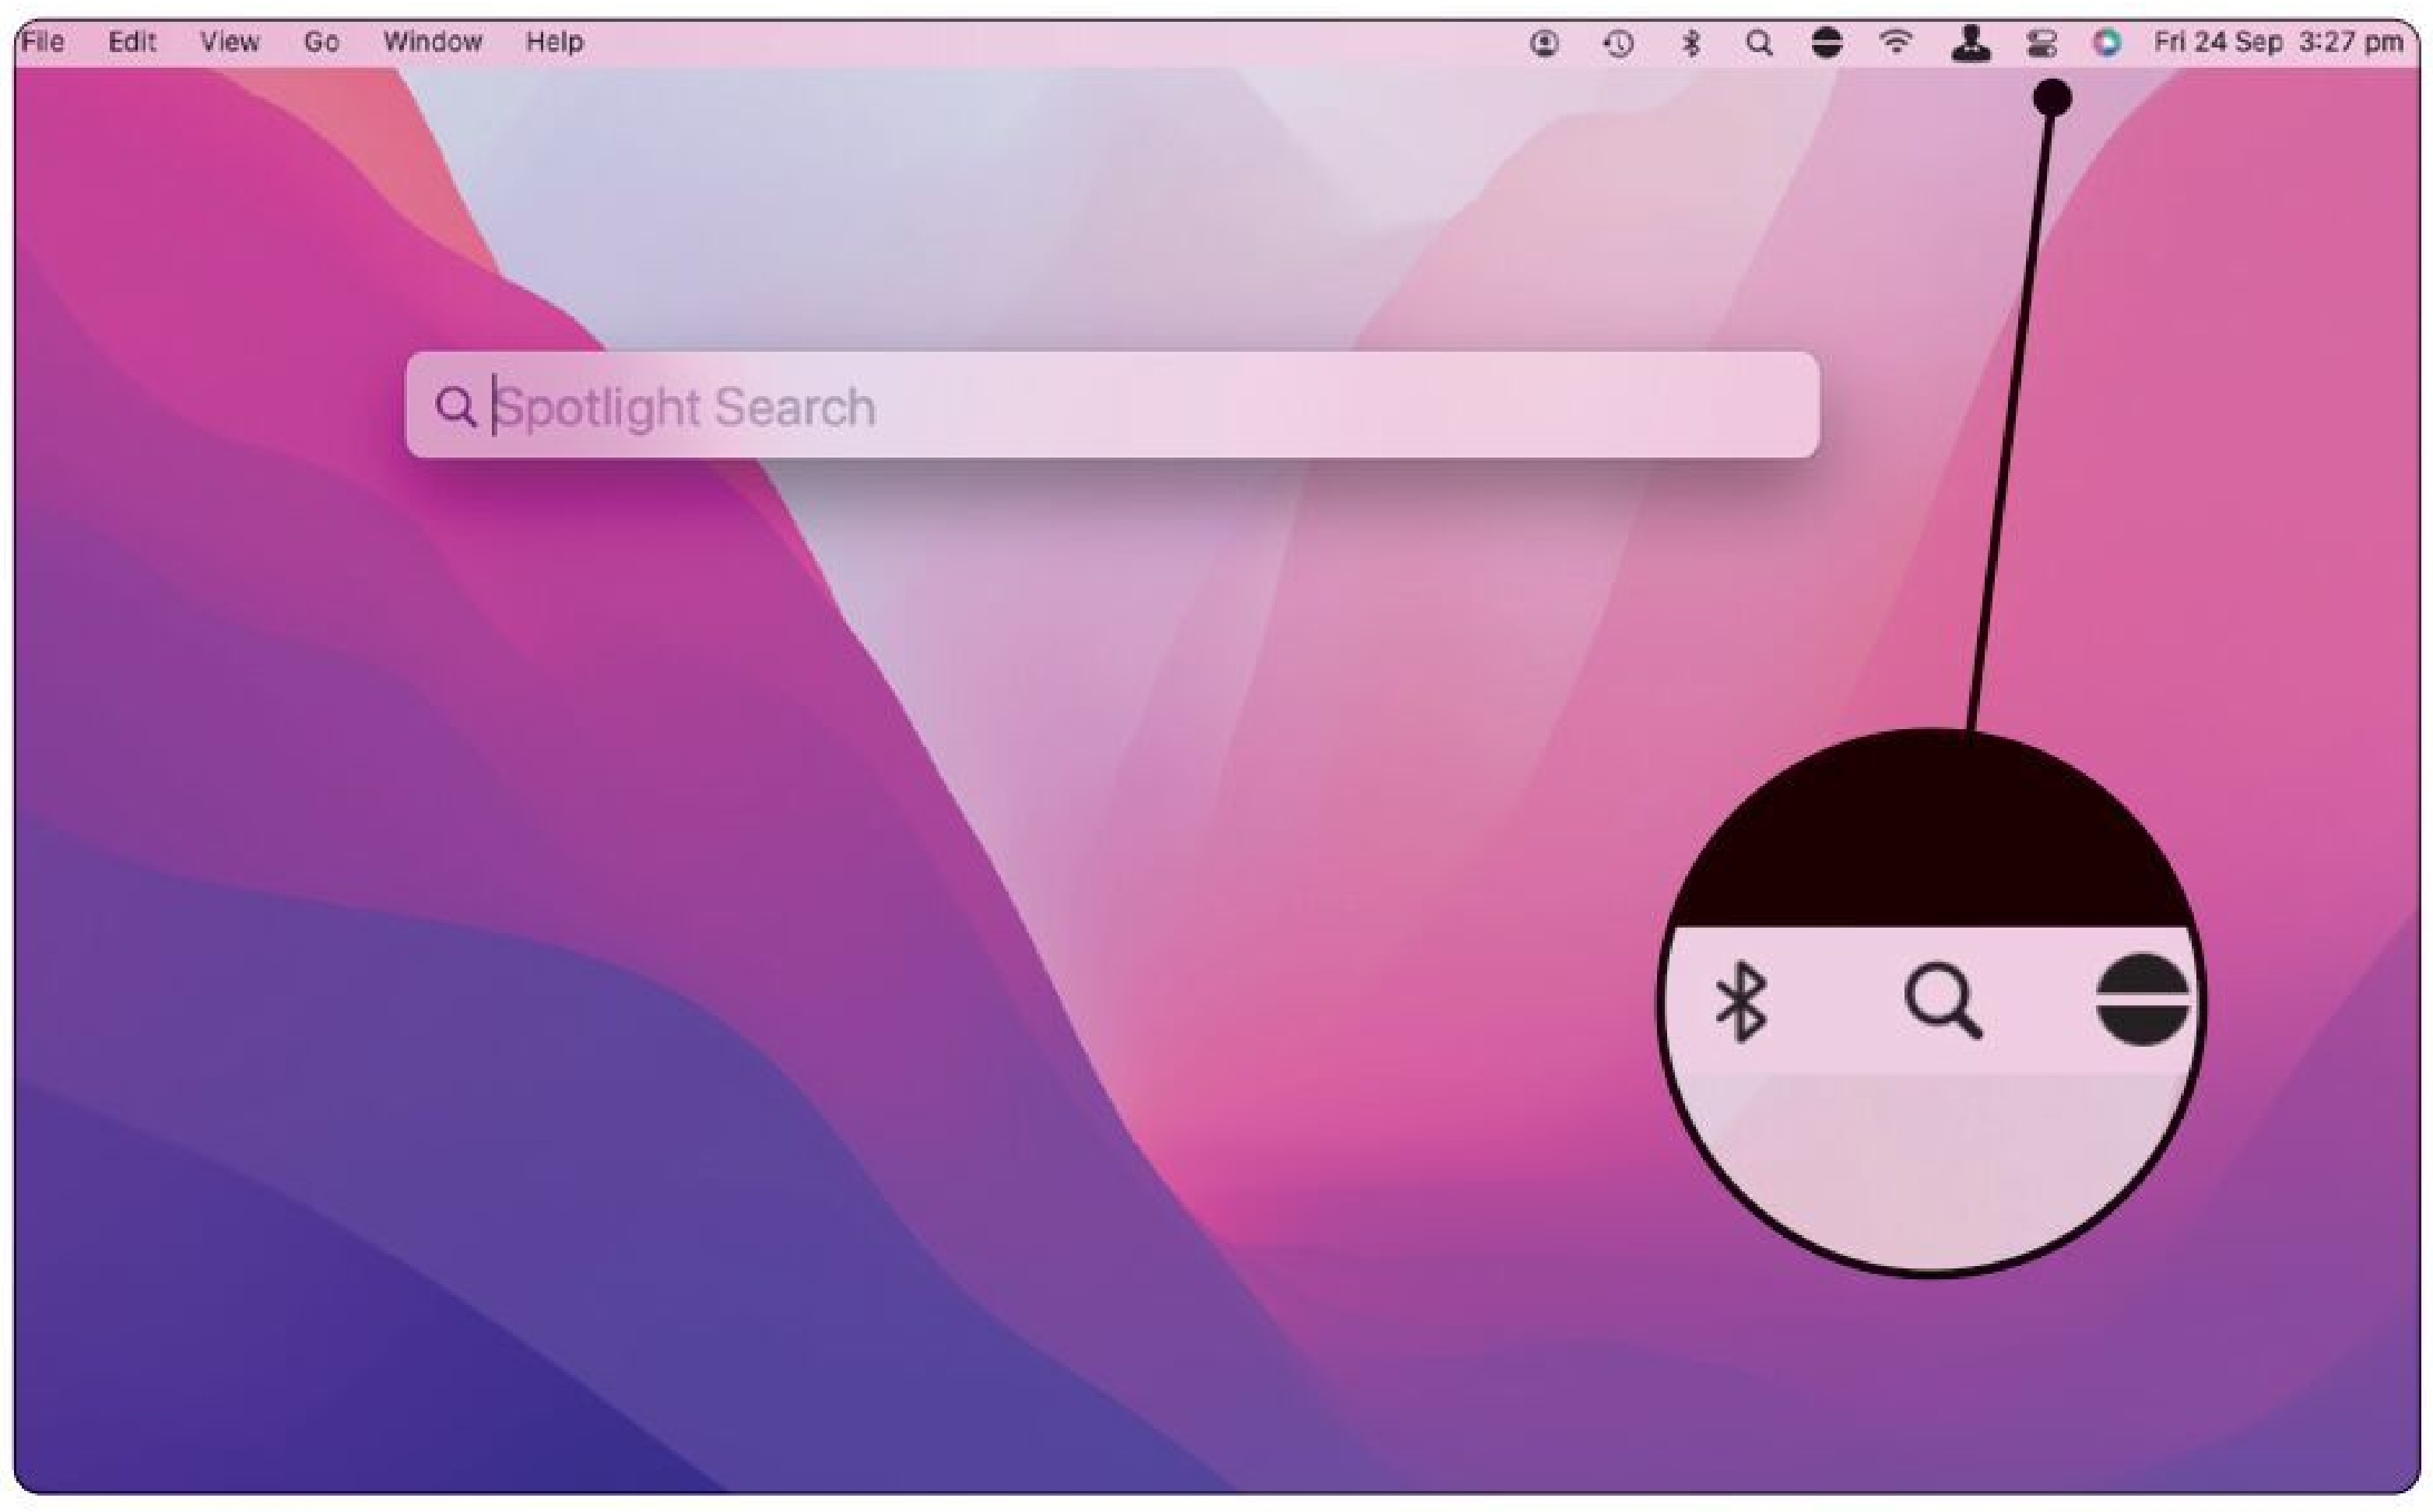
6 Third-party widgets won't update unless the app to which they refer are open, but if this is a problem for you, simply set up that app to open whenever you log in, and leave it open in the background. The widget then stays up to date.

The Spotlight Feature
Search Your Mac

Spotlight Search is Apple's unique and ultra-powerful search system that can find almost anything on your Mac. There's a whole raft of great features, making it a really powerful and useful tool that's integrated into the apps that you use every day. Here's how to get the most from the Spotlight feature.

Using Spotlight's Features



1 To start using Spotlight, press cmd and the space bar or click the magnifying glass in the top menu and the Spotlight Search window appears. In Big Sur, as with macOS Catalina, you can drag this window to wherever you want on the screen; it's not fixed in position.

Definition
numb — Oxford Dictionary of English • (of a part of the body) deprived of the power of physical sensation

2 Start typing your search query into Spotlight and immediately answers appear, with suggestions based on the contents of your computer as well as other sources. This may mean you only have to type a few letters of your search term to find what you're looking for.

Singapore
Republic in Southeast Asia

Singapore, officially the Republic of Singapore, is a sovereign island city-state in maritime Southeast Asia. It lies about one degree of latitude north of the equator, off the southern tip of the Malay Peninsula, bordering the Straits of Malacca to the west, the Riau Islands to the south, and the South China Sea to the east.

10 Spotlight can find music by searching through your iTunes collection to find albums, tracks and artists. Type a band name, a track name or even the name of a band member. Recordings with that name or by that band or person are shown.

Launching Apps And Quitting Them

There are several ways of launching an app on your Mac. You can: use the Launchpad, which is found in the Dock; you can open a Finder window and navigate your way to the application you wish to use; or you can click on the Spotlight feature and simply type its name. Here's how to do it.

1 To launch an app using the Spotlight feature, first click on the magnifying glass found in the top right corner of the screen. A window saying 'Spotlight Search' pops up. If it's inconveniently located, you can drag it around the desktop and move it to wherever you like.

2 Begin to type the name of the app you want to launch and Spotlight tries to complete it for you. When you see the name of the app you want, scroll down to it and press Enter and it launches. To close the Spotlight search window without launching anything, just click anywhere on the screen.

Open apps are shown in the Dock. On the app's Dock icon, you can click using the right-hand side of a Magic Mouse or trackpad (right-click), hold the Control key and click anywhere (ctrl-click) or click and hold, then click on Quit in the pop-up window.

Alternatively, with the app to the fore in Finder, click on its name in the top left corner and select Quit [app name] from the menu; or hold the Command key and press 'Q'. Just make sure the app is open on your desktop or you might quit the wrong application.

Setting Up Email For the Mail App

With email, you can send mails and attachments anywhere in the world, at the push of a button. It's there instantly too. Here we take a look at what email is, how you can get yourself an email address and how you can use your email accounts on your Mac, with Apple's bundled email client, the Mail app.

How do I set up my Virgin Media email to my device?

Setting up my Virgin Media email on a device

If you want quick access to your Virgin Media email through your web browser, follow these steps.

You have two choices of settings to use with Virgin Media email - IMAP or POP.

IMAP (recommended)

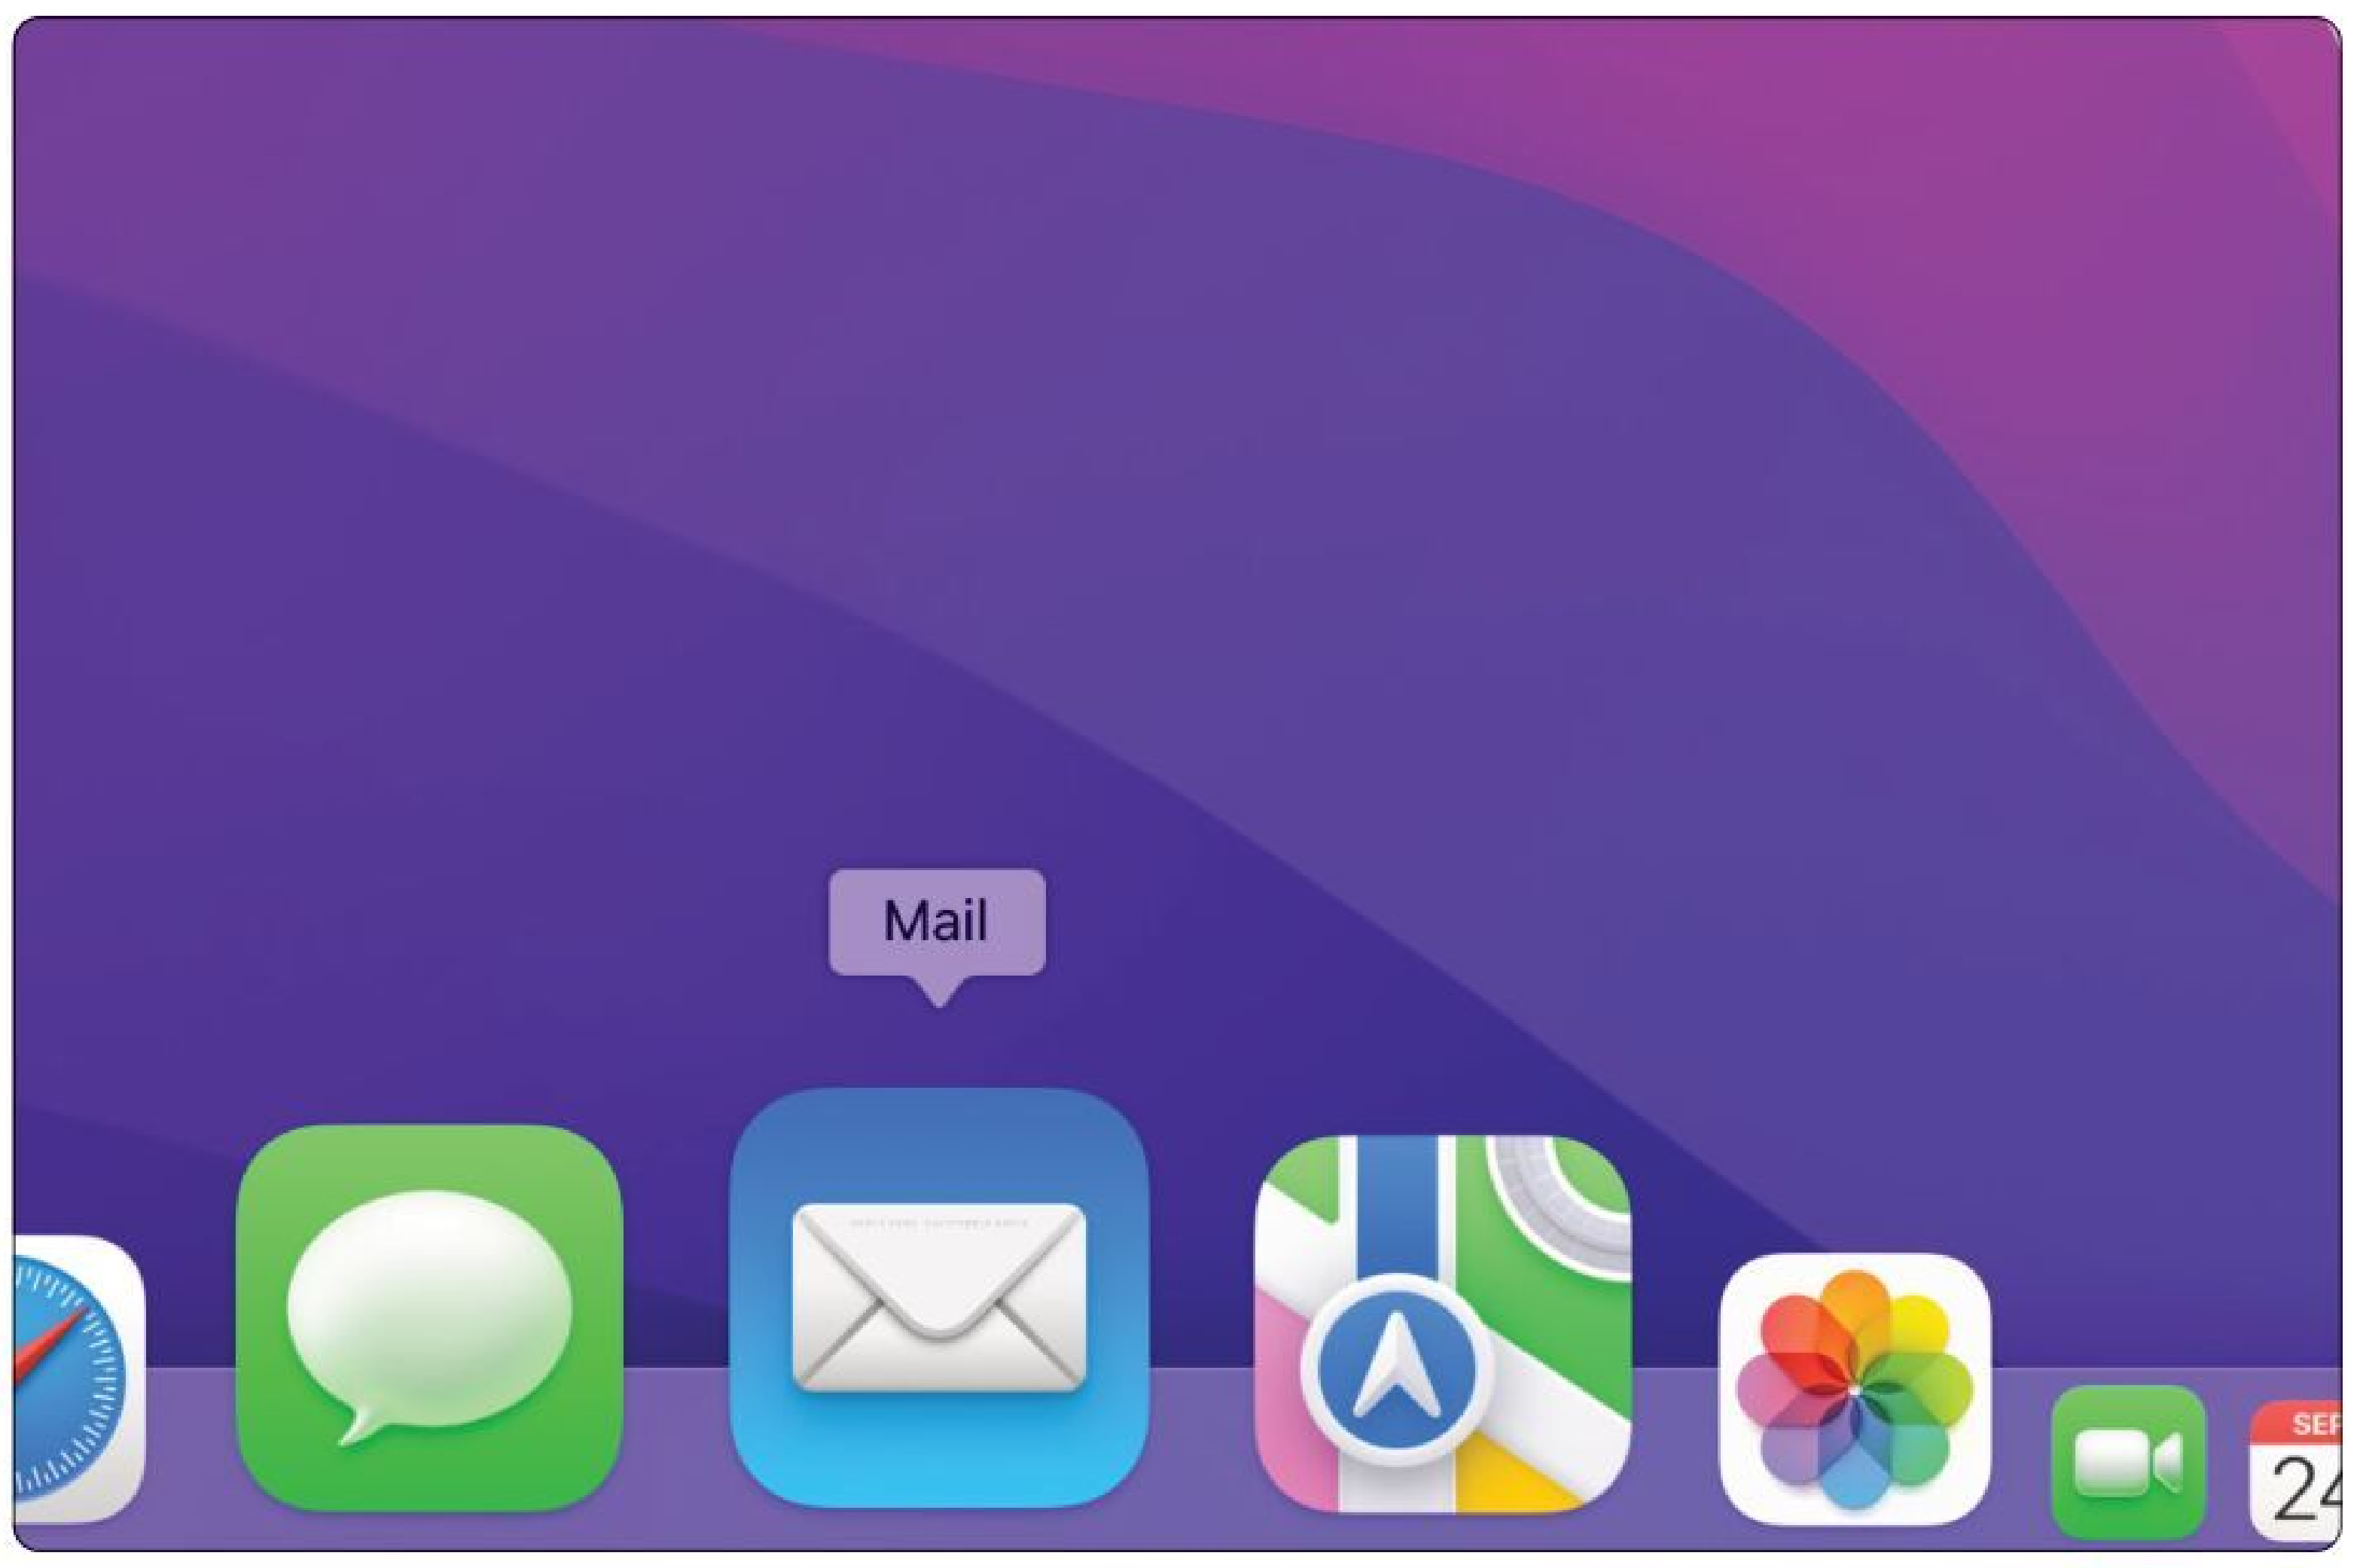
POP

Setting up Virgin Media email on a new device

Once you have chosen the best setting or identified which one you are already using, follow the relevant link to the device or application you want to access your Virgin Media email on:

- iOS Device
- Android
- Windows 10
- Outlook
- Mac

1 To configure your Mac to access your email account from your Internet service provider, you need your email address, your password to access your email account, and POP or IMAP (incoming) and SMTP (outgoing) server addresses.



2 macOS Monterey includes a sophisticated email program, simply called Mail. You can find it on the Dock, as it's there by default. The Mail App's icon shows the back of an envelope on a blue background. Click on this icon to open the Mail app.

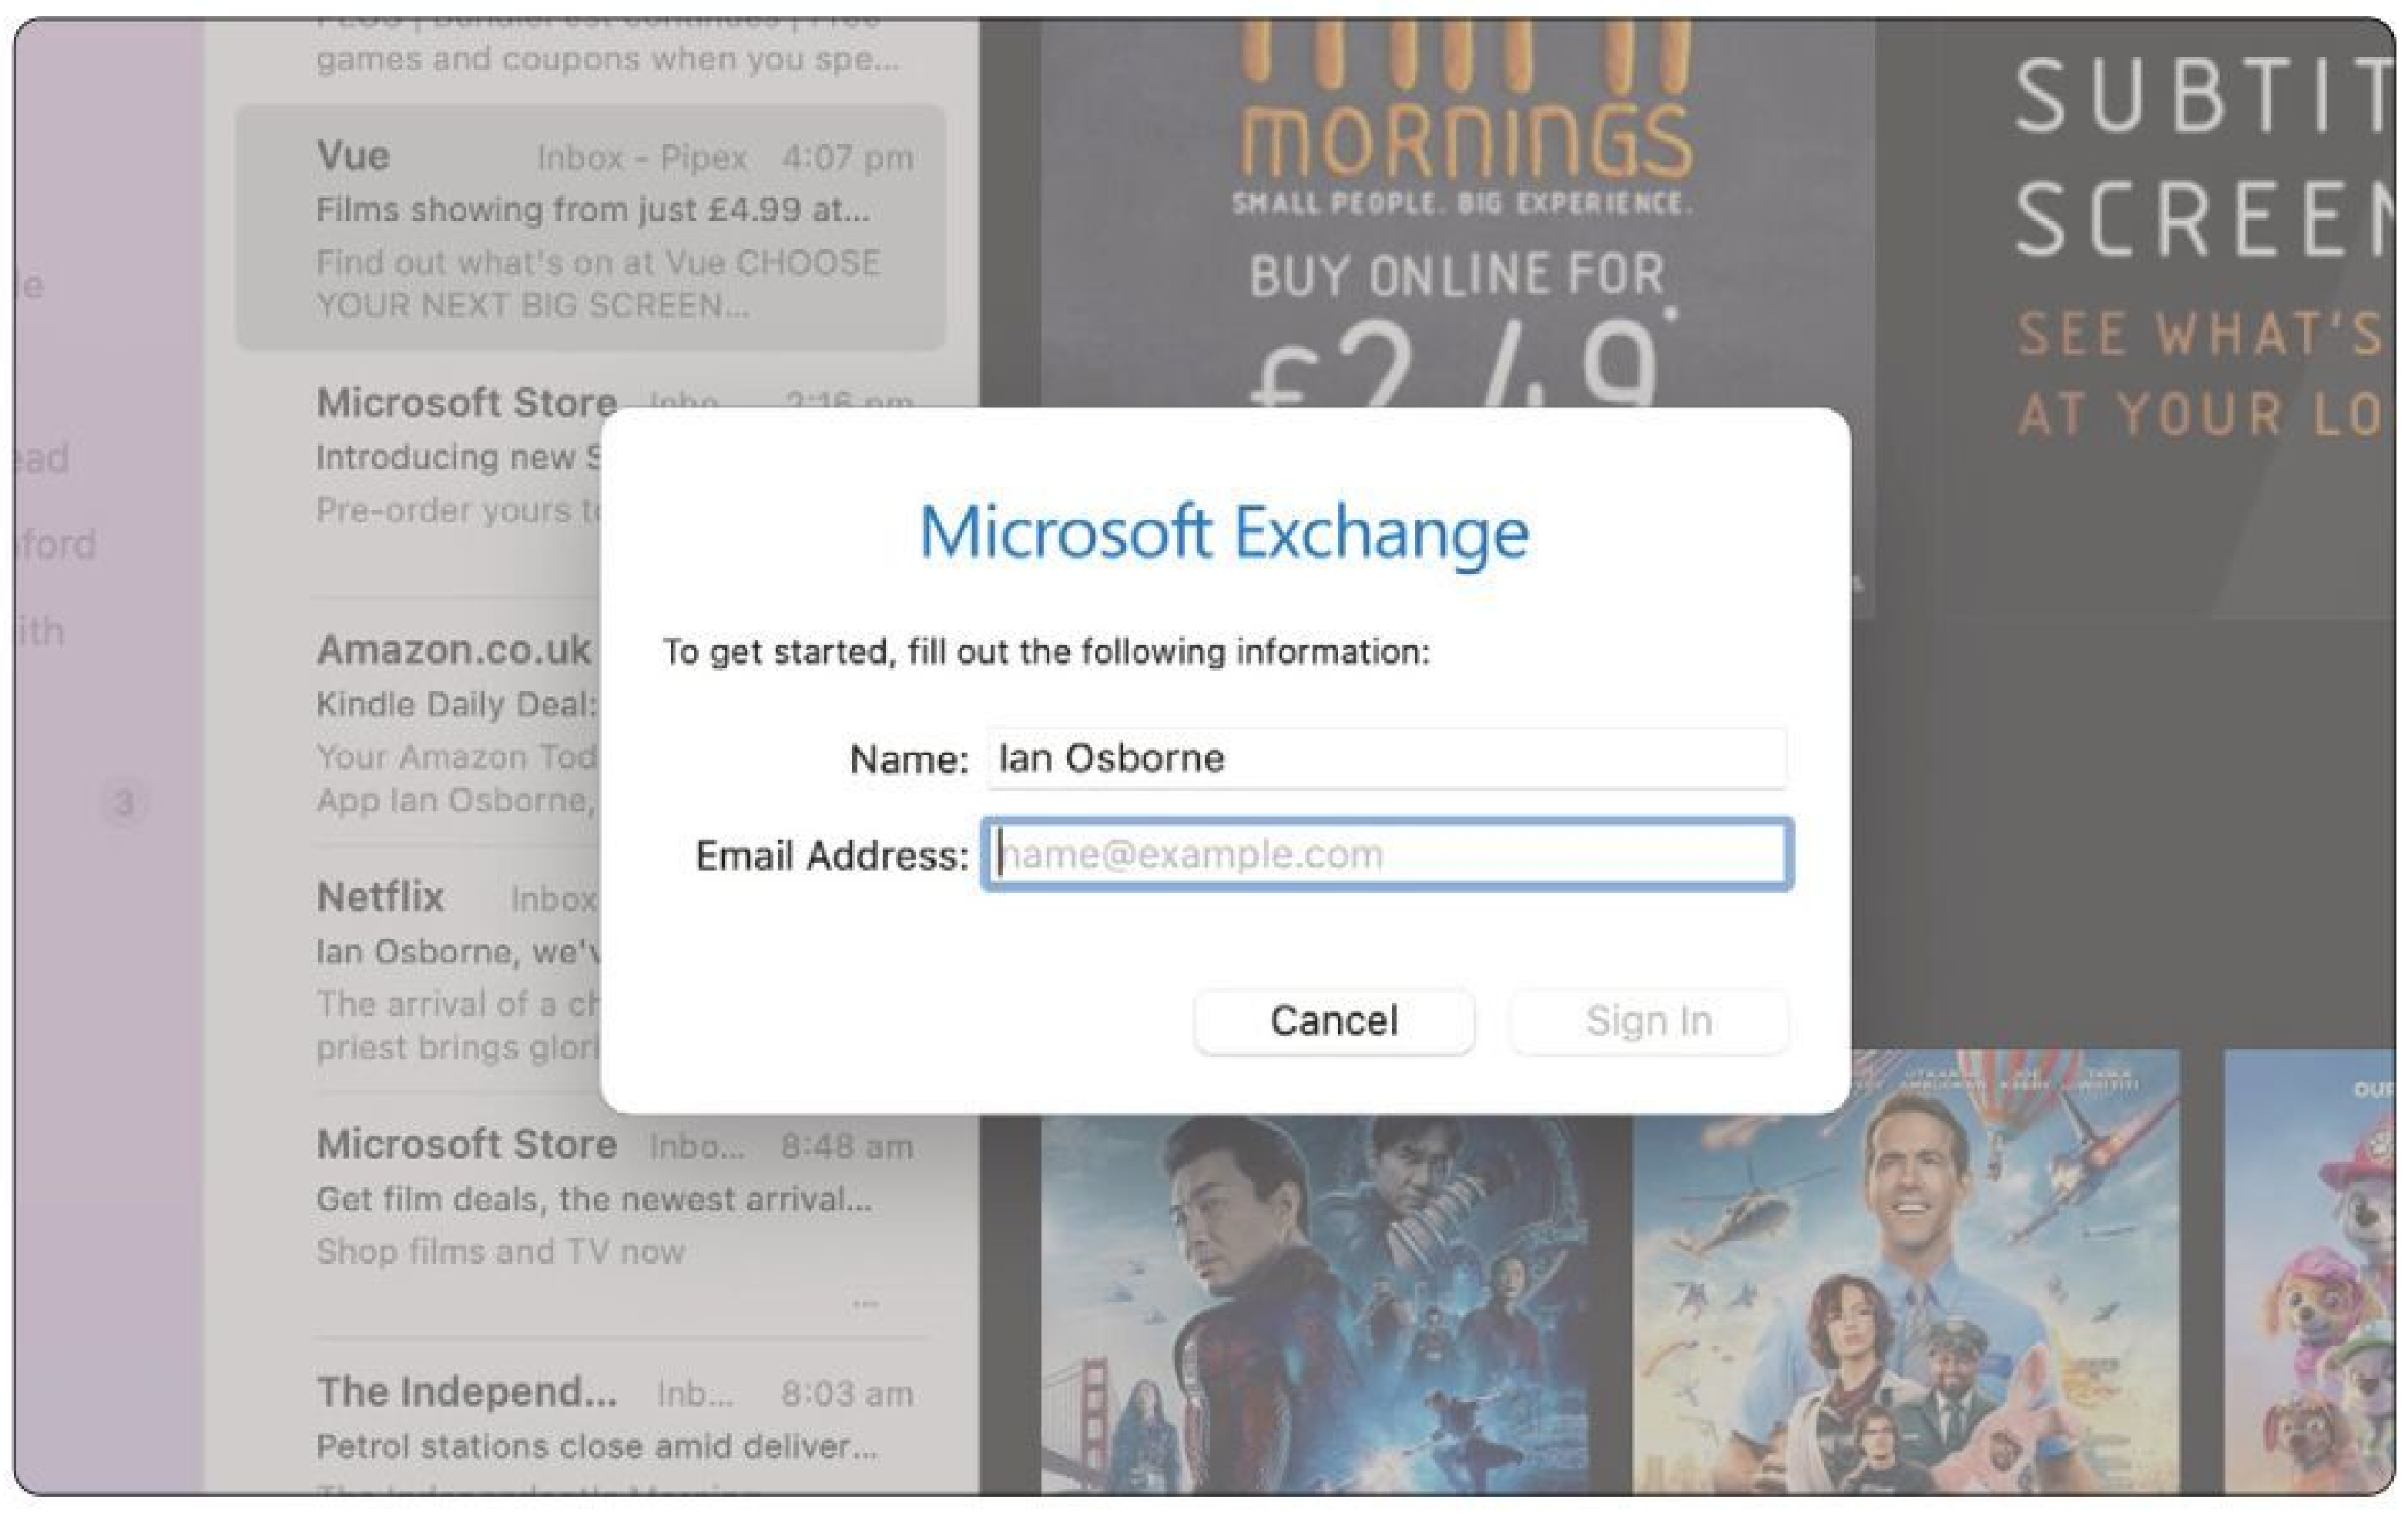
3 When you first open Mail you're prompted to set up your first email account. If you've previously used Mail or set up another account, you can add further new accounts by going to the Mail menu and selecting Add Account.



Microsoft Exchange

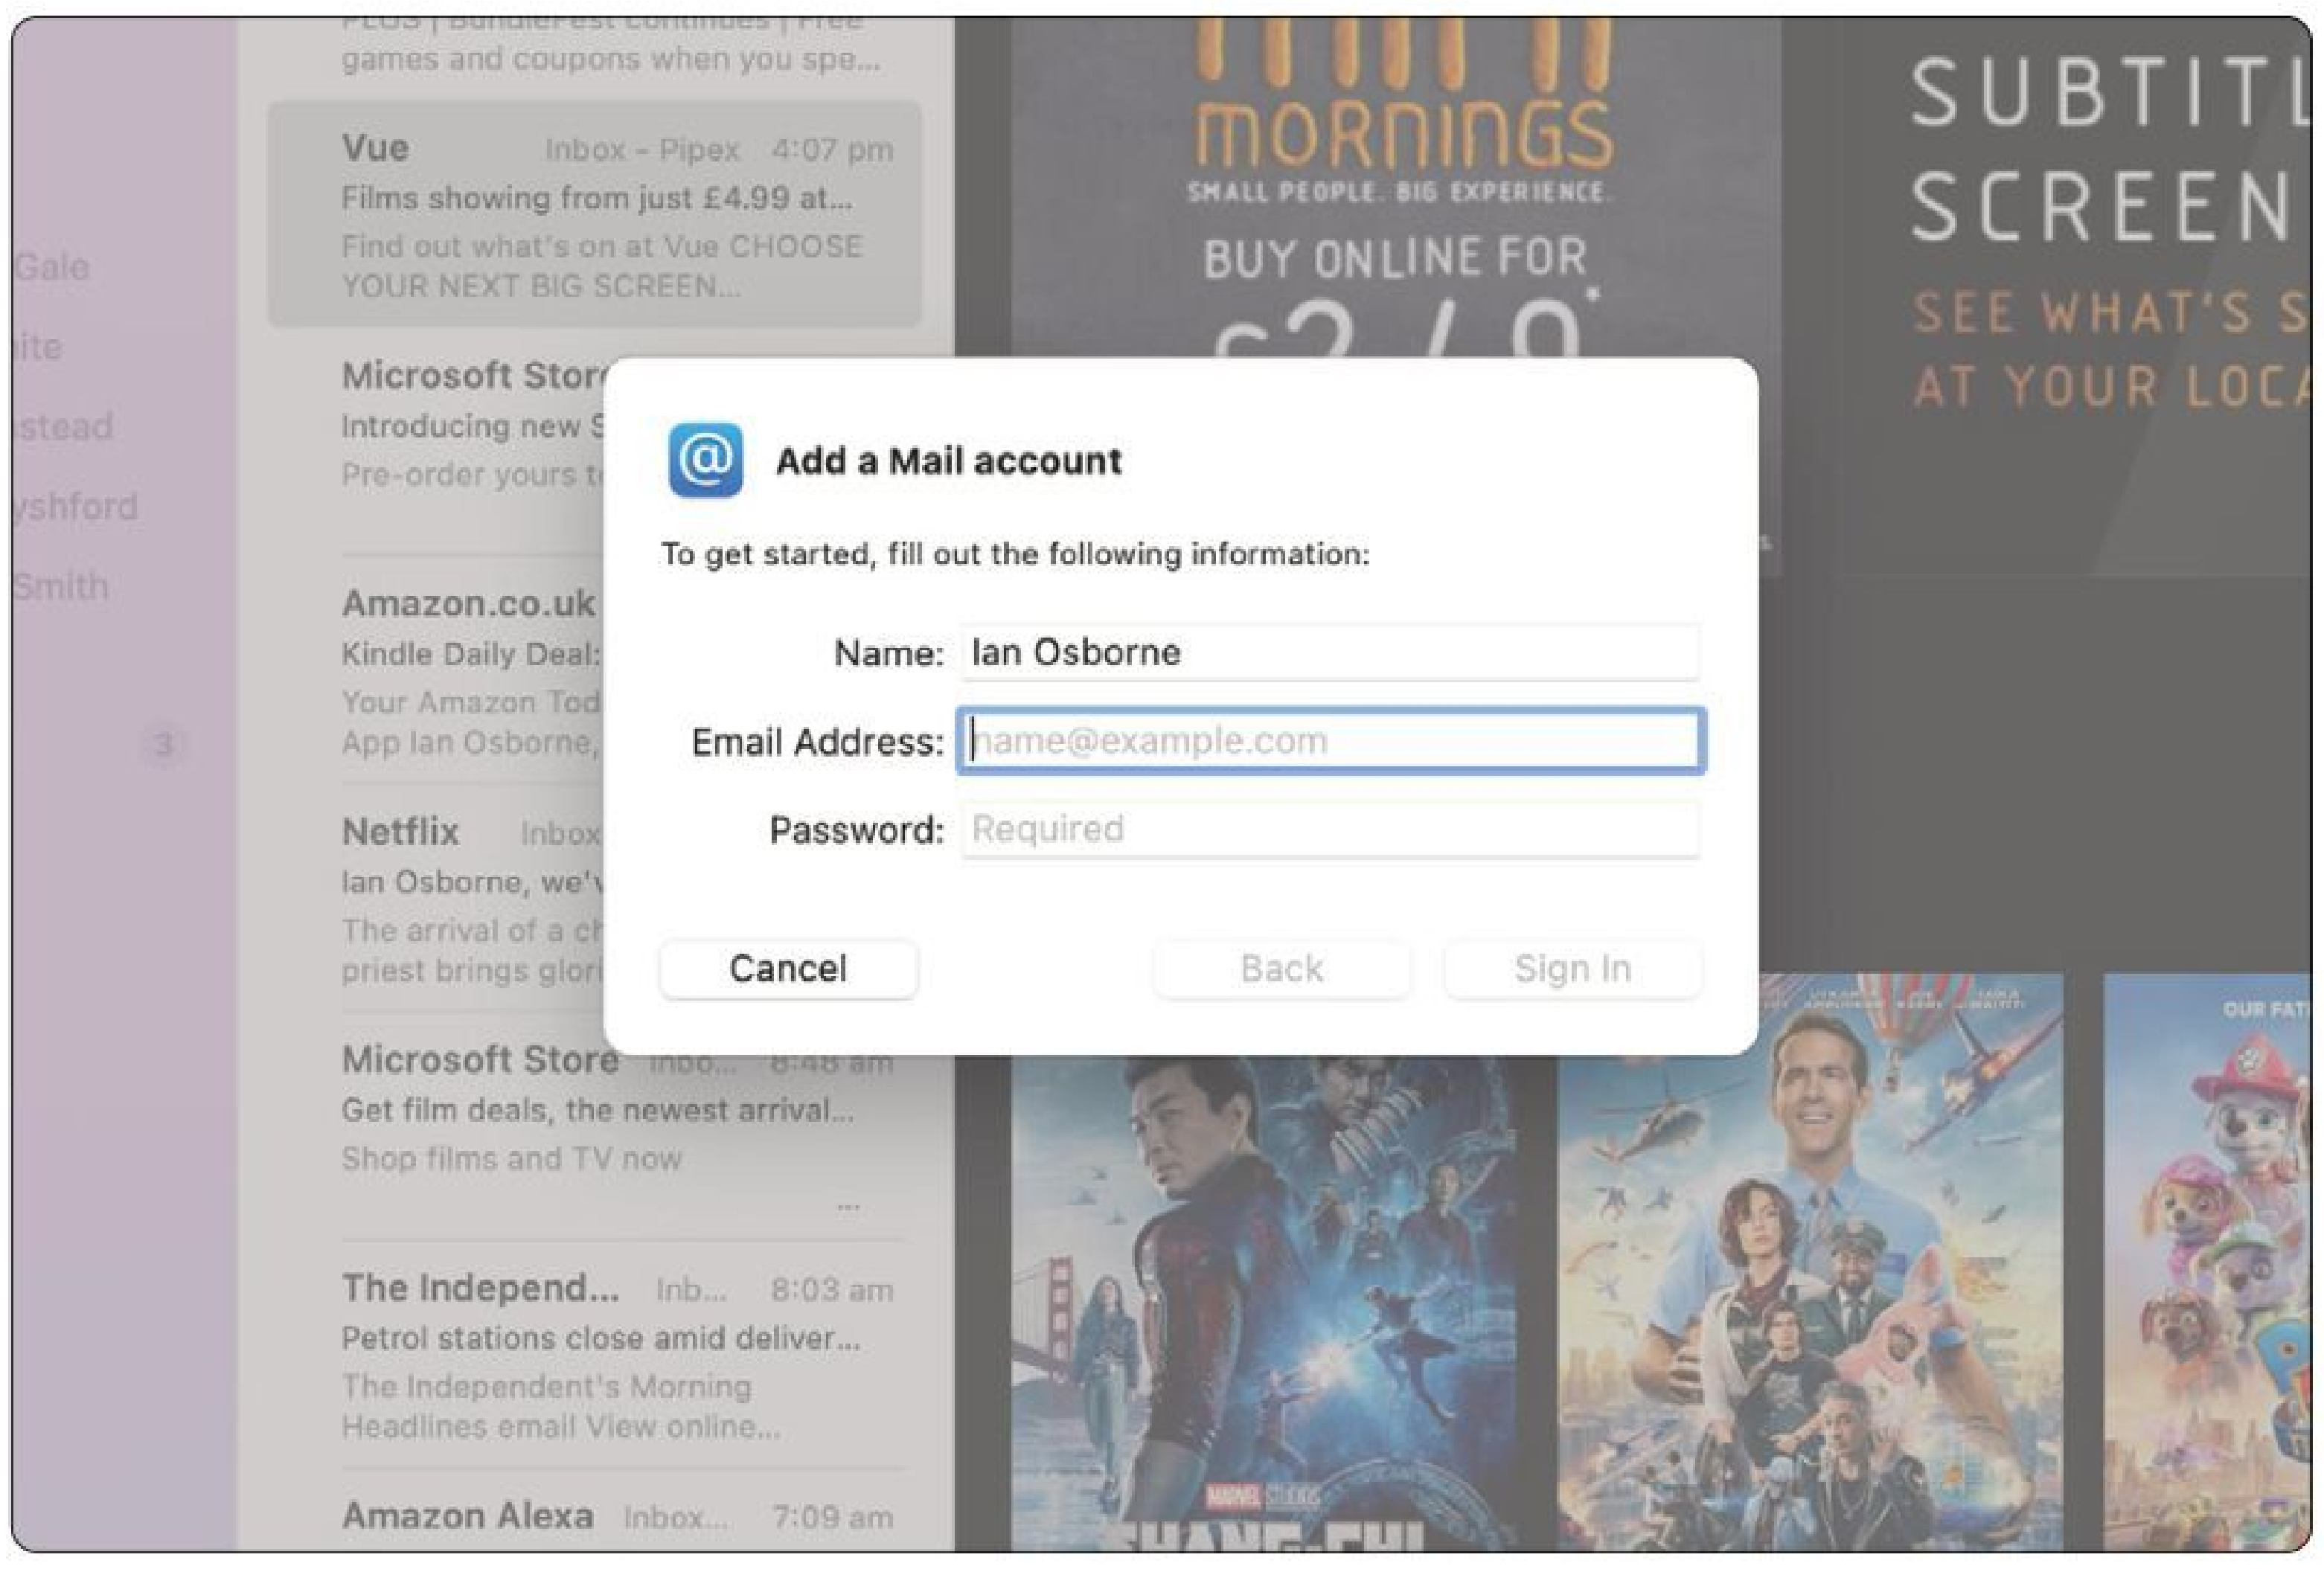
To get started, fill out the following information:

Name: Ian Osborne

Email Address: name@example.com

Cancel
Sign In

4 If it's another web-based email service you're adding, you must now enter your full name (this appears in your own, and other people's, contact lists), your email address and your password. Do this, and your account is added.



Add a Mail account

To get started, fill out the following information:

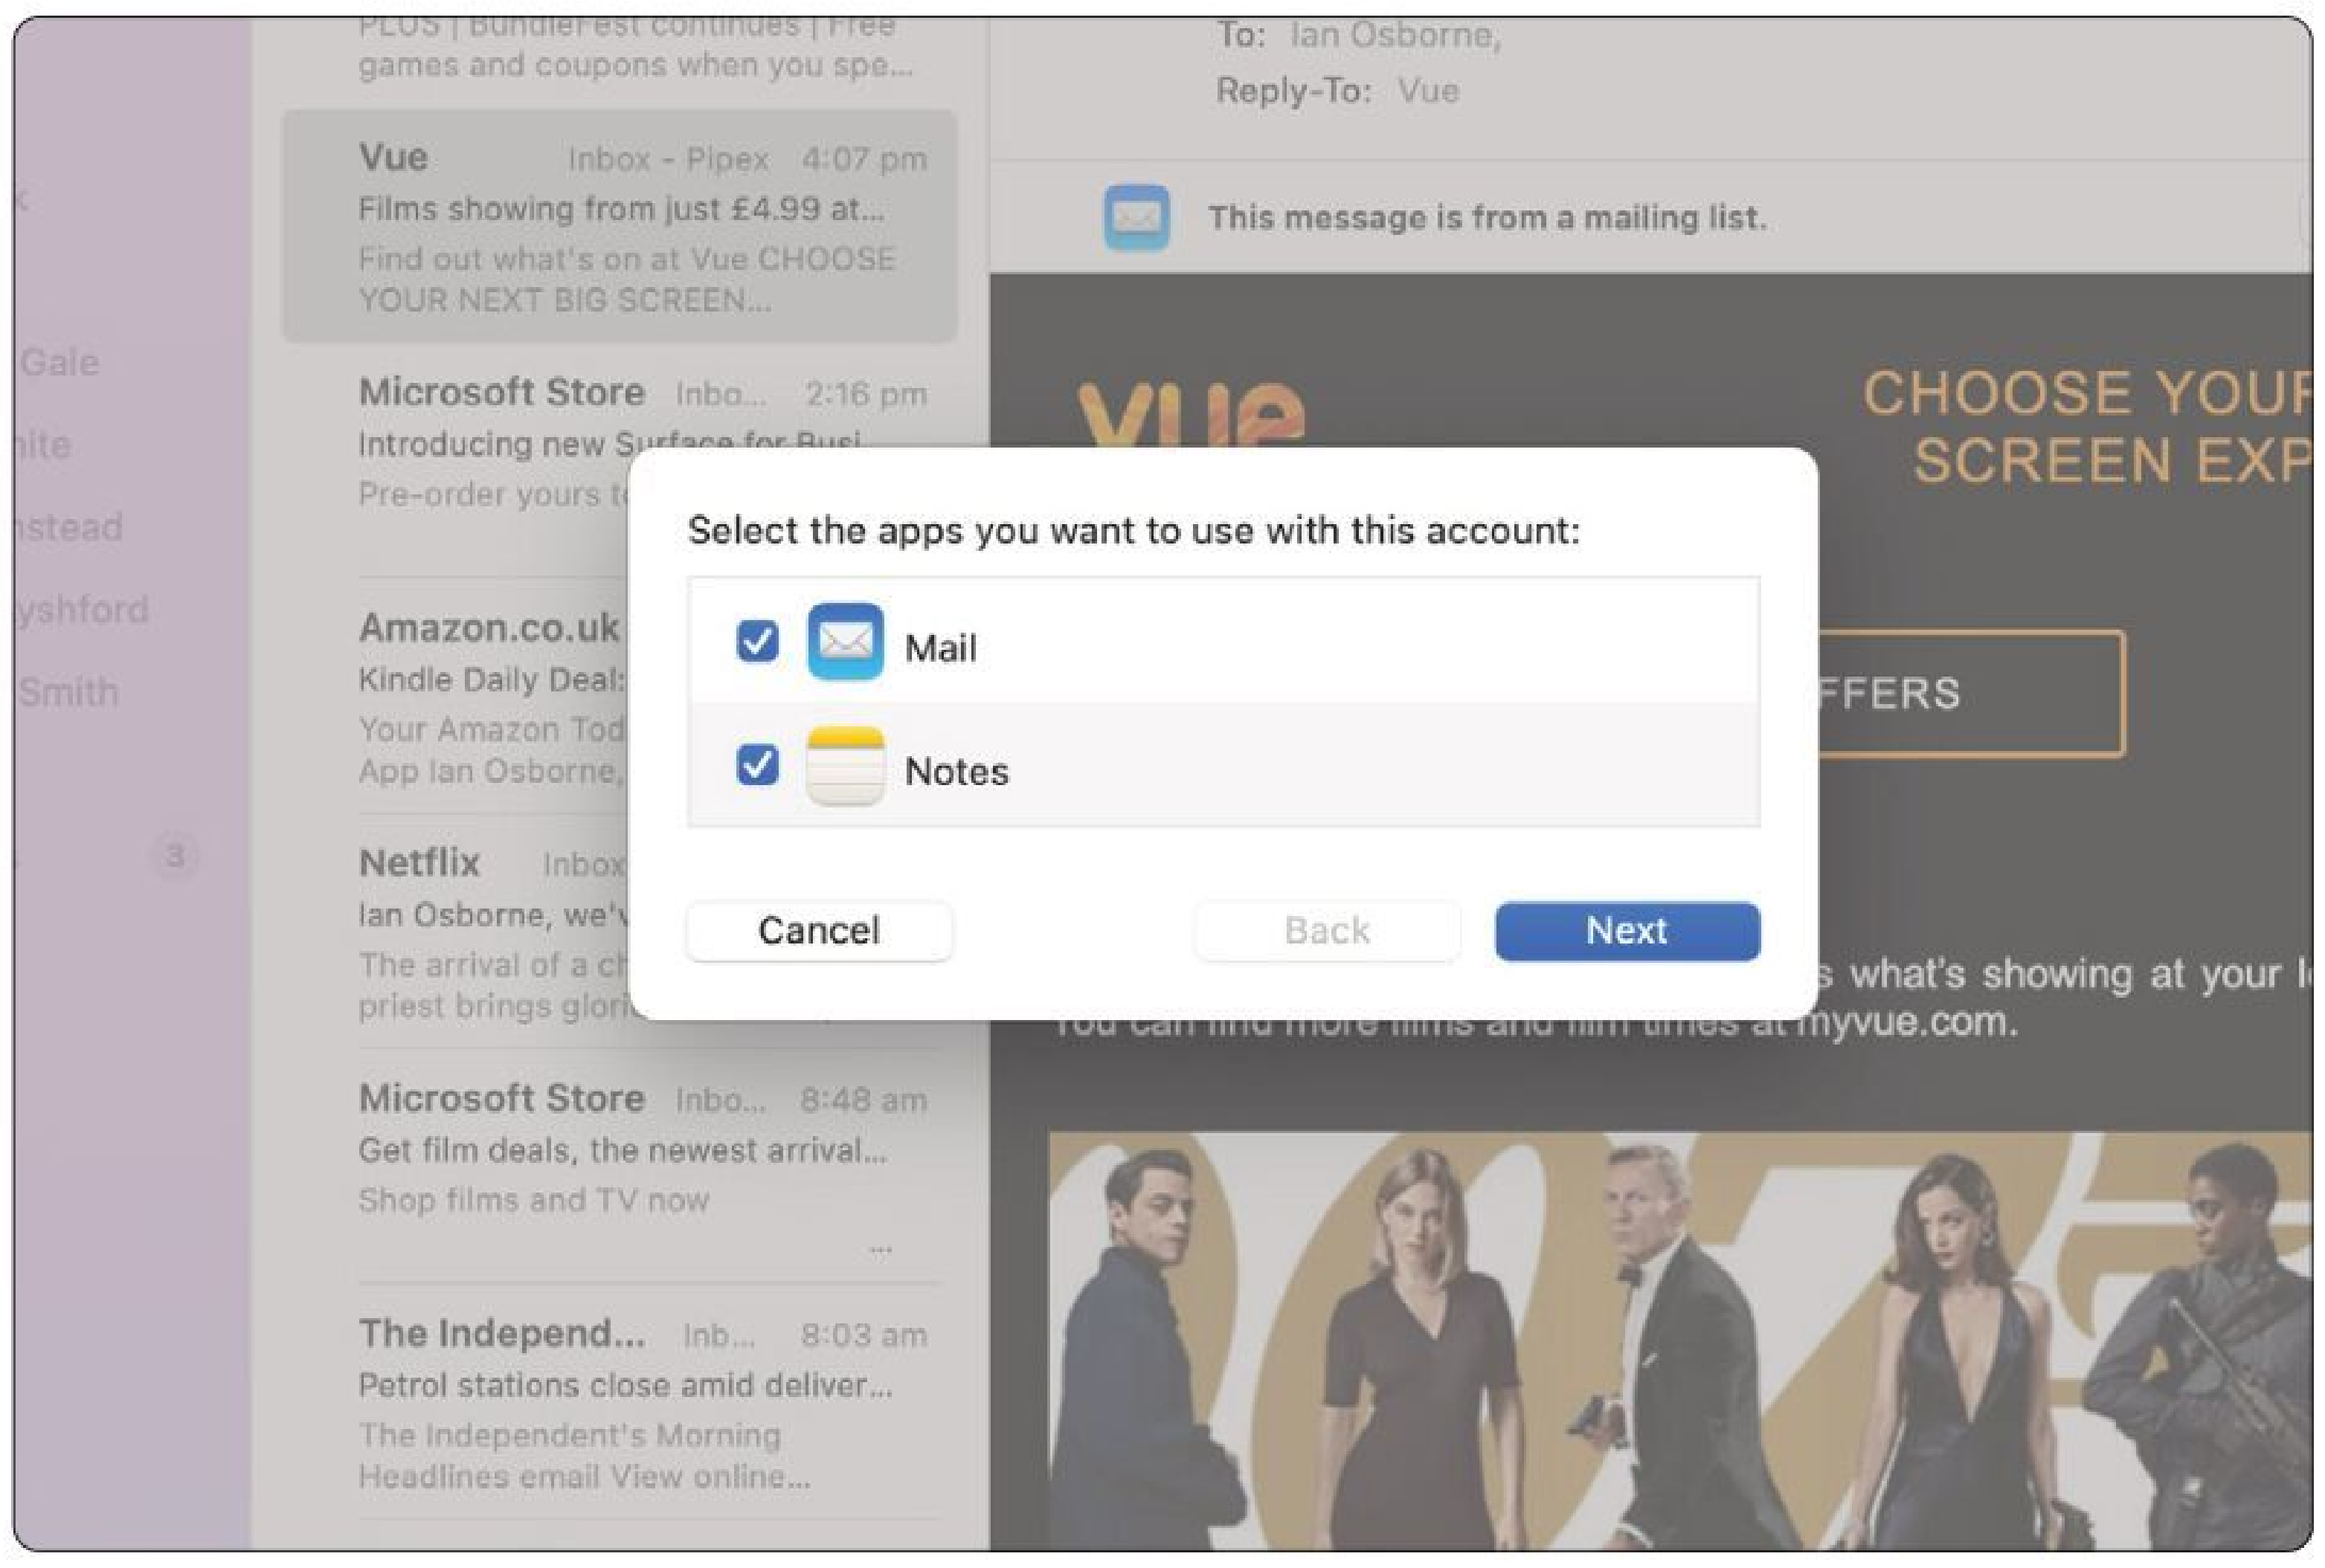
Name: Ian Osborne

Email Address: name@example.com

Password: Required

Cancel
Back
Sign In

5 If you're adding an account from your Internet Service Provider, select Other Mail Provider from the screen in Step 3. Enter details such as username, password and server information provided by your ISP. The server information should also be on the ISP's website.



Select the apps you want to use with this account:

☑ Mail

☑ Notes

Cancel
Back
Next

6 Fill in all the information for which you're asked. The exact information required depends on the service provider in question, but it typically includes incoming and outgoing mail server addresses, your username, and your password. When you've finished, click on Sign In to finish.

Installing New Apps On Your Mac

Installing new apps on a Mac shouldn't be a terrifying experience. Whether you're downloading from the App Store or from a third-party developer's website, you can download and install some great new software applications, or apps, on your Mac in macOS Monterey.

1 You can open the App Store app from the Apple menu, as well as from the Dock, the Applications window, the Launchpad and Spotlight. If updates are available for any of your apps, this is shown in the Apple menu.

2 Type the name of an app, a developer or a genre into the Search window to search the App Store for apps. Your search results are then shown in the main window.

3 The sidebar gives you options when exploring the App Store. Discover is best for general browsing, Arcade is for Apple Arcade titles, then there are categories for creative apps, work-related software, games developers' tools and more.

4 This is the featured app of the day, chosen by Apple's editors.

5 Click on the chevron for more featured apps.

6 More from Apple's editors. These boxes feature individual apps.

7 Click on your name in the corner here to get your account details.

8 Scroll the page down for individual apps and more.

The Mac App Store

The Apple Mac Store is an impressive market place of apps, that have been registered and cleared with Apple to run on your Mac without any hint of anything unwarranted – such as malware. But it doesn't have everything on offer. There are times when you may need to go outside the Mac App Store in order to get hold of a vital app, and this is where the confusion often arises.

Beyond the Mac App Store you'll find all manner of different kinds of apps and these are often packaged differently depending on the developer. You can find DMG files with apps inside them, PKG installers and even Zip archives with applications inside. Let's keep things simple to begin with and start with the Mac App Store.

Installing from the Mac App Store

The Mac App Store is a safe and friendly place for the Mac user to visit and install apps from. Open the App Store via the Dock and you'll notice that there are categories on the left-pane, while the content relating to each category is in the right-hand or main pane. There's also a handy Search bar at the top of the App Store window.

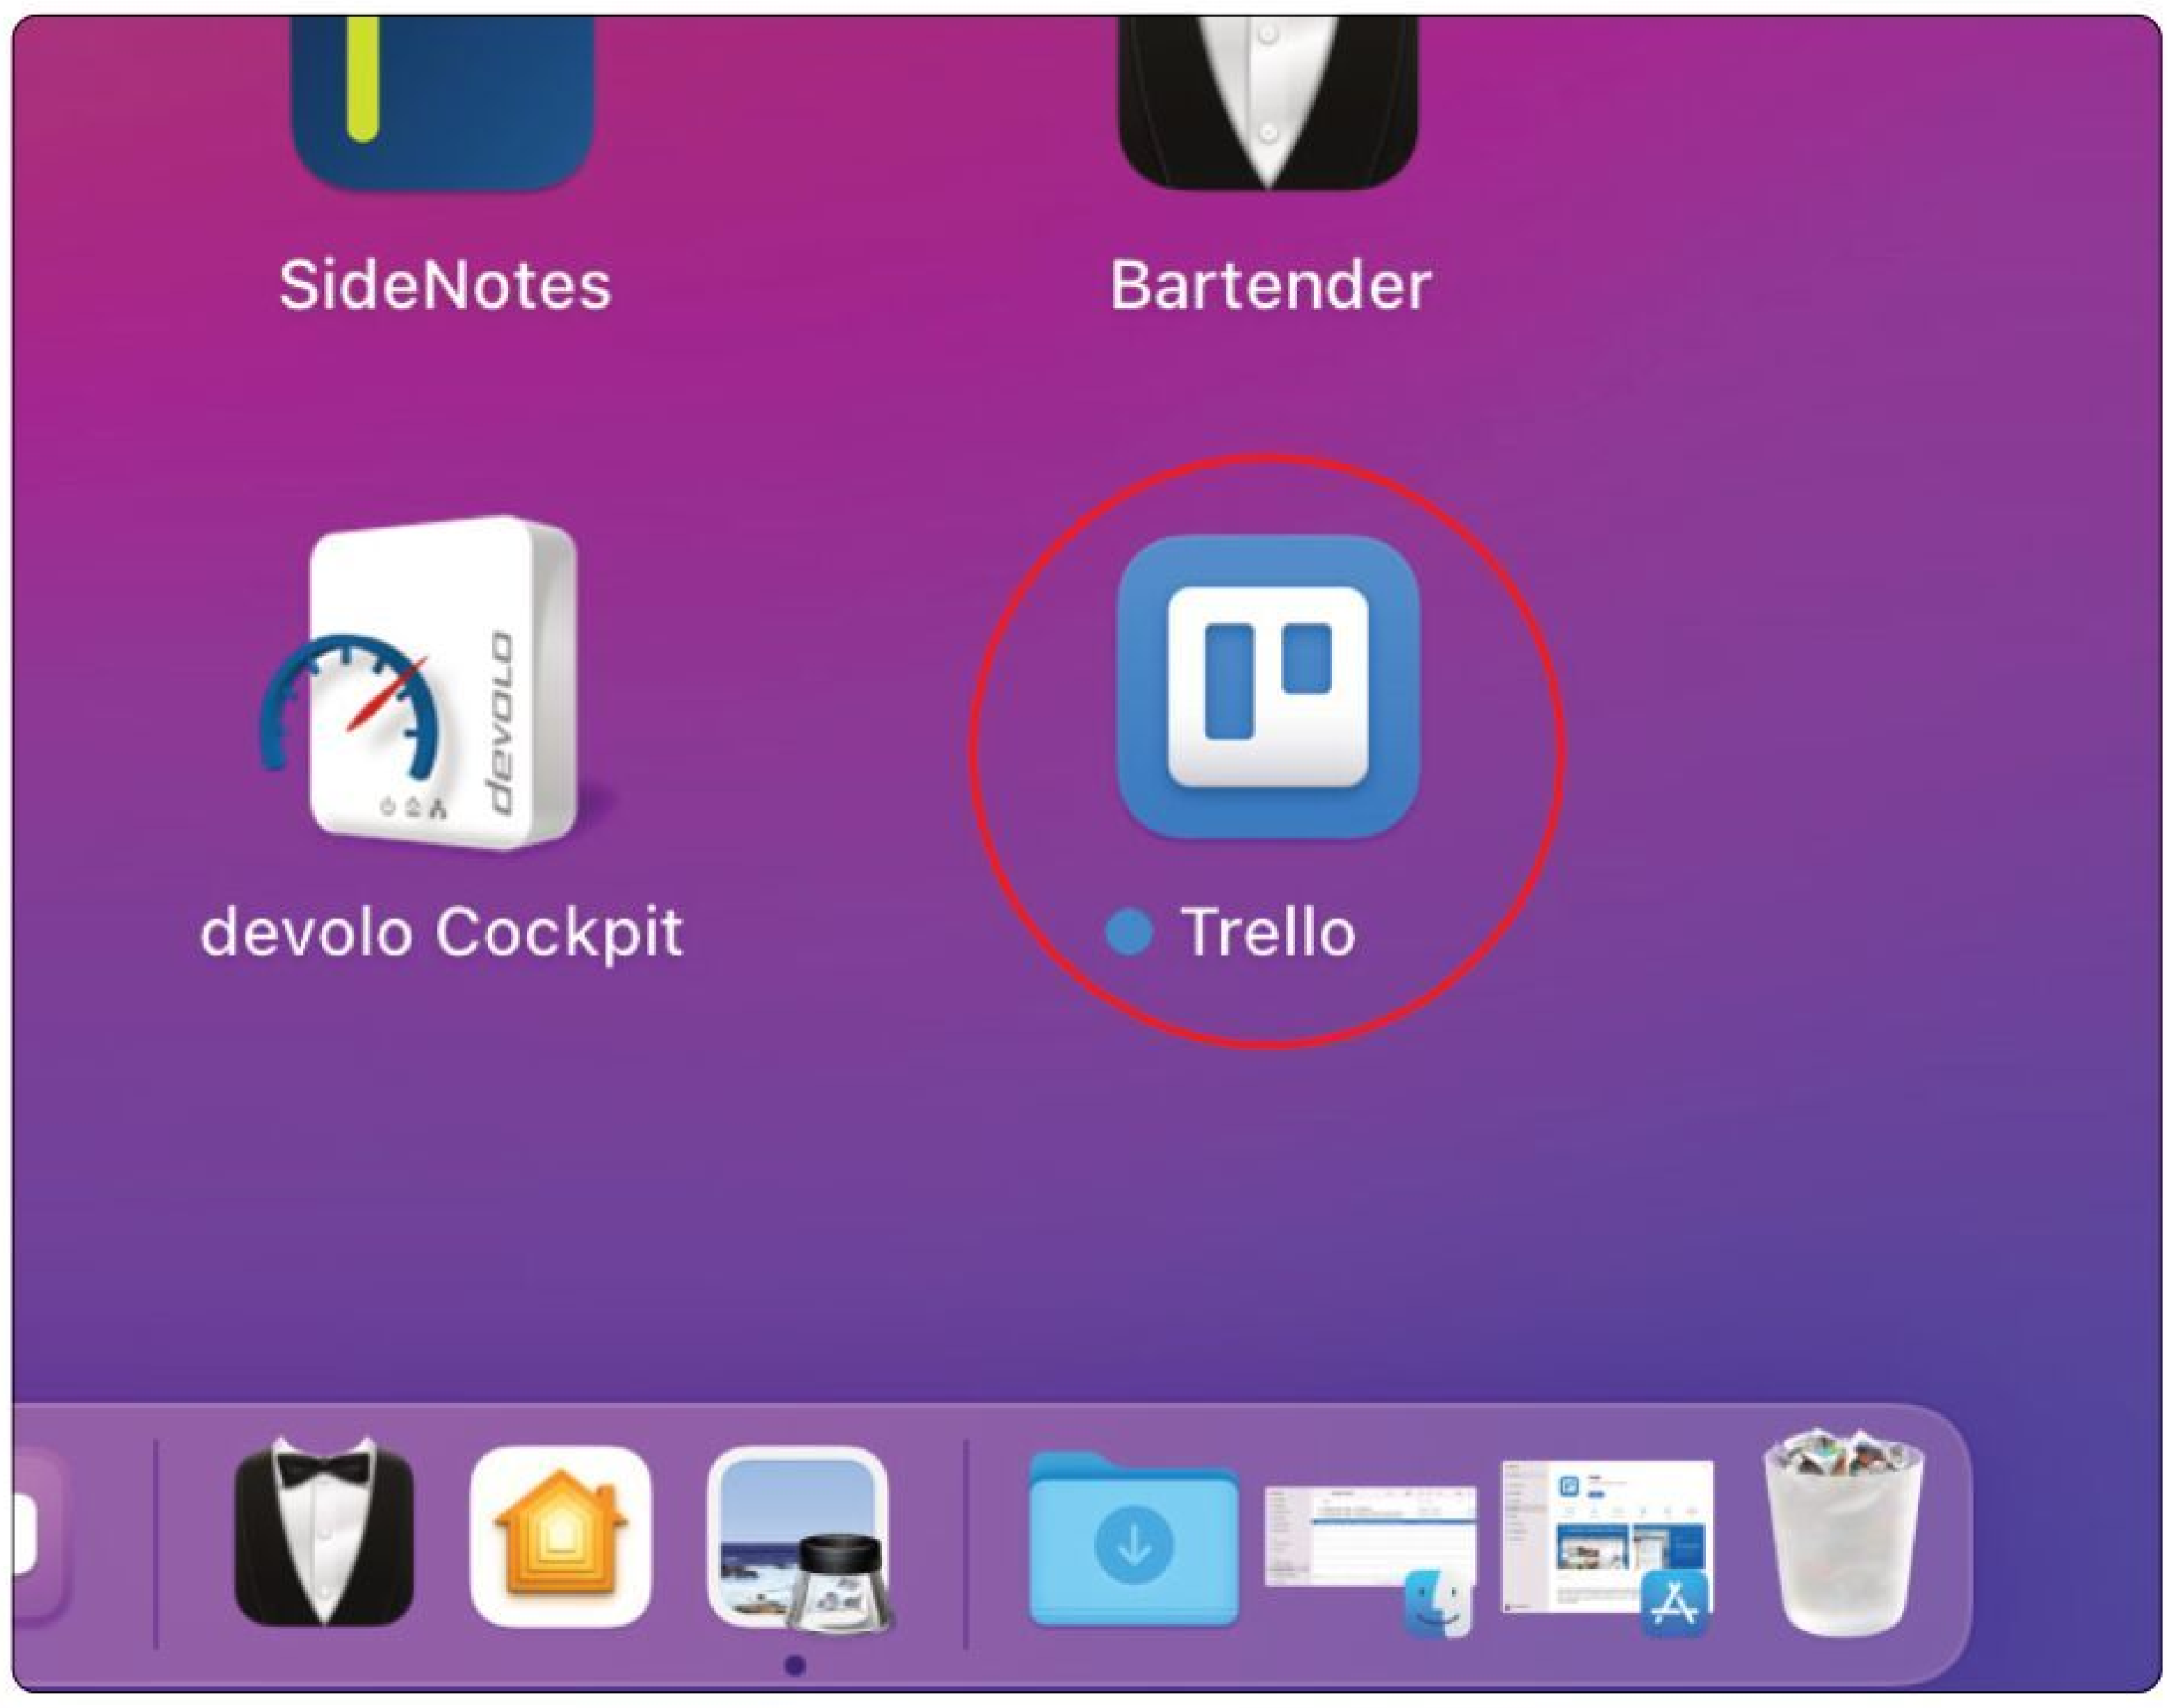
3 The downloading and installation process may take some time, depending on the size of the app your installing and your connection to the Internet. Progress is measured with a circle where the Install button was, which is gradually filled as the app is installed. If you need to cancel the installation at any point, then click the square inside the gradually filling circle.



SideNotes
Bartender
devolo Cockpit
Trello

4 Once the app has finished downloading and installing, you can either click the Open button – which has replaced the filled circle in the Mac App Store – or you can find the newly installed app through the Launchpad via the Dock. Updates are handled by the App Store and anything you purchase on one Mac will work on another compatible Mac. It's a quick, simple and convenient way to work.

Third-party Apps On Your Mac

Installing from developers' websites does carry some baggage. For one, you're not going to get updates from the Mac App Store, which may lead to an unresponsive app as the core macOS system is updated. Secondly, there's a potential security risk, as you've no way of knowing if the app you're installing has any form of malware hidden deep within it. And thirdly, it's not often quite as simple as a single click.

2 There's usually a Downloads section to any site where there's apps available from the developer. In there you can find the macOS specific installation file you need for the app in question. Click the link to it or button, to begin the download of the app's installer.

13.9 MB
Macintosh HD › Users › ianosborne › Downloads
4 items, 110.68 GB available

3 Most macOS downloaded app installers come as DMG files. A DMG file is an Apple Disk Image file or a Mac OS X Disk Image file. It's basically a digital reconstruction of a physical disk and stores compressed software installers instead of having a physical medium. These DMG files can therefore be mounted as virtual disk images.

All downloads from Safari are stored in the Downloads folder in Finder. Locate the folder and the DMG file you've downloaded, then double-click to mount the virtual disk image.

4 This does one of several operations: first, macOS will scan the DMG file and ensure it's all there and in the right order to read from. Secondly, it will open a virtual disk image both on the desktop and within Finder as a new external drive. Thirdly, you'll get a brief notice indicating how to install the chosen app on to your system.

5 If there's an Applications folder in the window with a small arrow in its bottom-left corner, drag the application into this folder to install it. If the folder contains a file with a name that ends 'installer', double click on that file to start the installation process. Follow the on-screen instructions to complete the installation. You'll then find the intsalled software in your Applications folder where you can choose to add to your Dock if you want to access it quickly.

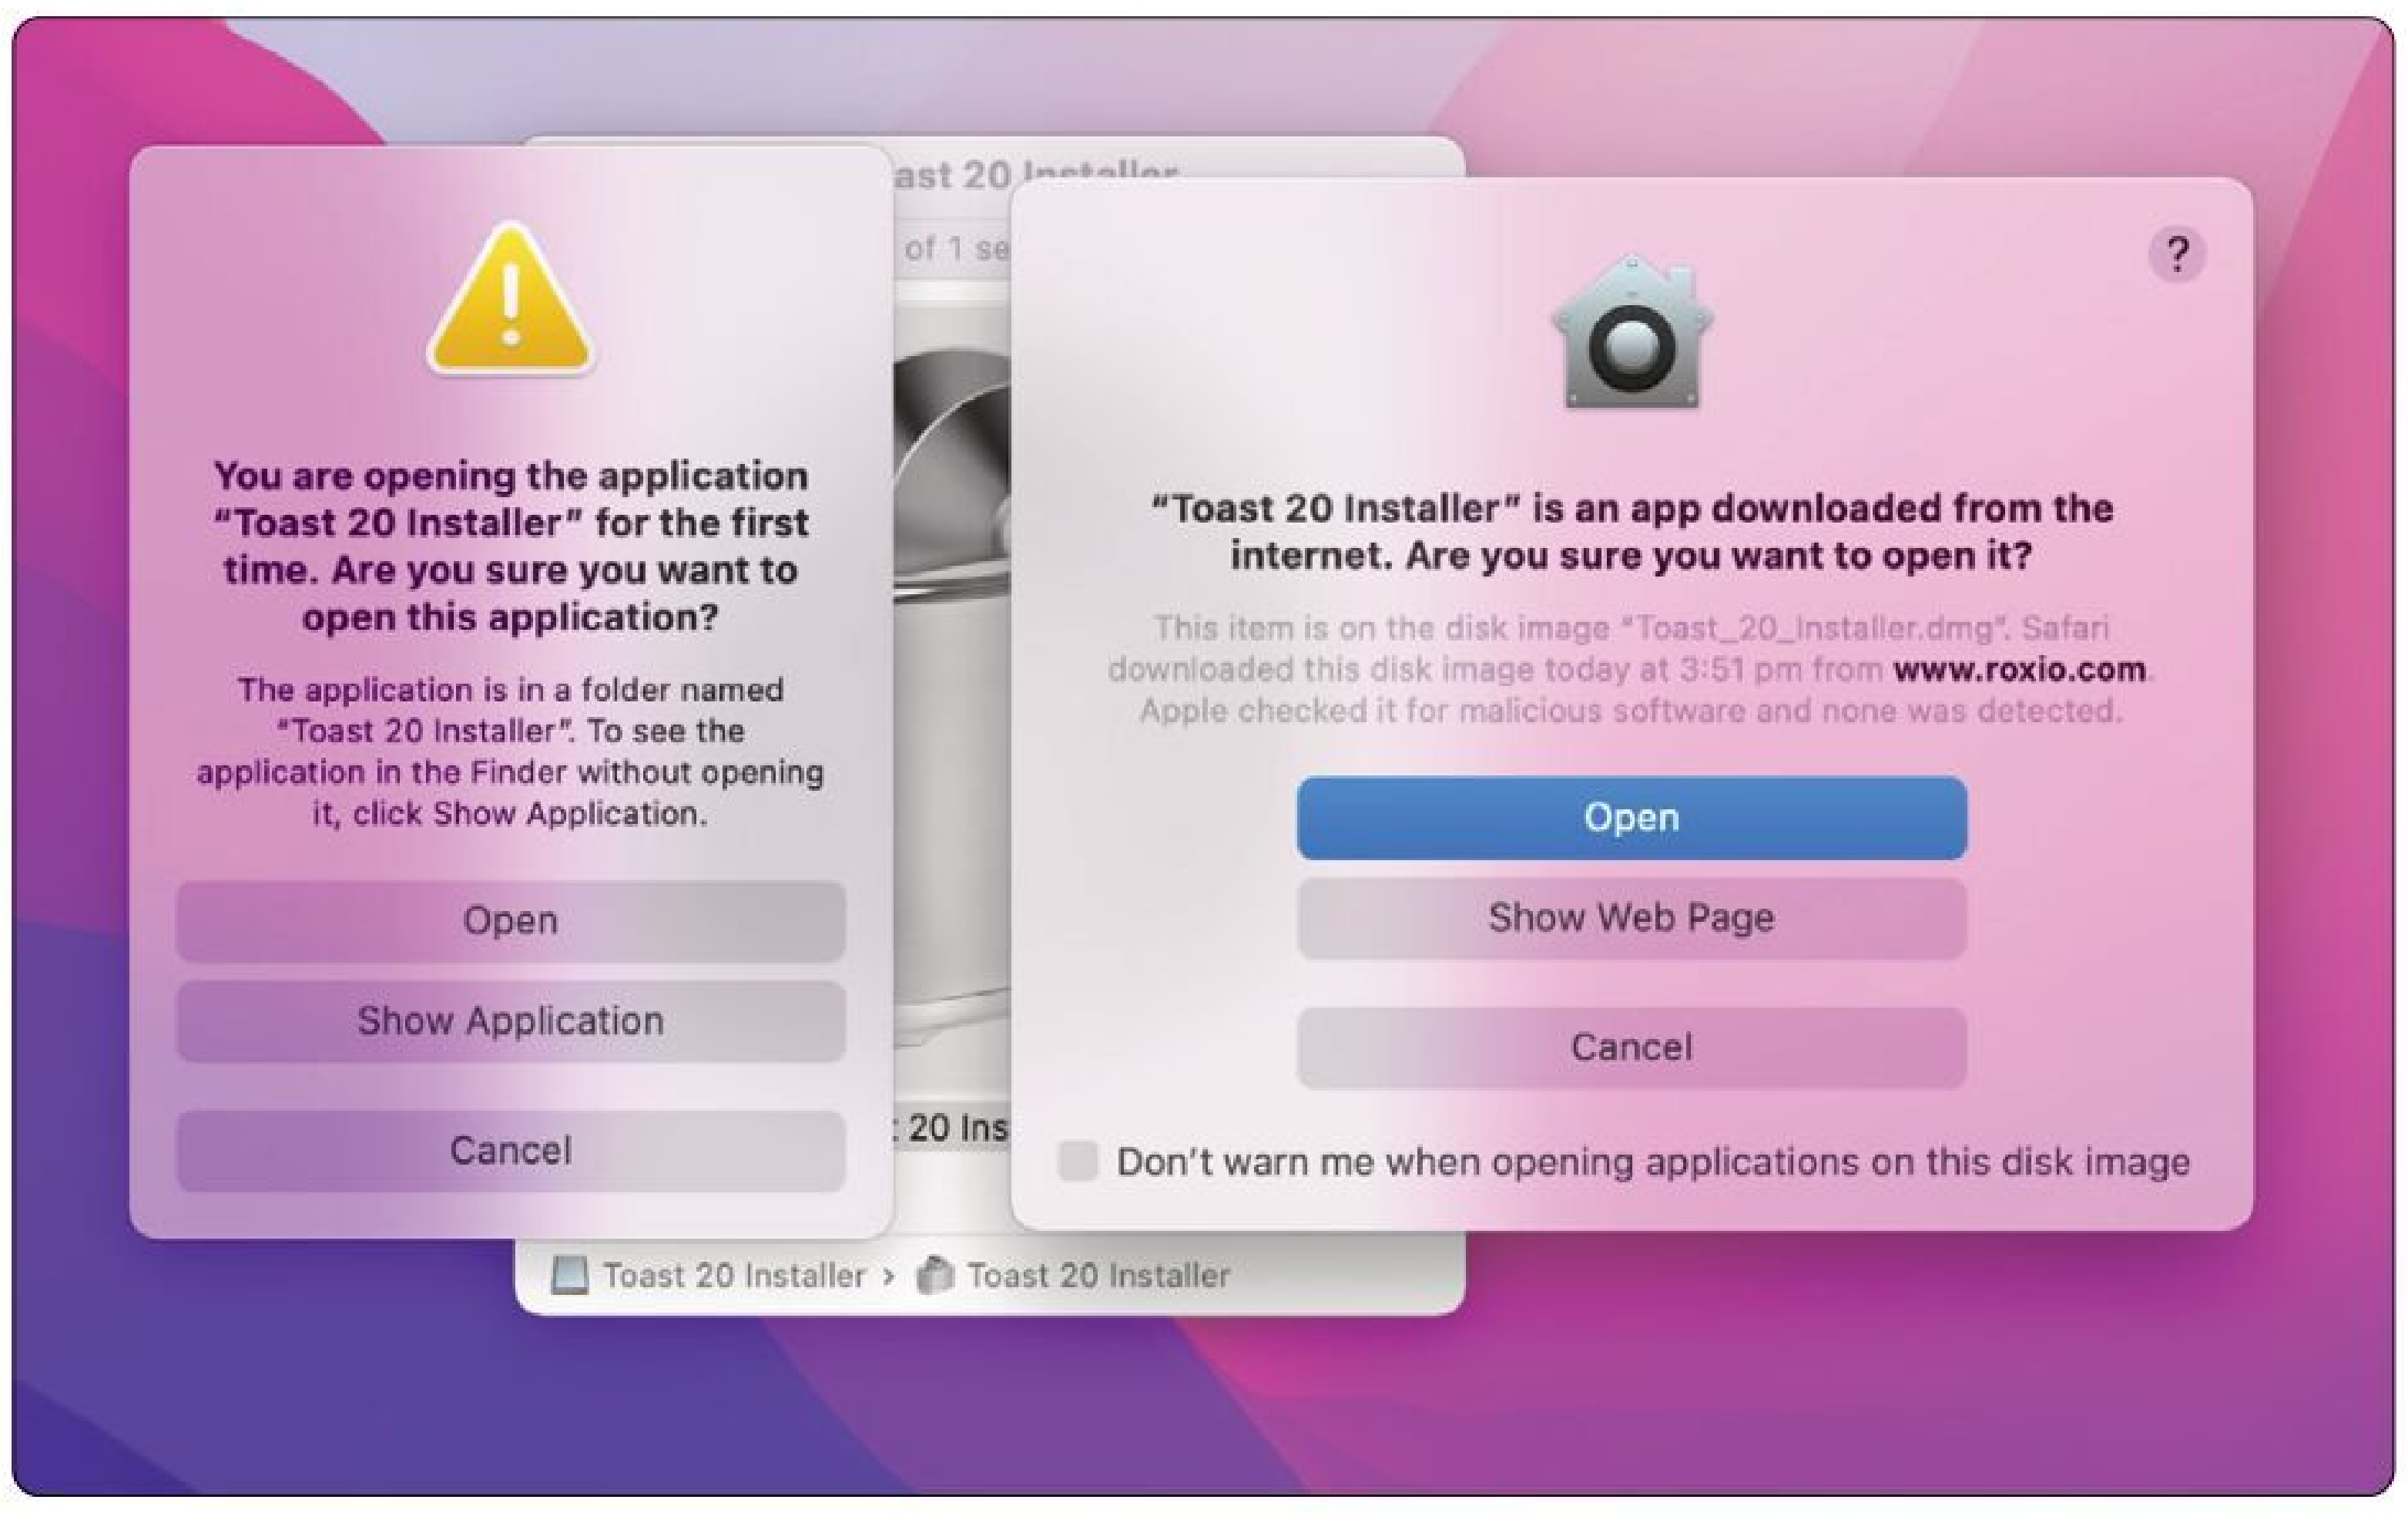
7 If you bought the app from the developer's web store, you might have received a registration code by email. This might be required during the installation process, or you might be able to use the application for free for a set period of time before a code is needed. If you're asked to input a code during the installation, copy and paste it from the email into the fields provided. Having done so, continue to follow the on-screen instructions.



You are opening the application "Toast 20 Installer" for the first time. Are you sure you want to open this application?

The application is in a folder named "Toast 20 Installer". To see the application in the Finder without opening it, click Show Application.

"Toast 20 Installer" is an app downloaded from the internet. Are you sure you want to open it?

This item is on the disk image "Toast_20_Installer.dmg". Safari downloaded this disk image today at 3:51 pm from **www.roxio.com**. Apple checked it for malicious software and none was detected.

6 Because the application was downloaded from a third-party site, you might get warnings such as the ones shown here. If you're sure you downloaded the app from a reputable site, click on Open to proceed. You might also have to open System Preferences > Security & Privacy > General, click the lock (bottom left) and enter your admin password and make sure the lower option is set to 'App Store and identified developers'.

8 The app should launch as expected. If you come across any problems, it's often down to the fact that you are running a more recent version of macOS than the app was designed for, or the app is 32-bit, whereas macOS Monterey will only execute 64-bit apps. If this happens, it's worth checking with the site you downloaded it from; perhaps there's a more recent version to download. Otherwise, you could Google the error and see what other users have to say about the matter. Most apps often produce unique errors depending on the developer and the app, so don't always expect the same solution to work all of the time.

What are PKG Files?

One other popular file type for macOS installations is the PKG file. Although it's not as popular as DMG files. Simply put, a PKG file are installation packages that generally contain automated scripts that will direct the installation of the app in question. They will take you through a kind of setup wizard and create a multi-step installation process.

They are usually only used where multiple additional components are required by the app but also when different services are required from macOS or the installation files will be placed in different areas of the Mac's file system.

One more note: Once you've installed any DMG or PKG file, you can delete it from the system. Its job is finished now, and the app is installed. Unless you'd like to keep it in case you install it on another Mac, there's no need to keep hold of it in the Downloads folder. Simply drag it into the bin and then empty the bin to delete it from your system.

The Mac Studio's Key Apps

One of the best things about the Mac Studio is that it comes with a wealth of preinstalled applications, or 'apps'. There's the Safari web browser, the Mail email client, productivity apps such as Calendar, Notes and Reminders, entertainment apps like Apple TV, Music and books, and more. Here we tell you all about them.

Learn more >

Safari
Your Web Browser

Safari is your Mac's built-in web browser. With it, you can explore the worldwide web, enjoy your social media accounts, buy and sell on eBay and more. With macOS Monterey, Safari gets an overhaul with a great new Group Tabs option.

1 This icon opens and closes the sidebar on the left.

2 Here you see how many tabs you currently have open in Safari. Click the four-squares icon to see those tabs as thumbnails in the main window.

3 This icon gives you a menu that lets you make a Tab Group of the tabs you currently have open, or start a new, empty Tab Group to which you can add tabs manually.

4 These two chevrons are your navigation controls, which let you move forward and backward through your browsing history.

5 Click the house icon to take you back to your designated Homepage. Change this Homepage in Preferences > General.

6 A lot of websites use trackers to track your browsing from site to site, in order to target advertising. The Shield icon lets you see what trackers have attempted to track you, and lets you Turn On Private Relay (iCloud+ required).

7 This is the URL Bar. Enter the website address of your choice or a search term that you wish to look up into this bar, then tap the Return key.

8 If a web page fails to load properly or you wish to check if it has updated, you can refresh it by clicking on this button and reloading.

9 Click on the Sharing icon to see your options for sharing the page you're viewing; adding it to Notes, making a Quick Note and options for Add Bookmark and Add to Reading List.

10 Click the + icon to open a new, blank tab. You can then go to a new website without closing the one you're currently viewing.

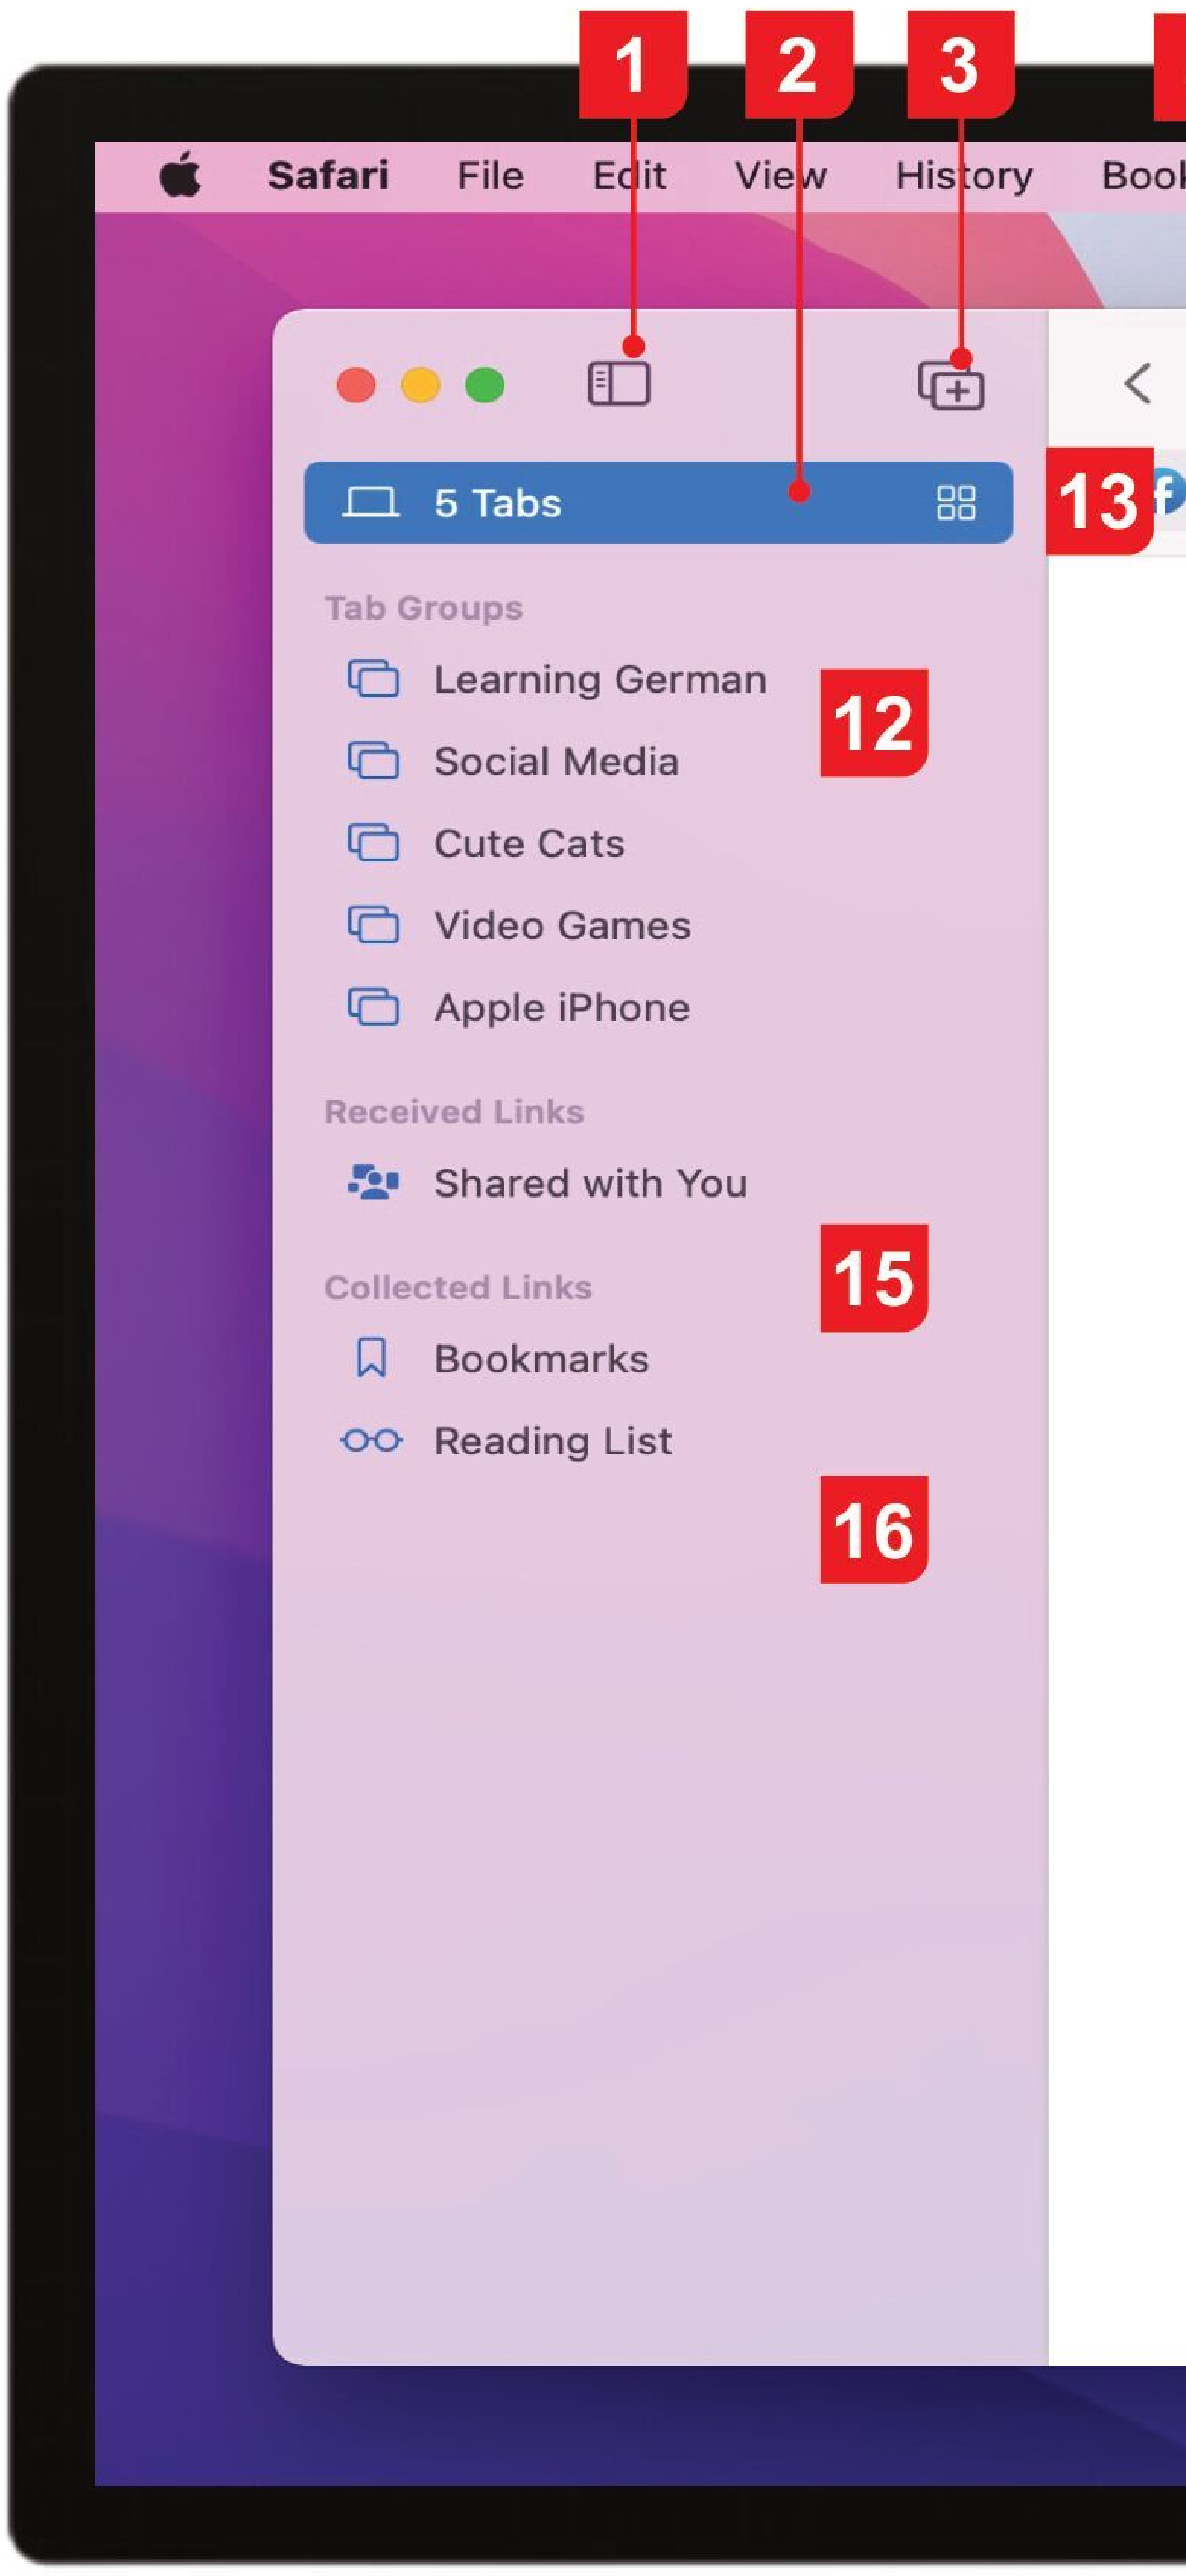
11 This takes you to the Tab Overview, showing all your open tabs as thumbnails in the main window. Click on one to open it.

12 Your Tab Groups. Click a group to close the tabs you currently have open, and open the group of tabs you selected. To return to the tabs you had open before, click the 'X Tabs' option above it (Item 2).

13 These are sites that you've pinned to your tab bar, where they remain. Click on one to open that tabbed site.

14 These are your currently open tabs. Click on one to open it, hover over the tab and click the 'X' on the left-hand side of the tab to close it, and click the '+' icon (Item 10) to open a new one.

15 If someone shares a link with you in the Messages app, it appears here.



16 Click these links for a list of your Bookmarks or sites you added to your Reading List. After doing so, click the chevron in the top-left of the sidebar to return to the sidebar shown here.

17 This is where the web page you're viewing is displayed. You can then scroll up and down by using the scroll function on your mouse or trackpad, and navigate to new pages by clicking on links, which can be menus, buttons, text or images.

Full Screen.

Browse in full-screen mode by clicking on the green gumdrop in the top left corner, selecting Enter Full Screen in the View menu or pressing fn-F. To go back to regular browsing, repeat any of these options.

macOS Monterey Preview - Apple (UK)

macOS Monterey. Connect like never before. Exciting FaceTime updates. An all-new Safari. Powerful new ways to work across devices. And much more.

macOS Monterey is the 18th major release of macOS, Apple's desktop operating system for Macintosh computers. The successor to macOS Big Sur, it was announced at WWDC 2021 on June 7.

2 If you want to search for something on the web, instead of typing a URL in the URL bar, type what it is you're searching for, then hit Return. Your search results show relevant sites. Scroll up and down the list and click one to go to it.

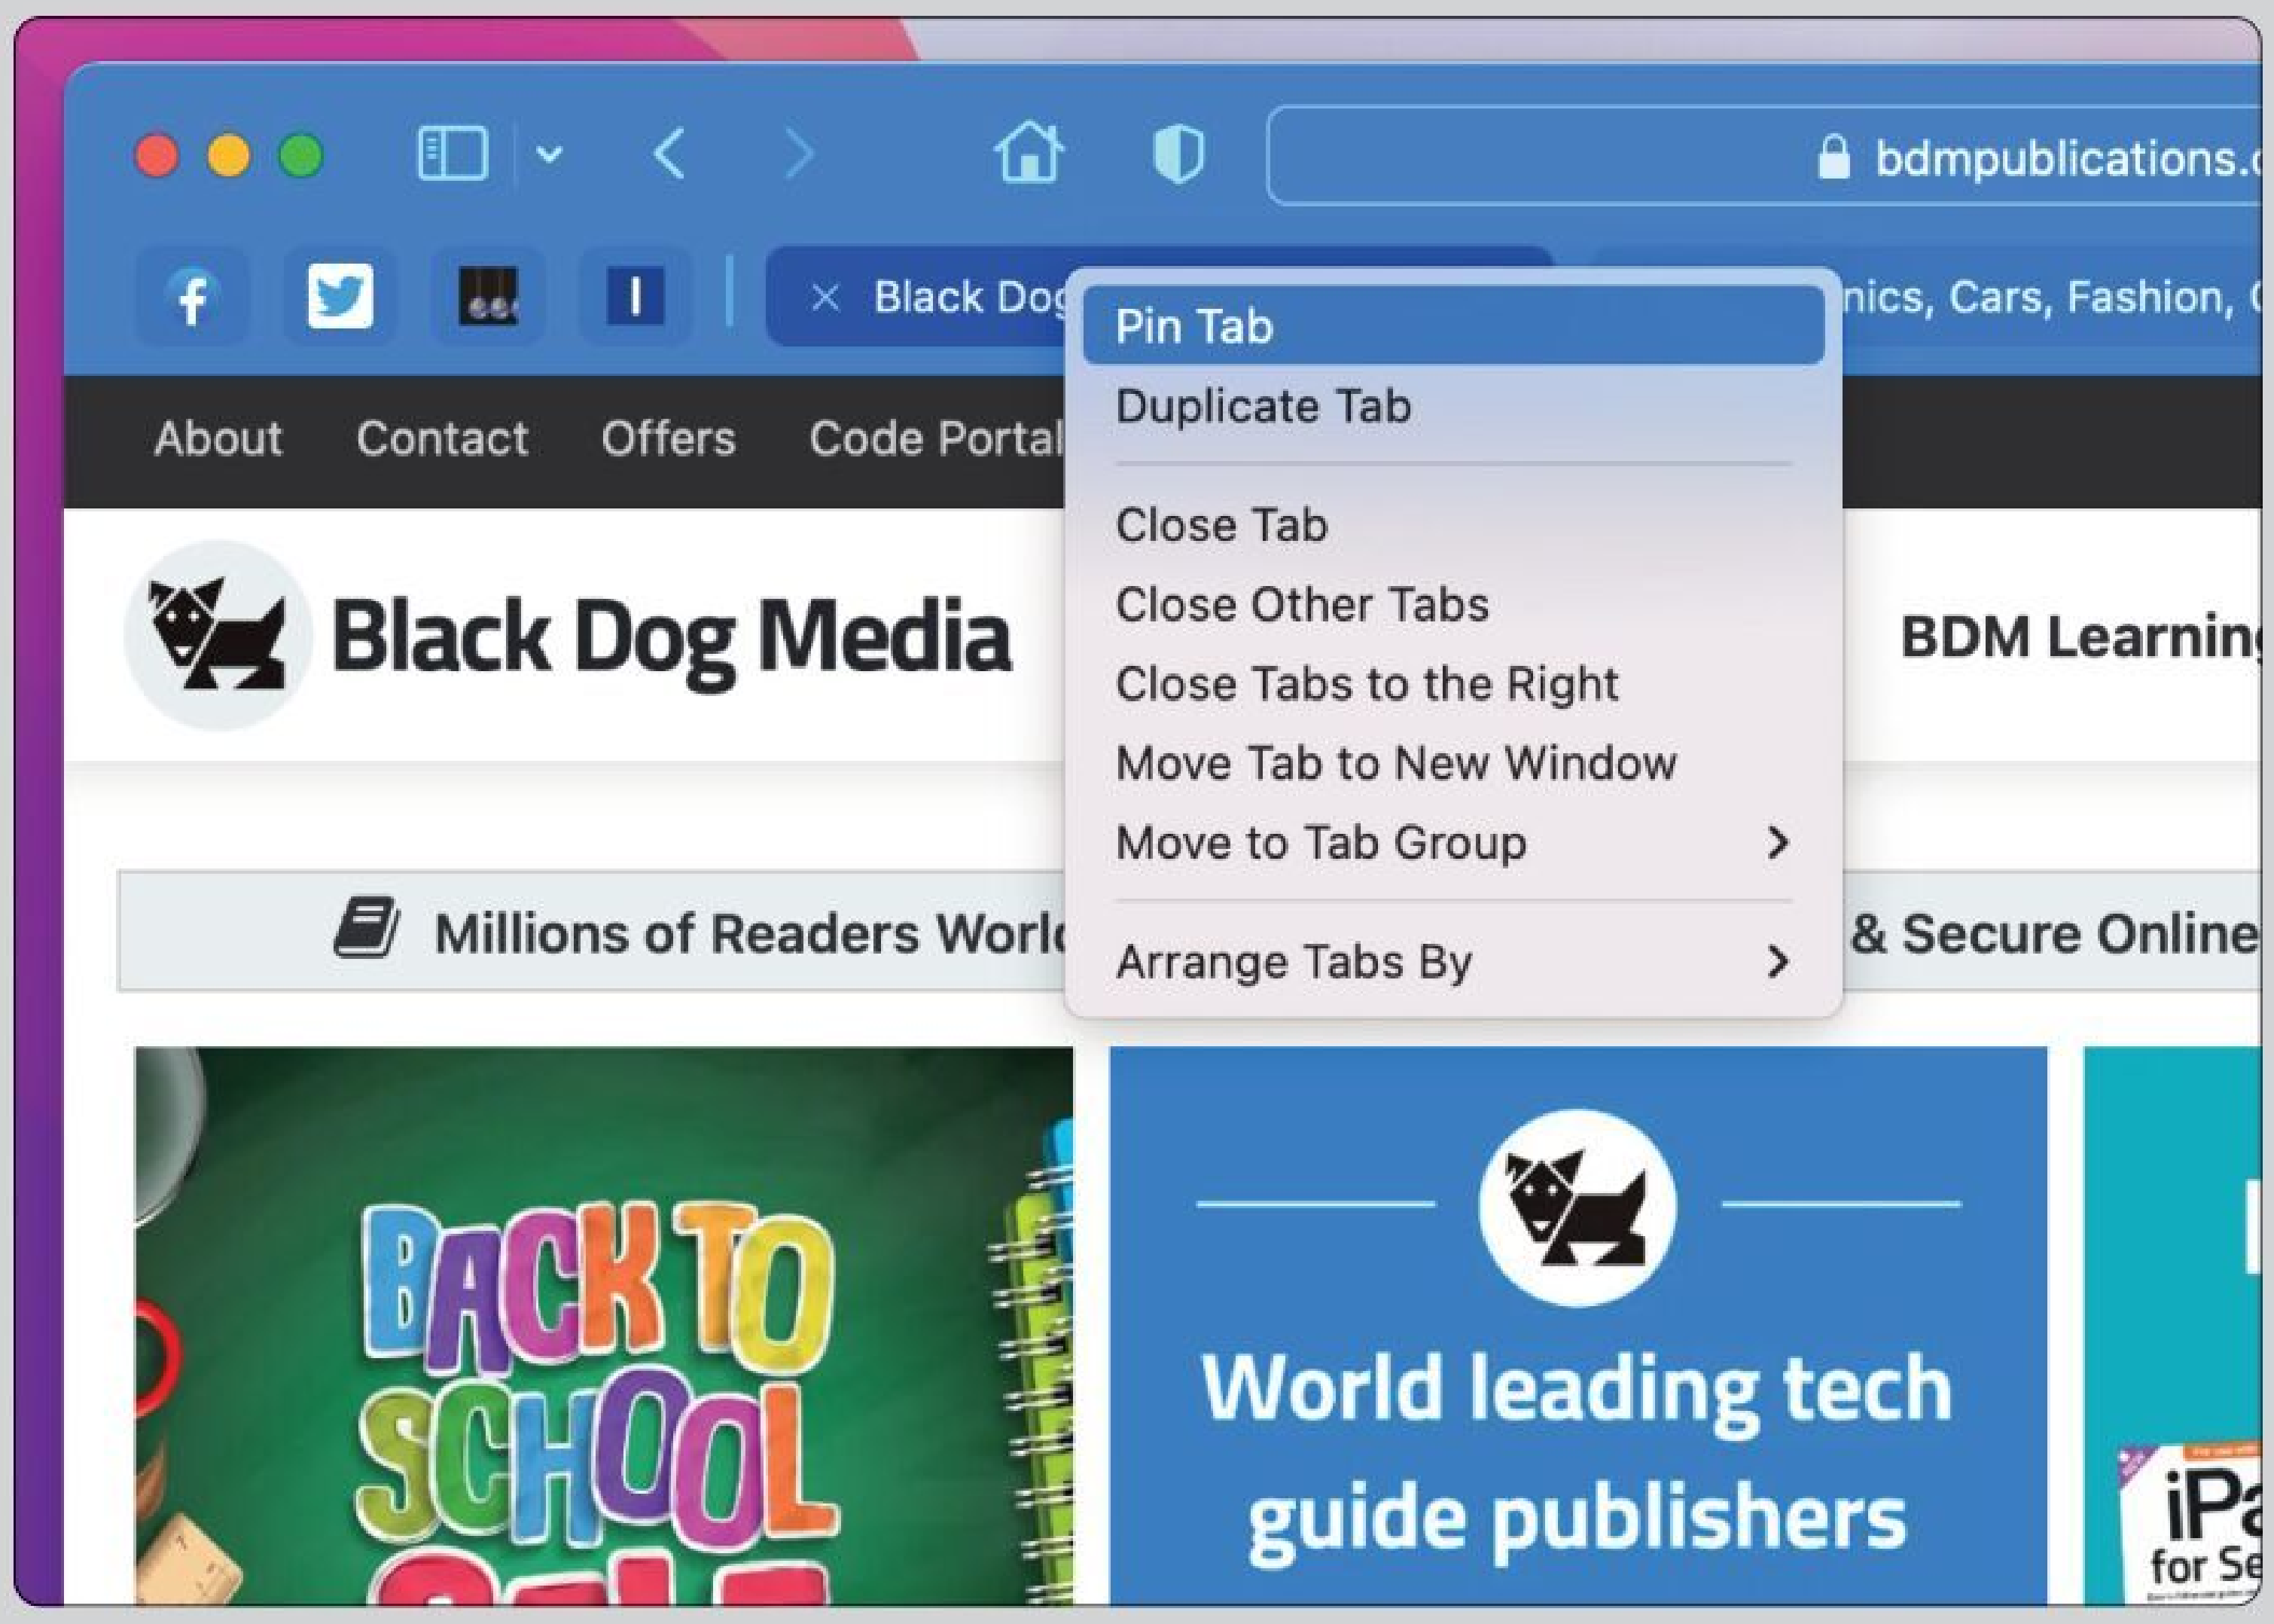
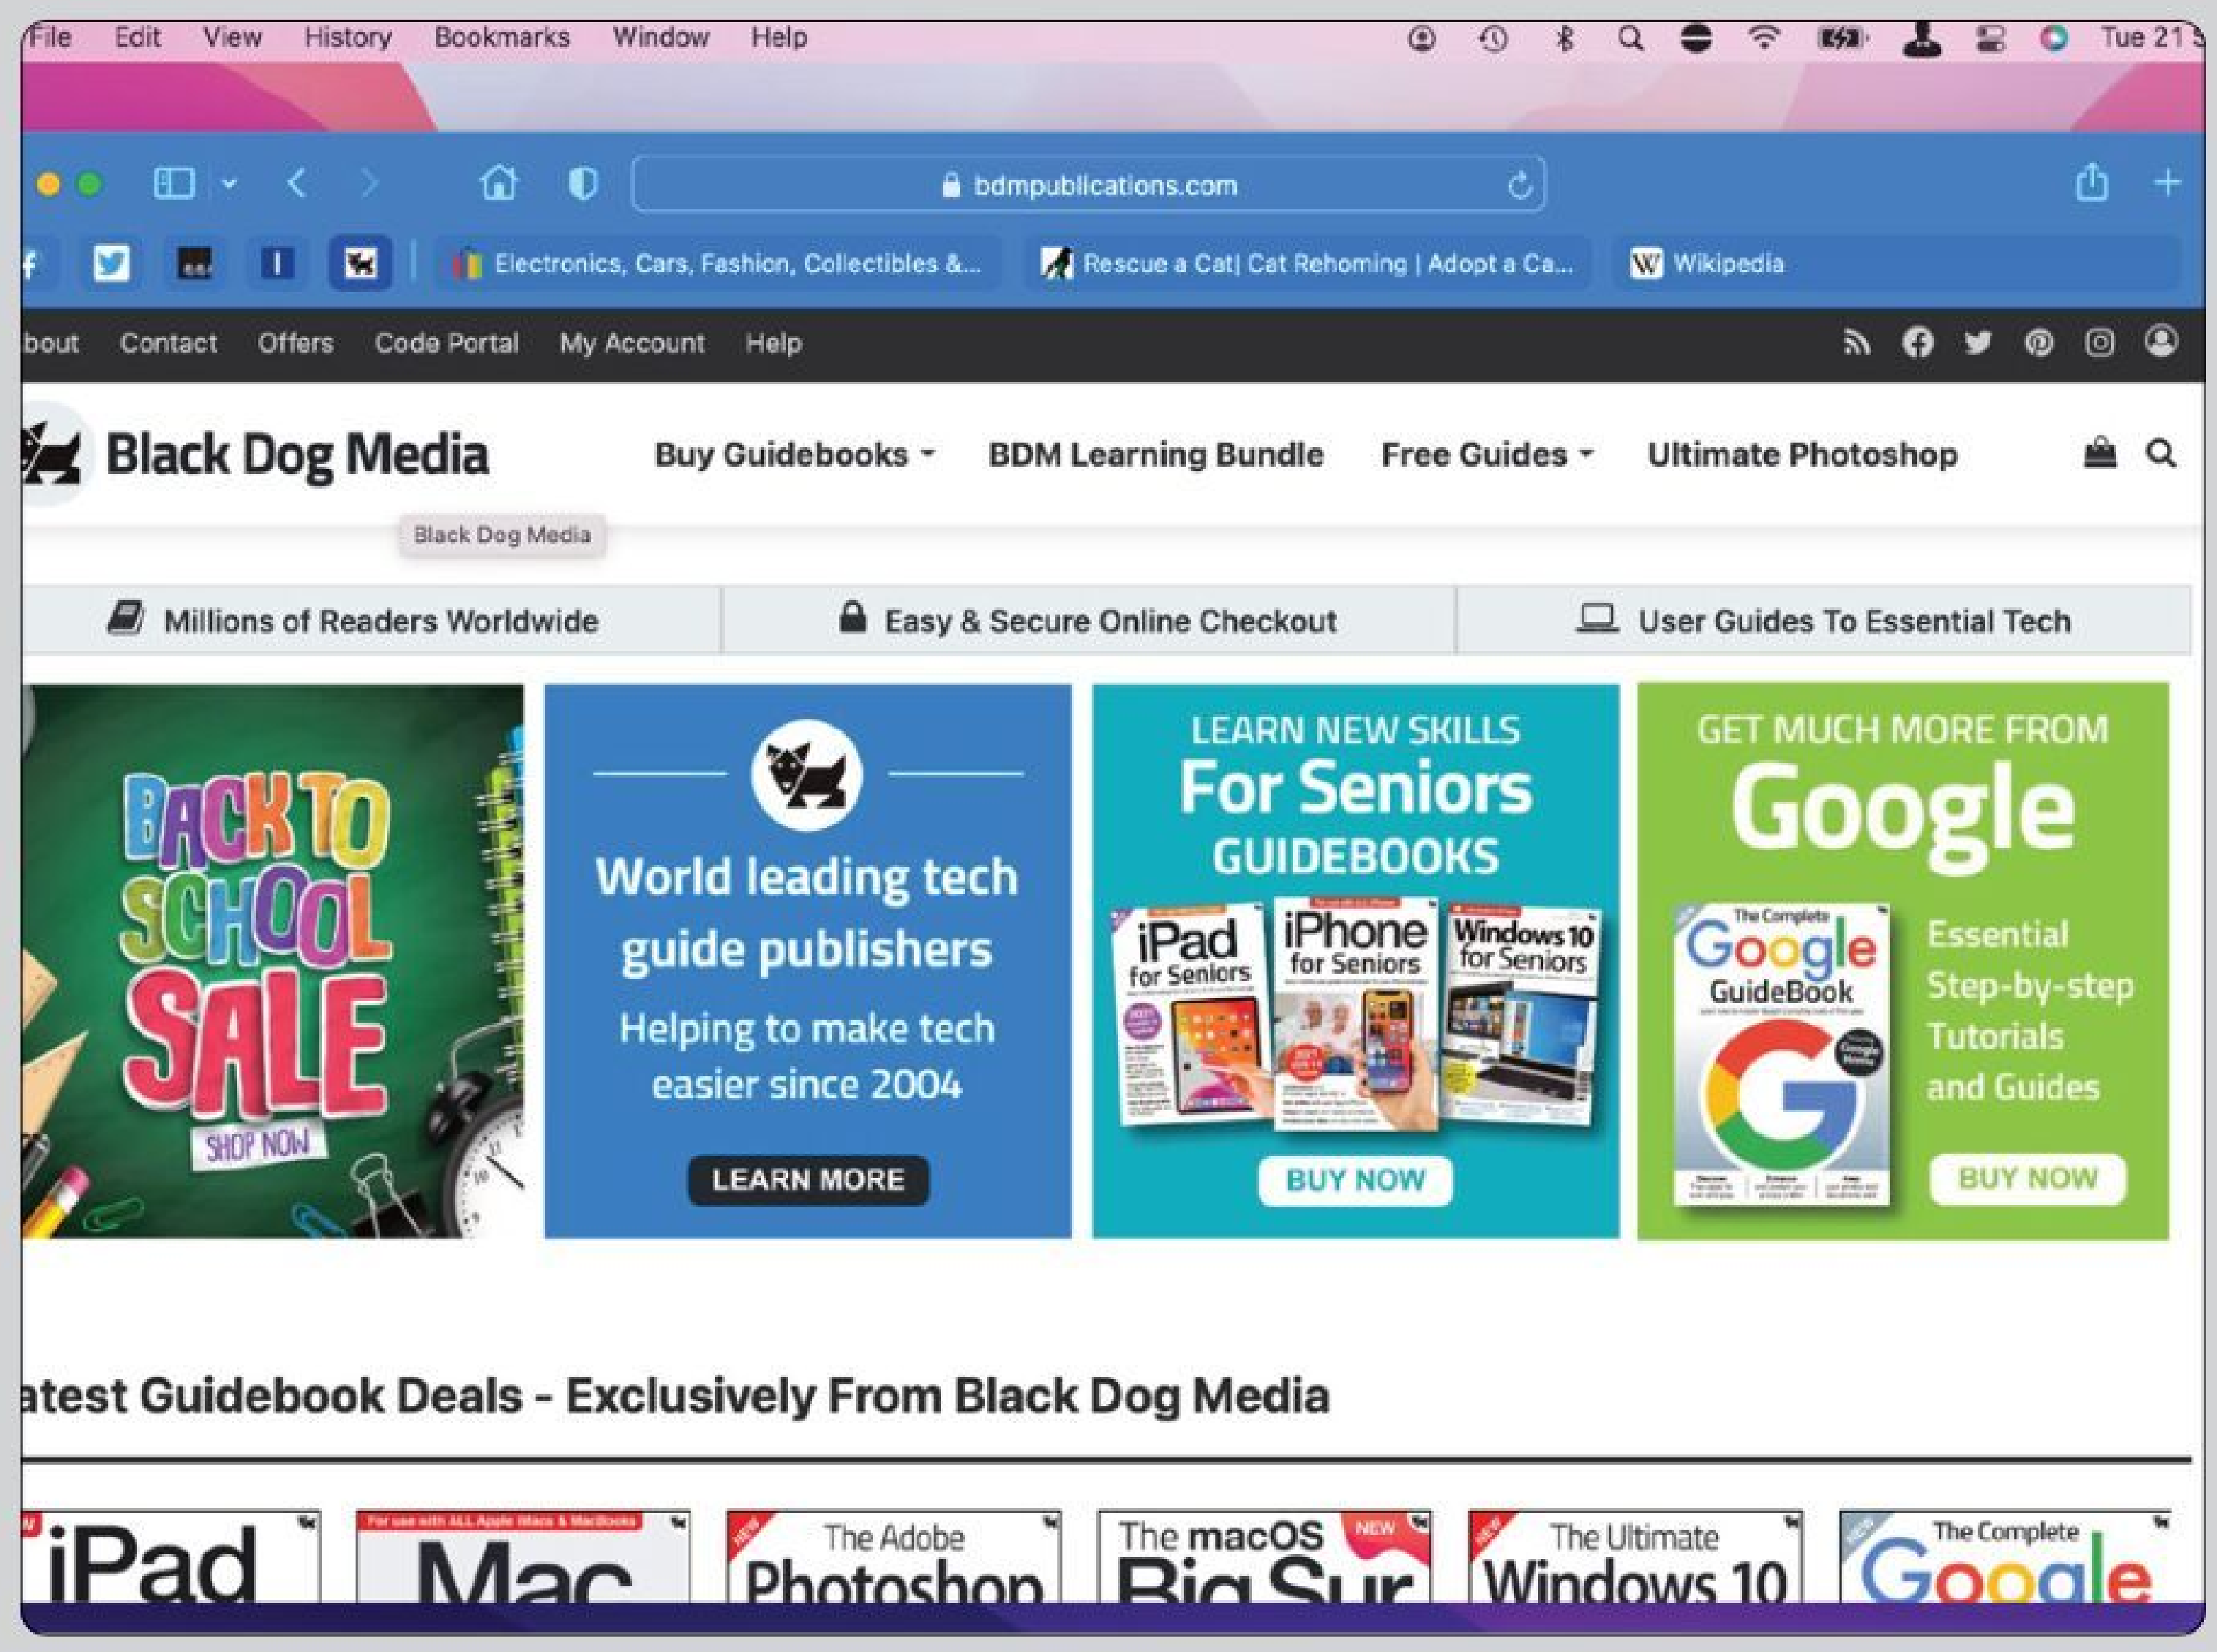
You can show or hide the Tab, Favourites and/or Status Bar (a strip along the bottom of the window showing the full URL) by clicking the View option in the menu bar atop the screen, and selecting the option in question.

Pinned Sites.

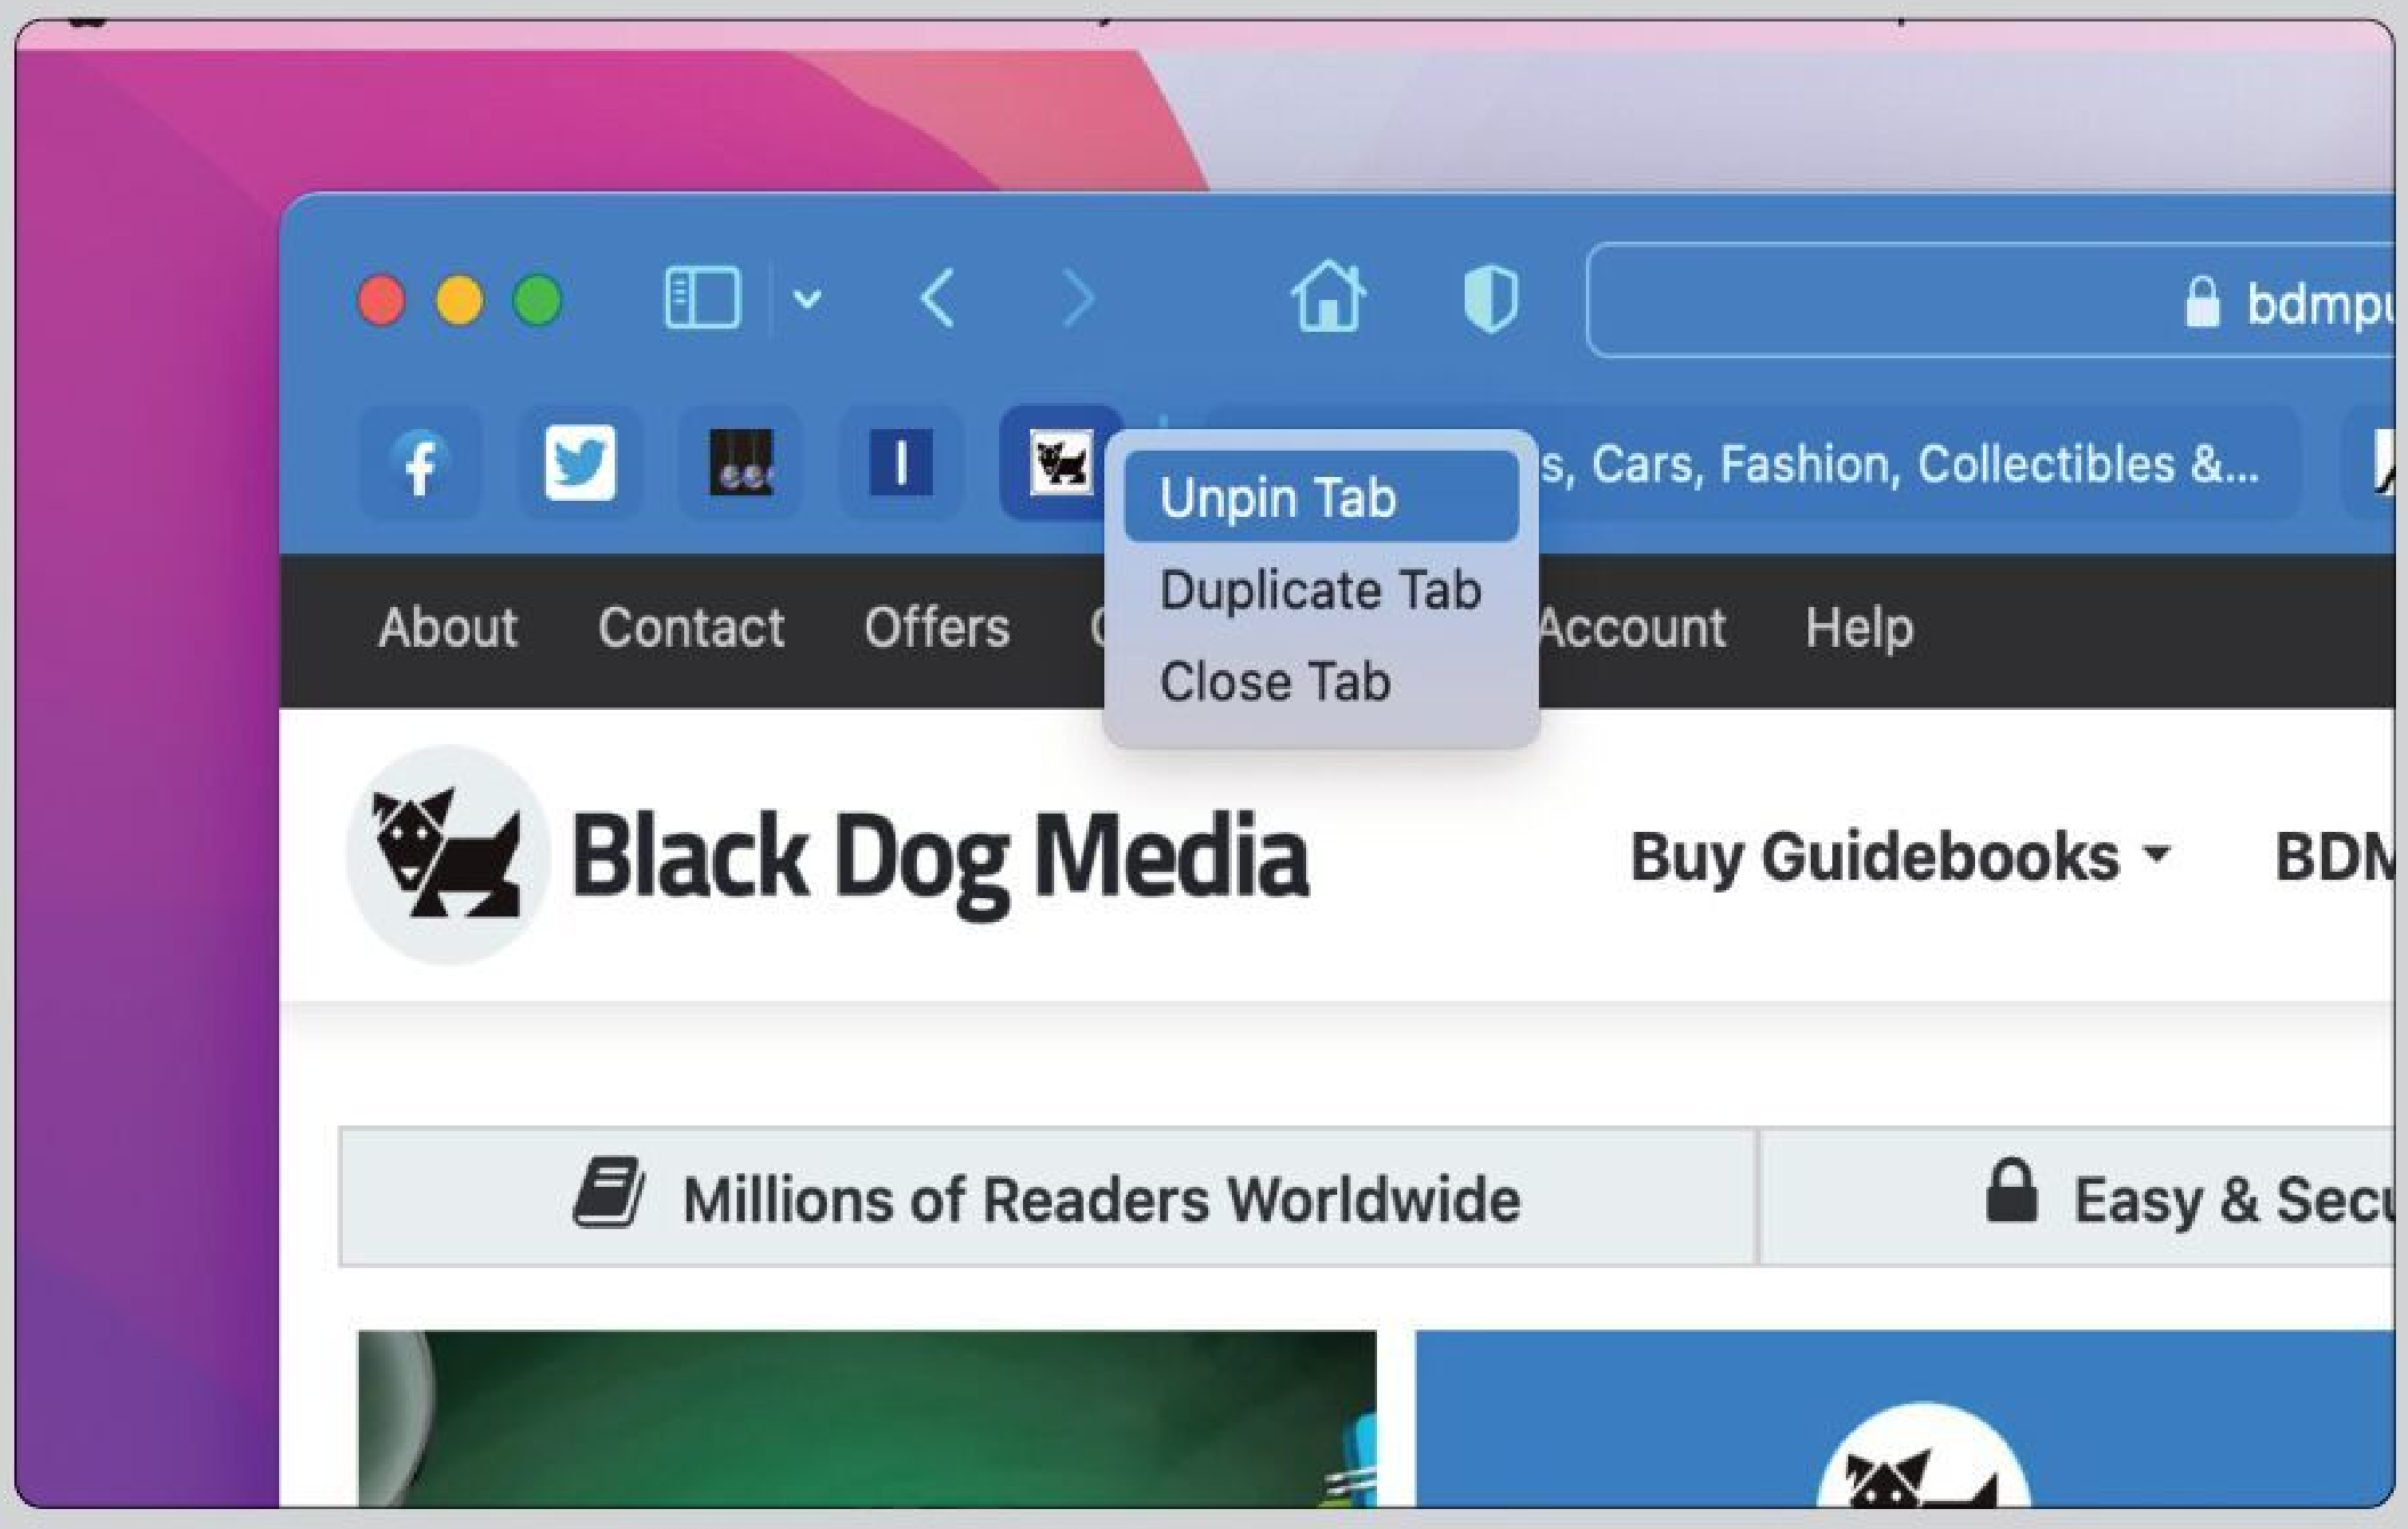


Pin Tab
Duplicate Tab
Close Tab
Close Other Tabs
Close Tabs to the Right
Move Tab to New Window
Move to Tab Group
Arrange Tabs By

If your tab bar isn't showing, go to the View menu and select the Always Show Tab Bar option near the top. Now open the site you intend to pin and right or ctrl-click on its tab. From the pop-up menu, select the Pin Tab option.



The site gets a small tab in the left-hand side of the tabs bar. This is always in place, ready for you to click on it and open the site. You can pin multiple sites in this way. They all appear as small tabs, showing a symbol or letter.



Unpin Tab
Duplicate Tab
Close Tab

To remove a site's pinned tab, right-click or Ctrl-click on it and from the pop-up menu, select Unpin Tab. The previously pinned tab then becomes a regular tab. You can reorder your pinned tabs by dragging them within the tabs bar.

Safari Extensions

You can add great extensions to Safari to expand its functionality and speed up your workflow. Open Safari's Preferences window (Safari > Preferences) and select Extensions. Click on the More Extensions button to access the App Store's extensions page, from where they can be installed.

Mail
Send & Receive Email

Monterey has a great bundled email application, so sending and receiving emails is as easy as typing a message and clicking a button. Here's how to get the most from the Mail app.

1 This is the sidebar, which lets you select mailboxes, see emails from VIP senders or those which you've flagged, and more. You can resize and even close this sidebar by clicking and dragging the divider between this and your emails list.

2 The list of emails contained in the currently selected mailbox, in this case, All Mailboxes. The number of emails in the box, and the number of unread emails, are shown. You can resize this column by clicking and dragging its left or right edge.

3 Click this circular icon to toggle between showing all emails and only unread emails.

4 This button downloads new emails. You can set your Mail app to check automatically but this button does so manually.

5 When you want to write a new email from scratch, click on this button to open a blank one.

6 This button archives the selected message. Very useful if you want to make sure you don't delete it.

7 If you want to throw away the currently selected email, click here to send it to the Trash folder.

8 This button moves the selected email to your junk mail folder. Use it to help the Mail app identify 'spam', which is junk emails.

9 This button lets you reply to the currently selected email, with the reply going to its sender only.

10 Use this button to reply to the sender of the currently selected email, but also to everyone else that received it.

11 If you want to forward an email to a third party, that is, not the person who sent it to you, use this button.

12 Click the flag to mark the currently open email with a flag of this colour. Click the chevron next to the flag for a pull-down menu that lets you select a different flag.

13 Use this button to silence notifications on threads that are sending you too many alerts.

14 This pull-down menu is another way of moving an email into another mailbox or folder.

15 Information about what mailbox the open email is in, what time it was received and the paper clip shows it has attachments.

16 To search for a specific subject, person or word/phrase in your emails, use the field here.

17 These are email inboxes and as you can see, we have two email accounts set up in Mail; however, you can have more or fewer if you prefer.

18 Your emails appear here. Unread emails are shown with a blue dot to the left. Click on an email to open it in the main window.

19 If the email's sender is in your Contacts and has a picture, it appears here. If not, it's just a grey circle with an initial in it. To the right is information about who sent and received the open email, and its subject.

20 Hover over the top of the open email and the icons numbered 7-11 are repeated. Their functionality is the same.

21 If the open email has attachments, click here for a pull-down listing them all, from where you can select and open them.

22 If you've identified senders as VIPs, they're listed here. Click 'VIPs' to open and close this section, and click on a VIP name to see emails from that person.

23 Here you can access emails you've flagged, or those you have sent from your email accounts.

24 Various other mailboxes associated with the accounts you've set up in Mail.

25 When new emails are downloading or sending, it says so here.

Hi folks,

A few things we need to discuss regarding the next project.

* Furniture for the new office building.
* Finalising the lease.
* Talk to the contractor about our deadlines.
* Make sure the staff know what's expected of them.

Does anyone have anything to add to this?

Regards,
Ian Osborne

4 Once you've finished typing your letter, click the Send button in the top left corner of the email panel to send it on its way. Email is usually sent very quickly, and your addressee should receive it within a couple of minutes, as long as there are no issues with their connection or provider.

Replying to & Forwarding Email

If someone you know sends you an email, you'll probably want to reply to them. Simply click on the email so you are viewing the text of it, then at the top of the screen you'll find a row of three buttons, as you can see here.

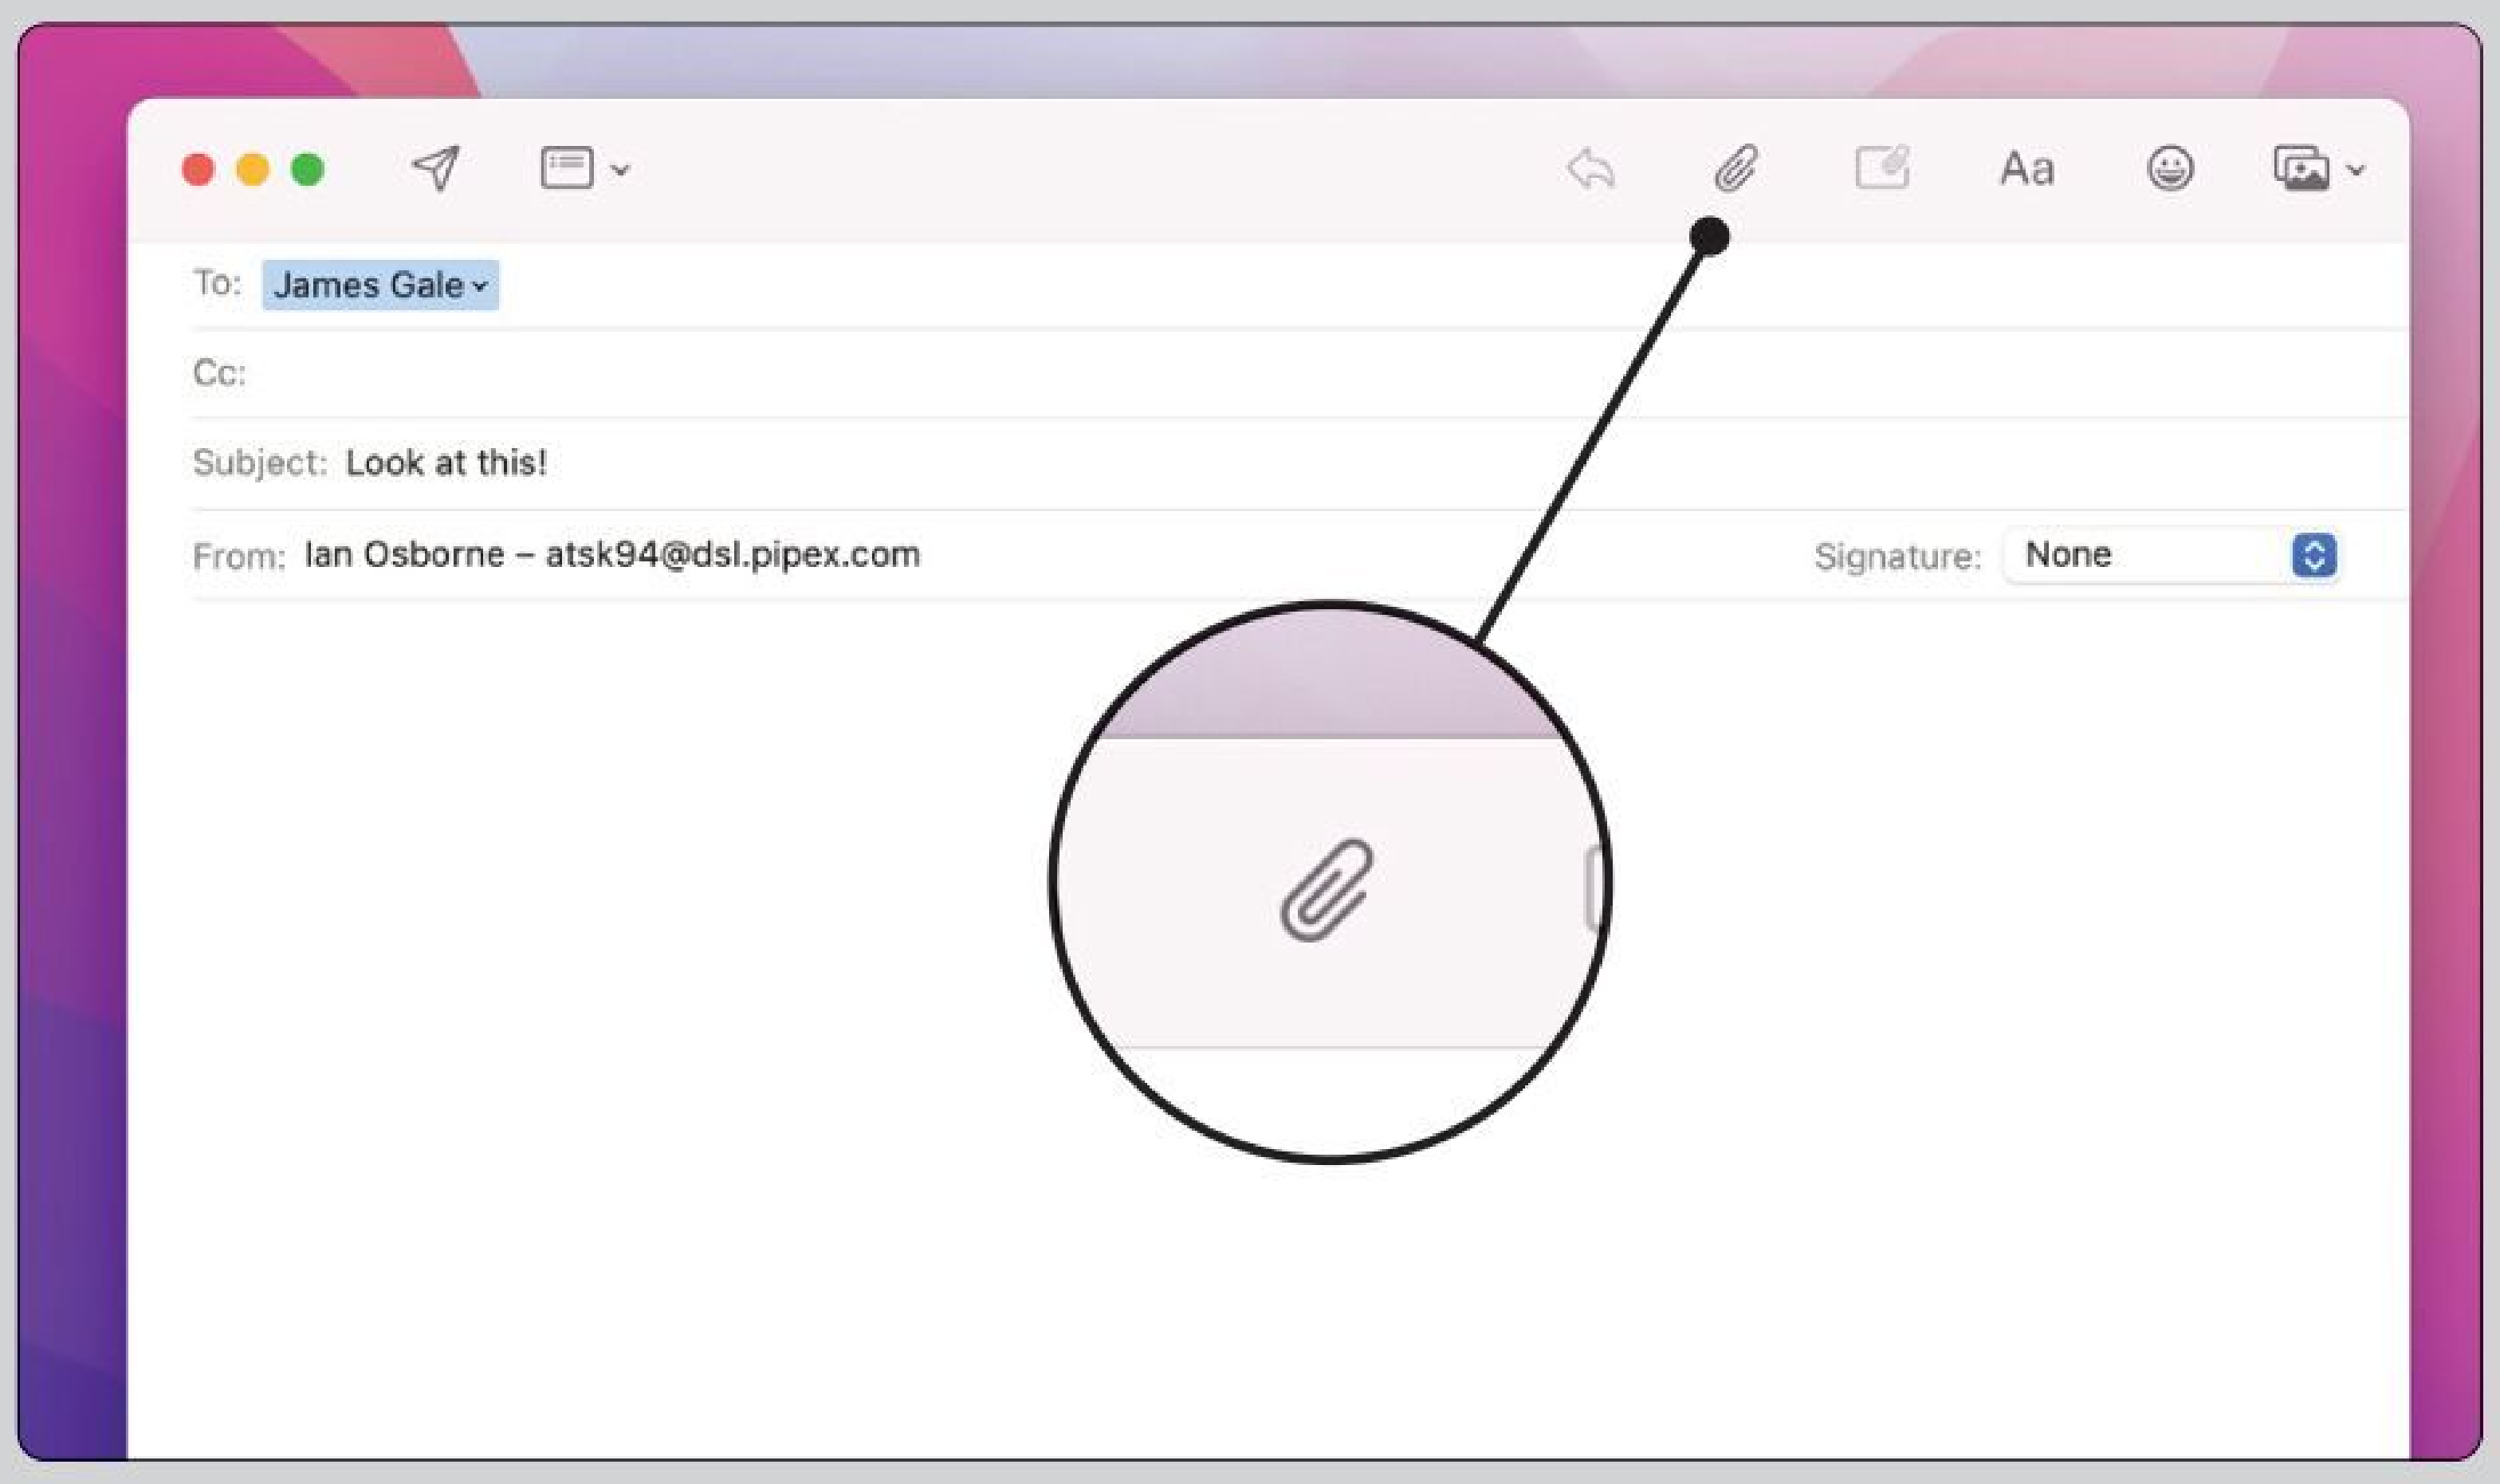
The leftmost one has a single left-pointing arrow on it. This is the Reply button. If you click on this you'll see a window pop up that looks a lot like the window for a new email, but it will have the responder's email address already in the To: box.

Next to the Reply button is a similar button with two left arrows on it. This is the Reply All button; use this with extreme care. If you have been sent an email that has also been sent to a number of other recipients, hitting Reply All will send your reply to everyone who received the original mail. Obviously if your reply was meant to be private this is a very bad idea, and has got many people into trouble.

The rightmost button of these three is the Forward button, which is used to send an email you've received to another recipient. Forwarding emails is another thing that requires care; make sure that you don't accidentally send private information to someone who was not meant to receive it.

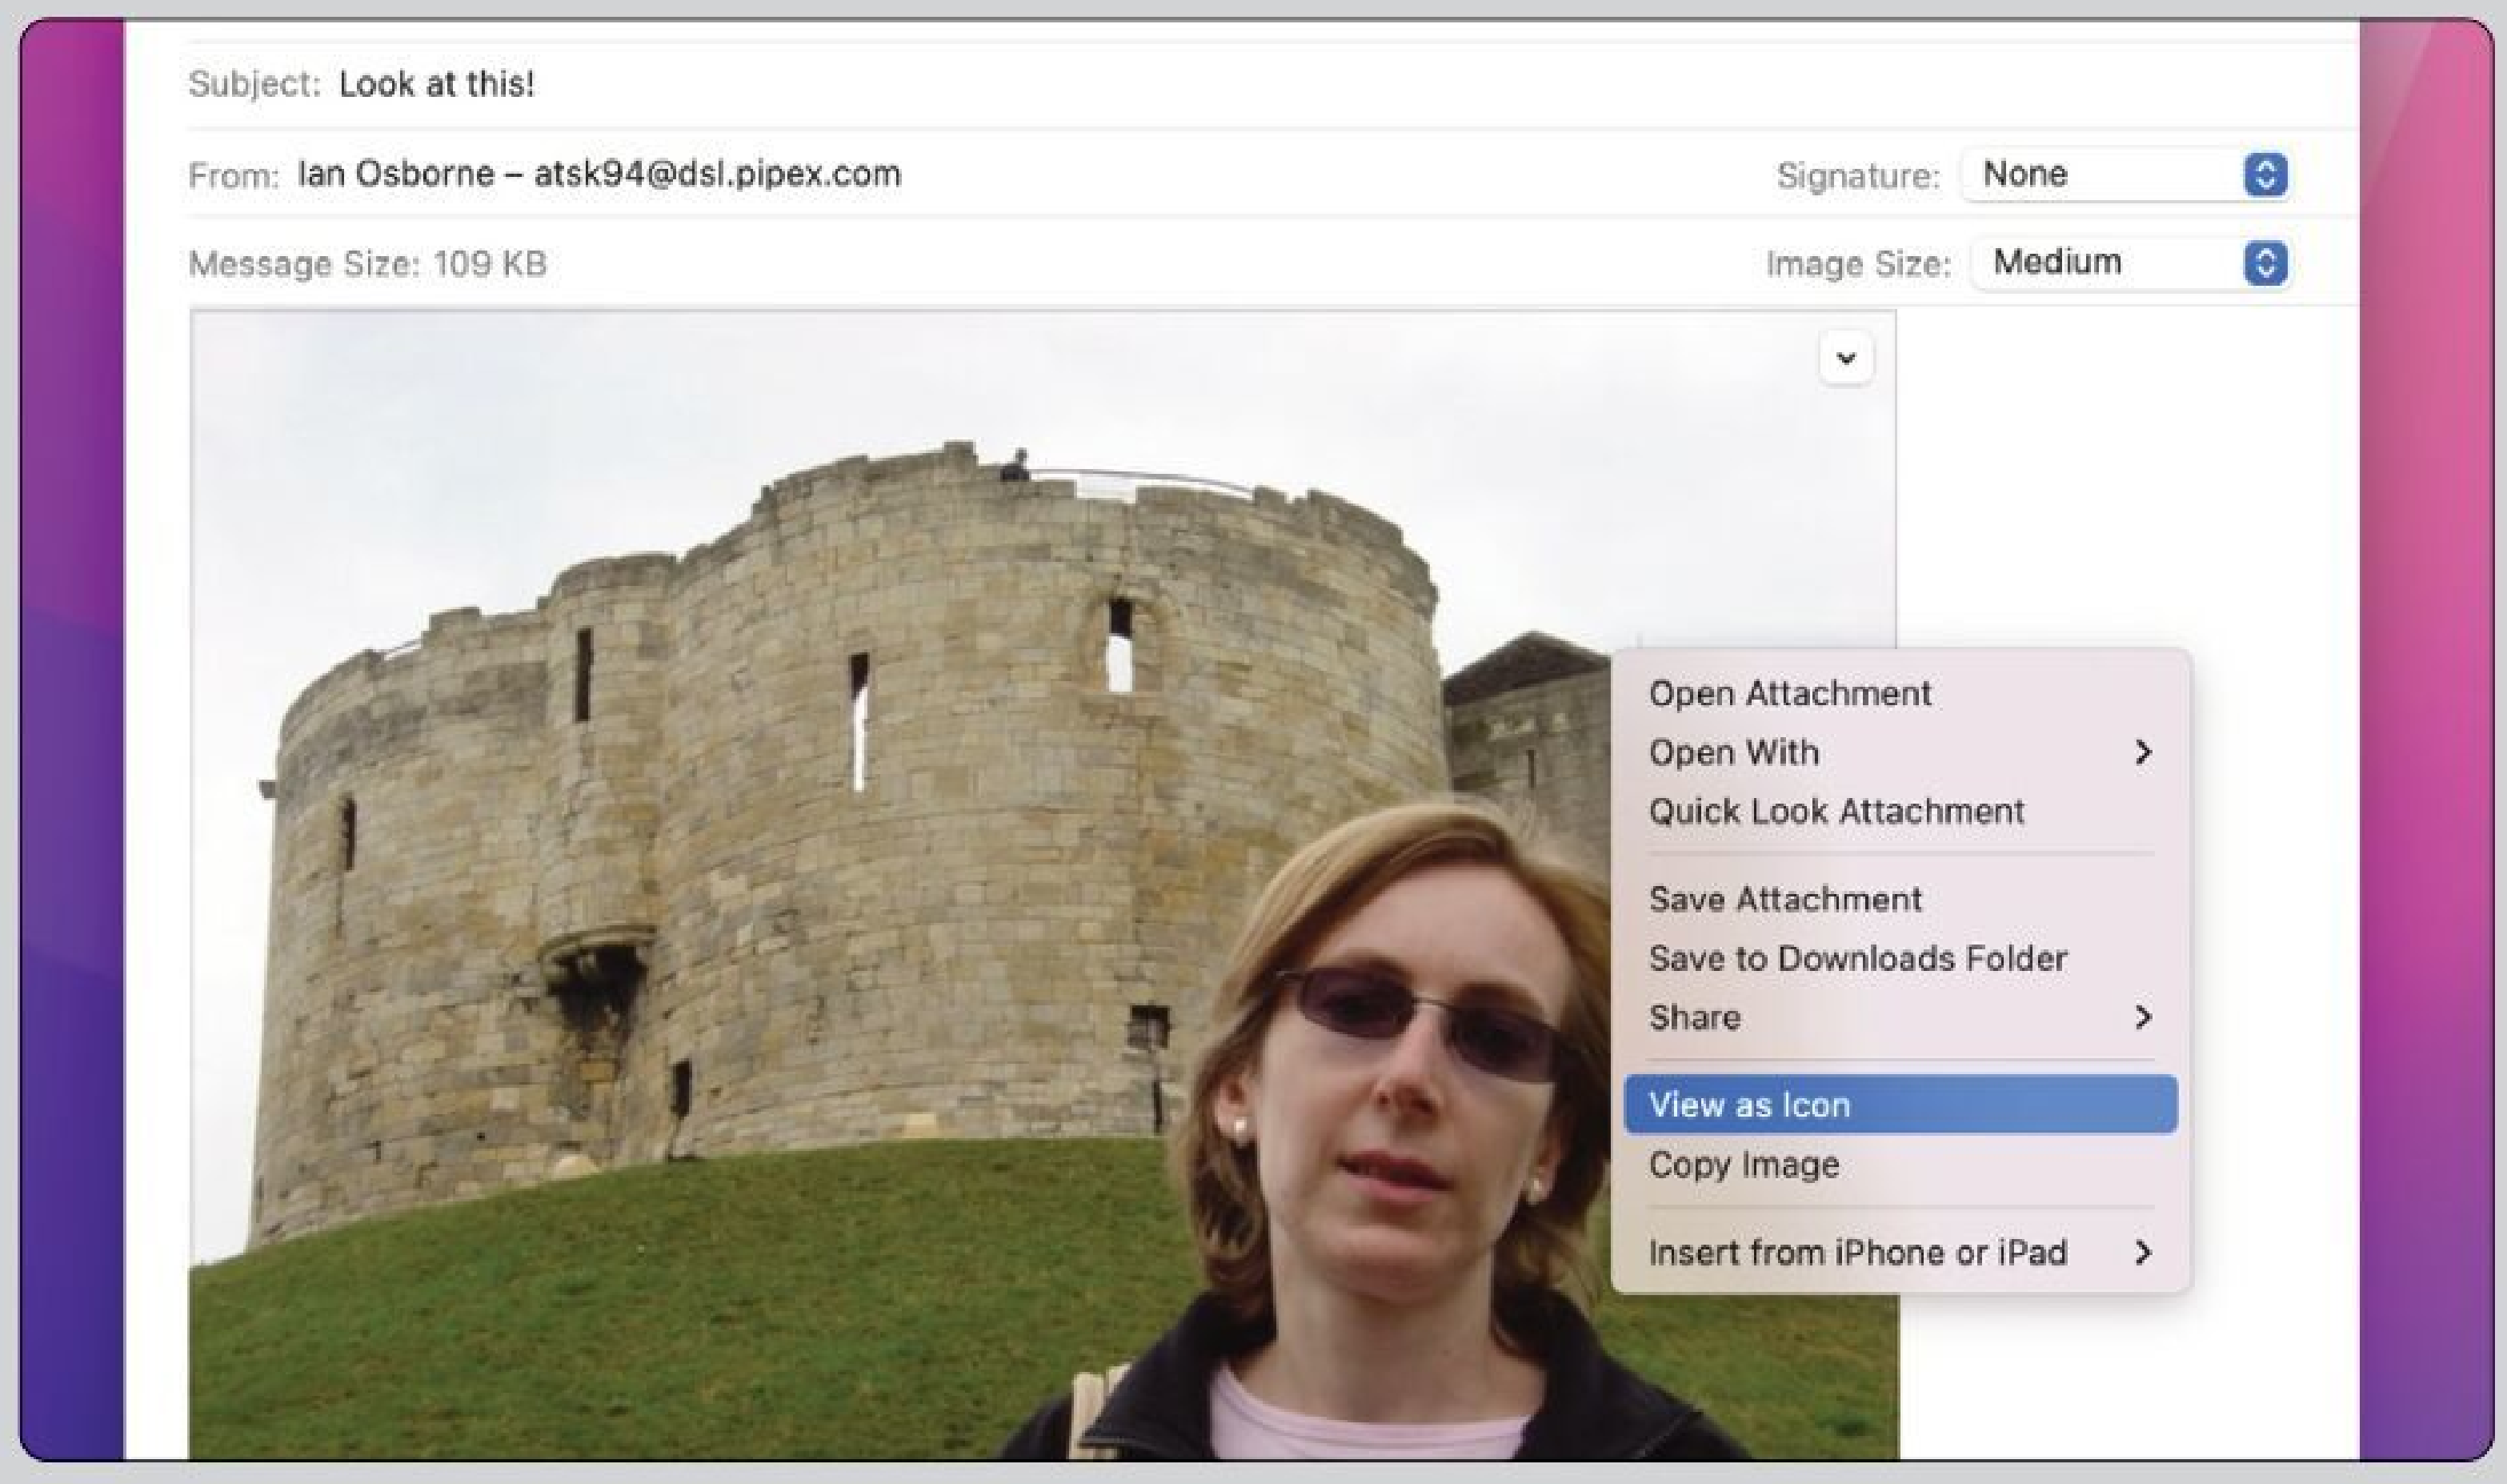
Adding Attachments.

Almost any type of file can be attached and sent over the Internet along with your email.



To: James Gale
Cc:
Subject: Look at this!
From: Ian Osborne – atsk94@dsl.pipex.com
Signature: None

To add an attachment, first start an email (or reply to one you received), and then click on the button bearing the picture of a paperclip, at the top right of the email panel. This will open a Finder window, allowing you to navigate to the file or files that you want to send. Select the ones you want, then click Choose File to attach them.



Subject: Look at this!
From: Ian Osborne – atsk94@dsl.pipex.com
Signature: None
Message Size: 109 KB
Image Size: Medium

In Mail, pictures you've included as attachments are shown in the body of the email for convenient viewing. This means you can turn your email into a mini-illustrated article if you want; or, if you don't want to display it as an attachment, right-click on it and from the contextual menu, choose View as Icon. It can still be opened by the recipient.

The Mail Markup Feature

Cancel
Done
Frank
Bill
John

3 You can now use the interface that appears to add text, drawings, or a range of shapes and symbols directly onto the photo, in the email environment. When you're finished, click the Done button and either mark up more pictures or send your email as normal.

Move to...

Highlight or open an email. In the top-right corner there's a pull-down menu marked 'Move to...' in the toolbar. If your Mail window is small, you might have to click on a chevron and select it from a menu. This lets you move it to one of your folders including Trash, Junk, and folders you've set up yourself.

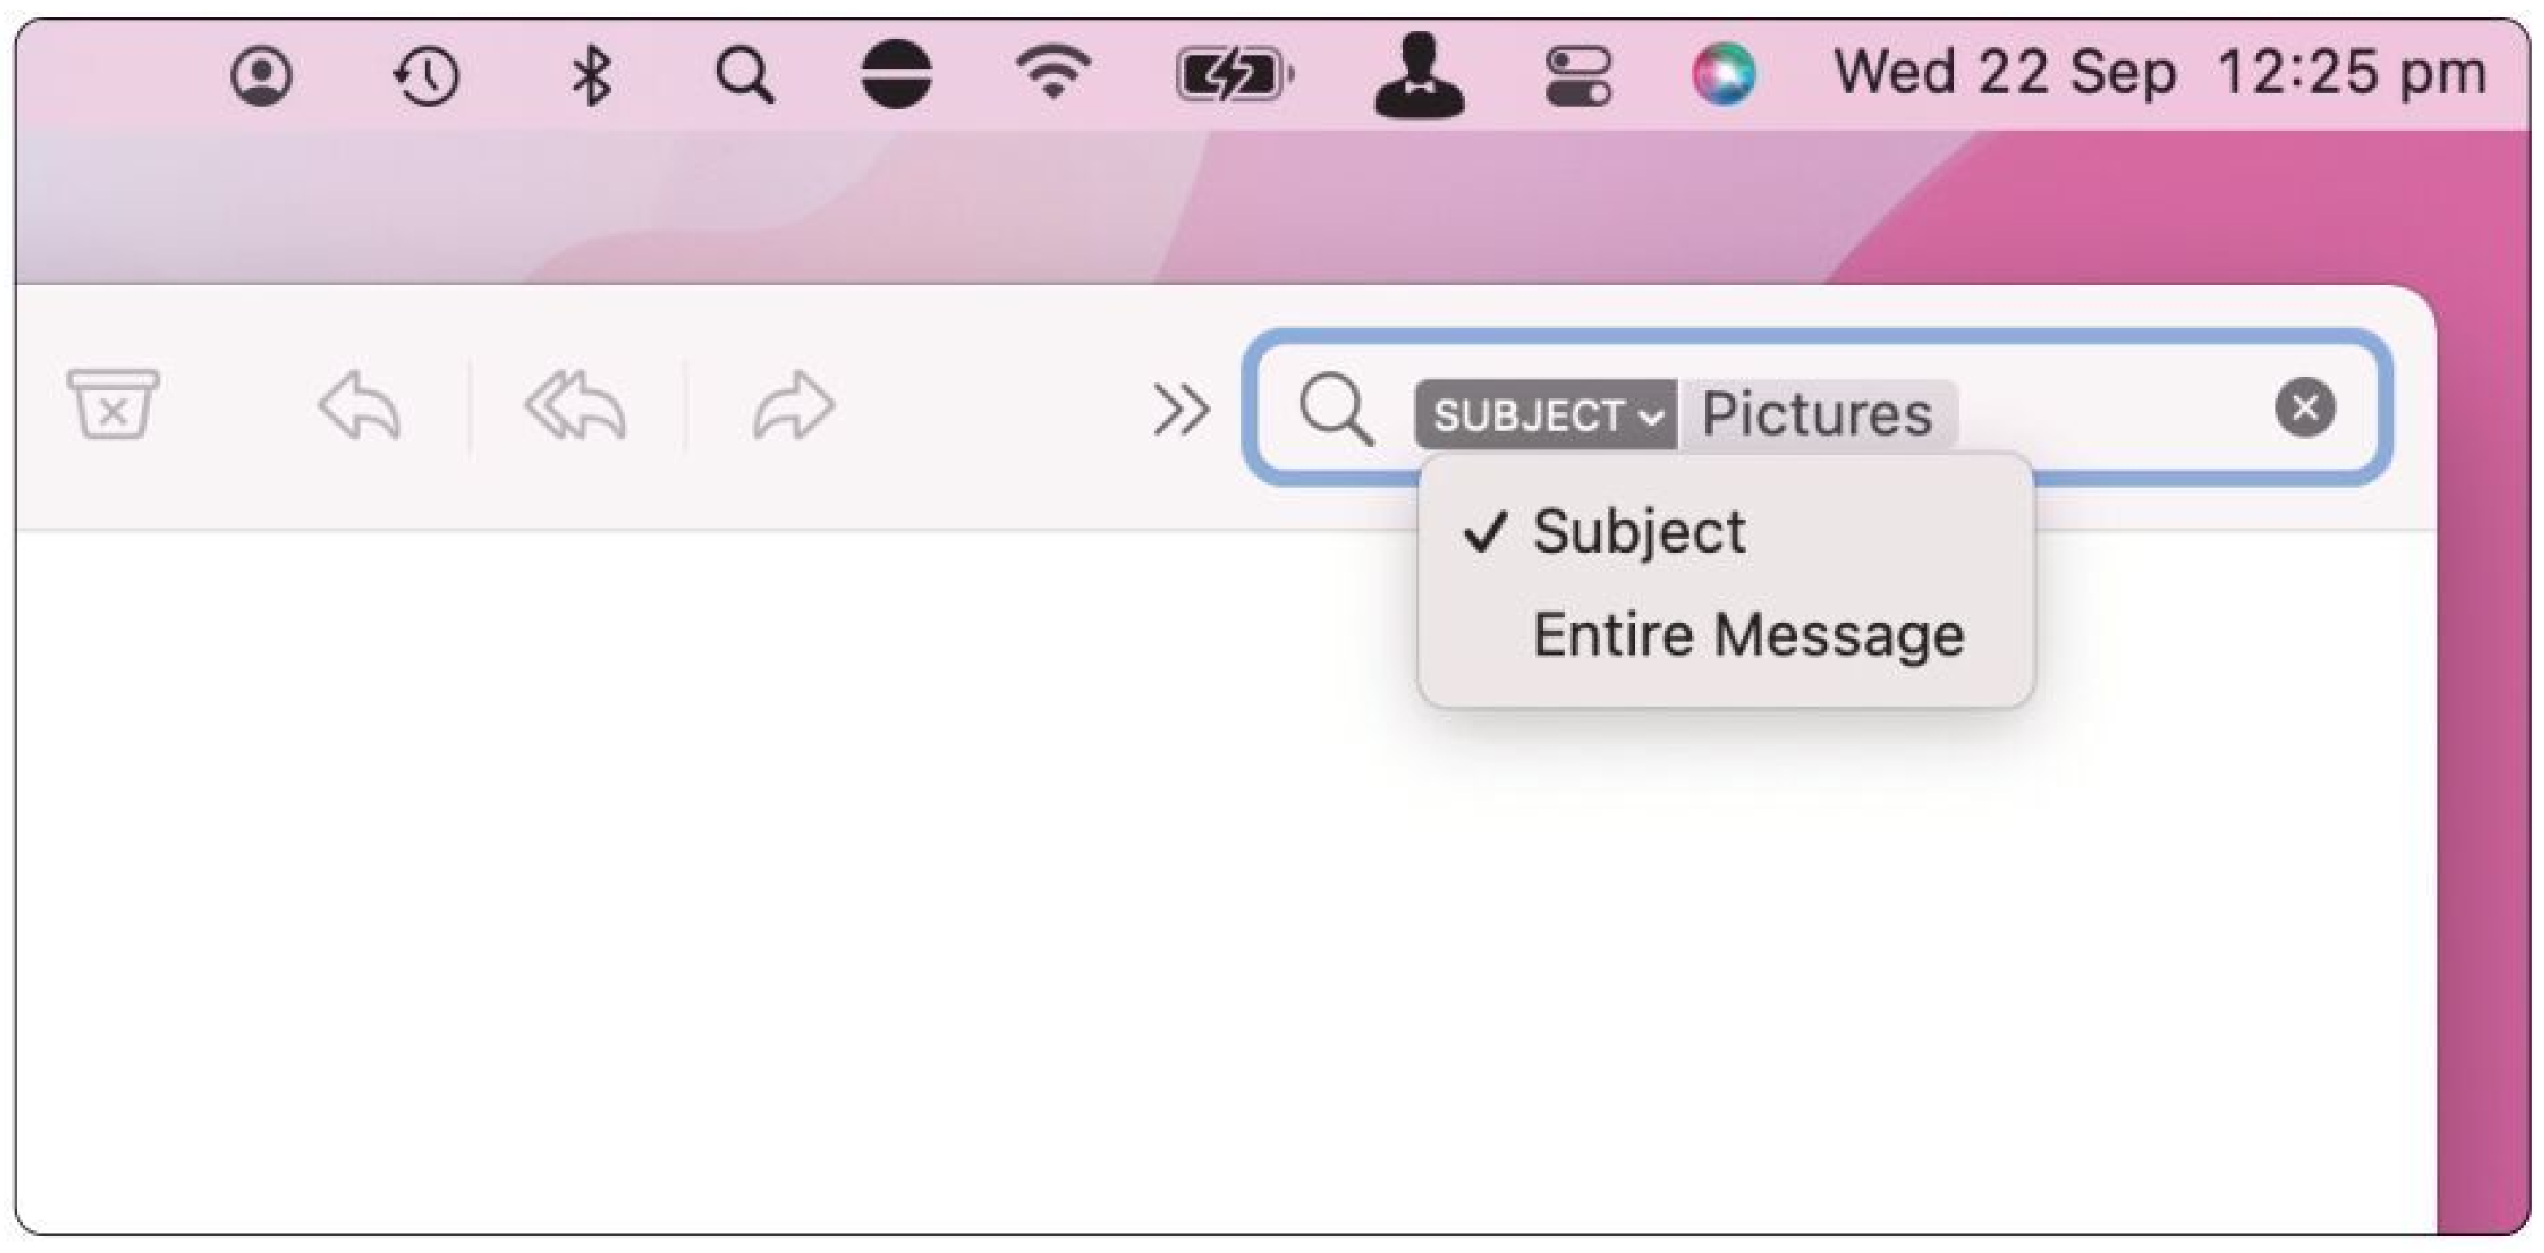
1 Click the magnifying glass icon and type your search term into the search field. Suggestions are offered for items such as people, subjects and attachments; emails that meet your search requirements are shown in the email list.

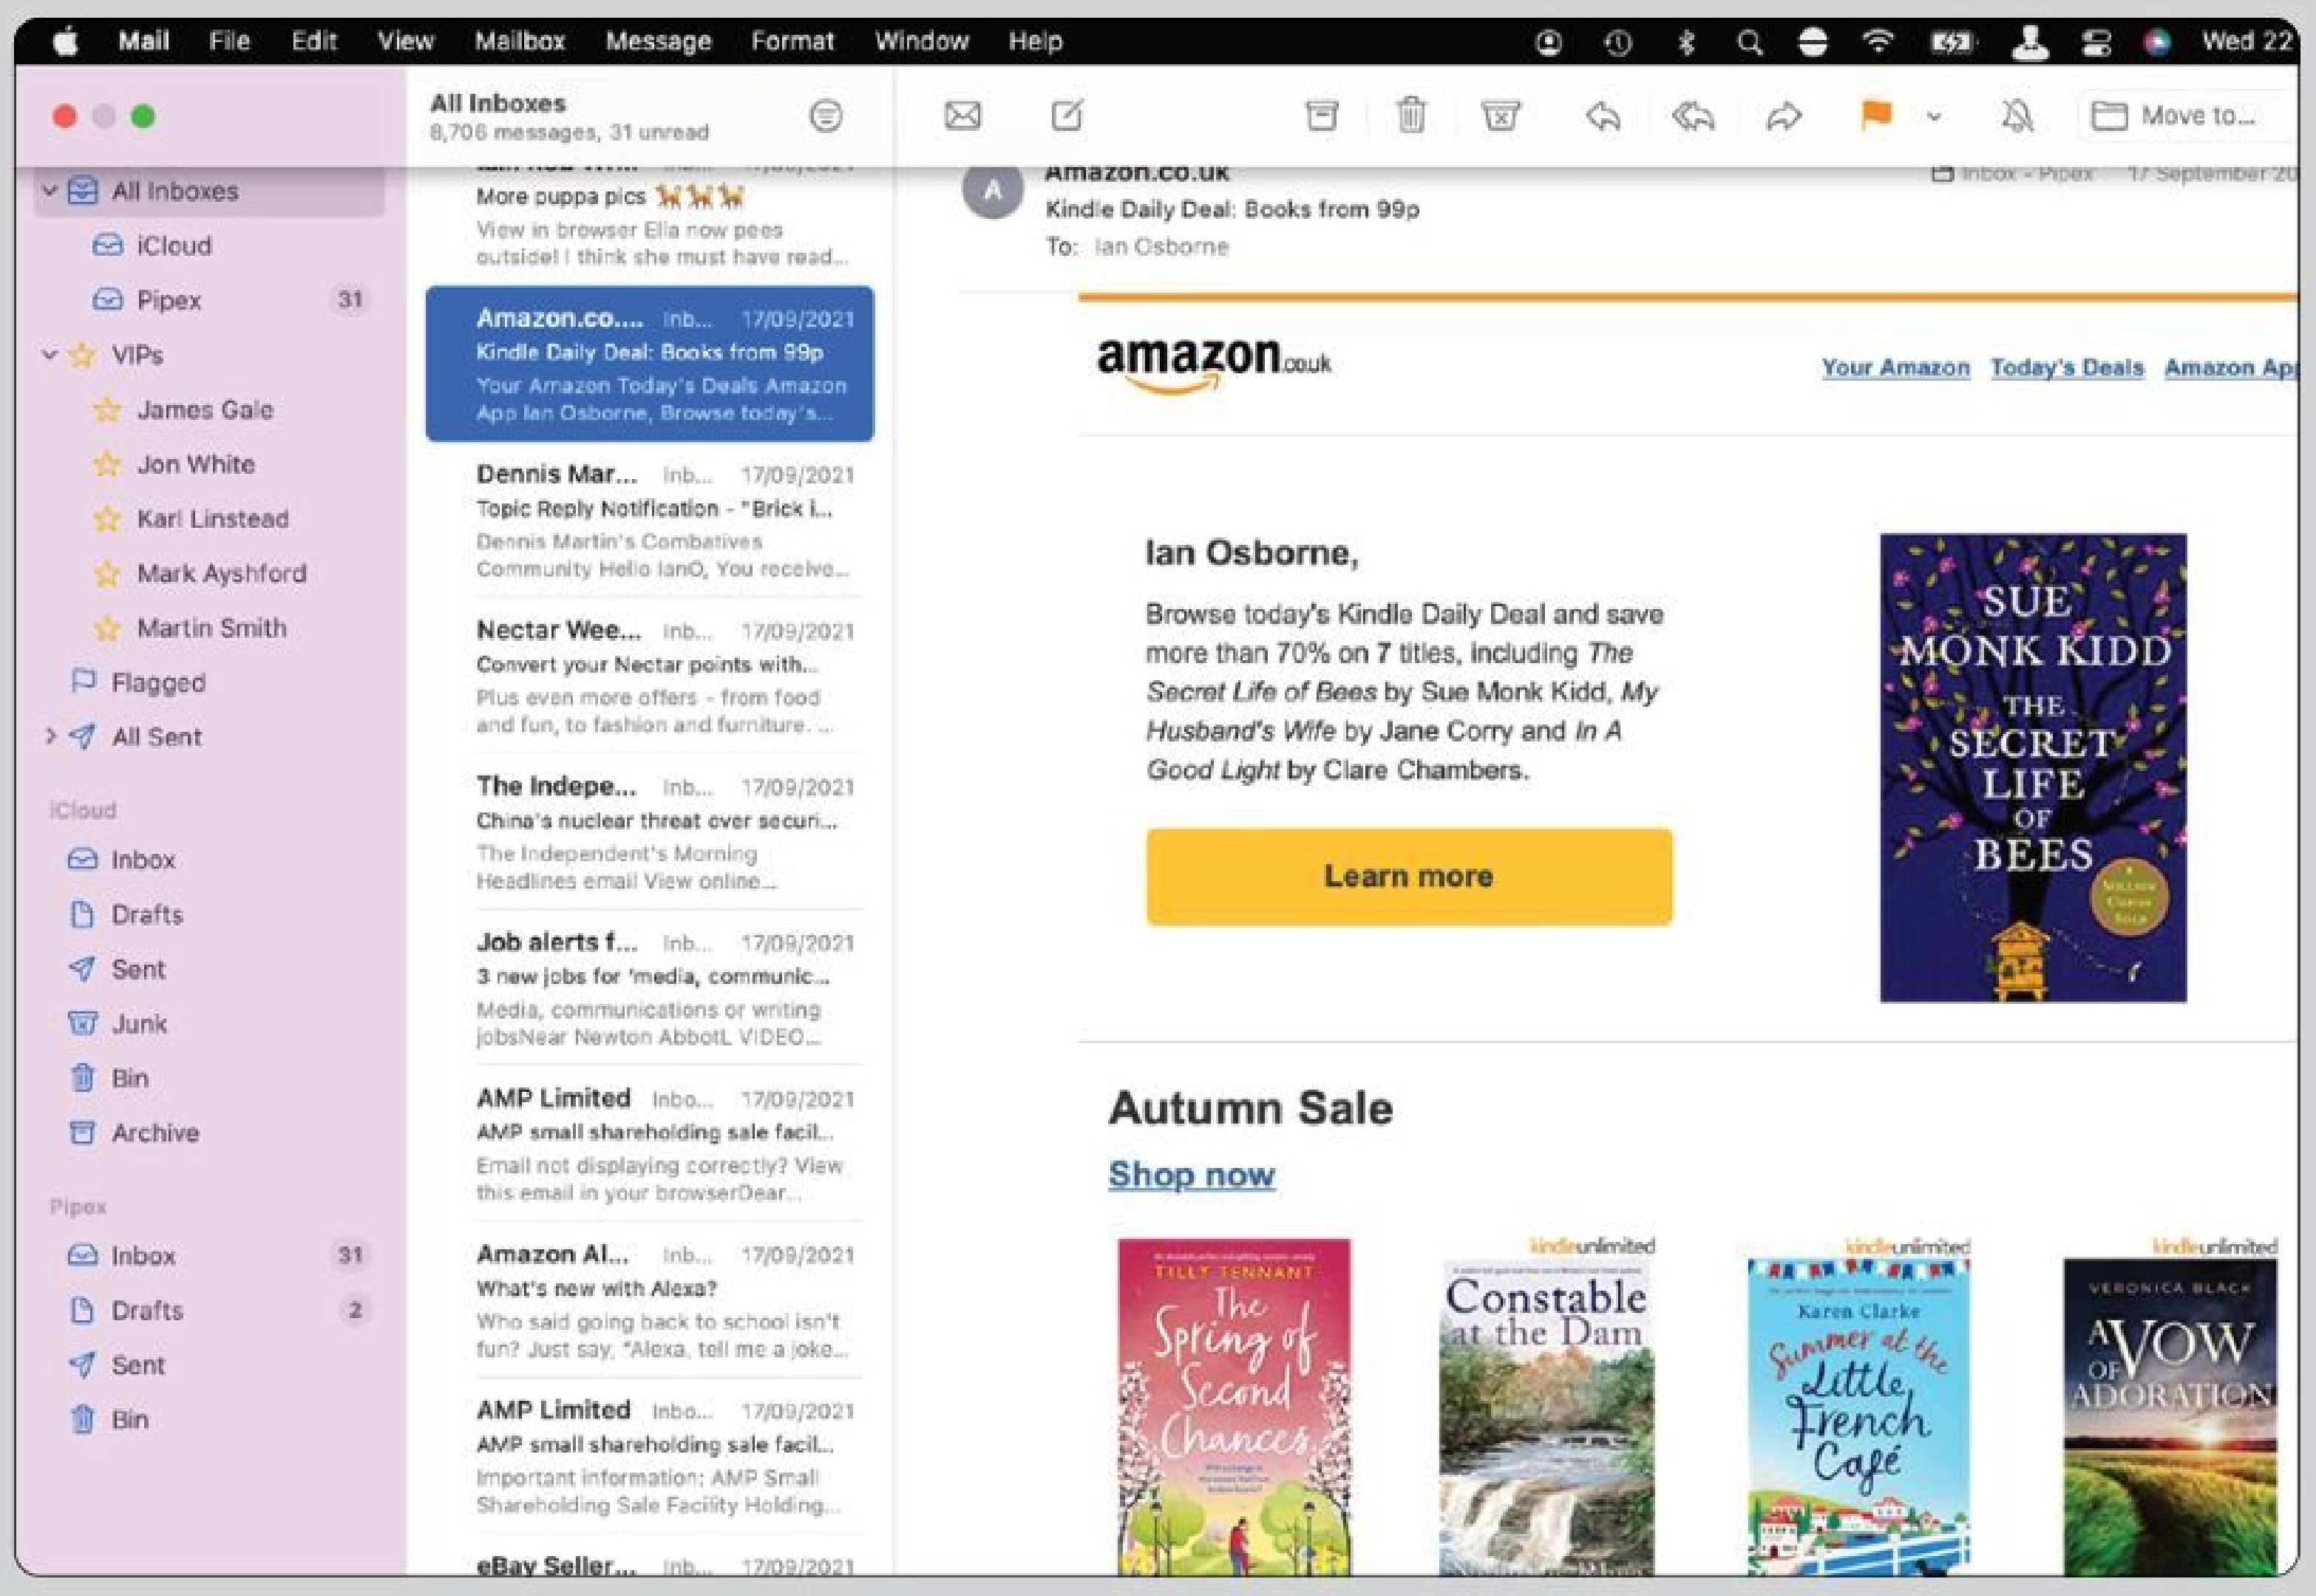


Wed 22 Sep 12:25 pm
SUBJECT
Pictures
✓ Subject
Entire Message

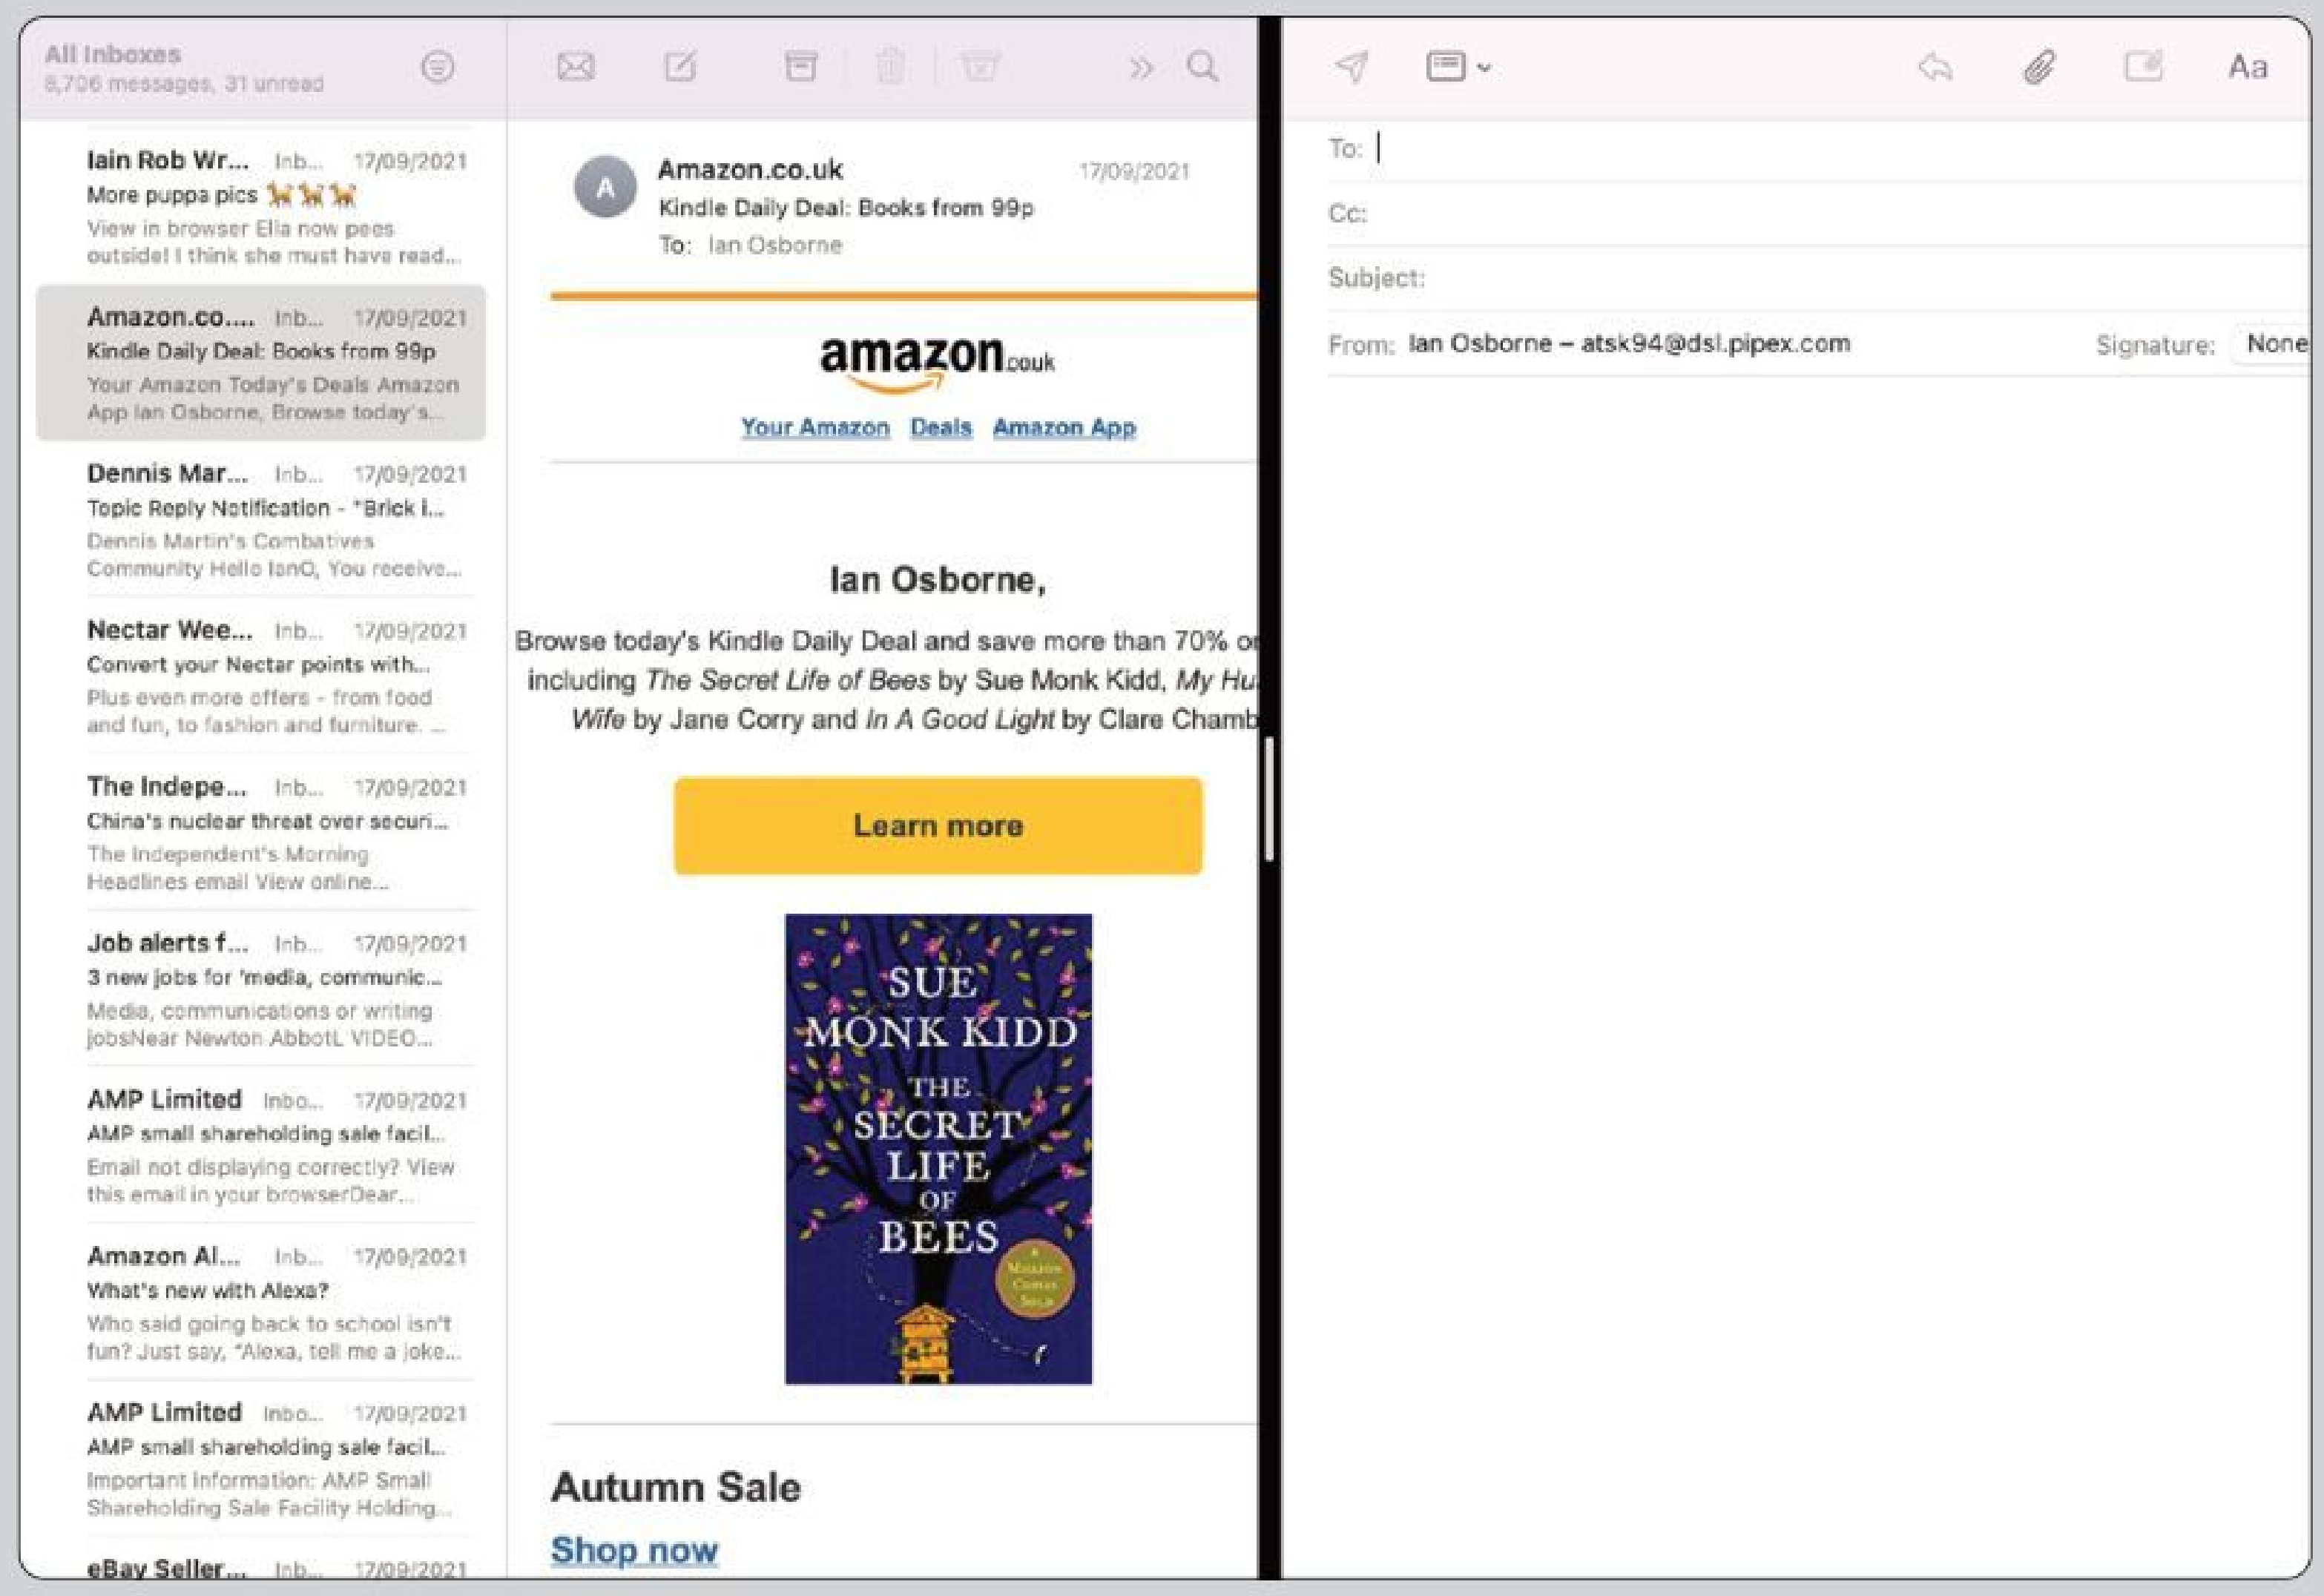
2 After clicking on one of the suggested items, you can adjust your search by clicking the first word in the field and choosing a new option, as shown here, or even adding a second search term for more advanced searches.

Mail in Full Screen Mode.

The Mail app's full-screen mode works in a different way to other apps. Here's a guide on how to use this useful feature.



Writing or replying to an email when the Mail app is in full screen mode involves working in a split screen view. Click on the green gumdrop in the top left corner of the Mail app window to take the app into full screen mode.



Start a new email or reply to one. The screen is split, with your outgoing email shown on the right. Drag the dividing line left or right to resize the windows. The email's gumdrops are shown by dragging your pointer to the top of the screen.

Using Mail Signatures.

You can add a signature to your emails, that is, a short piece of text that’s at the foot of every email you send.

3 Click the Automation tab and you can set timers, actions and more. What they do depends on what kit you've incorporated into your Home app. Click the + icon to add automations or groups of automations (scenes).

4 For example, you can use the Home app to control and configure speakers that are compatible with HomeKit. Naturally, Apple's own HomePod, pictured here, fits the bill but there are plenty more.

Music

Play Your Tunes

The Music app is great for enjoying all your sounds on the Mac. If you subscribe to the Apple Music service, you can stream from over 70 million tracks and numerous online radio stations. You can rip your CDs and store them on your Mac, and you can also compile your own playlists.

The Music app is very similar to the one found on the iPhone or the iPad. If you already use Music on a mobile device, you shouldn't have too many problems getting started.

of what's playing next and your history; that is, what you've played.

7 If you have an Apple Music account, Listen Now is the main page, offering suggestions of music you might like and showing what you played recently. Browse is great for finding new music, and Radio gives access to streaming stations.

8 This is the Listen Now page, your gateway to the Apple Music streaming service.

9 This is the gateway to your Music social network. Click on it and you can find out what sounds your friends are listening to, and discover and enjoy new music together.

10 These are the options for your Library, that is, music you've installed on your Mac. It can be arranged into Artists, Albums, or Songs, and there are sections for music you've recently added and music videos.

11 At the top of the Listen Now page is Top Picks, a series of playlists made up of tracks chosen for you based on previous plays, tunes you play a lot, themed playlists, etc. Scroll left and right for more.

12 These are your playlists. The top ones are Smart Playlists, which add songs automatically according to rules, and the lower ones are playlists you build yourself.

13 This is a round-up of music you've recently streamed. Scroll this page up for more suggestions, again based on previous listens.

14 Click this link to see a wider range of music you've recently played.

Photos
Manage Your Images

Monterey sees minor updates to the Photos app. Memories has a new look, and you can use Apple Music for background tunes. The information panel is more comprehensive, and facial recognition is improved. The interface has been tweaked too.

1 Use this button to toggle between regular thumbnails of your photos, as seen here, and square-shaped images that leave little border.

2 This slider increases and decreases the size of your preview images.

3 Use these buttons to view your photos arranged according to the year, month, or day in which they were taken.

4 Click here to see all your photographs in the Photos app, arranged as thumbnails. Double-click on a thumbnail to open a photo.

5 Select or open a photo and then click the 'i' for the information window. Here you can review and edit where and when it was taken, add captions and more.

6 The Share button lets you add the picture to shared albums, send it using Mail, AirDrop, Messages and more, add it to Notes or Reminders and even set a desktop picture.

7 Choose a photo and click the heart to identify a picture as one of your favourites.

8 Rotate the image 90% anti-clockwise. Hold Alt to turn it clockwise instead. Useful if a picture that's been imported is not the right way up.

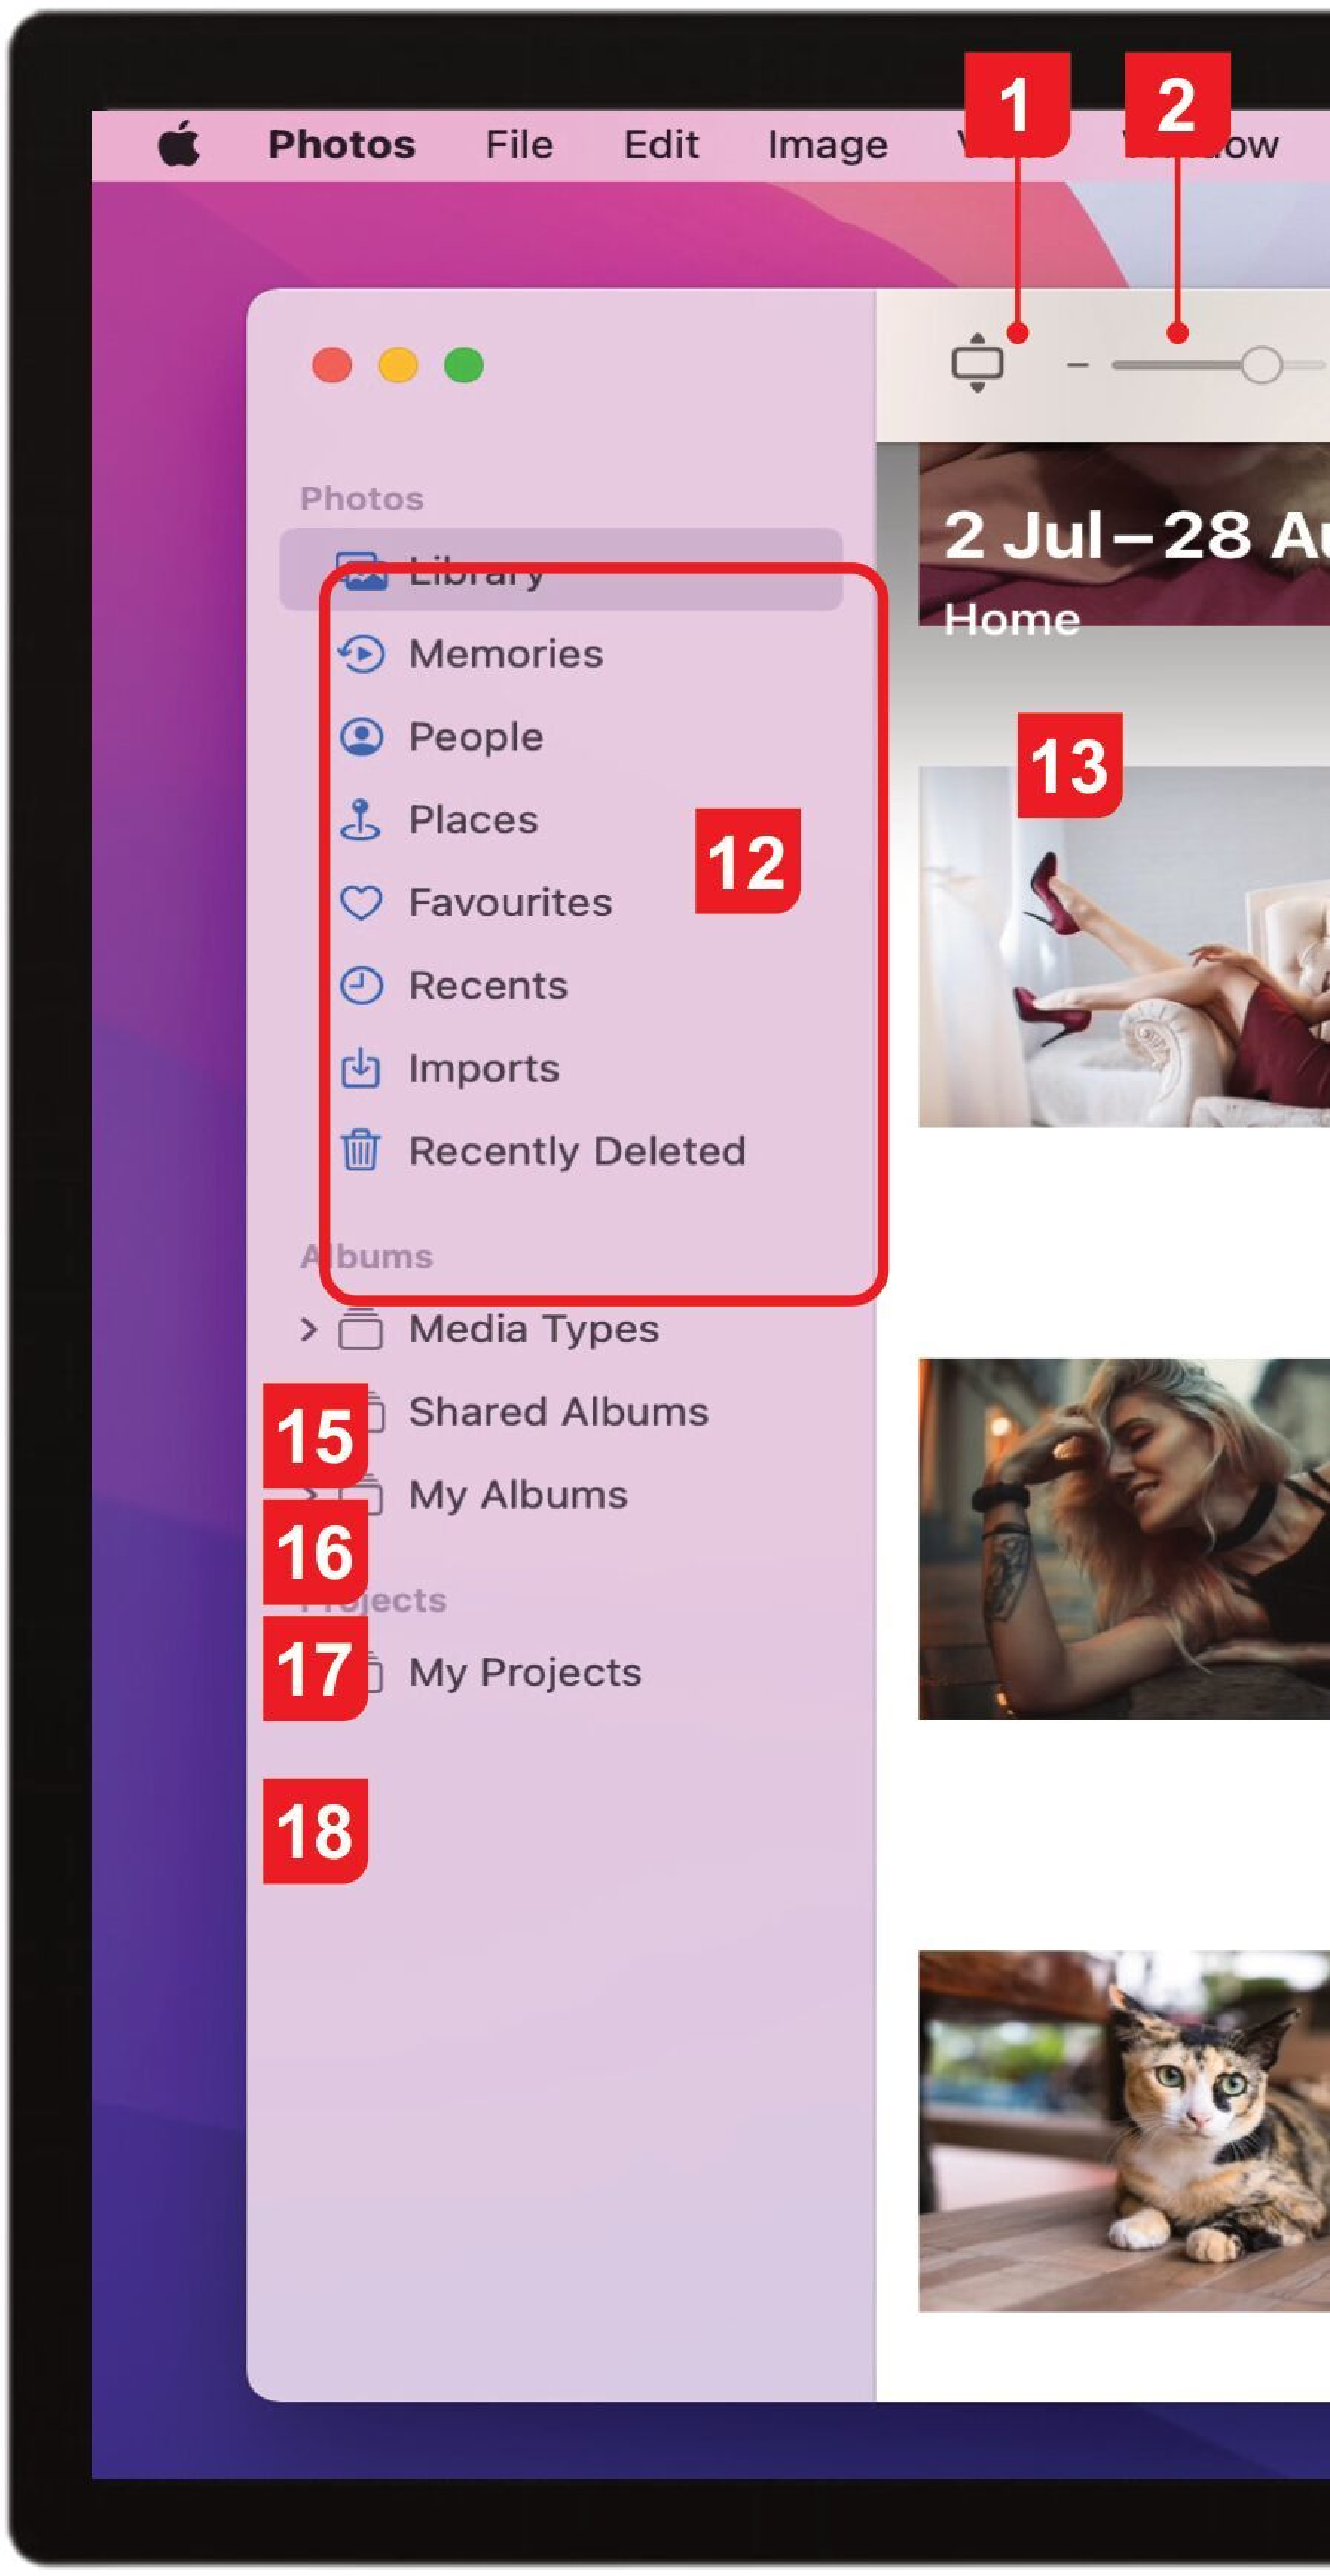
9 The search field. Thanks to the Photo app's machine learning, you can search for terms like 'birthday', 'holiday', 'Christmas' and more, to find photos taken on these occasions.

10 Filter to display all pictures, favourites, those you've edited, only photos, only videos and according to keywords.

11 Click to switch between showing only your photos, and both your own pics and those shared with you.

12 These sidebar options represent different ways of viewing photos found in your library. Photos shows all your photos, Memories arranges them into groups, Favourites shows your best pics, and Places groups them according to where they were taken. Recents, Imports and Recently Deleted are self-explanatory.

13 These are the dates between which the currently visible pictures were taken and the locations.



14 The heart seen in the corner here shows you've identified this photo as a favourite. Click the heart to unfavourite it again.

15 Click here to arrange and view your media according to type, such as Videos, Selfies, Live Photos, Screenshots and more.

16 Click the chevron to expand the Shared Albums category. Photos you've shared on iCloud are listed in Activity, and Shared Albums shows the albums in which they were shared. Hover over Shared Albums and click the plus sign that appears to the right to start a new, shared album.

17 These are your albums, whether created by yourself or put together automatically by the app.

18 If you make a book, calendar, card, print, wall decor or slideshow based on your photos, they appear here. Apple no longer sells prints, but you can get apps from the App Store for third-party services. Hover over My Projects and click the plus sign to start a new project.

19 Your pictures, arranged as thumbnails. Click on one to open it, after which you can swipe through them or choose one from the preview bar under an open photo.

Make Key Photo

1 Open a photo containing people and click the 'i' button for the information window, and click the Add Faces link. If Photos recognises faces in the picture, they're circled. Click the tag under a circle to add that person's name. Click the Plus sign again to add further tags, which you can drag into place as needed.

2 Click 'People' in the sidebar to see photos you've identified by name. Click on a person to see all the photos you have of them. If a photo doesn't contain that person, right-click on it and select the option 'X is not in this photo' to remove it. Scroll down and click Confirm Additional Photos to check pics the app thinks are of that person.

Print and publish your photos

Photos for macOS lets you do more than just collect, edit and organise your pictures. Using Photos extensions, you can create printed projects like books, calendars and cards.

To install an extension, download its corresponding app (see the list below) from the Mac App Store. The next time you launch Photos, go to File > Create to see the new options available.

1 You can still order prints and design books, calendars and cards with Photos but Apple no longer sells them. Instead, click '+' next to Projects and select the project you want to start. Apps you have downloaded for the purpose are shown, as is an App Store link taking you to extensions offering these third-party services.

2 Choose an extension offering the project you want and install it. Then choose the pictures you want to import into the project (hold cmd and click on them one by one), then select the extension in the menu shown in the previous step. You can then follow the instructions offered on-screen to build and print your project.

1 Click on Memories in the sidebar to show photos grouped according to various factors, including time and content. For example, a series of pictures taken over a week in a certain location might be identified as a holiday. Photos also picks your best shots too.

2 Open a memory and hover over the picture at the top to see a Play button. Click it for a slideshow. Hover over the slideshow for controls. Click the cog to change the background music. Right-click on a memory and you can delete it or add it to your favourites.

Using Contacts on iCloud.

You can also access your contacts using a web browser on any computer, tablet or smartphone that's connected to the Internet. Just go to www.icloud.com, enter your details and then click on Contacts. Only cards stored under iCloud in your Contacts app appear here, so bear this in mind when adding cards.

Calendar
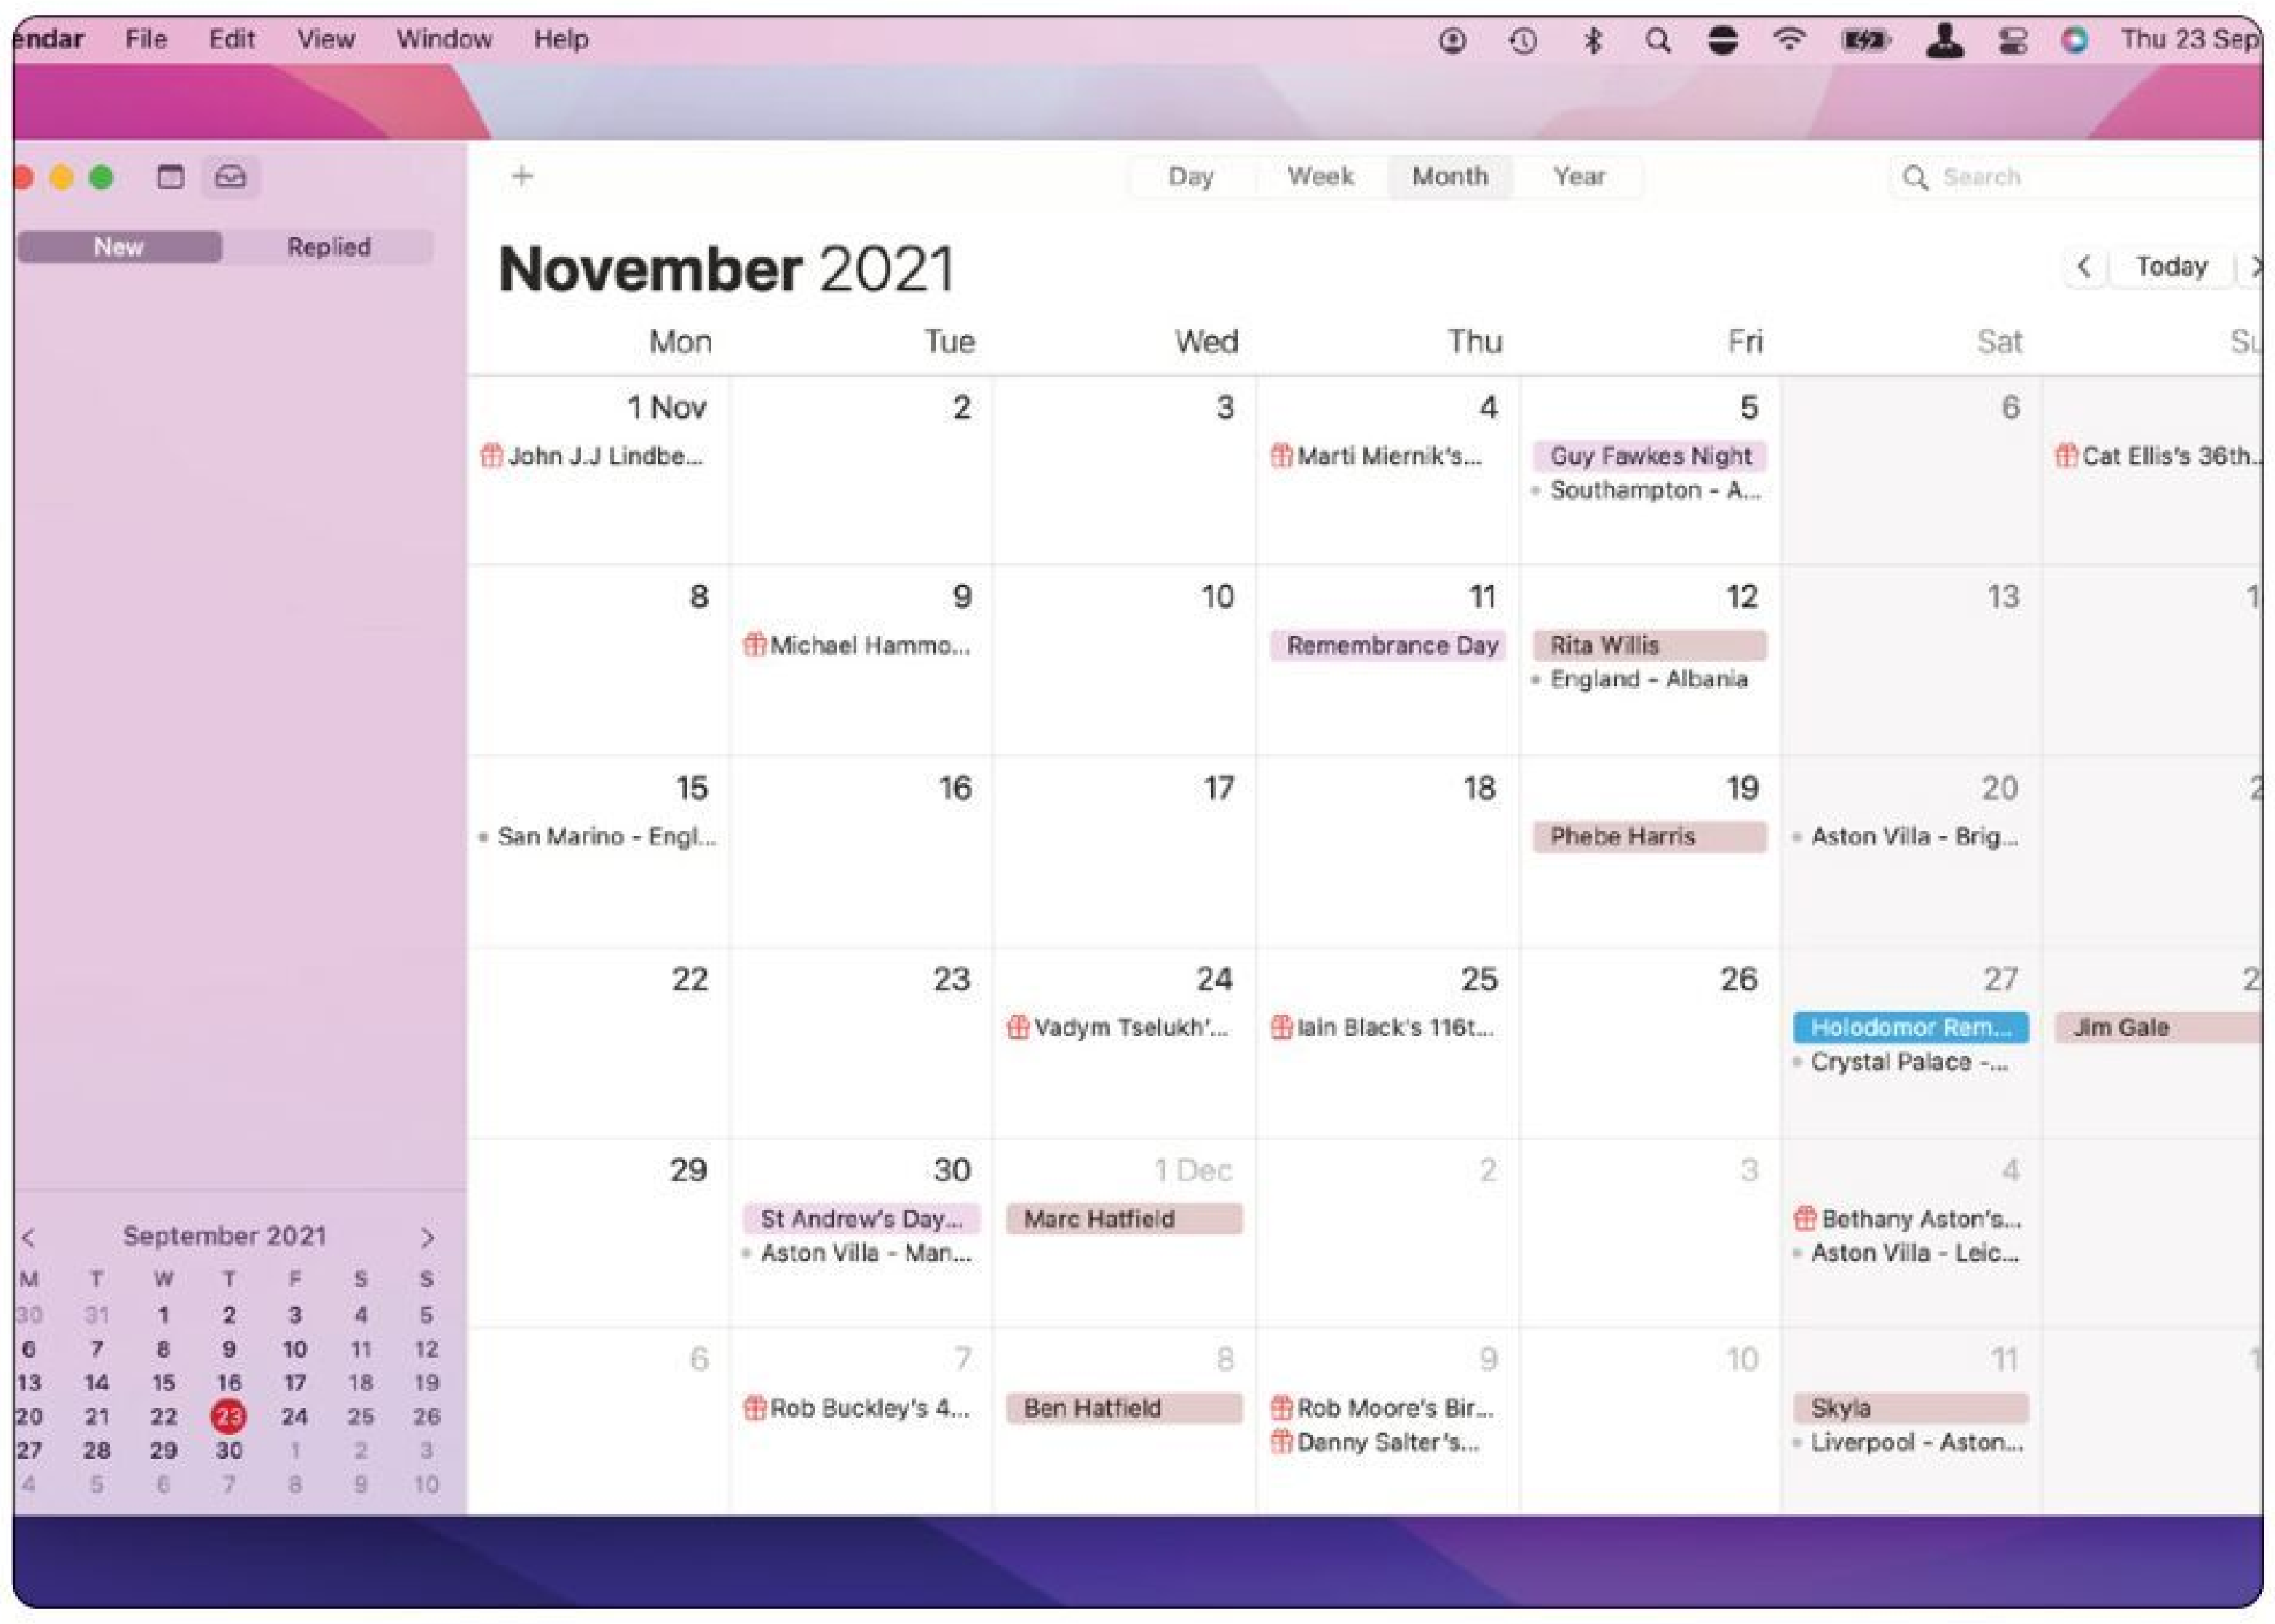
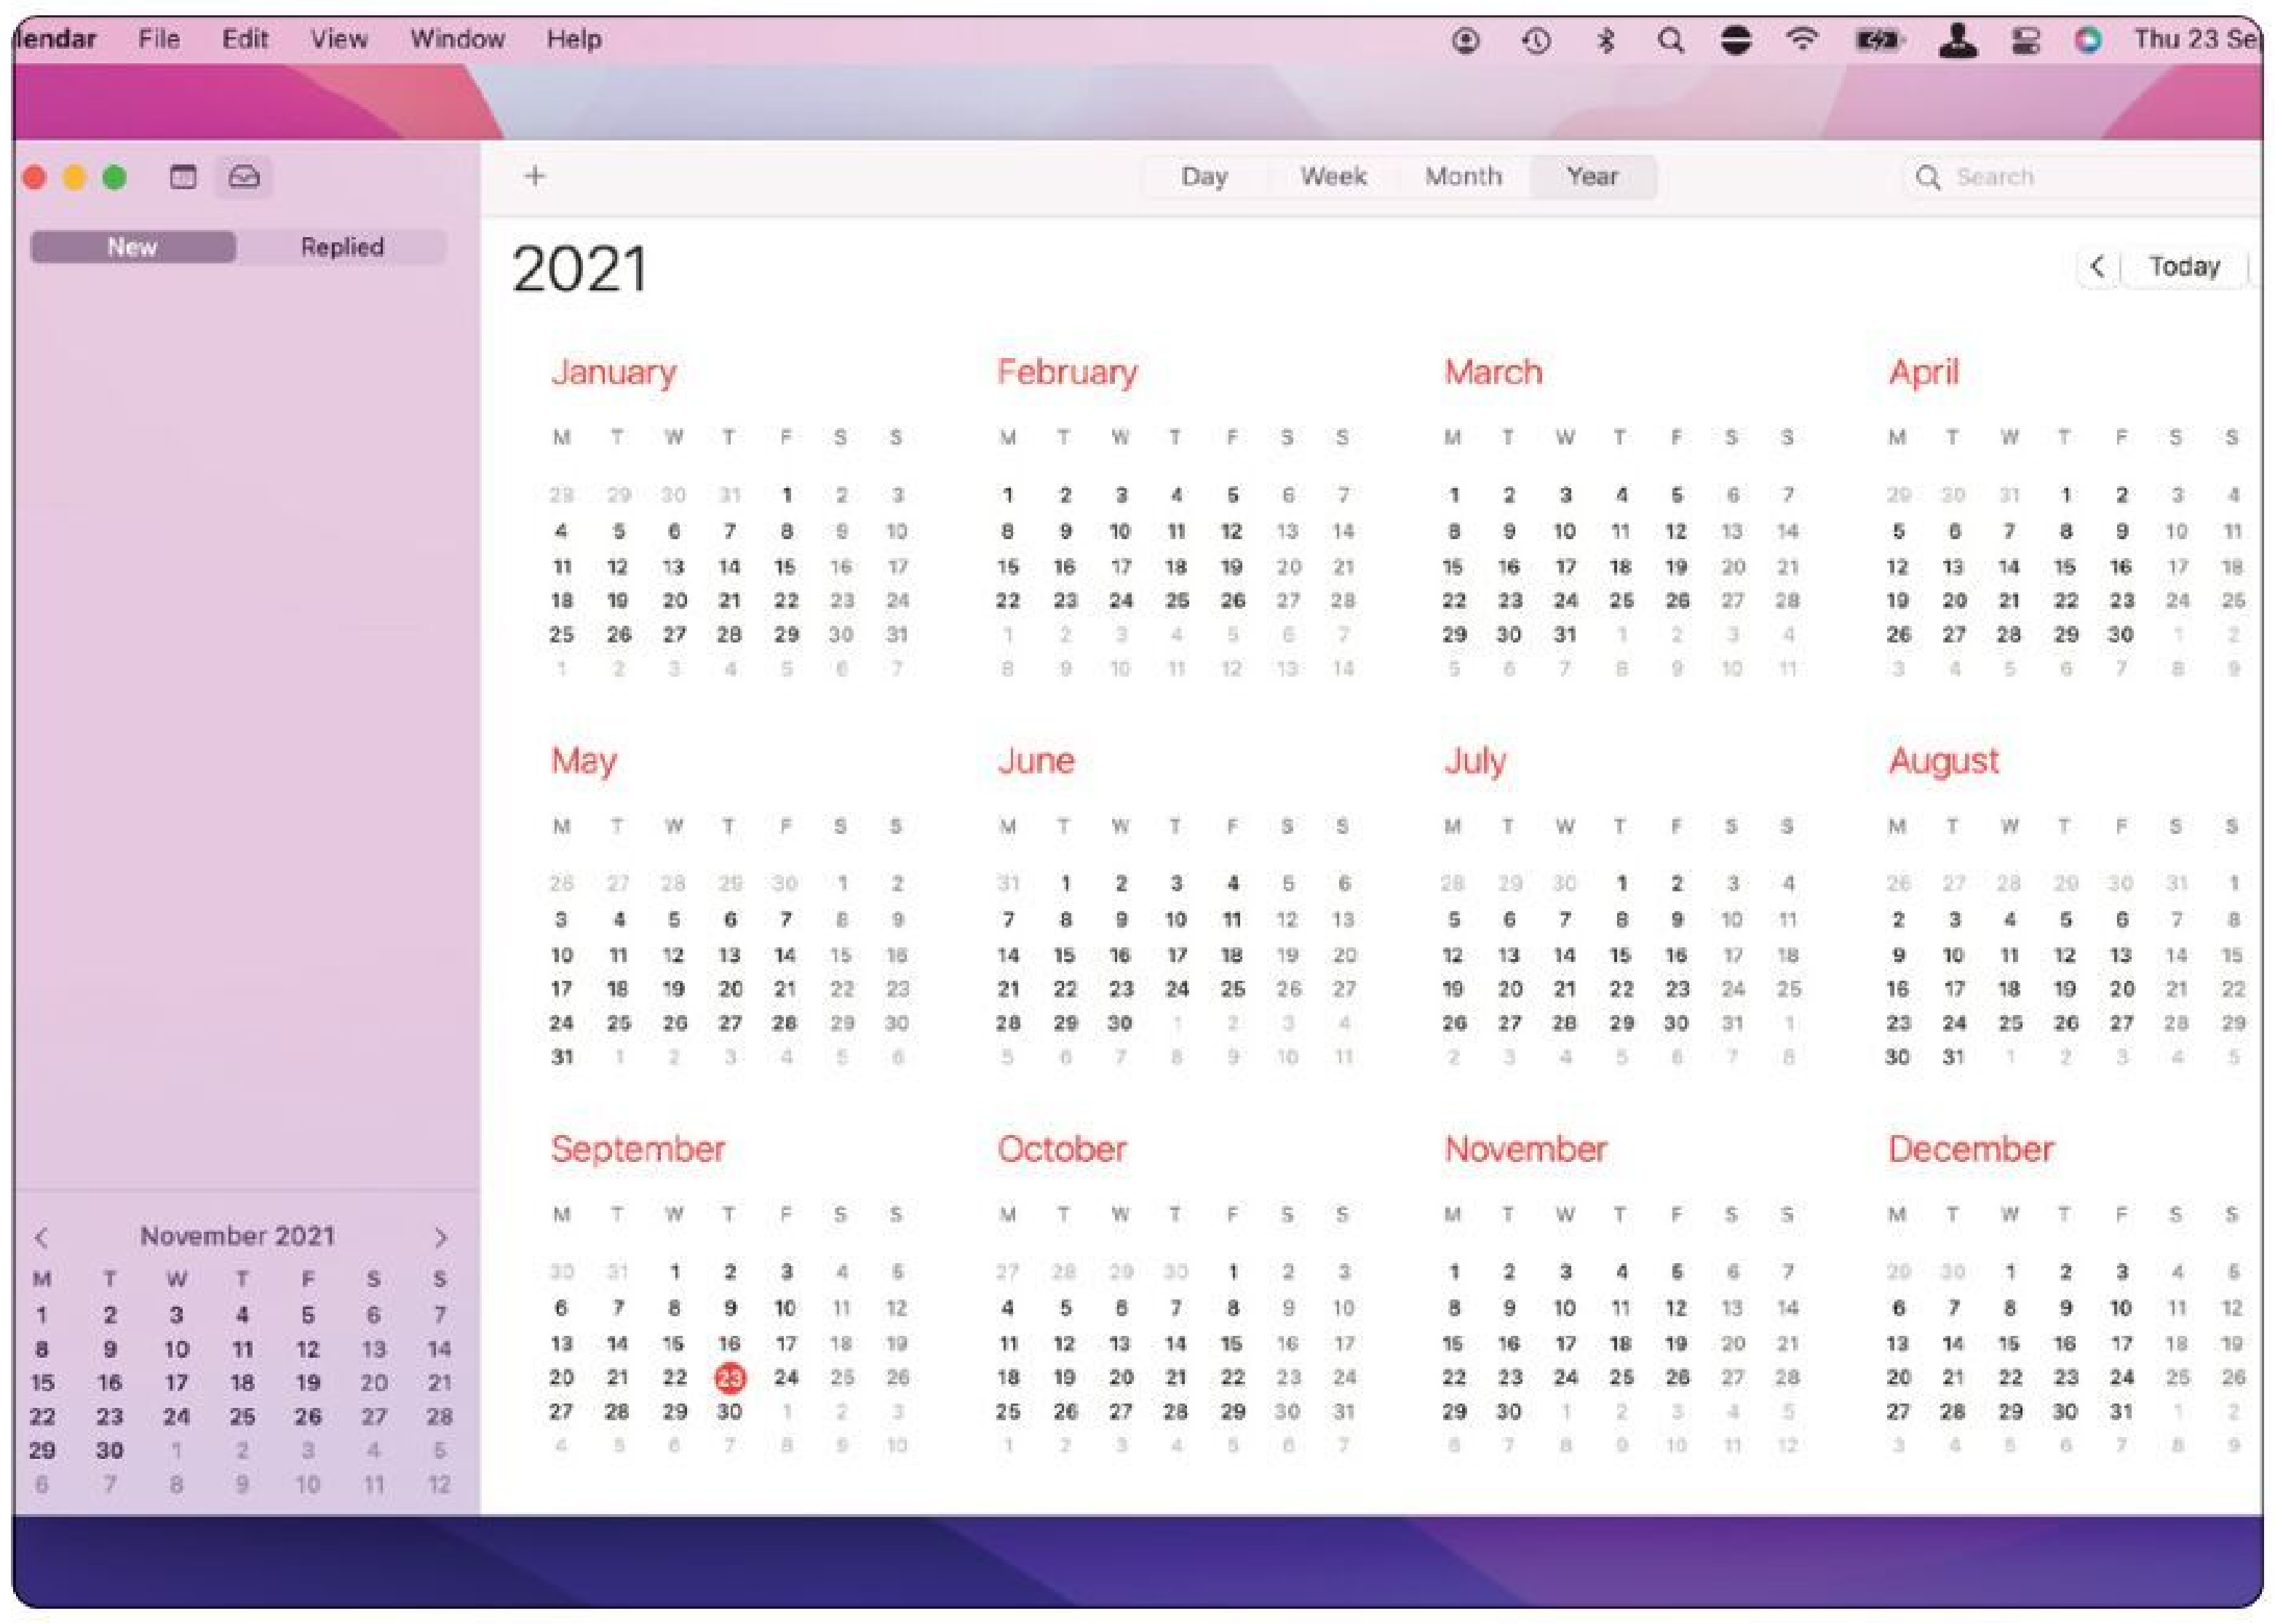
Plan Your Events

The Calendar app, as you'd expect, is there to help you organise your life. With it you can add events, set reminders and synchronise your calendars with your iPad or iPhone. Birthdays and anniversaries can be stored and you're able to set annually reoccurring events, as well as scheduled alerts.

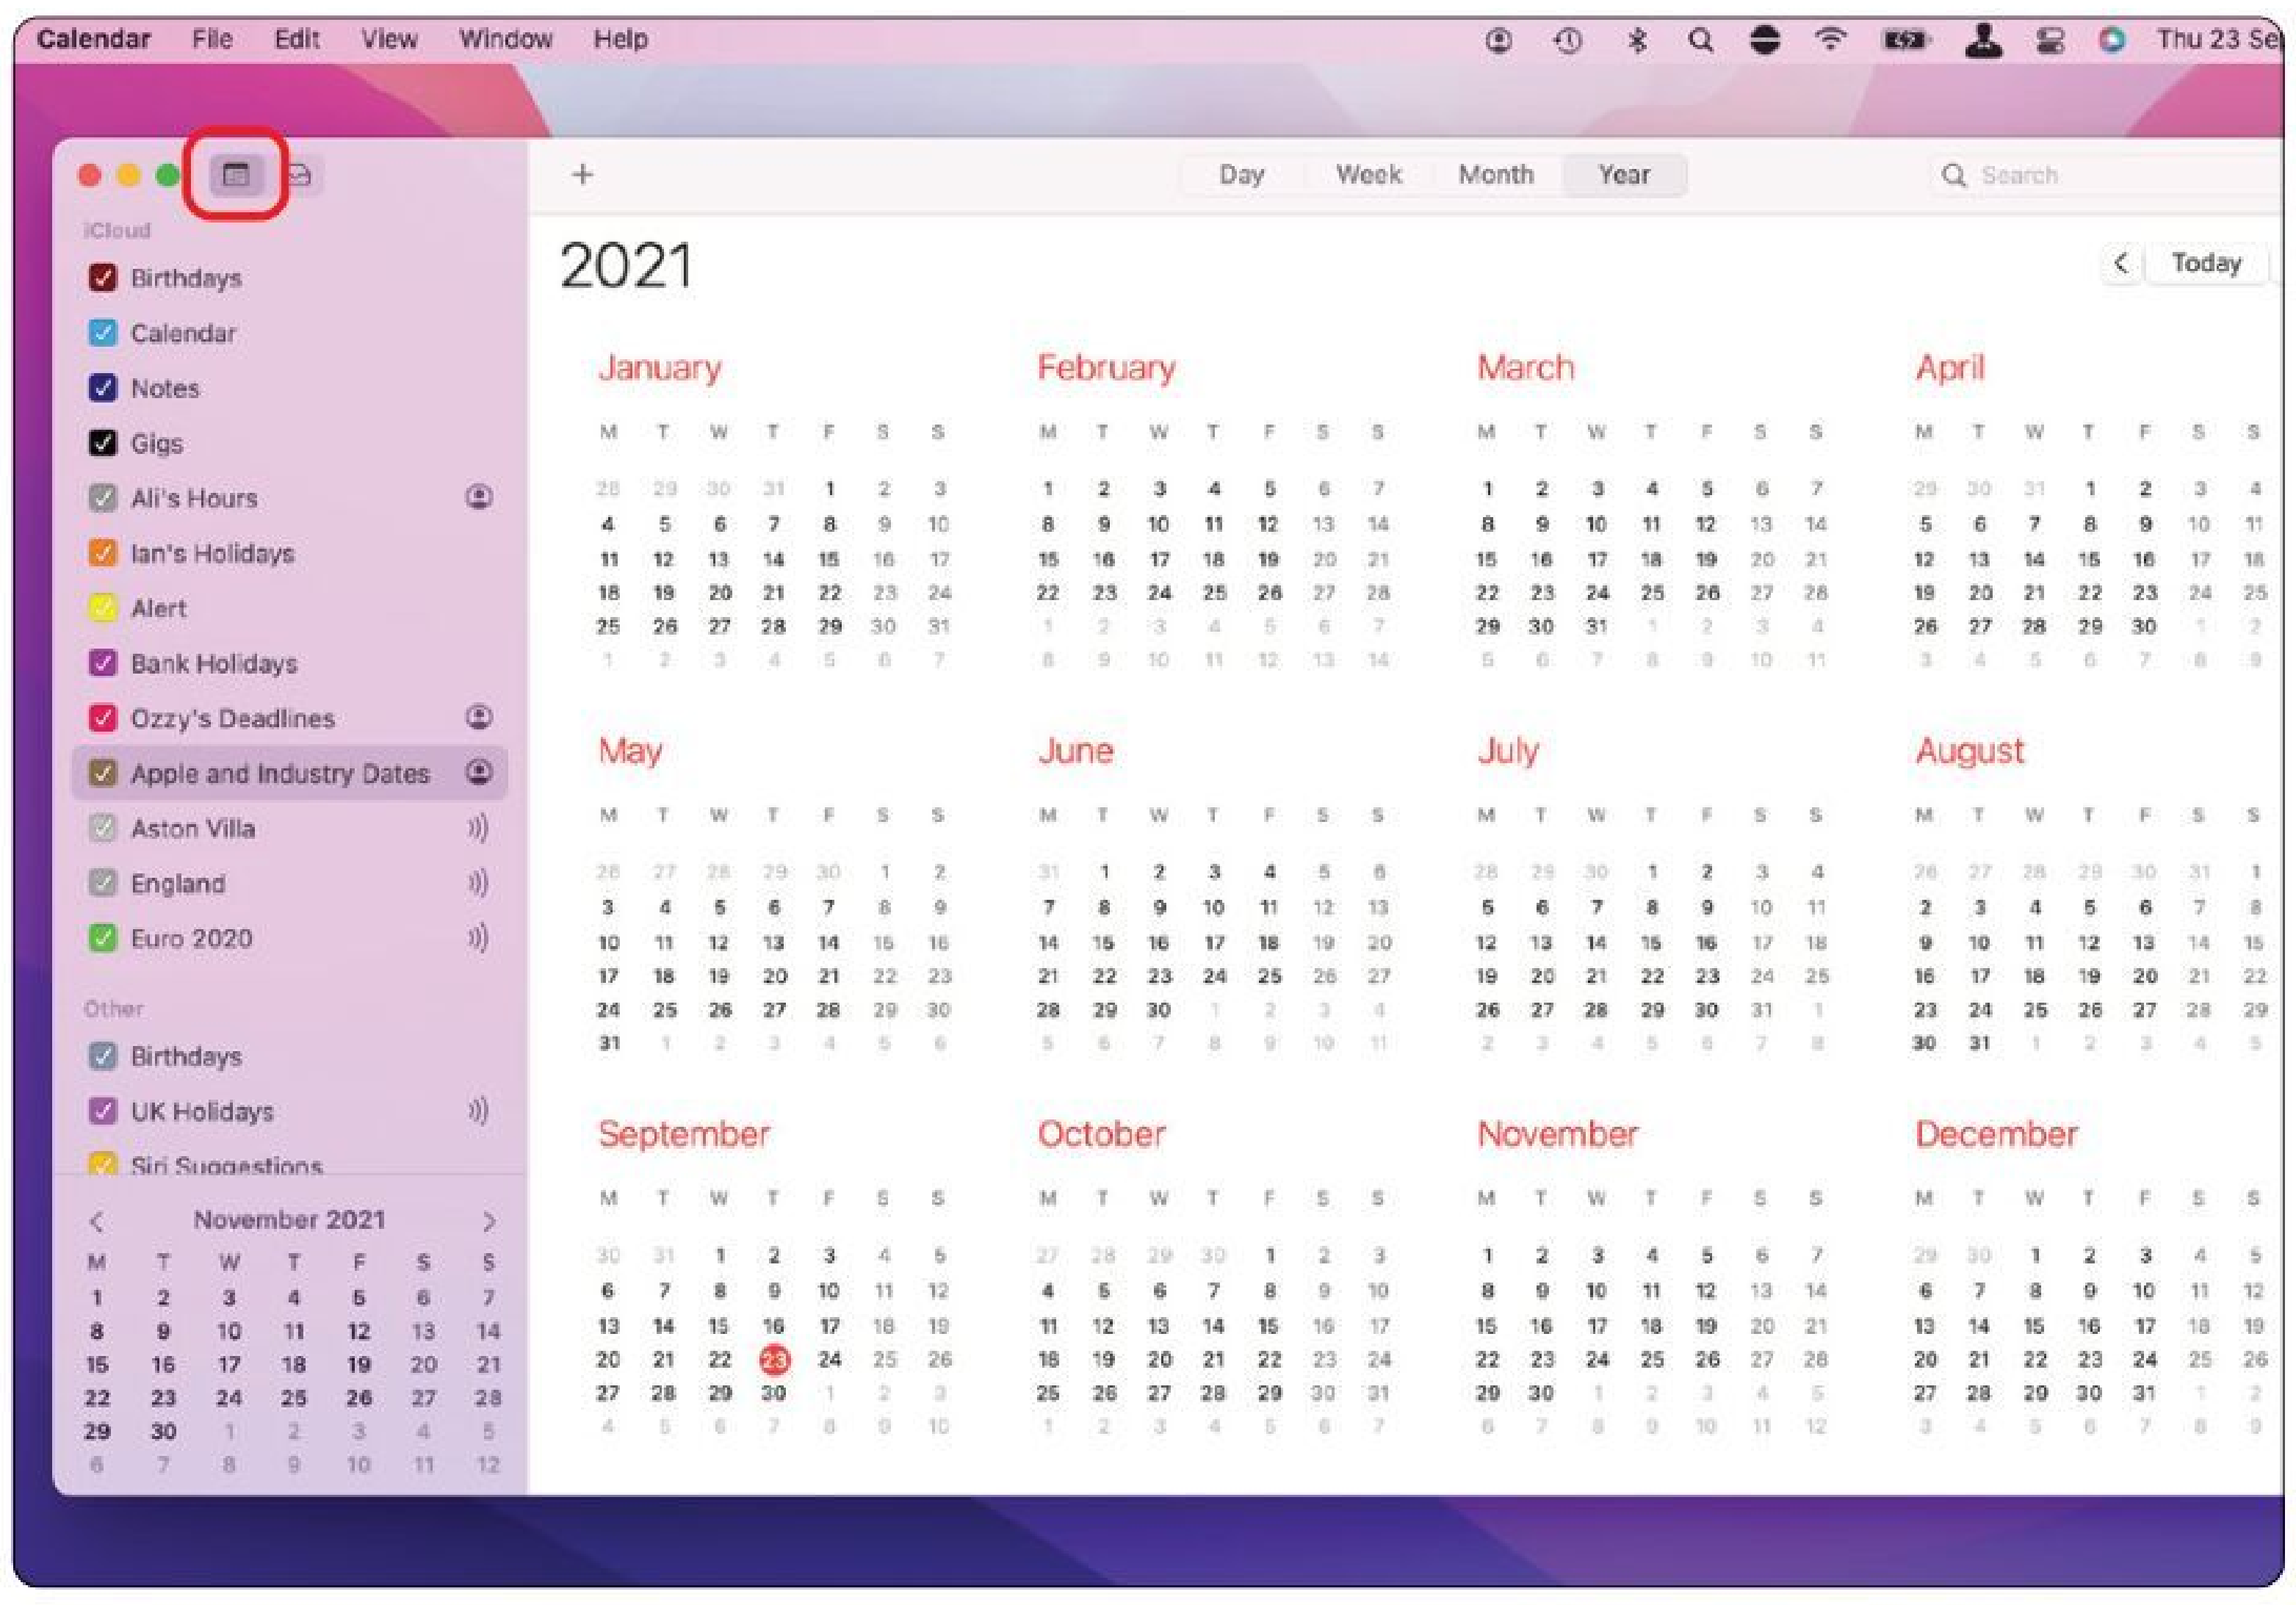
Changing the View

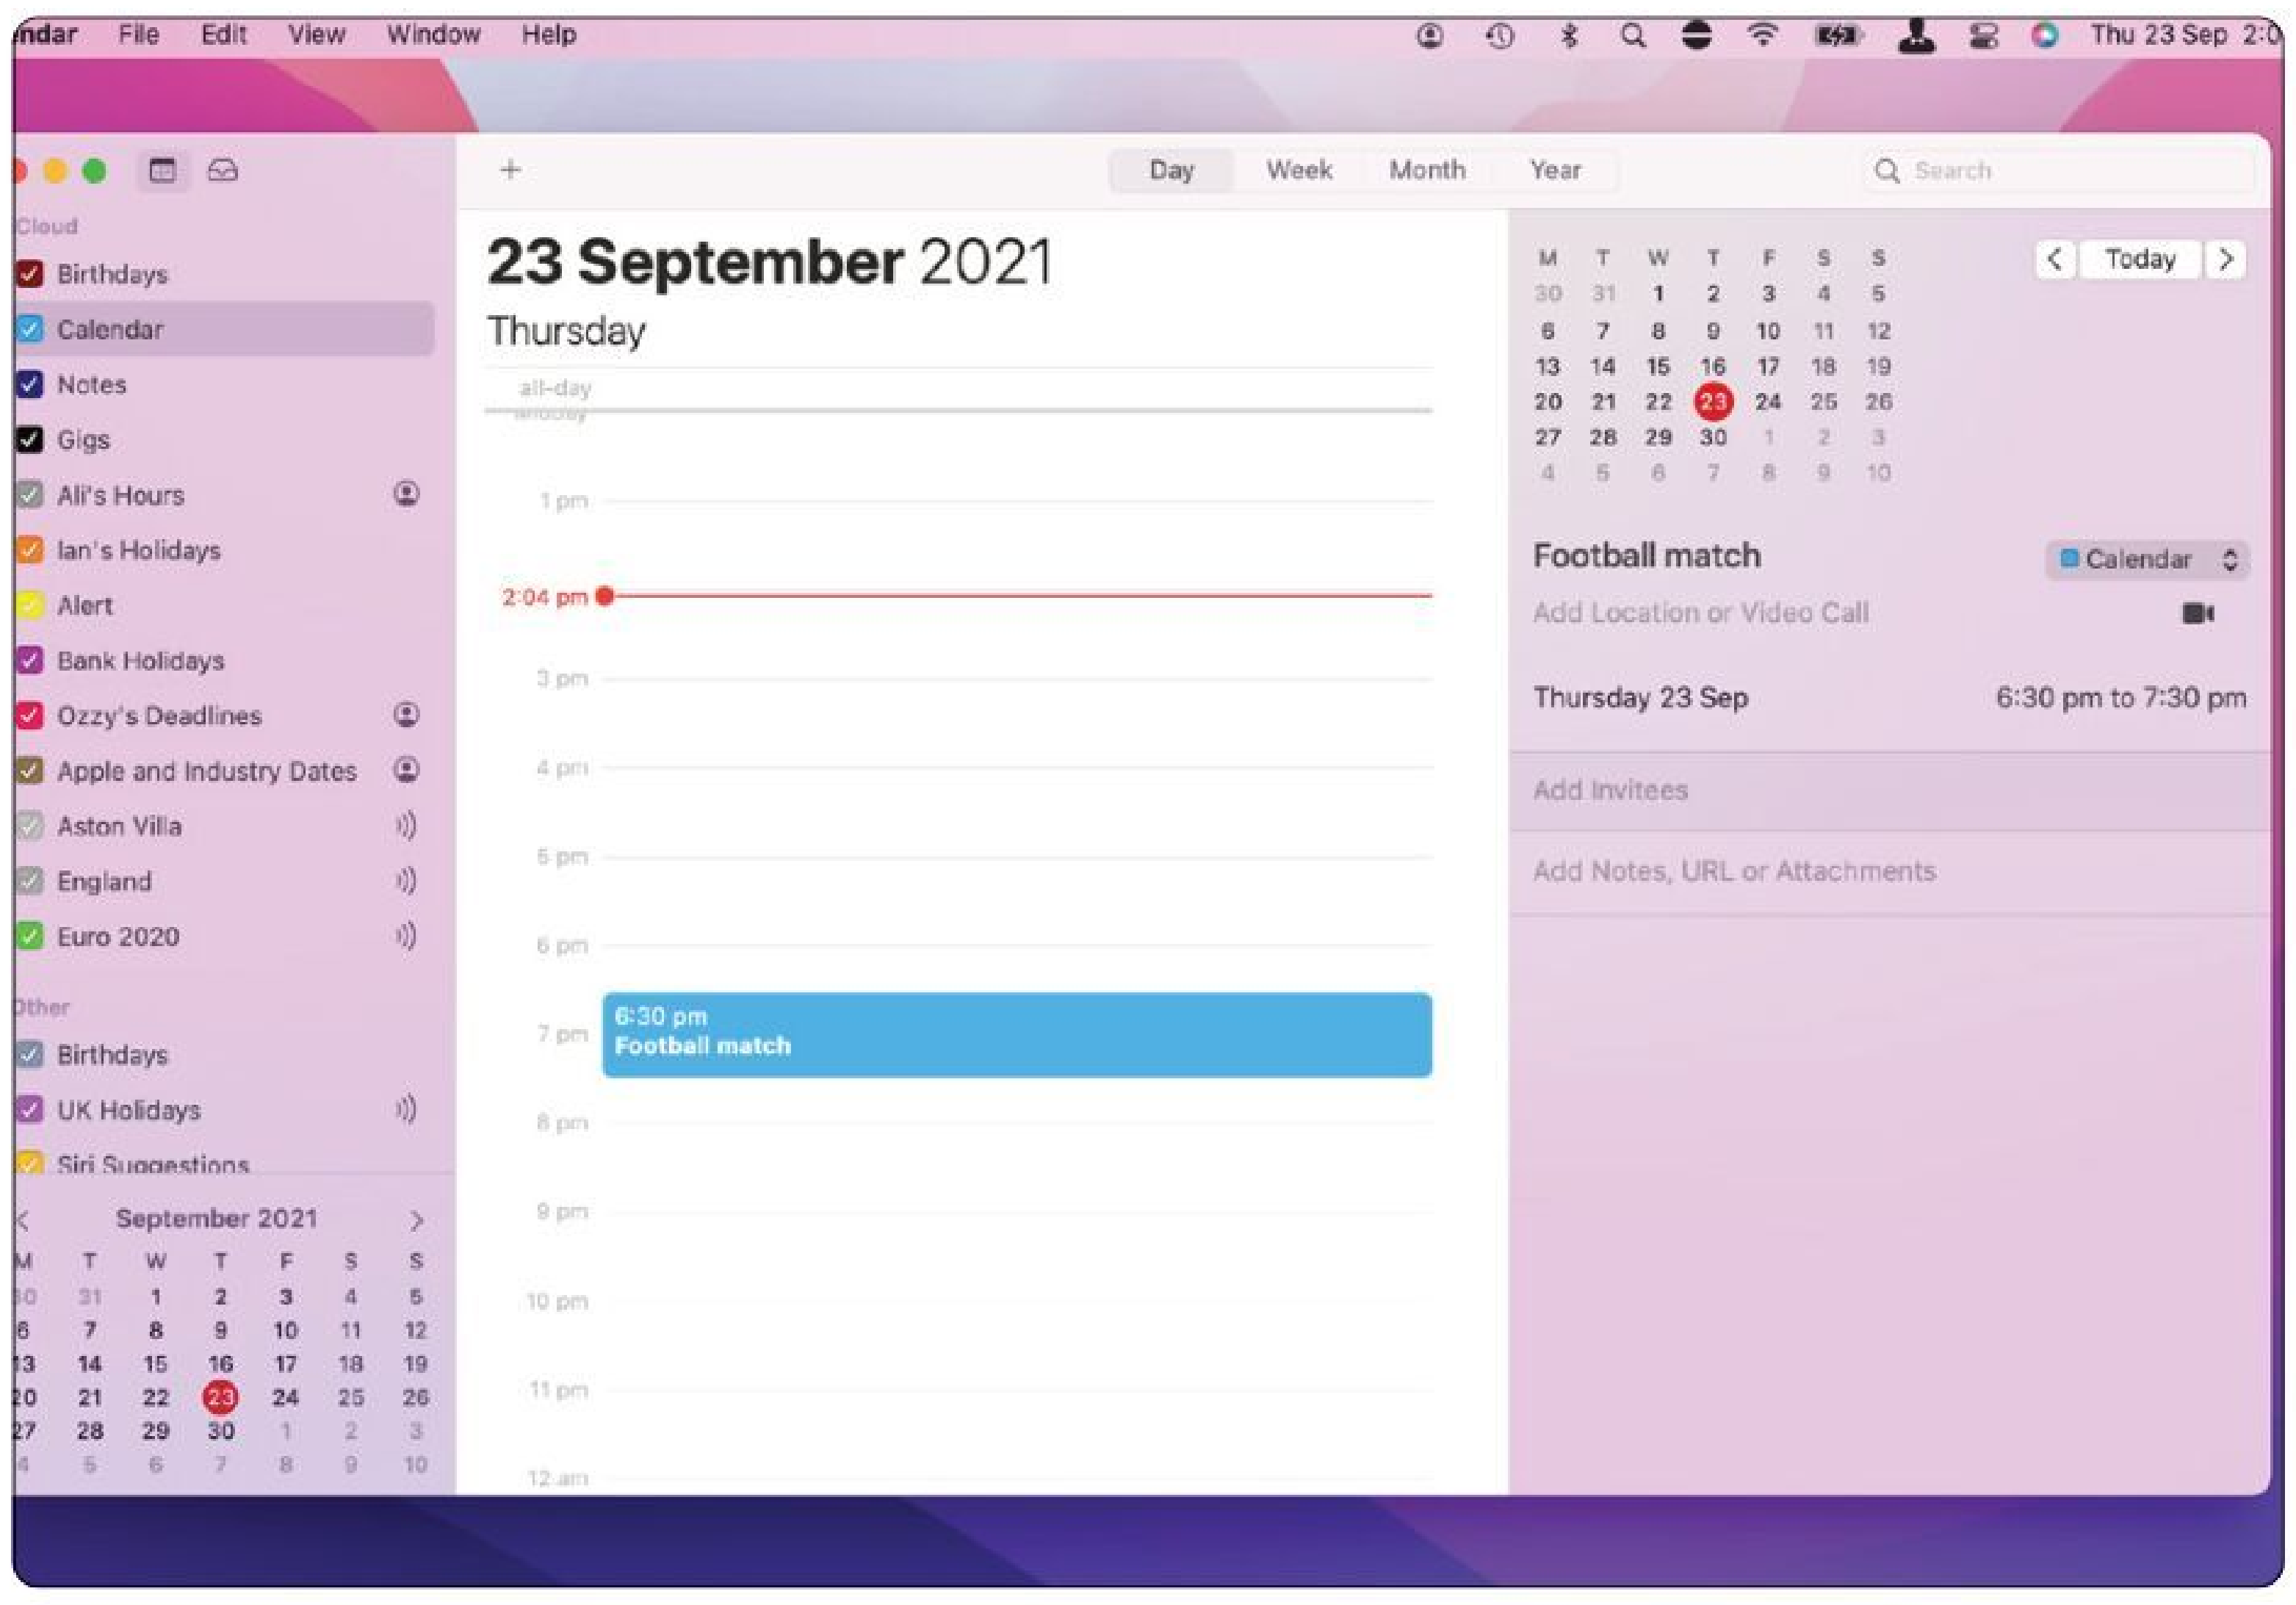




1 There are several different ways to view your calendars. To move between Day, Week, Month and Year views, you can use the corresponding buttons that appear in the top bar of the Calendar application.

2 The Year view shows you a complete year in a single window. Clicking on the title bar for any month takes you to its Month view. Double-click a specific day in either Year, Week or Month view to open its page in the Day view.

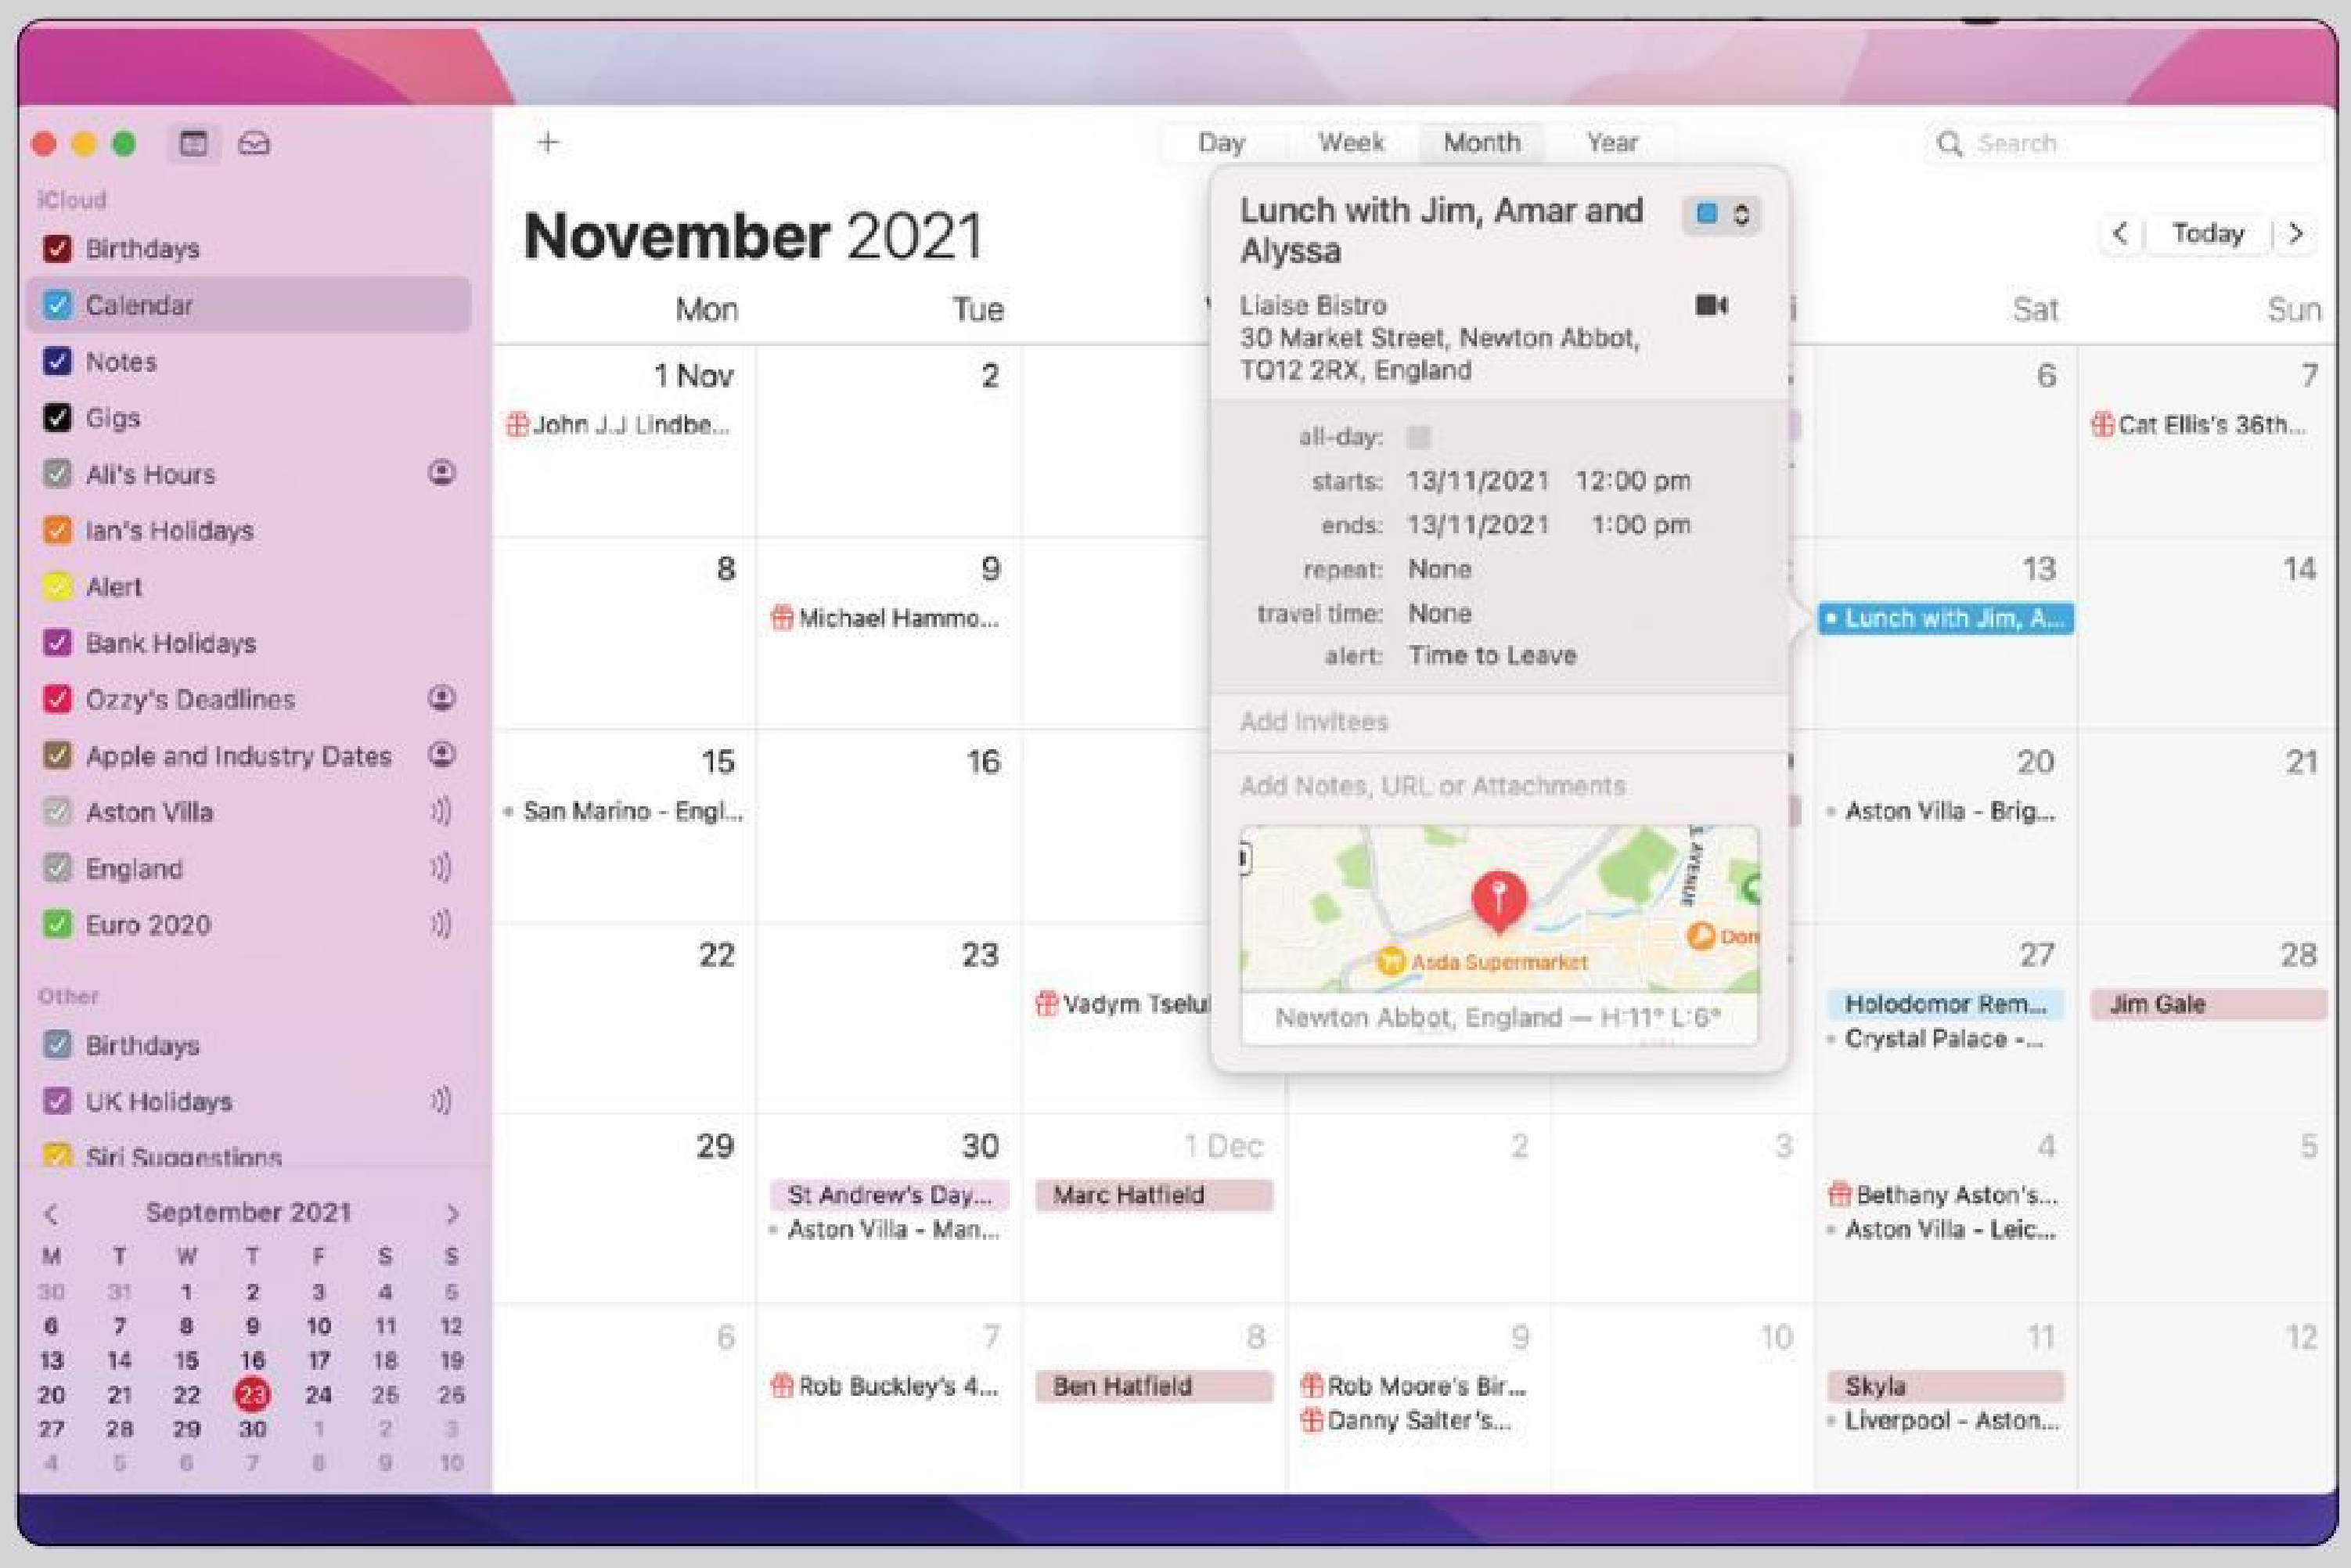




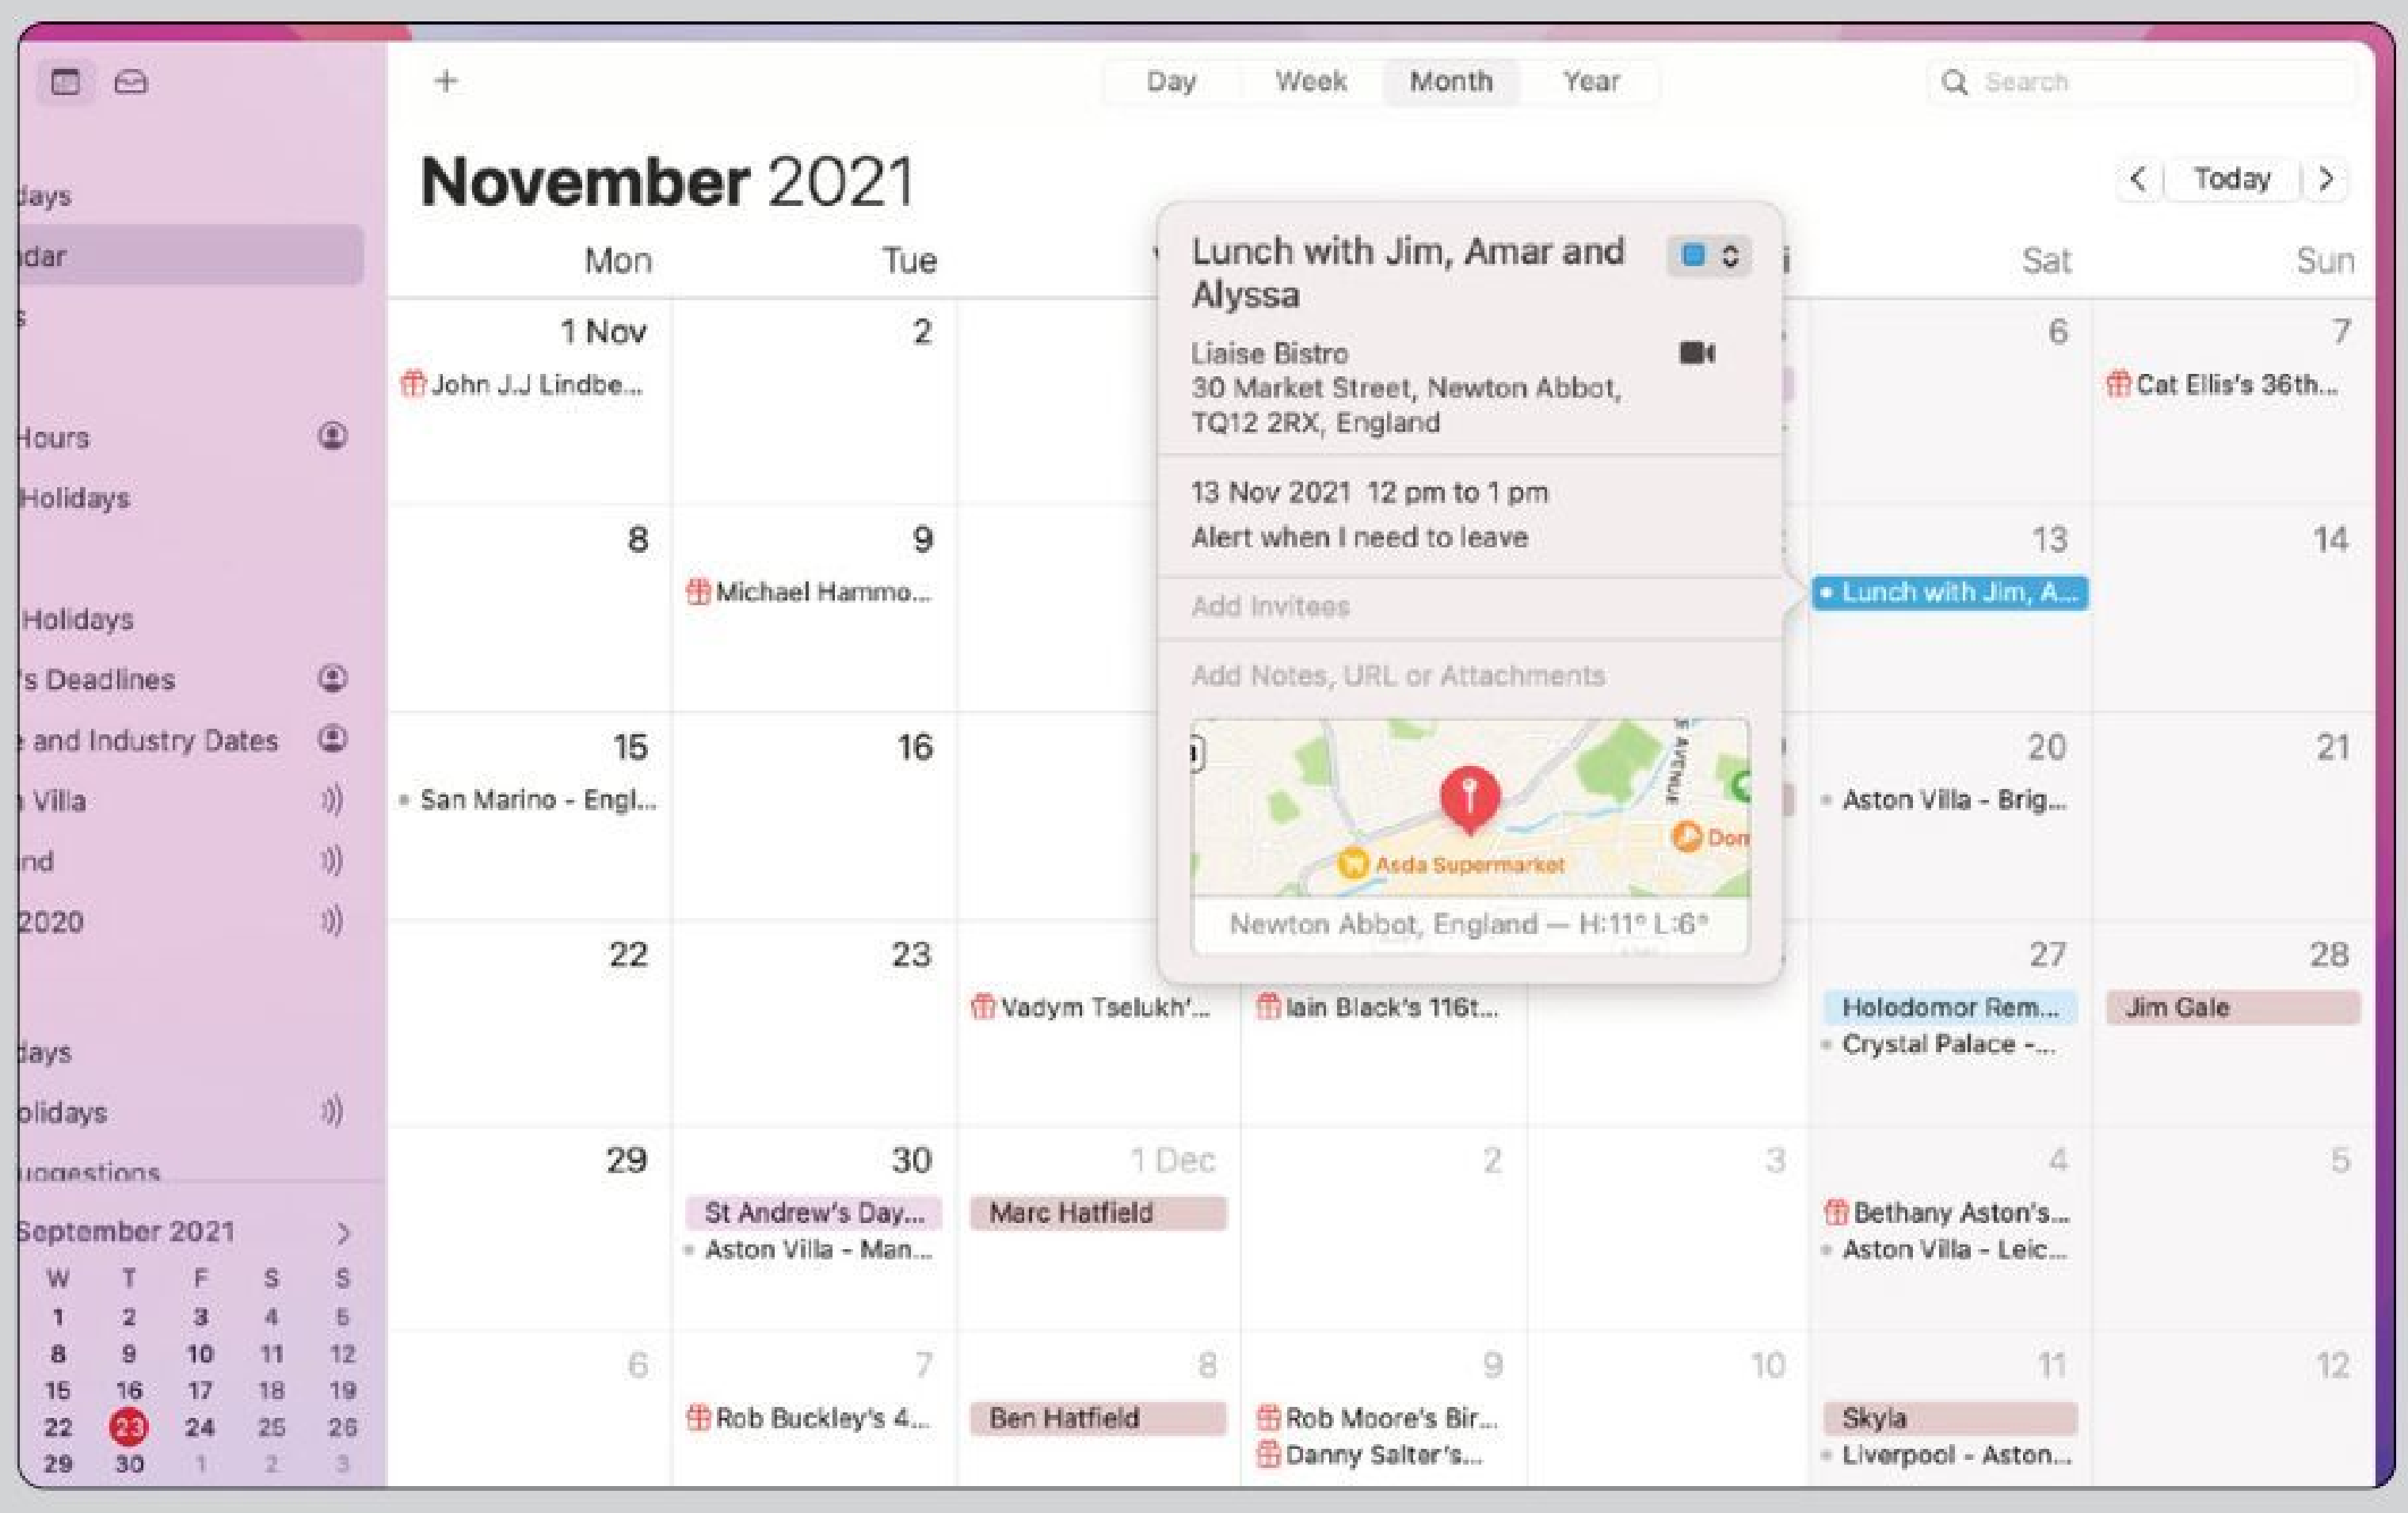
3 Click the Calendars button (top left) to open and close the sidebar, as shown here. This sidebar is visible regardless of whether you're in Day, Week, Month or Year view and lets you mute or reveal individual calendars and more.

4 Click the Today button in the top right corner to get to the Day, Week, Month or Year (depending on view) with the current day in it. The arrows either side take you forward or back one year, month, week or day at a time; depending on the display.

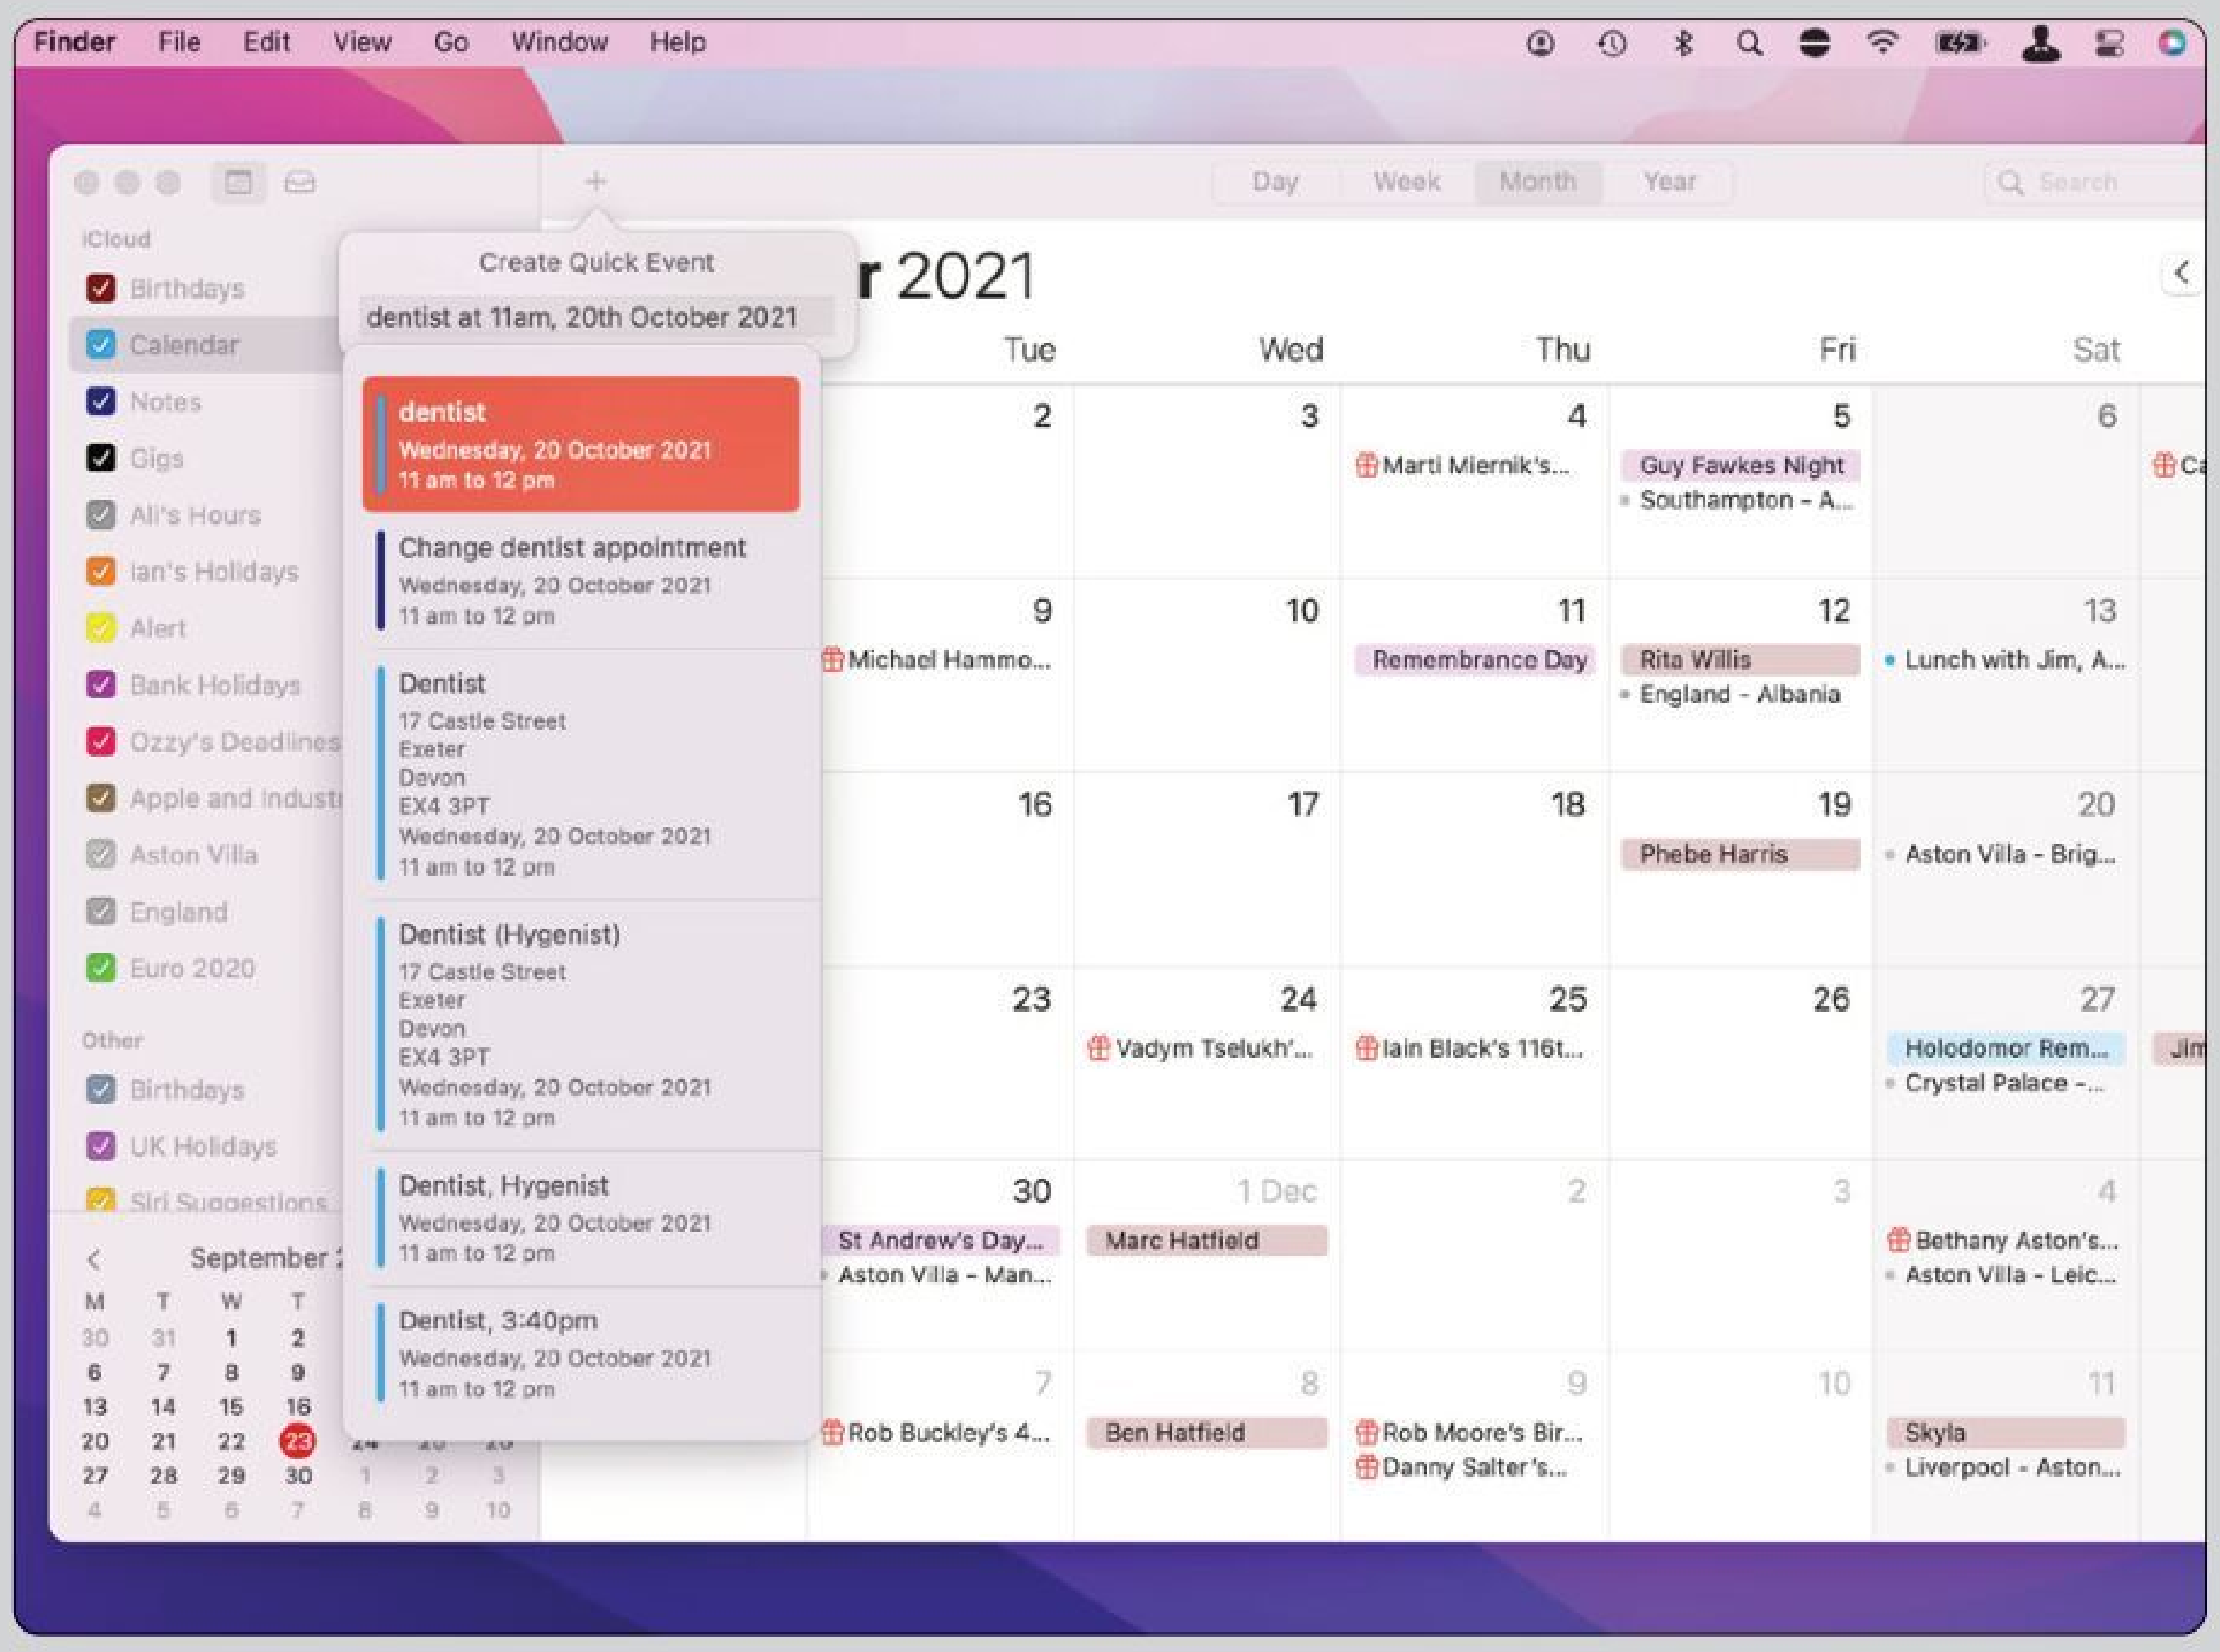
Creating an Event.



1 In Day and Week views, to add an event double-click the time slot, then drag and/or expand/contract it into place. The hours are divided into quarter-hour sections for adding events. For all-day events, click the top bar.

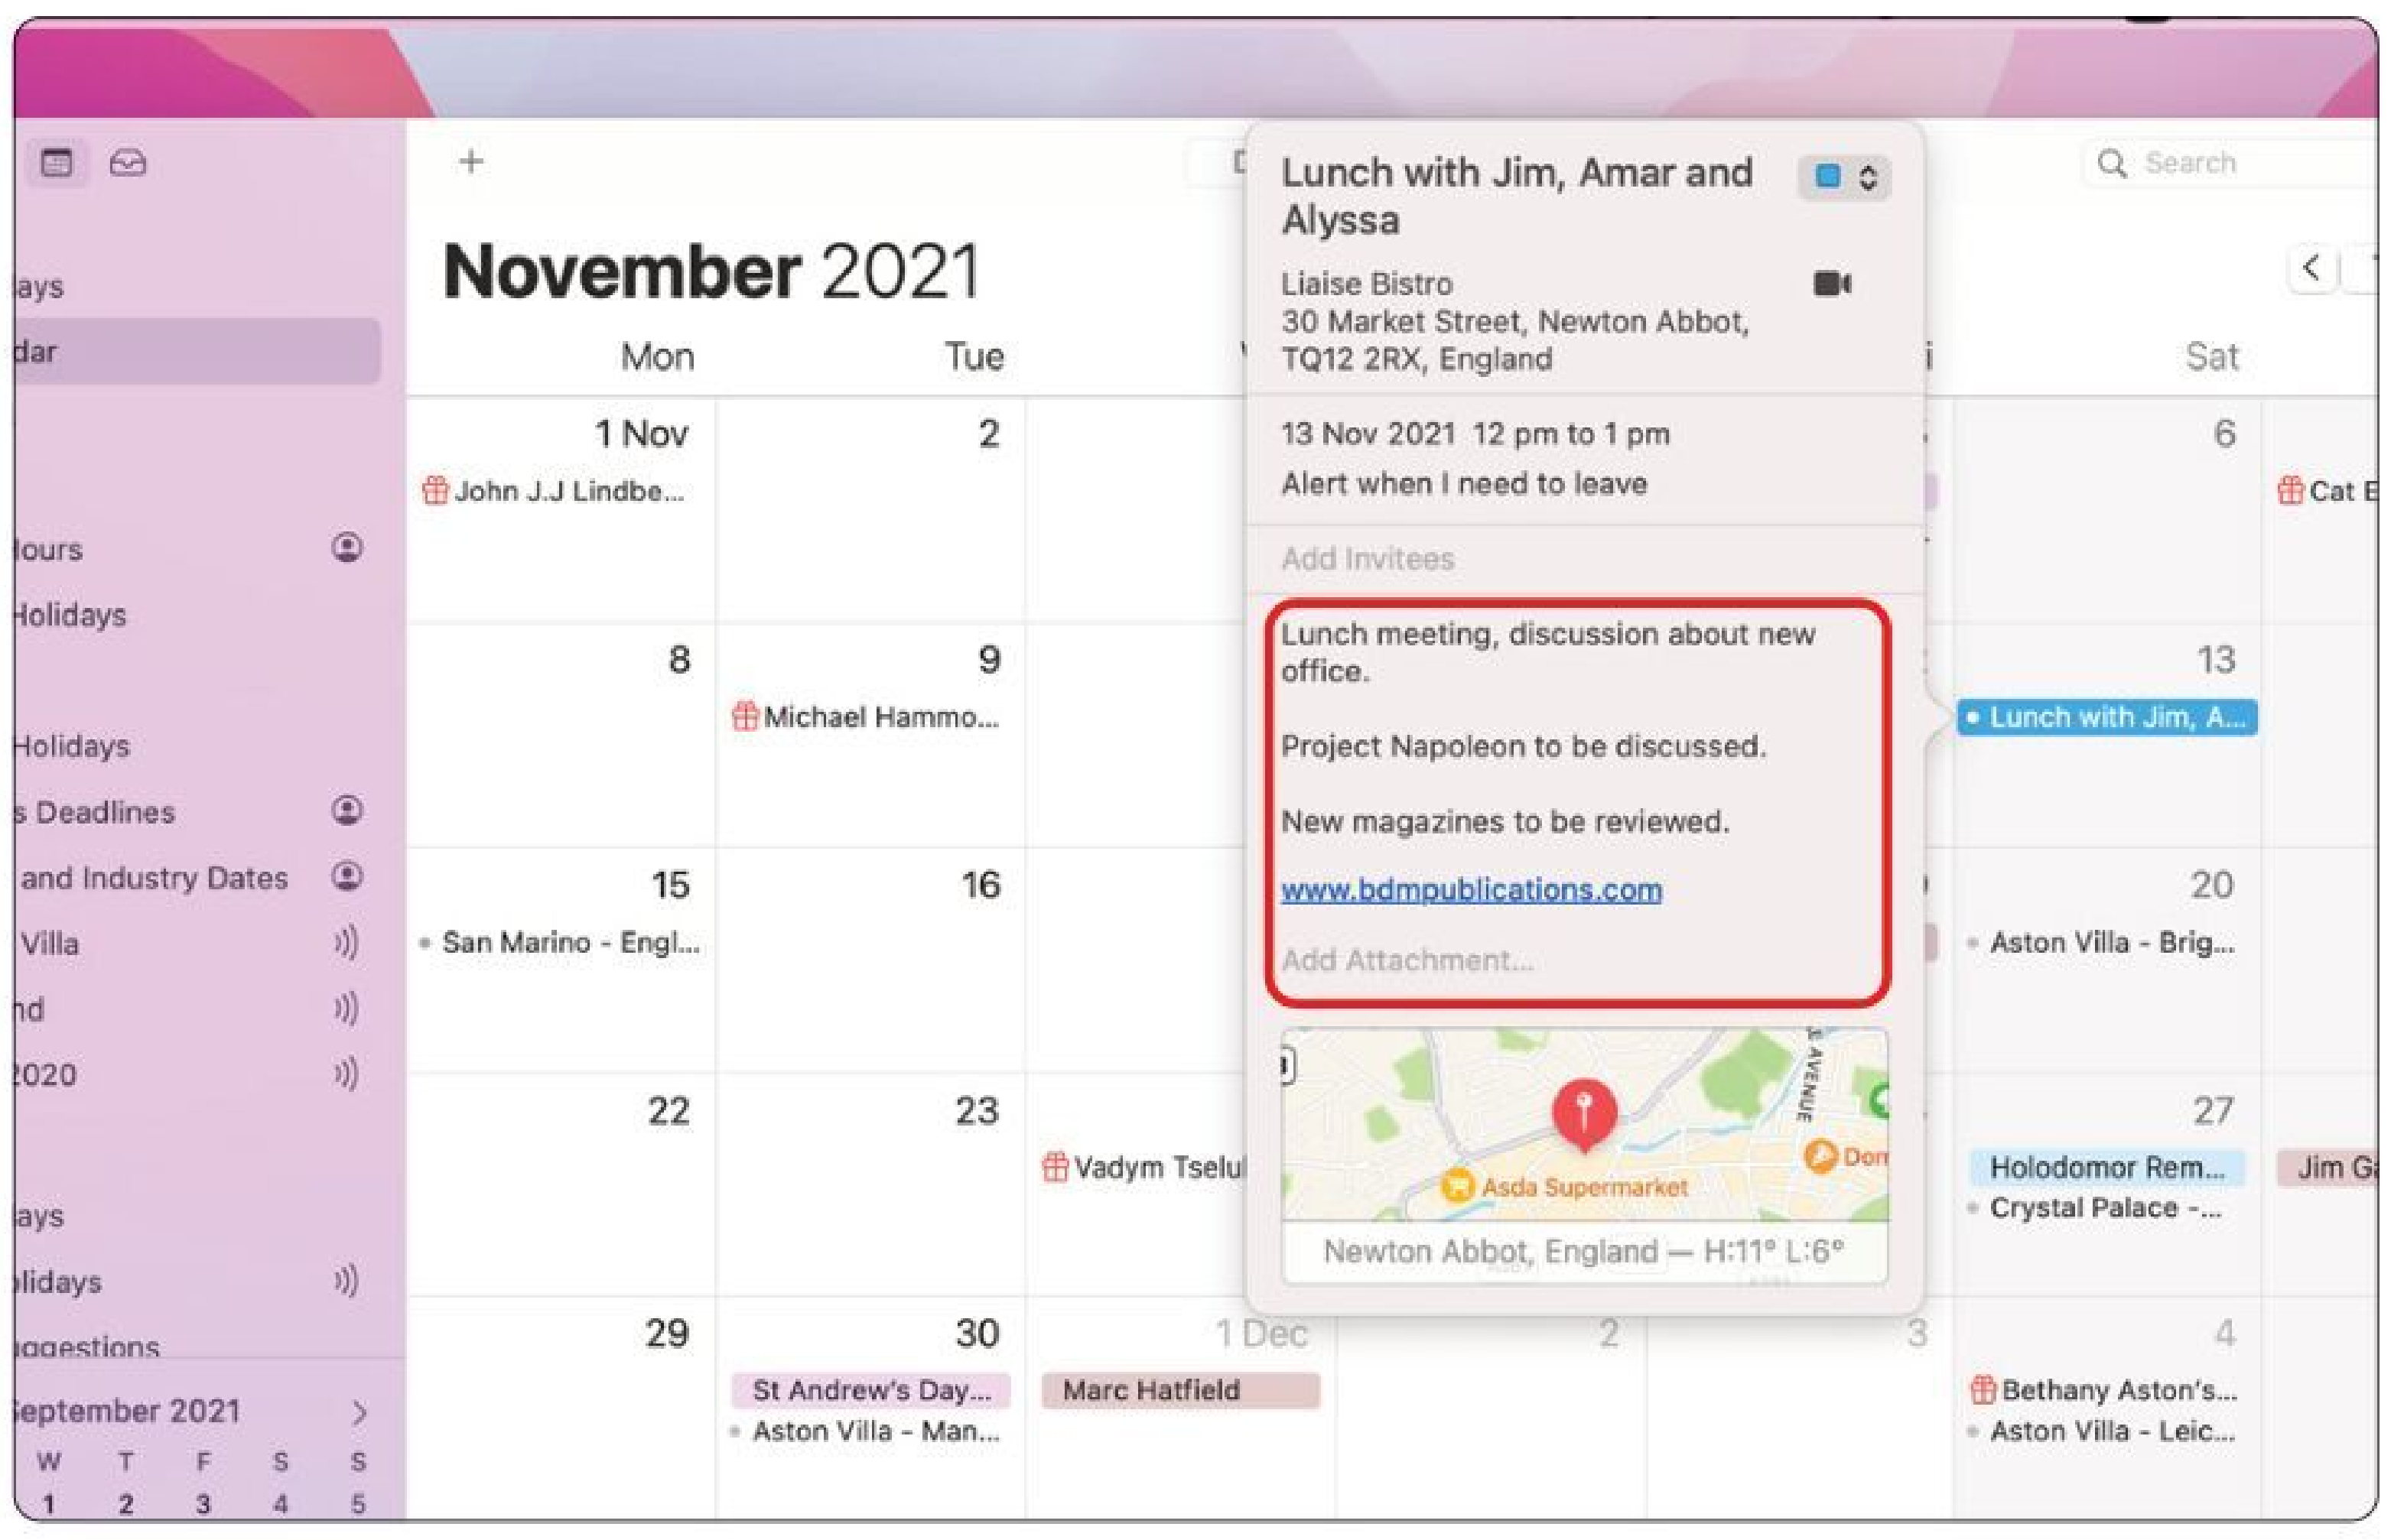


2 Double-click on an event to add and edit all sorts of details in a pop-up window; including the title, location, alerts, notes, URLs and more. The pull-down menu in the top right of this window lets you change which calendar it's stored in.



3 Clicking the '+' button in the toolbar lets you create a quick event. Type in a title or brief description, day and or time and Calendar intelligently enters it at the appropriate place. For example, type 'Dentist, 10th May, 11am' and it's added.

Searching Calendar



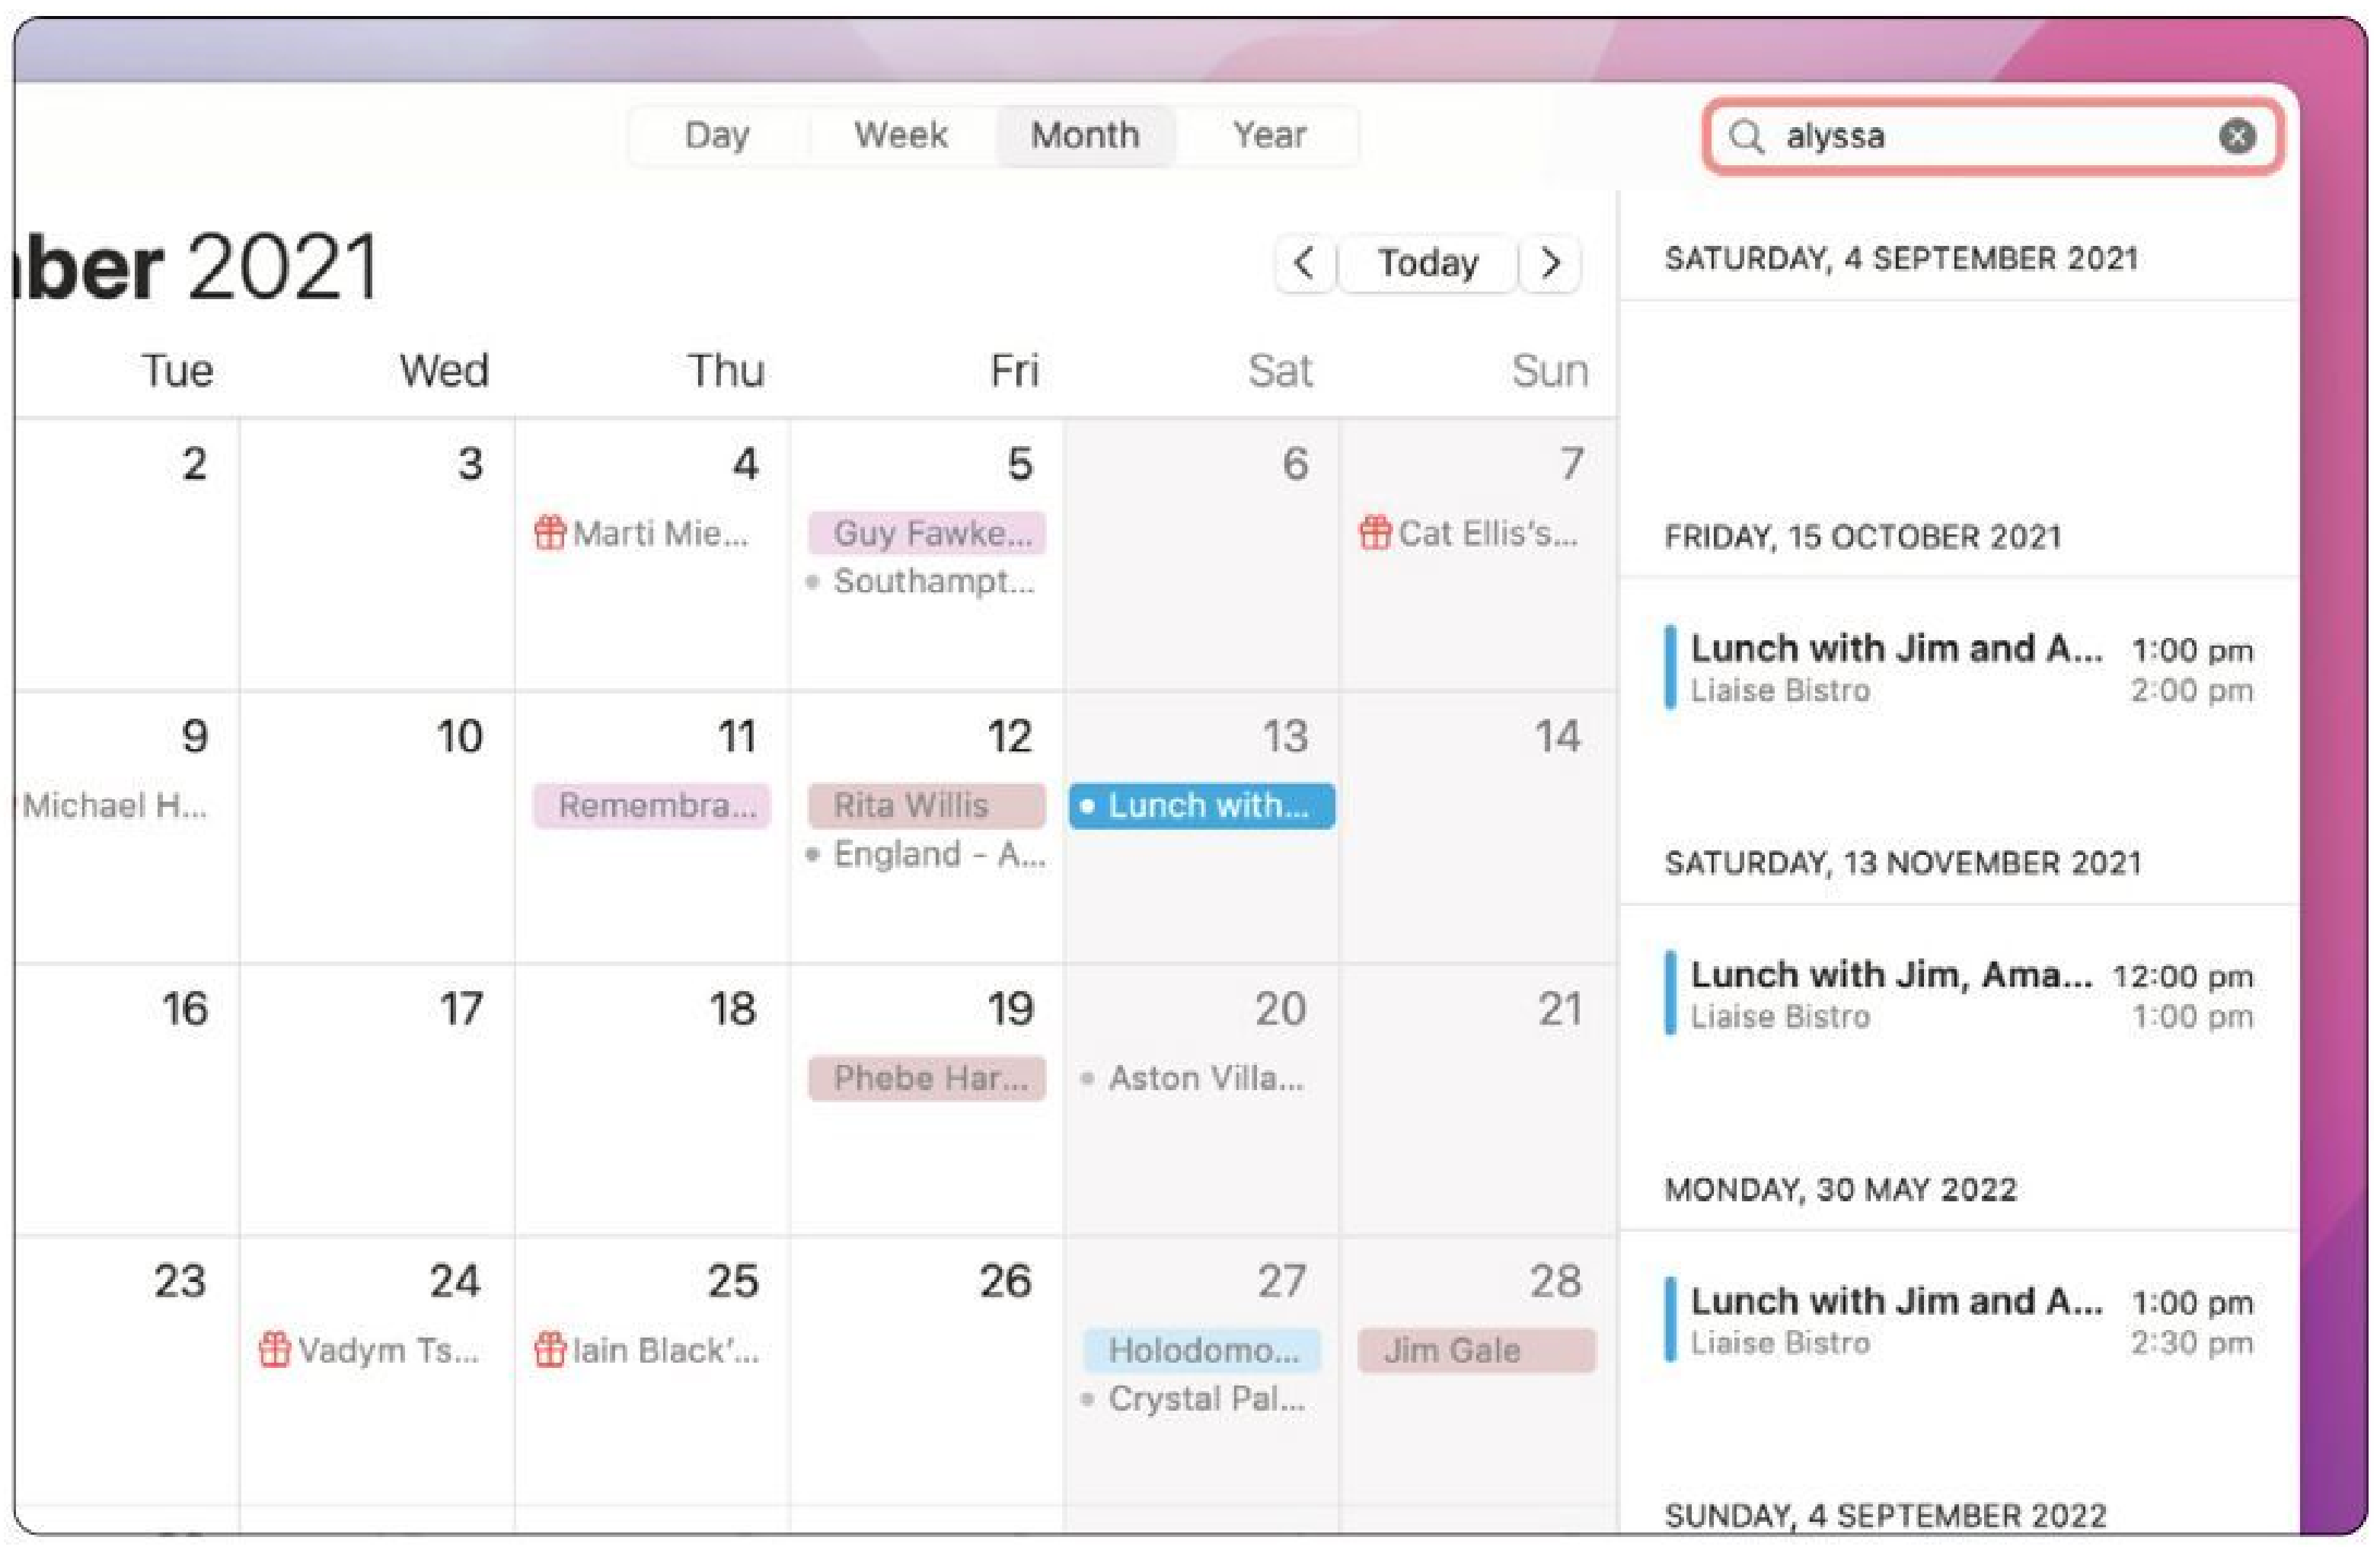
Lunch meeting, discussion about new office.

Project Napoleon to be discussed.

New magazines to be reviewed.

www.bdmpublications.com

1 Make your events more easily searchable by labelling them clearly and adding details in the notes section. The search function scans both event names and notes for keywords, so the more details you put in, the easier they are to find.



2 Type any keywords into the search field to the right of the top bar of the Calendar window. All results appear instantly in a pane at the bottom of the main window. The more keywords you type in, the more unwanted results are filtered out.

Creating a Backup.

You can manually create a complete backup of all the calendars in your Calendars app. Open the File menu, choose Export and select Calendar Archive. You can rename the file and select a location to save it to. To load it again, use the Import option.

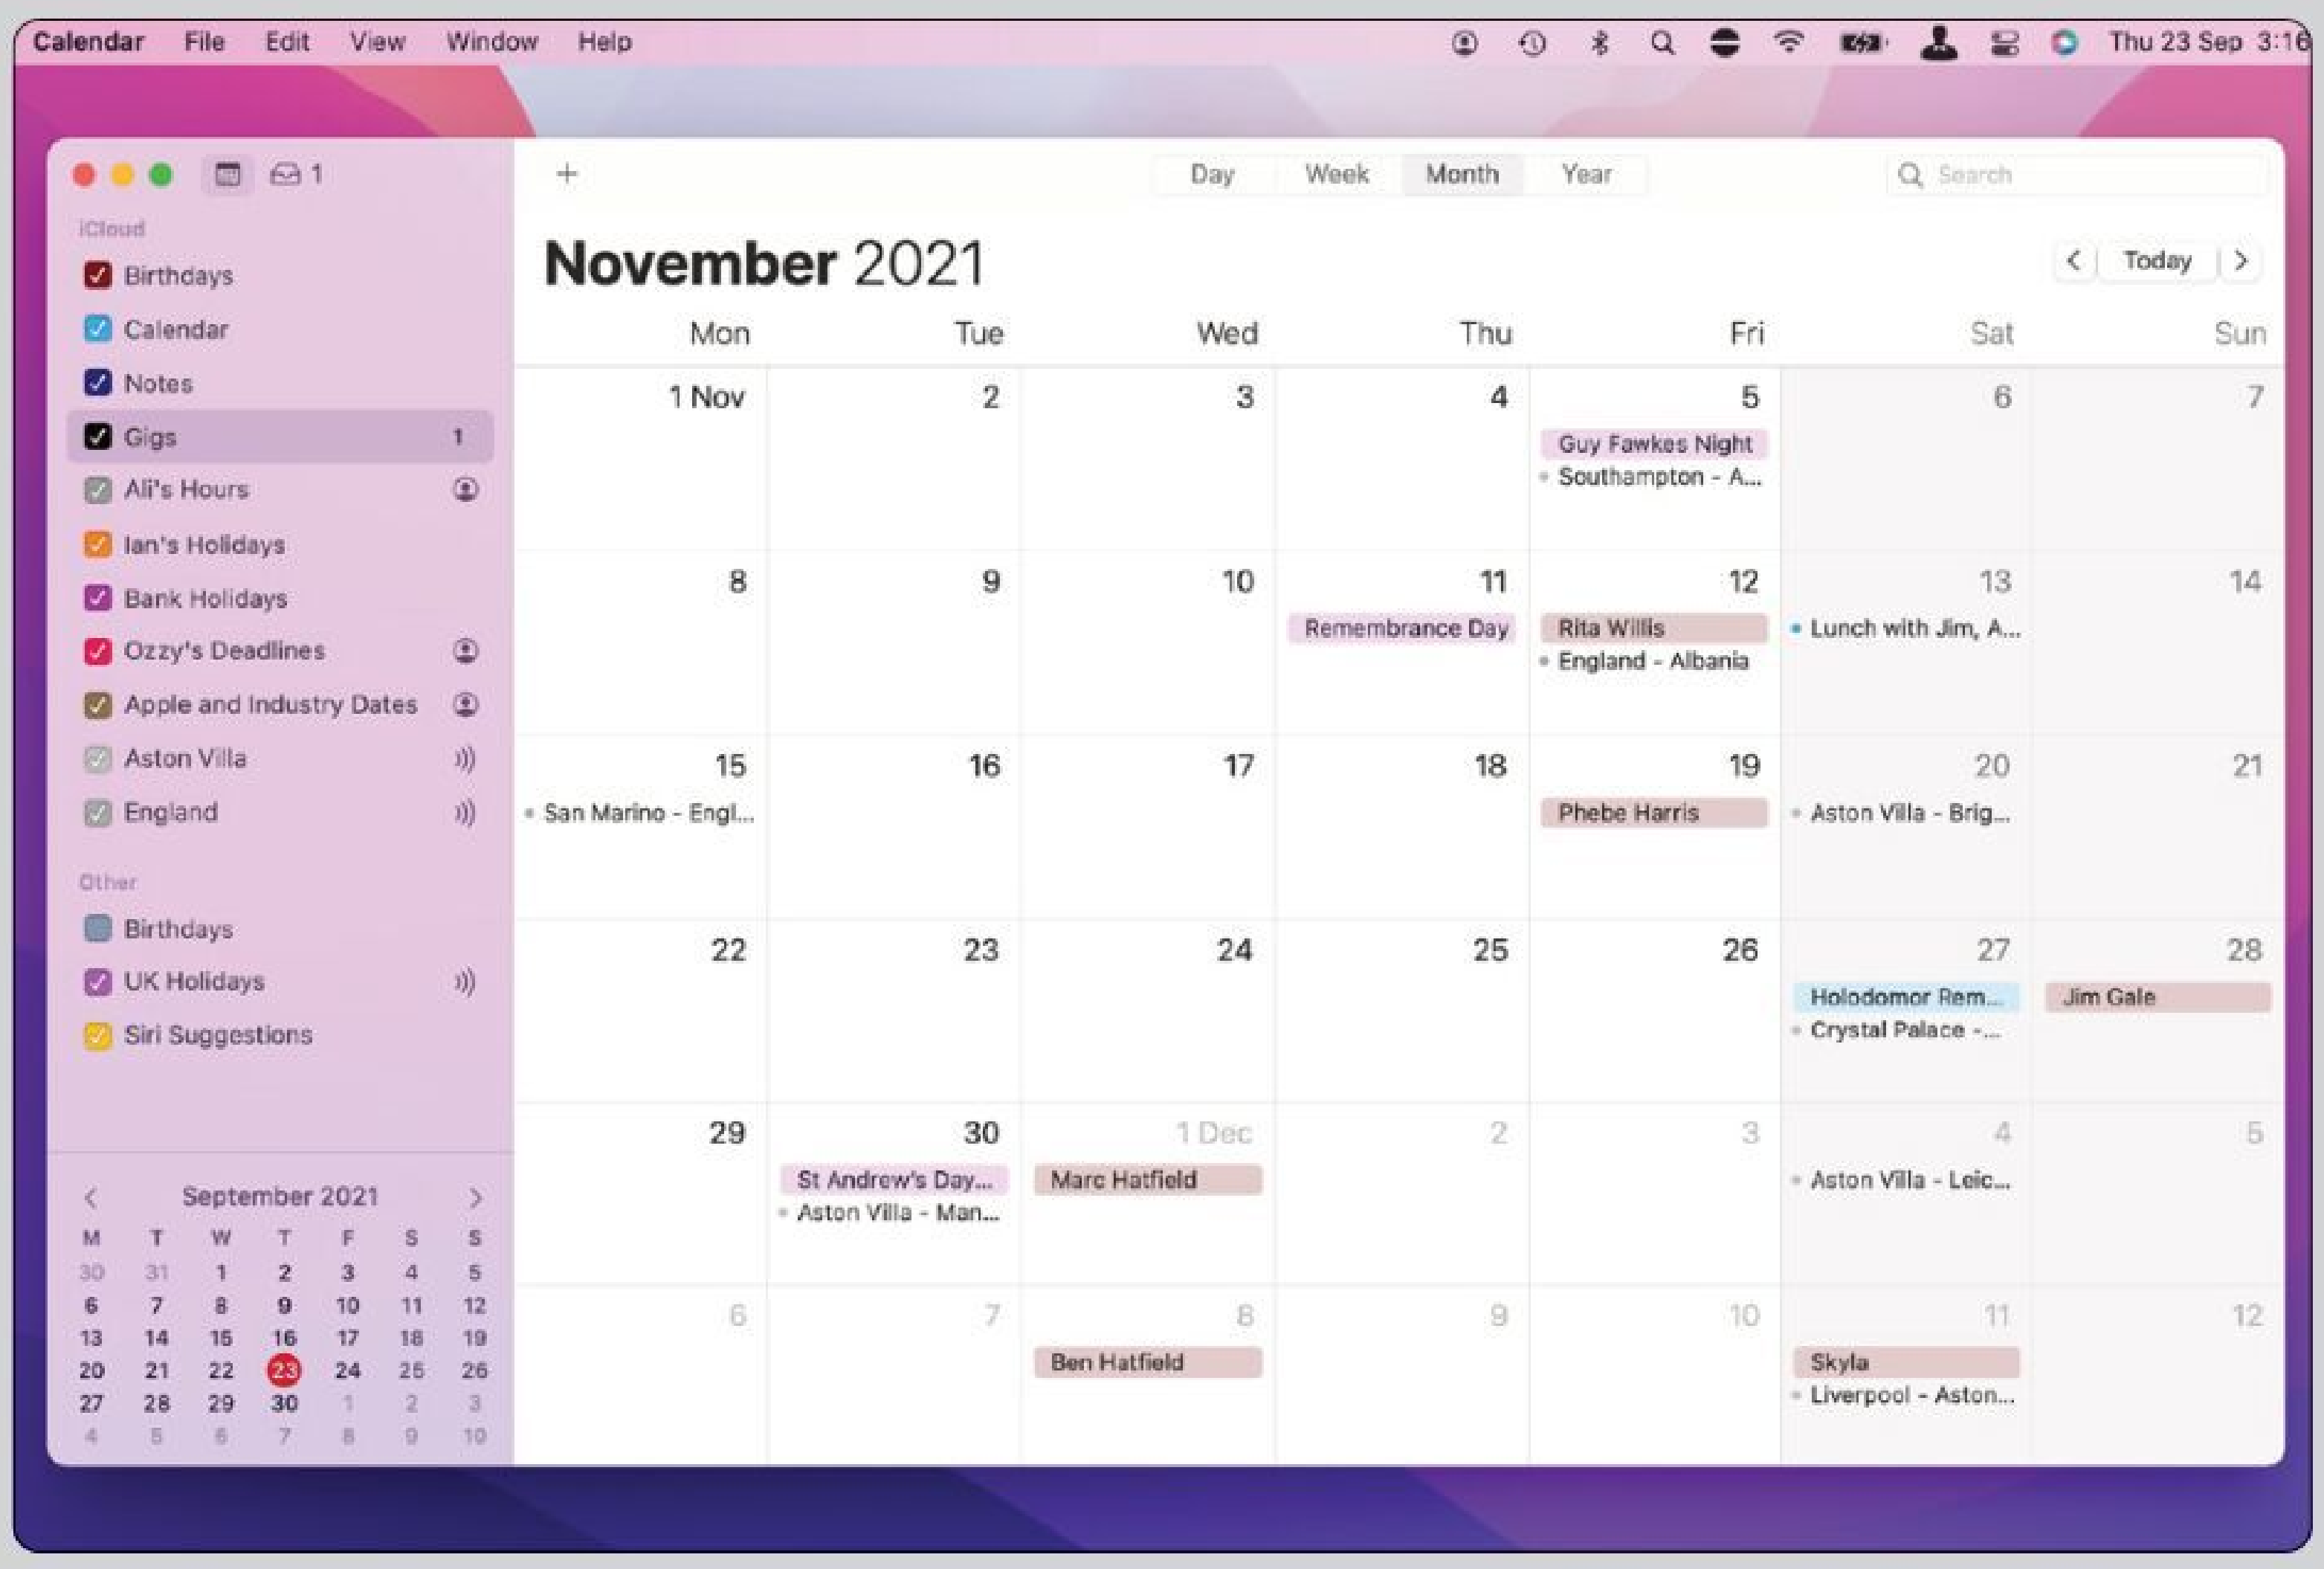
2 To activate iCloud syncing on an iPadOS or iOS device, open Settings, tap your name at the top and then tap iCloud. Make sure the Calendars switch is on. If it isn't, switch it on to sync your calendars between the device in question and all other Macs and iOS devices with syncing on.



November 2021

3 Now, when you return to your Calendar app, all the entries you made on your iOS devices are also shown on your Mac and vice versa. It's a great way of keeping your computer and your tablet or smartphone calendars in sync.

Reminders
Never Forget Again

If you want to make a shopping list, set up a regular reminder or schedule an alert, you need the Reminders app. It syncs across your Apple devices using iCloud, so you can add a reminder on your Mac and get an alert when you're out and about with your iPhone, and it's straightforward to use too.

- Room clear out: garage
- Room clear out: sheds and greenhouse
- New shed, roof
- Outside wall
- Look into tattoos

1 This is your search field. Use it to search your reminders, regardless of which list they're organised in.

2 This is the Reminders app's front page, showing smart lists as well as the lists you've created yourself. A 'list' is a group of reminders you've set up and can be titled anything you like.

3 Click the plus sign to add a reminder to the open list. You can call it anything you like. When added, it appears in that list until you mark it as done.

4 These boxes at the top of the sidebar are your smart lists. Click on one to open it. 'Today' is all reminders scheduled for that day, 'Scheduled' shows reminders due in the future, 'All' lists all your reminders and 'Flagged' shows those that you've flagged.

5 Here, you can see the currently selected list or smart list displayed in the main Reminders window. As 'All' is the currently selected smart list, this column shows all of your reminders, regardless of where they're stored.

6 Your lists can be called anything you like. Click one to open it and see the reminders you've added, mark reminders you've done as complete and also add new ones.

7 These icons show a Reminders list is shared. You can share a list with anyone with a Mac or iOS/iPadOS device. The list then appears in their own Reminders app.

8 The numbers on the right of each list show how many outstanding reminders it contains. When you mark one as done, it's removed from the list.

9 To mark a reminder as done, click the circle next to it and it disappears from the list. If you want to get it back, click Show (top right), and then click a filled circle to clear it.

10 Click here to create a new list, which appears in the My Lists section of the Reminders home page. You can then add reminders to this list in the usual way.

Today 10:56 am

Hi Amar, how are you doing? 😃

I'm fine, how are you today?

Ticking over. Do you fancy catching a movie tonight? There's some great new films on at the local pictures.

Read 10:58 am

4 When conversing, messages you've sent are shown on the right-hand side of the conversation window, and replies are shown in grey on the left. Under your last message, you're shown when it was read. While your contact is typing, a three-dots speech bubble is shown.

Howdy everyone. Hope you're all enjoying the sun. ☀️

James Gale: It's certainly been a really nice change! 😎

Jackie Derby: Yeah, I'm loving it.

James Gale: Have you managed to get to the coast?

We're on the train, will be at the seaside soon.

James Gale: Bring me back an 🍦

6 Type more than one person's details into the To field and you can start a group conversation. Your outgoing messages are sent to everyone in the group, and their replies in grey show the picture and the name of the person who sent it; so you can see who said what.

DRACULA

had better tell you exactly what happened, leaving you to draw, in a measure, your own conclusions. I shall then say what I have done and propose doing.

"I found Miss Westenra in seemingly gay spirits. Her mother was present, and in a few seconds I made up my mind that she was trying all she knew to mislead her mother and prevent her from being anxious. I have no doubt she guesses, if she does not know, what need of caution there is.

"We lunched alone, and as we all exerted ourselves to be cheerful, we got, as some kind of reward for our labours, some real cheerfulness amongst us. Then Mrs. Westenra went to lie down, and Lucy was left with me. We went into her boudoir, and till we got there her gaiety remained, for the servants were coming and going.

"As soon as the door was closed, however, the mask fell from her face, and she sank down into a chair with a great sigh, and hid her eyes with her hand. When I saw that her high spirits had failed, I at once took advantage of her reaction to make a diagnosis.

"She said to me very sweetly, 'I cannot tell you how I loathe talking about myself.' I reminded her that a doctor's confidence was sacred, but that you were grievously anxious about her. She caught on to my meaning at once, and settled that matter in a word. 'Tell Arthur everything you choose. I do not care for myself, but for him!' So I am quite free.

"I could easily see that she was somewhat bloodless, but I could not see the usual anemic signs, and by the chance, I was able to test the actual quality of her blood, for in opening a window which was stiff a cord gave way, and she cut her hand slightly with broken glass. It was a slight matter in itself, but it gave me an evident chance, and I secured a few drops of the blood and have analysed them.

"The qualitative analysis give a quite normal condition, and shows, I should infer, in itself a vigorous state of health. In other physical matters I was quite satisfied that there is no need for anxiety, but as there must be a cause somewhere, I have come to the conclusion that it must be something mental.

"She complains of difficulty breathing satisfactorily at times, and of heavy, lethargic sleep, with dreams that frighten her, but regarding which she can remember nothing. She says that as a child, she used to walk in her sleep, and that when in Whitby the habit came back, and that once she walked out in the night and went to East Cliff, where Miss Murray found her. But she assures me that of late the habit has not returned.

"I am in doubt, and so have done the best thing I know of. I have written to my old friend and master, Professor Van Helsing, of Amsterdam, who knows as much about obscure diseases as any one in the world. I have asked him to come over, and as you told me that all things were to be at your charge, I have mentioned to him who you are and your relations to Miss Westenra. This, my dear fellow, is in obedience to your wishes, for I am only too proud and happy to do anything I can for her.

"Van Helsing would, I know, do anything for me for a personal reason, so no matter on what ground he comes, we must accept his wishes. He is a seemingly arbitrary man,

The Universe
Chapter 4: Outside and Beyond

The chance of this collision taking place has been researched and studies have concluded that the collision is definitely going to happen.

It is also theorised that in the very distant future, the other galaxies in the Local Group could merge into the colossal Milky Way-Andromeda galaxy. This will create a gigantic galaxy, and will literally consist of all the galaxies in the Local Group in one galaxy.

Although Andromeda is the largest galaxy in the Local Group, recent studies suggest that the Milky Way contains more dark matter which could put it in place of the most massive galaxy in the group.

The Andromeda Galaxy has 14 dwarf satellite galaxies. A satellite galaxy is a galaxy that orbits a larger galaxy due to gravitational attraction. A dwarf galaxy is a galaxy that consists of only a few billion stars, as opposed to the 200-400 billion stars in the Milky Way, and the trillion stars in Andromeda.

Andromeda is similar to the Milky Way in many ways, and as a result, astronomers use information they know about Andromeda to help them learn more about our own Milky Way.

The Andromeda Galaxy is one of only ten galaxies that can seen unaided from the Earth.

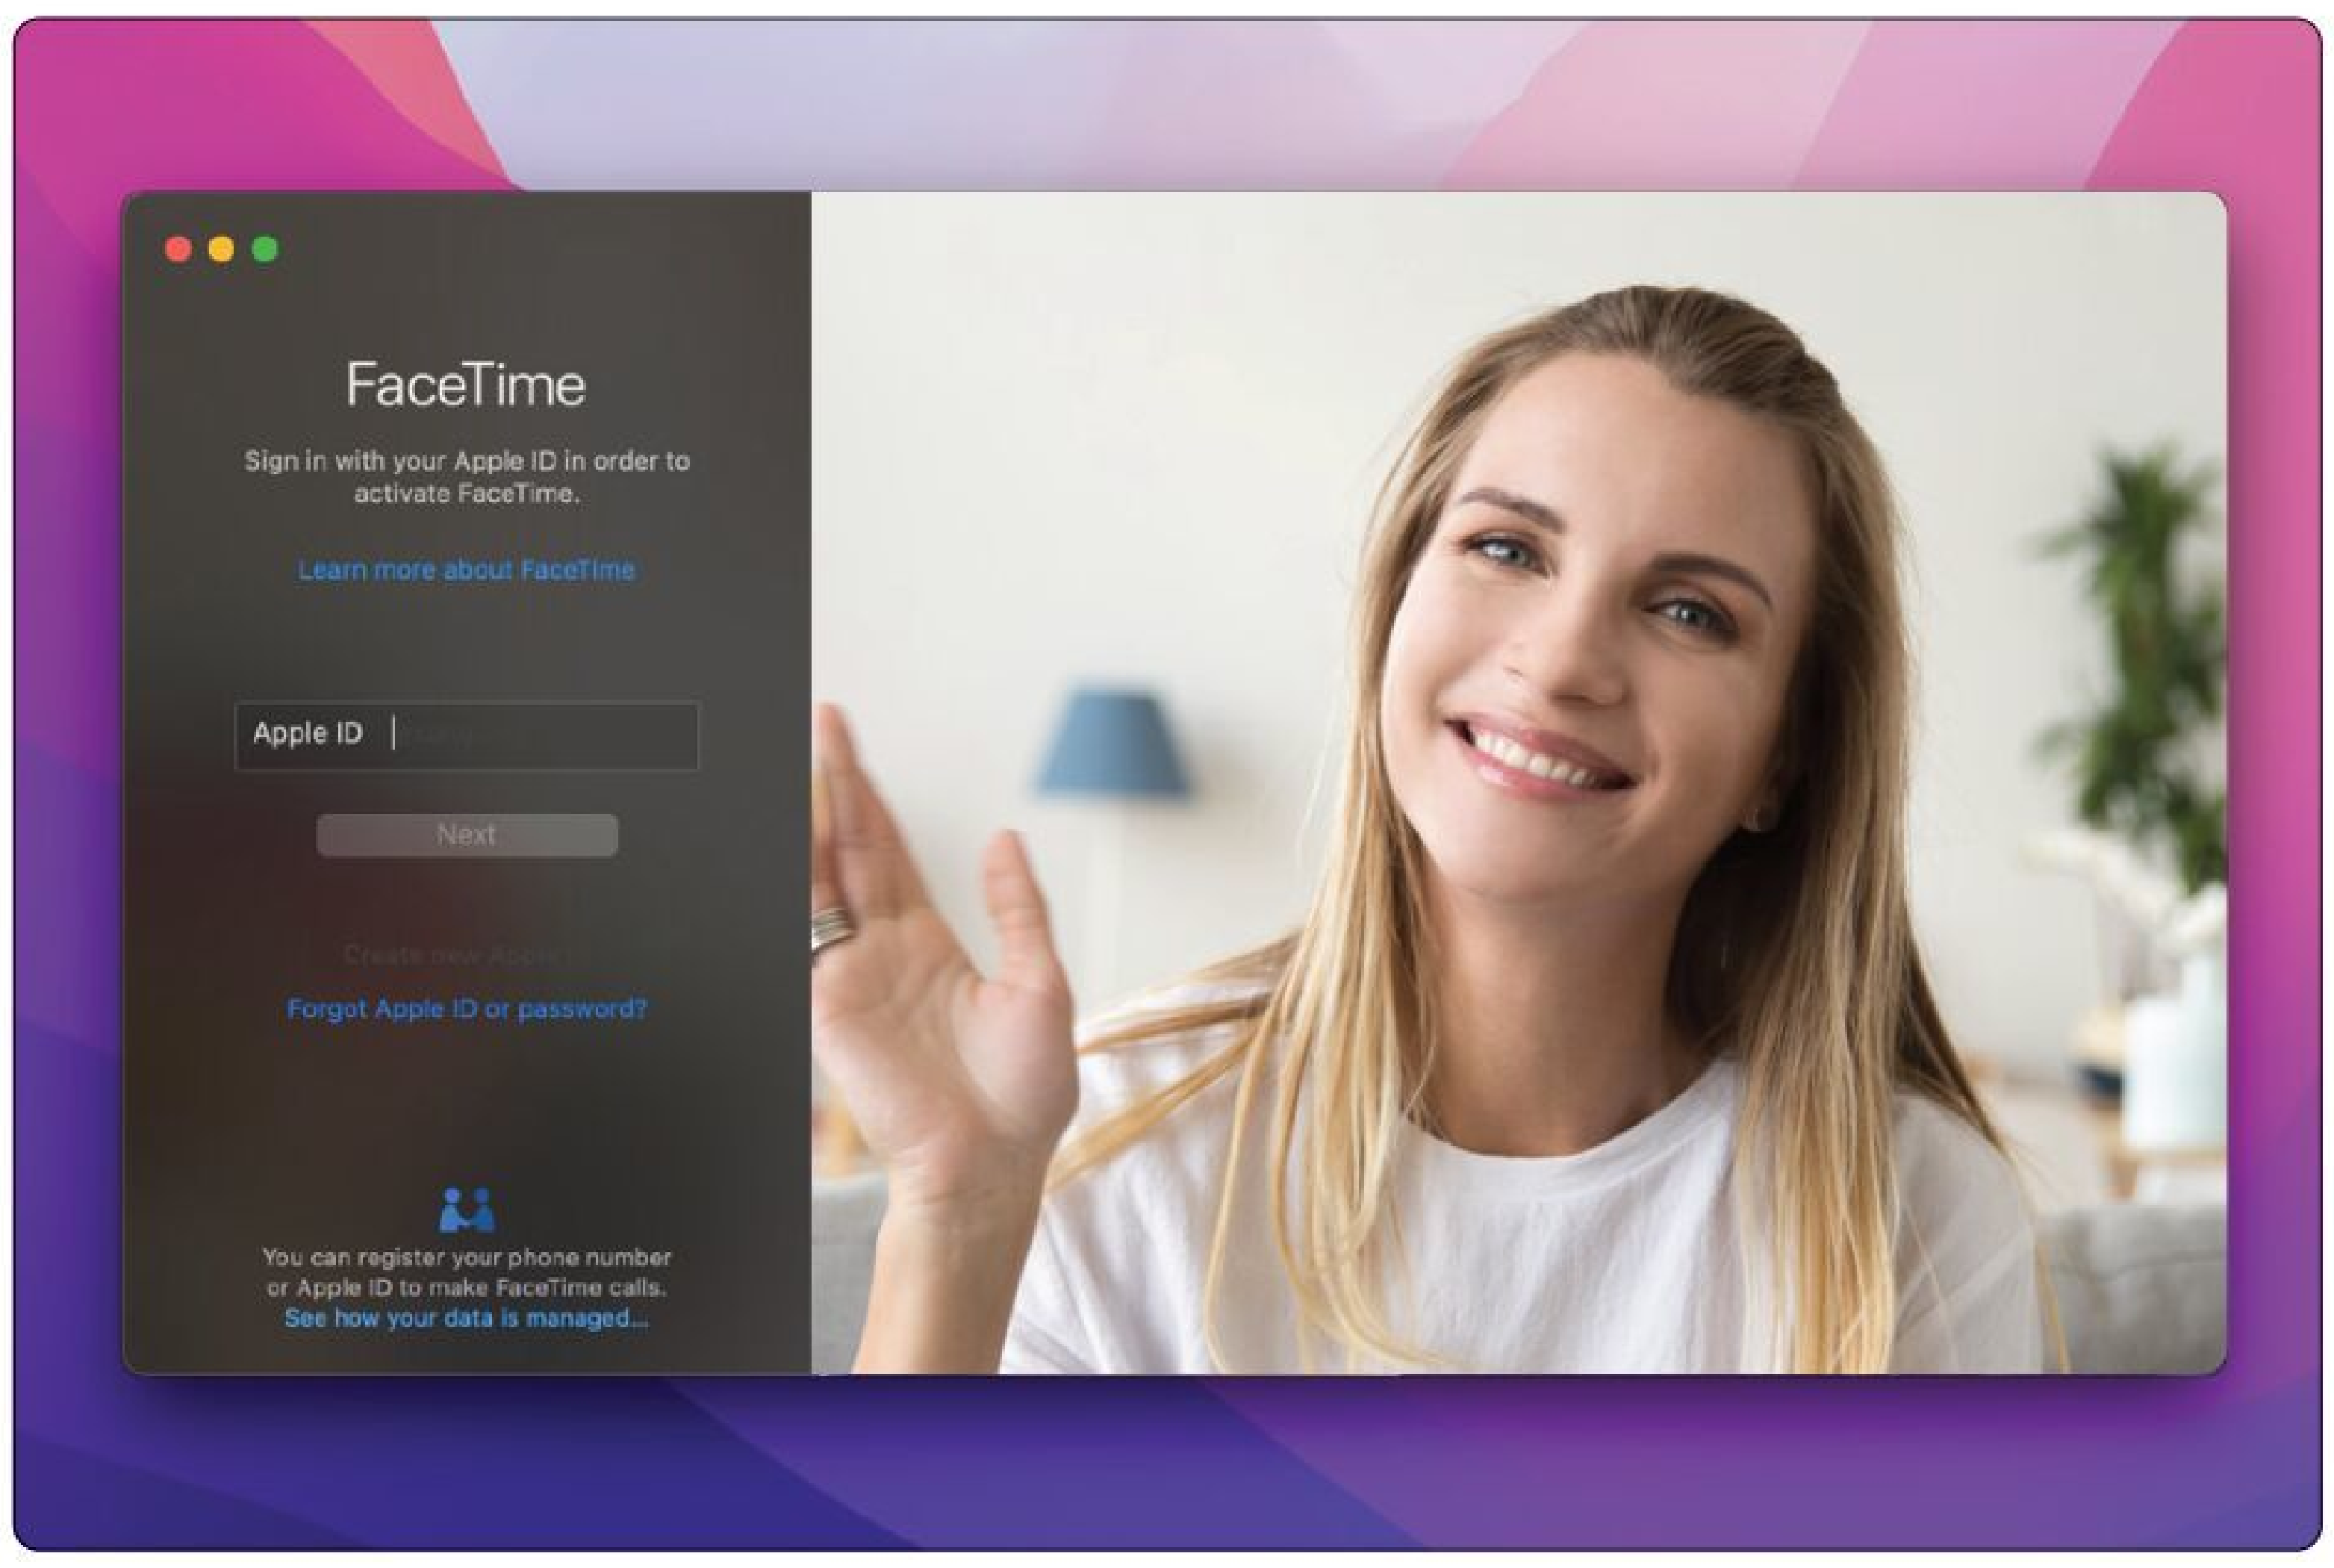
FaceTime
Video & Audio Calls

Video chat has grown in popularity during the global pandemic, and Apple's own FaceTime video chat app has grown with Monterey. It's now even more powerful and feature-packed, and you can even take (but not initiate), FaceTime calls on Android and Windows devices. Let's take a look at it.

Using FaceTime

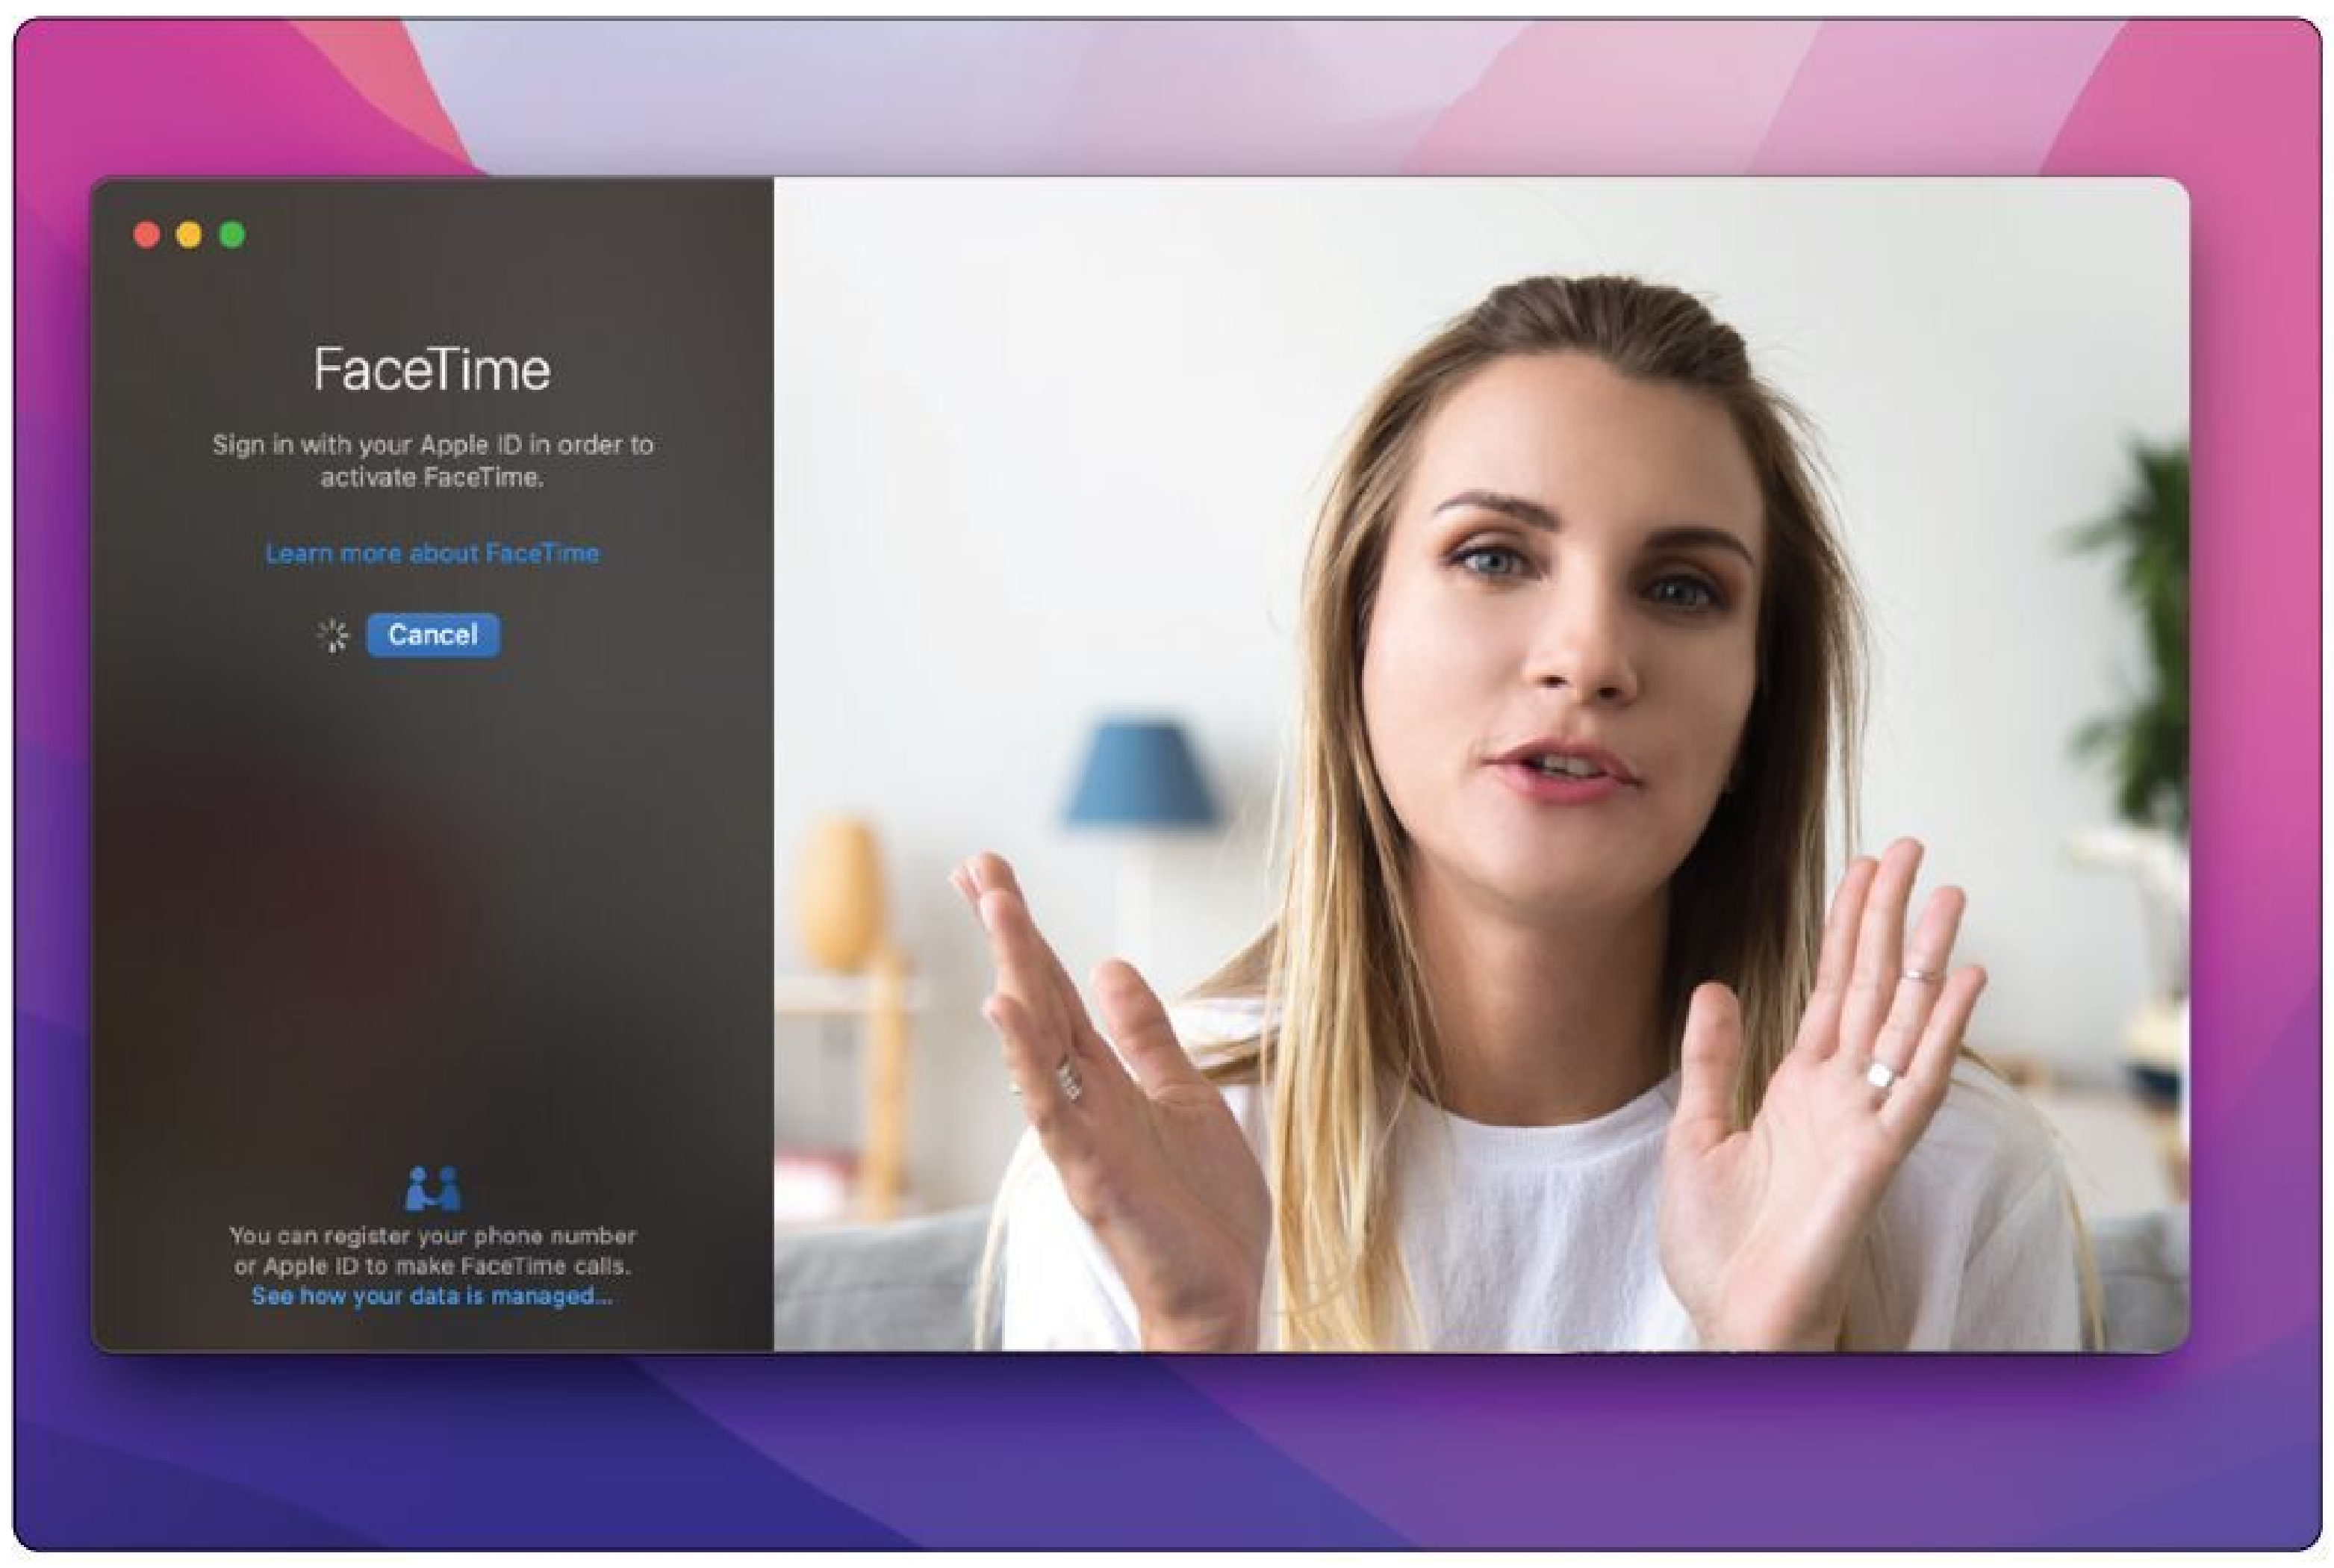


FaceTime
Learn more about FaceTime
Apple ID
Next
Forgot Apple ID or password?
See how your data is managed...

Sign in with your Apple ID in order to activate FaceTime.

You can register your phone number or Apple ID to make FaceTime calls.

1 Click on the FaceTime app to launch the program. It should start straight away, and you'll see your own face on the screen, as well as a panel inviting you to log in with your Apple ID. Type in your Apple ID password and click OK.



FaceTime
Learn more about FaceTime
Cancel
See how your data is managed...

Sign in with your Apple ID in order to activate FaceTime.

You can register your phone number or Apple ID to make FaceTime calls.

2 Next you'll need to log on with your Apple ID. People can use your Apple ID email to call you through the FaceTime app. There might be a brief pause while FaceTime verifies your details and logs you on.

3 Before you make a video call, it's a good idea to make sure they can see you properly. Using the camera view shown here, make sure there are no distracting bright lights behind you and your face is well lit. You don't need to light up like a movie studio, but turning on a desk light could help.

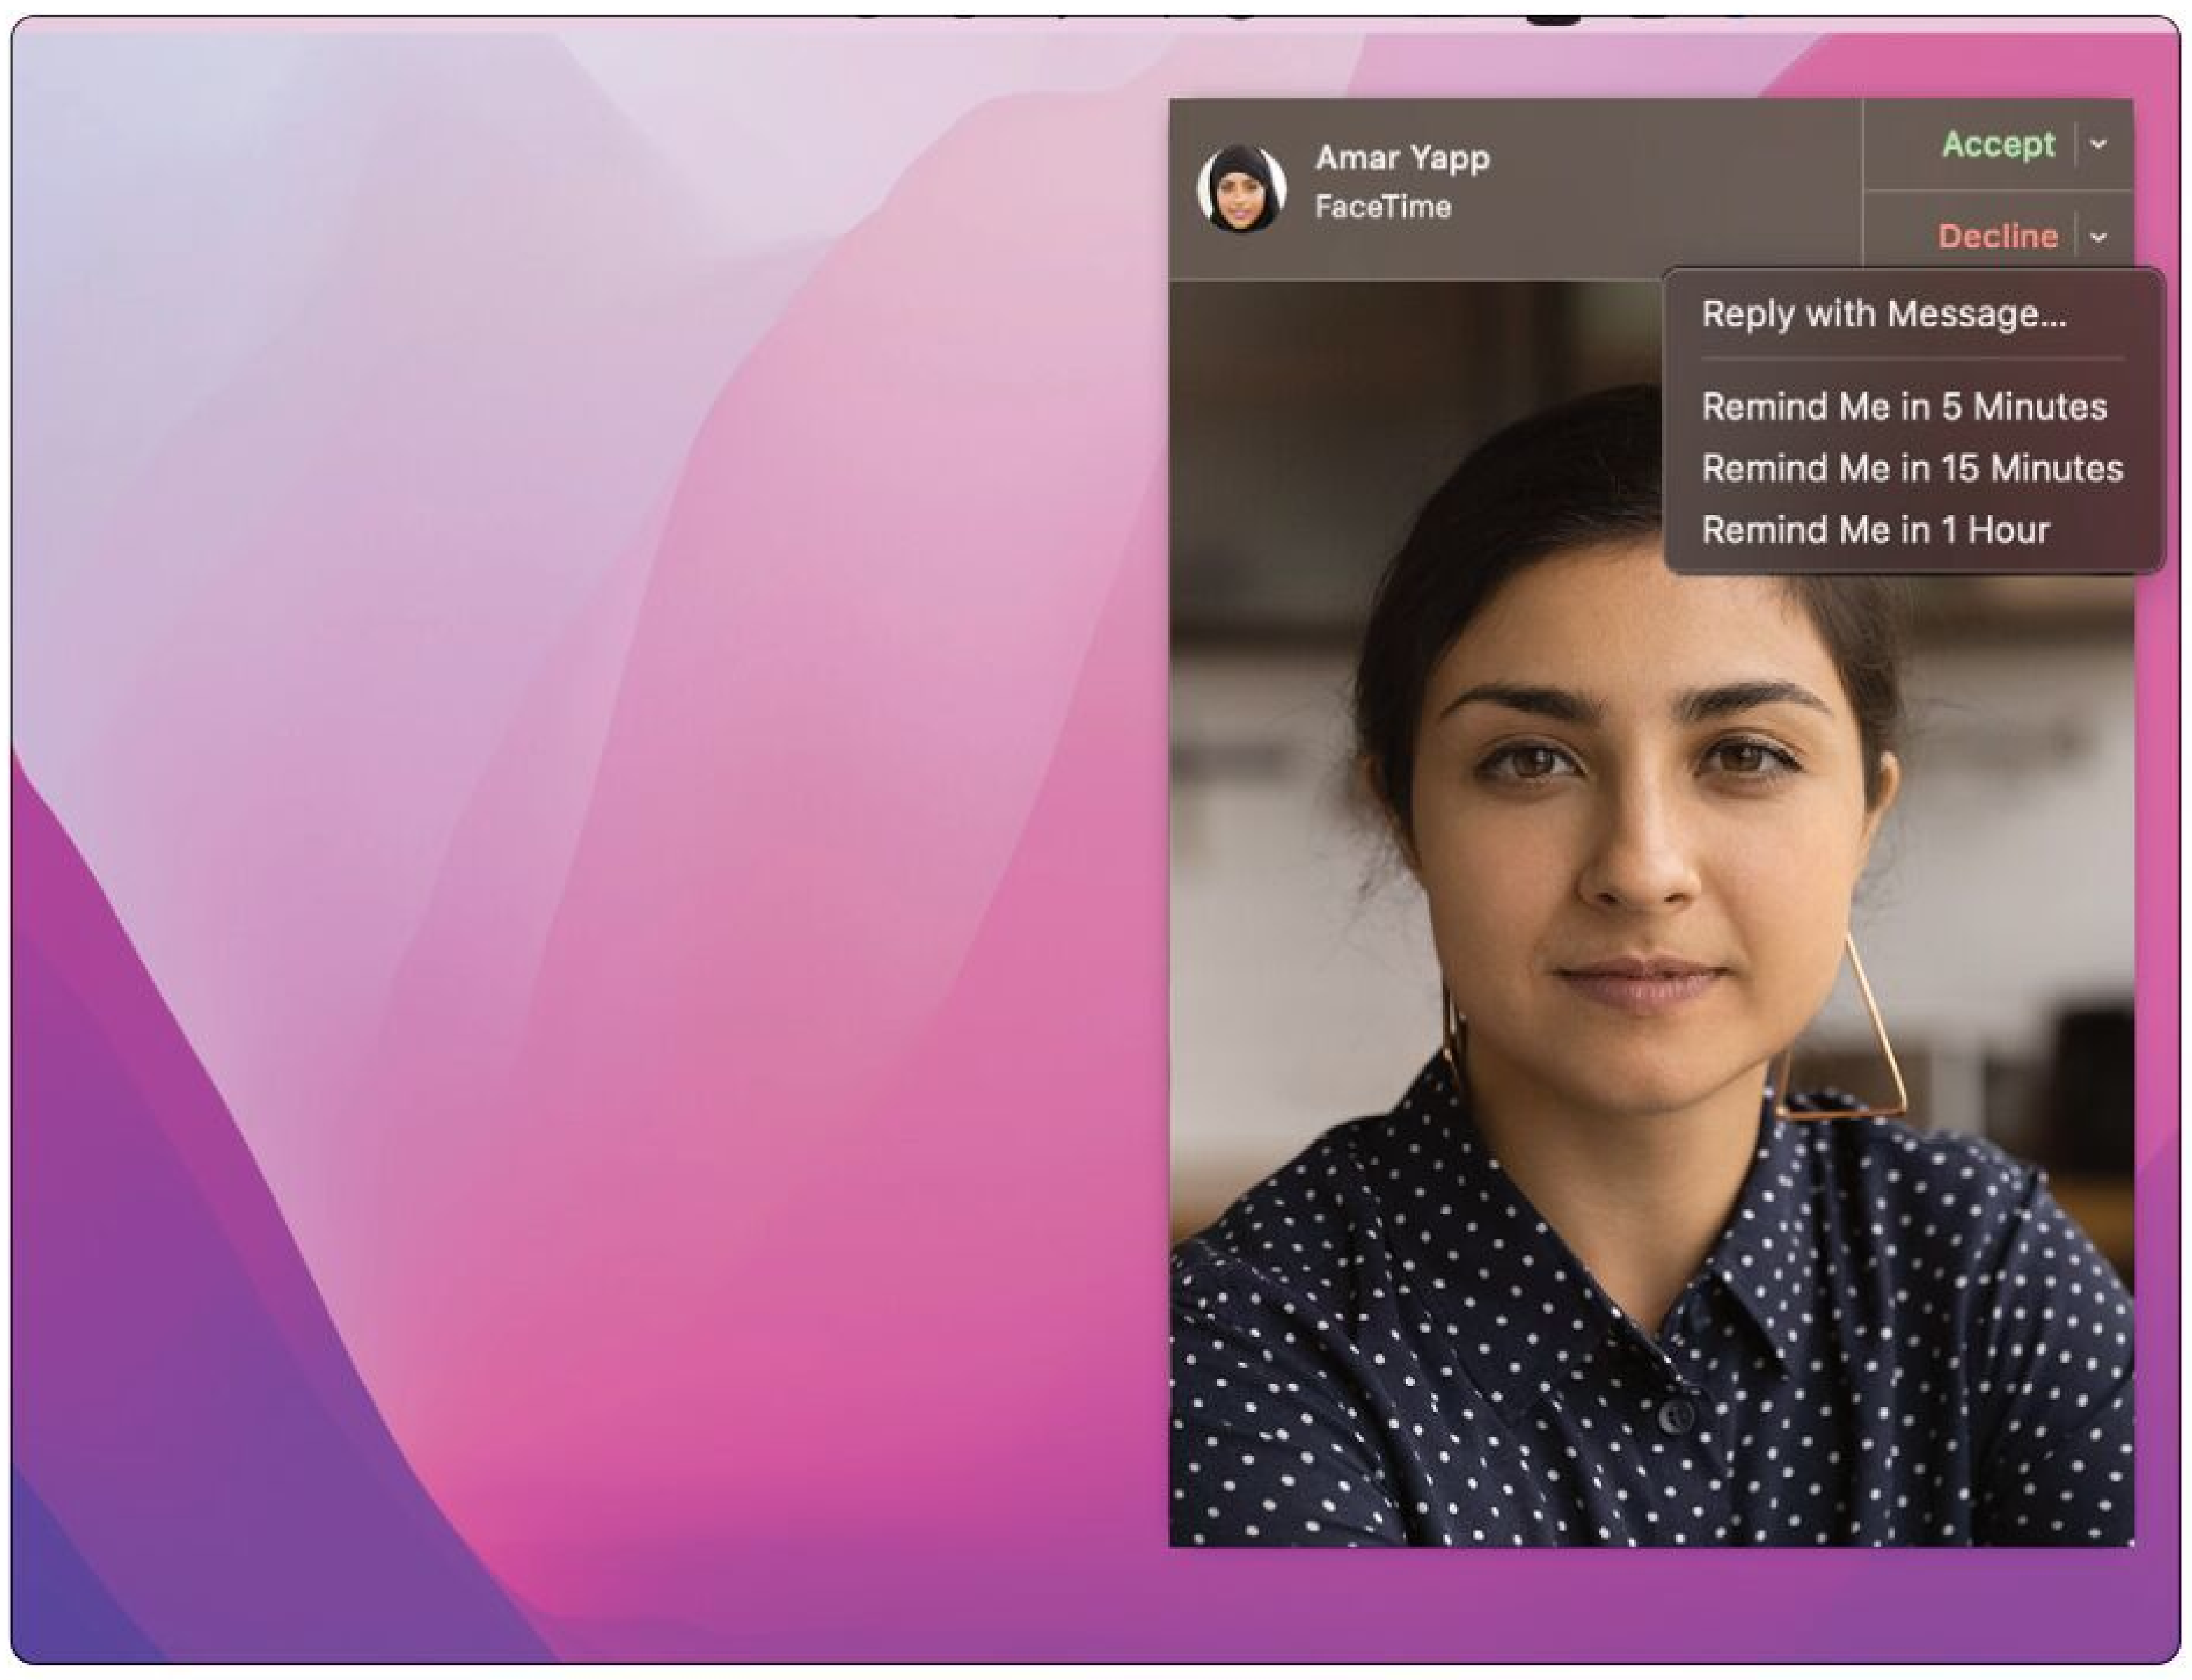
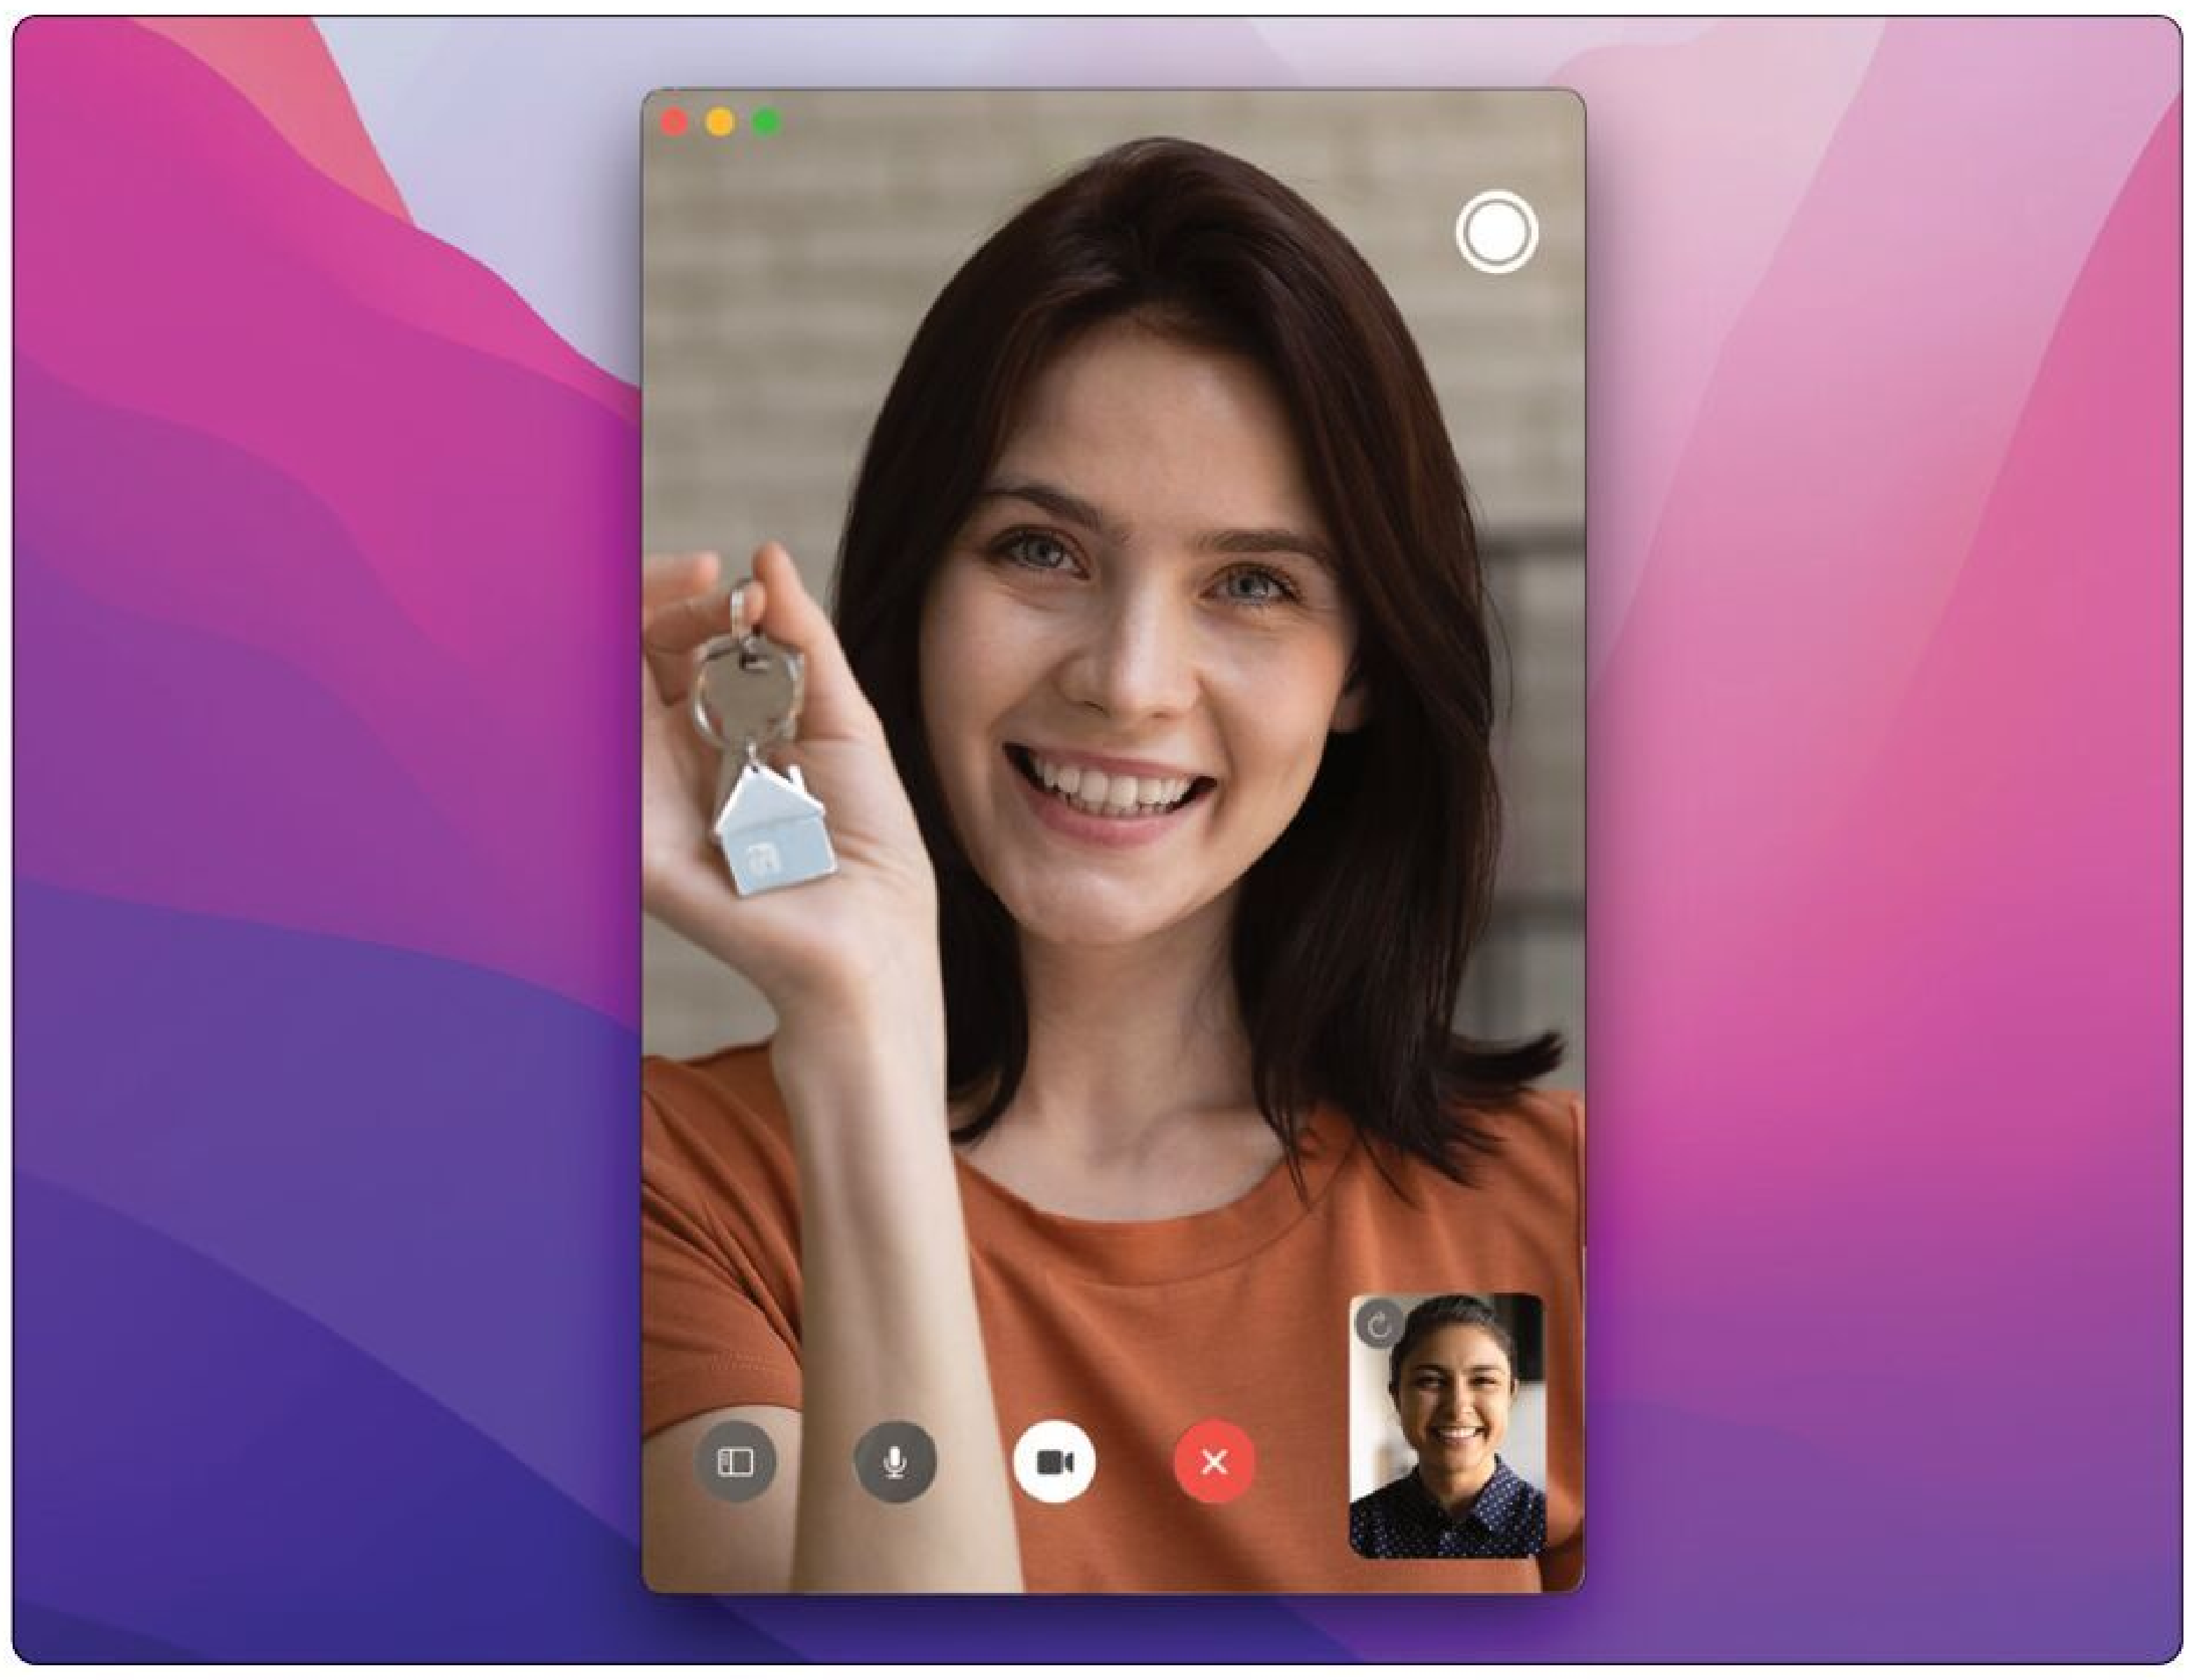
4 To start, look up the person you want to call in your Contacts list, scroll down and you find the FaceTime call button. If the person in question isn't in your Contacts app, you can call them by typing their name, email address or phone number in the field provided and pressing Return.

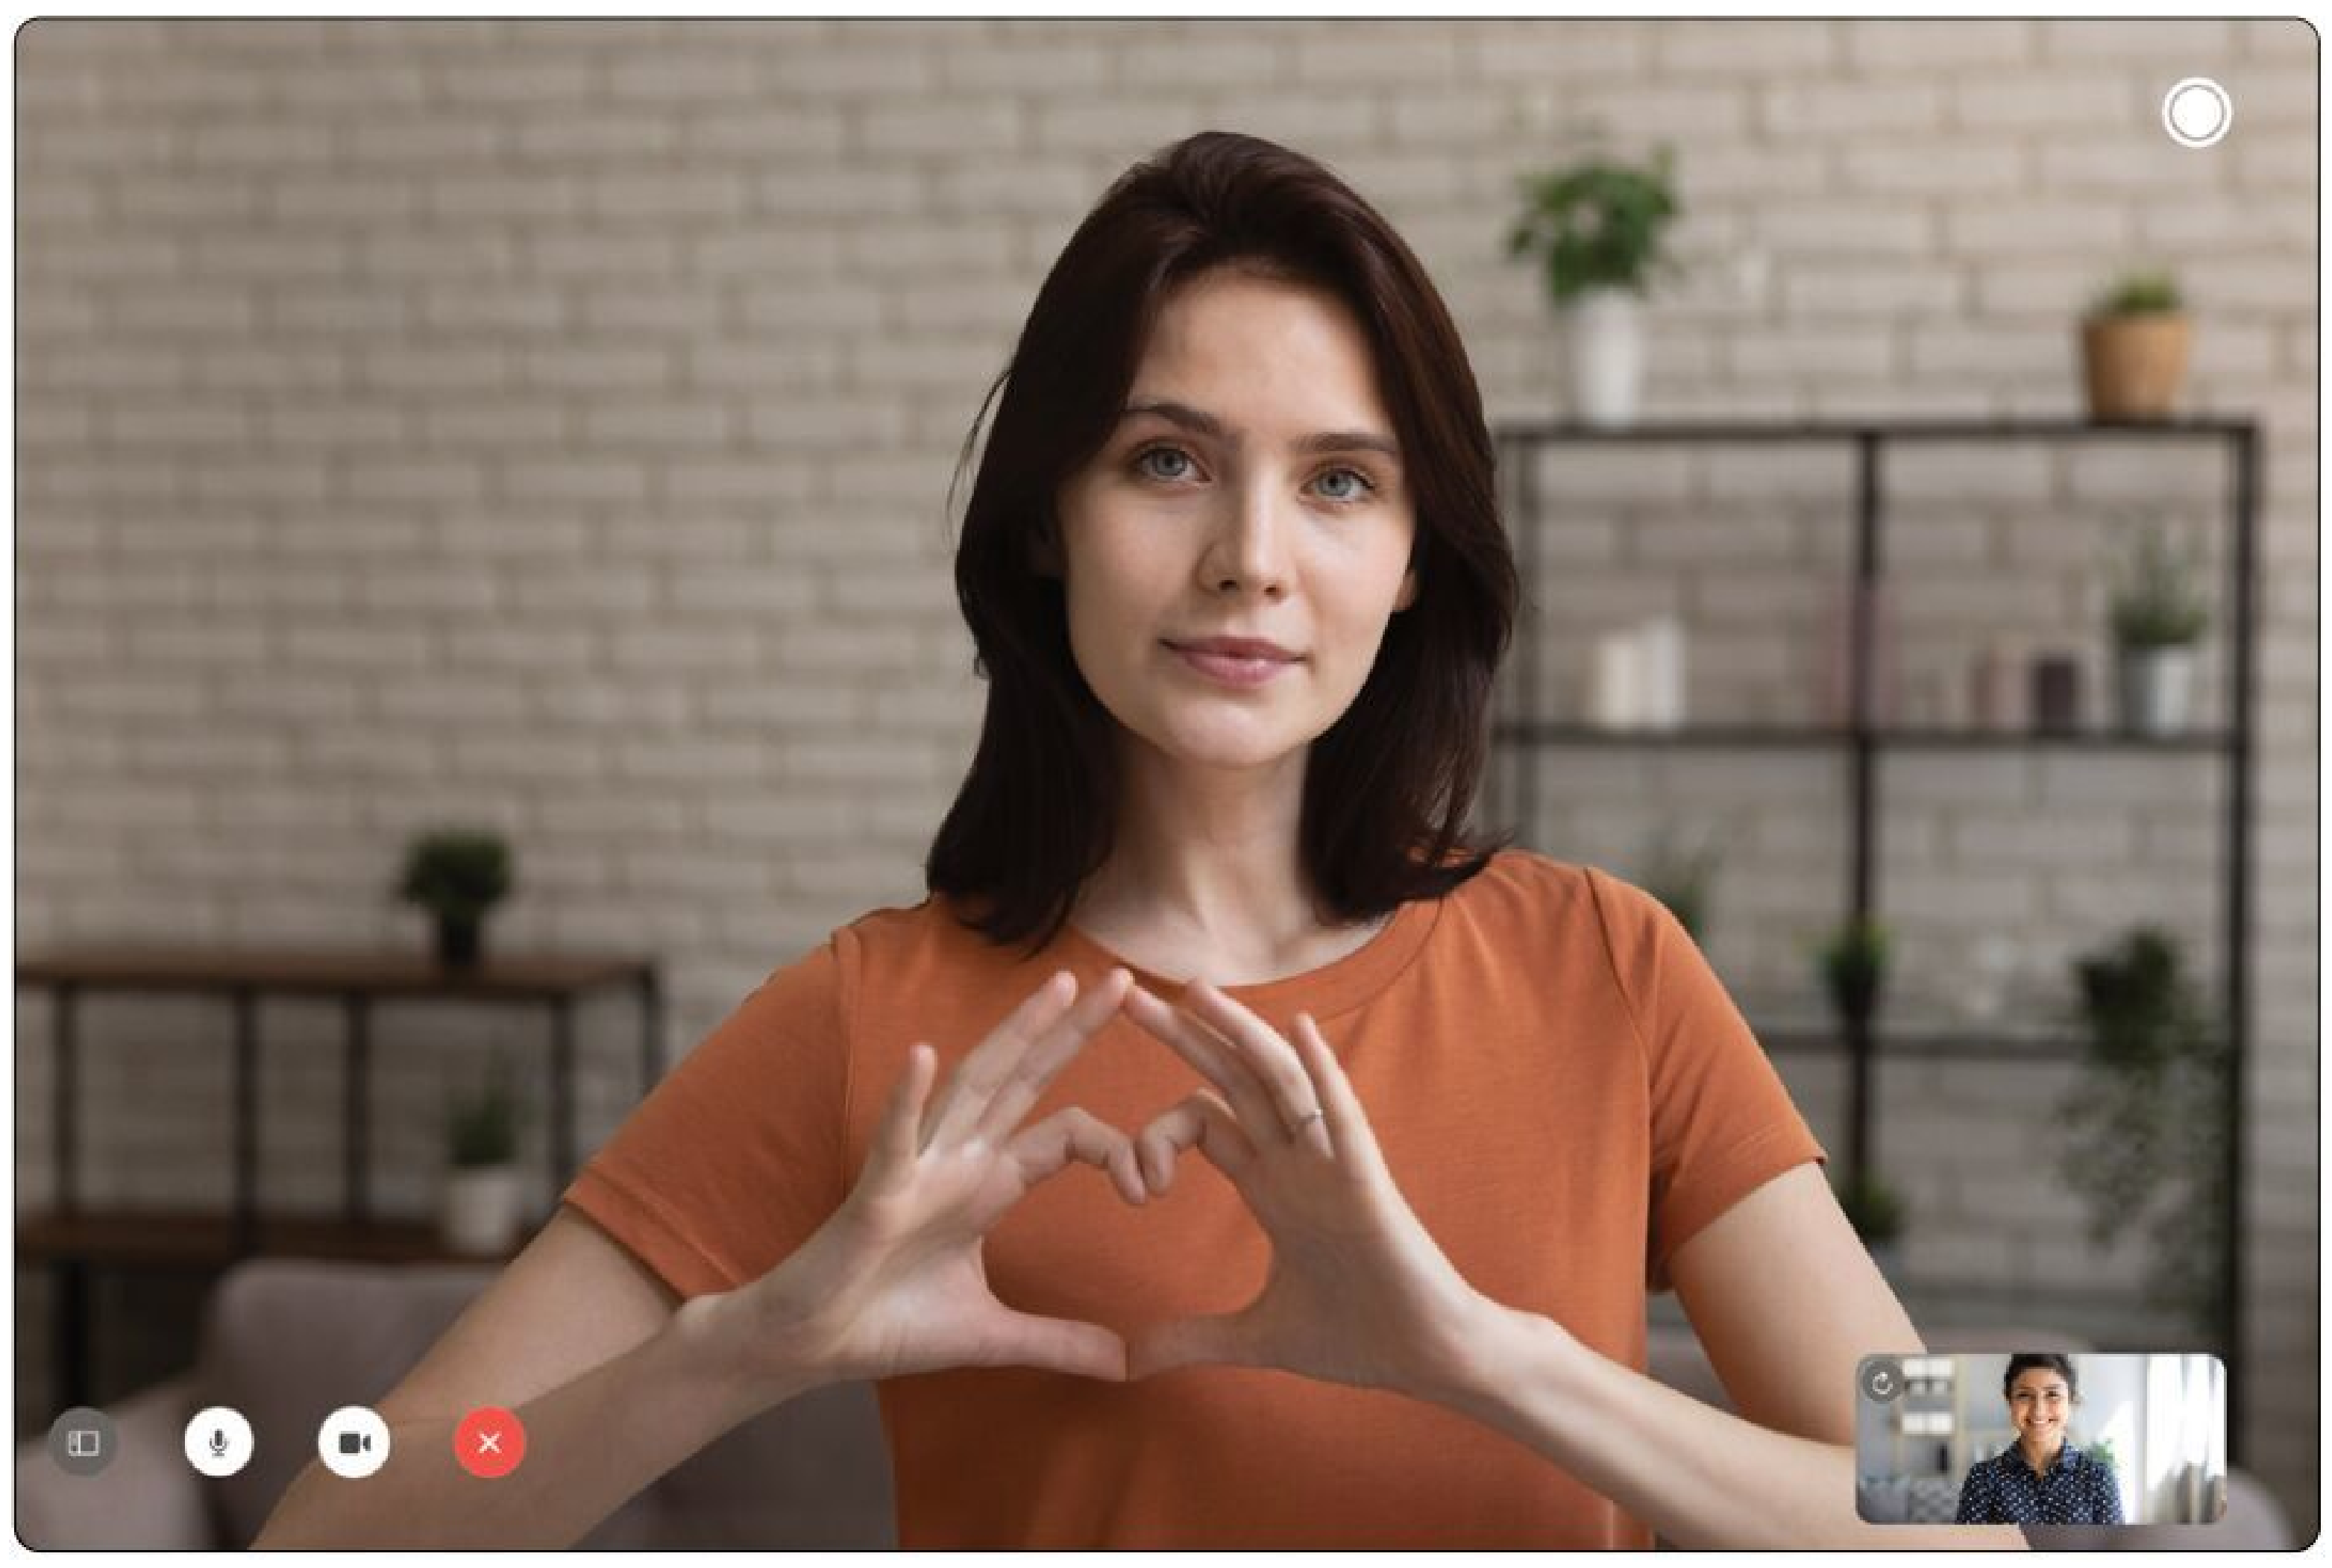


Amar Yapp
FaceTime
Accept
Decline
Reply with Message…
Remind Me in 5 Minutes
Remind Me in 15 Minutes
Remind Me in 1 Hour

5 Accepting a call in FaceTime is also extremely simple. When you receive a call, the app automatically opens and you're given several options. These are Accept or Decline the call, and under the chevron, Remind me in five minutes, 15 minutes or an hour, or Reply with Message. You also see your camera view in a small inset window.



6 Whilst you're in the call you can mute the microphone by hovering your pointer over the picture and clicking the icon that appears at the bottom. Hover over the inset video feed of yourself and you can toggle between landscape and portrait modes. Take a Live Photo with the button at the bottom left. To end the call click on the red button.



7 Hover over the FaceTime window and click the green gumdrop in the top left corner to go full-screen with your video chat. If the other person's chat is shown in portrait mode, it's because they're holding an iOS device in that orientation. Ask them to turn it to landscape mode for a bigger picture.

About FaceTime & Privacy…
?

Apple ID: ian.osborne@dsl.pipex.com

☑ Enable this account

You can be reached for FaceTime at:

☑ +44 7949 383177
☑ ijosborne@icloud.com
☑ ijosborne@me.com
☑ ian.osborne@dsl.pipex.com

☑ Calls From iPhone

Use your iPhone mobile network account to make and receive calls when your iPhone is nearby and on Wi-Fi.

Automatic Prominence

☑ Speaking

During Group FaceTime calls, the tile of the person speaking will automatically become larger.

☑ Allow Live Photos to be captured during video calls

Start new calls from: +44 7949 383177
Ringtone: Opening (Default)
Location: United Kingdom
Default for calls: Skype

8 You can use FaceTime to make and receive regular phone calls on your Mac, as long as it's signed into the same Apple ID as your iPhone, and your phone is nearby and on Wi-Fi. Click the FaceTime menu and select Preferences. In the window that appears, check the box marked Calls From iPhone.

FaceTime Audio Calls.

It's also possible to make audio only FaceTime calls. From the Contacts app, find the person you want to call and right-click on the telephone receiver icon at the top. Choose the option for a FaceTime Audio call. Alternatively, in the FaceTime app, right-click on a previous video conversation found in the left-hand sidebar, and select FaceTime Audio. If the entry shows a telephone receiver icon, it was already an audio conversation, so you can just click it to repeat the call. Naturally, you can enter an email or phone number in the top field and as long as the other person has registered that email or number with their FaceTime account, you can make the FaceTime call. Because they're made over the Internet, FaceTime calls, audio and video, are free.

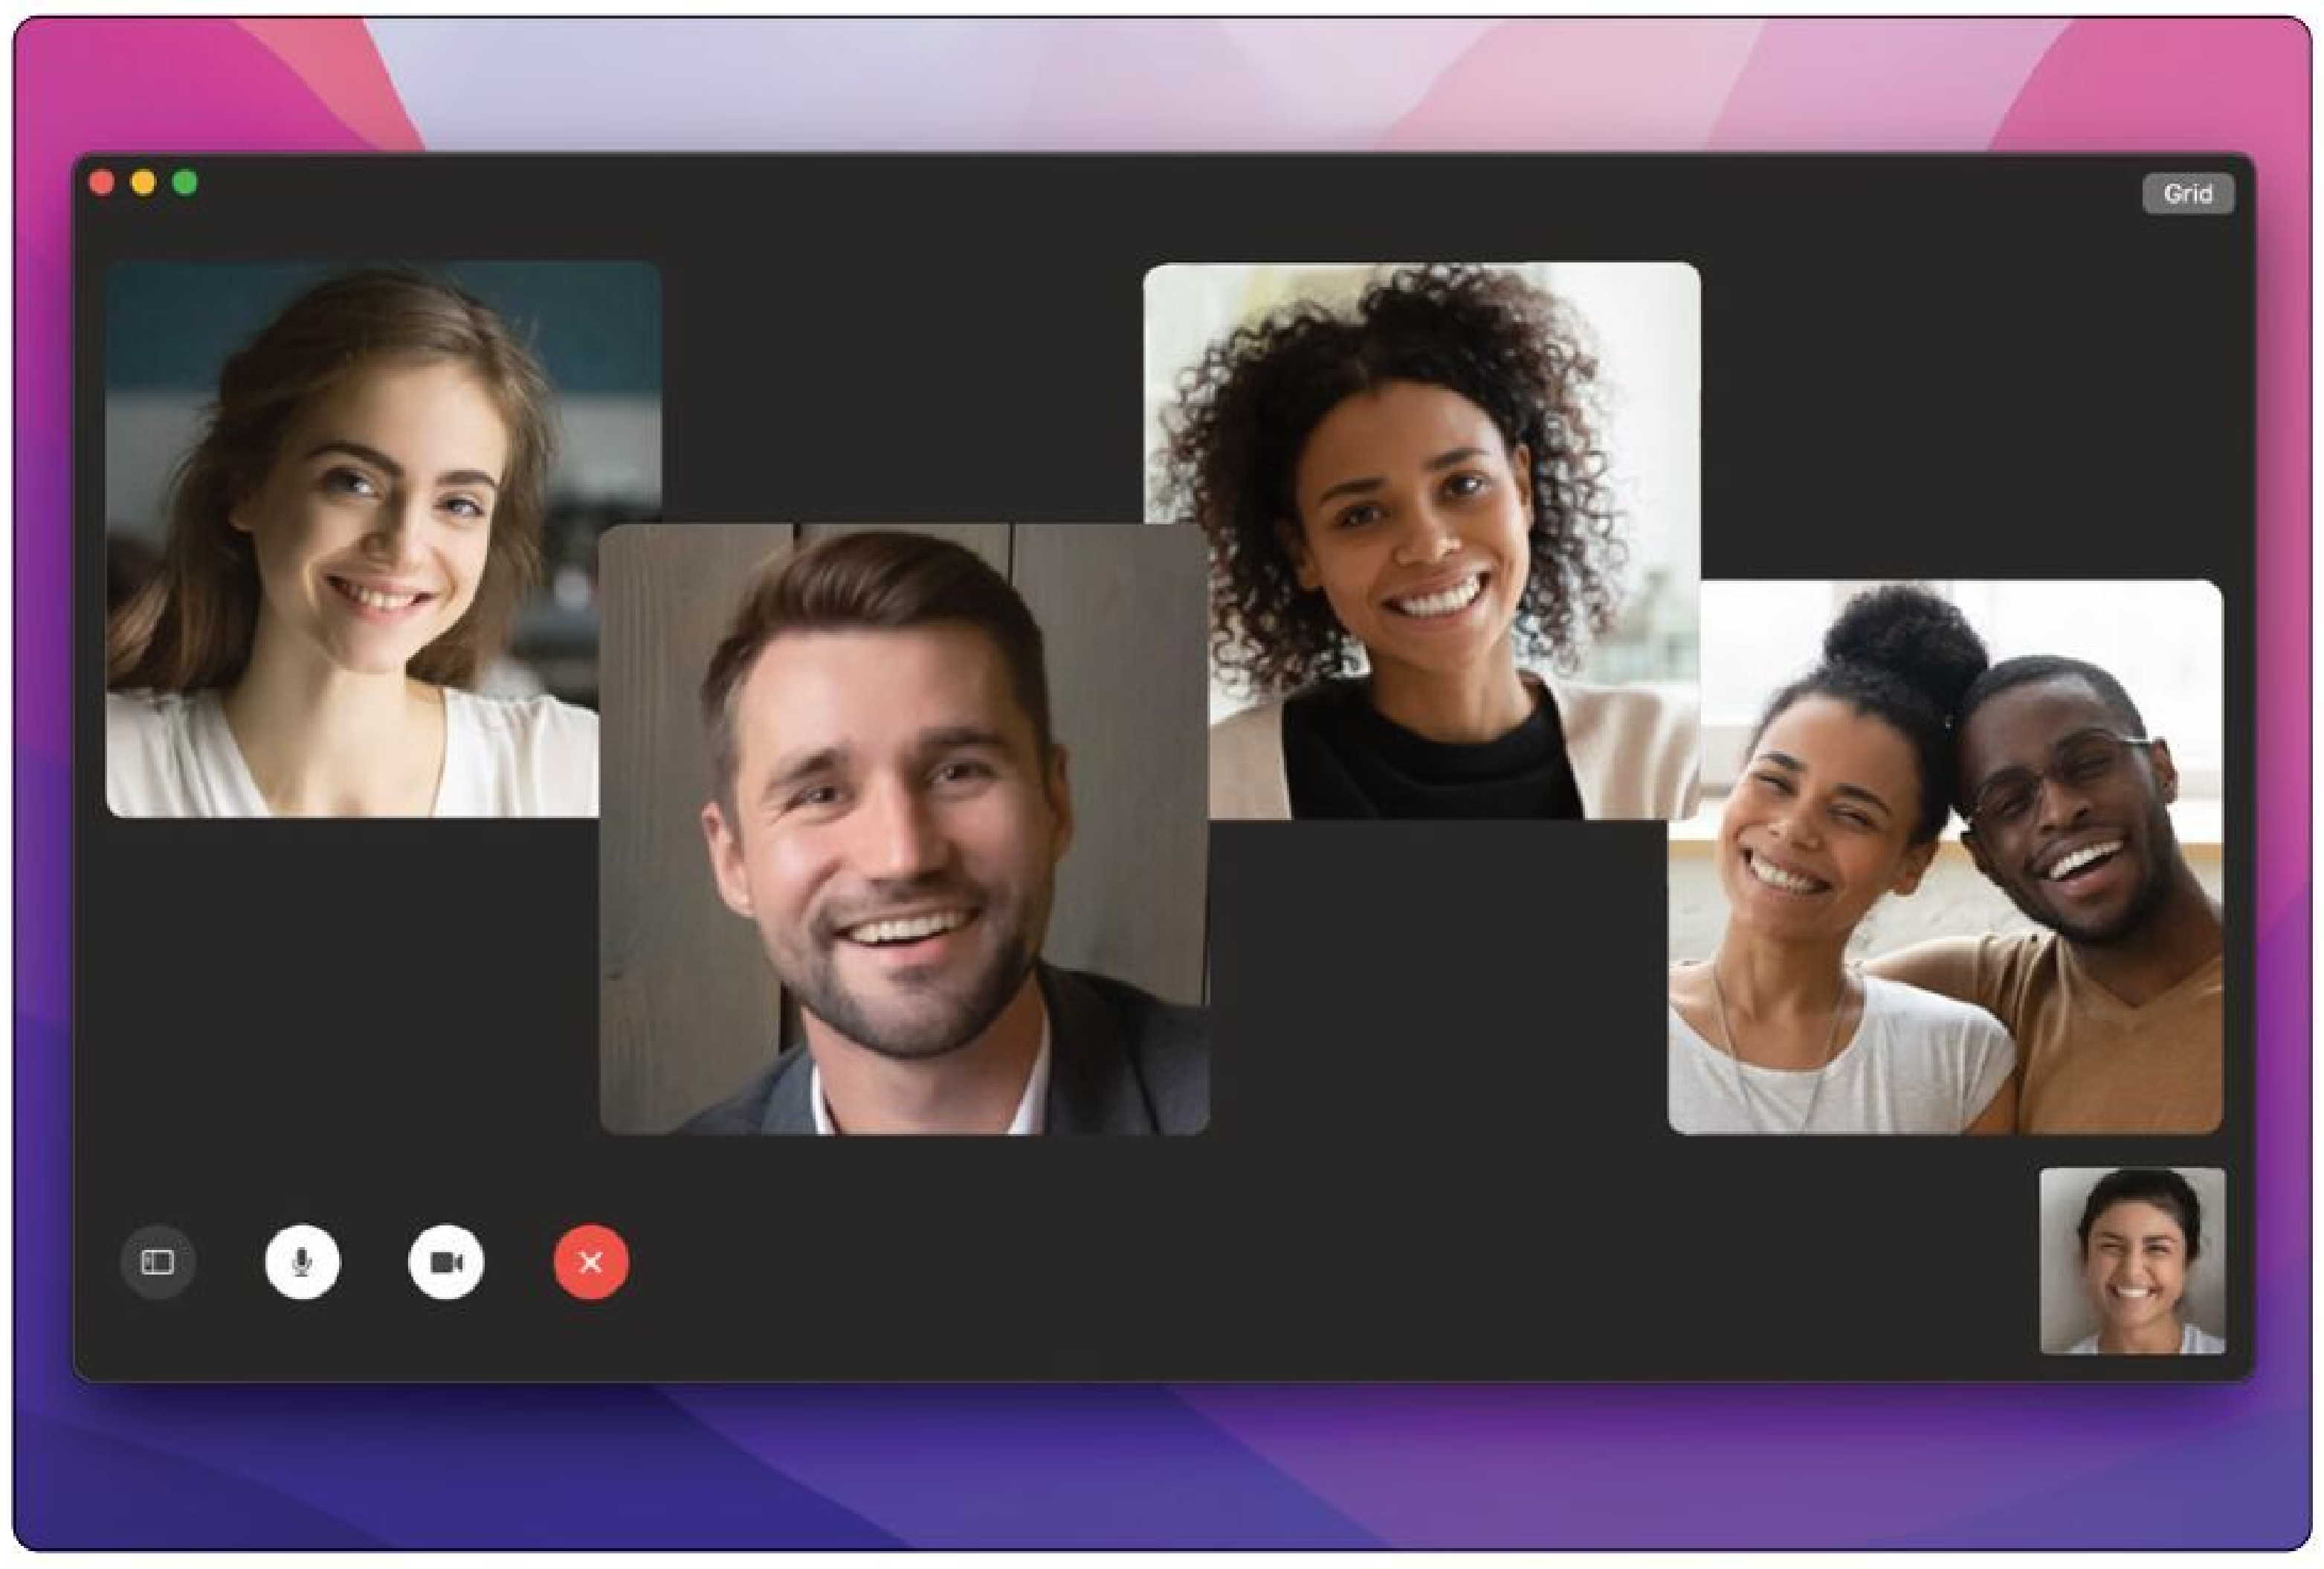
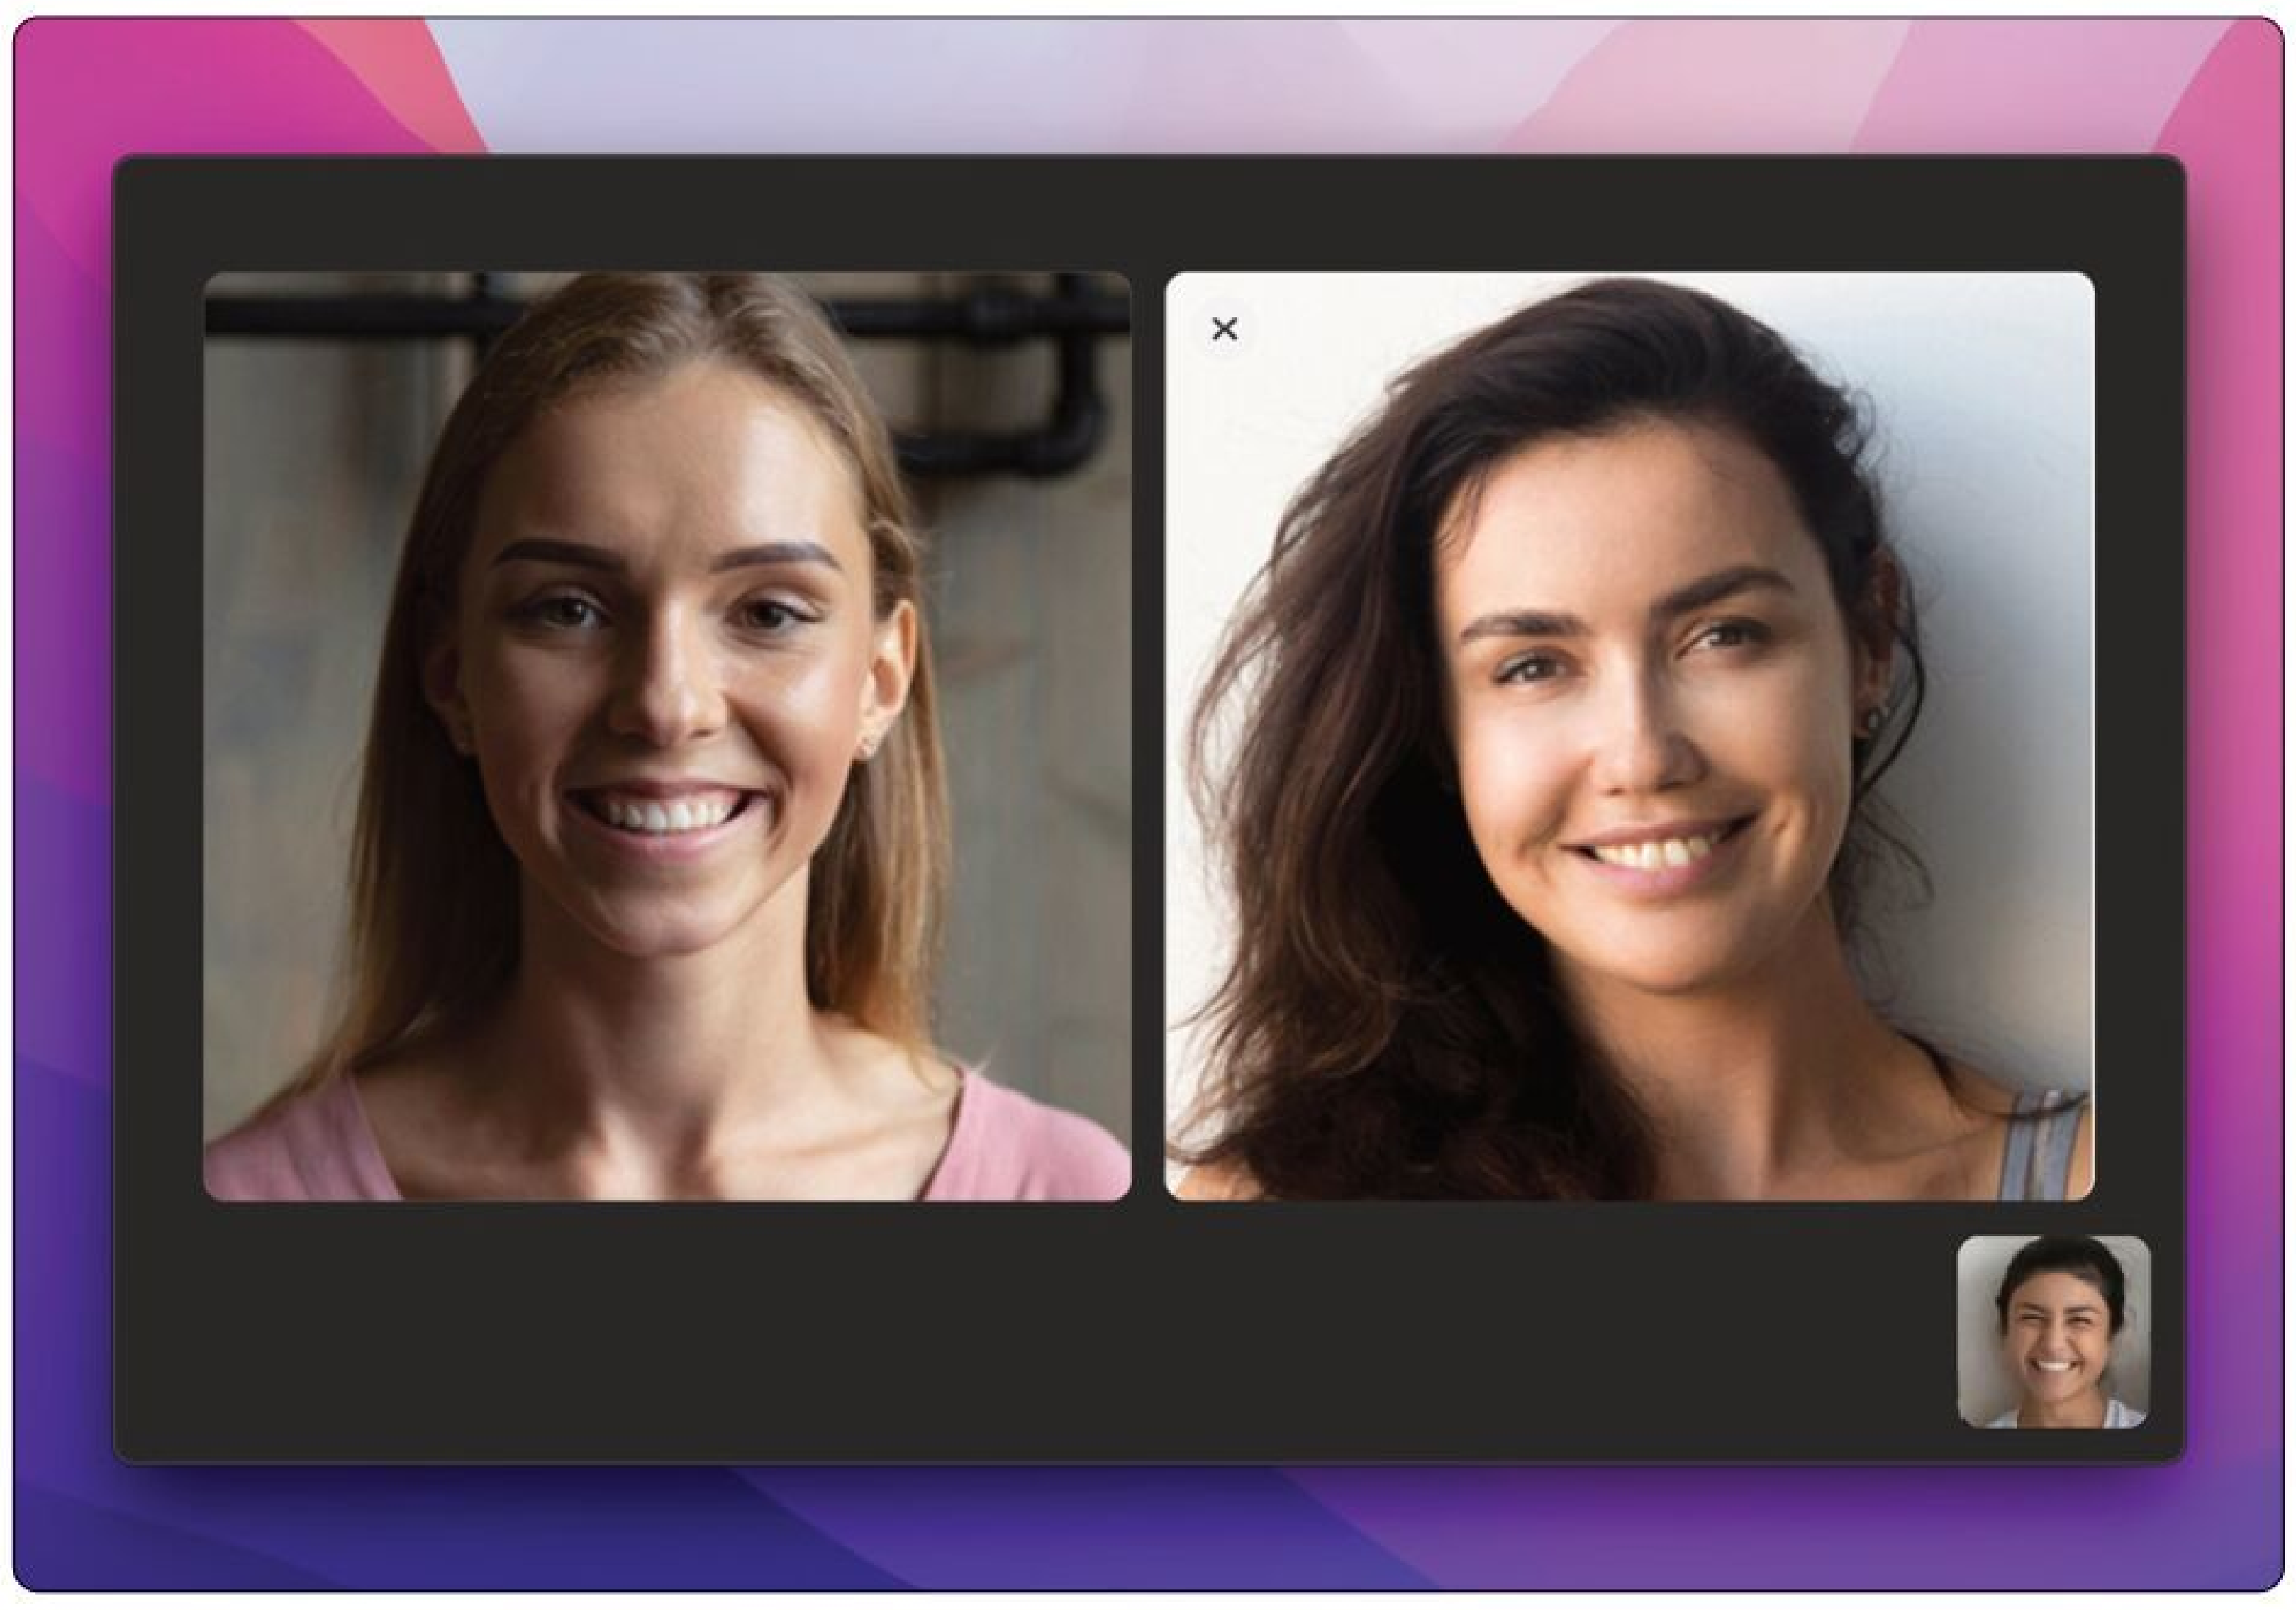
3 To invite people to a chat that's to take place in the future, on the FaceBook window, click the button marked Create Link. You can send this link with a range of apps, or copy it to distribute another way. This link can be used to join a Group Chat, immediately or at an agreed time.



4 Up to 32 people can join a Group FaceTime chat. To leave, click on the red button marked with an 'X'. The rest of the group is unaffected. During a Group Chat, the tile of the person who's speaking automatically becomes larger, but you can turn this off in FaceTime Preferences.

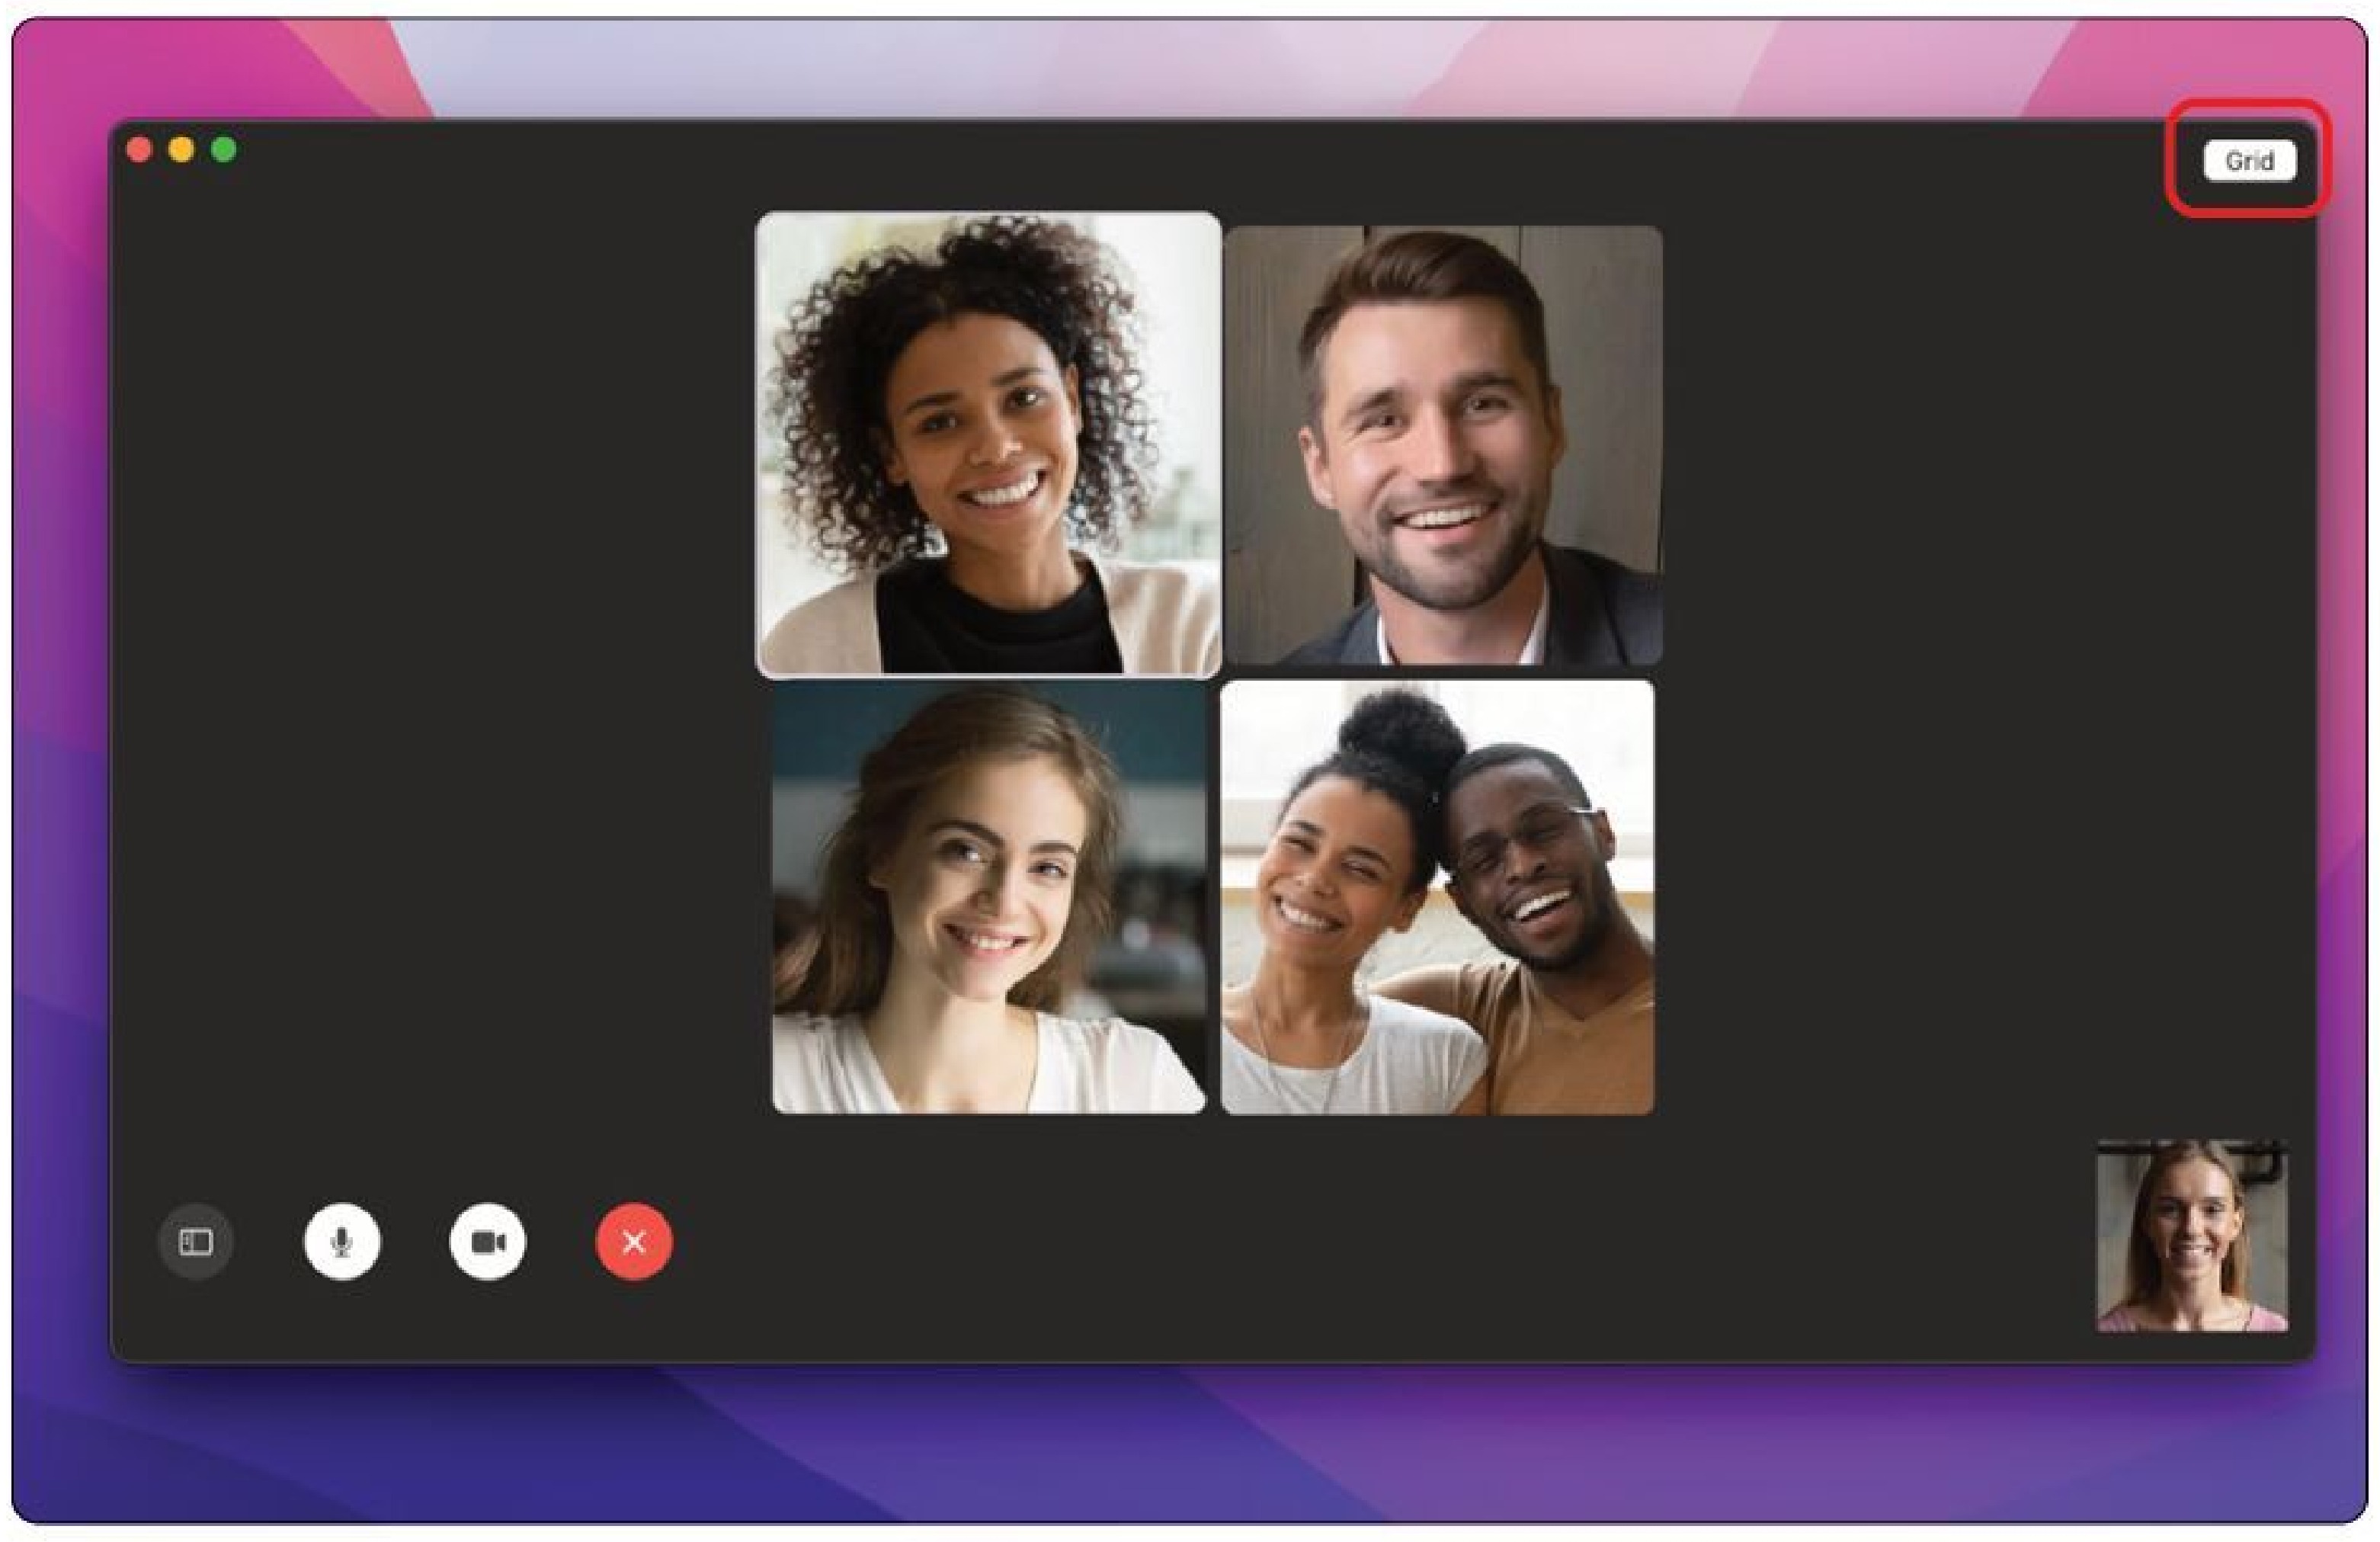


5 Providing your operating systems are up to date, you can mix Macs, iPhones, iPads and iPod touches, and even Android and Windows devices in Group Chats. They all work fine.

3:39
Alyssa Falcon
home

6 You can even Group FaceTime from an Apple Watch or a HomePod speaker, though as these devices don't have built-in cameras, you are limited to audio chat only.

New for Monterey

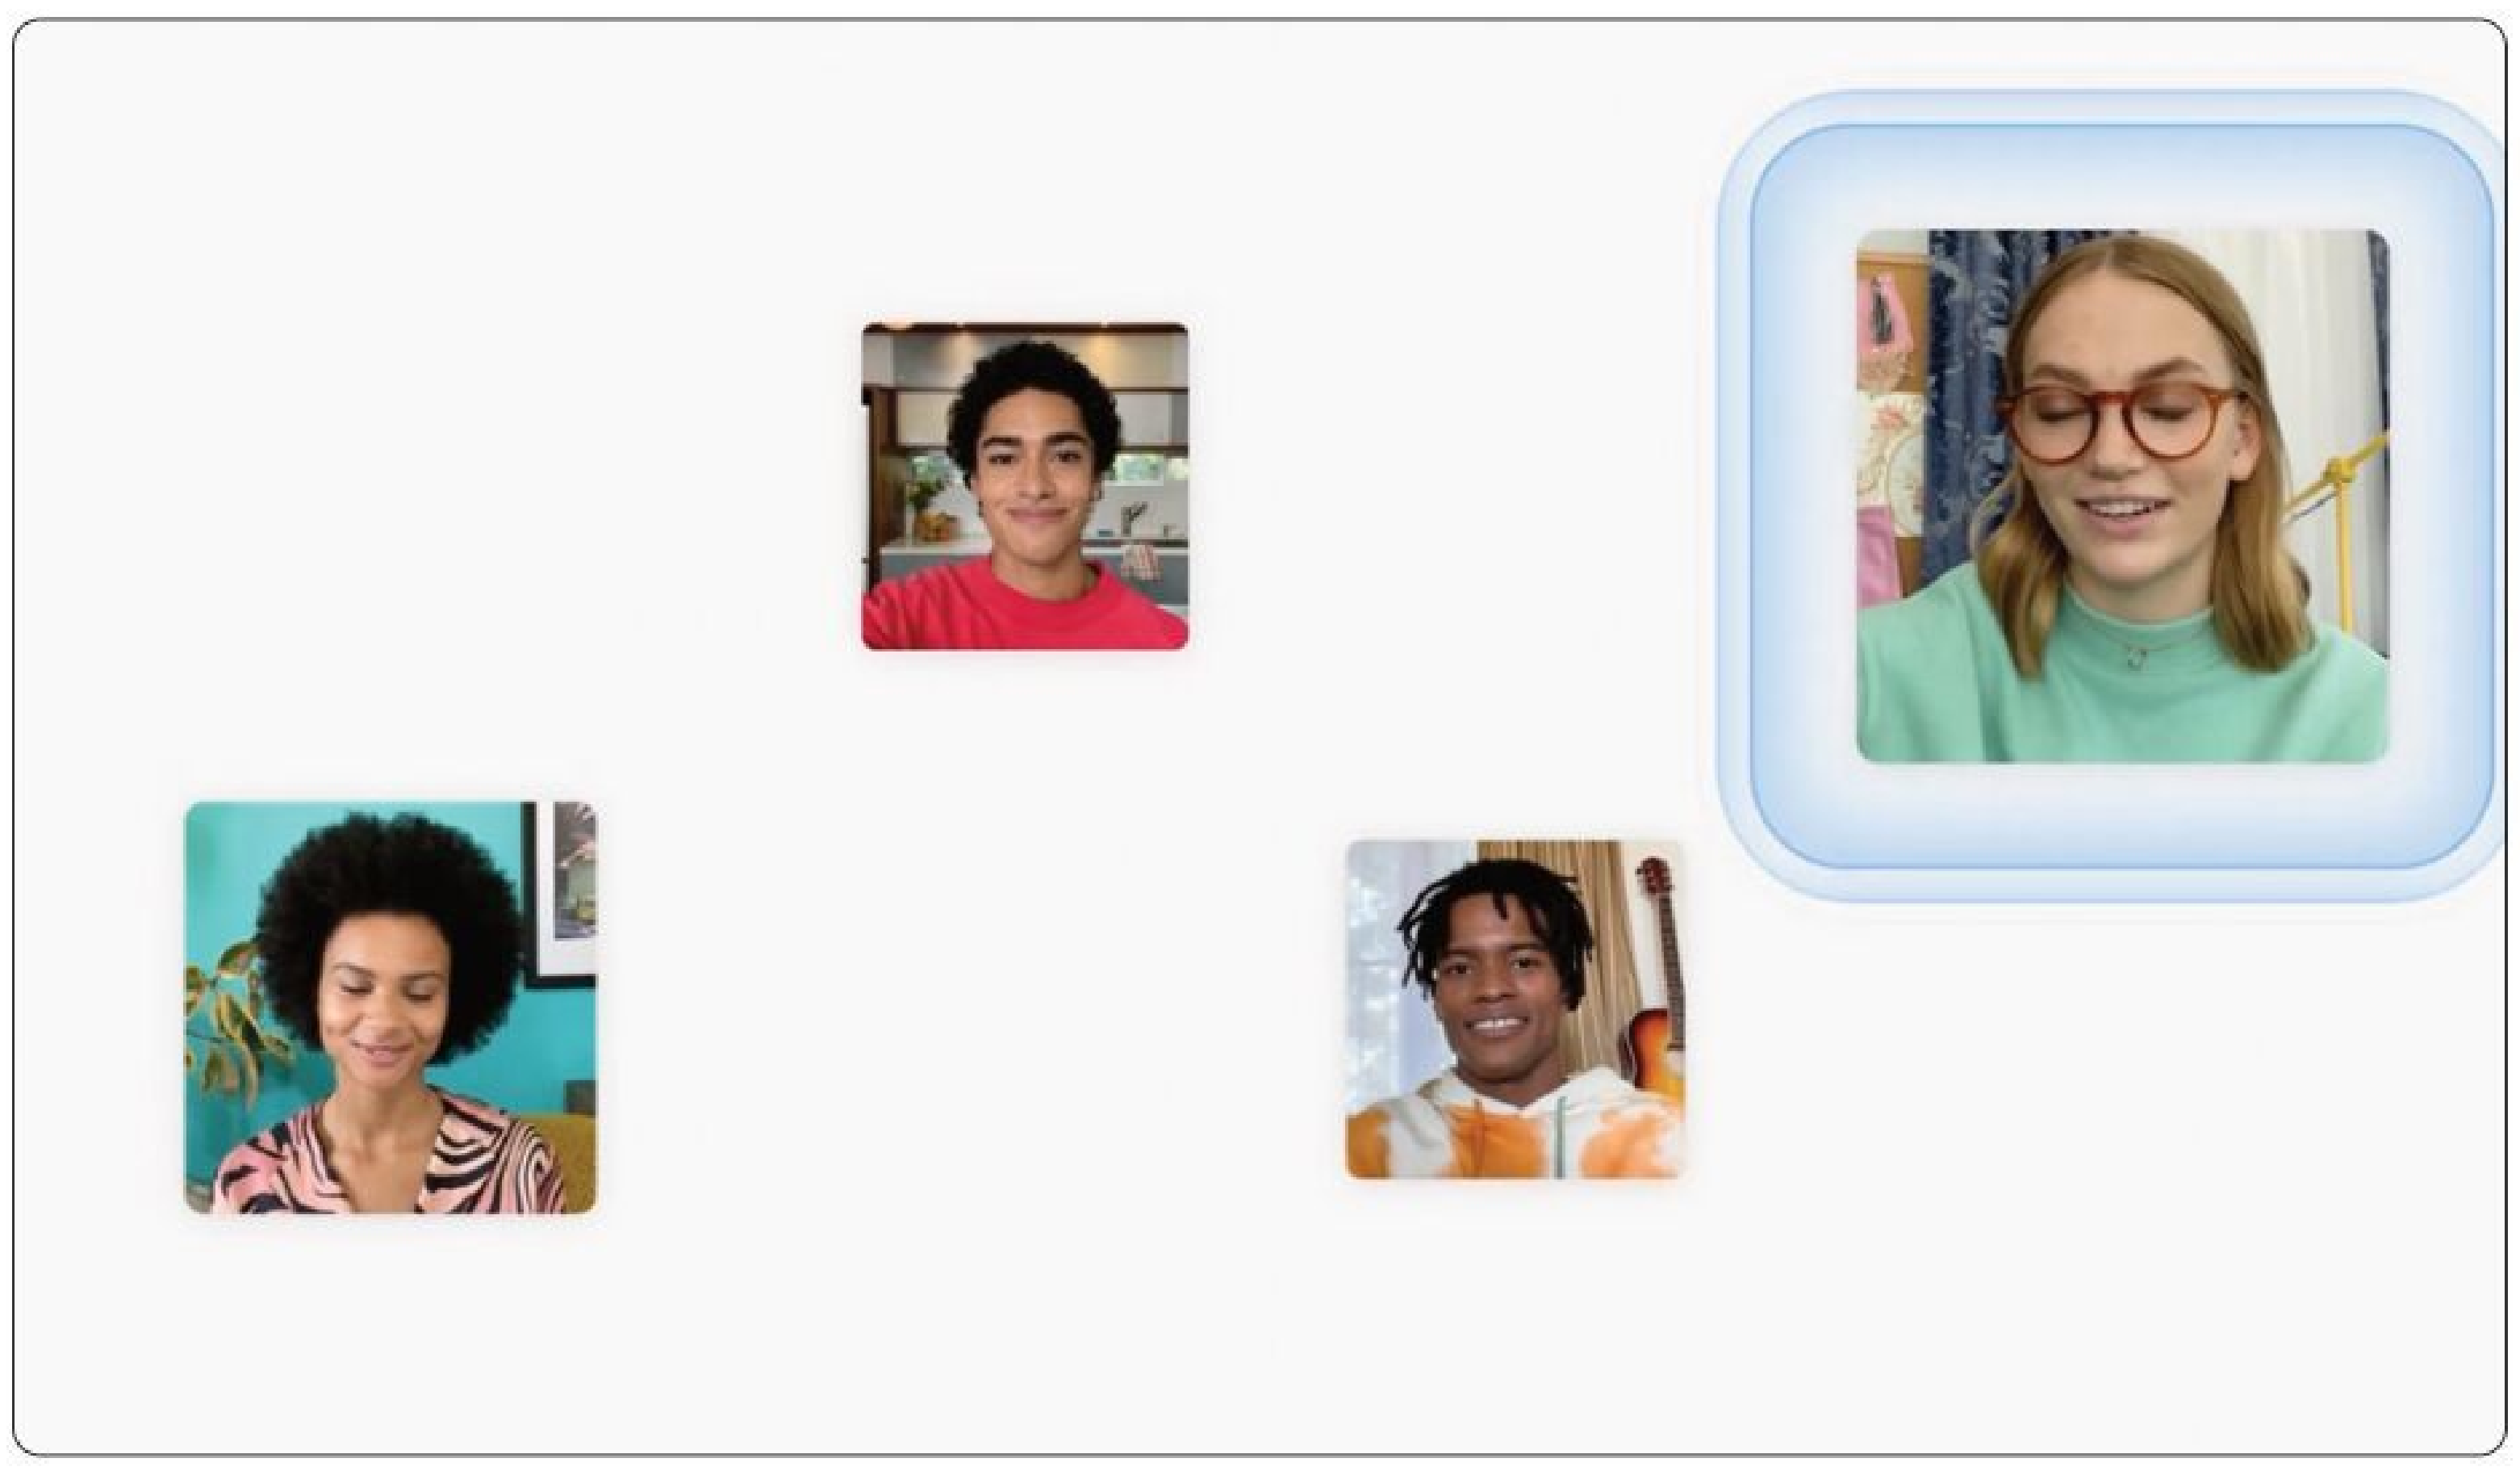


Grid View

macOS Monterey brings a host of improvements and new features to the FaceTime app. In a Group Chat, toggle the floating tiles and have a regular grid that gives everyone the same space by clicking the Grid button in the top-right. Click it again to go back to the default view.

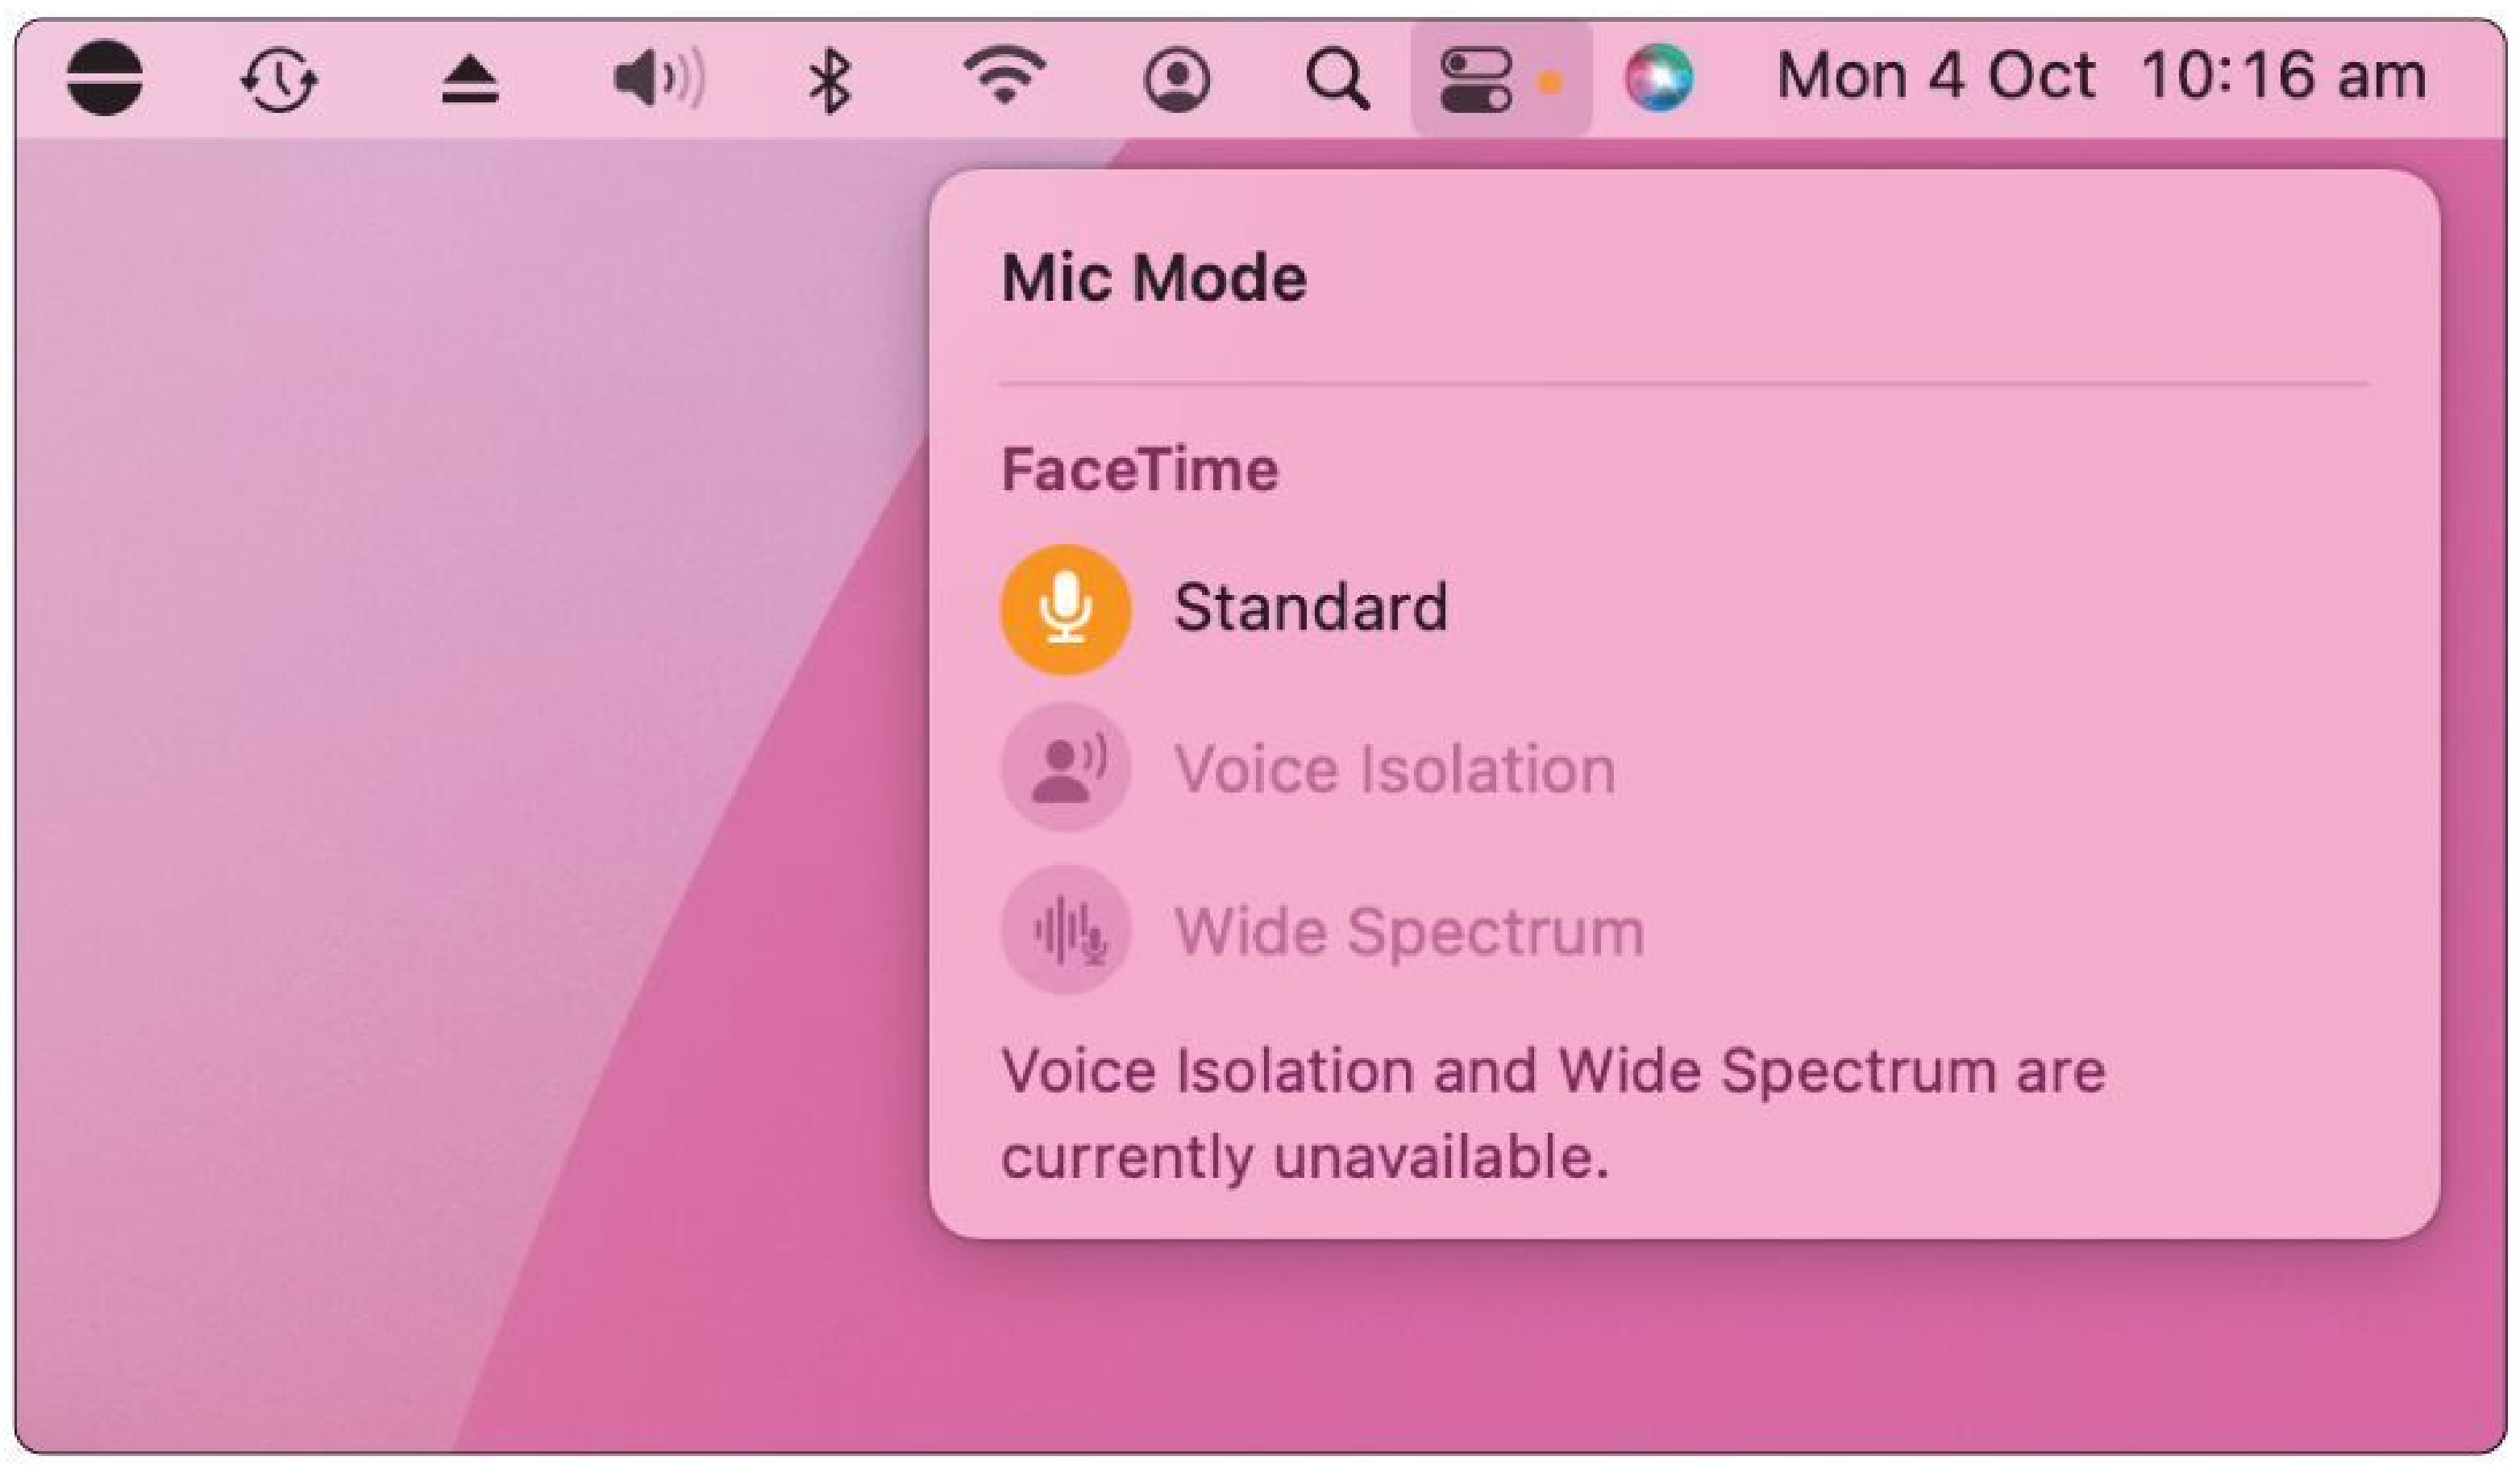
Windows & Android

You can take a FaceTime video call initiated on a device running macOS Monterey, iOS 15 or iPadOS 15, on a Windows or Android device. The Apple users sends a link, and the Windows/Android user opens it in a Google Chrome or Microsoft Edge web browser.



Spacial Audio

Spacial Audio makes the voices of those you're chatting to sound like they're coming from the direction in which they're placed on the screen. The person on the right sounds like they're on your right, and so on. This makes for a much more natural conversation in FaceTime.



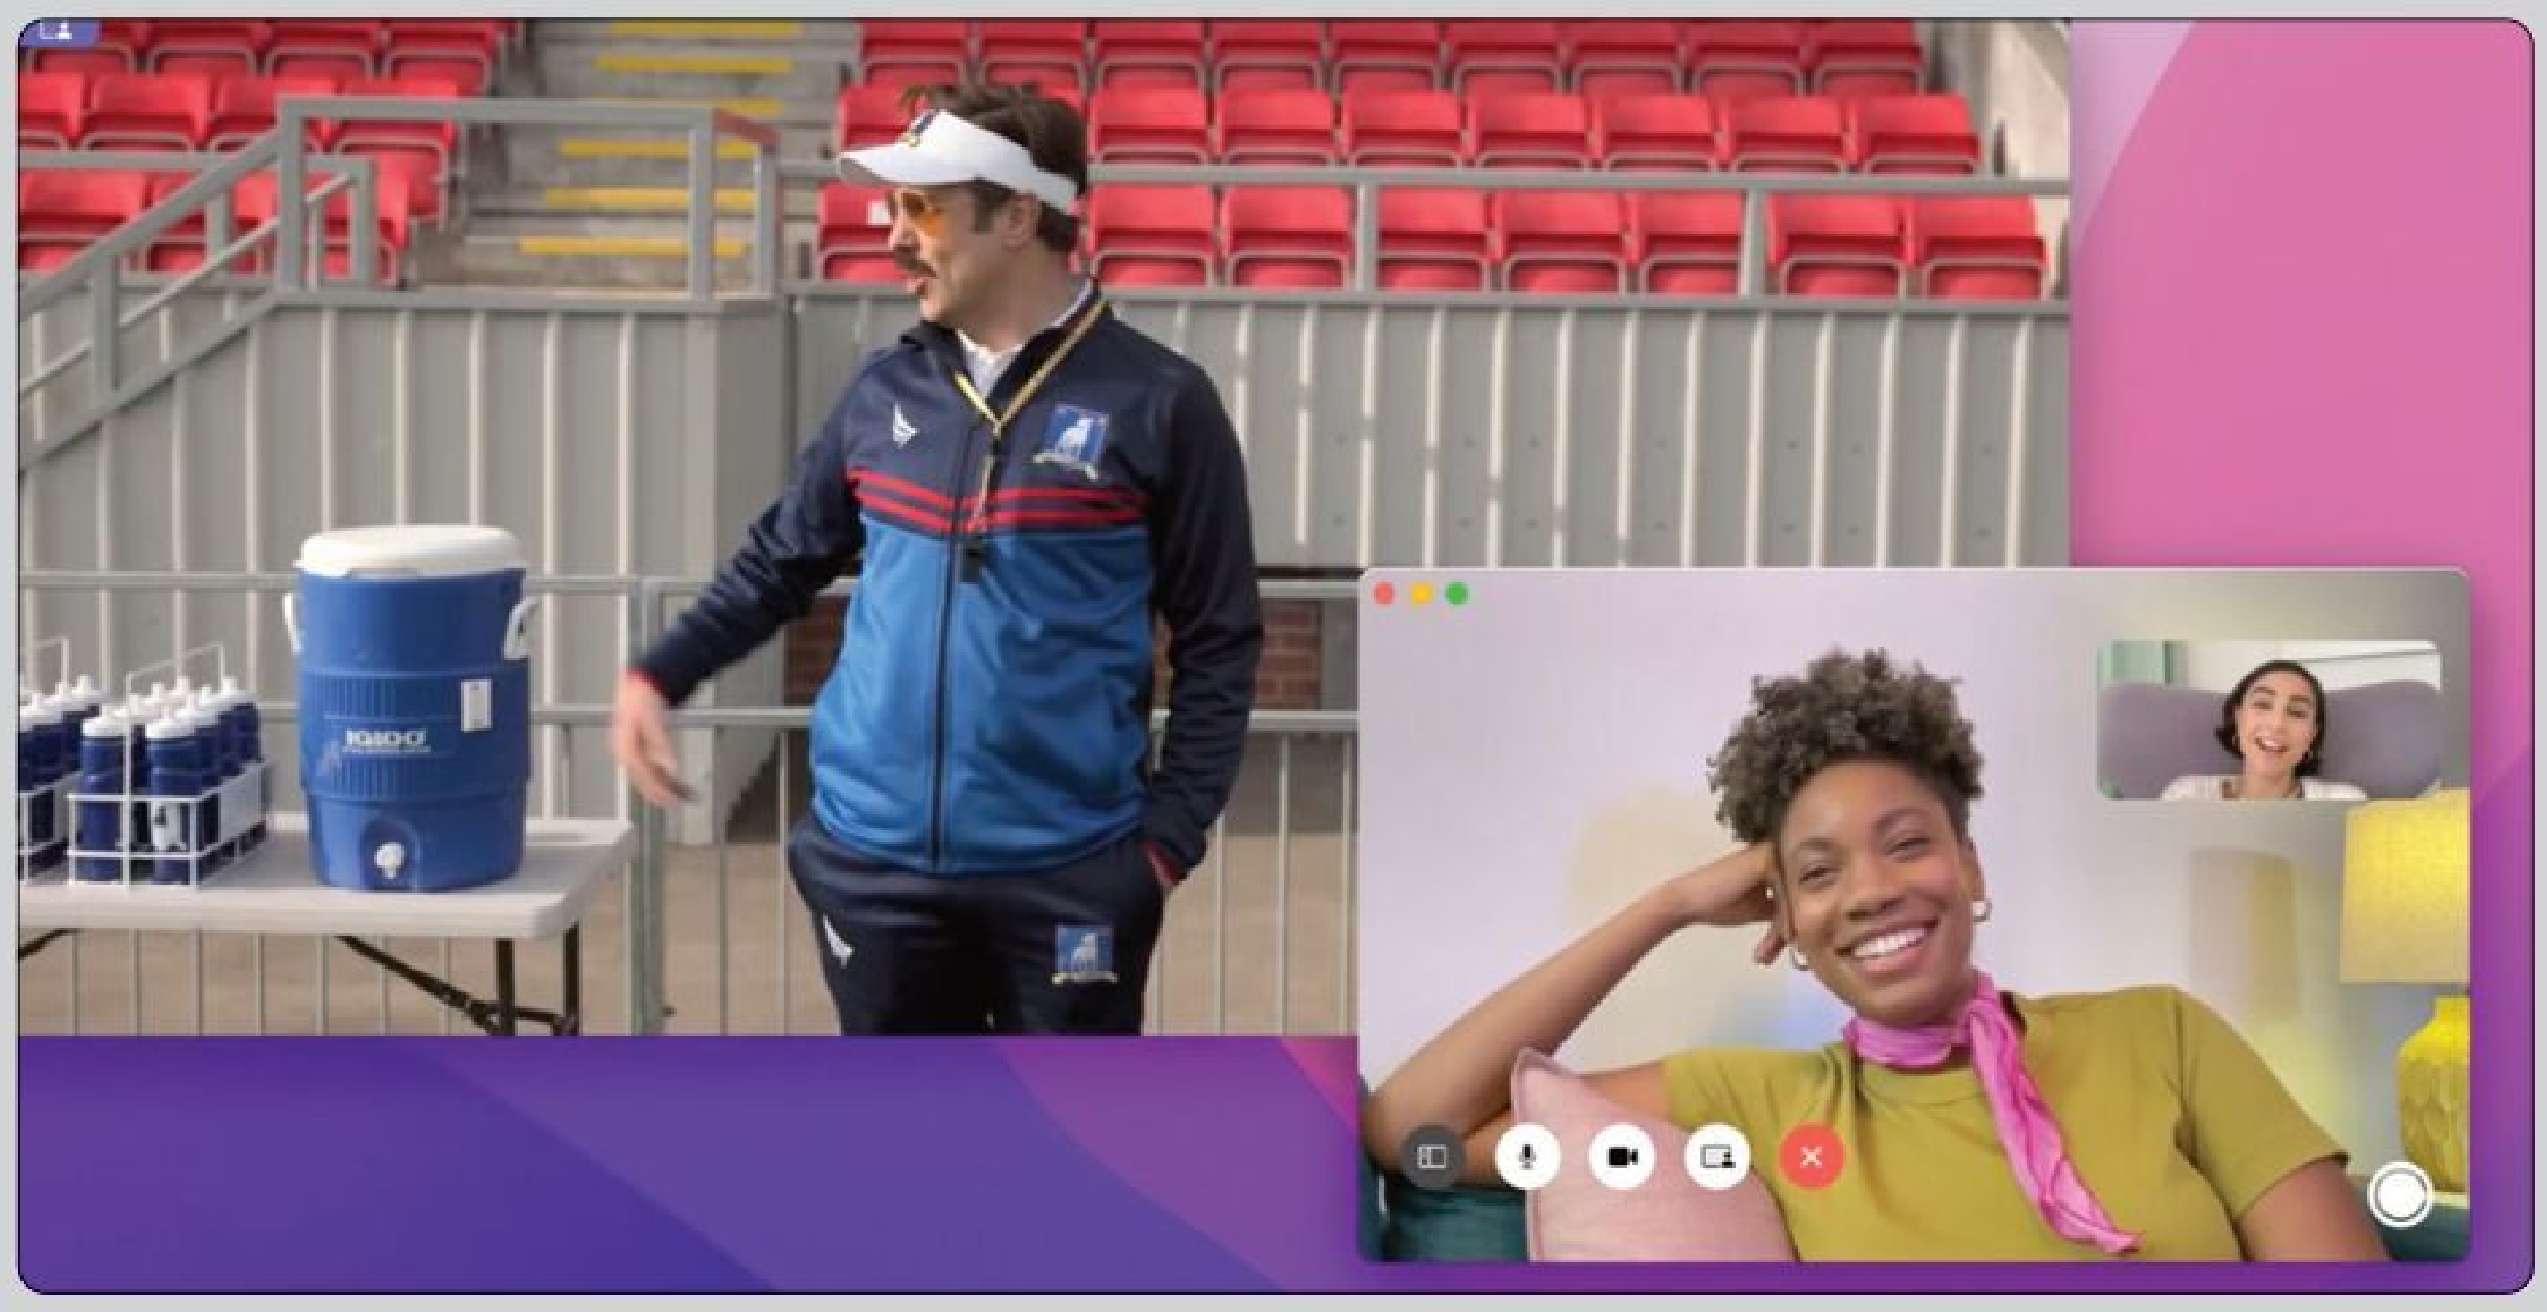
Voice Isolation and Wide Spectrum are currently unavailable.

New Mic Modes

You can use three different mic modes in FaceTime calls. Open Control Centre and click on Mic Modes to switch between Standard, Voice Isolation (which only picks up your voice), and Wide Spectrum Mode (picks up every sound going on around you).

SharePlay.

The SharePlay feature, coming with a future Monterey update, lets you play your movies, TV shows and music with your friends over a FaceTime chat. Your media is played in sync, so you can chat about it as you enjoy it.

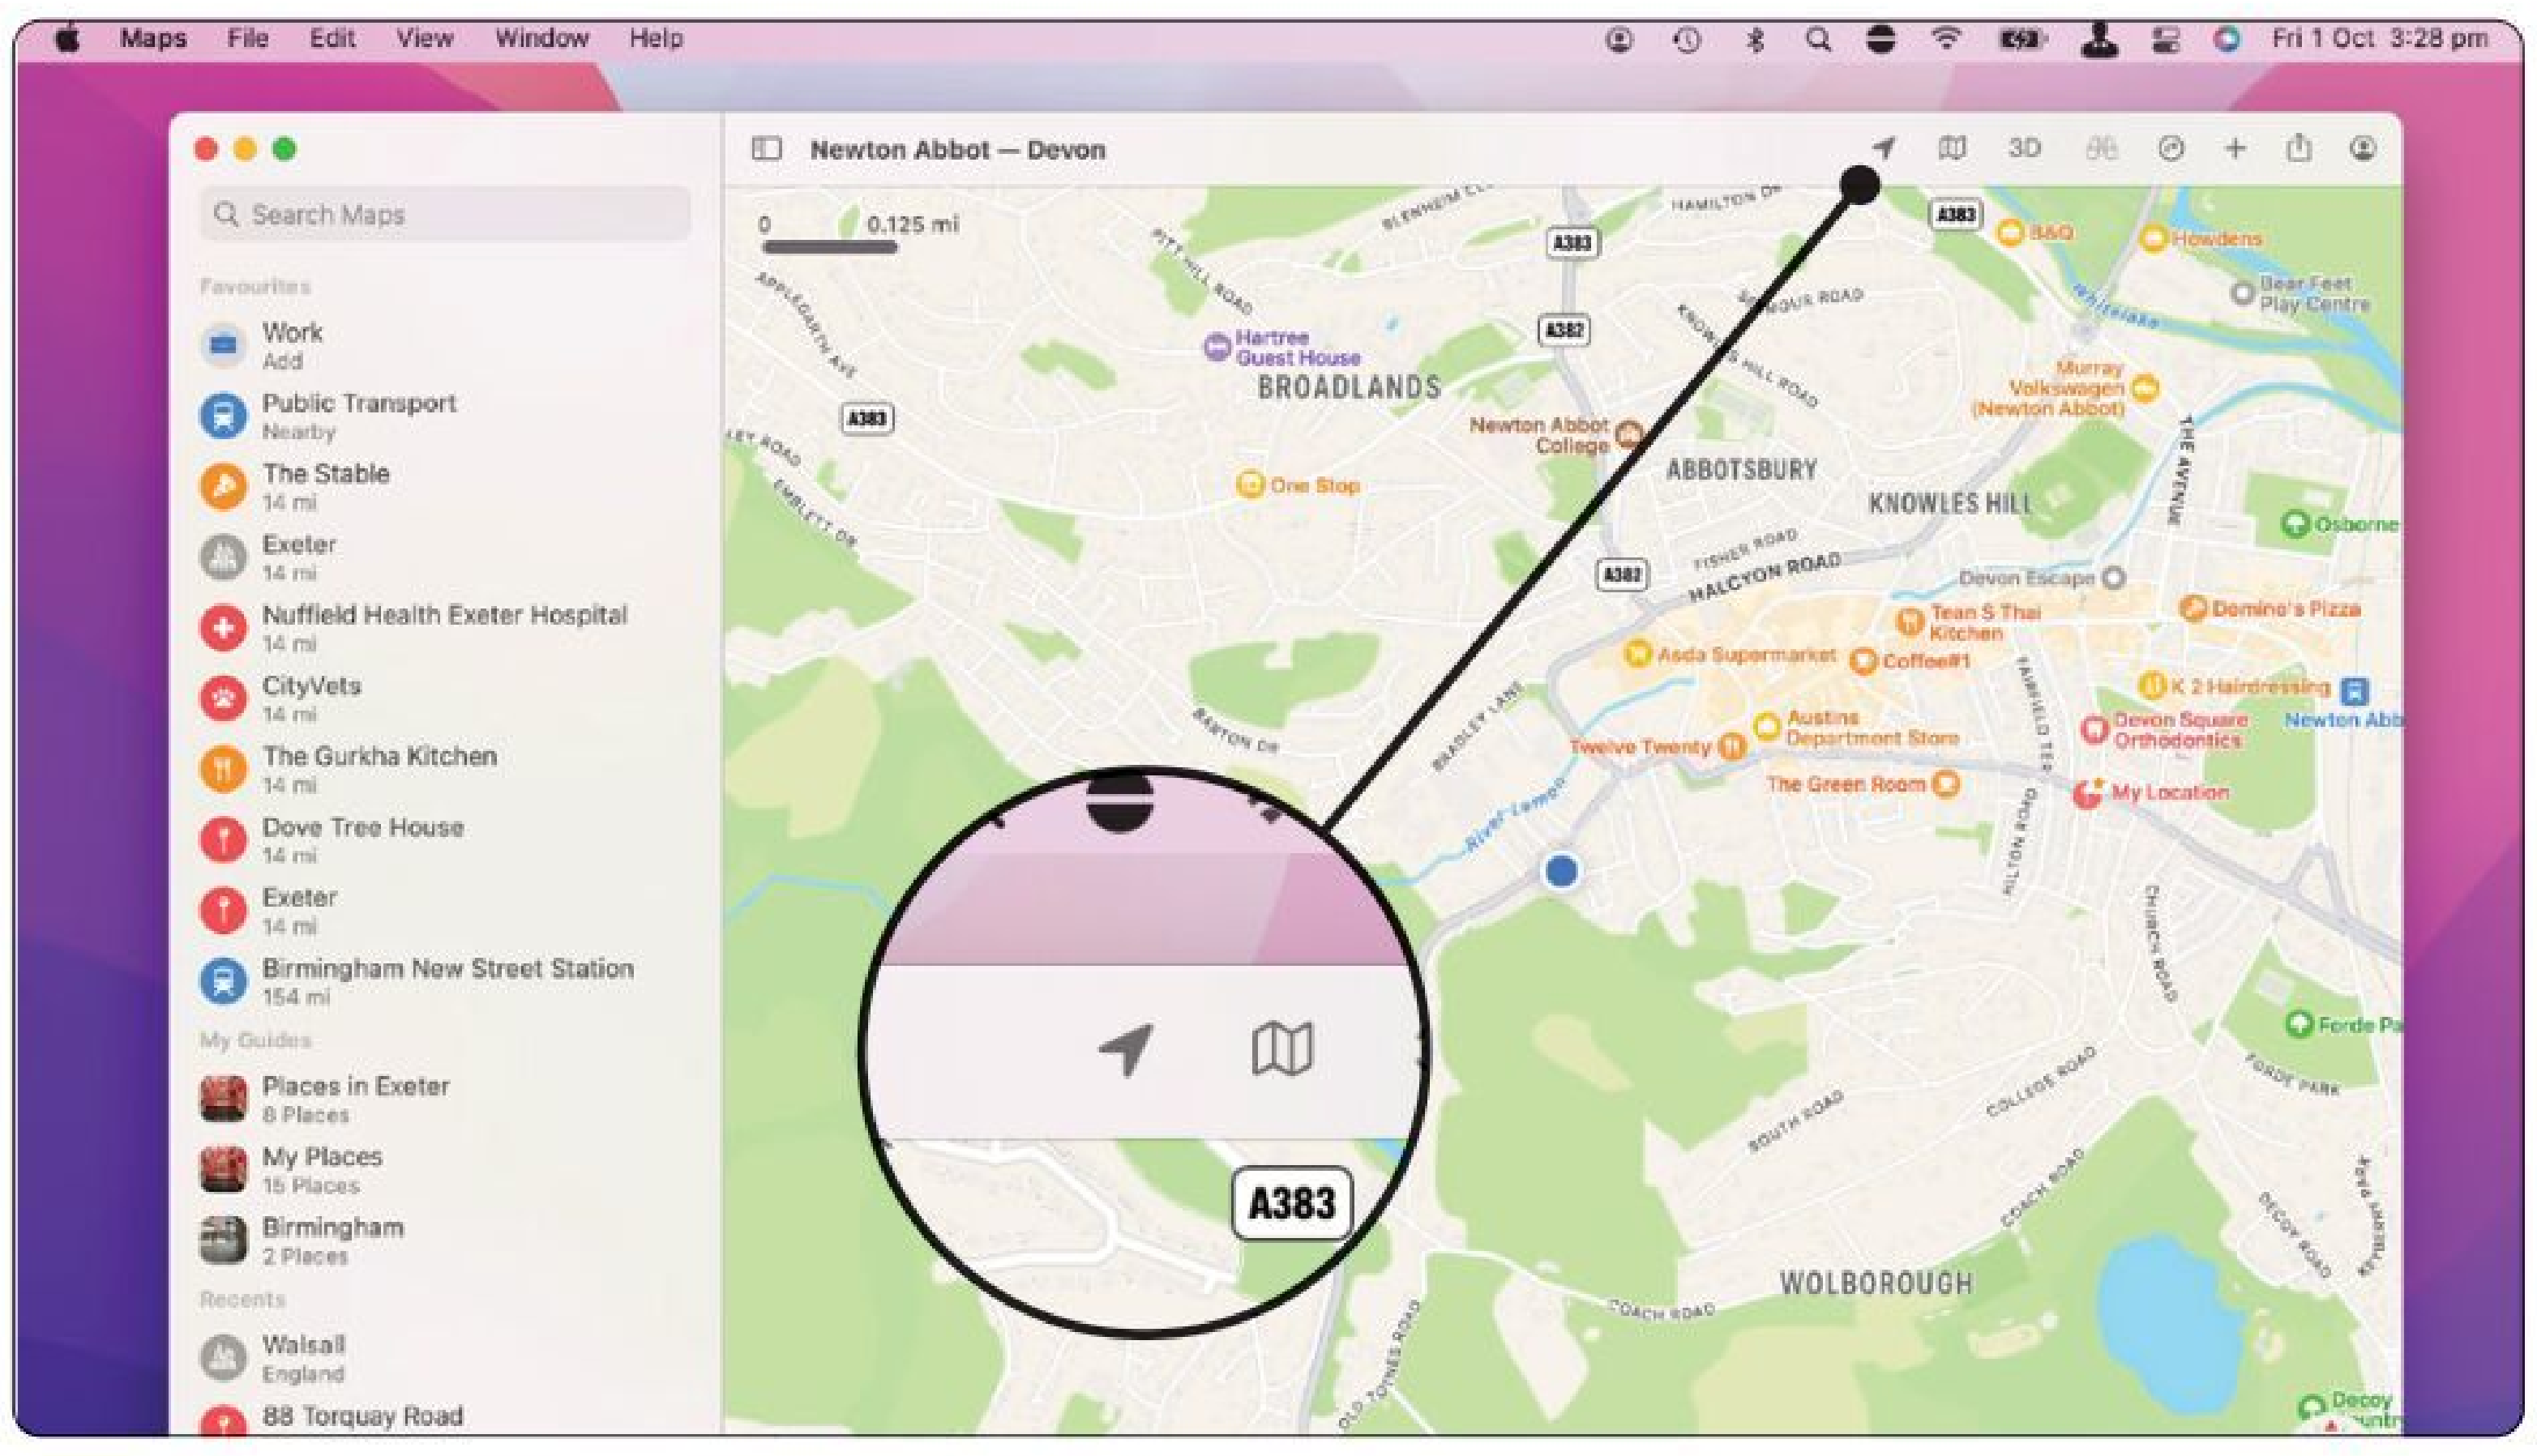


To share movies and TV shows during a FaceTime chat, open the TV app or a compatible third-party TV app and press Play. For audio, open Apple Music, find a track or album and press Play. Everyone can add and queue songs.

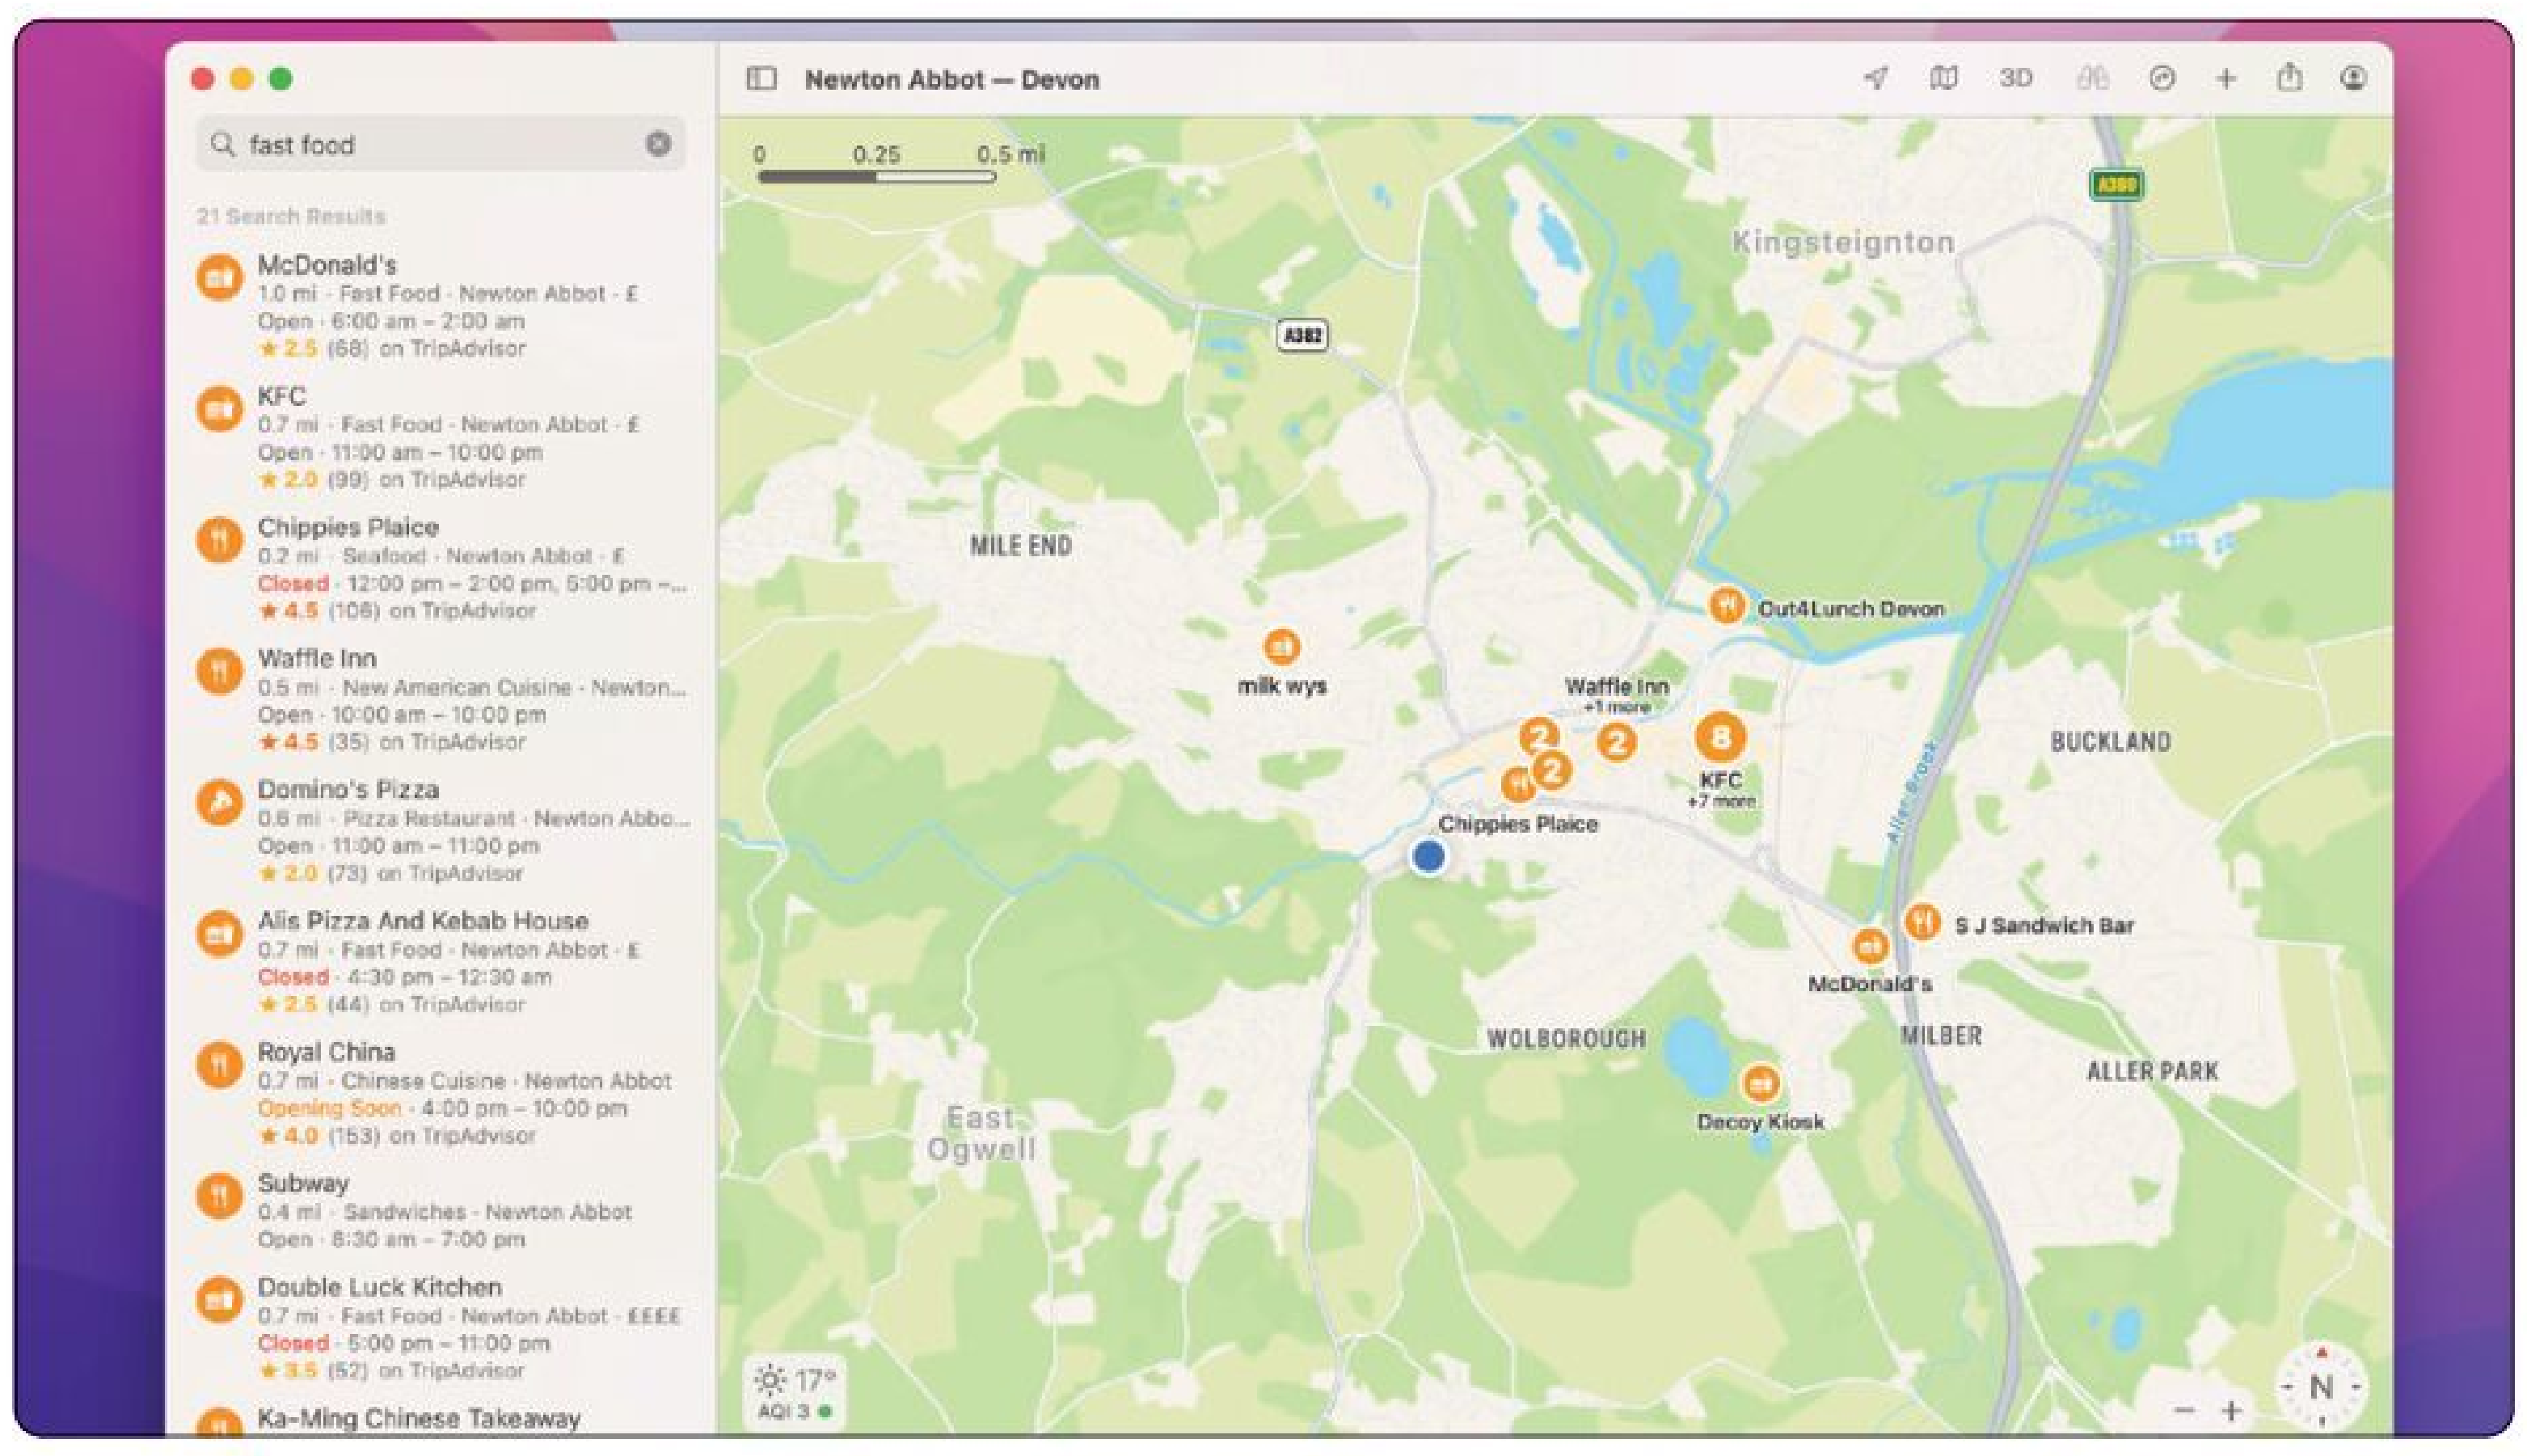
Maps
Plan Your Routes

macOS Monterey brings some new features to the Maps app. Major cities such as San Francisco, Los Angeles, New York and London enjoy greater detail; showing roads, trees and buildings. Its 3D capabilities have been enhanced, public transport now shows nearby stations and transit times and more.

Finding Places with Maps



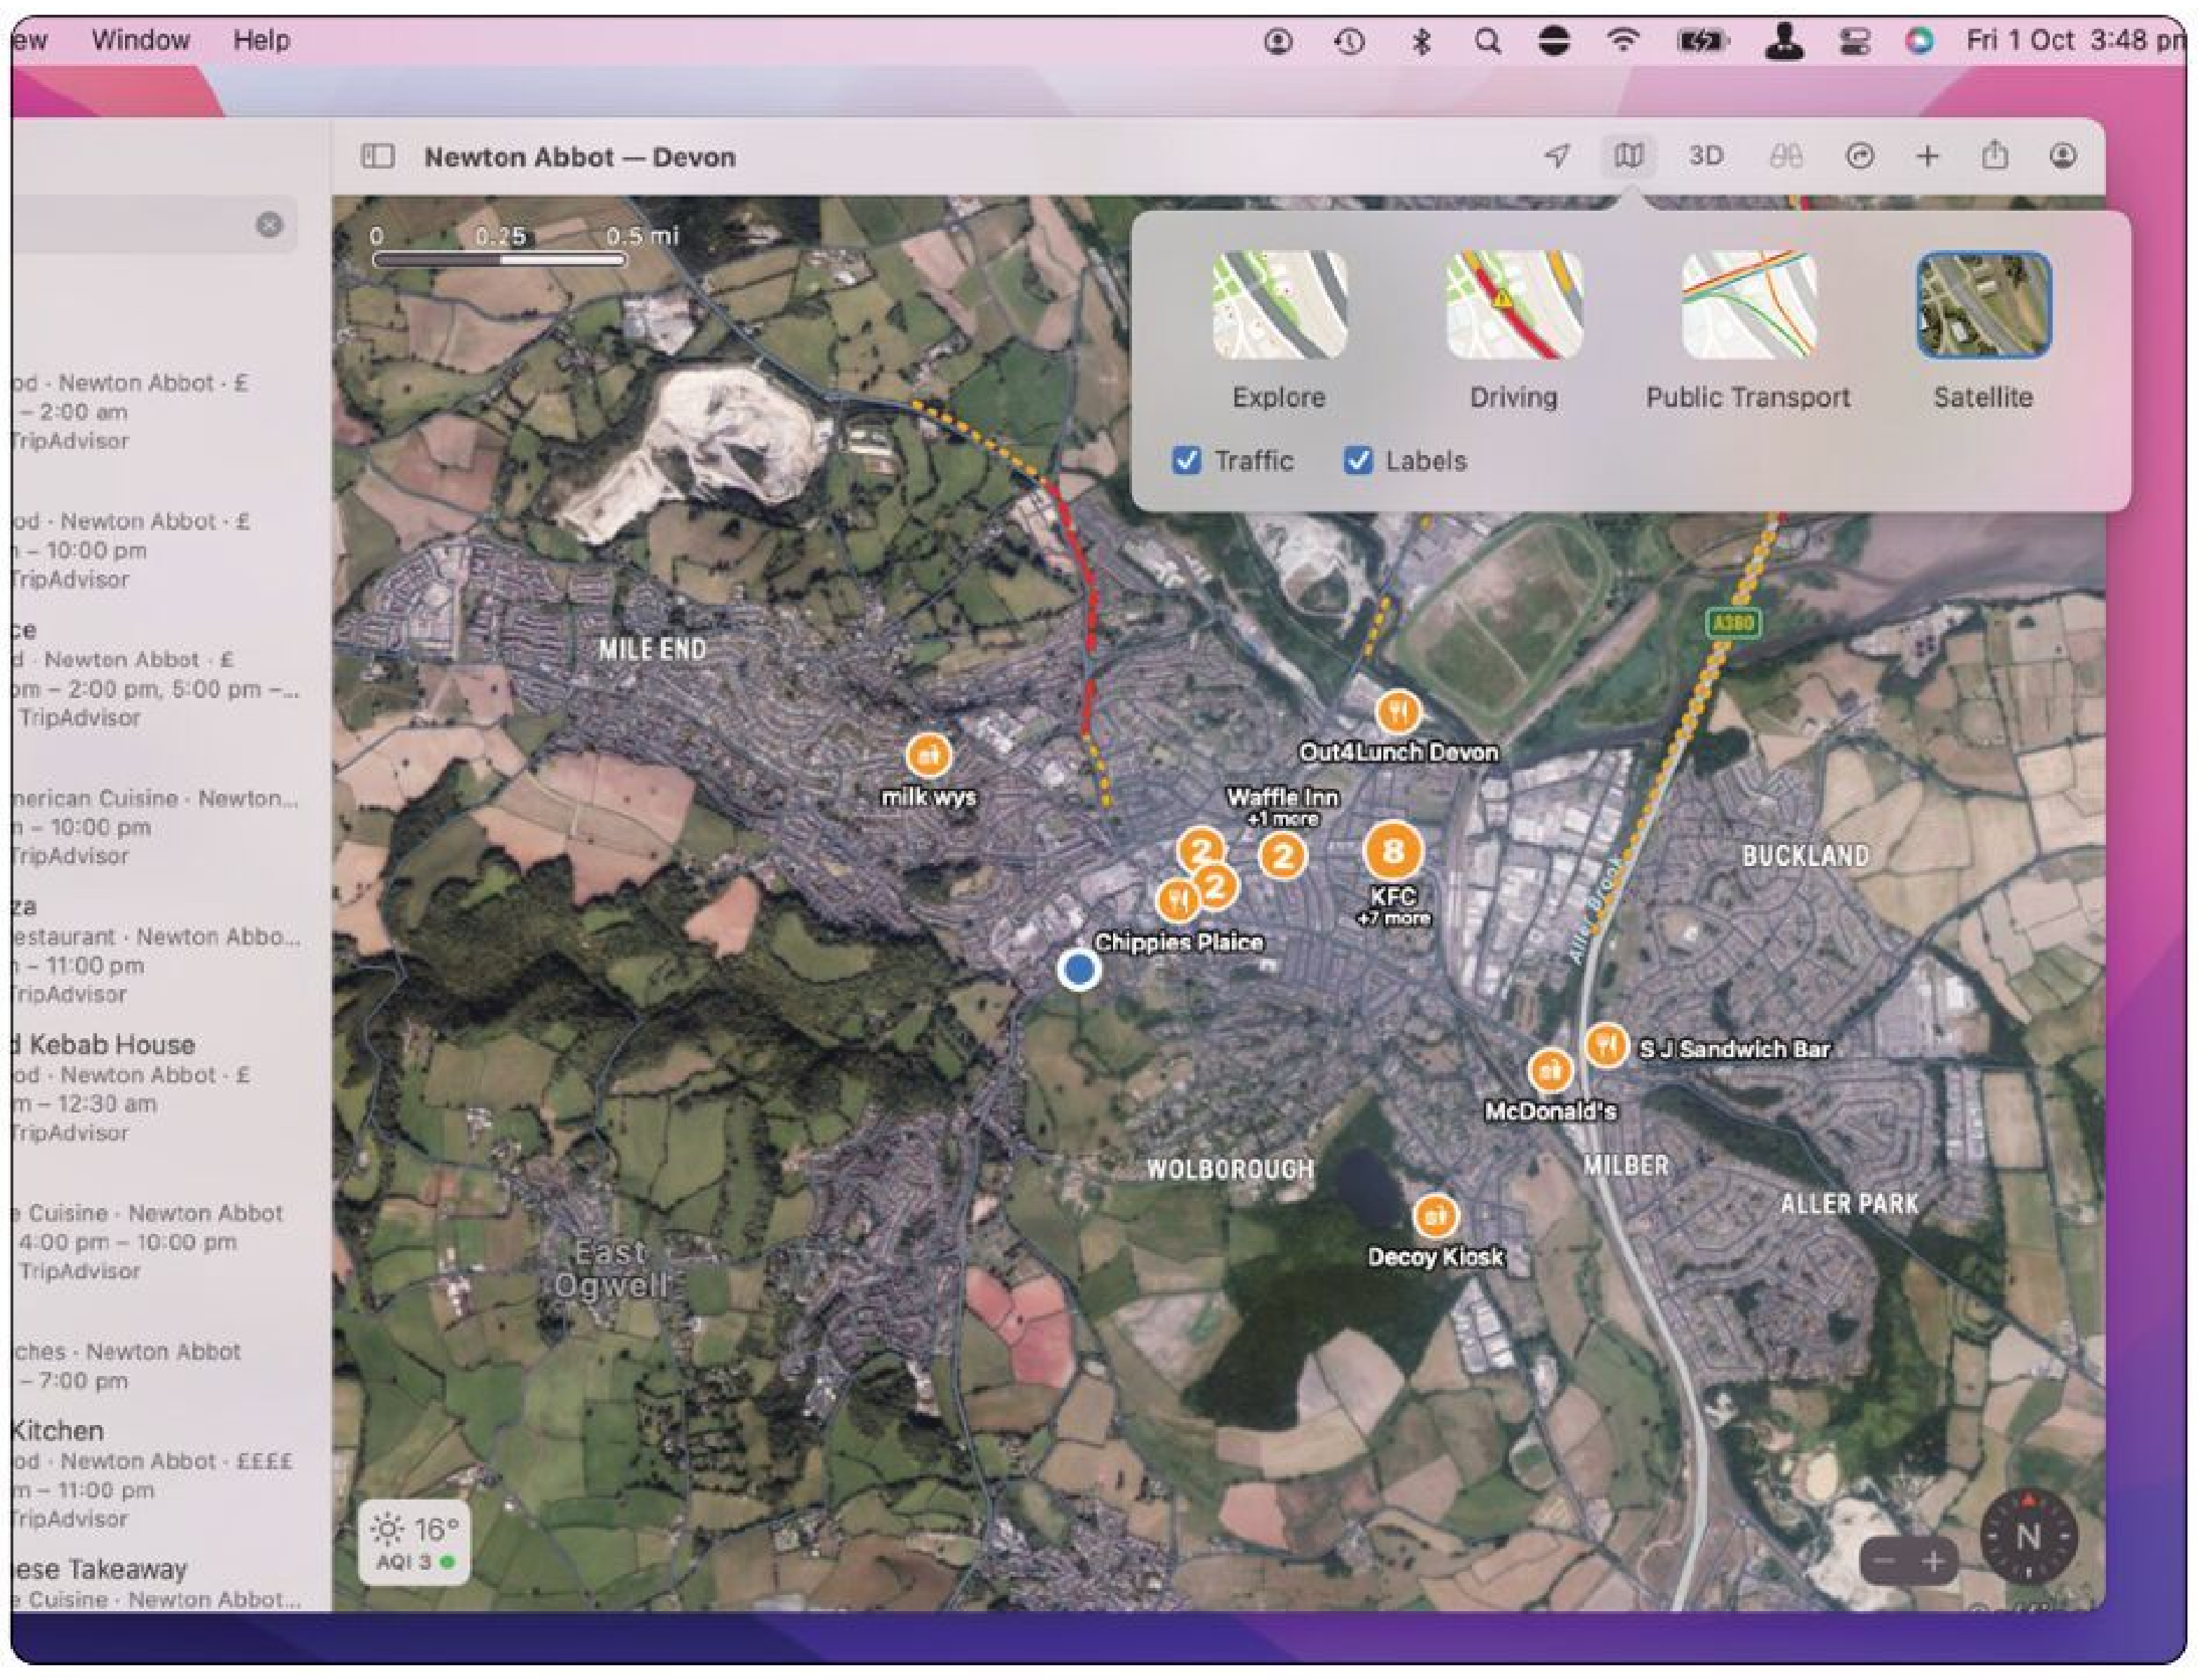
Newton Abbot — Devon
Search Maps
A383



Newton Abbot — Devon
fast food

1 To focus the view on your current location, click the arrow icon in the toolbar. The map zooms to your current whereabouts. To search for a specific location, type the address, postcode/zip code or road name into the search field. Possible matches are shown as you type.

2 You can search for a business by entering the business name or type, for example 'Fast Food', into the search field. Icons appear on the map indicating all matching businesses in the area. To get more information, click on an icon, then on any relevant information that accompanies it.



Newton Abbot — Devon

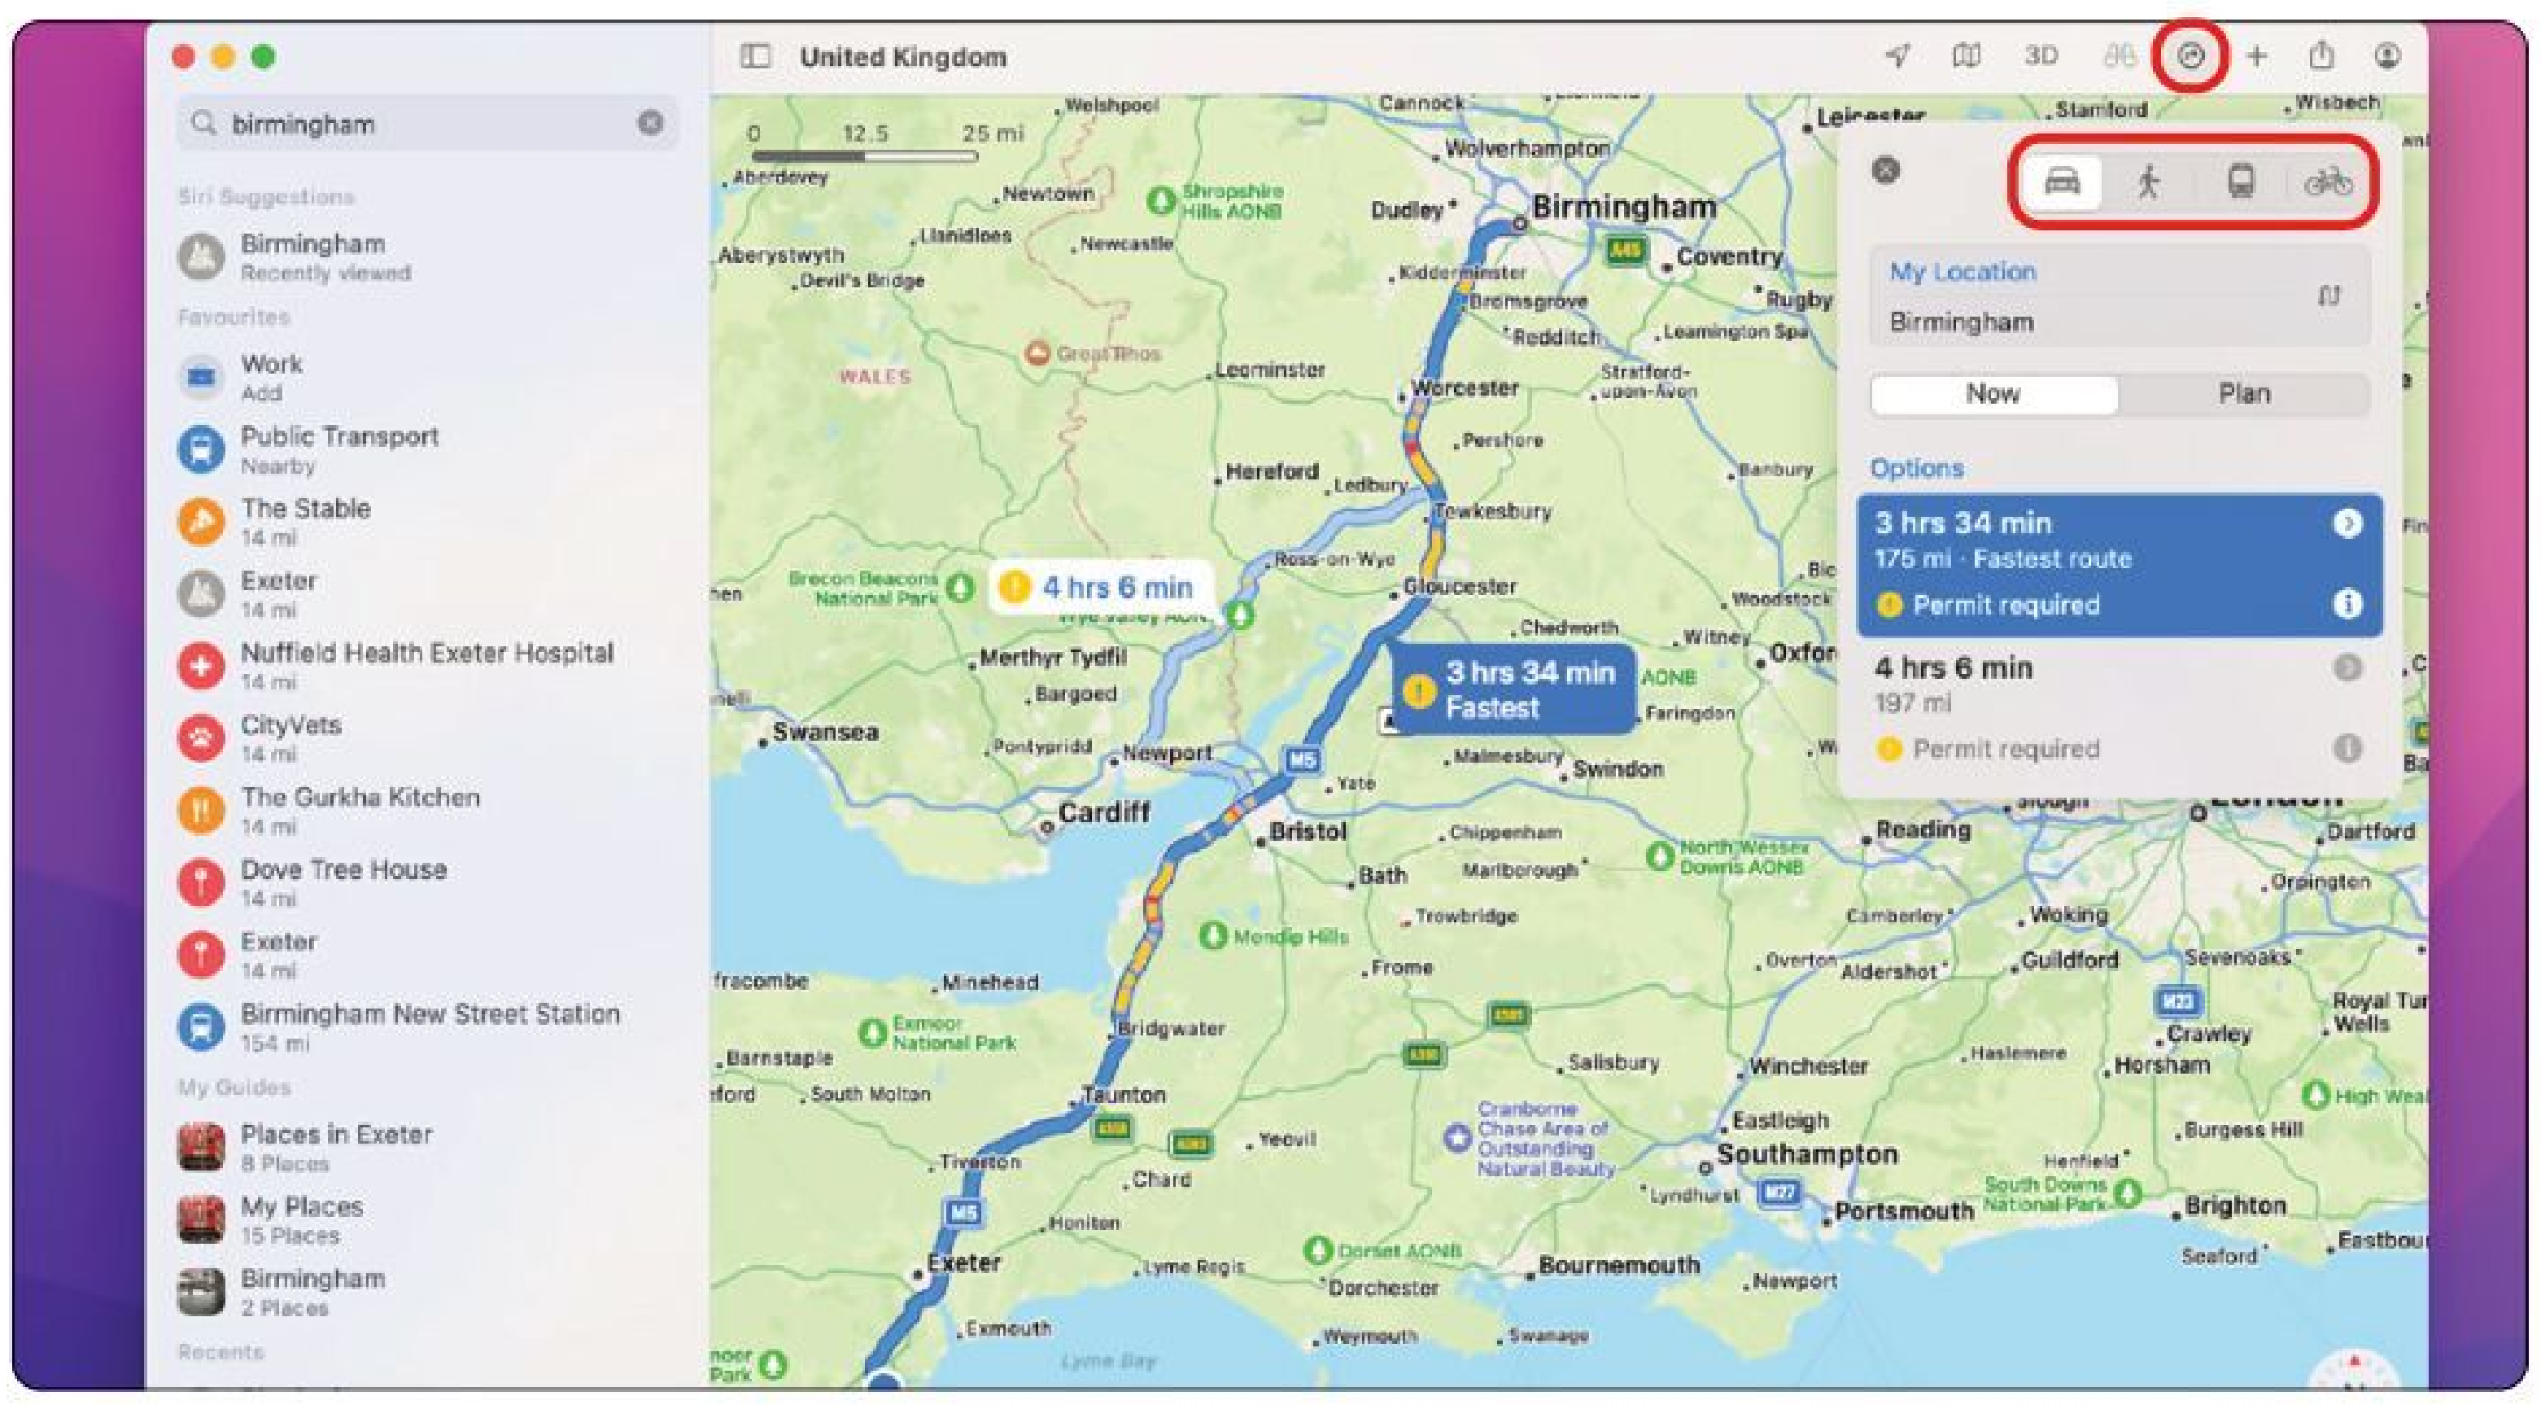
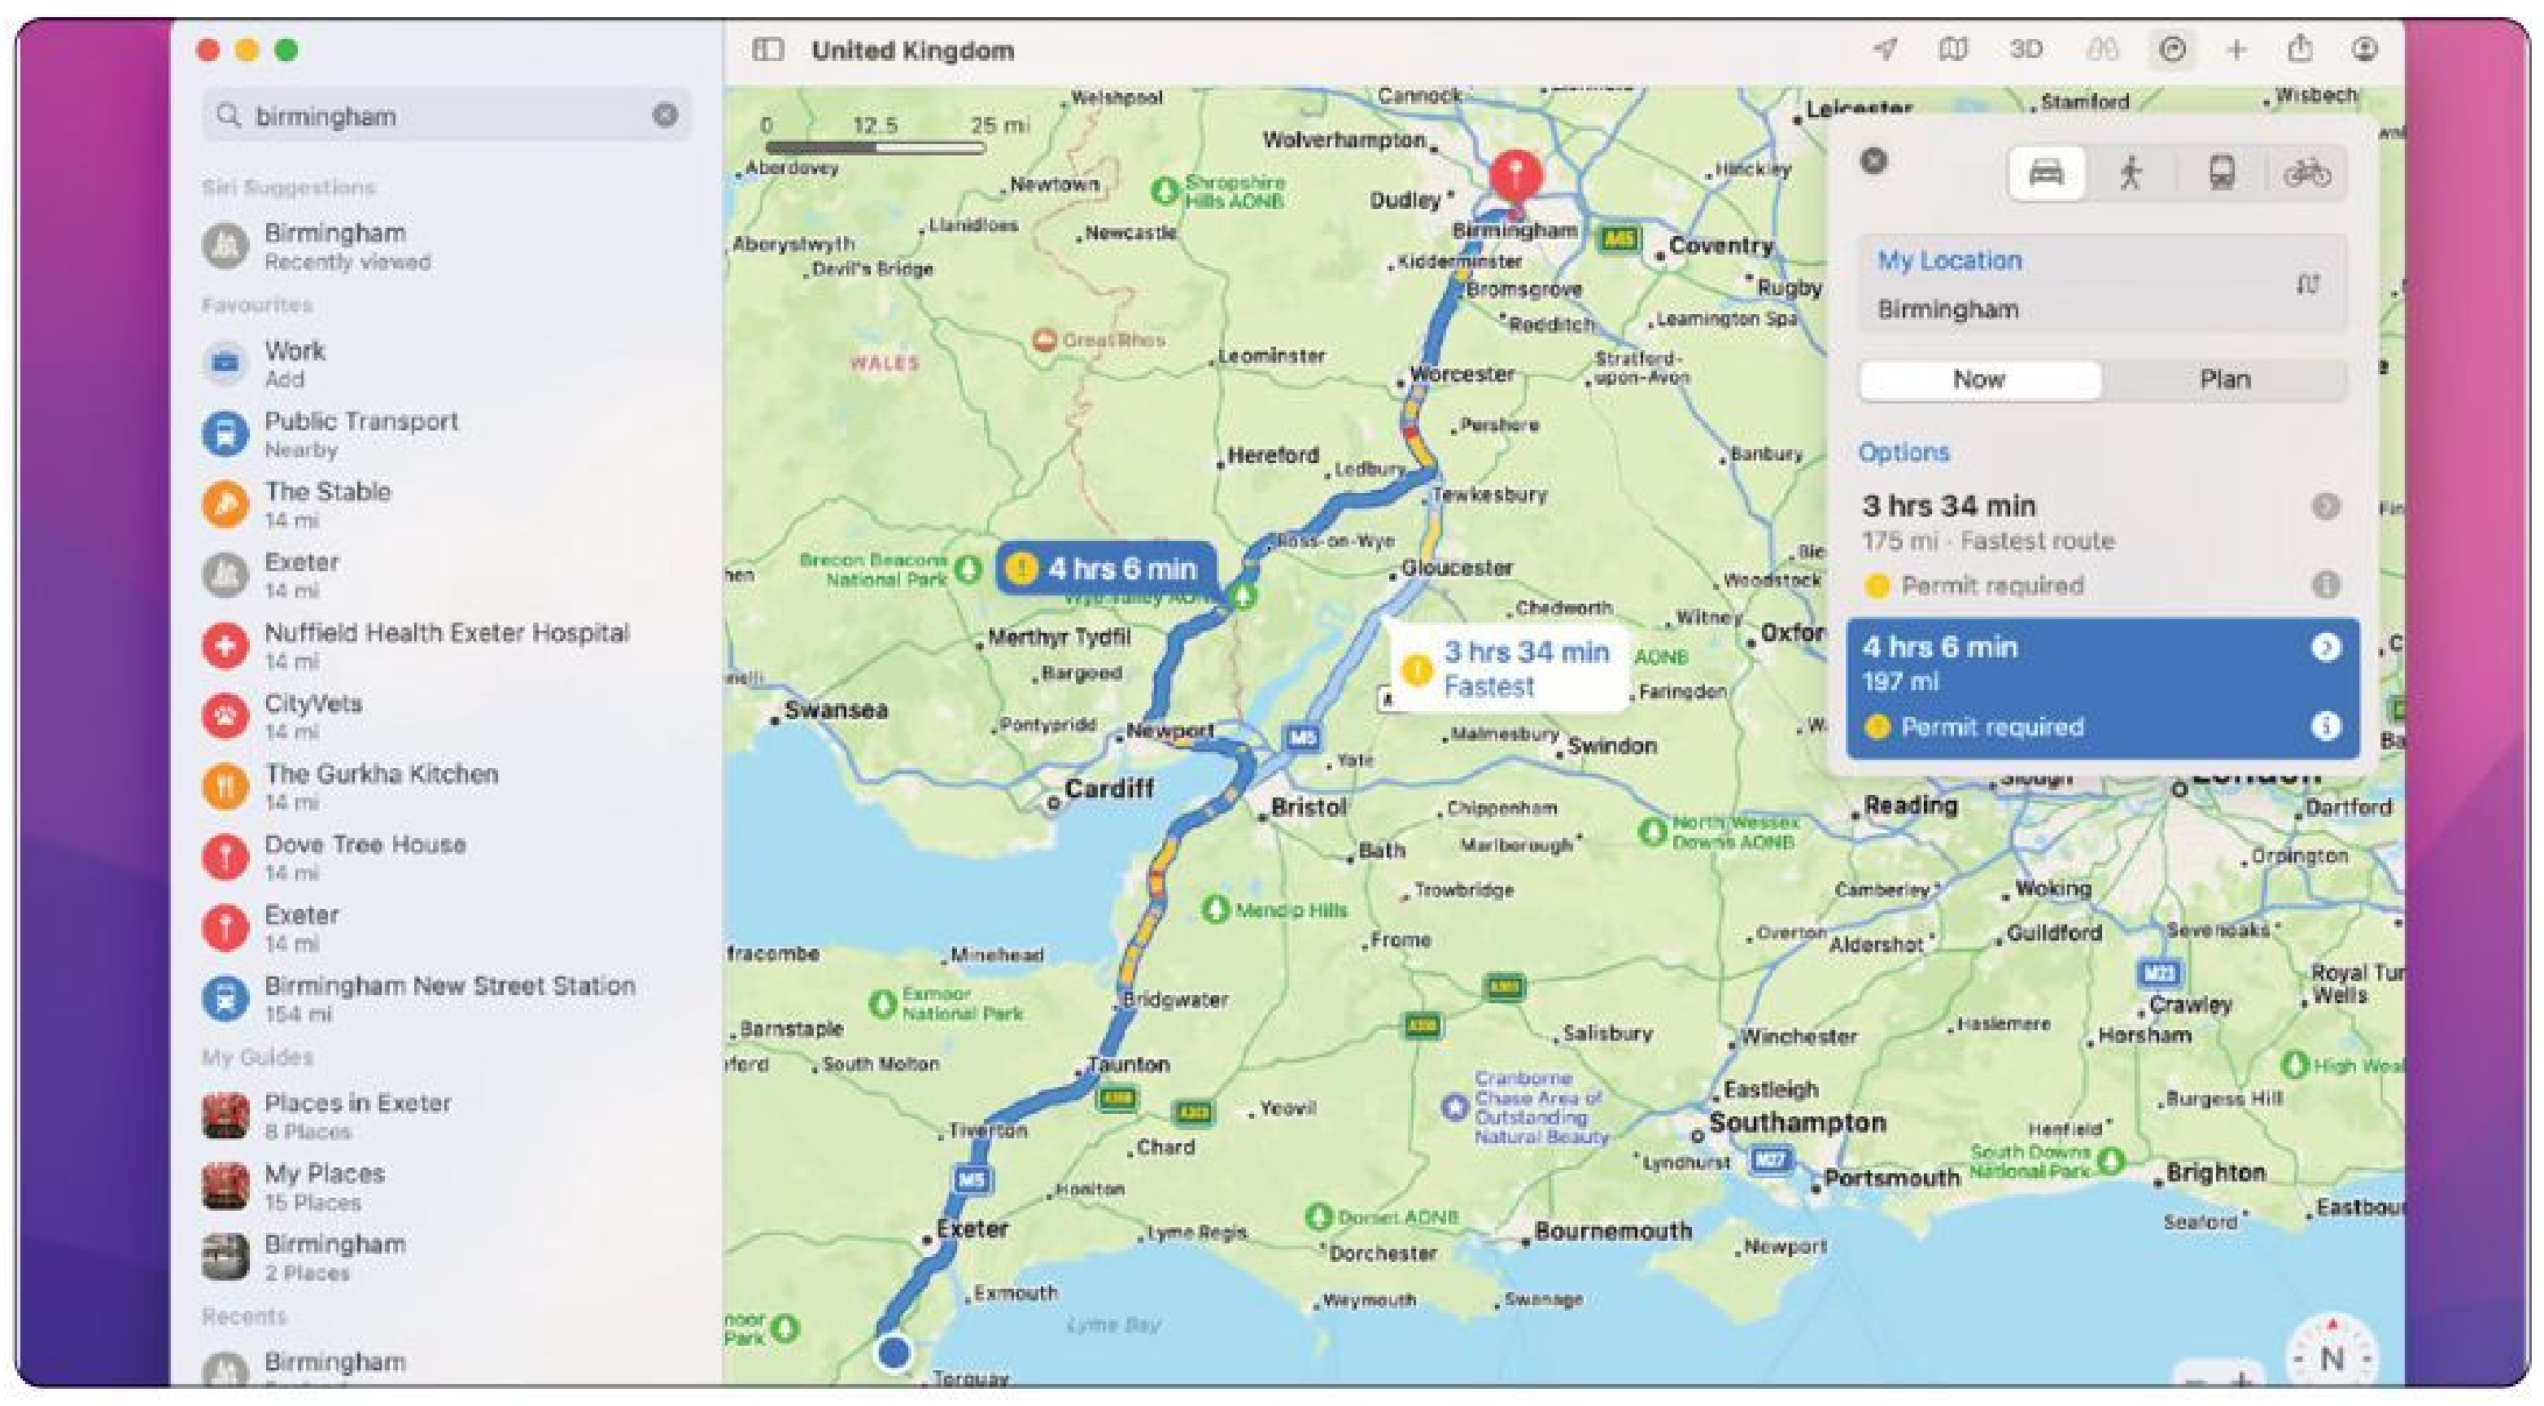
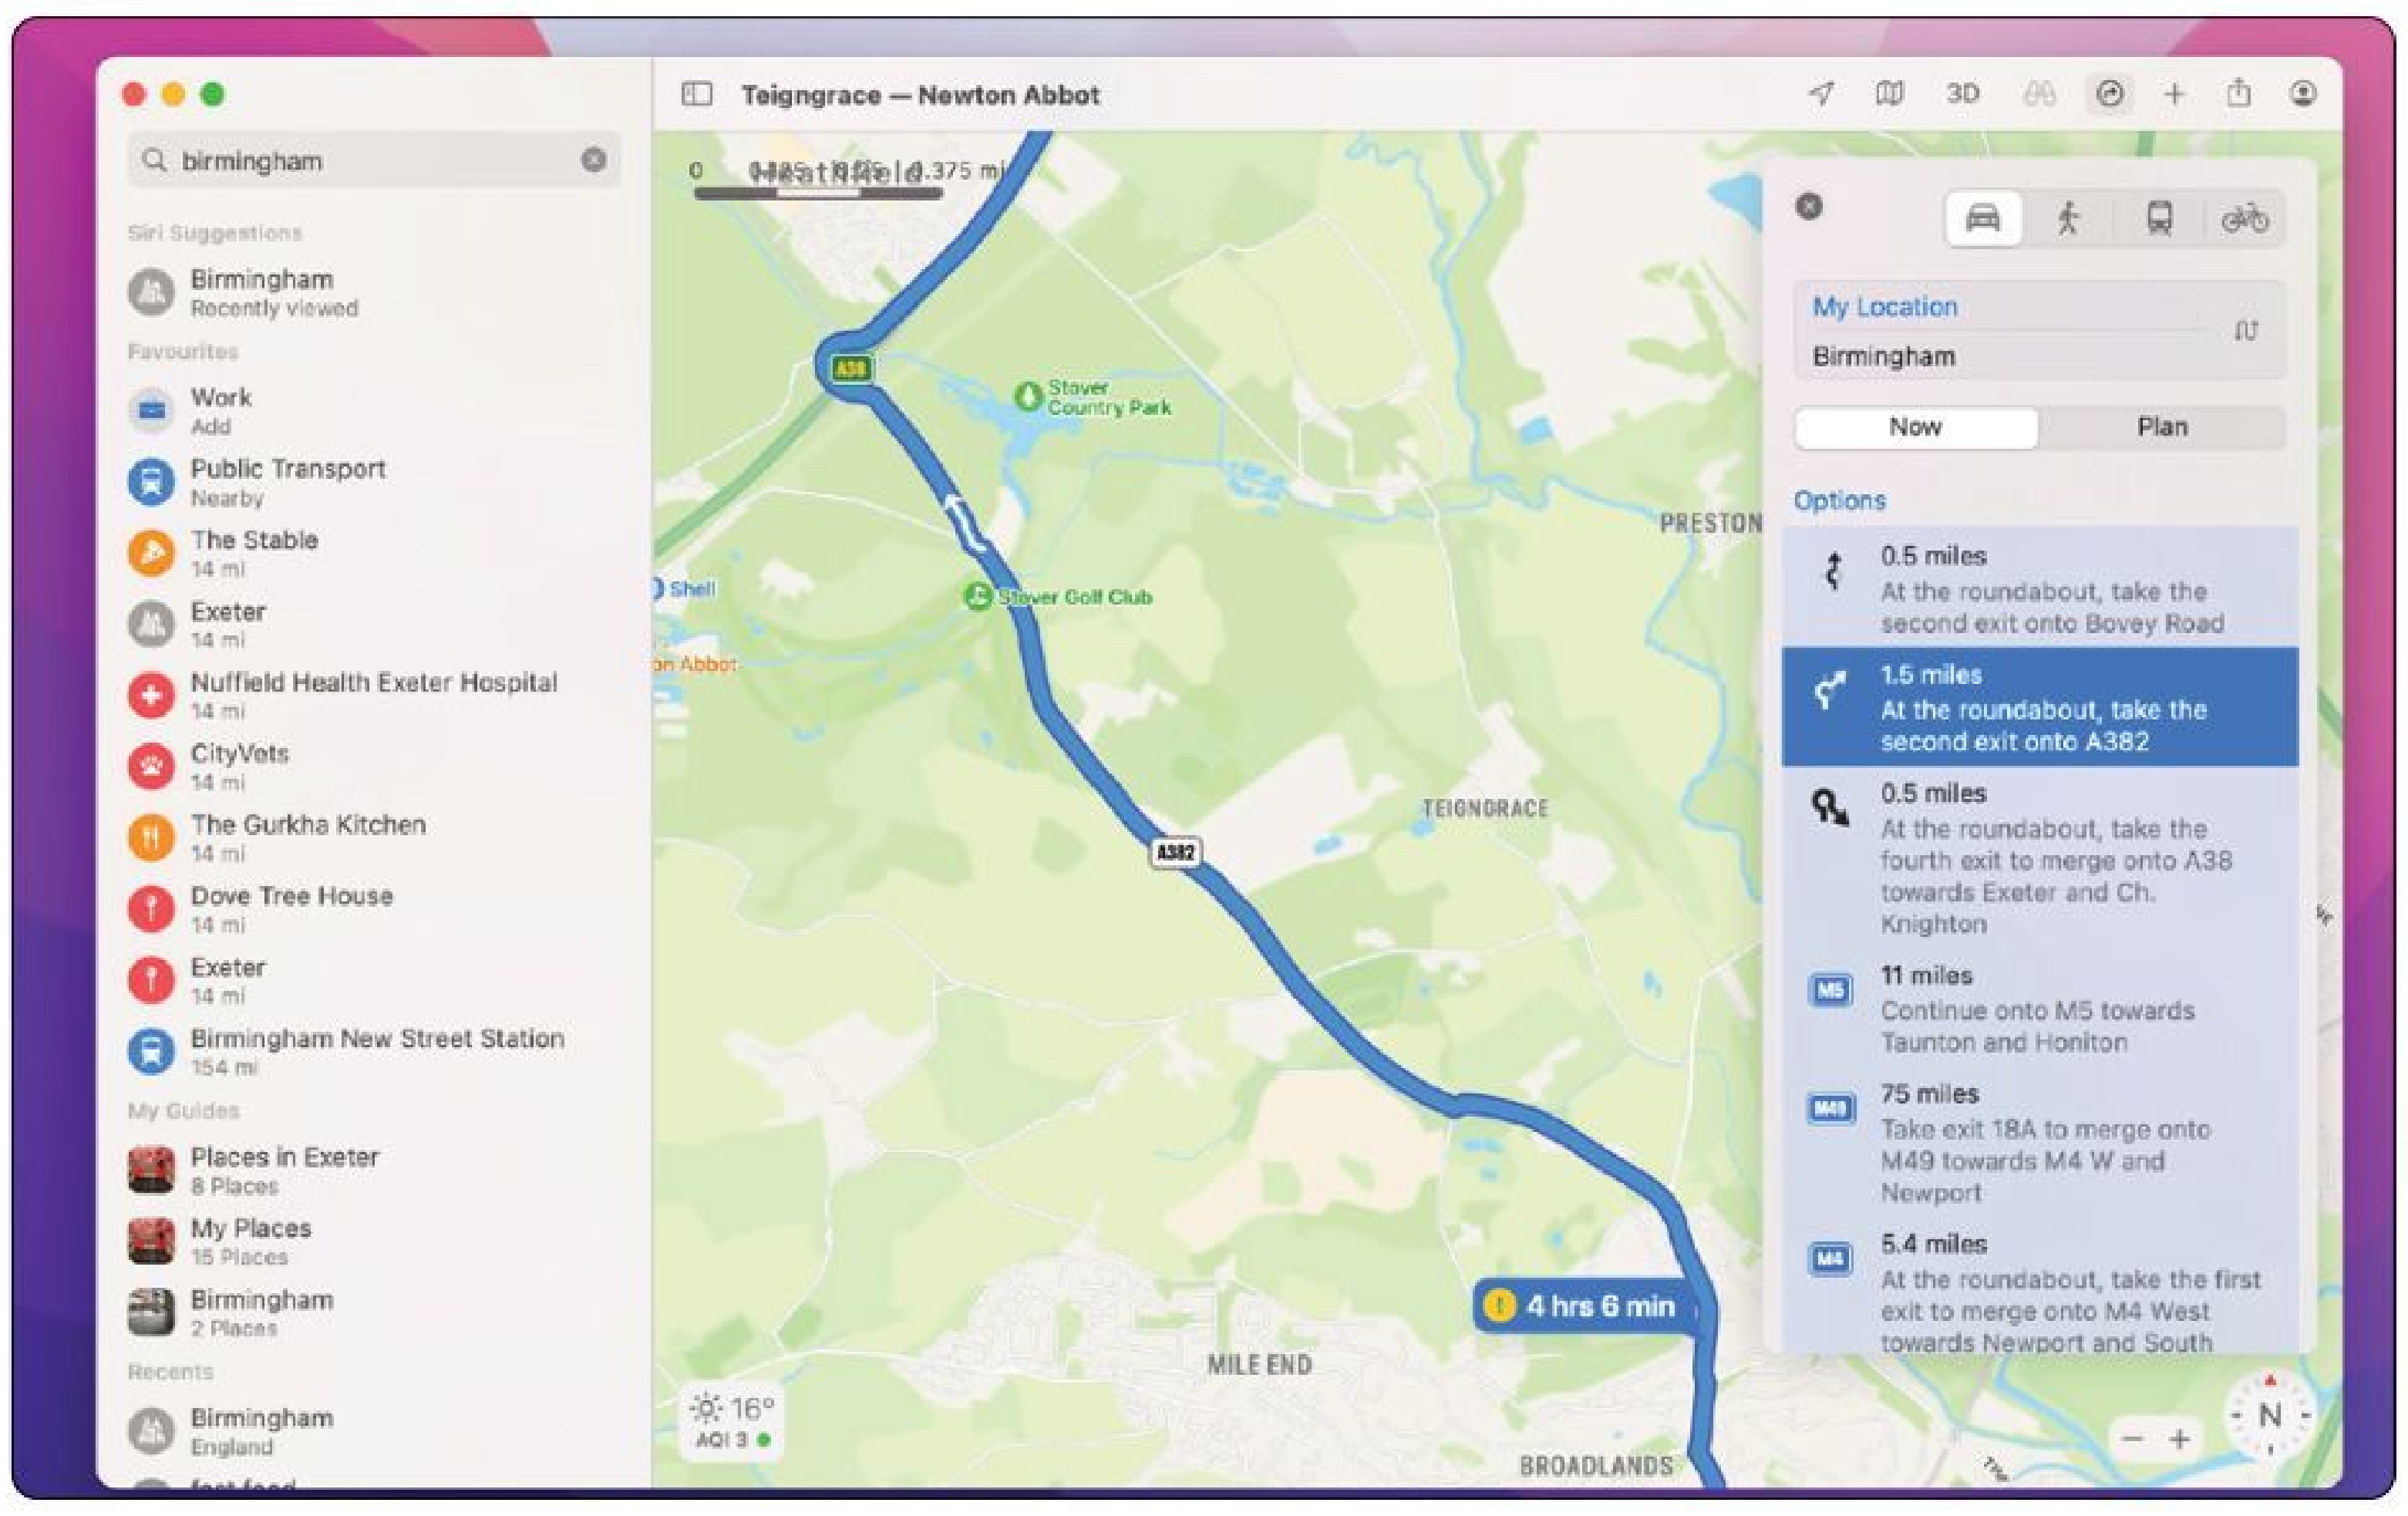
Route Planning Explained

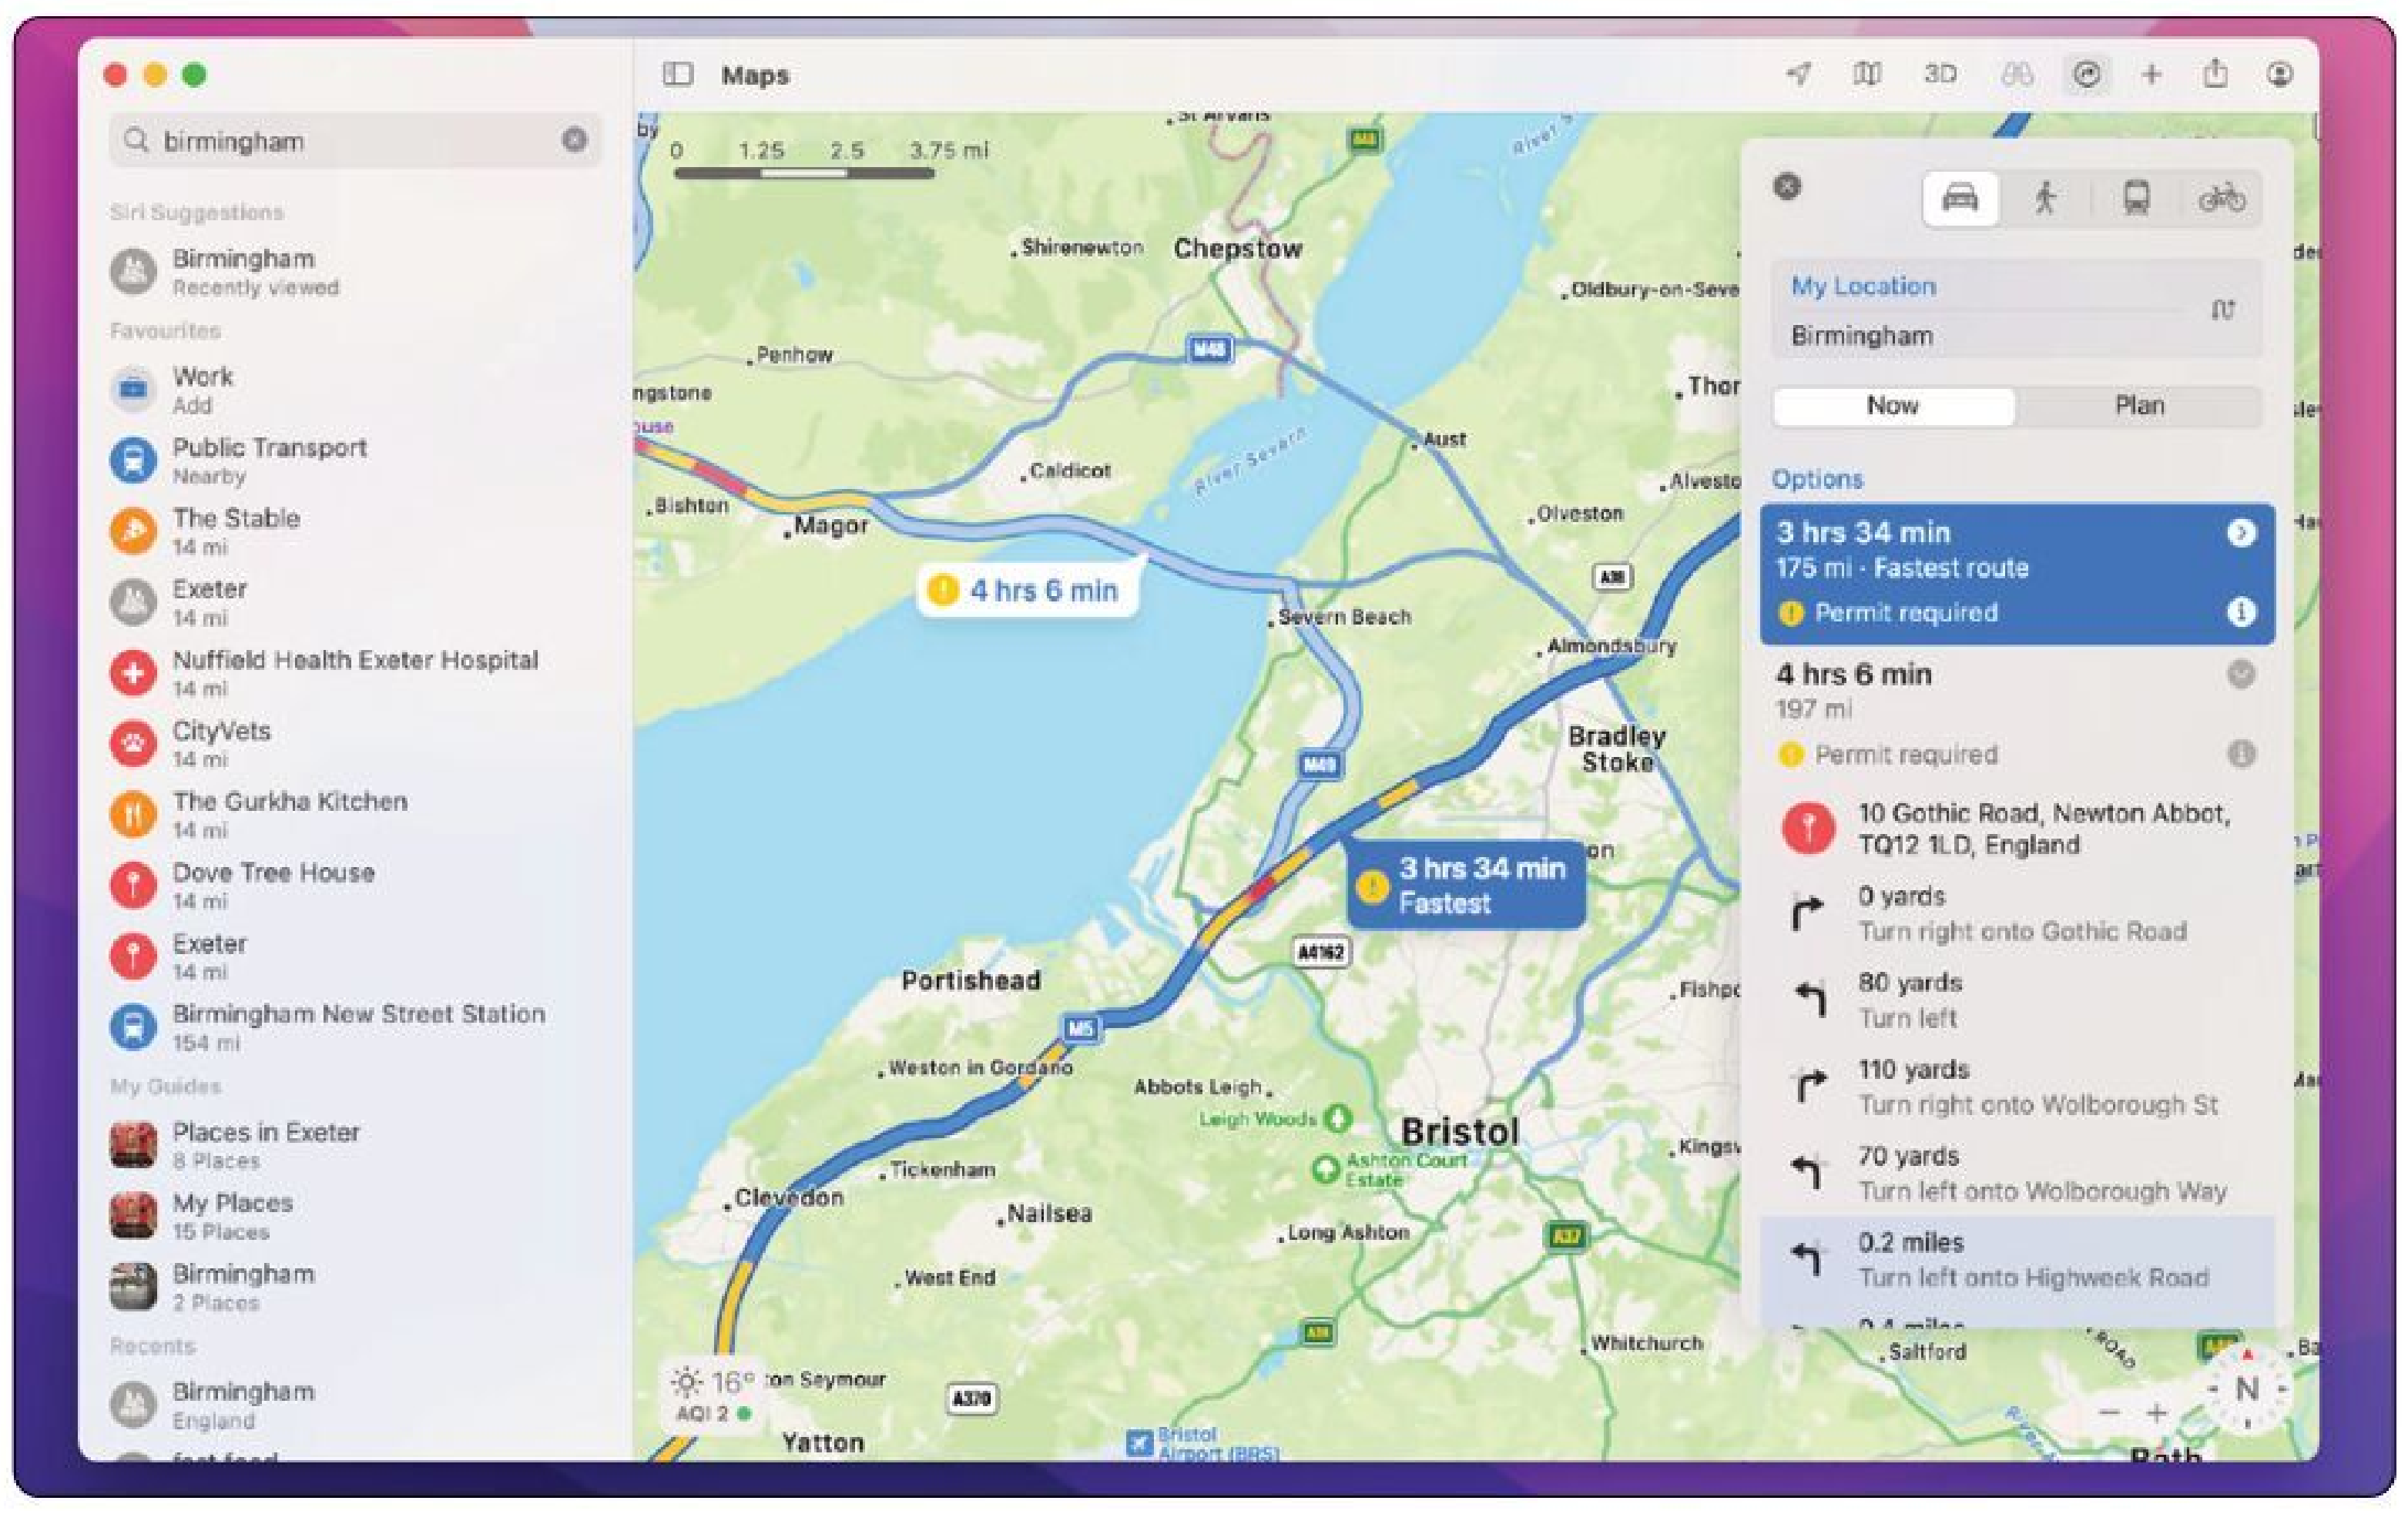




1 For directions, click the Directions button (arrow in a circle), and enter your start (if it's not your current location), and finish points. Alternatively, search for your destination and click Directions in the pop-up. Choose your transport method with the four buttons in the window.

2 Maps calculates the best route, based on your chosen transport. It's displayed on the map as a blue line. The distance and travel time are also offered. If alternative routes are available, they're shown as lighter blue lines. You can switch between routes by clicking on a light blue line.





3 When you've chosen a route, click on the right-facing chevron next to the route in the window to expand the details. You can view a step-by-step breakdown of the journey. Click on any of these points to be taken to that stage on the route.

4 If there are alternative branches leading off your chosen route, they're displayed as lighter blue lines once more. Again, you can opt to follow these alternative routes by clicking on them, causing Maps to change your route.

Getting and Using Traffic Information.

When on a road journey, there's nothing worse than getting caught up in a traffic jam or running into major roadworks. Luckily, Maps covers that one too. You can add or remove real-time traffic information in the View menu at the top of the screen. Just select Show/Hide Traffic. When traffic information is turned on, closed roads are shown as no-entry signs, roadworks as road men and accidents as a red sign. Click on one of these indicators for more details, including possible length of delays and for how long the works is likely to continue. Where traffic is heavier than usual, an orange line is added on the road. If it's very heavy, a red line is used.

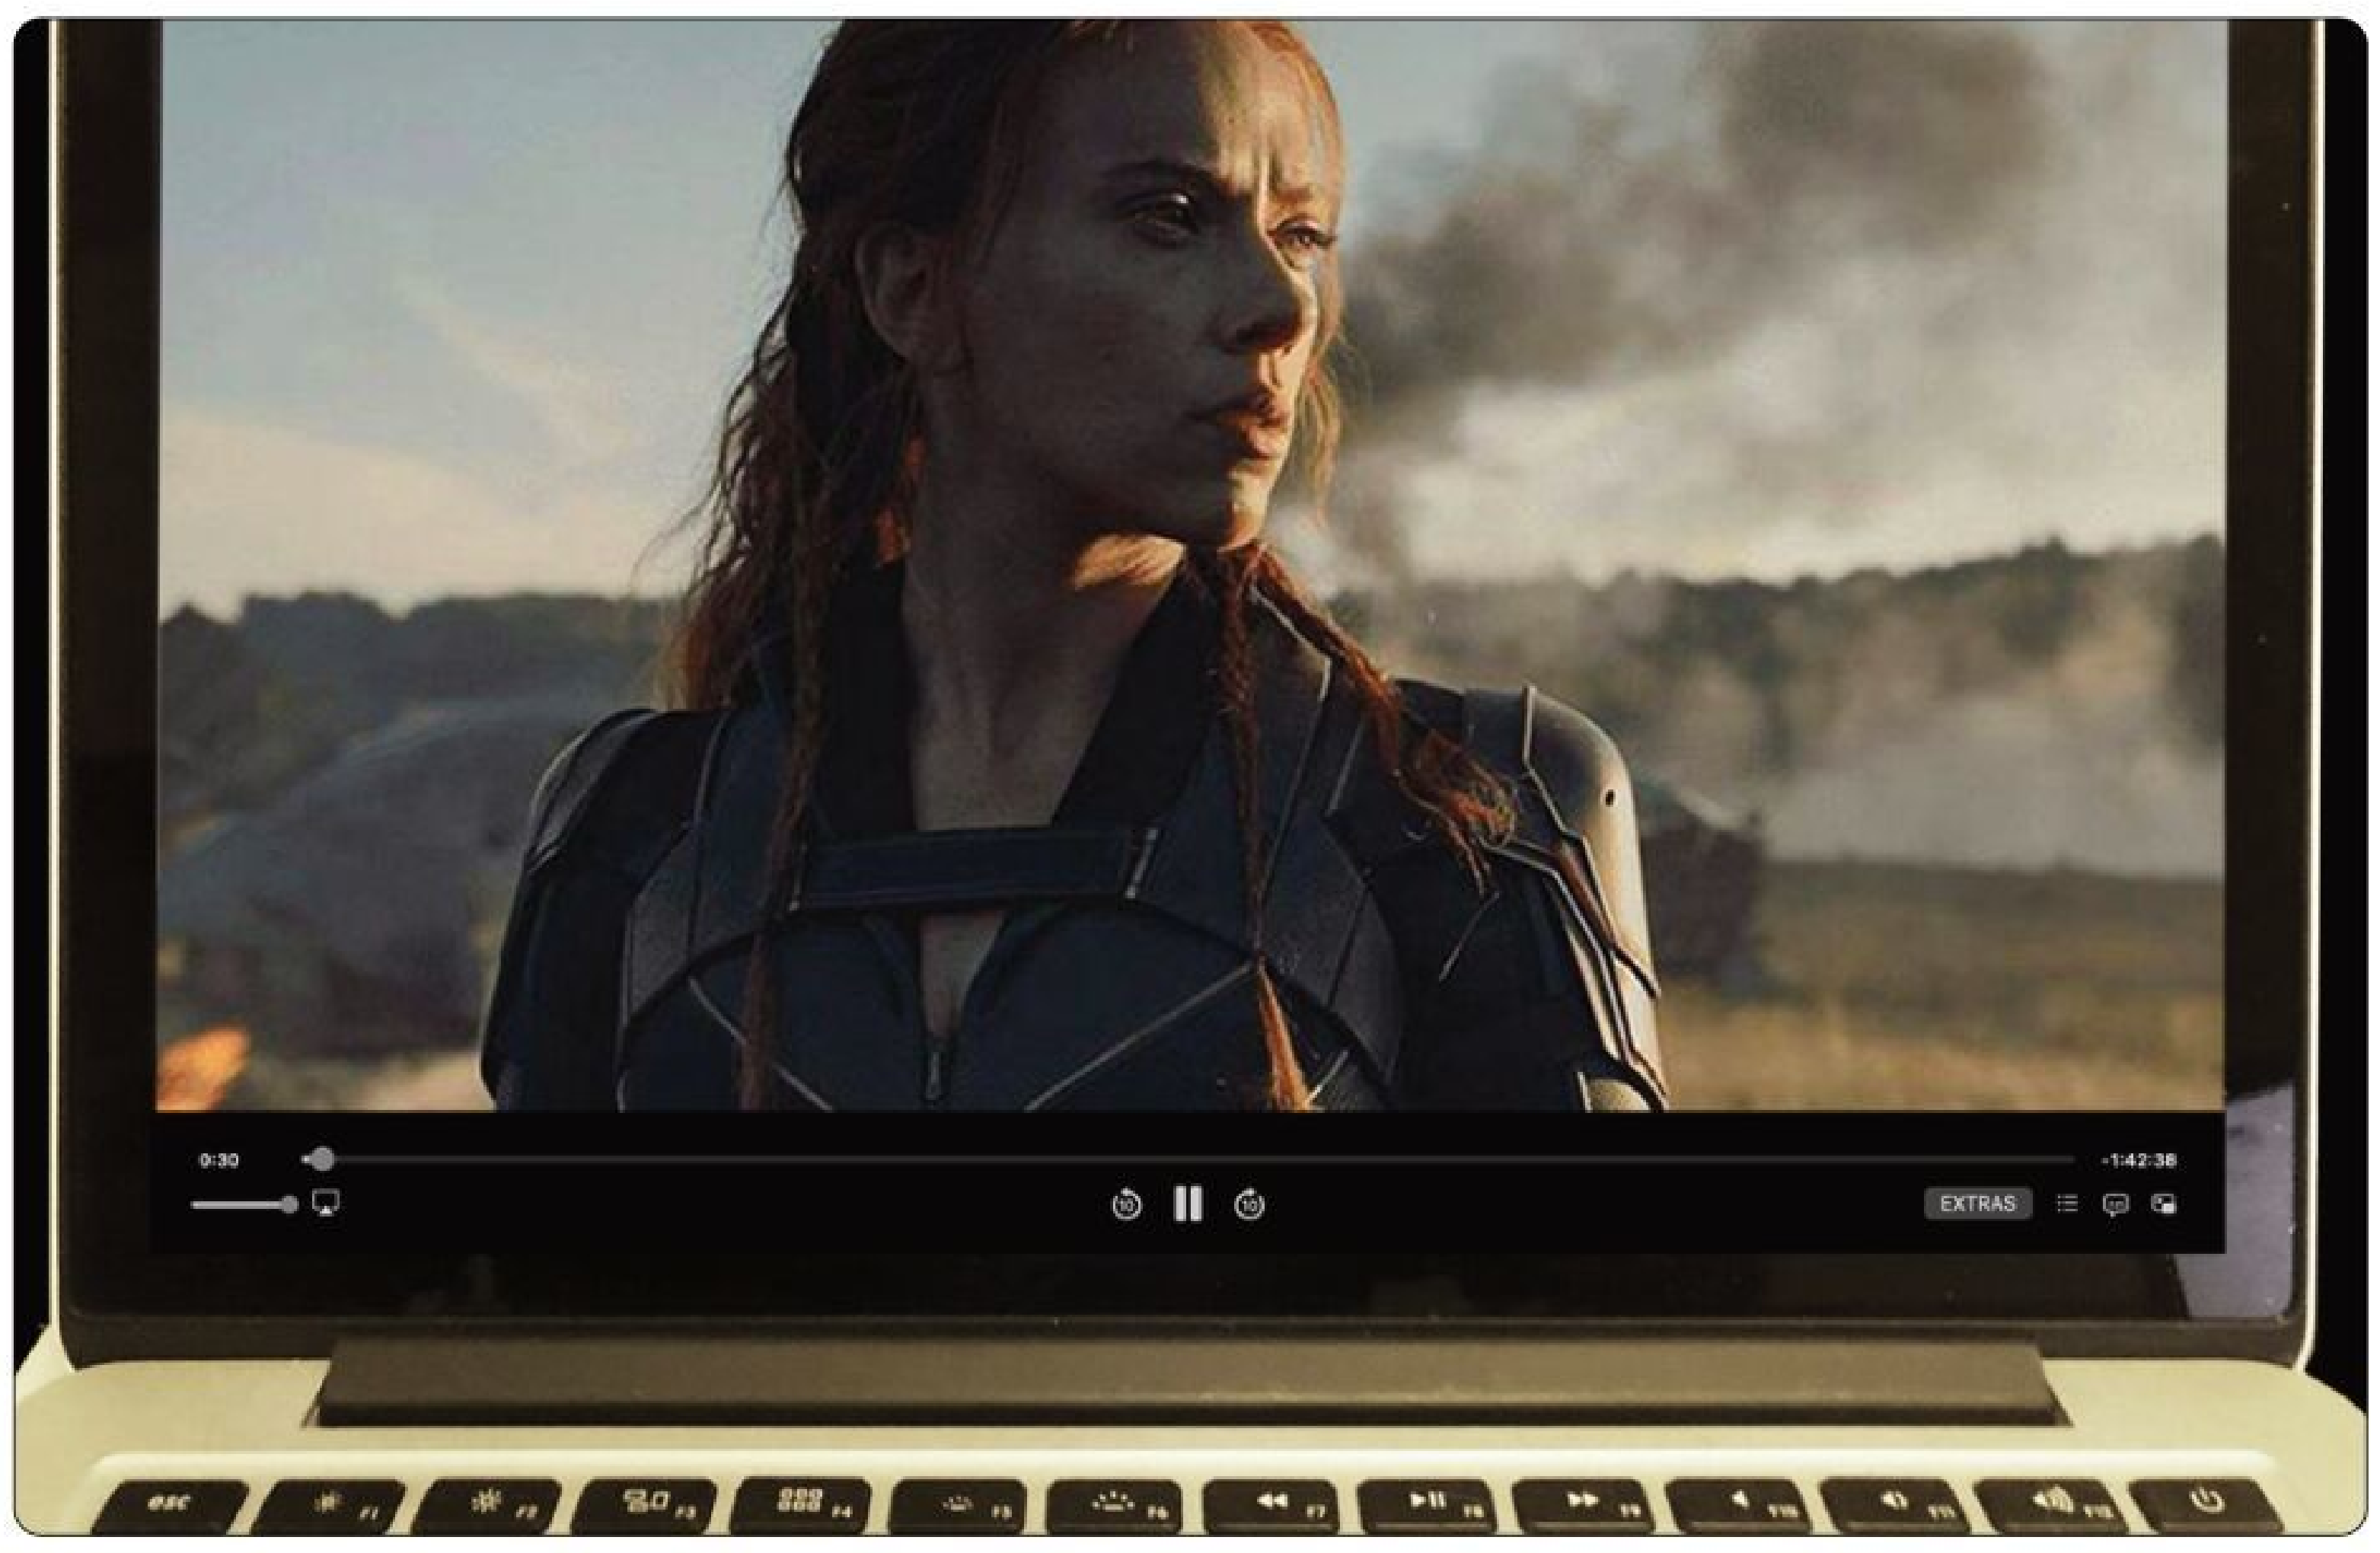
9 Click a Buy or Rent button and a window appears, showing you how much it is to do each. Click one of the prices to do so. Rented media is removed 30 days after renting it, or 48 hours after you start watching it, whichever is sooner.

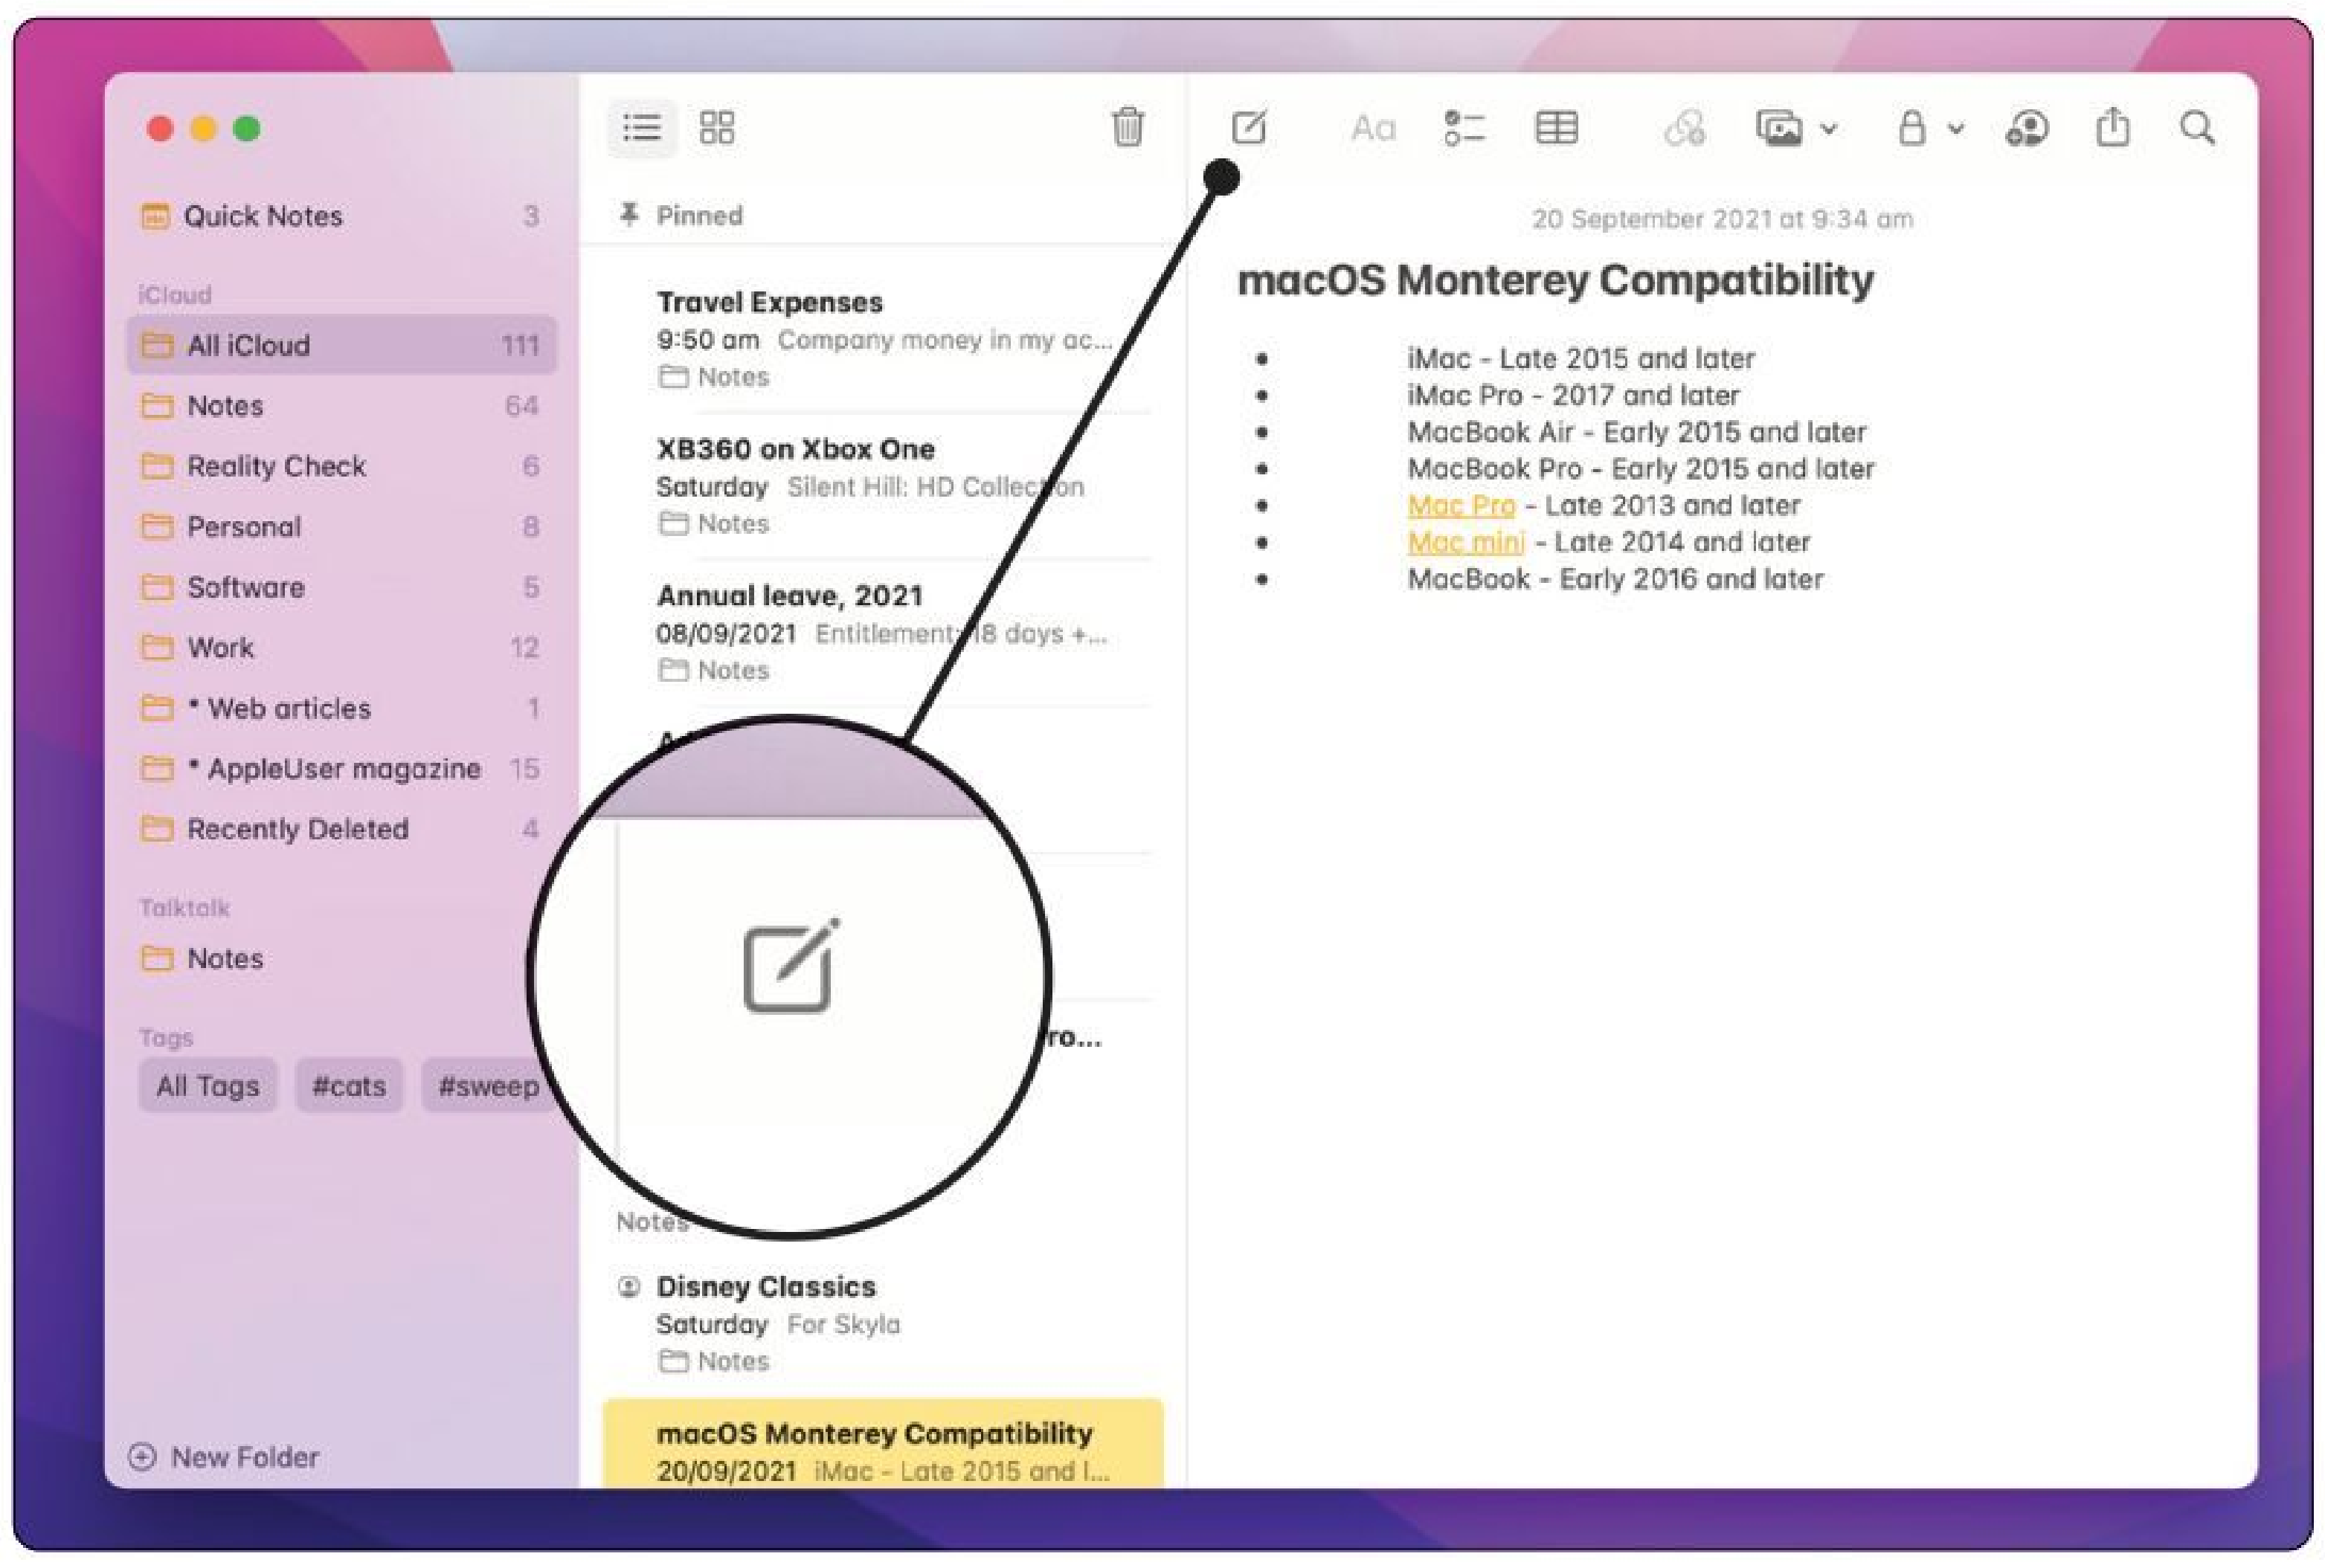


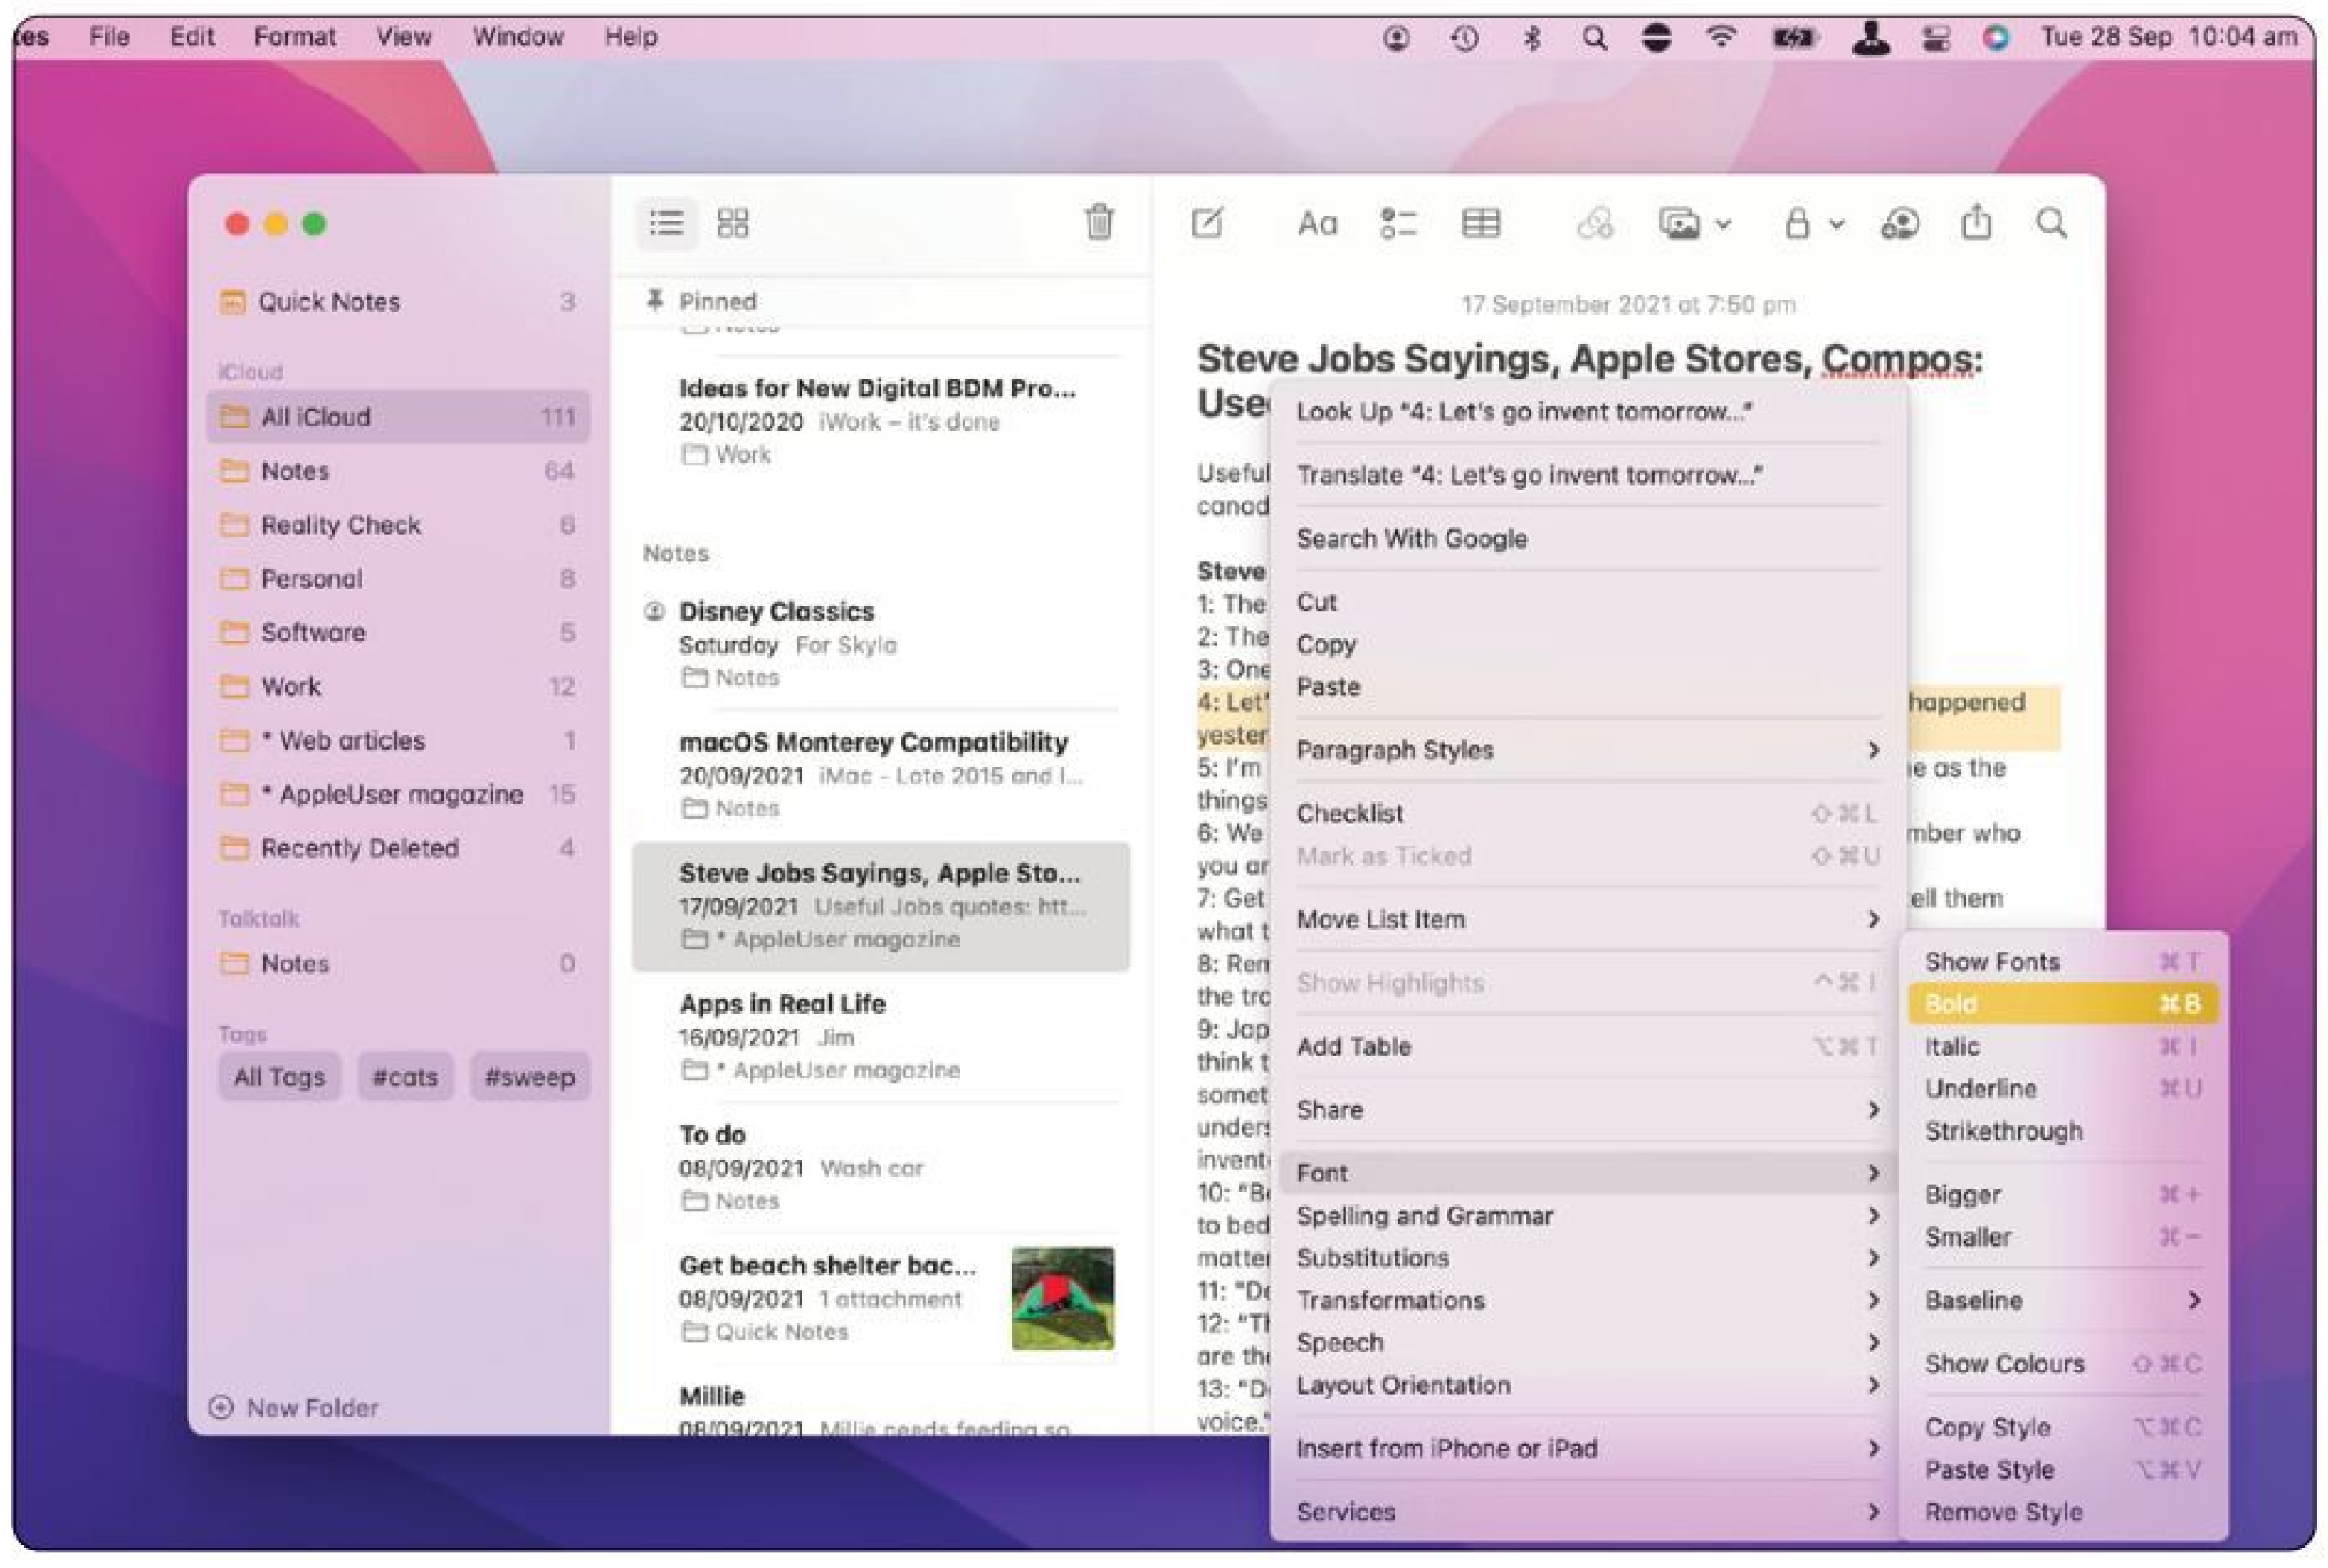
10 When watching a show, move the mouse pointer for controls. These include pause/play, skip forward or backward, close the viewing window, add subtitles, and watch the show in a small window that floats on top of the desktop.

Notes
Store Your Jottings

The Notes app is a remarkably powerful, yet simple, virtual notepad. With it you can jot down your thoughts and ideas or create complex notes that are easily edited and fully searchable; and you can also sync your notes to your iCloud account. There's more to Notes than first meets the eye.

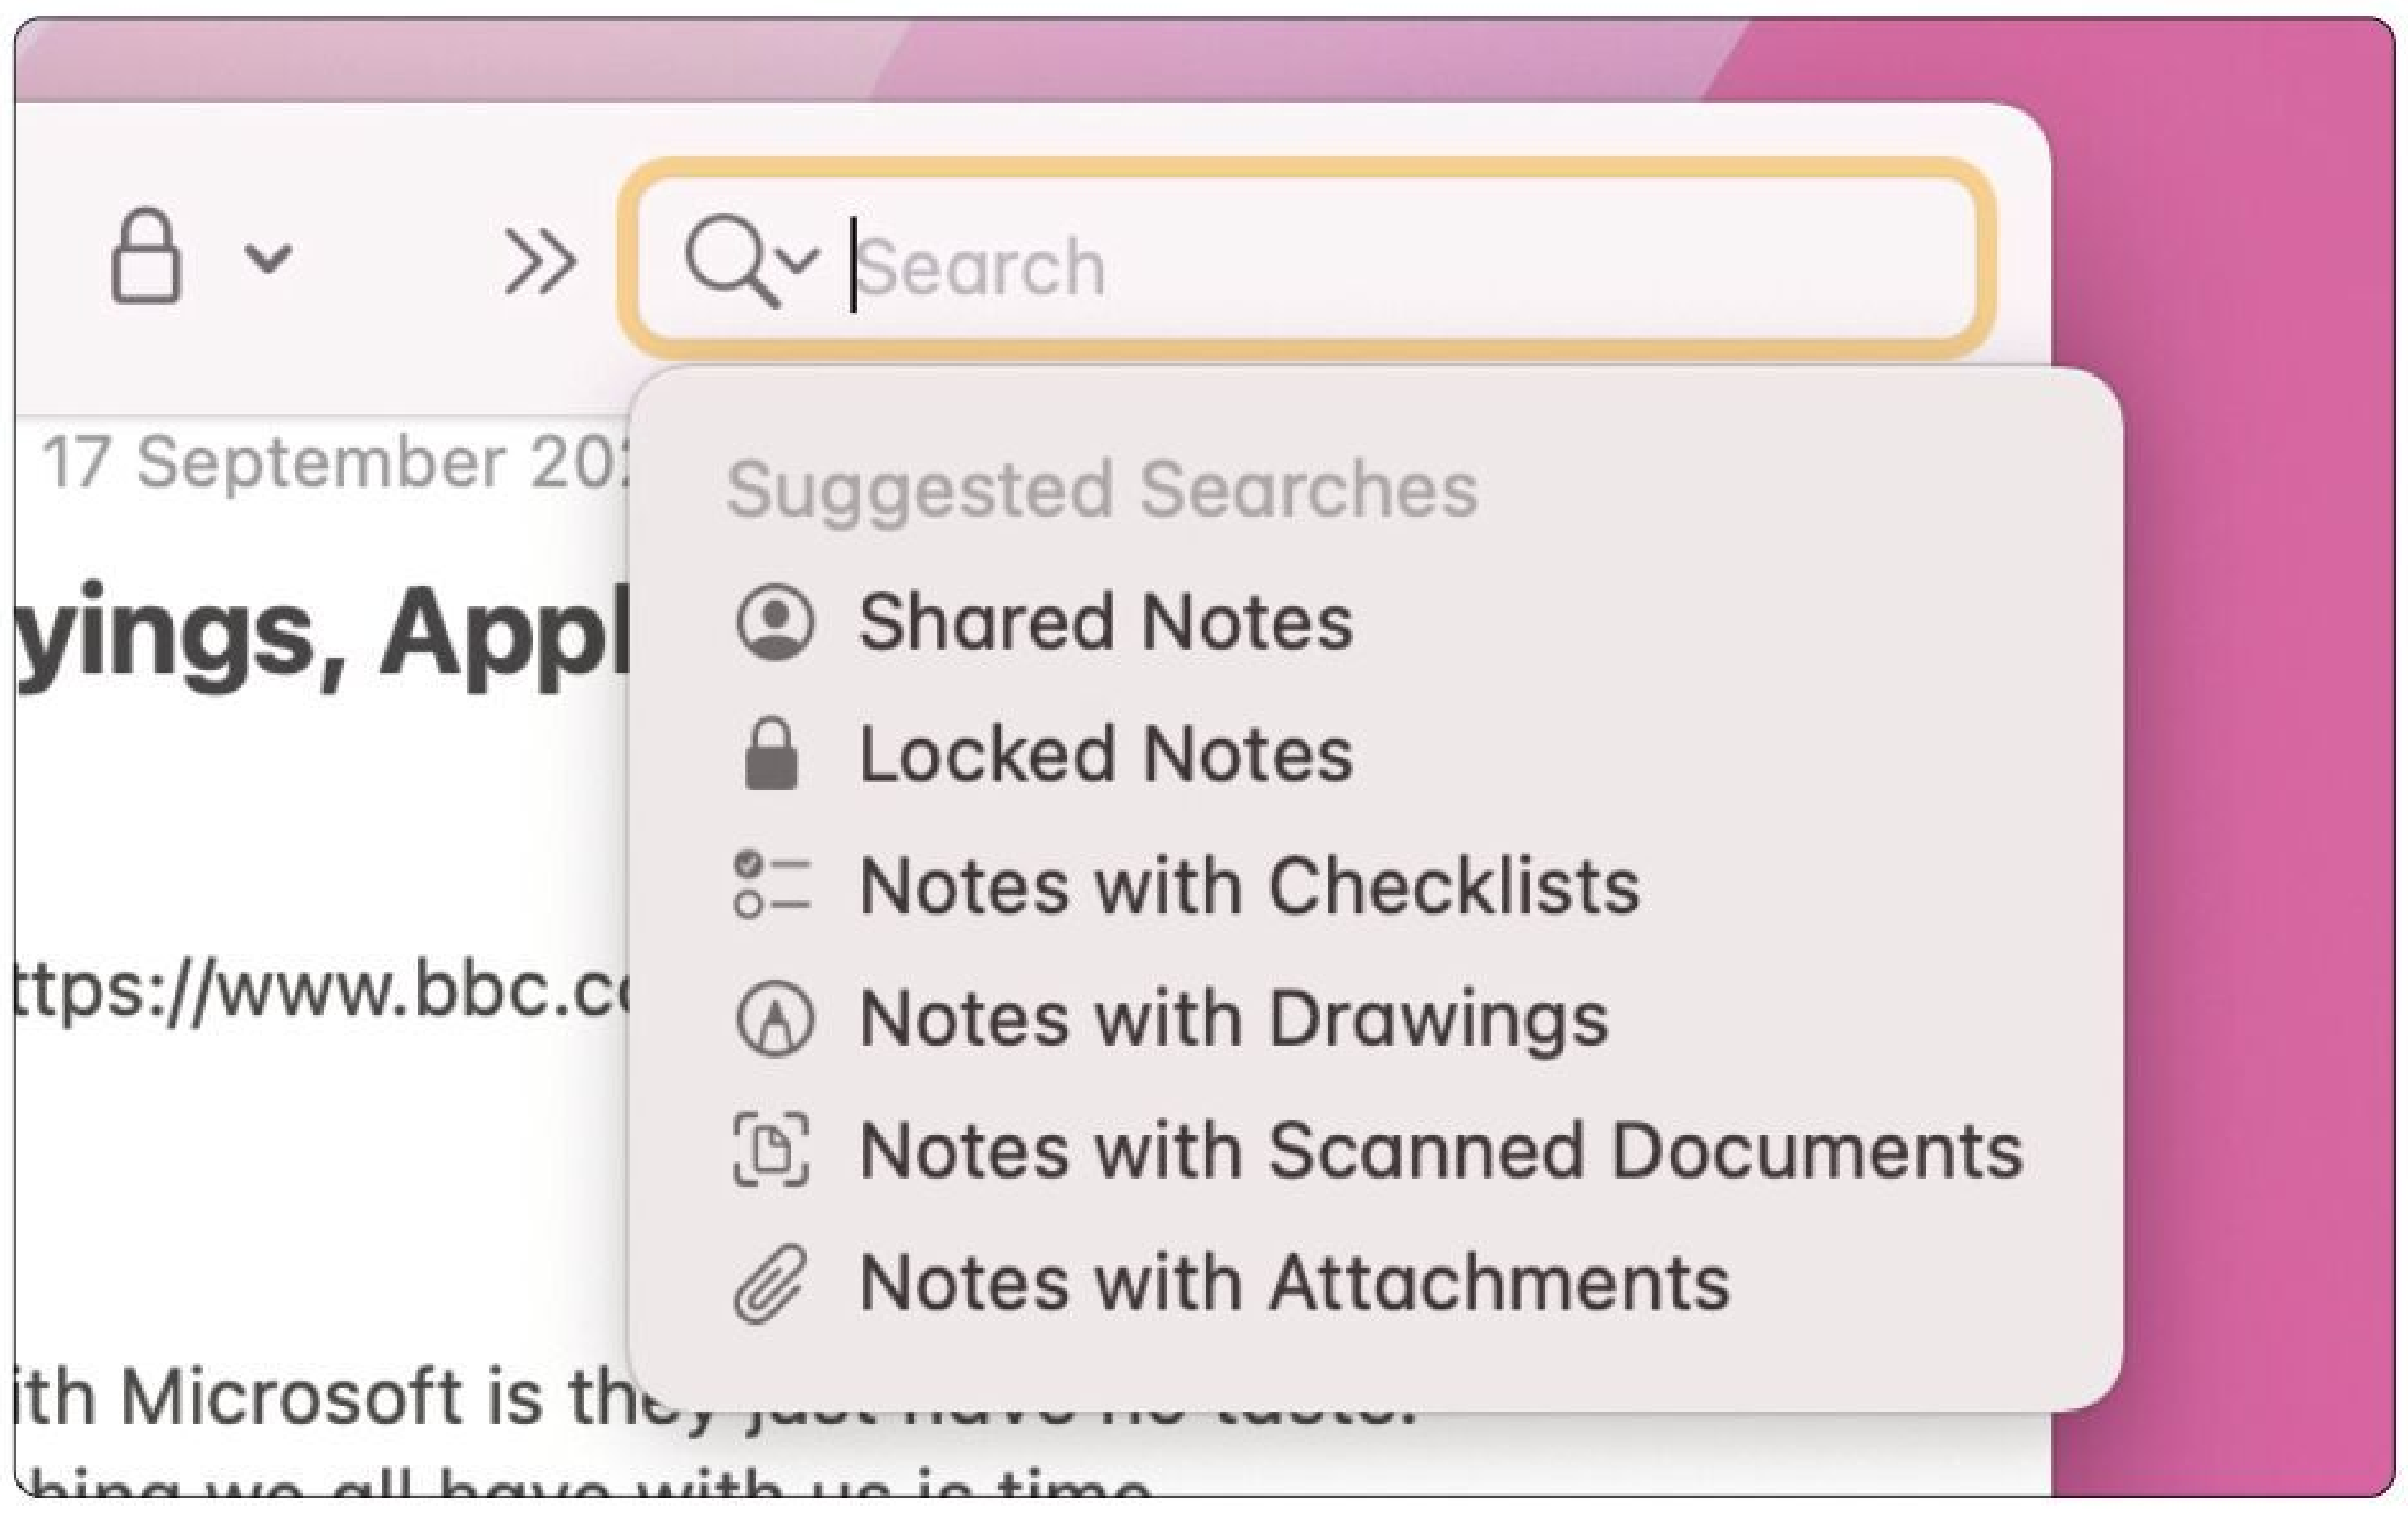
Creating, Editing and Searching Notes

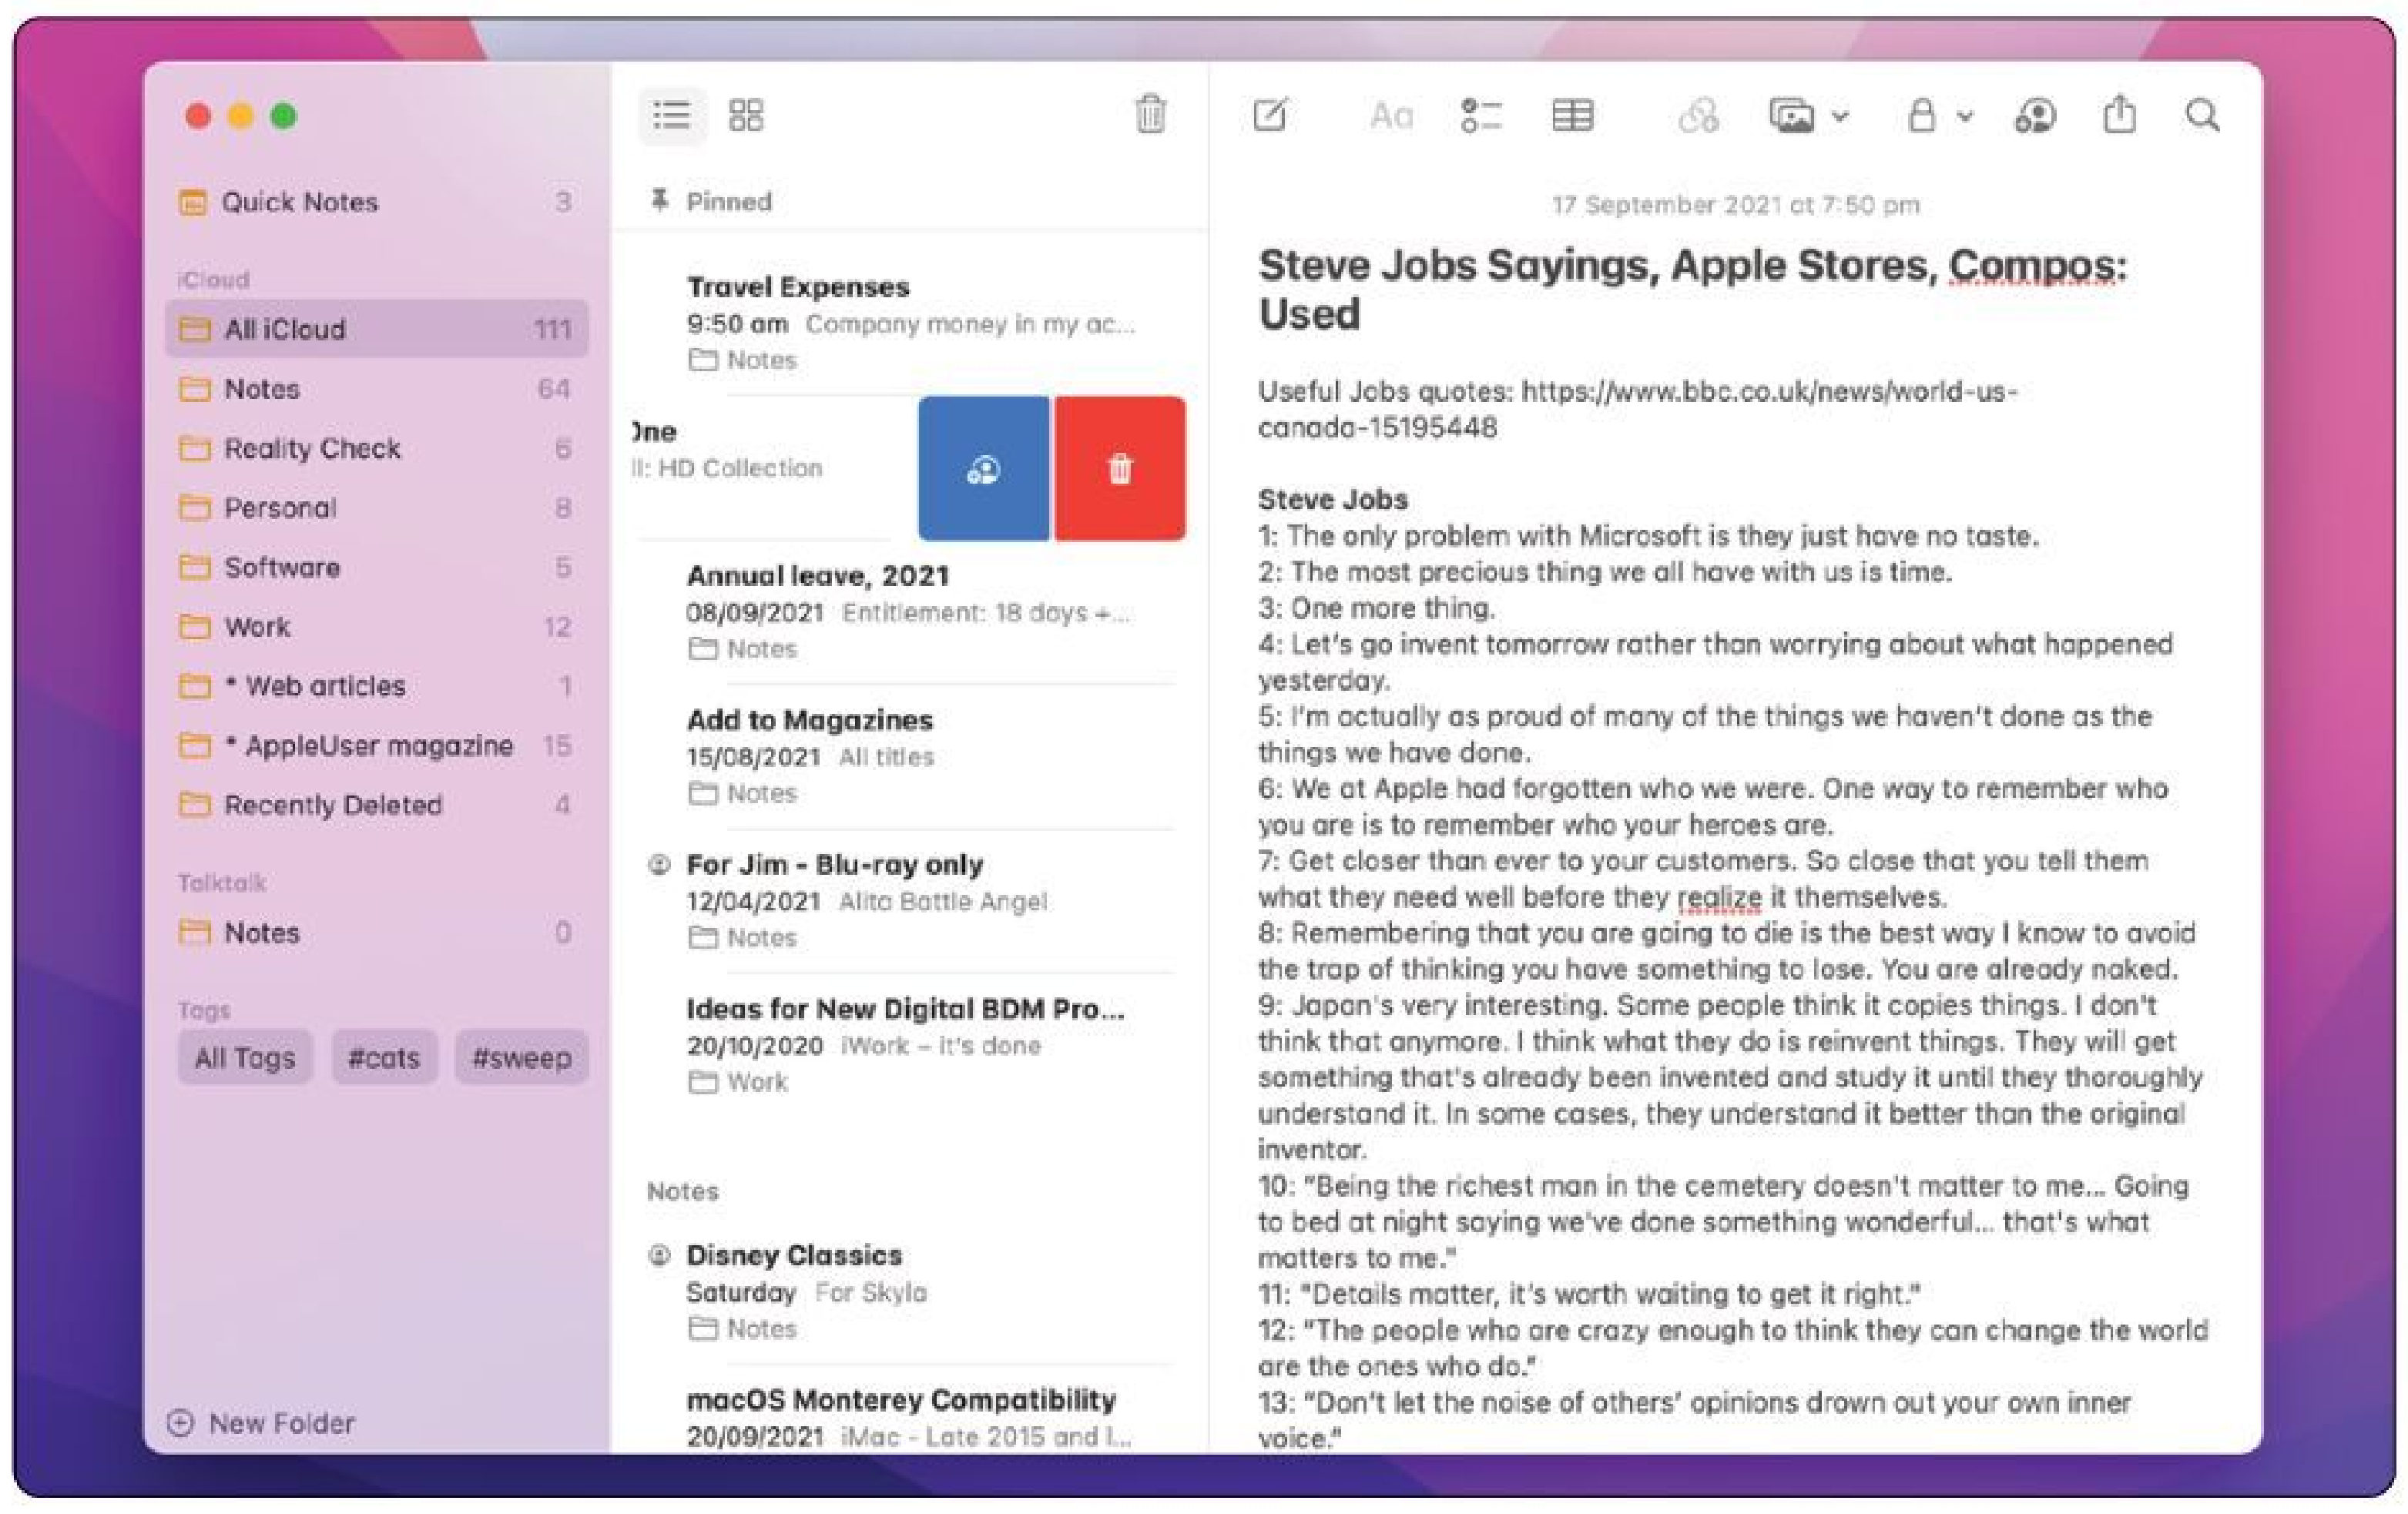




1 To create a new note, first of all, click on the pen-and-paper symbol found in the toolbar at the top of the Notes window. A new blank note appears. Start typing your note. The first line of a new note is used as its title in the notes list, so bear this in mind.

2 Your notes are listed in the left-hand pane. Click on a note to open it. To change the font or use bold, underline or italicise, select the text and right-click or ctrl-click for a menu; these options are found under Font. To attach an image, simply drag it onto the note or copy and paste it.





3 To search notes, use the search icon (the magnifying glass) in the top right. Searches cover all your notes, not just the titles. Searches are very powerful and can recognise objects and scenes in attached images. When you click on the search field, you get a window that helps you focus your search.

4 To delete a note, open it and use the Delete option in the Edit menu, the dustbin button in the toolbar or swipe it left and click the dustbin. Deleted notes are kept in the Recently Deleted folder for 30 days. To email a note or share it in Messages, click on the Share button.

Safari
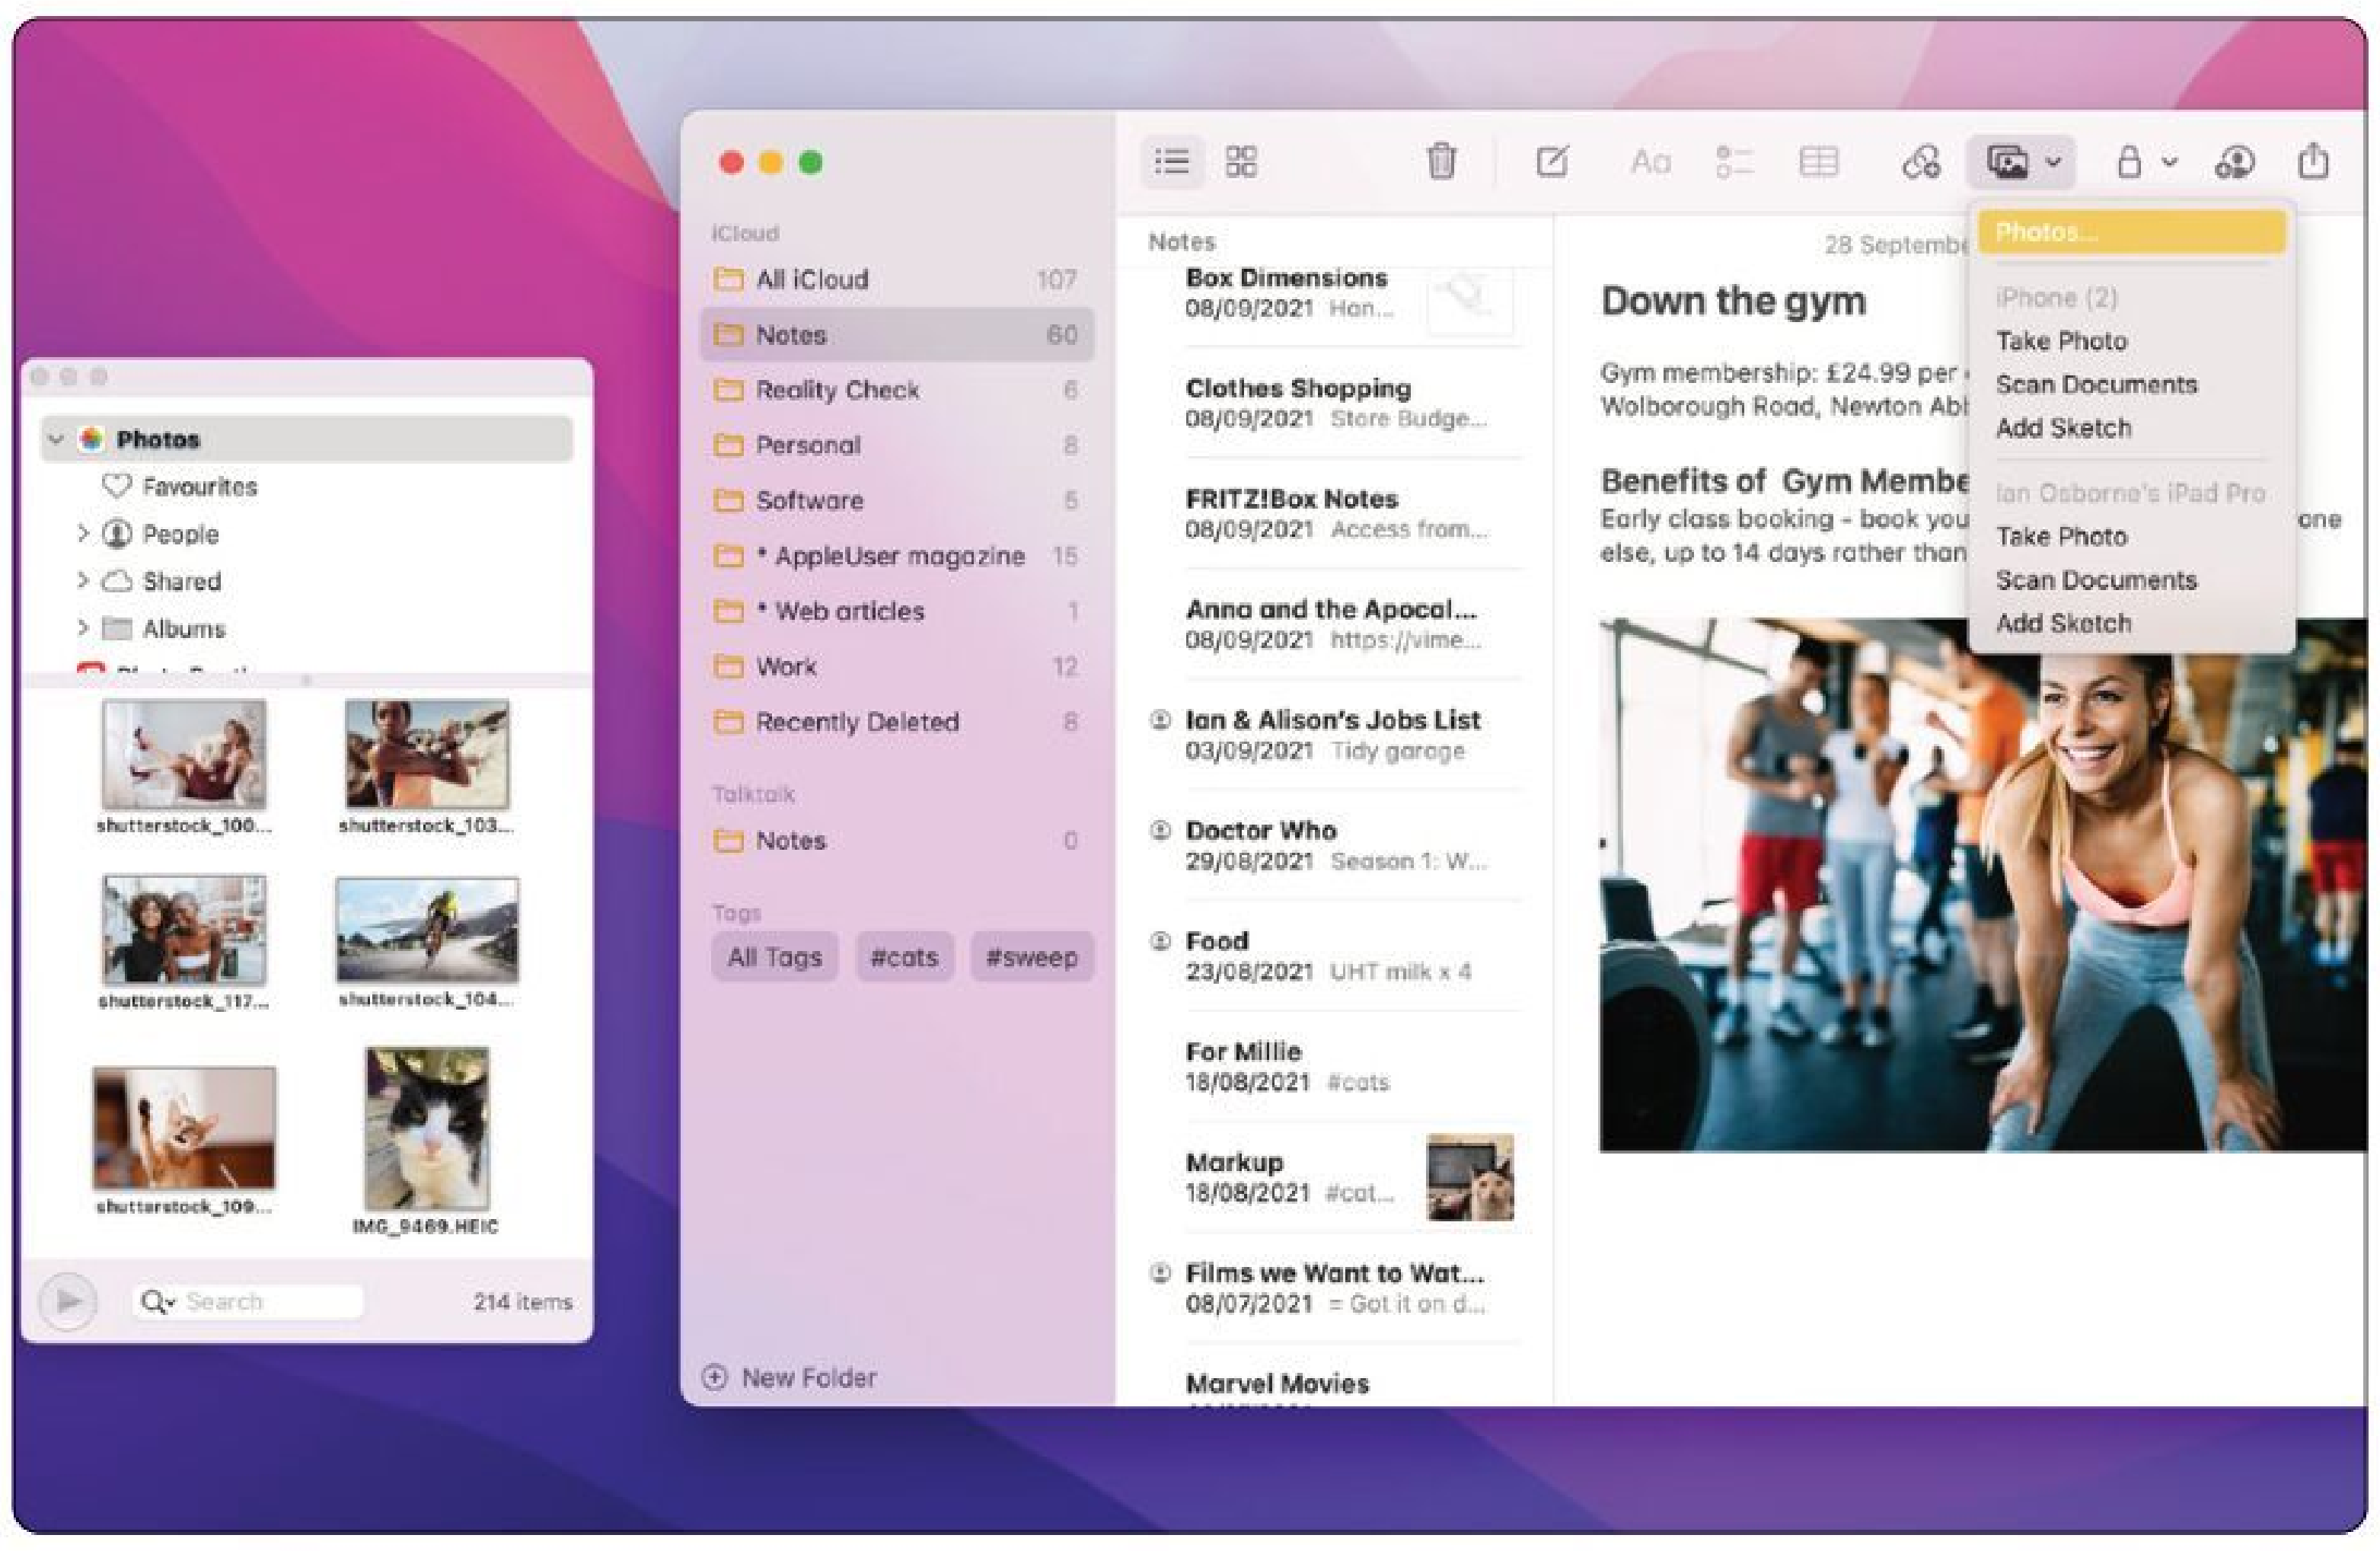
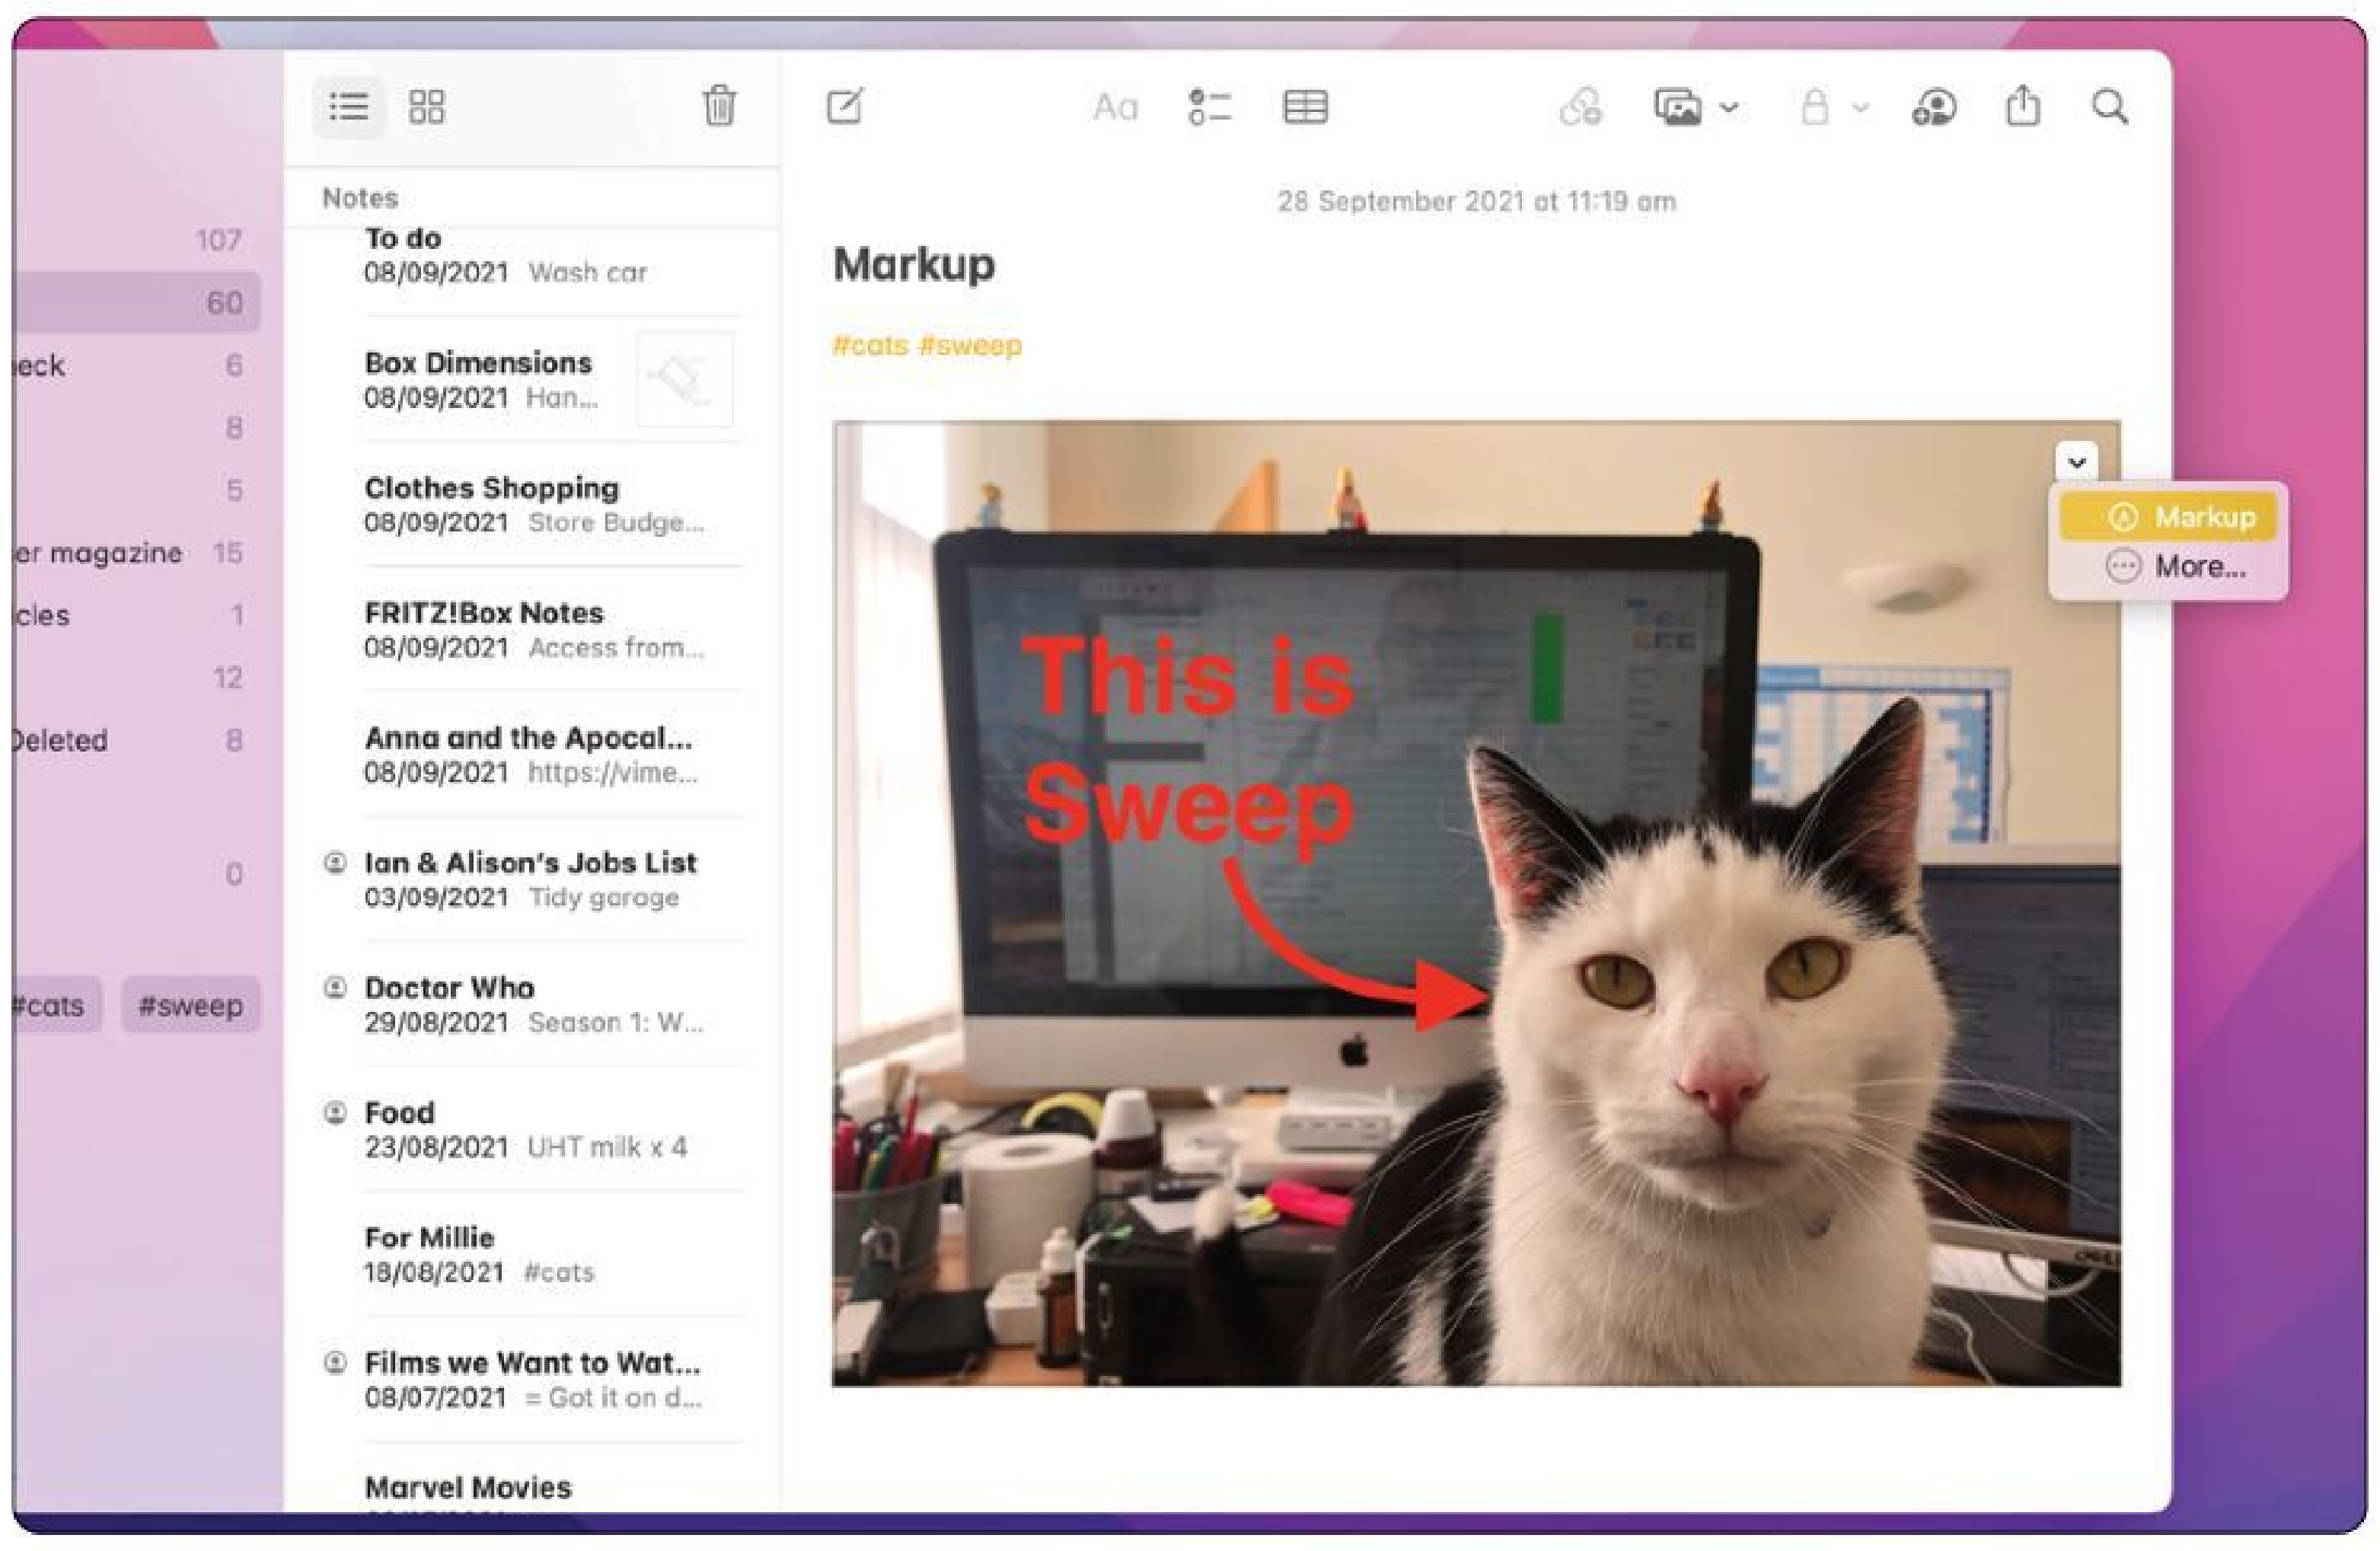
Add Link

4 If you have a Safari window open, you can paste a link into a note using the Add Link icon. Click it, and you’re invited to add a link to your note, which appears as an attractive preview instead of a regular underlined URL.



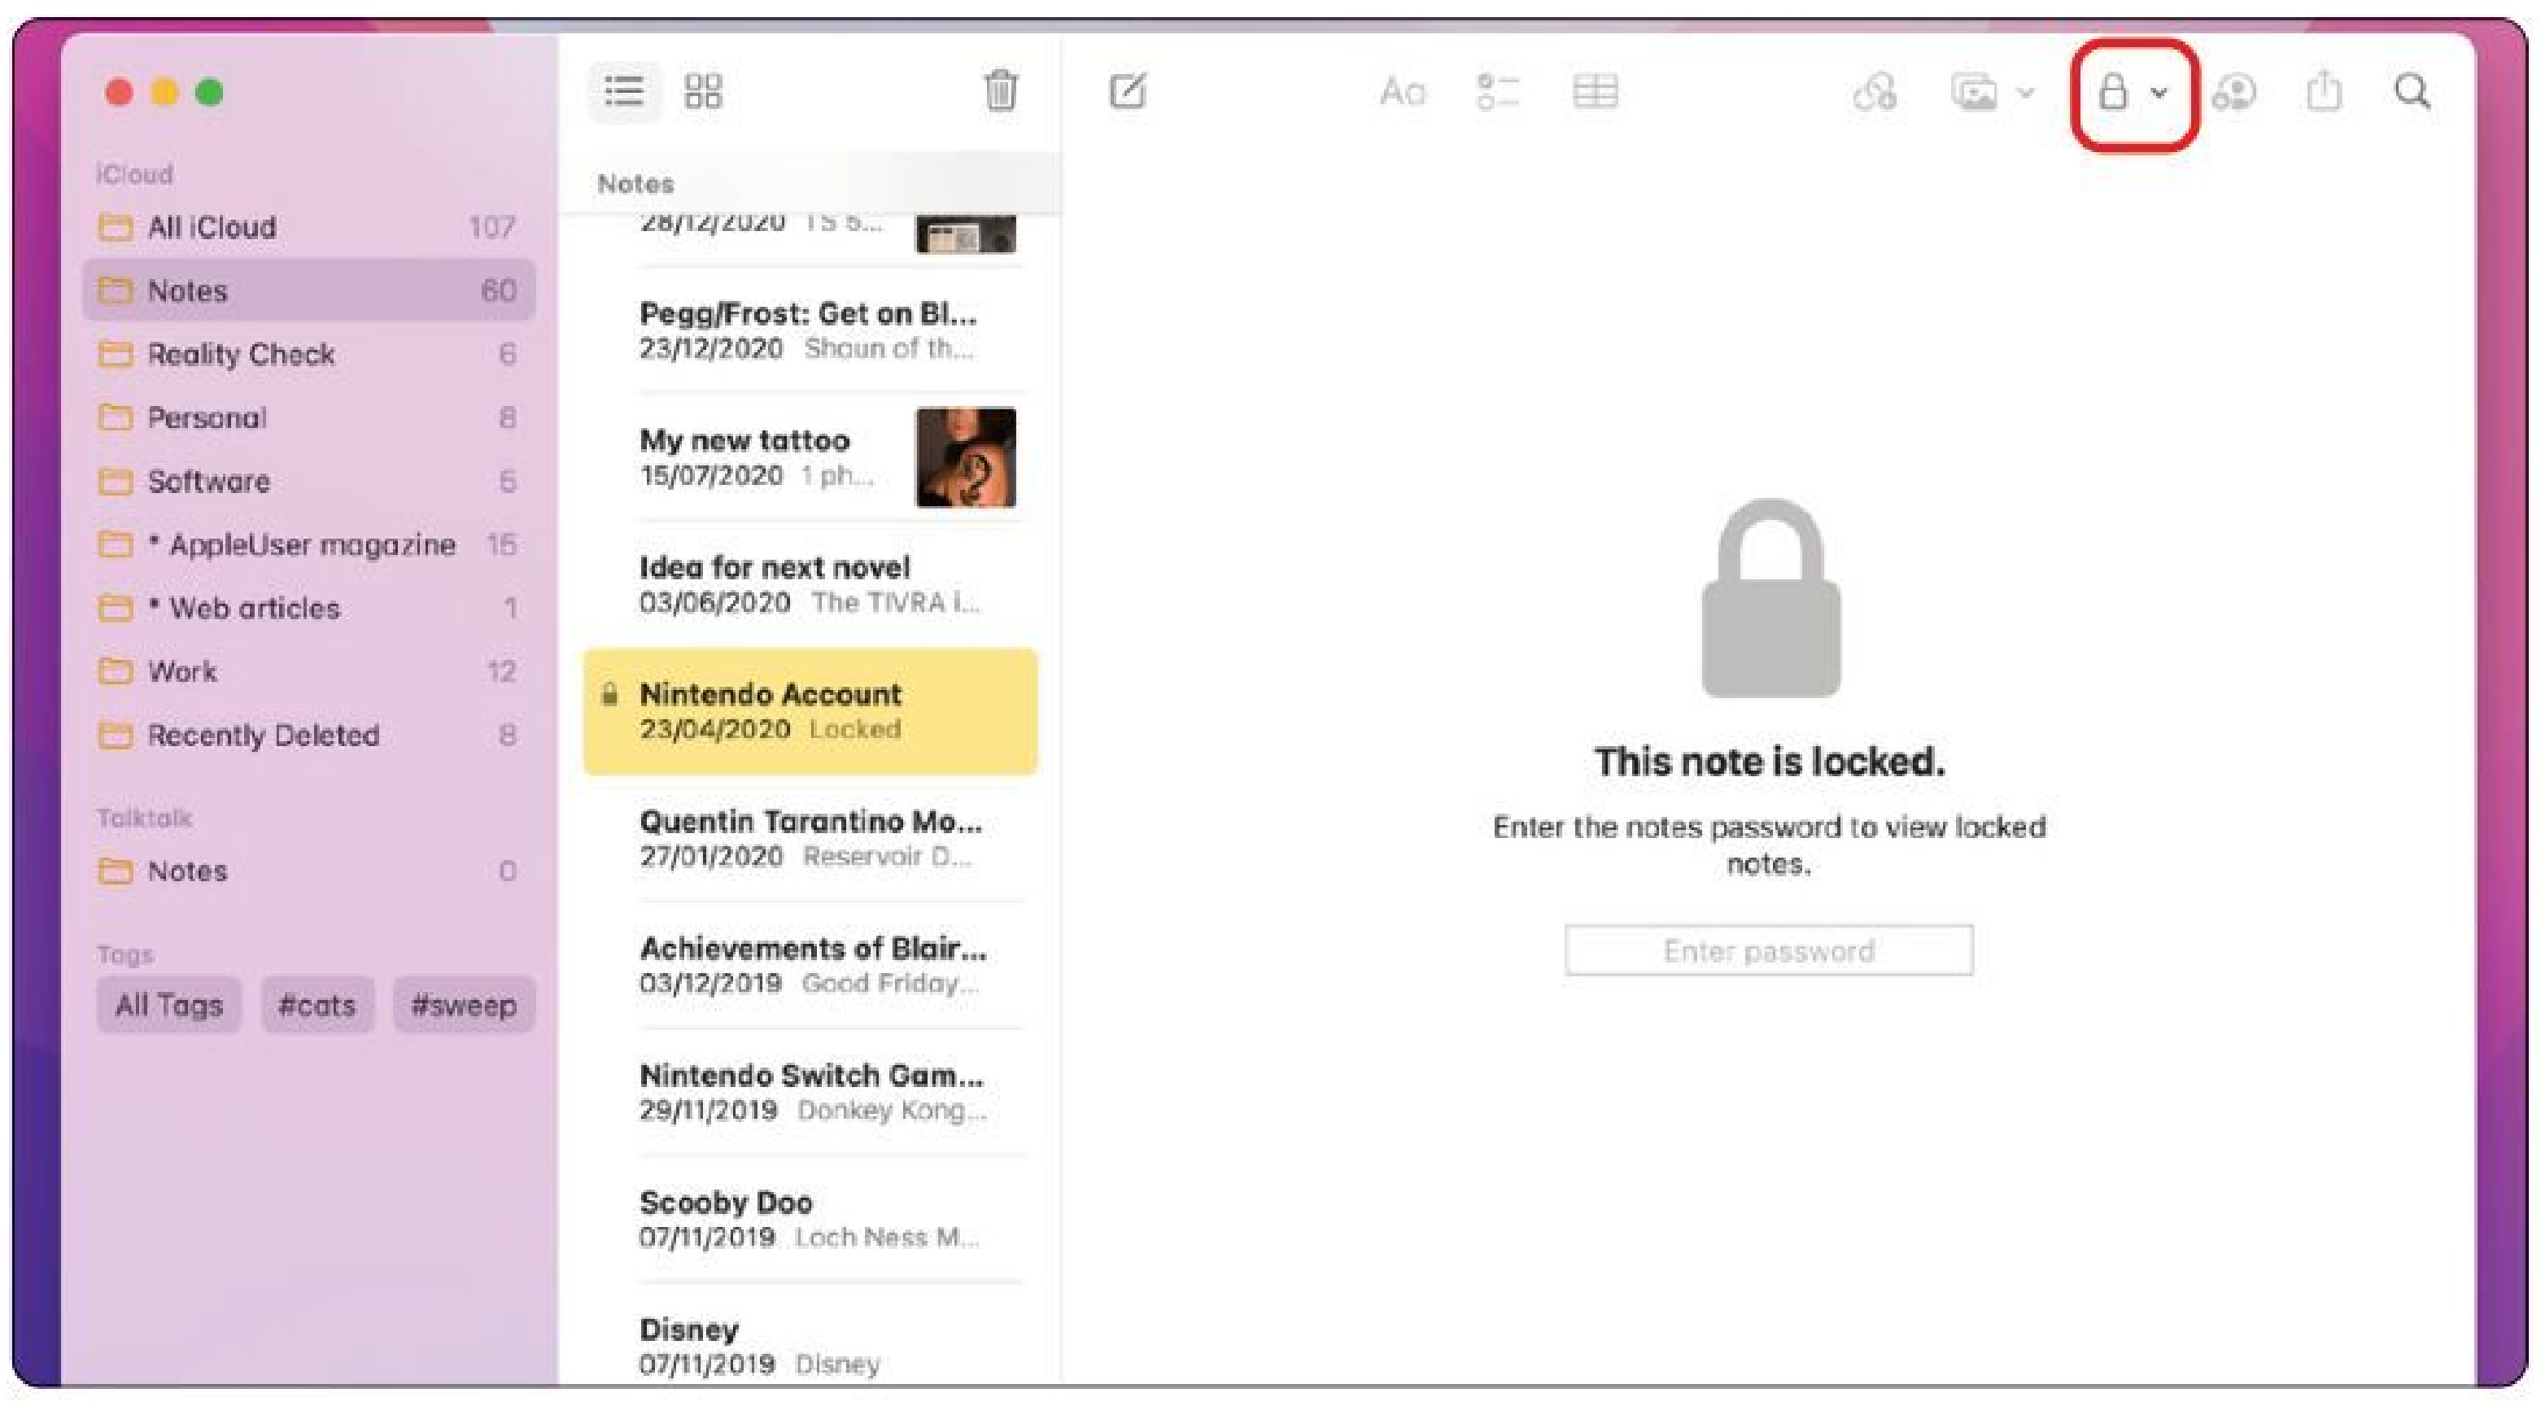
Photos...
Take Photo
Scan Documents
Add Sketch

5 You can drag pictures onto your Notes from anywhere. There’s also a Photo Browser for using pics from your Photos app. Choose Photos from the Photos icon in the toolbar and drag photos from the browser into your notes.



Markup
#cats #sweep
This is Sweep
Markup
More...

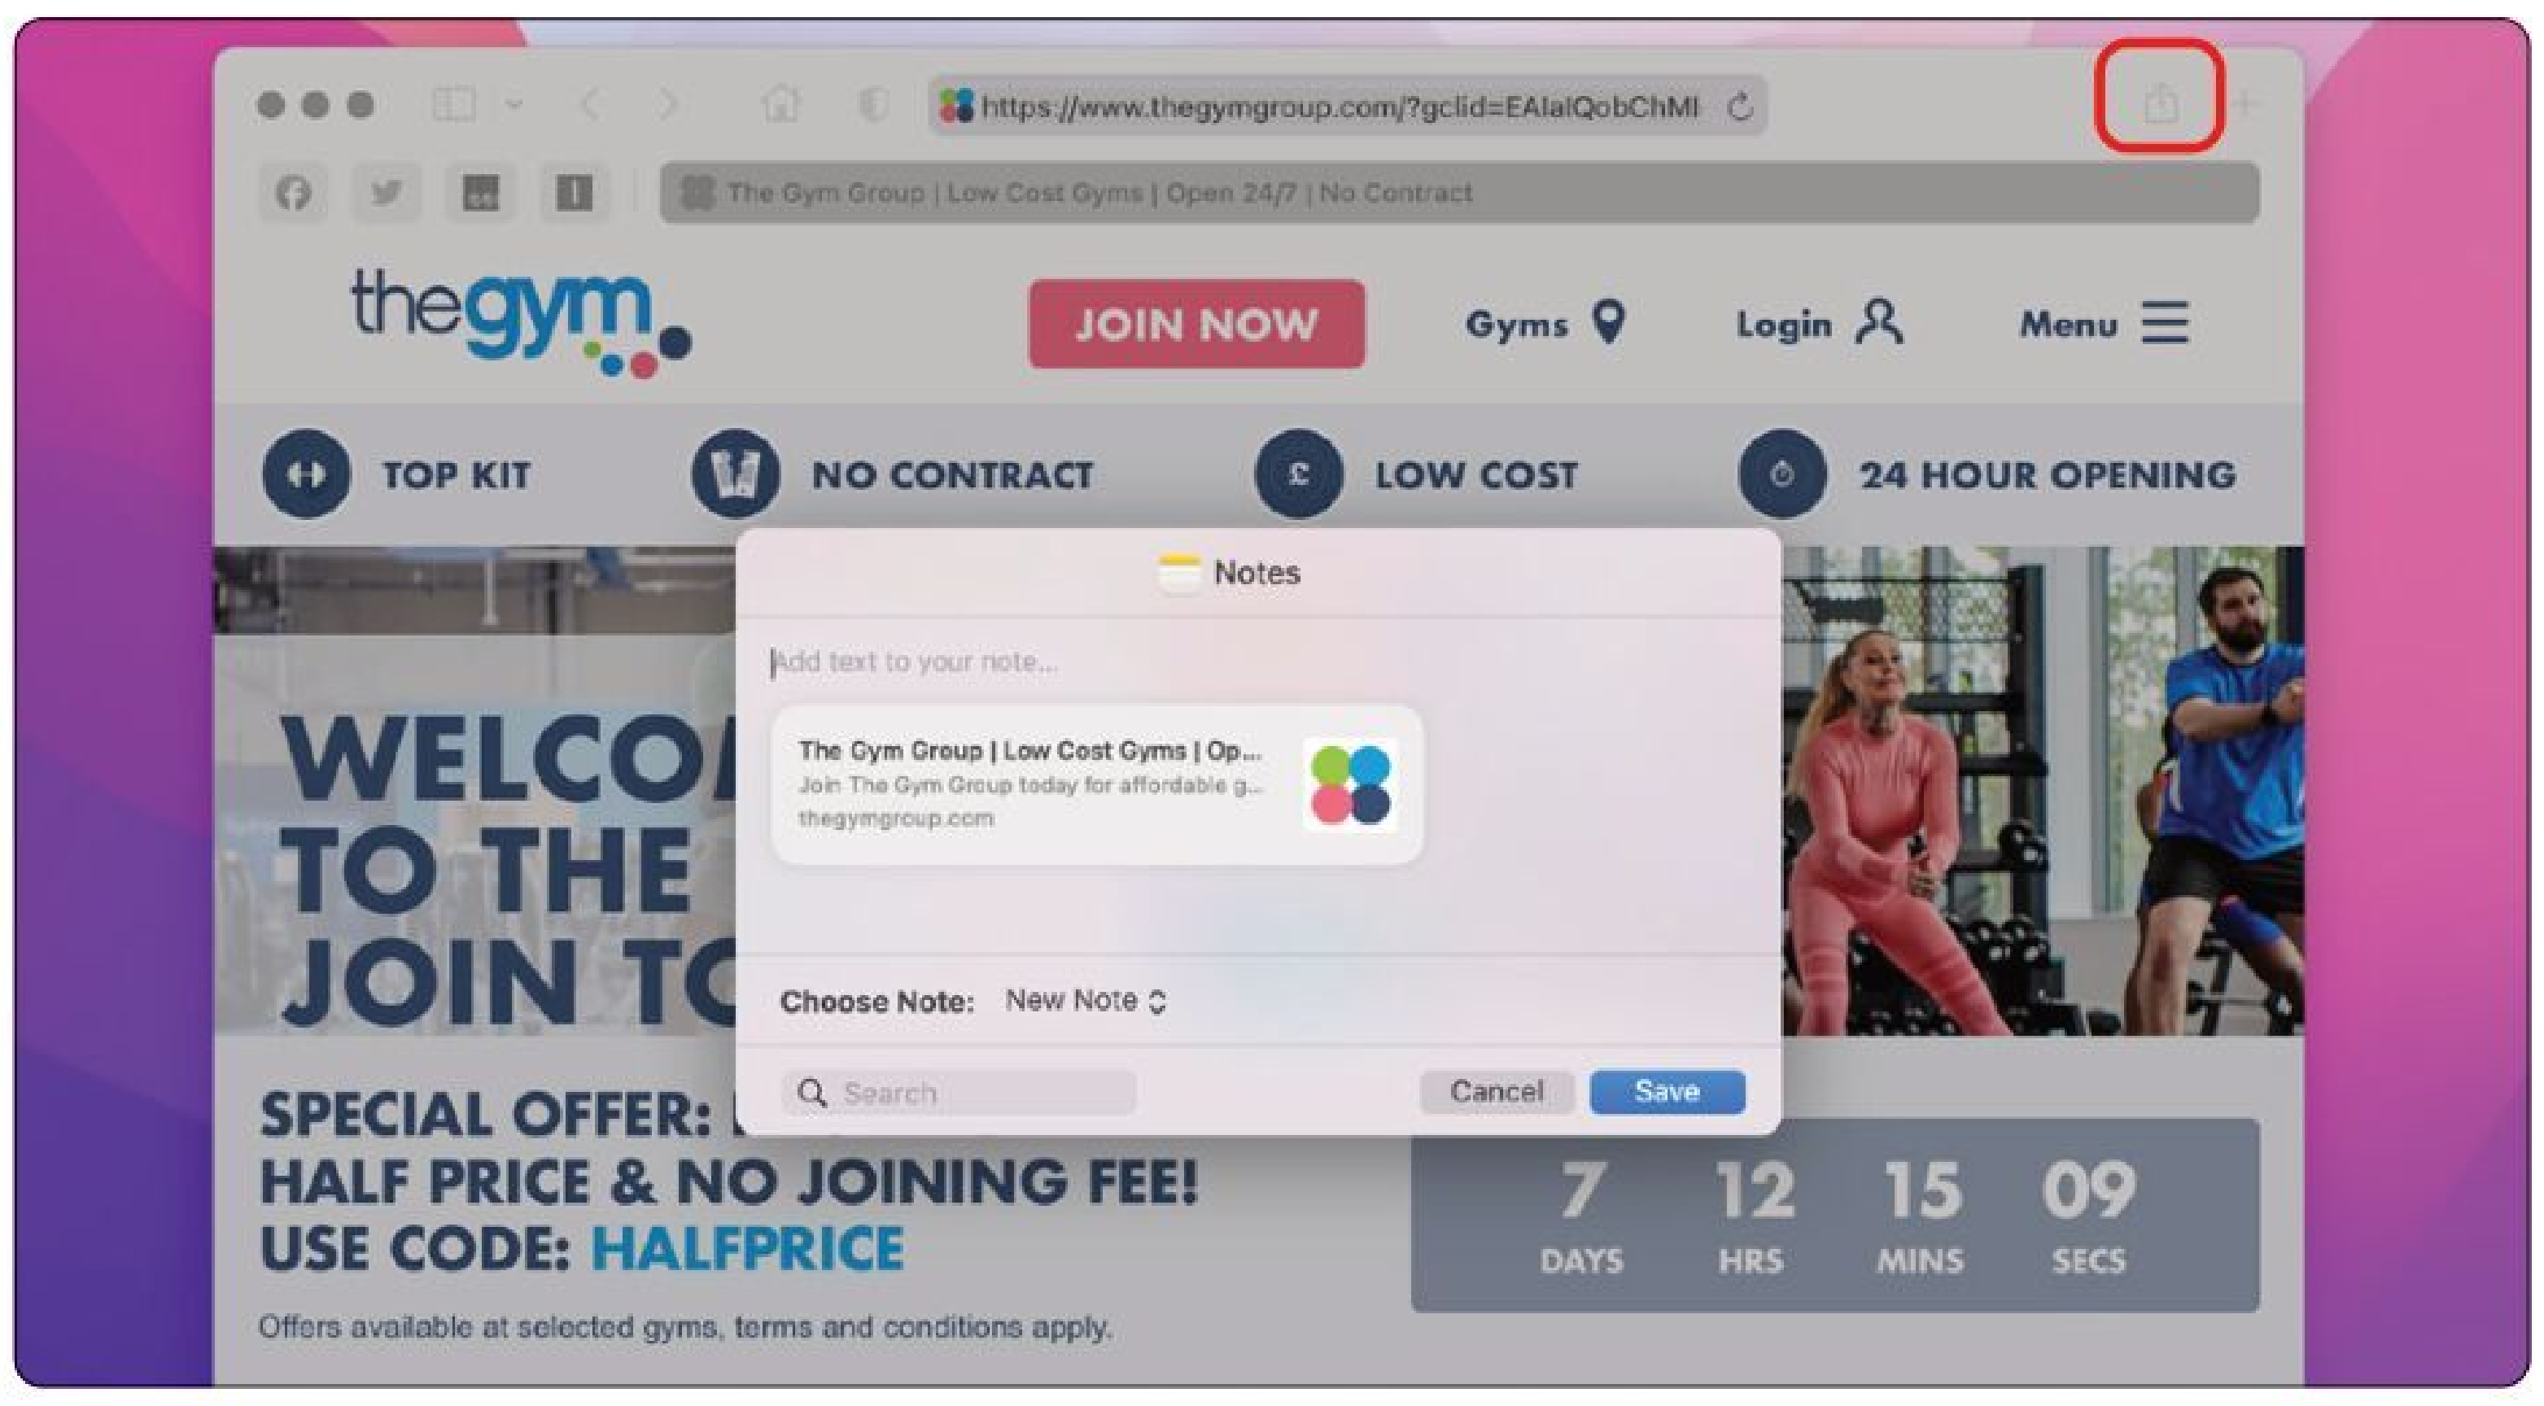
6 Click on a photo in a note and then click on the button that appears in the top-right corner for the Markup feature. This lets you scribble on and add text to the picture, using the Markup drawing tools, just like those in the Mail app.



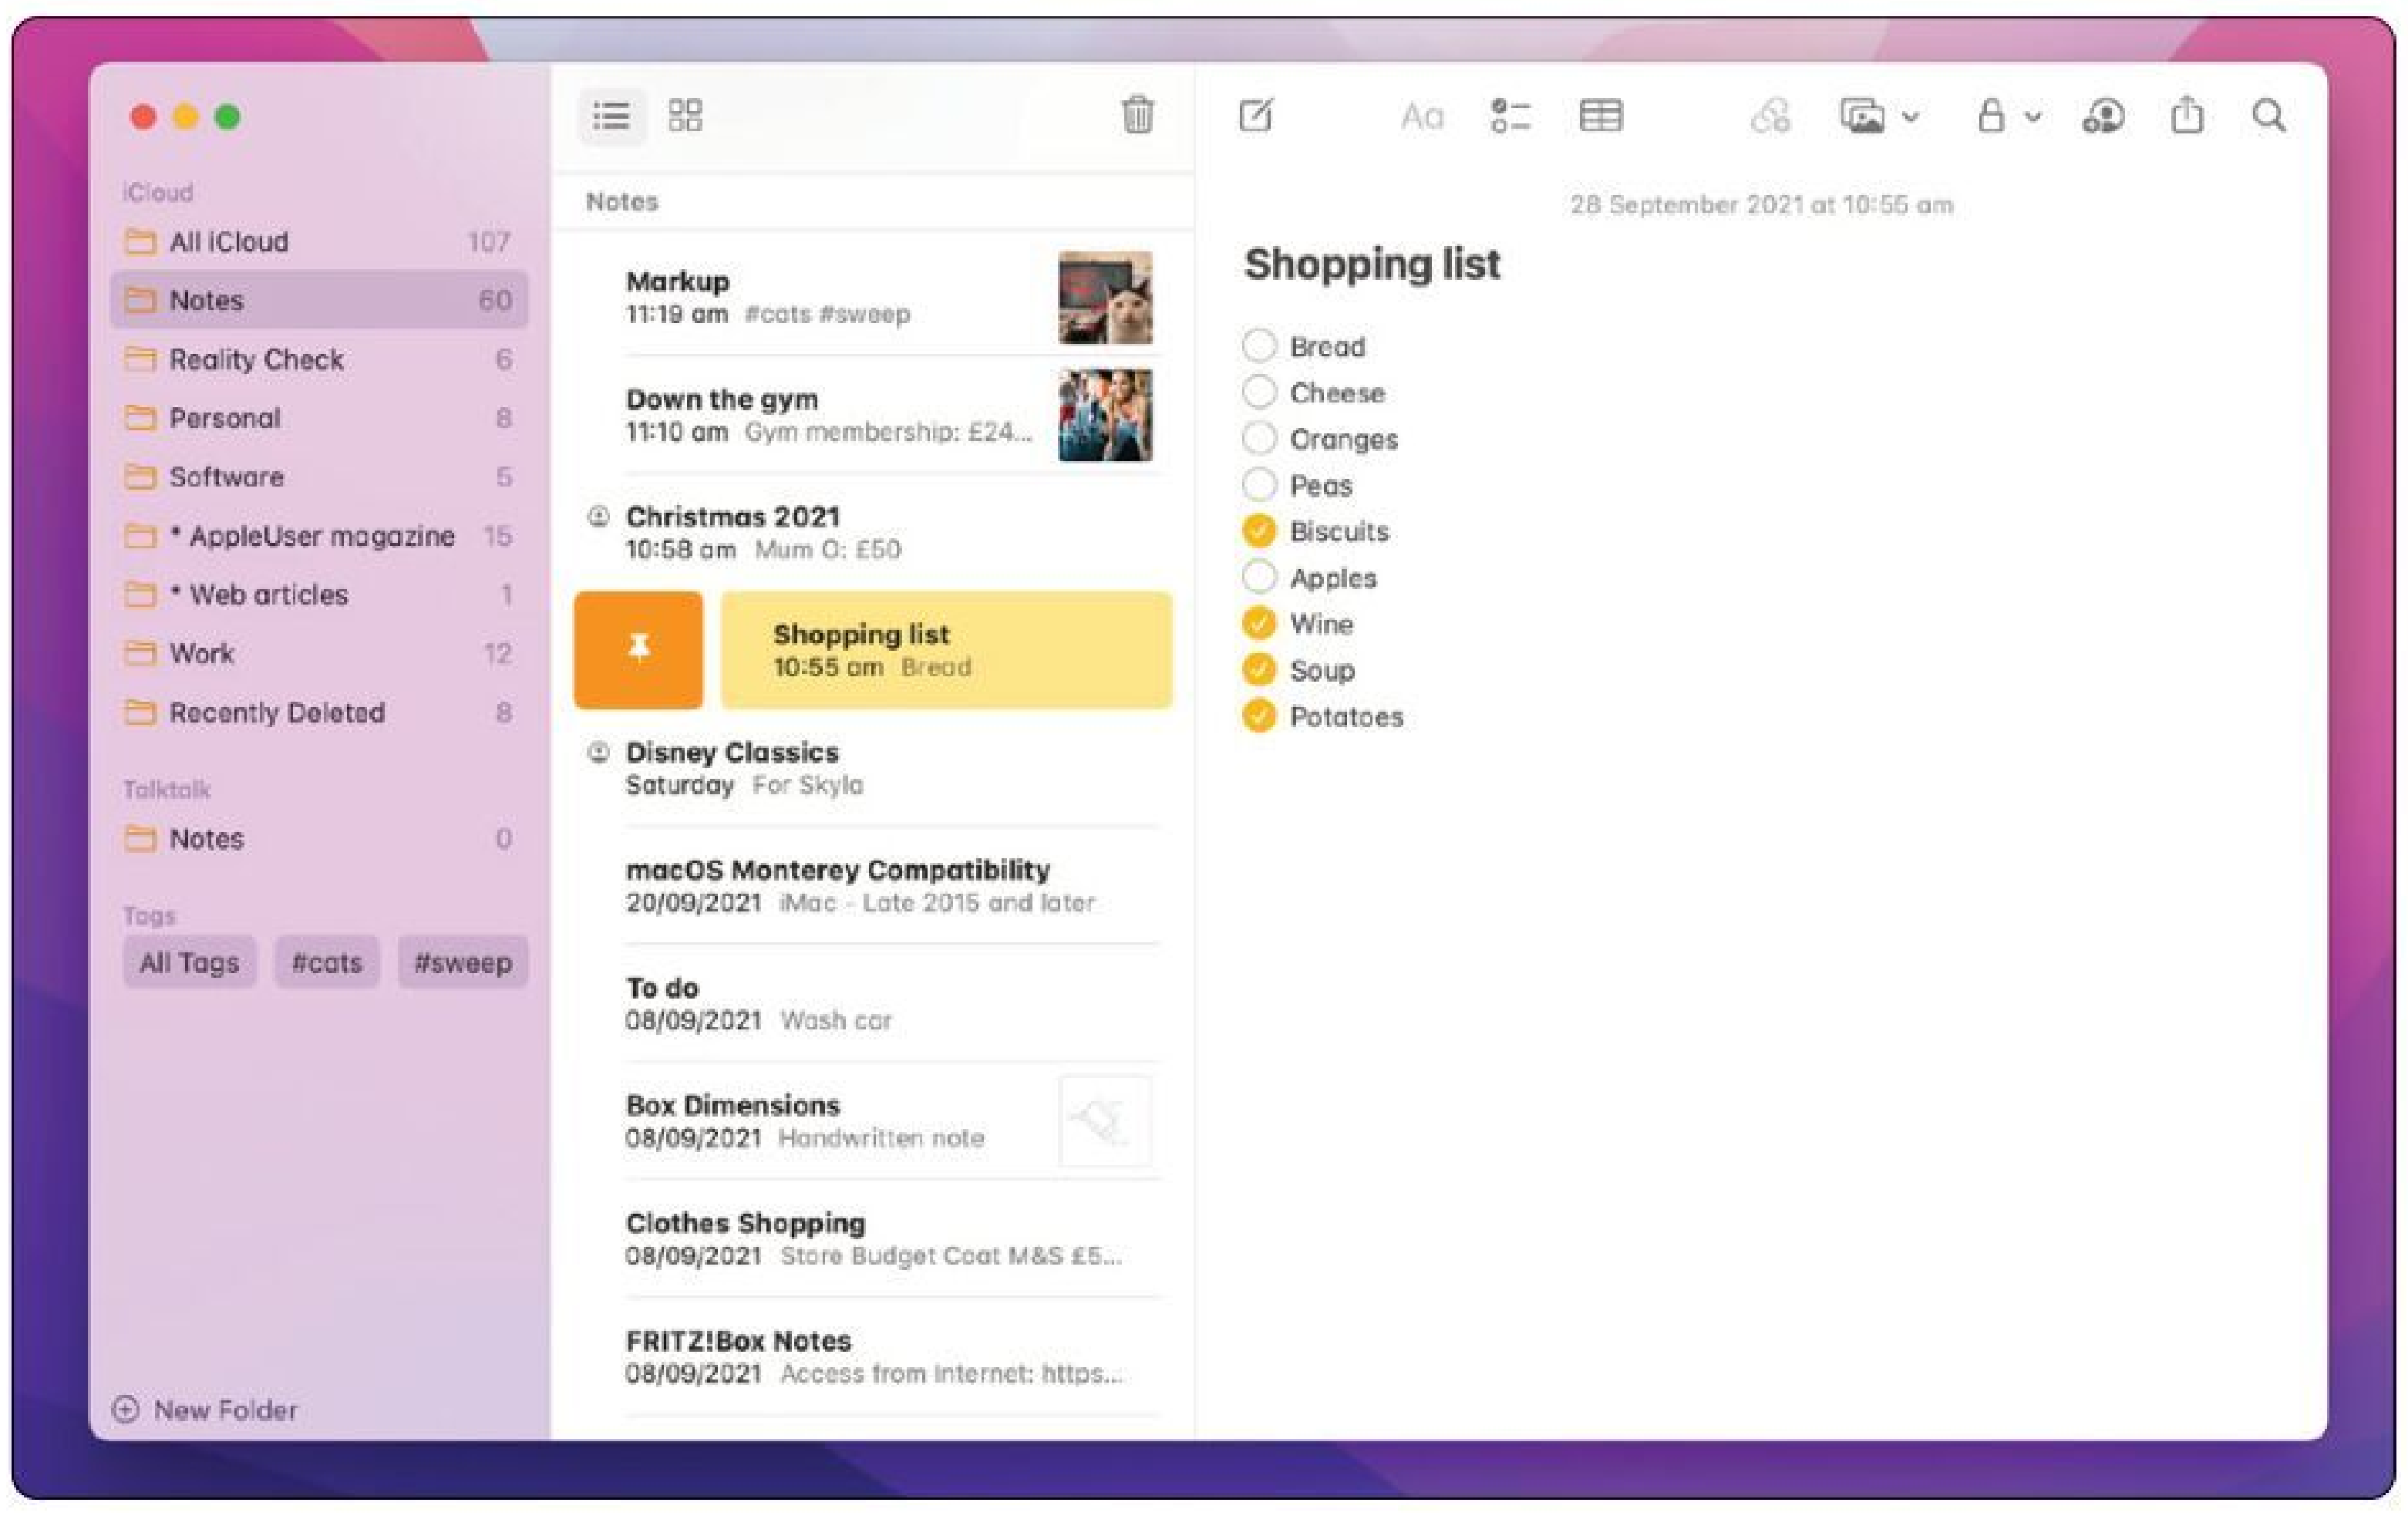
This note is locked.

Enter the notes password to view locked notes.

7 To password-protect a note, click the lock icon and select Lock Note. You can then set a password for the Notes app. Then you can only open locked notes with that password. Also use the lock icon to open and close all locked notes, and remove a lock.



8 The Share icon lets you send a note to someone else using Mail, Messages or AirDrop; or add it to a reminder. You can make a note with an attachment from another app using the Share icon in the app in question; just select Notes. Here we did it with a website.



9 You can pin a note, so it always appears at the top of your list, regardless of how that list is sorted. To do this, swipe the note right and click the Pin icon. To unpin a note, repeat this step. You can pin as many notes this way as you like.

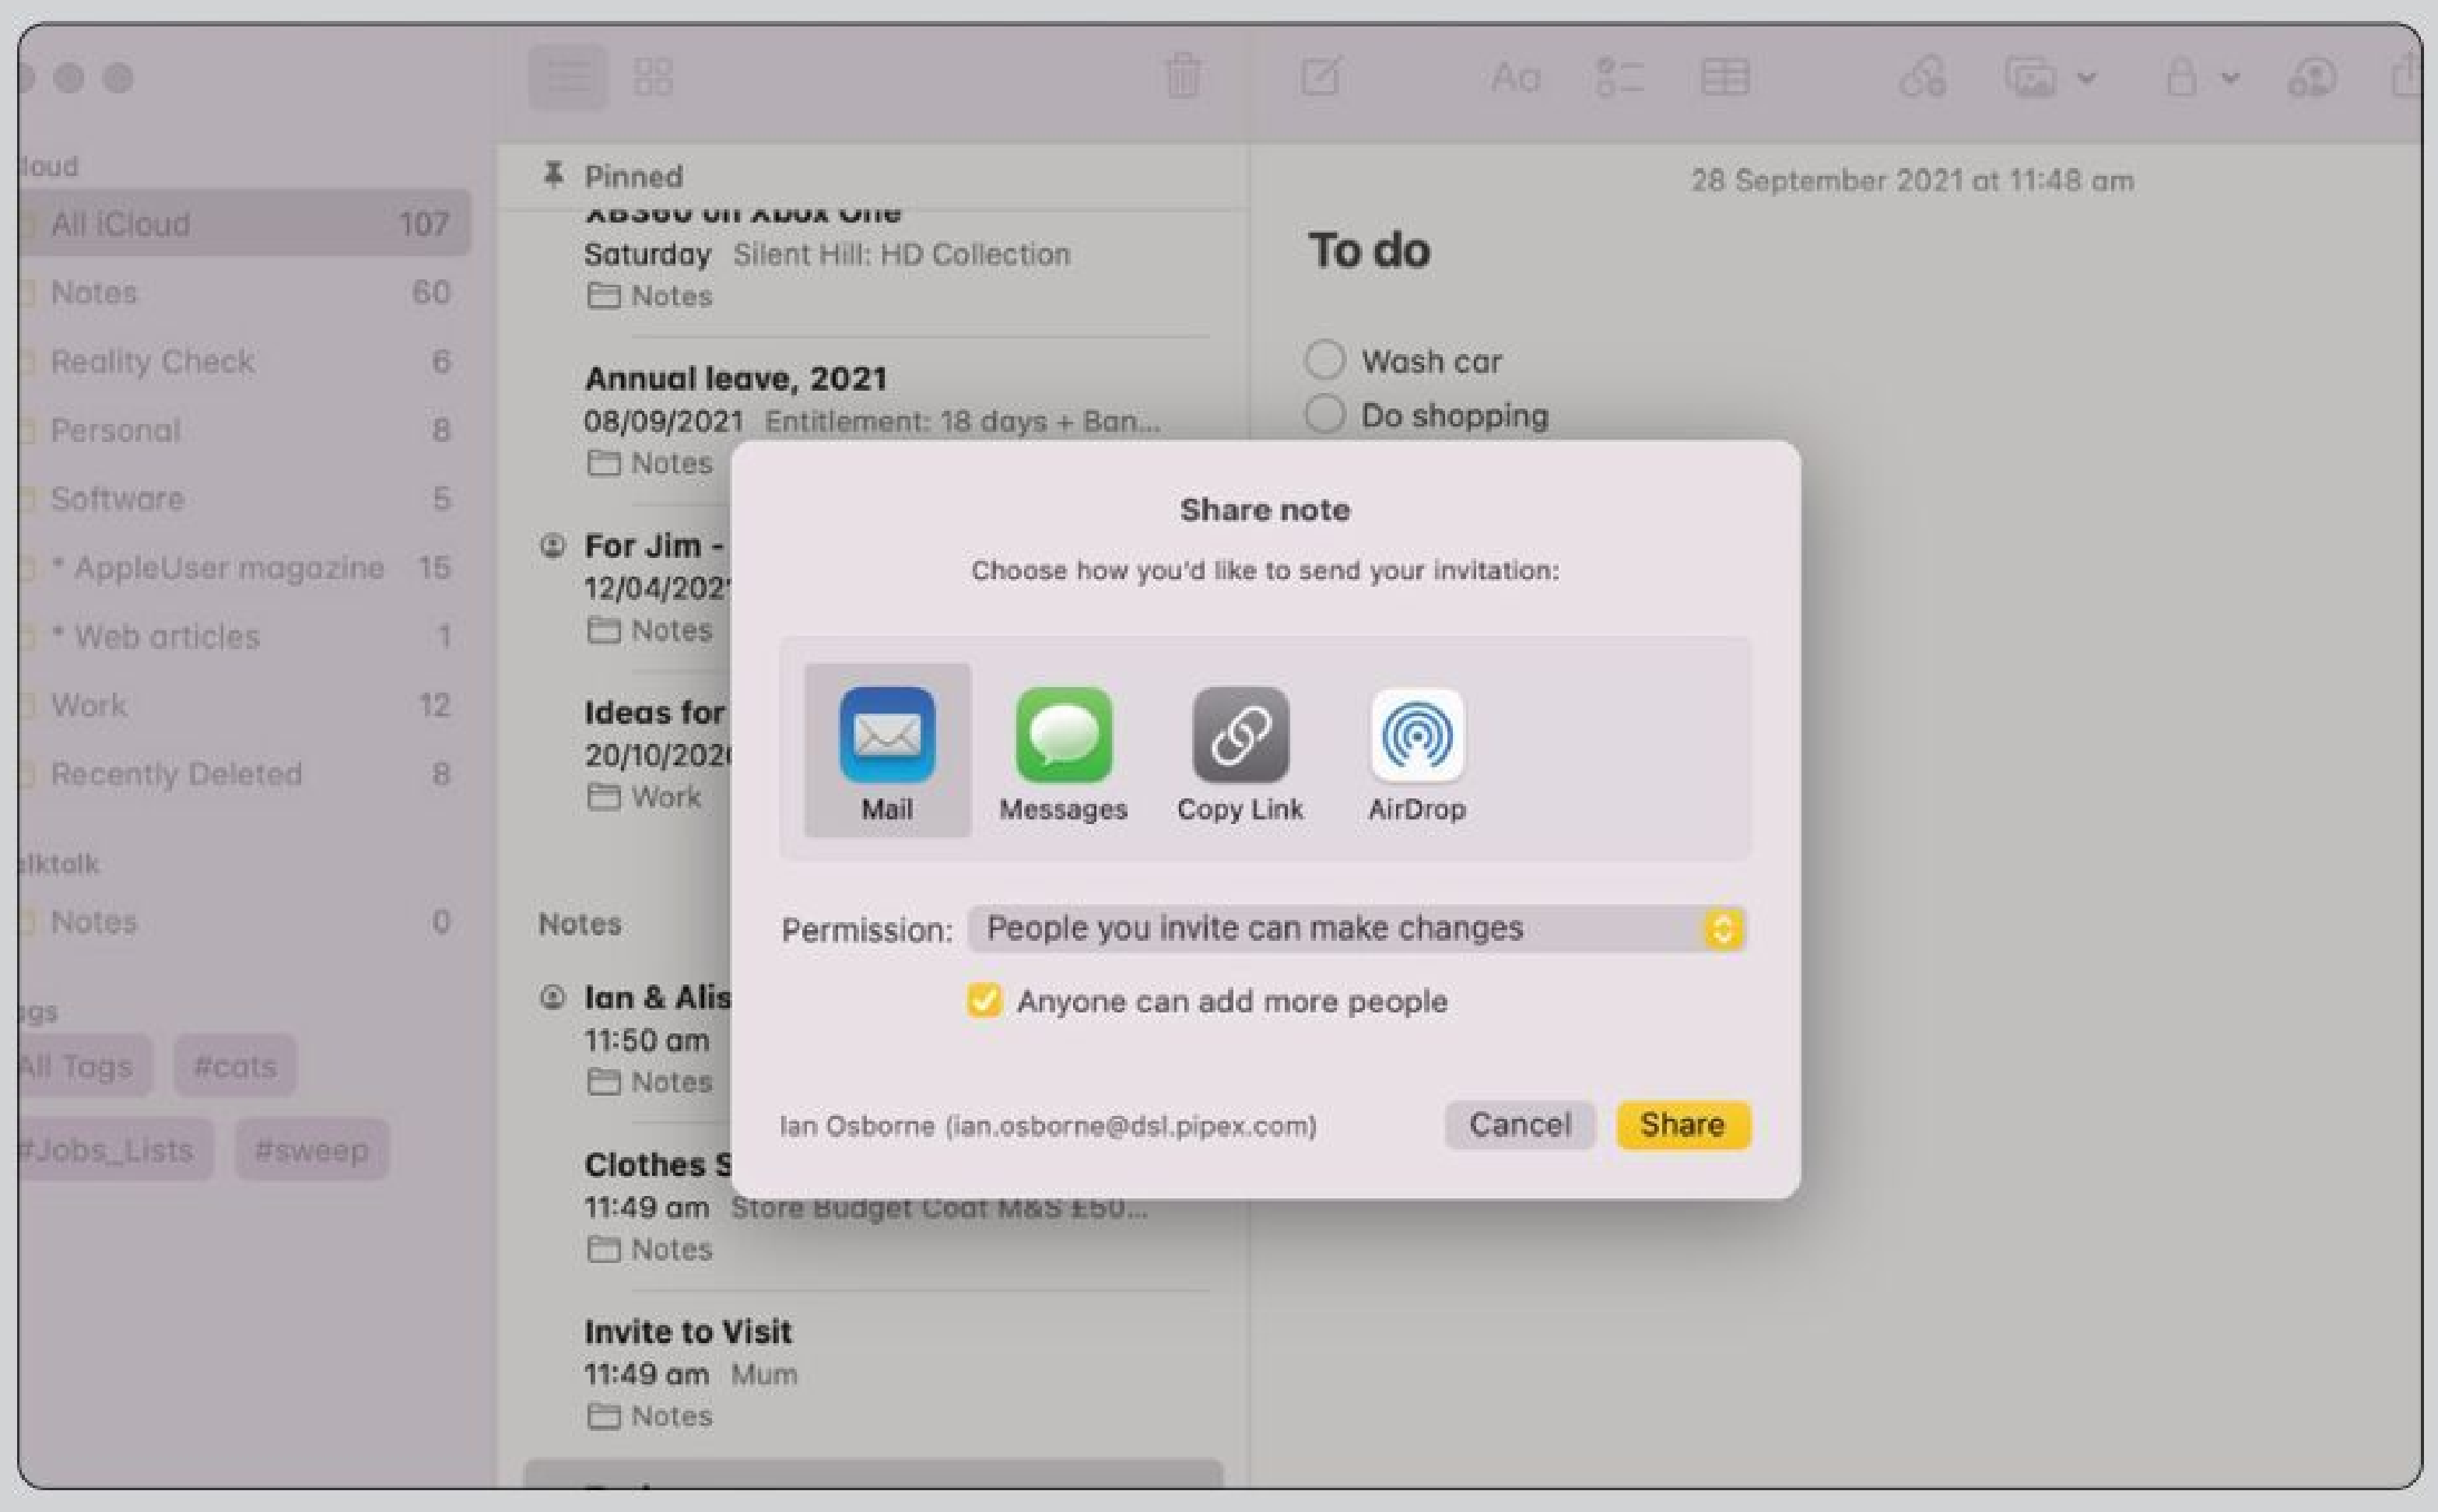
#Jobs_Lists

10 Type a word with a hash (#) at the front and it becomes a tag. Tags you've created are listed at the foot of the left-hand panel. Click on a tag to see all notes that share that tag. A note can have more than one tag if you wish.

Collaborative Notes and Folders.



Share note

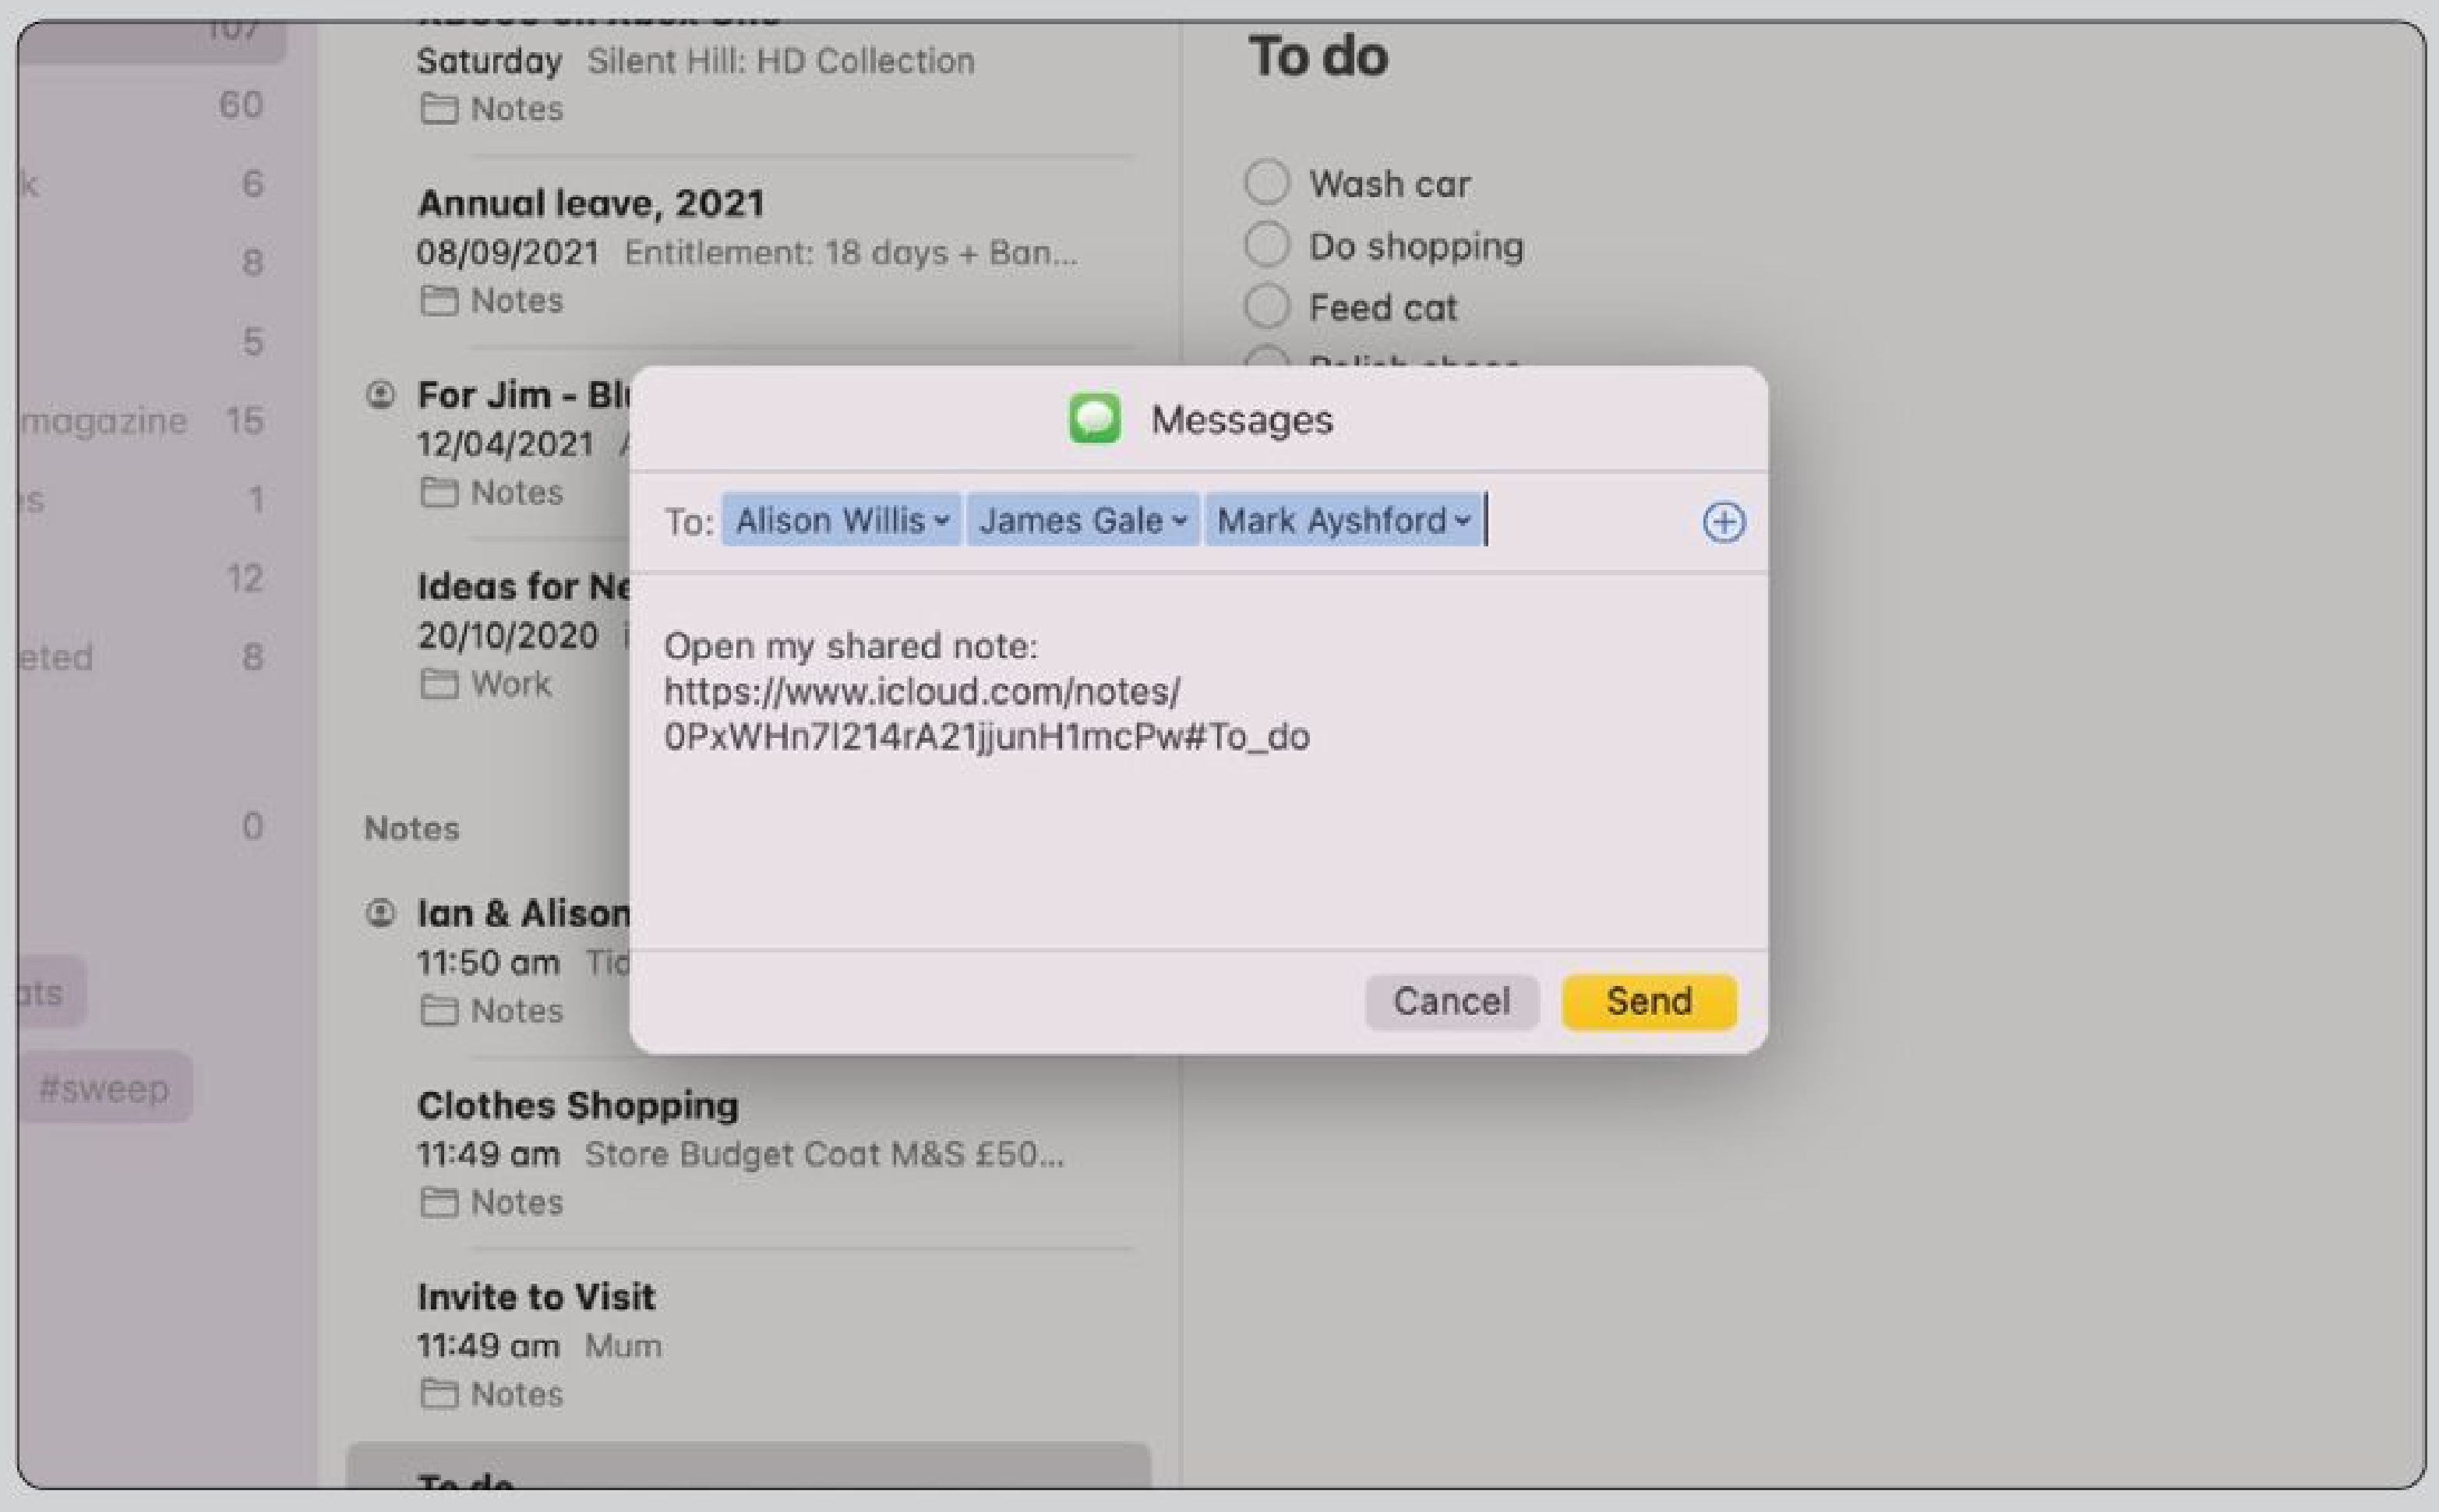
Choose how you'd like to send your invitation:

Permission: People you invite can make changes

☑ Anyone can add more people

Ian Osborne (ian.osborne@dsl.pipex.com)

Collaborative Notes are shared with other people, and can be edited by more than one person too. You can also make a folder collaborative, and share notes and folders giving read-only rights too. Open a note, or highlight a folder, and click the button with a head and a plus sign on it.



To: Alison Willis James Gale Mark Ayshford

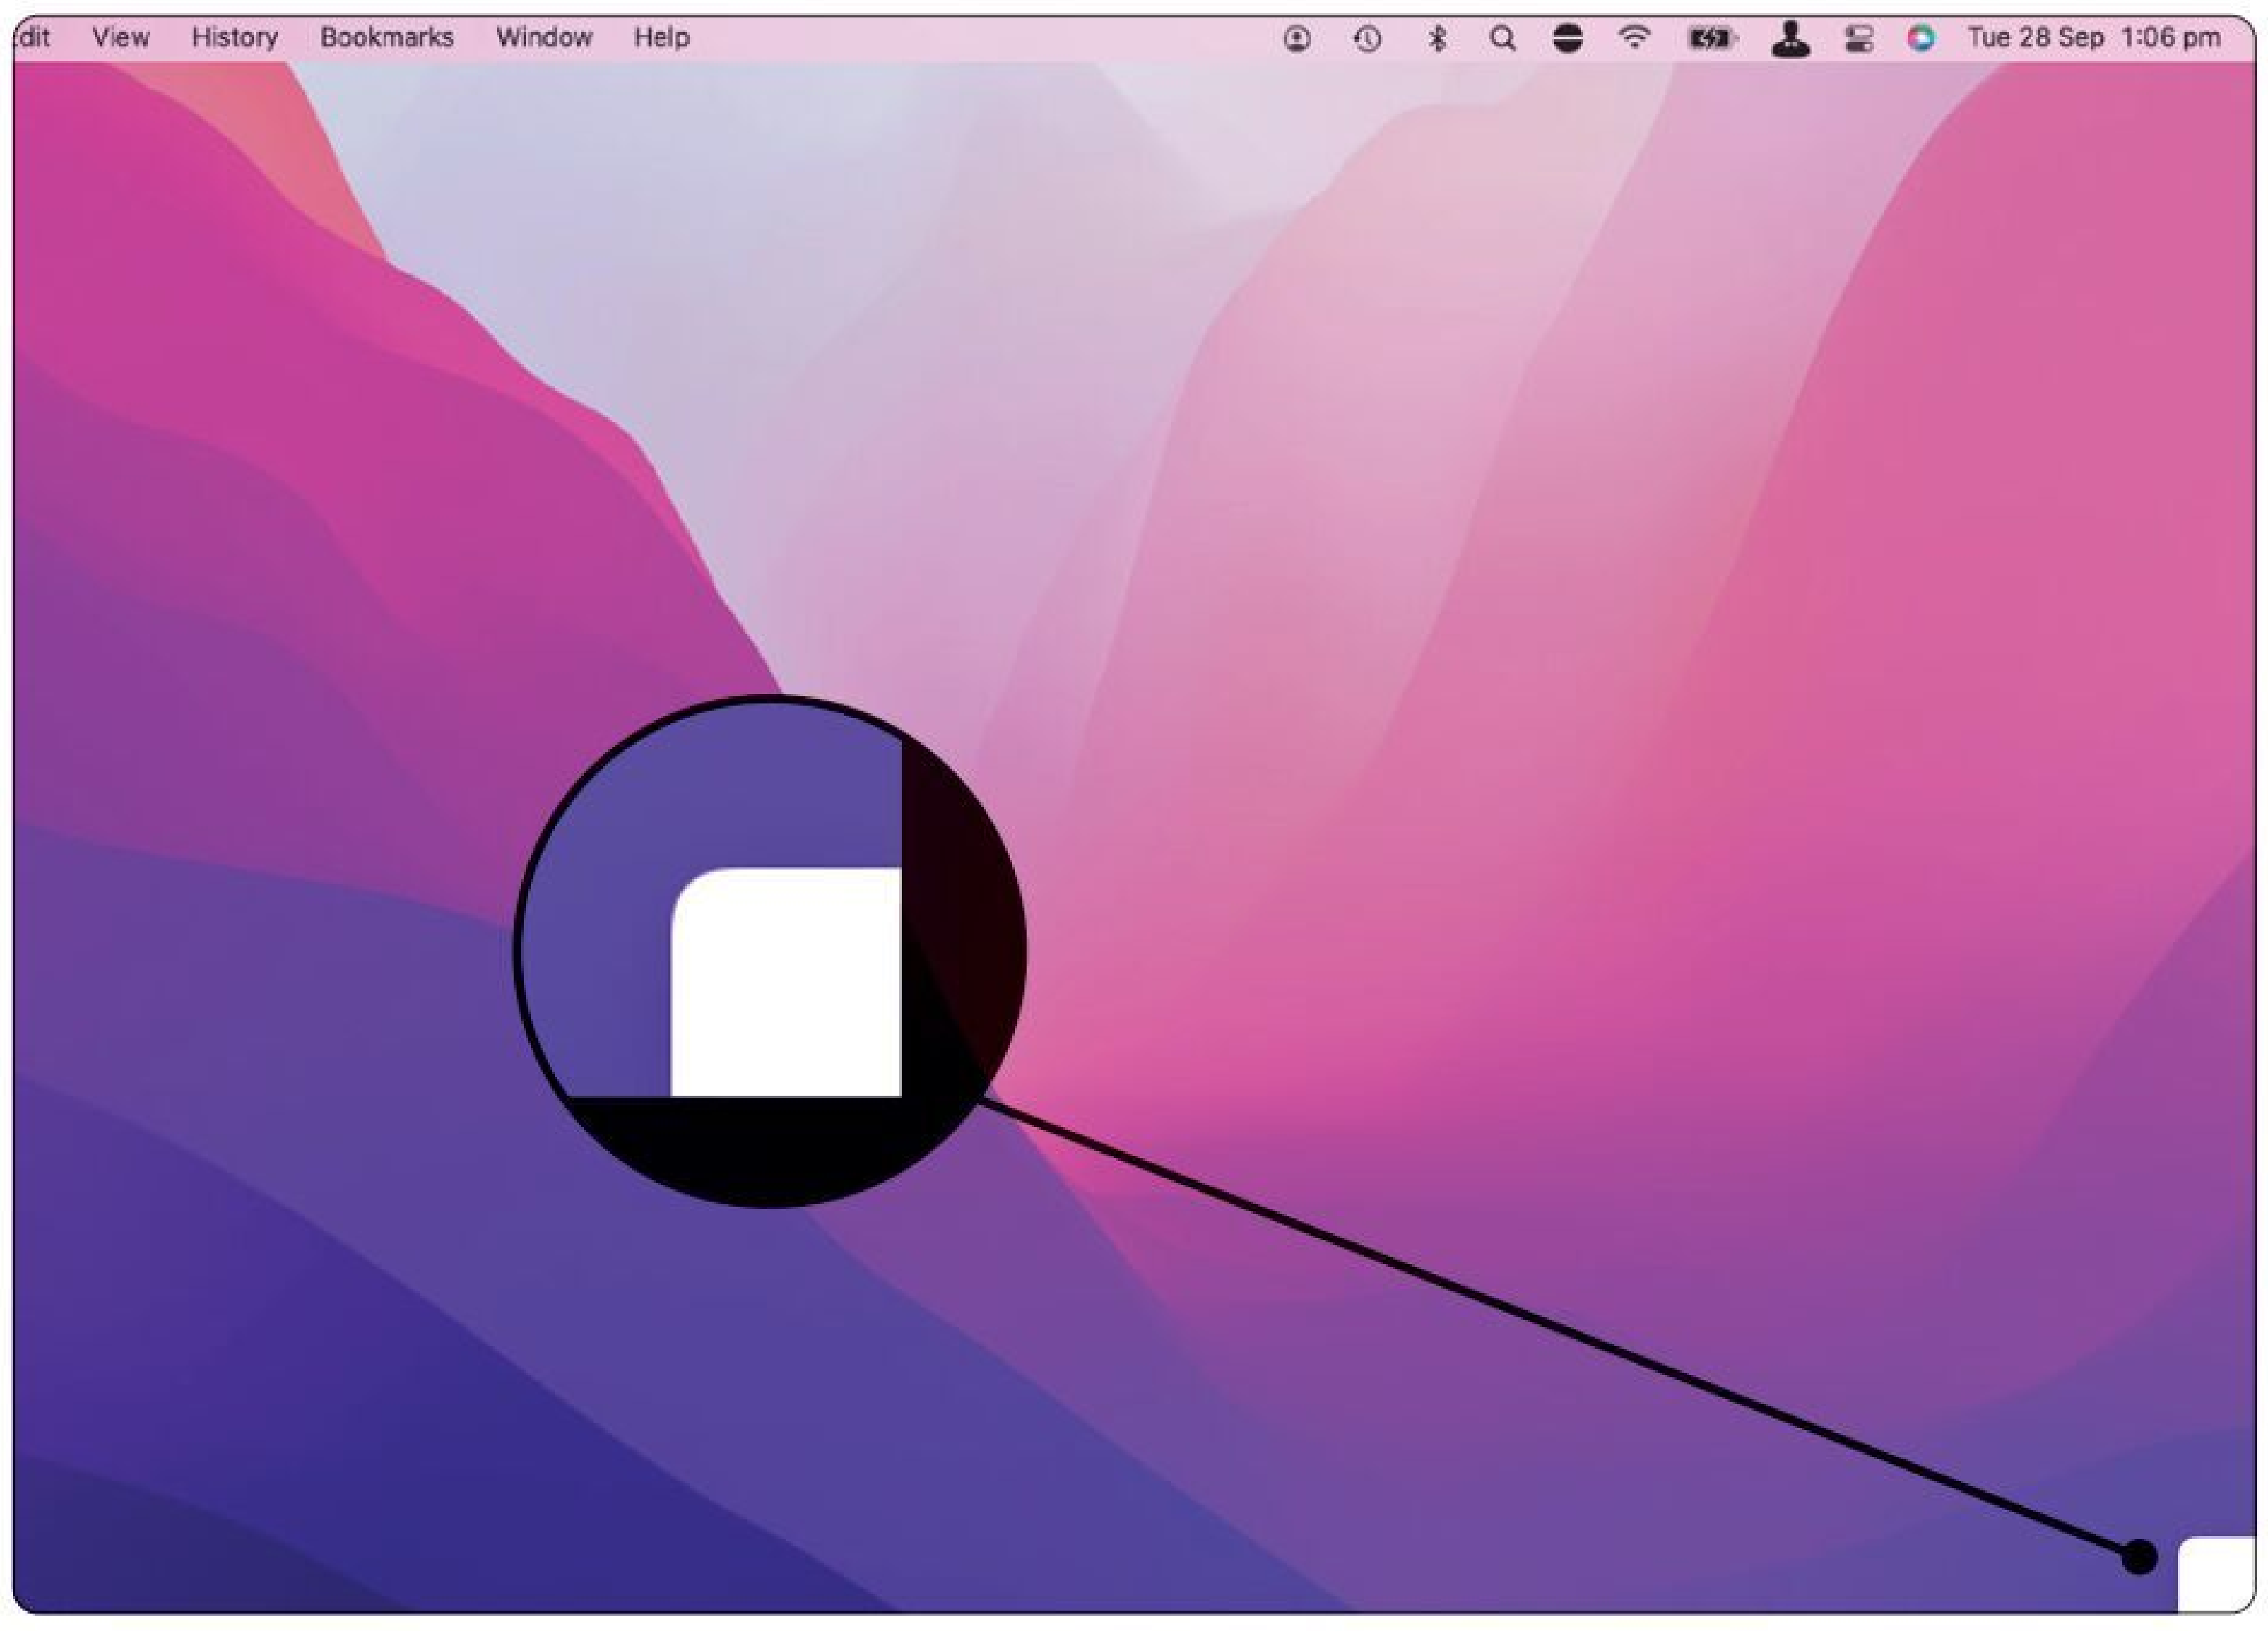
Open my shared note:
https://www.icloud.com/notes/
0PxWHn7I214rA21jjunH1mcPw#To_do

Use the permission pull-down to decide who can make changes, and use the checkbox to decide whether anyone can add more people. Choose how you want to send the invite, click Share, then enter their details and they're sent an invitation. Once accepted, they can share the note or folder.

Quick Note
Speedy Jottings

When using your Mac, have you ever wanted to jot down a phone number, save a website or simply scribble down a thought as soon as it comes to you? That's where Quick Note comes in. This new feature, introduced with macOS Monterey, is perfect for speedy jottings you can review later.

Getting Started with Quick Note



dit View History Bookmarks Window Help
Tue 28 Sep 1:06 pm

1 You can open a Quick Note from anywhere on your Mac, and access it in the Notes app. There are three ways of opening a Quick Note. The easiest is to drag your pointer to the bottom-right corner and click the white box that appears.

About me

Meow! We are the (Smaller) Parker Kittens and we are looking for our new forever homes! We're extremely cheeky and enjoy playing with lots of different toys, we can do this all day long and once we're tired we'll all snuggle up together for a good long snooze. We've spent most of our lives outdoors so we need a home where we can learn to really trust human beings which we're sure won't take long as we don't have a bad bone in our body. We'd like a home where children are 10 and we could live with friendly cats or dogs. If you can of maybe one of my siblings) a forever home please enquire The humans here will be looking through the applications of the month so please be patient and fingers crossed!

Back to Cats Looking for Homes

2 In the Safari app, you can highlight a piece of text, right-click or ctrl-click on it and select New Quick Note from the contextual menu. A Quick Note is created containing both the text and the URL from which it came.

6 Quick Notes are synced between your Apple devices, though as the iPhone doesn't offer the feature, they appear as regular notes there. You can scribble on an iPad Quick Note using an Apple Pencil, and it appears as such on your Mac.

Find My
Find Your Gear

With Find My, you can keep track of your friends' whereabouts, and they can keep an eye on yours. You can also track down a missing Mac, iPad, iPhone or Apple Watch, find your missing AirPods and keep track of your AirTags. It's great if you're arranging a meeting, or finding lost or stolen Apple gear.

iPhone (2)

ian.osborne@dsl.pipex.com

SUMMARY

No phone number provided

This iPhone has been lost. Please give me a call, or take it to the nearest police station.

☐ Notify When Found

This feature can only be enabled when there is no recent location for this device.

☐ Receive Email Updates

Your iPhone can be unlocked using your existing passcode. When you recover this device, some services may be temporarily disabled while they are being restored.

Activate

3 If one of your gadgets is missing, in its information window, click Activate under Mark as Lost. You can then (optionally) add a phone number that can be used if someone finds your device and a message for the finder. You can then click Activate to mark it as lost.

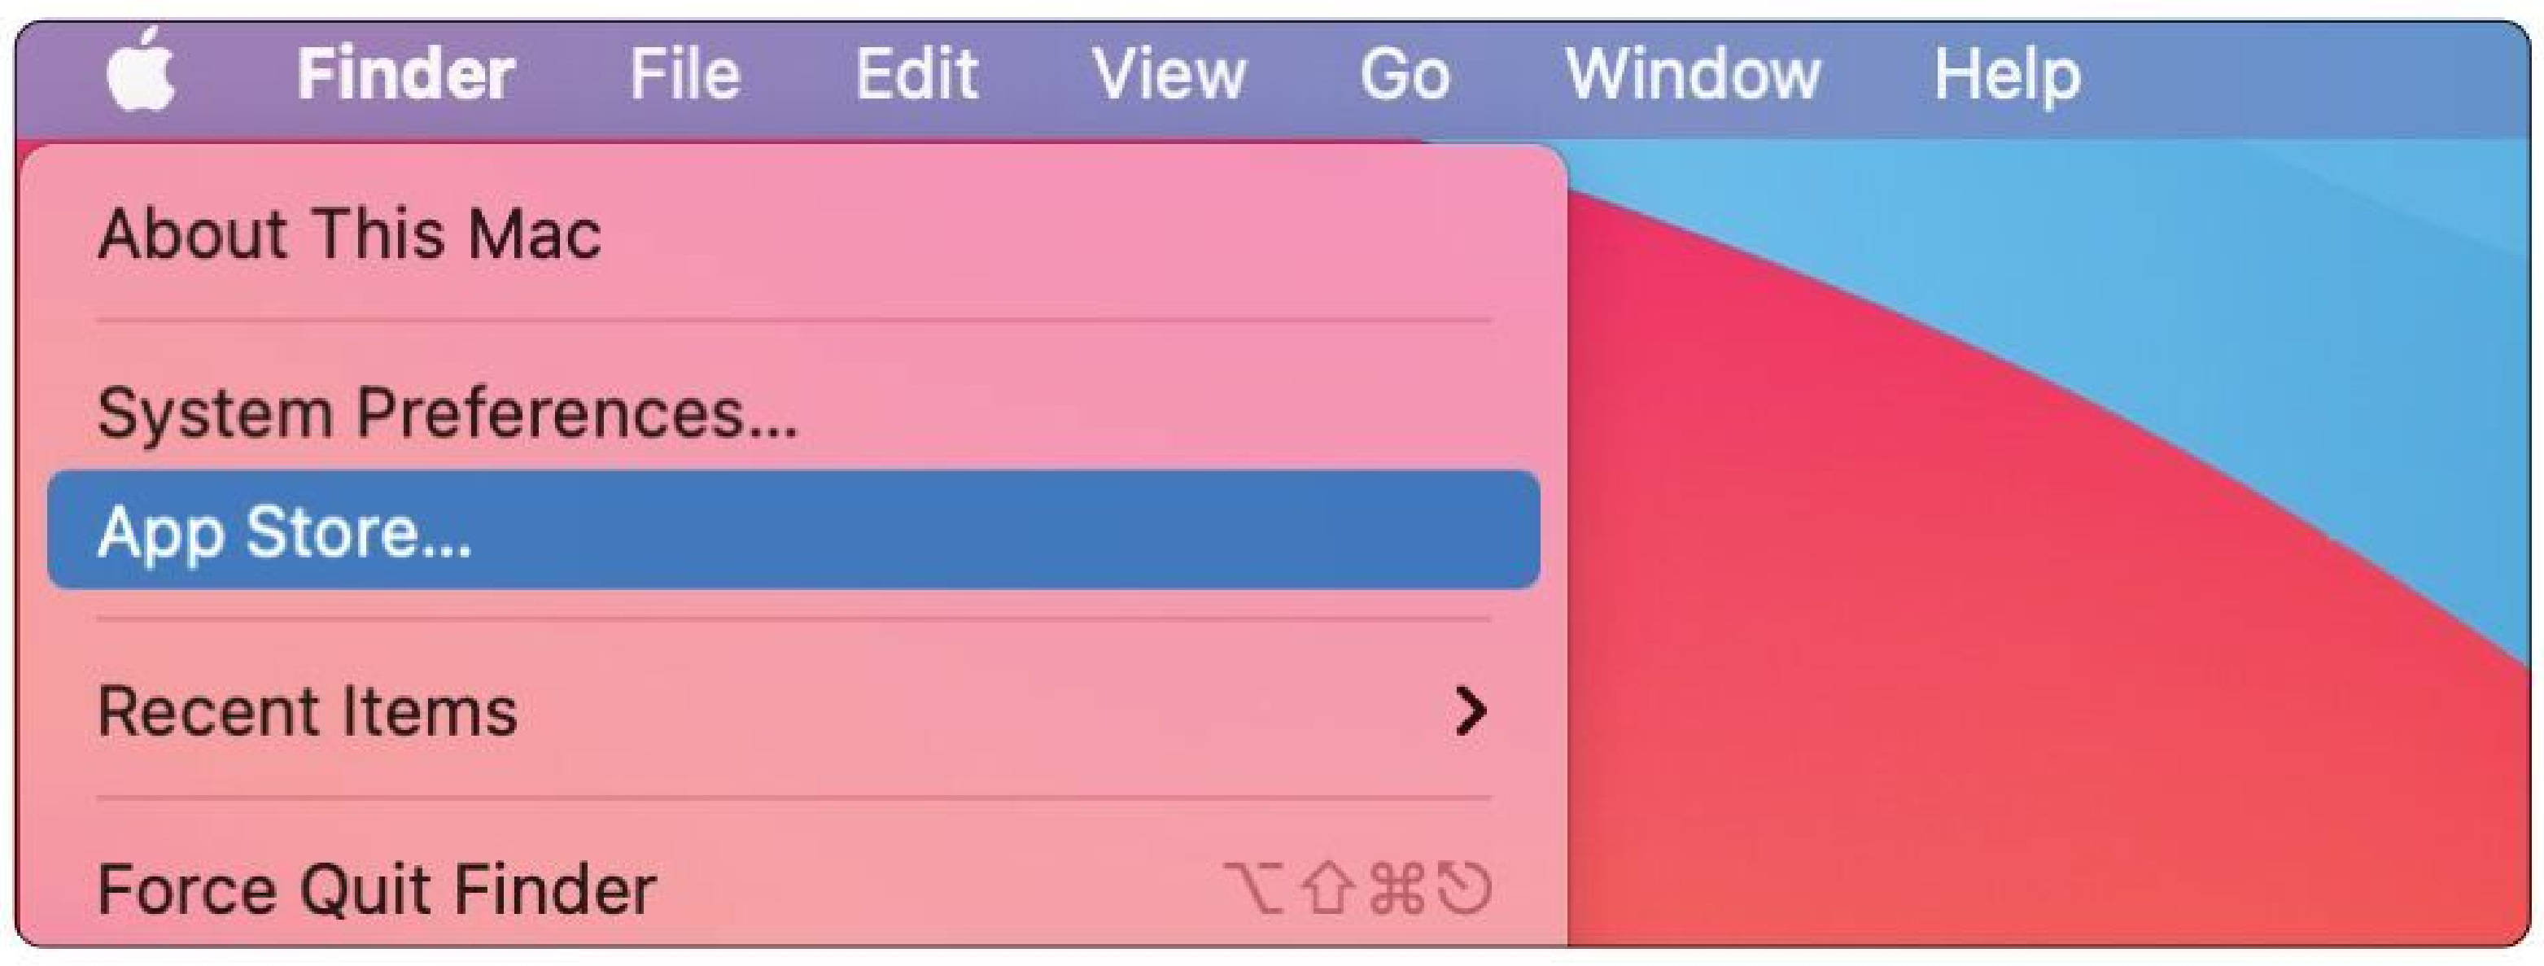
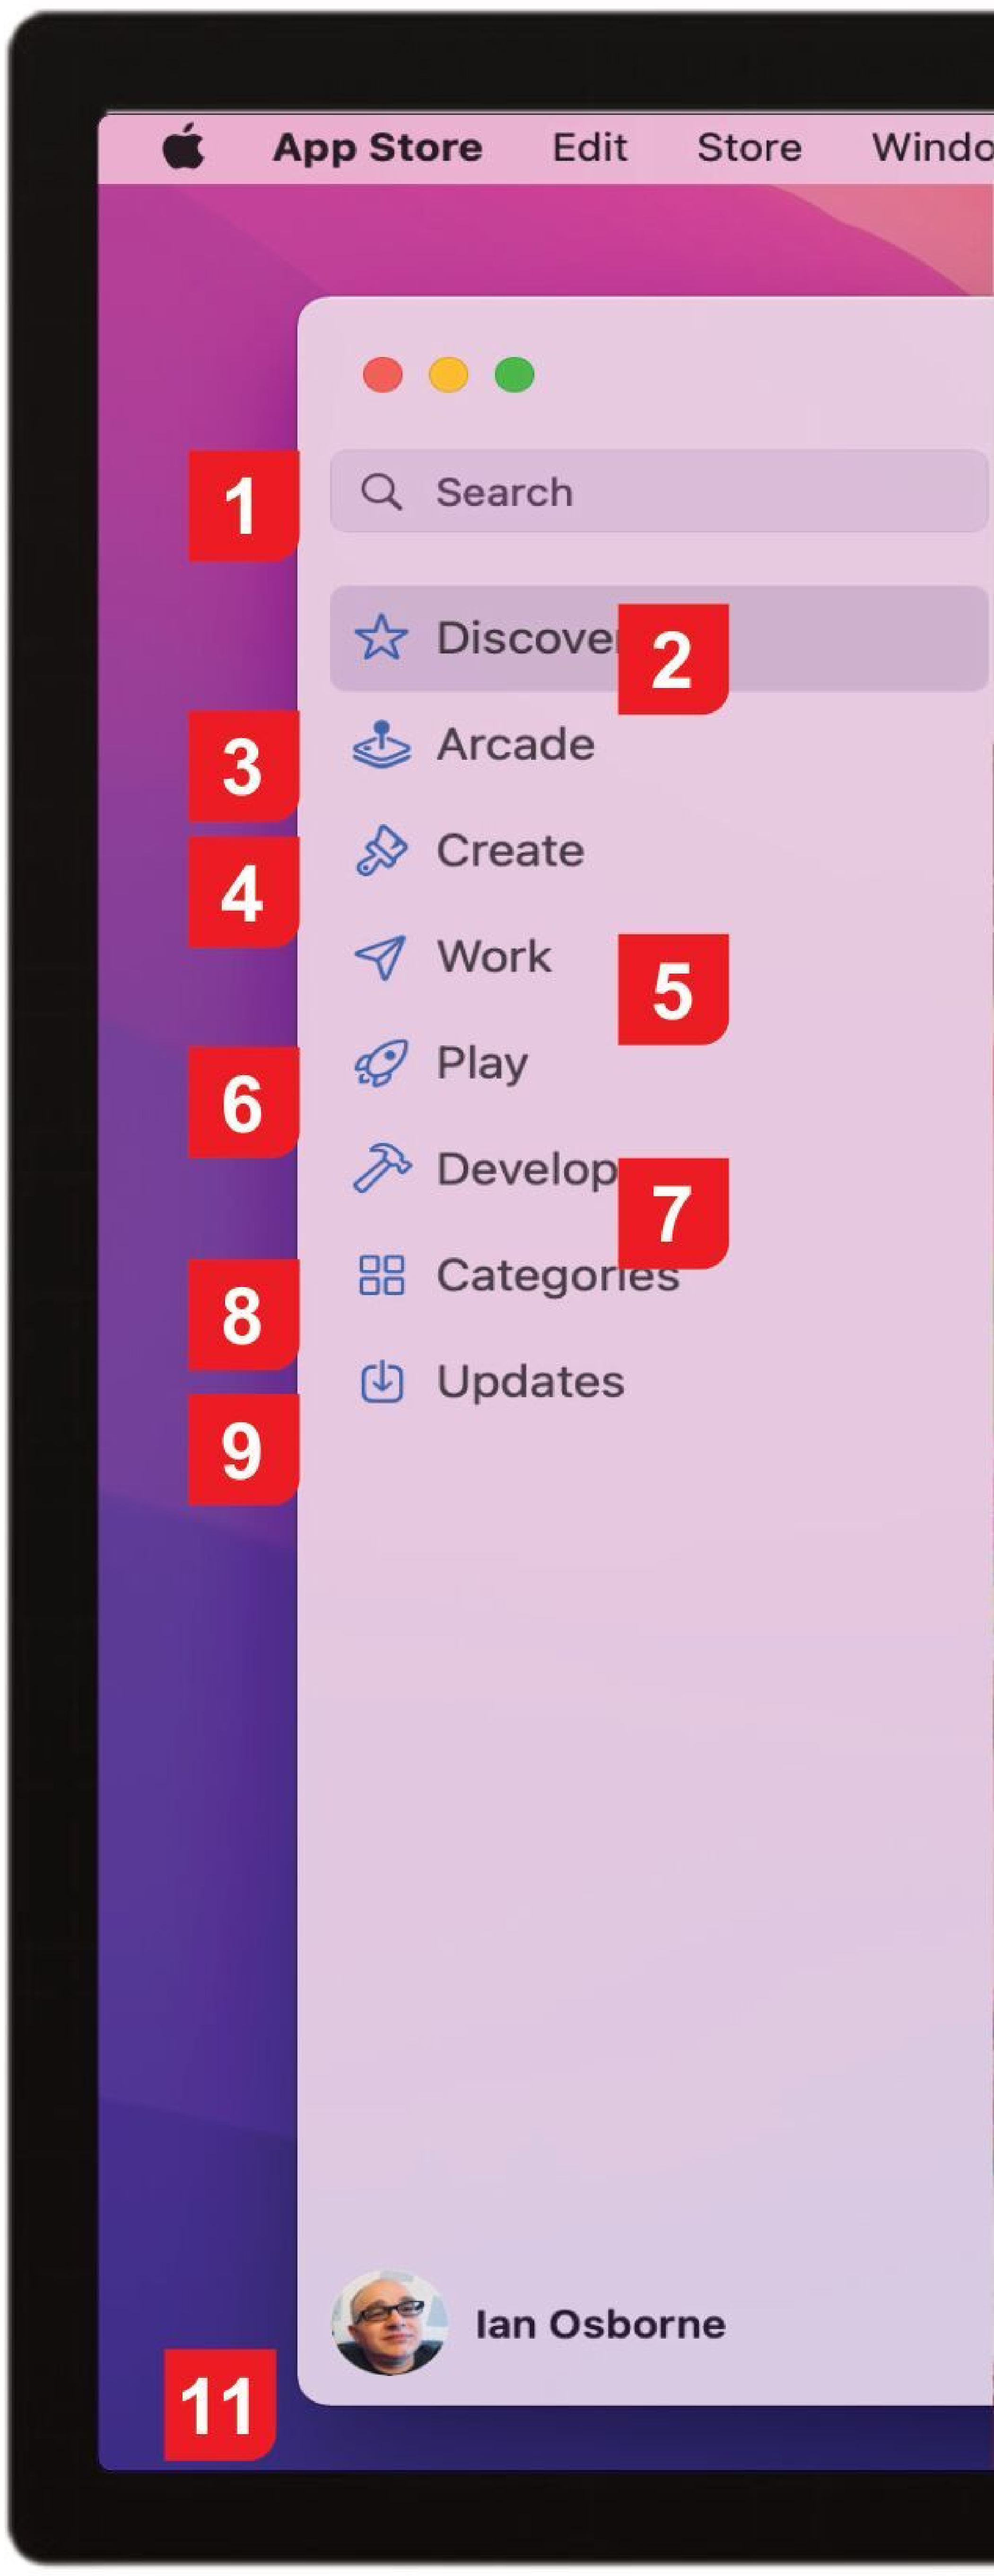
App Store
Buy More Software

The App Store is the best place to download applications for your Mac. It's quick and secure, and has an easy-to-use interface so you can find all those obscure apps and utilities you've been wondering about. There's some great software out there to discover, purchase and download in the App Store.



To open the App Store, click the Apple menu and select App Store. Alternatively, you can use the Monterey Launchpad or the App Store icon found in the Dock.



1 If you know the name of the application you're looking for, type it in the Search Bar to go straight to it. Suggestions are offered as you type, so click on one to select it. You can search for developers here too.

2 Click on Discover for the App Store's main page, where you can see Apple's picks of the best and most essential apps for your Mac.

3 For a monthly fee, Apple's all-you-can-eat Arcade gaming subscription service lets you play as many games as you want, for as long as you want.

4 Click Create to look for apps designed for creativity, such as image editing, music making, photography, video editing, desktop publishing and more.

5 Under Work you'll find the App Store's productivity apps, such as note taking apps, software for getting things done, apps to organise your life and more.

6 Unsurprisingly, the Play section is for video games. The number and quality of games on the Mac has increased dramatically over the last few years, and this is where you get them.

7 Ever wanted to write your own software? The Develop section is where they list the apps for developers, including art and drawing tools, as well as coding.

8 Click on the Categories link for a list of genres such as Business, Entertainment, Finance, Music and more. It's another easy way to navigate the App Store.

9 If any apps on your Mac have been updated, the Updates page is badged in the sidebar, as it is here. Click on this page to update these apps and see the ones that have been recently updated.

10 Featured Apps are chosen by Apple's editors, and are shown at the top of each of the pages listed in the sidebar. Here we're showing the Discover page.

11 Click here for your account details, including a list of apps you've already purchased. You can download those that aren't on your Mac by clicking the cloud symbol next to the app.

12 Underneath the featured apps are lists showing the top paid-for, top free and editor's choice apps in the category in question. Click See All for the full list.

Install Applications.

When you've found an app you want to install, click on its icon to open the details page. To install the app, simply click the price button under the app's title (or 'Get' for free apps), followed by the Install button that replaces it, then input your Apple ID.

Pages at a Glance

1 Every app on the Mac has its own pull-down menus, and Pages is no exception. When you see a reference to a pull-down menu in the tutorials, this is where you'll find them. For example, you can open a new document in the File pull-down menu. To do this, click on the word 'File' in this top bar and select New from the menu that appears.

2 The View button, found here, opens a menu with several options about showing and hiding on-screen tools and guides. You can choose between thumbnails and a list of contents in the left-hand sidebar, or hide it altogether. You can also show or hide comments, the word count, an on-screen ruler, the Find & Replace window and more. Take a look at this menu and familiarise yourself with these options as they come in very useful as you design your documents.

3 Choose the size your document is shown on the screen, or select a preset option such as fit to the width of the window, or fit the whole page in the viewing area. This doesn't change the size of the document; just the screen.

4 This button allows you to add a page to your document. If it's greyed, you're probably working on a word processing document (as opposed to a Pages layout document), and new pages are added as soon as your text reaches the end of the current last page.

5 This row of buttons lets you add features to your layouts. The Insert button lets you add page breaks and more. You can add a Table or Chart and the Text option gives you a box in which you can type text. Shape lets you add a geometric shape, and Media gives access to photos, videos, audio clips and more. Highlight a piece of text or an object on the page, and you can add a comment.

6 If you want to collaborate on your document with another Pages user, click this button and send an invite. You can set whether they can edit or just view the document.

7 The Format and Document controls appear in the right-hand sidebar when you click their respective buttons. Format lets you work on specific elements within the document, while the Document button sets parameters for the document as a whole.

8 The left-hand sidebar shows the individual pages in your document. Click on one to zoom to it. You can drag and reorder the pages here too, and using the View button above it, can switch to showing a contents listing or hiding it altogether.

9 The document you're currently working on. Click on an element such as a box, text or a picture to make changes. You can scroll it up and down, and/or left and right if it's not all on the screen.

10 The right-hand sidebar shows a wide range of controls relating to the document's formatting and its parameters. You can make changes such as changing a font, making your copy bold, italicised and lots of other formatting options.

11 The Word Count, shows how many words there are in your document. Highlight a piece of text or click on a text box to show how many words are in that section, click on the chevrons to switch to character counts. Hide this window in the View menu or by pressing Shift-cmd-W.

geist, but he didn't care. Or at least, he pretended he didn't care. If he were more honest with himself, he'd admit he loved gadgets and technology, but his pay grade didn't leave him a huge amount of disposable income, and what little he had, he spent on upgrades and subscription fees for his TIVRA.
Munching on the last of his cornflakes, he waited for his PC to boot up. It always seemed to take ages. He was the only person he knew whose computer still used a hard drive instead of super-fast solid state storage, and his 64GB of RAM simply wasn't enough for the three-dimensional, touchscreen user interfaces favoured by 2033's software. But at least it looked good. It was an all-in-one model with a built-in Ultra-HD 3D webcam and gesture controls, the sort of thing Apple released a couple of years before and the rest of

Reality Check by Ian Osborne *Page 10 of 35*

the computer industry immediately copied. But although Bob couldn't afford a real Apple Mac, his five-year-old PC was a fair imitation of what they looked like back in the day, and it sufficed for

Hover over the top or bottom of a Pages document and a row of three rectangular boxes are shown. This is for headers and footers. Whatever you type in these boxes appears on every page in the document. Click a blank box and an optional button for inserting page numbers appears. With this you can add automatically-applied page numbers in various formats.

Reality Check by Ian Osborne
Page 13 of 36
Reality Check by Ian Osborne
Page 14 of 36

When reviewing a multi-page document, you can view a single page at a time, or two pages side by side as if they were laid out in a book. To switch between these two view options, click on the Zoom button on the right of the toolbar and select an option from the top of the pop-up menu. You can also set the view to page width and a single page here too.

Spread and Pinch

If you're using a Mac with a trackpad (that is, a laptop or a desktop with a Magic Trackpad), you can zoom in and out of a Pages document using the Pinch and Spread gestures on the trackpad instead of using the Zoom menu in the toolbar, and drag it around the window with two fingers. Changing the display size like this is more precise and configurable, and it's quicker too.

Della's Amazing Ink

Della Foster, 32, has been a fan of tattoos since she was a teenager. "I decided I wanted a tattoo when I was 15, and spent three years planning my first one," she said. "I eventually got it for my 18th birthday."

Although she's a colourful character, she prefers black tattoos. "Coloured tattoos are great on other people, but personally, I prefer something in just black. It means I can wear whatever colours I like, and they still look great." Her 'Love All Animals' tattoo, on her right arm, is very personal to her. "I went vegan when I was 17, and wanted some ink that reflected this. I love animals, and couldn't bear to eat them or steal from them, so I

"Unfortunately, lot of people rush into getting a tattoo just because they can, and end up with something they regret."

Highlight a piece of text and in the Format sidebar's Style tab, click the cog button in the Font section for advanced options. Character Spacing increases and decreases the distance between the letters in the text (the tracking) and Baseline Shift does the same for the distance between the lines (the leading). It's useful if your copy doesn't quite fit the space.

With the Baseline menu, you can change a character or text string to superscript (small and above the baseline, as in '62' for 'six squared') or subscript (small and below the baseline, as in H2O). You can change the capitalisation of the entire text in one go with the Capitalisation menu, and Ligatures lets you change this setting for a specific piece of text.

The last three options in this menu are mainly for headlines. You can add an outline around each letter in any colour, or a drop shadow (sometimes called a step-and-repeat). You can also add a background to the text, in any colour you like. This is a useful alternative to putting it on a shape.

Another tip that's mostly for headers. Highlight a piece of text, and in the Format > Style sidebar, click the words Text Colour and select Image Fill or Advanced Image Fill, the latter giving more options. Click the Choose button, and you can fill the text with an image of your choice instead of a colour. The Scale slider increases and decreases the style of this image. In this screenshot, we also added an outline.

To select more than one object at a time, hold down the Shift key and click on them in turn. They can now be dragged around the page together, retaining their positions relative to each other. Here we've selected all three of the pictures; note they all have handles showing on their borders. Some, but not all, style changes can be applied to multiple objects in this way.

Do you want hyphens to automatically change to proper dashes, quotes to be 'smart' rather than 'dumb' (that is, correctly shaped for the start and end of words instead of being generic lines) and make links automatically turn into hyperlinks? In the Edit menu, go to Substitutions and make sure these options (or at least the ones you want), are ticked. Then, these substitutions are made automatically as you type, with no further action needed.

Before you can publish your book, you have to set up iTunes Connect, if you haven't already. Follow the on-screen instructions; it's simple enough. You have to set up the digital rights you wish to use, agree to terms and conditions and so on.

Rotate Text & Images.

You can rotate text that's in a text box, but not text that's typed straight into the document. To do so, click on the text box and in the Format > Arrange sidebar, go to Rotate. Use the circle icon to drag the text around, or the stats to rotate a degree at a time. It works the same way for images. You can flip them too, using the Flip icons.

CATALOGUES EVER HAVE MANY?
TODAY'S TATTOOS

Graphic designers often use things called keylines in their designs. Here, for example, we have long horizontal lines atop the page and above and below the headline, and vertical lines separating the four items. To add lines like this, choose the line from the Shapes menu, and then tweak it to your own requirements using the Format > Style sidebar tab. You can make your document's keylines as wide as you want, and in any colour you choose.

The new office

Here's a list of things we need for the new office.

- Ten chairs
- Three desks
- A box of pencils
- Blinds for the back window
- An alarm – professionally fitted
- Bookshelves. Check who needs what
- Monitor stands. Again, check who needs them.
- Half a dozen wastebaskets
- Printer/photocopier
- Several reams of paper for the above

Character Styles: None

There's a couple of neat tricks that come in very useful when making lists. In the Format tab, under Bullets & Lists, pick an option then every time you start a new paragraph, it begins with a bullet point, a number or letter, a dash or other options. If this list then looks a little squashed, you can space out the paragraphs using the Spacing options, also found in the Format tab. Use the pull-down menu for a new setting, or click the chevron in front of the word 'Spacing' for advanced options.

Preferences.

In the Pages menu in the menu bar, select Preferences for this window. These settings apply across the app, not just your current document. Take a look at its various settings, so you can set up the Pages app to suit your own needs. The Auto-Correction tab is especially useful, as you can set up auto-replacements such as fractions, smart quotes and more.

Numbers Spreadsheet App

Numbers is Apple's free spreadsheet application, which you can download from the Mac App Store. Use it to create attractive, powerful spreadsheets using over 30 templates to get you started, or you can start from scratch with a blank document.

Apple
What's New

- Pivot tables provide a powerful and flexible way to view and analyse data
  - Create beautifully formatted pivot tables in just a few clicks

You need to download Numbers from the App Store as it isn't pre-installed, but it's free.

Numbers at a Glance

1 These are the Numbers pull-down menus, located at the top of the screen in the Menu Bar. Click on one of the words here for a pull-down menu. Take a look at each in turn. They offer controls such as opening new or existing documents, adding elements to a Numbers doc and more. The keyboard commands on the right of each menu are shortcuts you can use.

2 Click the View button for options regarding how the document is displayed on screen. You'll get a pop-up menu offering the Find & Replace option, Show and Hide Rulers, Show and Hide Comments and if applicable, Show or Hide Collaboration Activity.

3 The Zoom button increases and decreases the size of the document on screen. Click on it for a menu that lets you see it at between 25% and 400% of its actual size. Note; this doesn't increase or decrease the size of the document itself. It only zooms it in and out, to show greater detail or greater area.

4 If you have a large spreadsheet full of a lot of disparate information, you can add categories to organise it all. For example, a shop could view its sales information by price, date, product, sales person, department and more.

5 A pivot table is used in data analysis to aggregate information taken from a larger table. Select a table or a range of cells on your spreadsheet and click the Pivot Table icon to create this type of table on a new sheet. The data in the original table is your source data, which can be added as Columns, Rows and Values.

6 These tools help you create your spreadsheet. With them, you can use Insert to add or edit cell properties, Add a new Table or Chart to the sheet, add a floating Text box or Shape, add Media or make a Comment associated with a specific cell.

7 Store your spreadsheet on iCloud and more than one person can work on it at a time. Use the Collaborate button to invite other people to work on your document with you.

8 These buttons toggle the right-hand sidebar between Format, for producing and editing your spreadsheet, and Organise, for changing the ways it shows information you've added.

9 A Numbers document can have any number of sheets associated with it. If you want another sheet, click the + sign. If your document has more than one sheet, you can switch between them using the tabs to the right of the + button. Here, we have the main sheet, titled 'ROI', and a pivot table called Summary Pivot.

10 This is the main part of your Numbers document, the spreadsheet itself. This one is the Return on Investment template.

11 The right-hand sidebar offers various tools and controls for formatting and organising your document. What's displayed in this sidebar depends on what you're currently working on in the spreadsheet.

Top Tips for Numbers

Numbers is a complicated app, and there's always something to learn. These handy hints and terrific tips help you to get more from your spreadsheets.

New and Open.

When you have the Numbers app open, you can click on the File menu and choose Open to open a document you've previously worked on, through the browser shown here, or New to open the Templates window. If the Open Document browser is already open, click the New Document button in the bottom-left to bring up the Templates window.

☐		
	Total	£370.00

The template called 'Checklist Total' includes a ready-made calculation column that adds the values of every entry in the column, but only when its checkbox is ticked. It's a great way of keeping track of what you've spent on a project, and what you're going to spend. Naturally, these tables can be customised with illustrations and formatted text, just like other documents.

You can move and reorder columns and rows by double-clicking and holding on the number or letter representing that row or column, and then dragging it into a new position on your table. When in place, look for the thick line that shows where the item will go. When it appears, release the row or column you're moving and it's placed in its new position.

If you release a column or a row without finding a new place for it in the table, it's separated out into a new table completely, as you can see here. If you do this by accident and want to put it back, first add a new, blank row or column (click the chevron next to the number or letter of an adjacent row/column and choose add row/column before/after). Then select the entire row or column you want to add back in again, and copy and paste the data back into your main table. You can then delete the rogue floater.

Hide and Unhide Rows and Columns

To temporarily hide a row or column, click on the chevron in its letter or number for a pop-up menu. In this menu is an option to hide the row or column. Select multiple rows or columns and you can hide them all at once. To show them again, click any letter (if you've hidden columns), or number (for rows), and choose Unhide All Rows/ Columns from the menu.

Group Multiple Cells into One.

In this table, we grouped three cells into one so we could add our windfall into the table, and add it to our total savings. To do this, you select the cells you want to combine in this way, and then, in the Table pull-down menu, select Merge Cells. To unmerge them again, select the newly merged cell and from this menu, select Unmerge Cells.

You can access a similar contextual menu by clicking the chevron on the number next to a row. Again you can add a new row, above or below the one you've selected, or delete it. This menu also gives you quick access to the Sort, Filter and Categories sidebar options, create a group for that row and more.

Naming a Document.

To add tickboxes to your table, first of all, select all the cells you wish to modify in this way; click and drag over them to select. In the sidebar, click the Format button, and then the Cell tab. Click the Data Format pull-down menu and select the Tickbox option near the bottom.

To add tickboxes to your table, first of all, select all the cells you wish to modify in this way; click and drag over them to select. In the sidebar, click the Format button, and then the Cell tab. Click the Data Format pull-down menu and select the Tickbox option near the bottom.

Tickboxes, also called Checkboxes, appear in the cells you selected. These can be ticked and unticked as appropriate. The Data Format menu can also be used to add star ratings, steppers and sliders, a date and time and more. Take a look and experiment with them to your hearts content.

Keynote
For Presentations

Keynote was originally created by Apple for the company's own presentations, and then it was released to the public. It's free, and it's great for putting on displays. Create slideshows, add transition effects, include text, images and videos and more. There are themes too.

Keynote at a Glance

1 As you'd expect, Keynote has a series of pull-down menus in the Desktop's top bar. Click on one for the menu, and drag your pointer down this list to select an option. Some tools have a keyboard shortcut too, displayed on the right of the menu bars.

2 Keynote's View button lets you change the way the slide is shown in the window. You can hide the sidebars, show the slides as thumbnails, show and hide an Object list and the Find & Replace option and more.

3 Like the other iWork apps, Keynote lets you zoom in on the currently shown slide to see more detail, or zoom out to see more of the slide. This doesn't change the size of the document; only the way it's viewed on the screen. To see the whole of the slide, select Fit Slide in the menu.

4 Click here to add a slide to your current presentation. You get a pop-up window offering a variety of designs, depending on the template in question. Choose one to add it to the end of the presentation.

5 The Play button lets you watch the presentation as it currently stands. Press the mouse button or the space bar to move to the next slide, and the ESC button to go back to the editing window shown here.

6 These are your main editing tools, used to add elements to a Keynote slide. As you can see, you can add a Table, a Chart, Text, a Shape, Media such as music, video and photos and also add comments that aren't part of the presentation but act as useful notes to yourself and others working on the presentation.

7 When you're collaborating on a Keynote project, any edits you make are also visible to the others who are working with you on it, and vice versa. If you want to share a project without giving other people editing rights, change the Permission pull-down menu on the pop-up window to 'View only'.

8 These controls toggle the contents of the right-hand sidebar. Format lets you edit the slide's contents, Animate gives access to tools such as transition effects, as the presentation moves from one slide to another and Document offers tools that cover the presentation as a whole, rather than one particular slide or transition.

9 The left-hand sidebar shows the total range of slides in your presentation, as thumbnails. Click and drag to reorder them, click and delete to remove and use the View button above it to change the way they're displayed.

10 This is the slide you're currently working on. If you start with a template, you can change the pictures, text, fonts and other elements to suit your own presentation. There are lots of themes to choose from.

11 The right-hand sidebar's Format tools, which you use to edit, modify and build your presentation. You can choose a colour for your background. Click on an image and choose an image style, and set a border and shadow if you wish, and more.

How to get the best from your beans

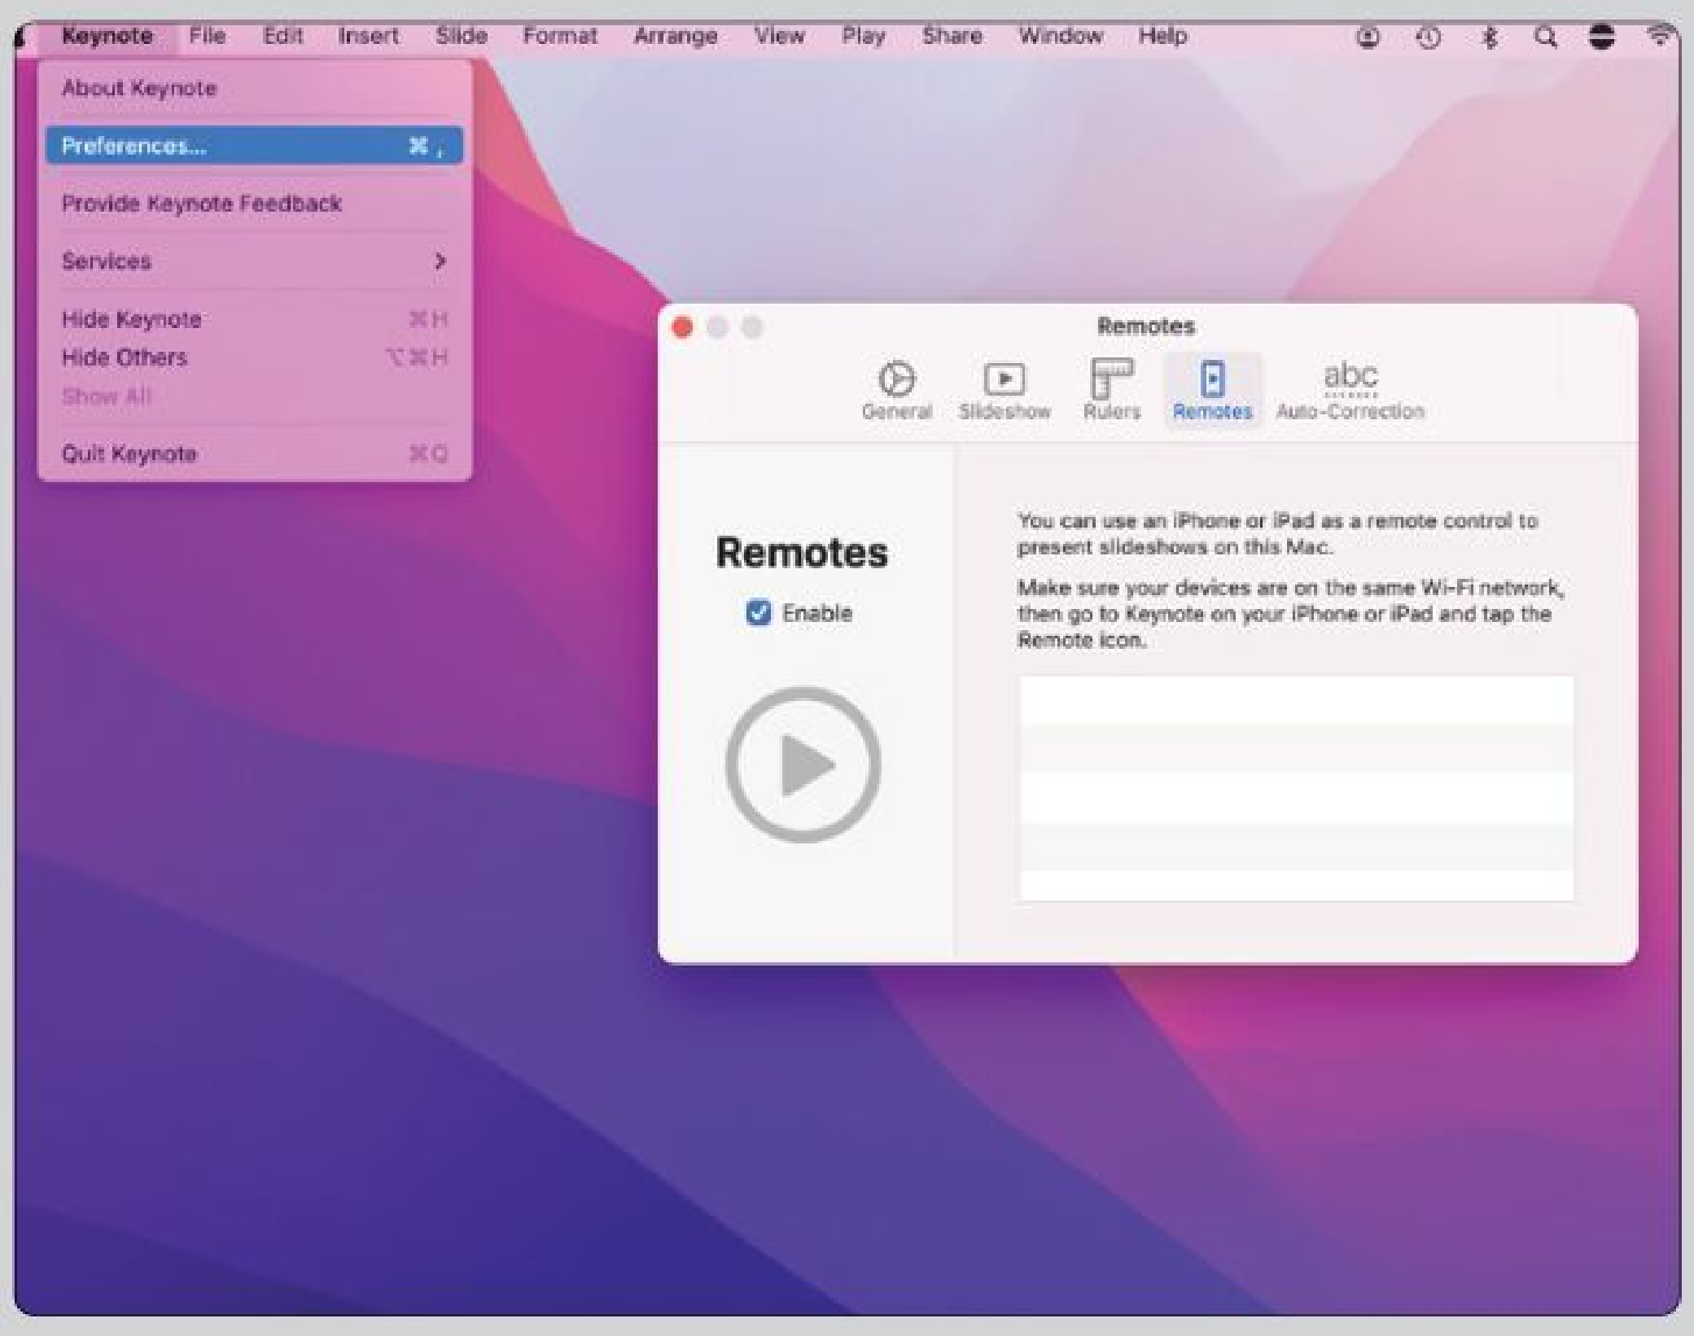
Keynote Live lets you broadcast your presentations over the Internet, so it can be watched by up to 500 viewers online or 35 on your local Wi-Fi. Make sure your presentation is in iCloud Drive. The Keynote app used to have a Keynote Live button in the toolbar, but in the latest version you find this option in the Share menu.

Click Keynote Live in the Share menu, and a Keynote Live link is created for your presentation, and you're invited to add viewers. You can do so, or copy the link under More Options, and send it in another way. Those you invite can watch your Keynote presentation, which you can password-protect to restrict who can see it if you wish.

Using an iPhone or iPad as a Remote.



Remotes

☑ Enable

You can use an iPhone or iPad as a remote control to present slideshows on this Mac.

Make sure your devices are on the same Wi-Fi network, then go to Keynote on your iPhone or iPad and tap the Remote icon.

You can use your mobile device as a remote for a Keynote presentation running on your Mac. First of all, make sure Wi-Fi is turned on for both of them and that they're both on the same network. On your Mac, open Keynote and in the Keynote menu at the top, select Preferences. Click the Remotes tab, and then tick the Enable box.

On your iPhone or iPad, open the Keynote app and tap the Keynote Remote icon (it looks like an iPhone with a Play symbol on it). The name of your mobile device appears on your Mac, in the Remotes preferences window. Click the button marked Link, and you can run a presentation on your Mac while controlling it on an iPhone or iPad.

After confirming the four-digit code that appears on both your Mac and mobile device, you're ready to start. Tapping your mobile device's screen acts like pressing a mouse button or the Space bar; it activates the next animation or slide. Tap the middle icon in the top-right and you can choose to view the current and next slide, if you wish, side by side.

Using an Apple Watch as a Remote.

Keynote
10:09
Slide 6 of 11

If you play your Keynote presentation on your iPhone, maybe linked to a bigger screen through the Lightning port or AirPlay, you can use your Apple Watch as a remote. First make sure your iPhone's Keynote app isn't paired with any other presentation devices. Launch Keynote on your iPhone, tap the Keynote Remote icon and follow the on-screen instructions so you can pair it with your Mac's Keynote app.

Open Keynote on your Apple Watch. It tells you it's setting up as a presenter for your iPhone. When instructed to do so (on your watch), open your Keynote presentation on your iPhone. From now on, you can use your watch as a remote presenter for your iPhone's Keynote show. Just tap the screen to bring forth the next slide, in-slide feature or transition. You can switch to using your iPhone as a presenter if you wish too.

Open Display Preferences
Set Password

Displaying:
☑ Scale slideshow to fit the display
☐ Apply motion blur to animations
☑ Enable presenter display in full screen
☐ Show presenter display window in other applications

Interacting:
● Show pointer only on slides with links or movies
○ Show pointer when using the mouse or trackpad
☑ Show slideshow controls when pointer is at the bottom of the screen

☑ Show playback controls when pointer is over a movie
☐ Show slide navigator when scrolling
☐ Allow app switching while presenting

Exiting:
☑ Exit presentation after last slide
☐ Require password to exit slideshows

Some preferences apply only when you play a slideshow full screen.

Open the Preferences panel from the Keynote menu in the menu bar. Take a look through them – there's some great customisation options in there. The Slideshow pane, for example, lets you decide whether to scale a presentation to fit the screen, change the way others can interact with your presentations or if you require a password to exit a presentation.

Go Easy!

Sometimes, less is more, and that's certainly true for Keynote presentations. Just because you *can* use a different animation for every object on the screen, it doesn't mean you *should*. Sticking to two or three animations per presentation can be much more effective than having everything in sight bounce around the screen in a distracting, confusing manner.

Going Further with macOS Monterey

When you're ready to take things further, we've a host of guides for your Mac and the Monterey operating system. The new Focus and Live Text features are covered, and there's a guide to the Shortcuts app, which makes its debut on the Mac with Monterey. Look out too for guides to iCloud and iCloud+, Siri, System Preferences and more.

Learn more >

macOS Monterey's System Preferences

When using a new Mac for the first time, it's easy to begin using it for day-to-day tasks without configuring it properly or exploring the settings. It's well worth spending a few minutes familiarising yourself with the System Preferences controls and the many options contained therein. So let's take a look at what they can do.

Accessing the System Preferences.

As long as you read up on what you're adjusting before making any changes, delving into System Preferences is not a scary experience, and it can make using your Mac a lot more enjoyable. There are several ways to open the System Preferences pane. You can click on the Apple icon in the top left corner of the screen and select System Preferences, click on the Dock icon showing cogs on a silver square or open it from the Launchpad or Applications folder. Opening System Preferences reveals a window with a grid of icons split into categories, each representing a different area of options you can configure. Wherever you are in System Preferences, the grid of squares in the toolbar takes you back to this, the System Preferences' front page.

Get Started

The simple way to share subscriptions, purchases, iCloud storage and more with up to six people in your household.

Screen Time and parental controls are built in for families with children.

Family Sharing

If you have set up Family Sharing on your Mac, you can access the feature here. With Family Sharing, you can share media and applications with your family. If, for example, yourself and some of your children all want the same music album, you can buy it once and all three of you can enjoy it; you no longer have to buy it multiple times. The same applies to apps too. Up to six members of your household can link up with Family Sharing, and you can activate safeguards and parental controls too.

General

The General options customise several things, such as the colour of buttons and icons, the colour of highlighted items in Finder and how scrollbars appear. It also lets you control whether applications should open the windows or documents you last viewed when you relaunch an app. Each option is clearly explained. By default, menus and highlights are blue.

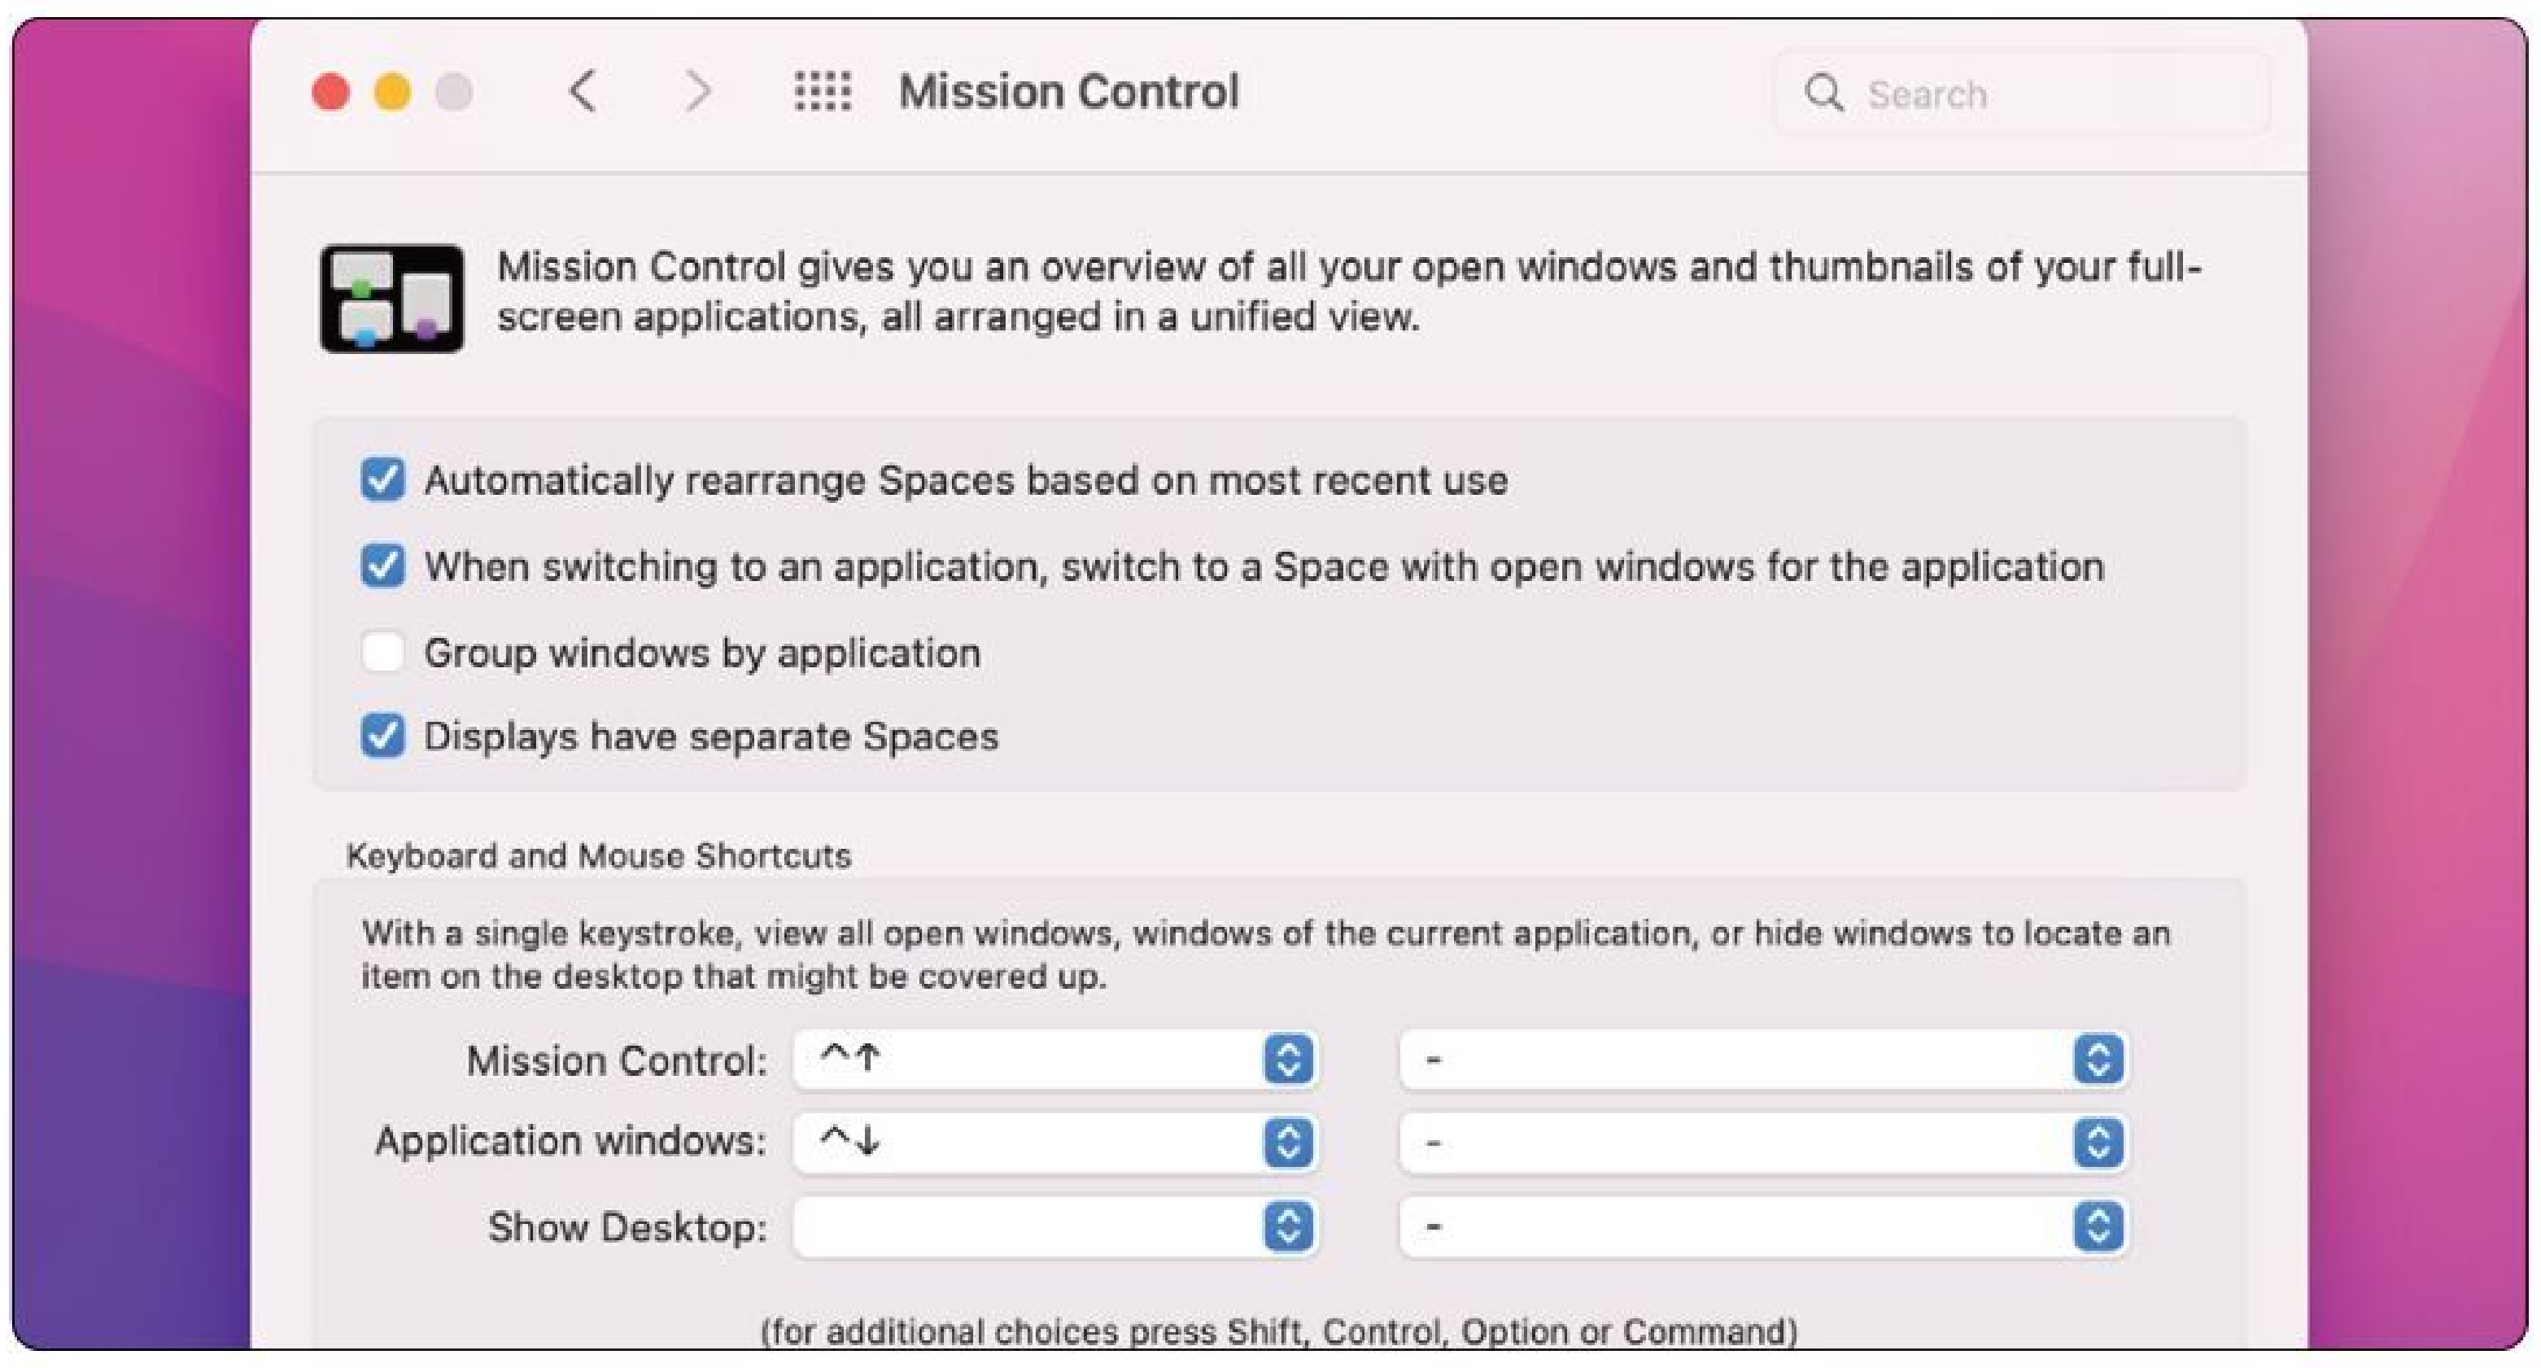
☐ Automatically hide and show the menu bar on desktop
☑ Automatically hide and show the menu bar in full screen

Dock & Menu Bar

The Dock & Menu Bar preferences actually govern three things; the Dock at the foot of your screen, the menu bar at the top of it and the Control Centre, accessed using the two-switches icon in the top-right of the menu bar. You can change the way the Dock behaves, decide whether you want to hide the menu bar and customise your Control Centre.



Mission Control
Search

Mission Control gives you an overview of all your open windows and thumbnails of your full-screen applications, all arranged in a unified view.

☑ Automatically rearrange Spaces based on most recent use
☑ When switching to an application, switch to a Space with open windows for the application
☐ Group windows by application
☑ Displays have separate Spaces

Keyboard and Mouse Shortcuts

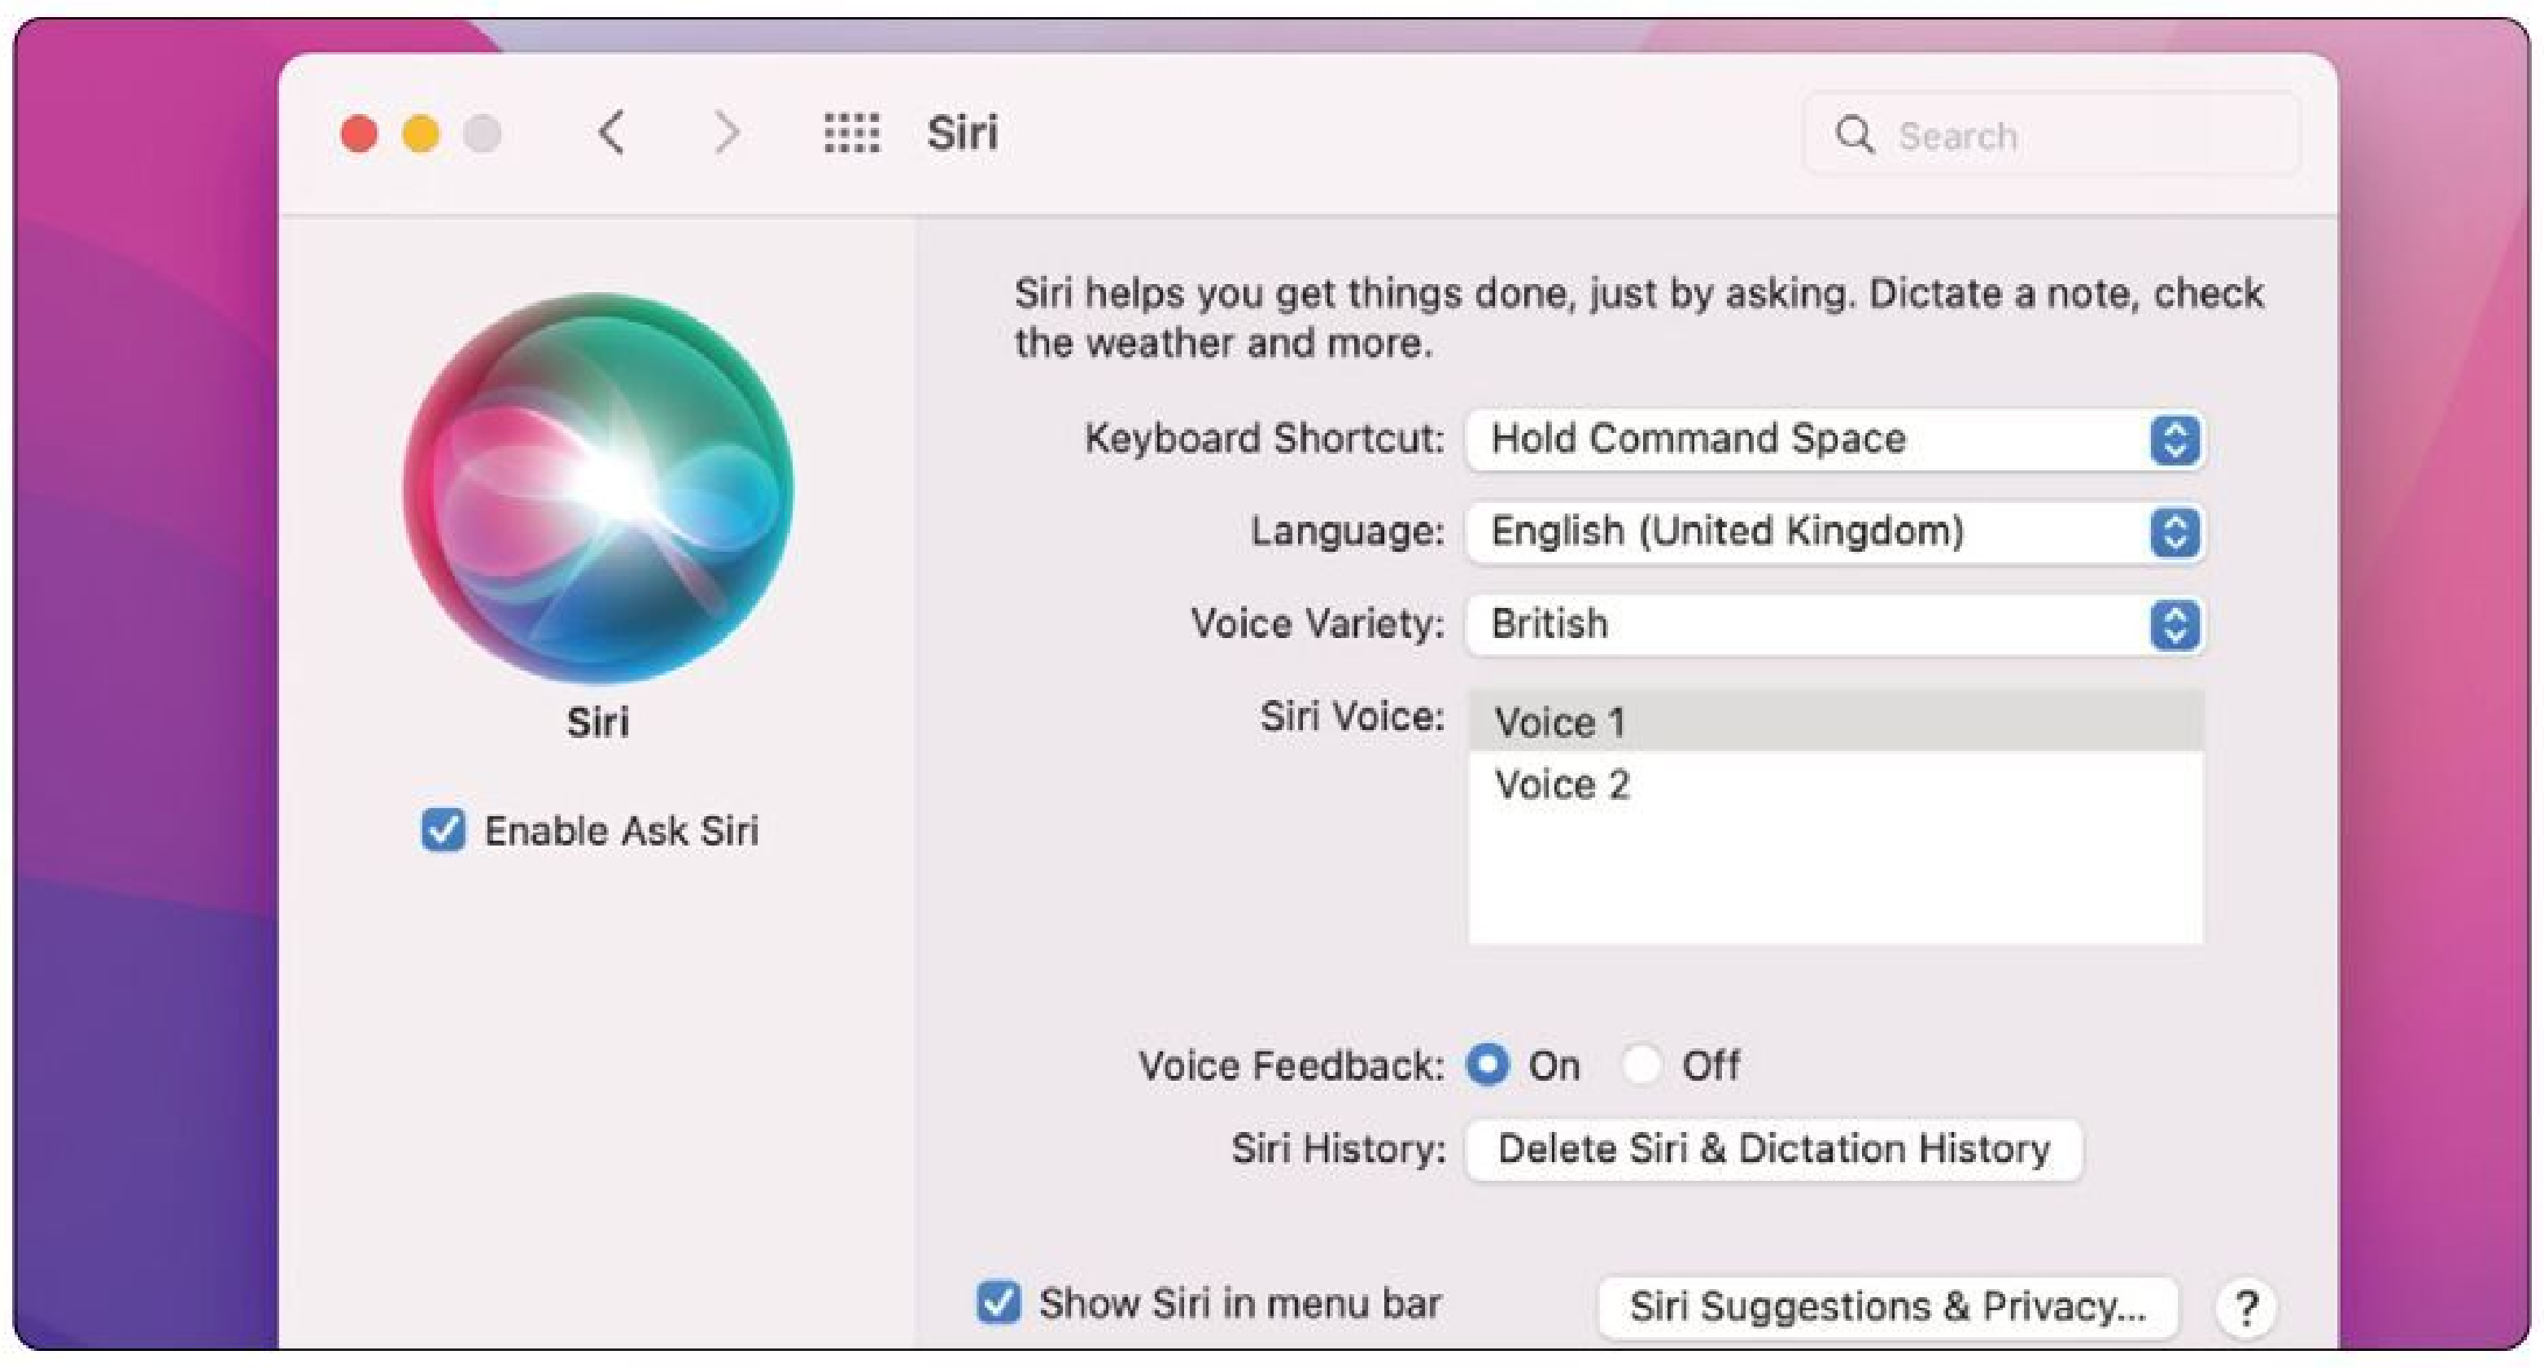
With a single keystroke, view all open windows, windows of the current application, or hide windows to locate an item on the desktop that might be covered up.

Mission Control: ^↑ -
Application windows: ^↓ -
Show Desktop: -

(for additional choices press Shift, Control, Option or Command)

Mission Control

The Mission Control options lets you control how applications are grouped and arranged in the Mission Control screen, which is accessed from the Applications folder, LaunchPad, or by pressing the F3 key. Mission Control is useful for quickly switching between applications or open windows, and seeing what is currently running on your Mac.



Siri

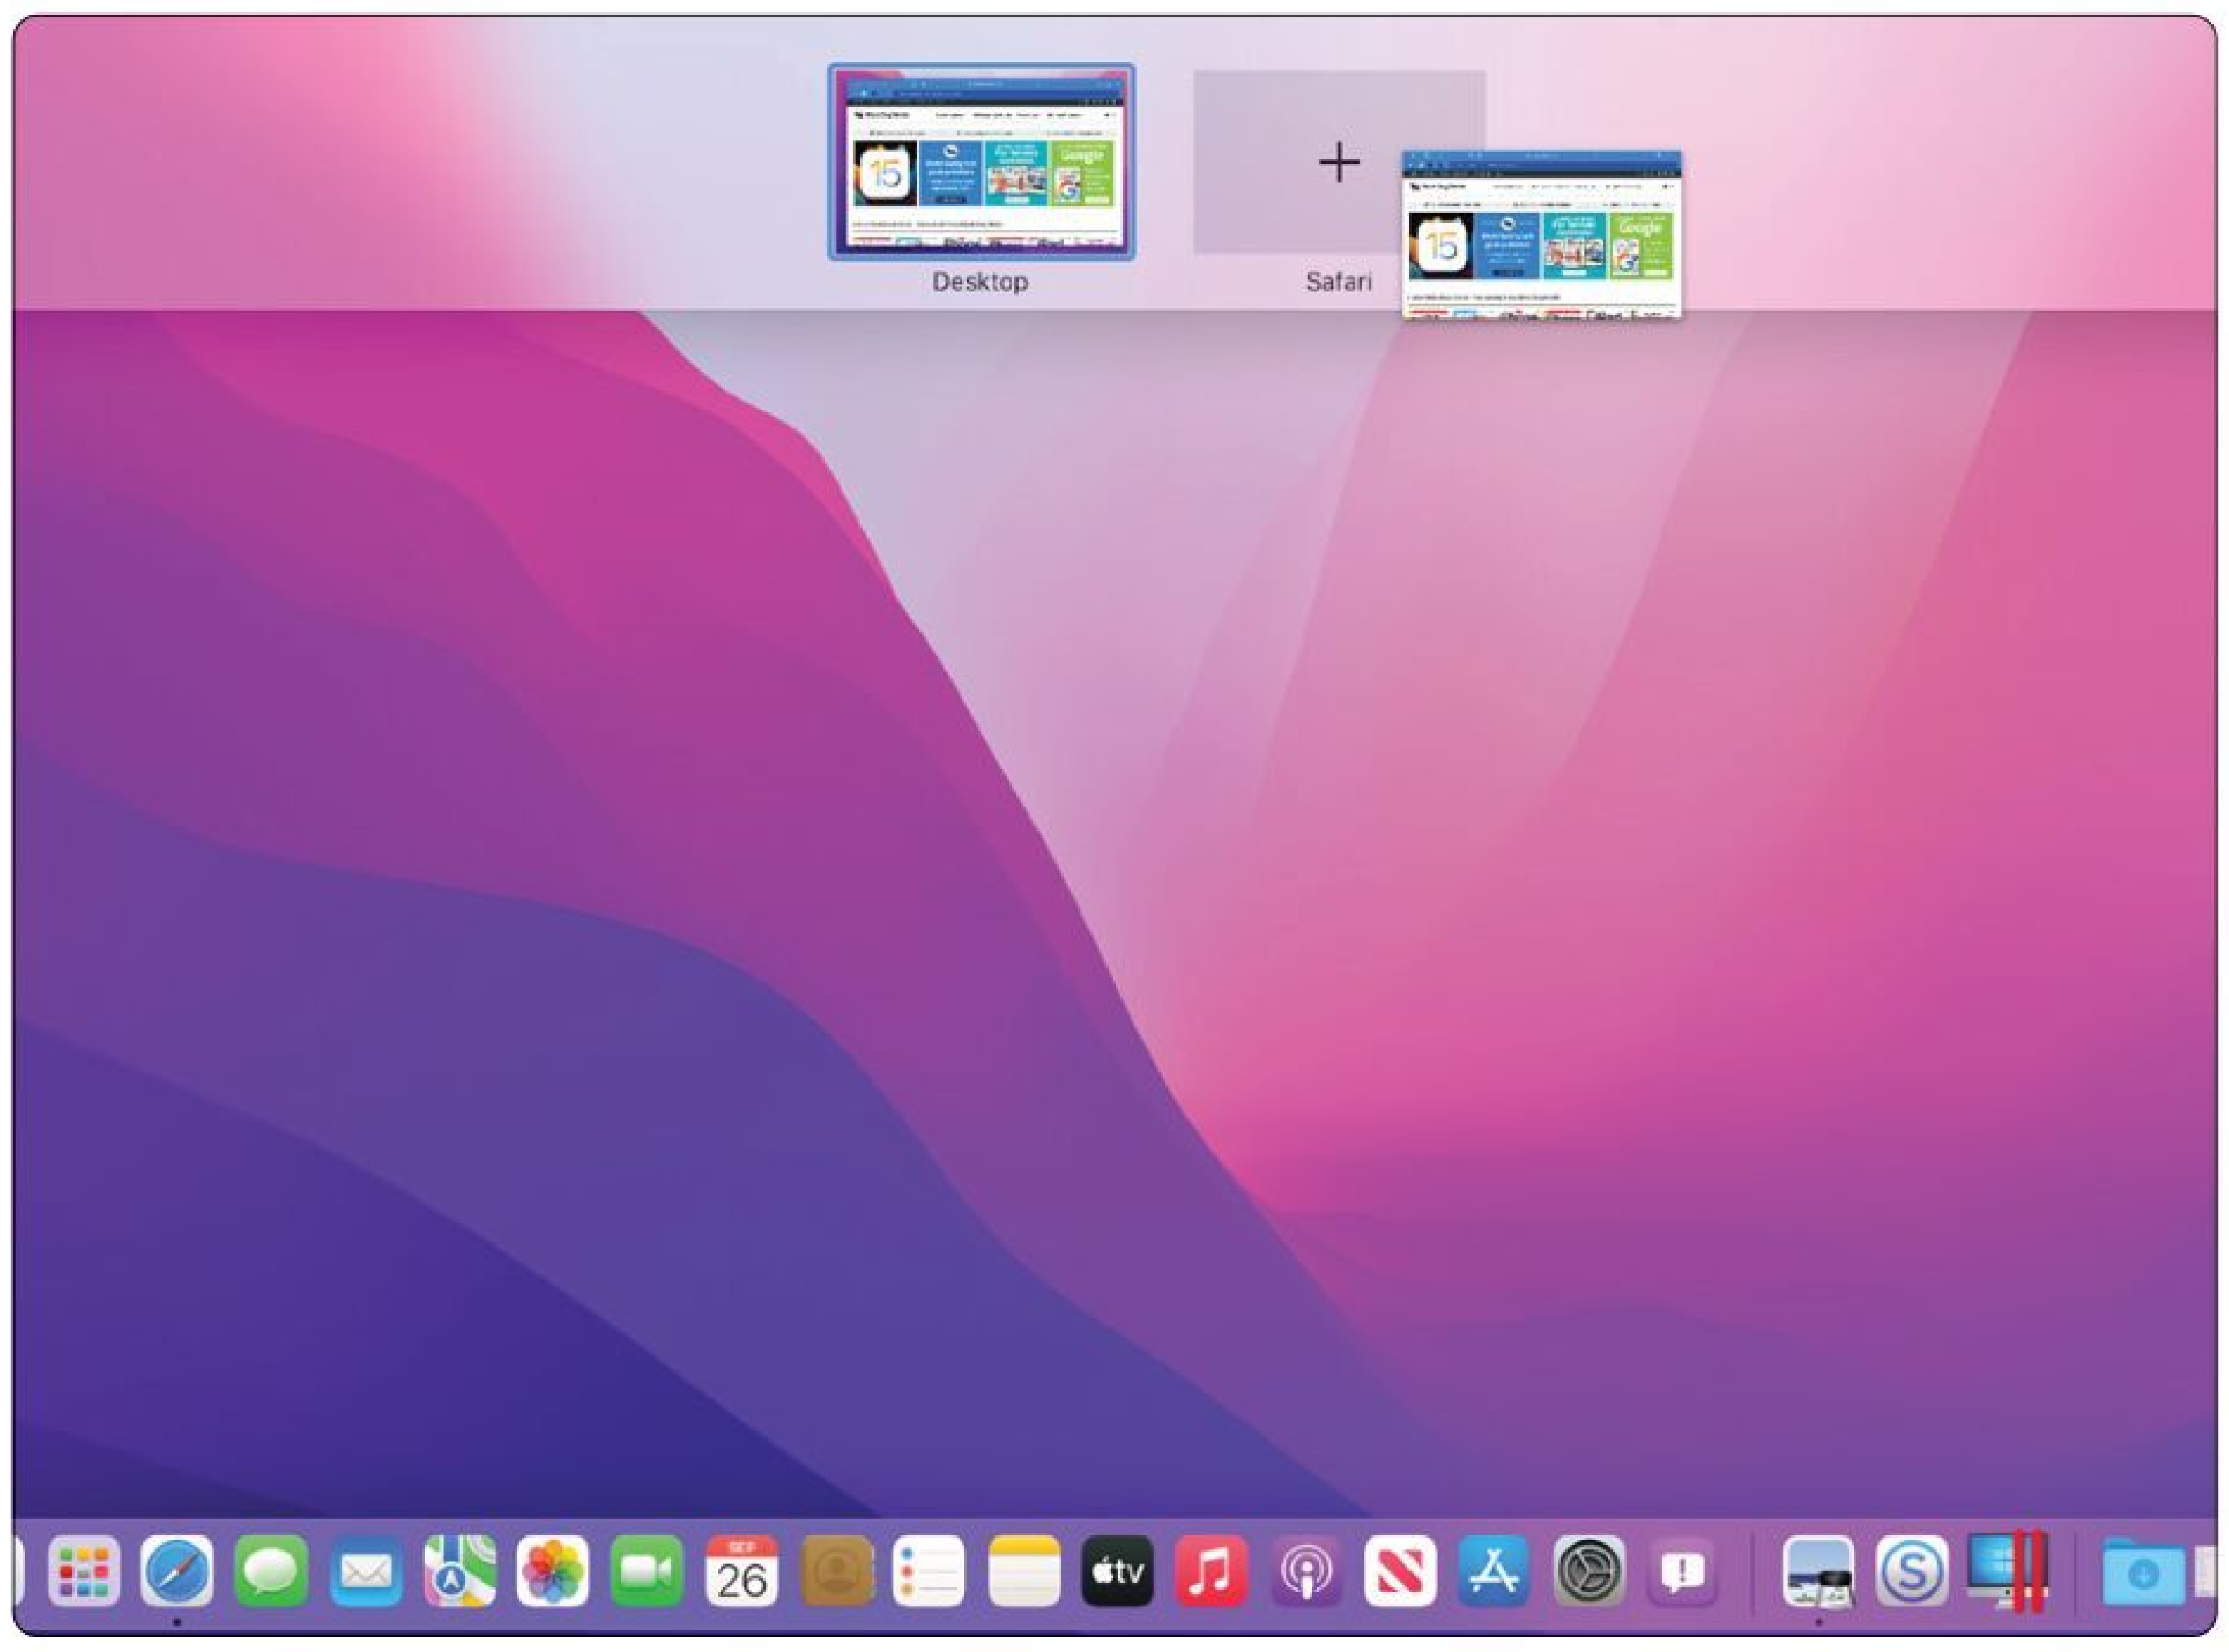
1 To use Split View mode, first open an app you want to use as a split-screen app. Here we've chosen Safari but any app that's compatible will do. Just open the app window; there's no need to open it as a full screen.



Desktop
Safari

2 Click on the window's top bar and drag it upwards, onto the menu bar. A strip appears, offering the current desktop image and a receptacle for the app you're dragging. Drop the window onto the plus sign to make it a full screen app.

Notes on the BDM Website

- Good use of colour. Perhaps we can match the colour of our covers?

5 The two apps now offer a combined icon, which you can see here, labelled 'Safari & Pages'. This is a single desktop, in which both those apps are running, in split view. To open them, click on the icon in the usual way.

6 In Split View mode, you can make full use of the two apps, just as if they were each running singly in full-screen mode. If you wish to allocate one app more space than the other, click and drag the black line that divides them.

7 Another way of setting up is by using the green window expand/decrease size button (located in the upper left of any open window). With an open app, move the mouse pointer over to the green icon. A sub-menu will appear with options. Choose to either Tile the window to the left or right of the display.

8 Once the window has been Tiled to the side of the screen you wanted, simply click on the remaining open app which is now displayed in the other half of the screen. This will expand the app to fill the other half of the screen. Again, you can adjust the split by dragging the divider left or right.

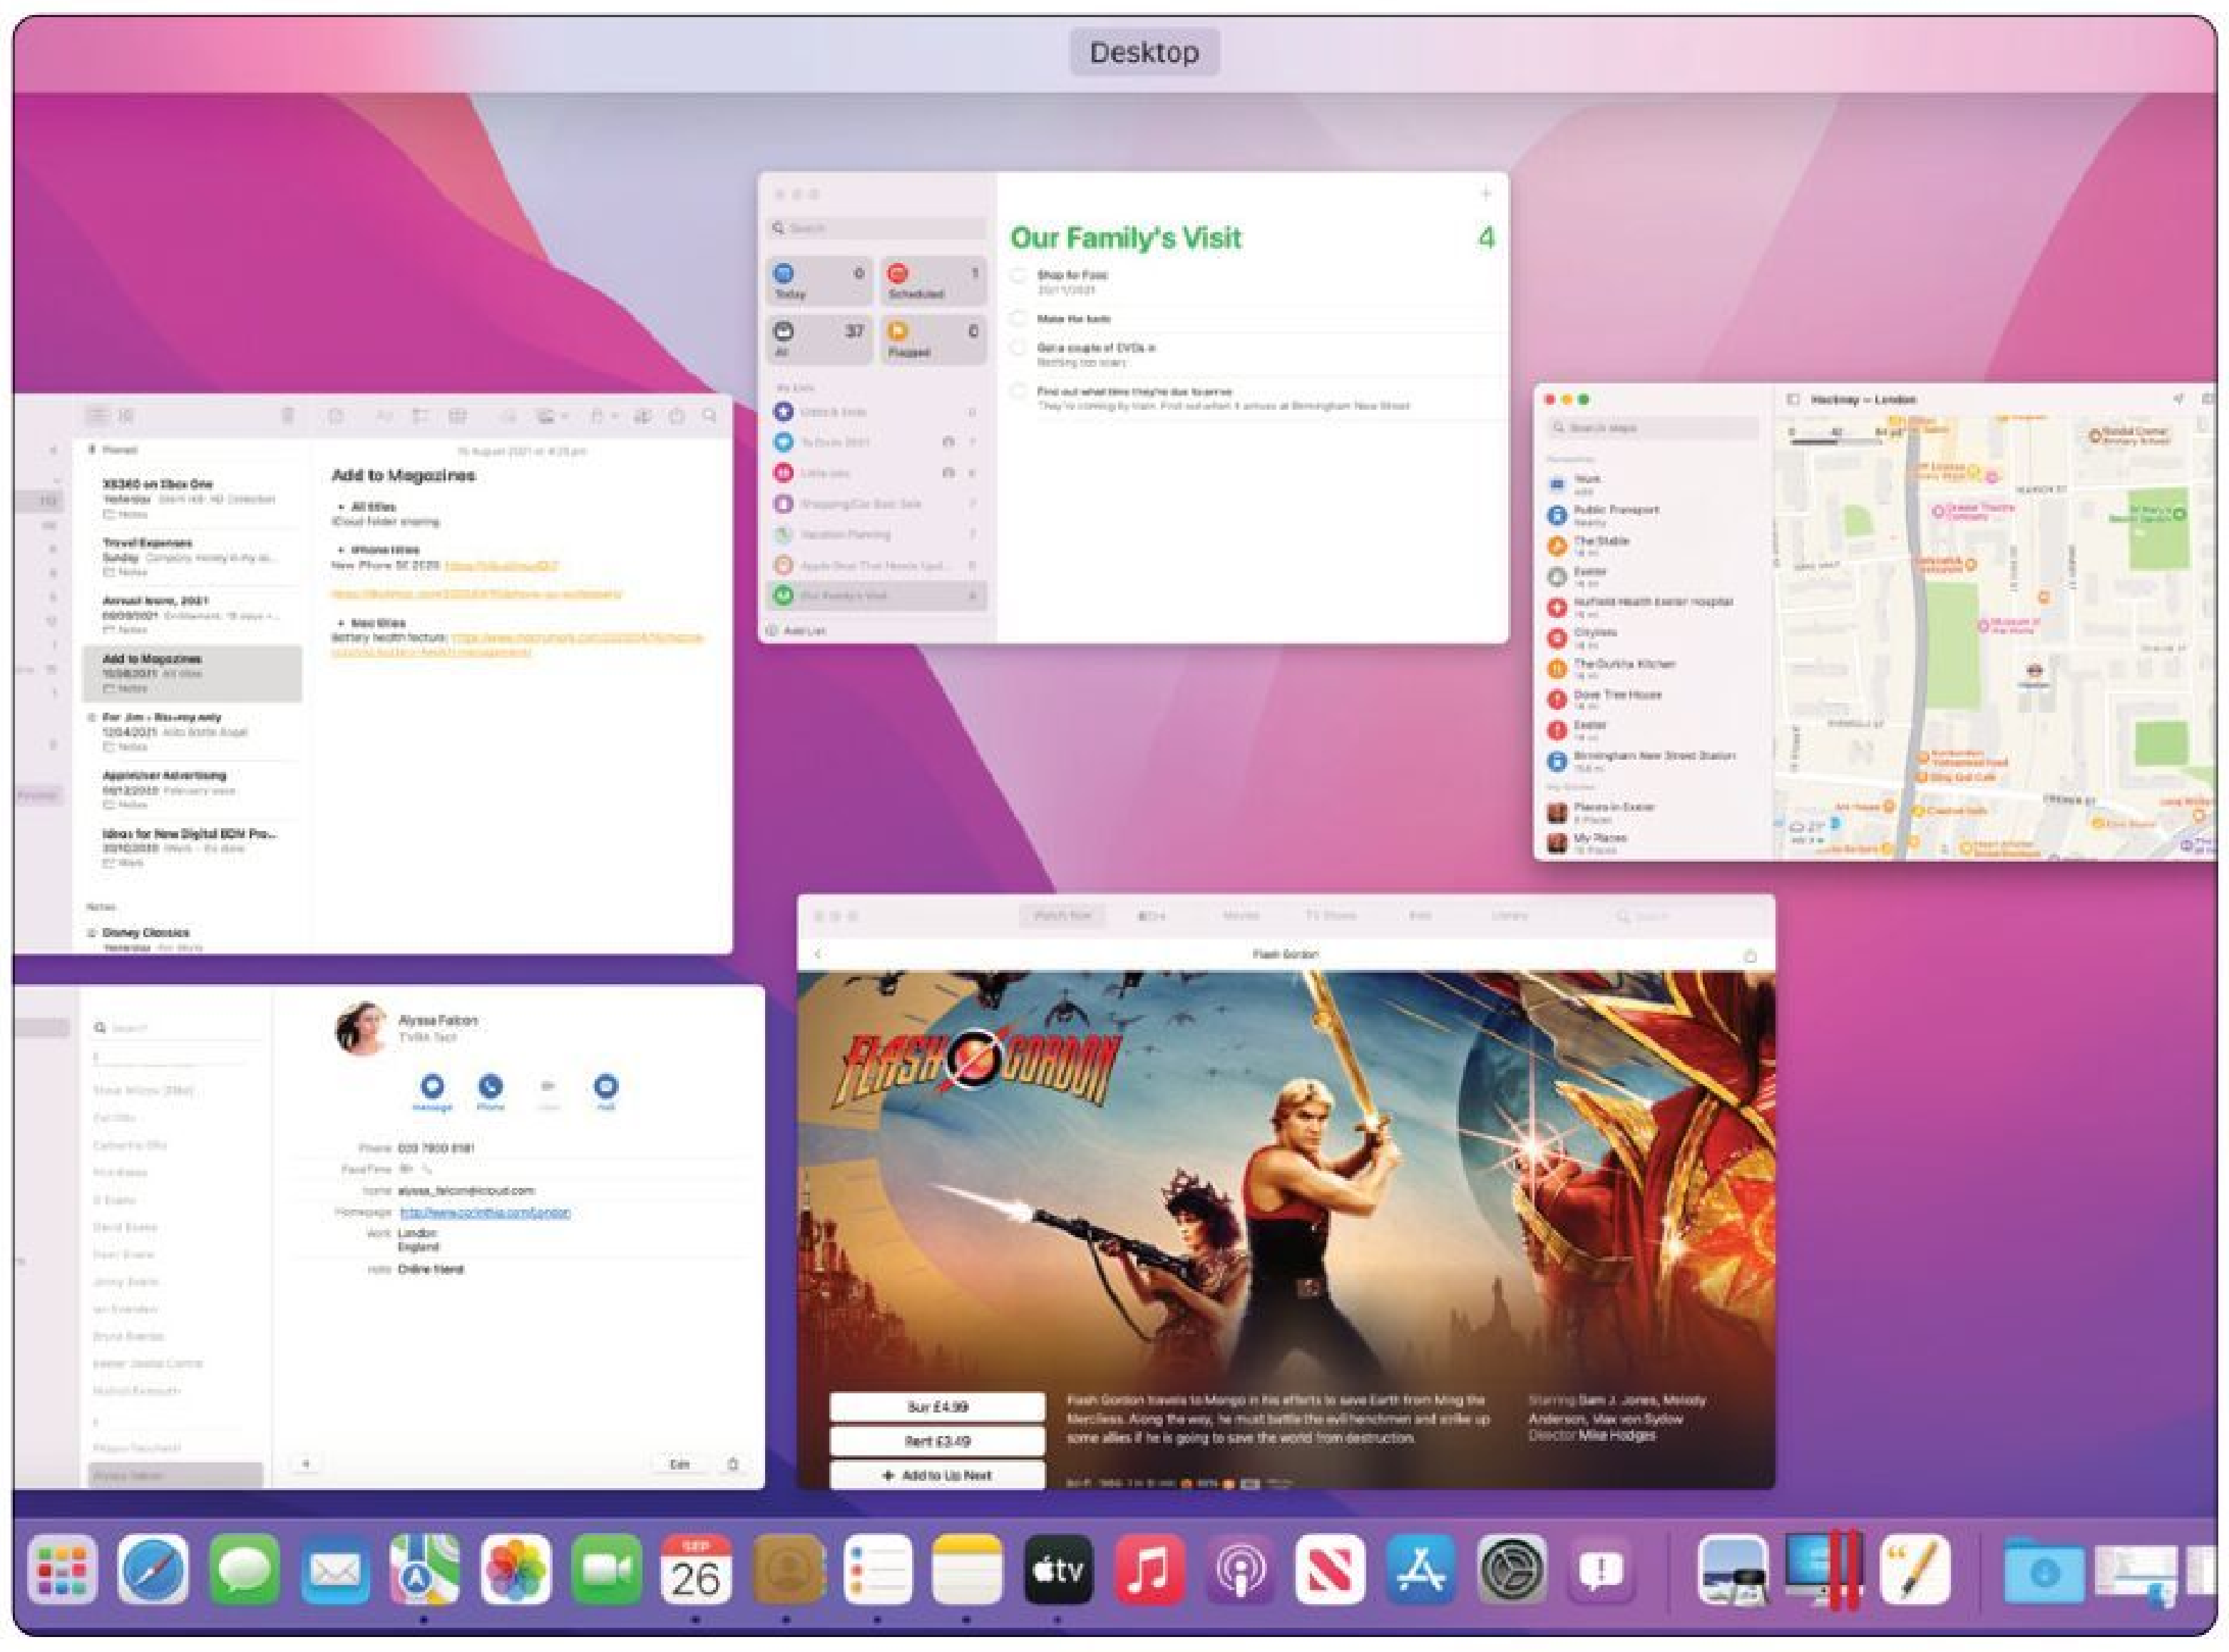
9 To take an app out of full Split View mode, move the pointer to the top of the screen and click on the green gumdrop. Click and hold it to replace the tiled app with a different one, or move the window to the desktop to take it out of full screen mode.

10 A useful trick with split view apps is to open two Finder windows, allowing you to manually compare and copy between two folders. To copy an item (instead of simply moving it) hold alt while you drag an item from one to another.

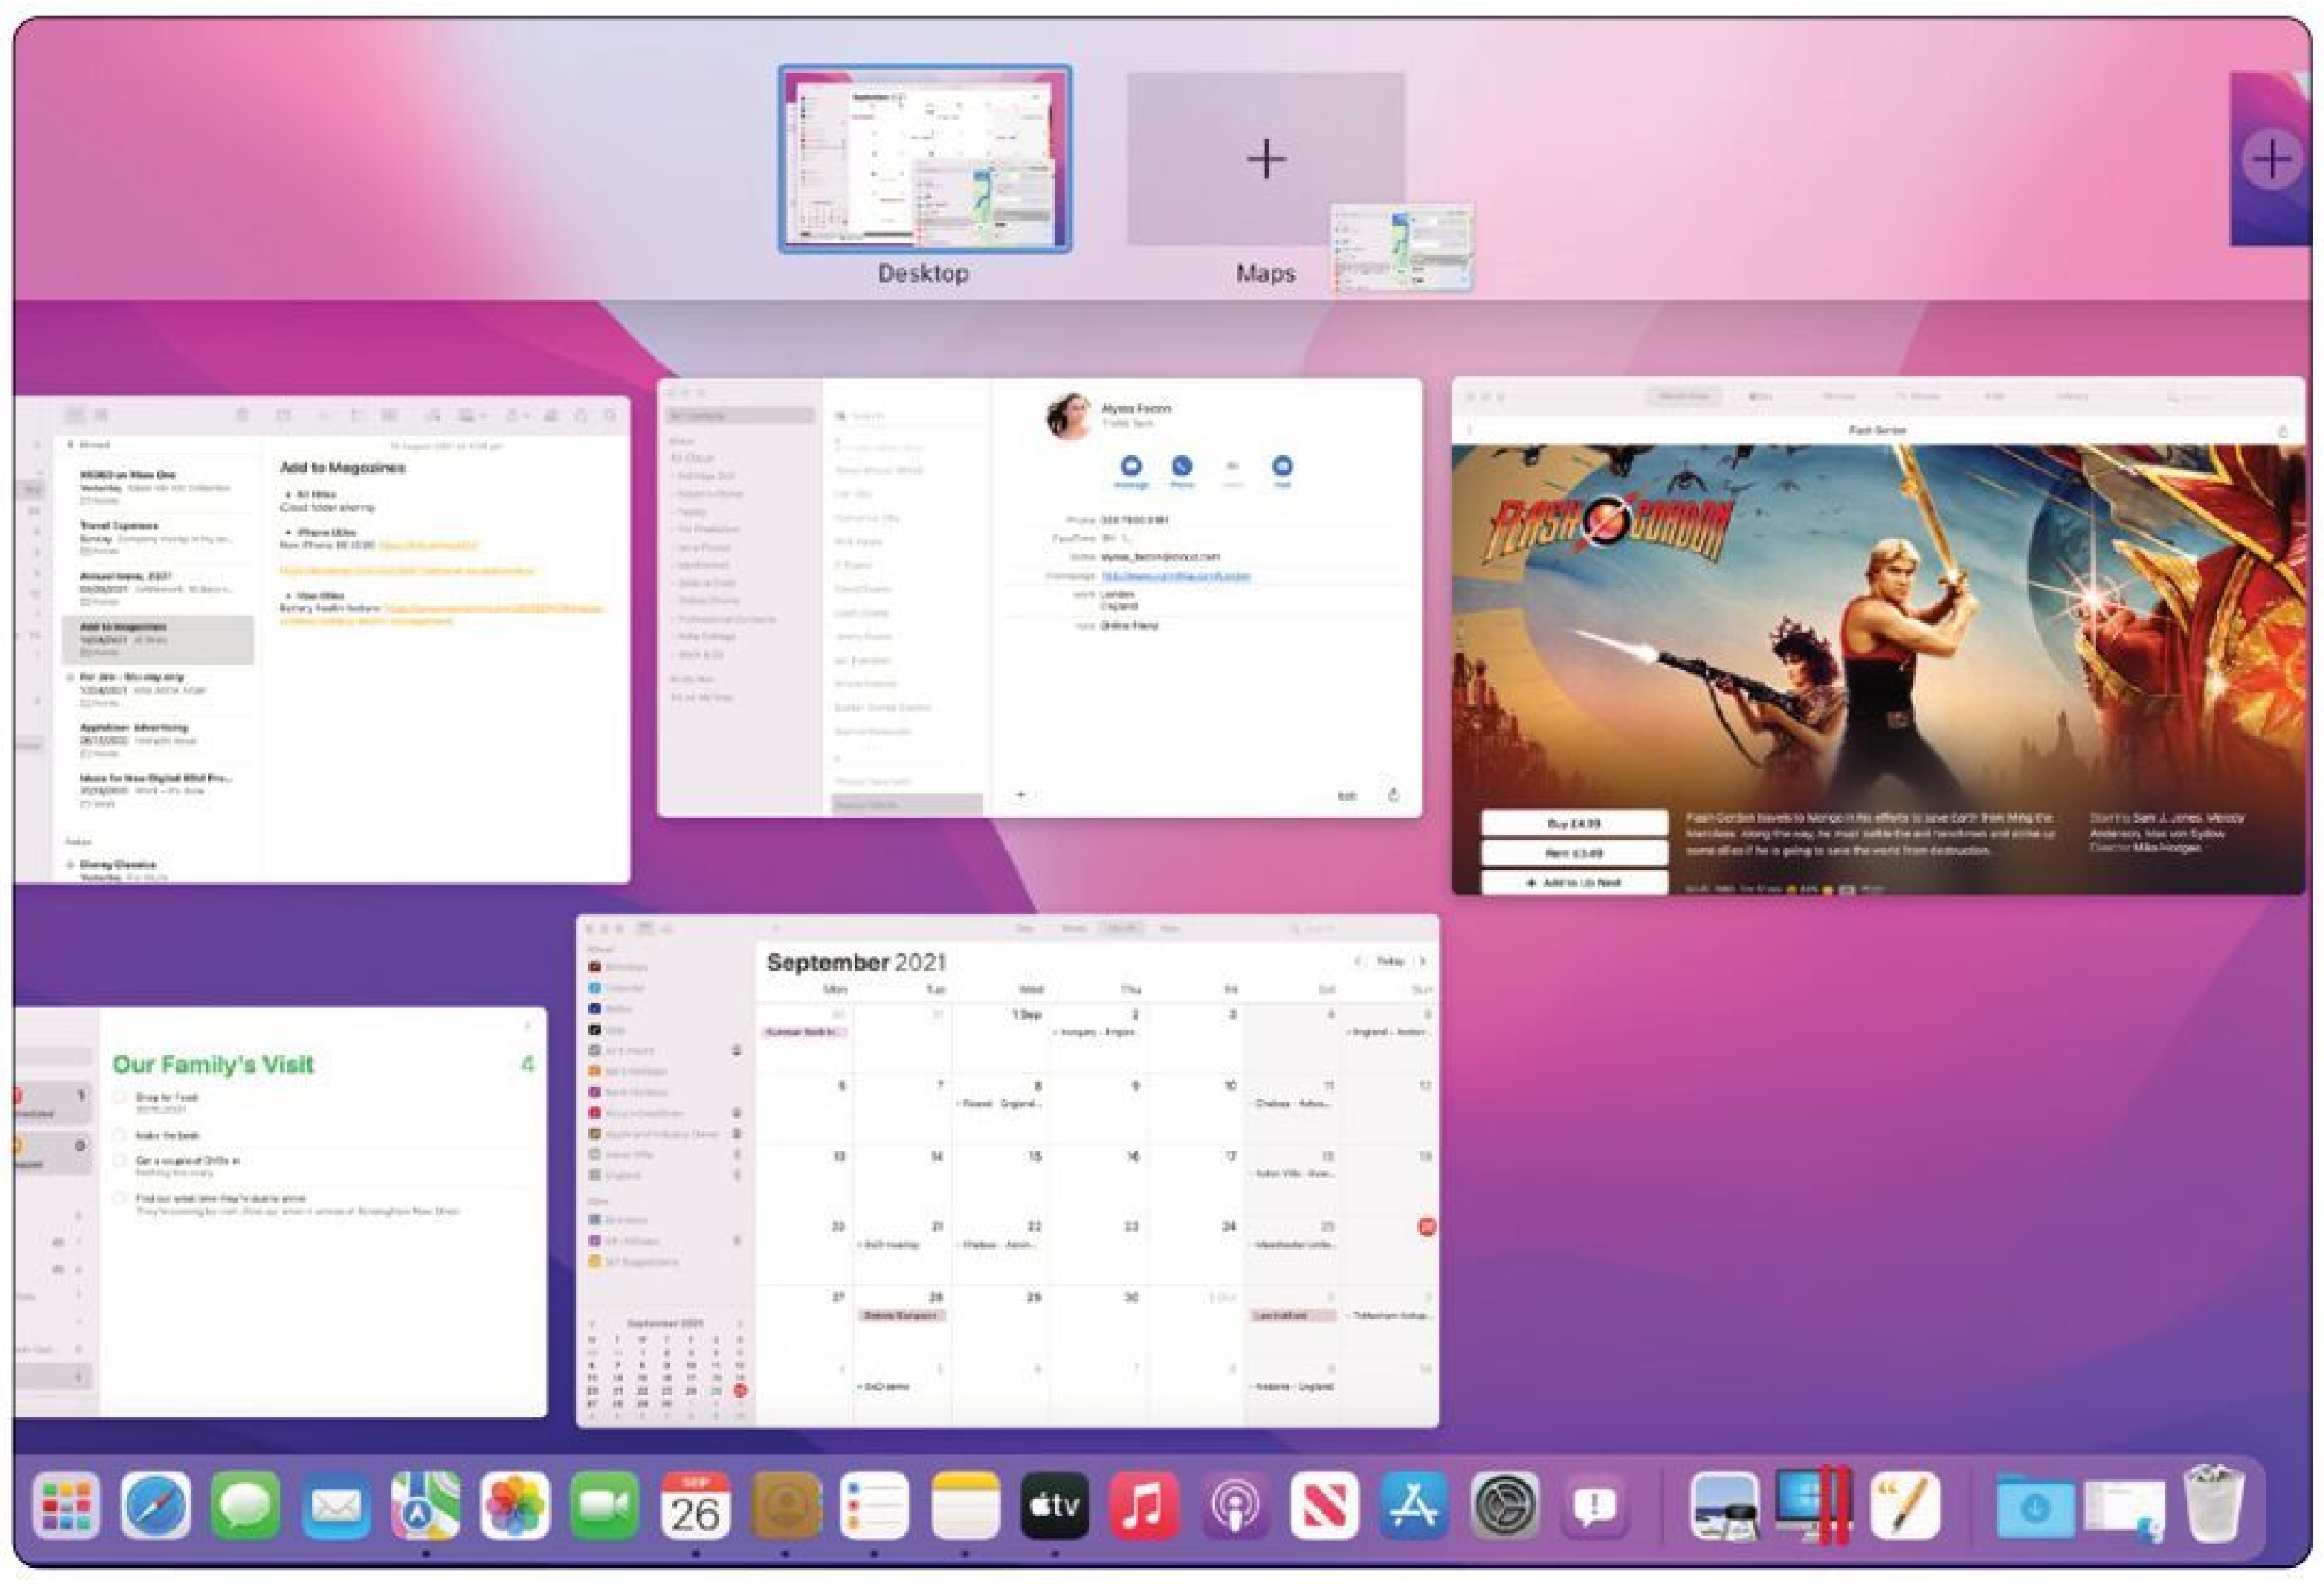
Managing Your Desktop

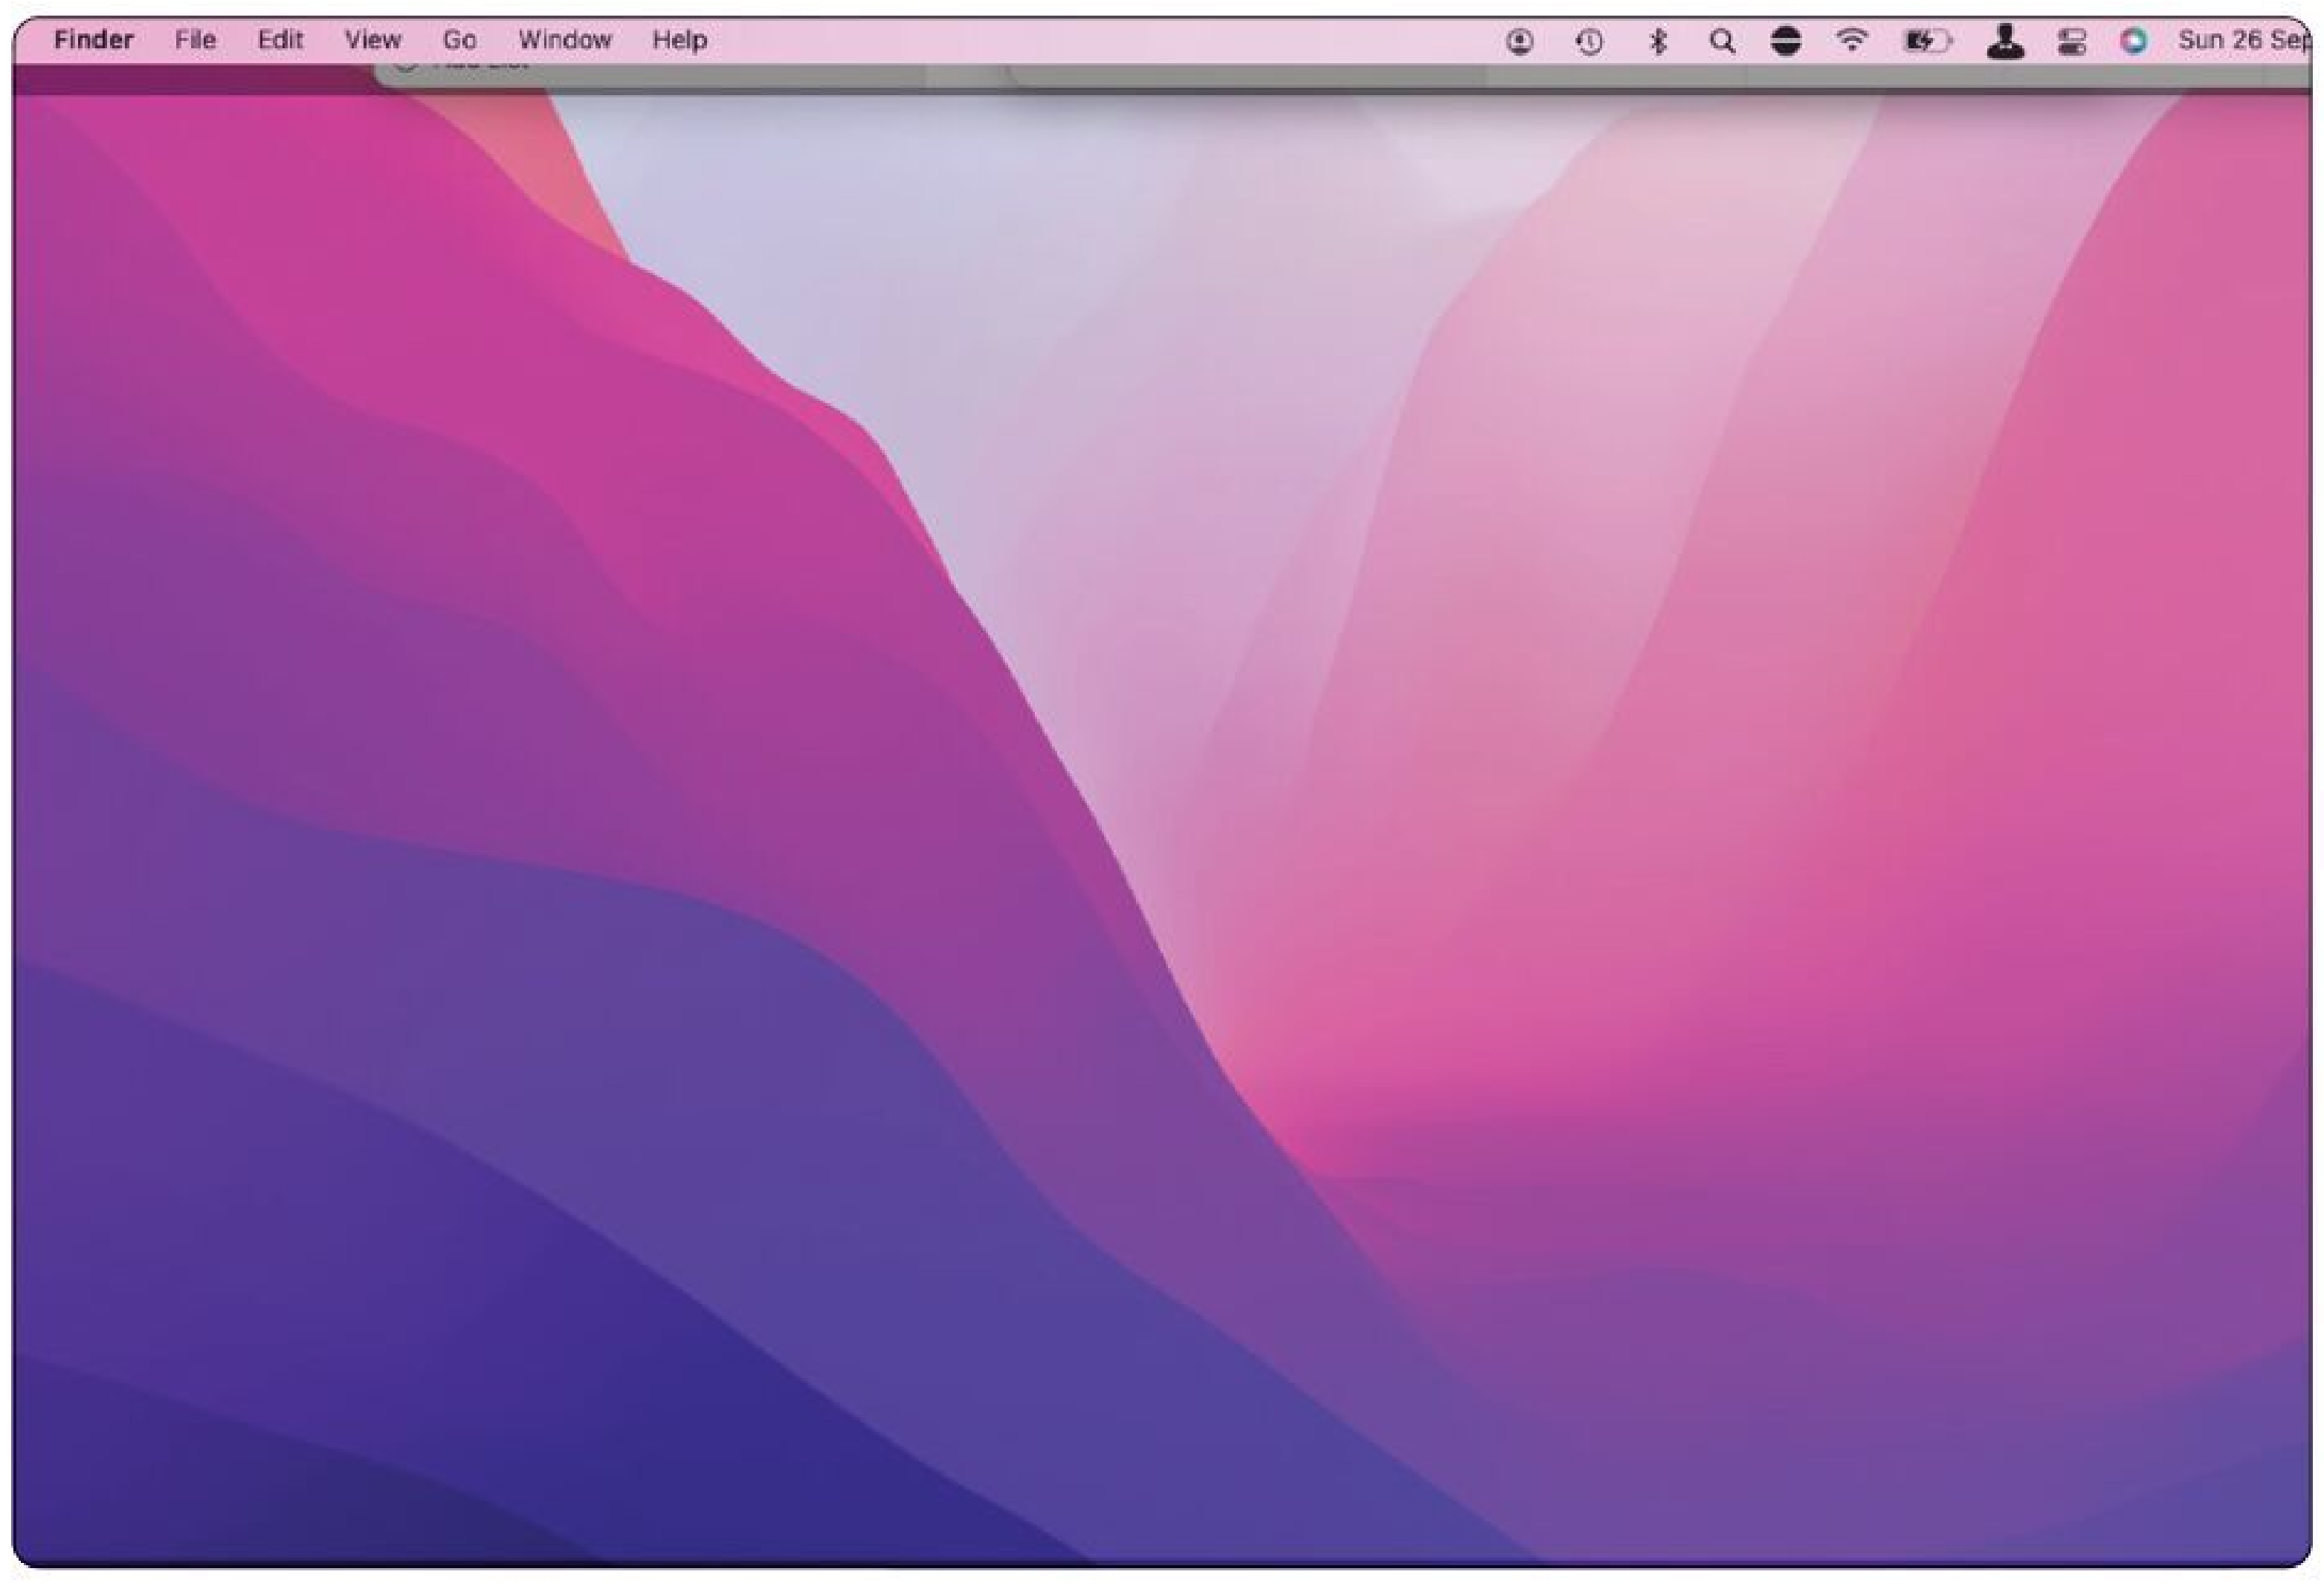
The macOS desktop has evolved considerably over the last decade. With cutting-edge features such as Mission Control and Exposé, you're able to make Monterey not just a personalised workspace but also one that's efficient and helps you get the job done. Here's some tips on managing your desktop.



1 To activate Mission Control, swipe upwards with three fingers on a trackpad or tap the F3 key on your keyboard. This is unchanged from previous versions of the Mac's operating system, unless you've modified the gesture settings yourself.

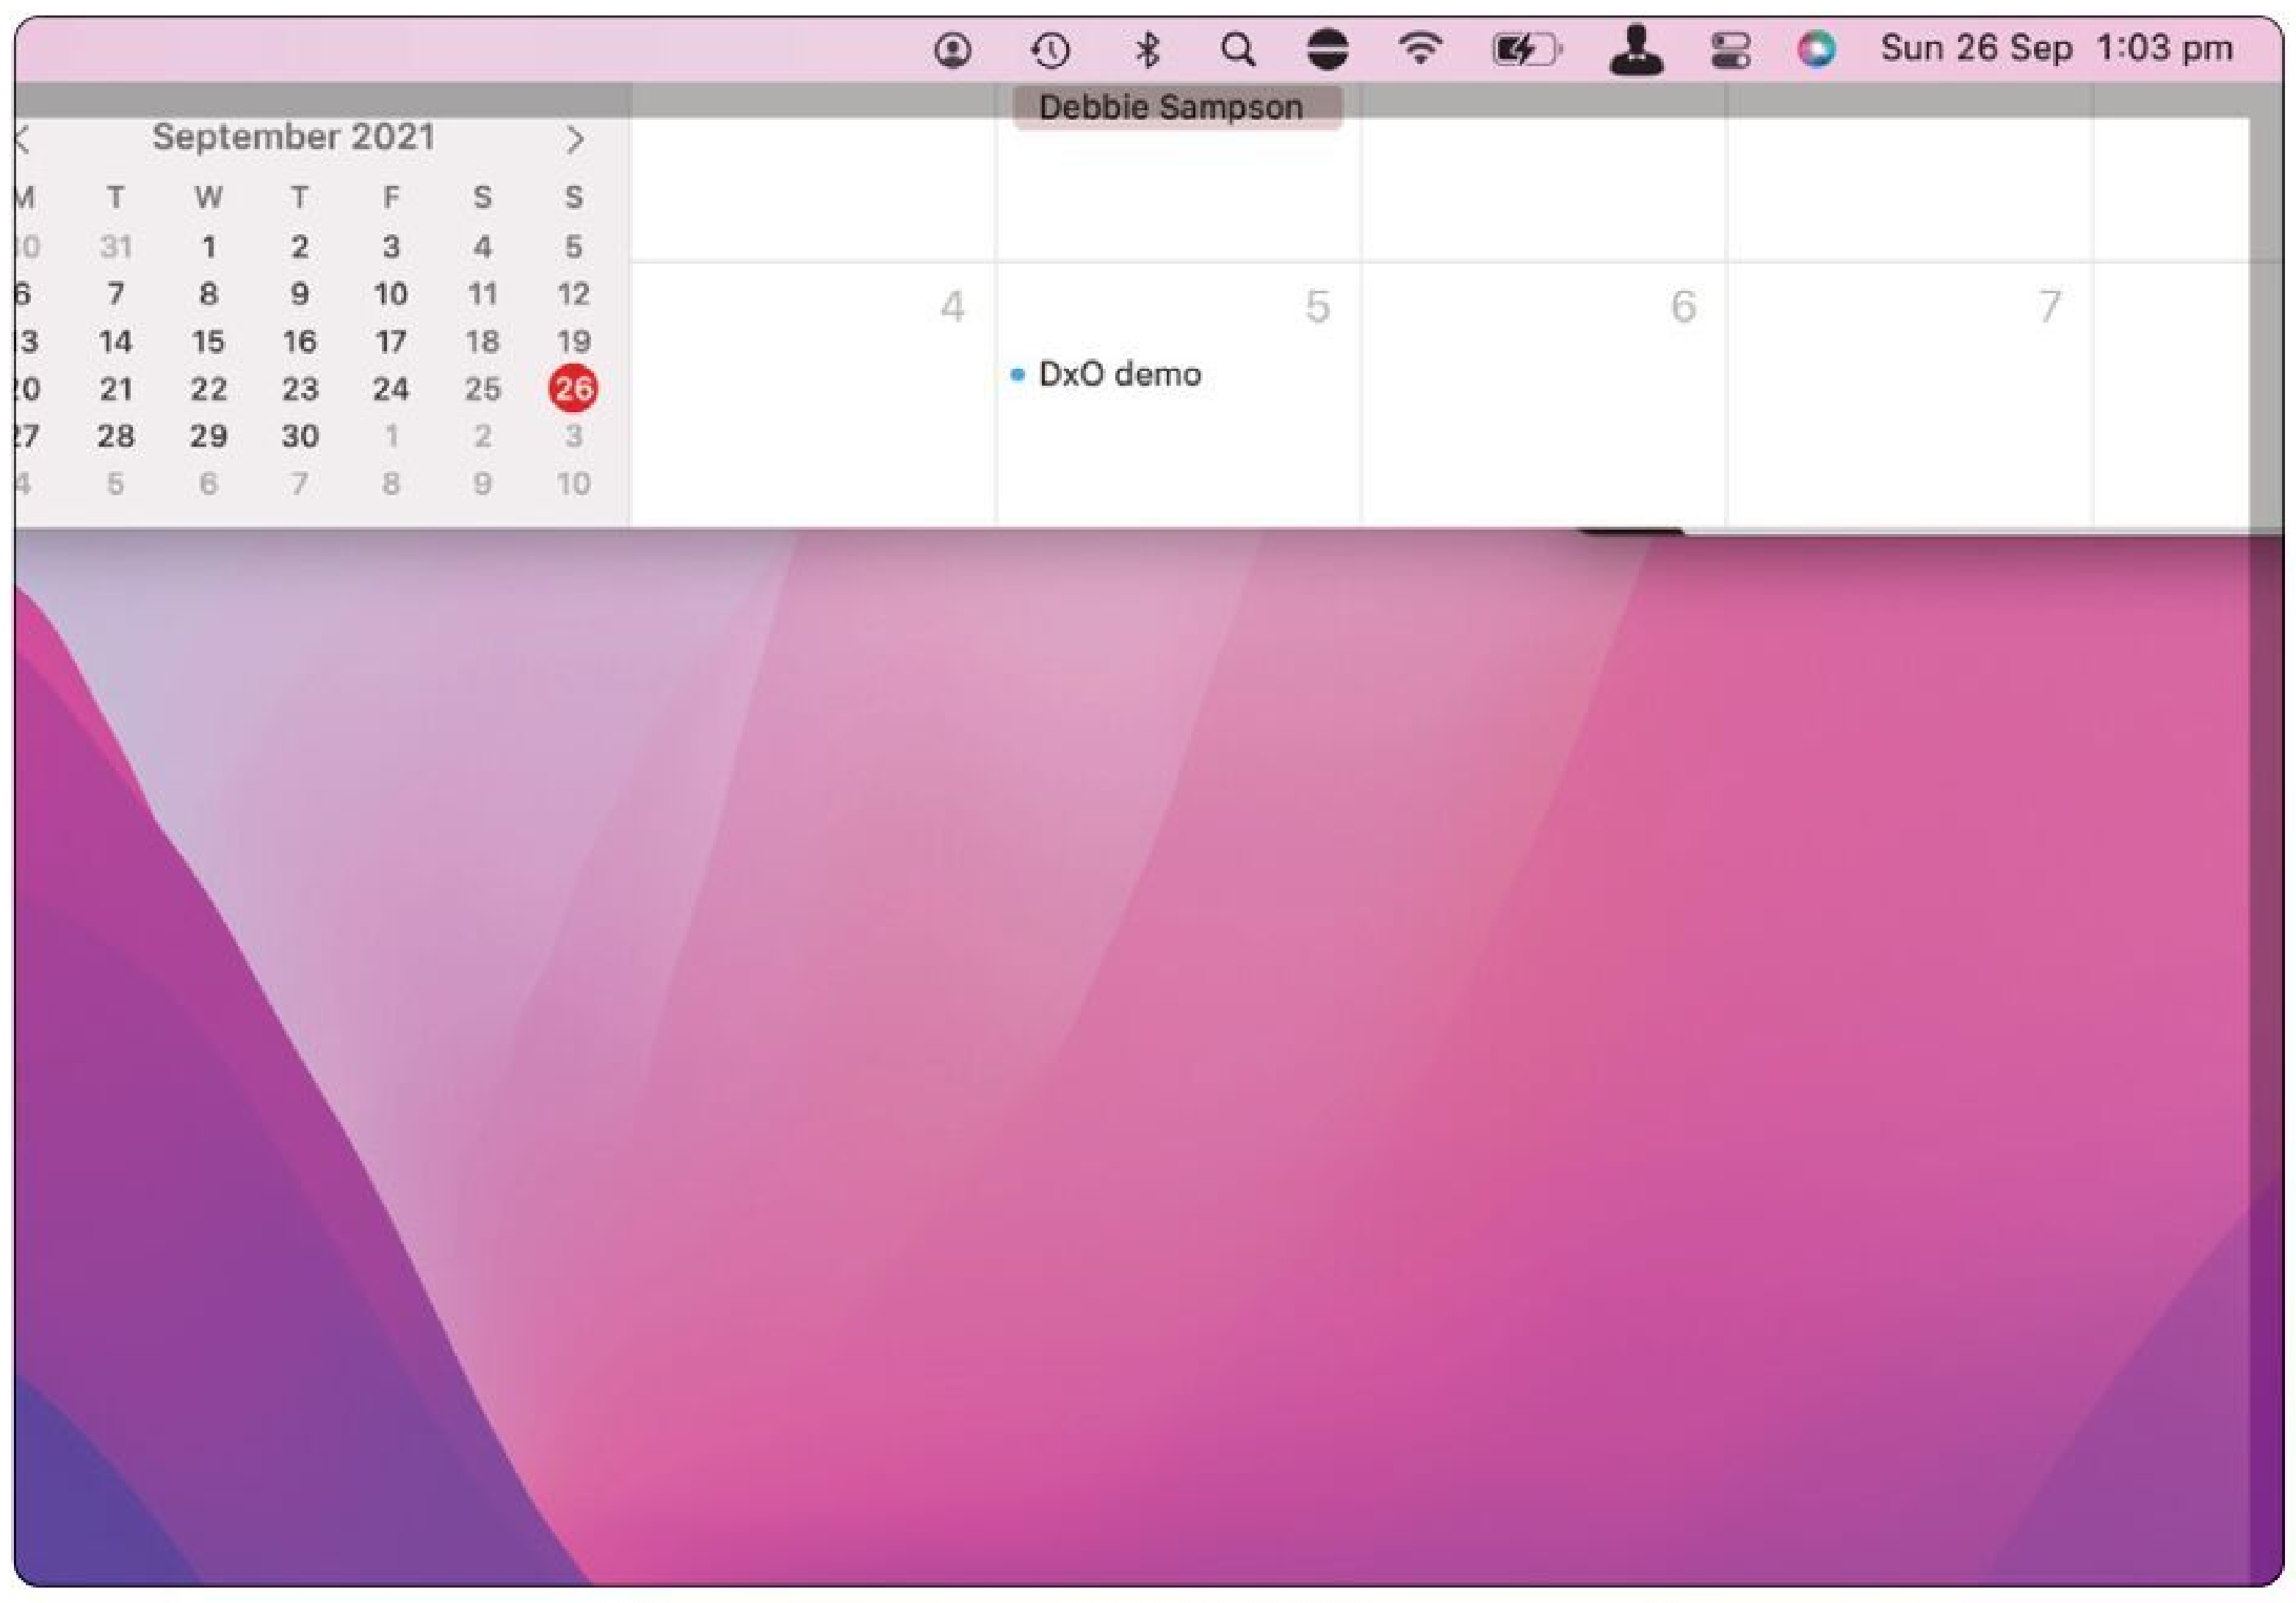
2 Unlike older versions of Mission Control, open windows are presented in a single layer instead of being stacked according to which application produced them. Click on a window to bring its app to the fore.





3 You can open a document or app in full screen from Mission Control simply by dragging its window upwards, onto the strip showing the desktops. You can also create a new desktop space by clicking the plus sign, whether this Spaces bar is open or not.

4 You can still use the Exposé buttons, just like in previous versions of macOS. F3 takes you straight to Mission Control. You can clear the Desktop with Fn-F11 too. Or alternatively, place four fingers on the trackpad and move them away from each other.



Sun 26 Sep 1:03 pm
September 2021
Debbie Sampson
DxO demo

5 To return your apps to the desktop, either click on the edge of the app, as seen in the margins of the desktop while in the Exposé view, or place four fingers on your trackpad and move them towards each other, instead of away from each other or use the Exposé button.

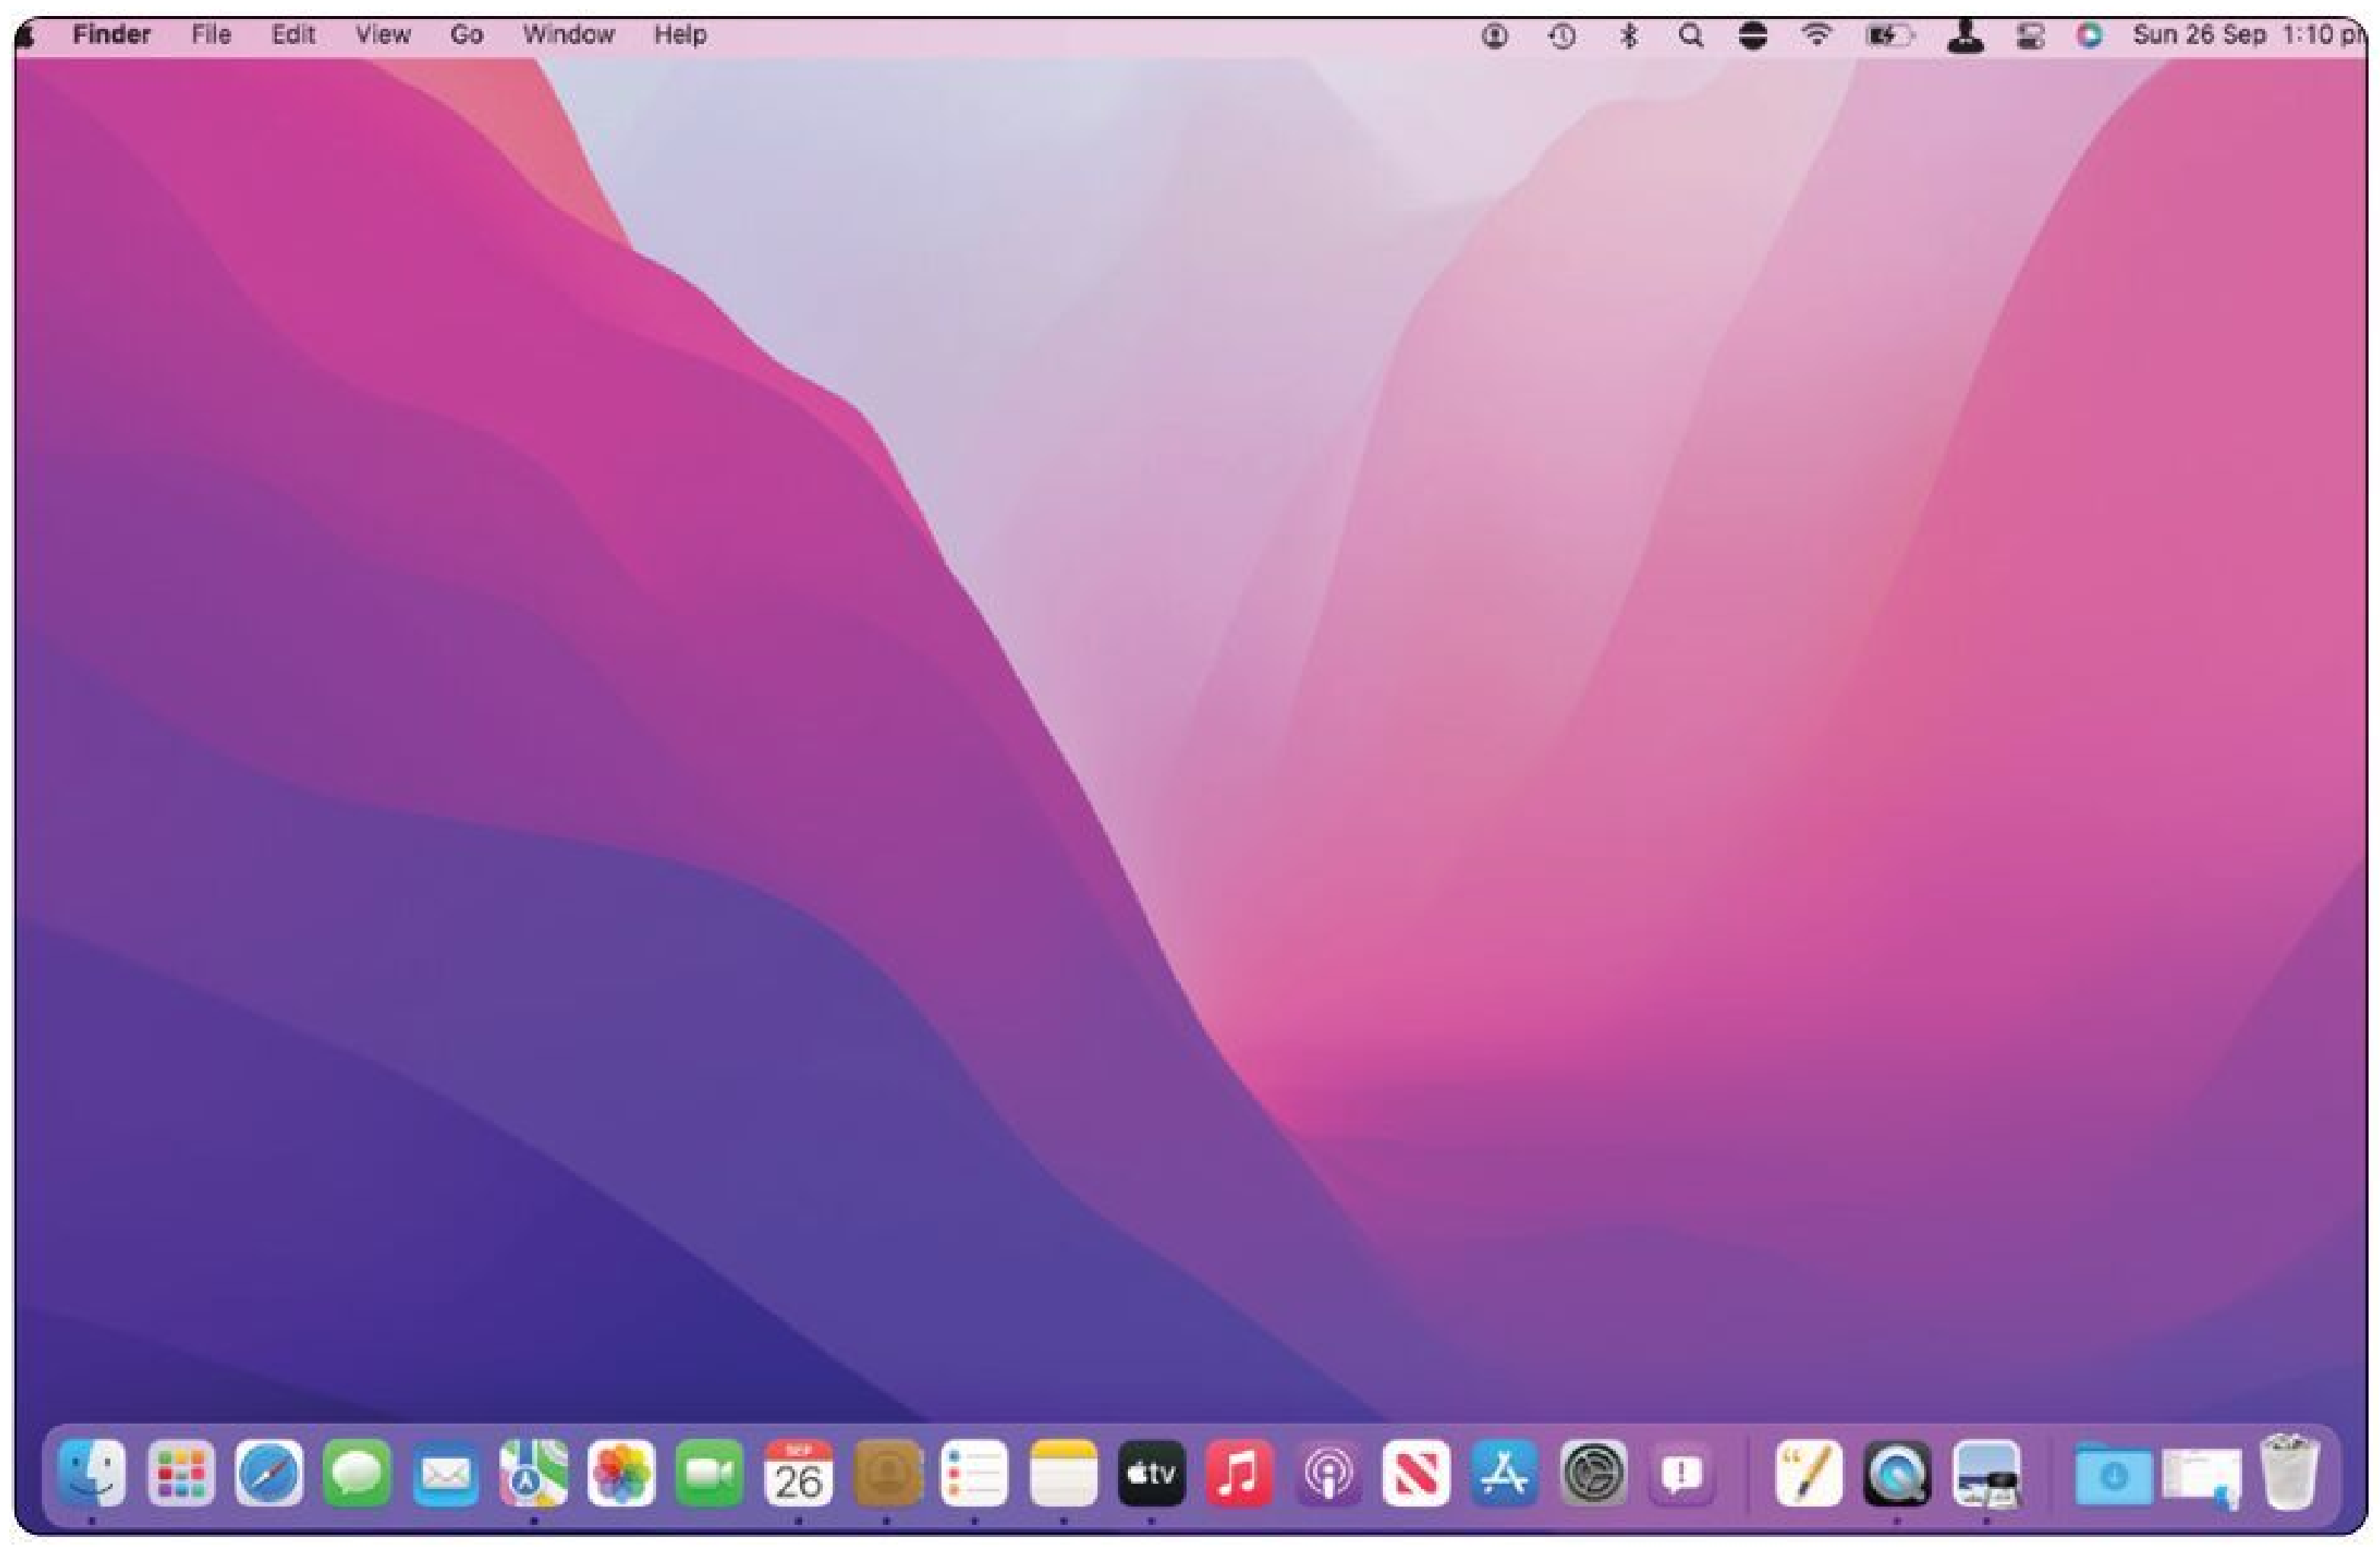
6 You can quickly cycle through the currently open apps on your desktop in macOS by holding the Command key and pressing the Tab key. You can also press 'Q' to quit any of the applications or 'H' to minimise them. This is called the App Switcher, and it's a much underused feature of macOS.



Finder File Edit View Go Window Help
Sun 26 Sep 1:10 pm

7 Regardless of whether you've set your Dock to automatically show and hide, you can quickly open and close it by pressing cmd-alt-D. If it's open, this hides it. If it's closed, the key combination opens it.

10 You can take a screenshot of your desktop by pressing cmd-Shift-3 but if you want a more specific area to screenshot, then try cmd-Shift-4. This will change the cursor into a crosshair, for you to drag a box around the actual area you want instead of the whole screen.

Continuity Feature On Apple Devices

With a Mac running OS X 10.10 or later, and a mobile device with iPadOS or iOS 8 or later installed, your Apple gear works together seamlessly. You can make and receive calls on your Mac, send and receive text messages on any of your devices, and share files between your Mac, iPad, and iOS devices with AirDrop.

1 Instant Hotspot's system requirements are stringent. A Mac must be mid-2012 or newer and running Yosemite or later. To find out when your Mac was made, click on the Apple icon in the top left and select About This Mac. An iOS device must be an iPhone 5 or later, iPad (4th gen) or later, an iPod touch (5th gen) or later or any iPad mini.

2 Make sure your Mac and all the devices you want to use with Instant Hotspot are signed into the same iCloud account. On an iPadOS or iOS device, go to Settings > [Your Name] > iCloud and on a Mac, open System Preferences (under the Apple menu, top left corner or from the Dock) and click on Apple ID > Overview.

3 Make sure your iPhone has a cellular connection to the Internet. You should see a 3G or 4G symbol at the top of the screen. Make sure Personal Hotspot is switched on too. To do this open the Settings app and then open the Mobile Data link. Look for the Personal Hotspot option, and if it isn't on already, switch it on.

1 To send or receive an SMS (Short Message Service) or MMS (Multimedia Messaging Service), from your Mac you must be running Yosemite or later. You also need an iPhone running iOS 8.1 or later. Text messaging from an iPad or iPod touch also demands they be using iOS 8.1 or later.

2 On a Mac, open Messages and in the Messages menu, open Preferences. Click on iMessage, then on Settings and make sure the required numbers and email addresses are enabled. On an iOS device, go to Settings > Messages > Send & Receive and again enter your Apple ID if necessary.

3 Finally, on your iPhone, you must go to Settings > Messages and turn on Text Message Forwarding. Tap on this option, and you're shown a list of devices logged into the same iCloud account. Switch on all the ones with which you want to share your text messages. Each device displays a verification code you must type on your iPhone.

Thanks, I was wondering what would happen in the snooker

Hi Ian, are you all set for tomorrow?

I'm packed and ready, picking you up at 4pm.

4 All your SMS and MMS messages now appear on your Mac and/or iOS devices, regardless of whether the person who sent them uses an iPhone. If the sender is using a non-Apple device, the speech bubbles you send are green instead of the blue that's used for iMessages, that is, messages sent between Apple devices.

Which side are you cheering for in the football?

Didn't even know there was a match on 😀 I guess England (unless the missus asks, then its definitely Denmark...)

Well, we're a goal down and have had Maguire sent off, so it's looking good for her.

I was gonna say Denmark don't have a great record playing against England, but a man and a goal down at this point isn't looking good for us. I'm sure I'll hear the cheering outside if the Danes hold out

I'm going to send you a web article in about 15 minutes. Can you upload it as a priority? It's about a new Apple service that launches today.

The article is in the Website folder, and is called Apple One Arrives. If you could put it up as soon as possible, I'd be grateful. LMK when it's there so I can tweet and FB it.

5 Sending text messages through your Mac is incredibly convenient, especially for long messages. It's great for replying too – you can just use whichever device is nearest. If you're working on your Mac, you get to read and reply to your text messages without even reaching for your phone.

6 You can initiate a text message chat regardless of whether the other person uses an Apple device by clicking a phone number or Message icon in Safari, Contacts or Calendar. Here, in Contacts, click on the icon and select a number from the pop-up. A message window soon appears.

Universal Clipboard
Copy and Share

Universal Clipboard is a great way to shuttle small sections of data between Mac and iOS devices; as long as the Macs are running at least macOS Sierra, and iOS devices are on iOS 10 or later (including iPadOS), and all your devices are signed into the same Apple account. Here's a guide to copying on one device and pasting to another using Macs and iOS devices.

4 You can copy text from your device running iPadOS, or iOS 10 or later, and paste it on your Mac using cmd-V. It works for images and video too. We copied this photo from Safari on our iPad and pasted it into TextEdit on our Mac.

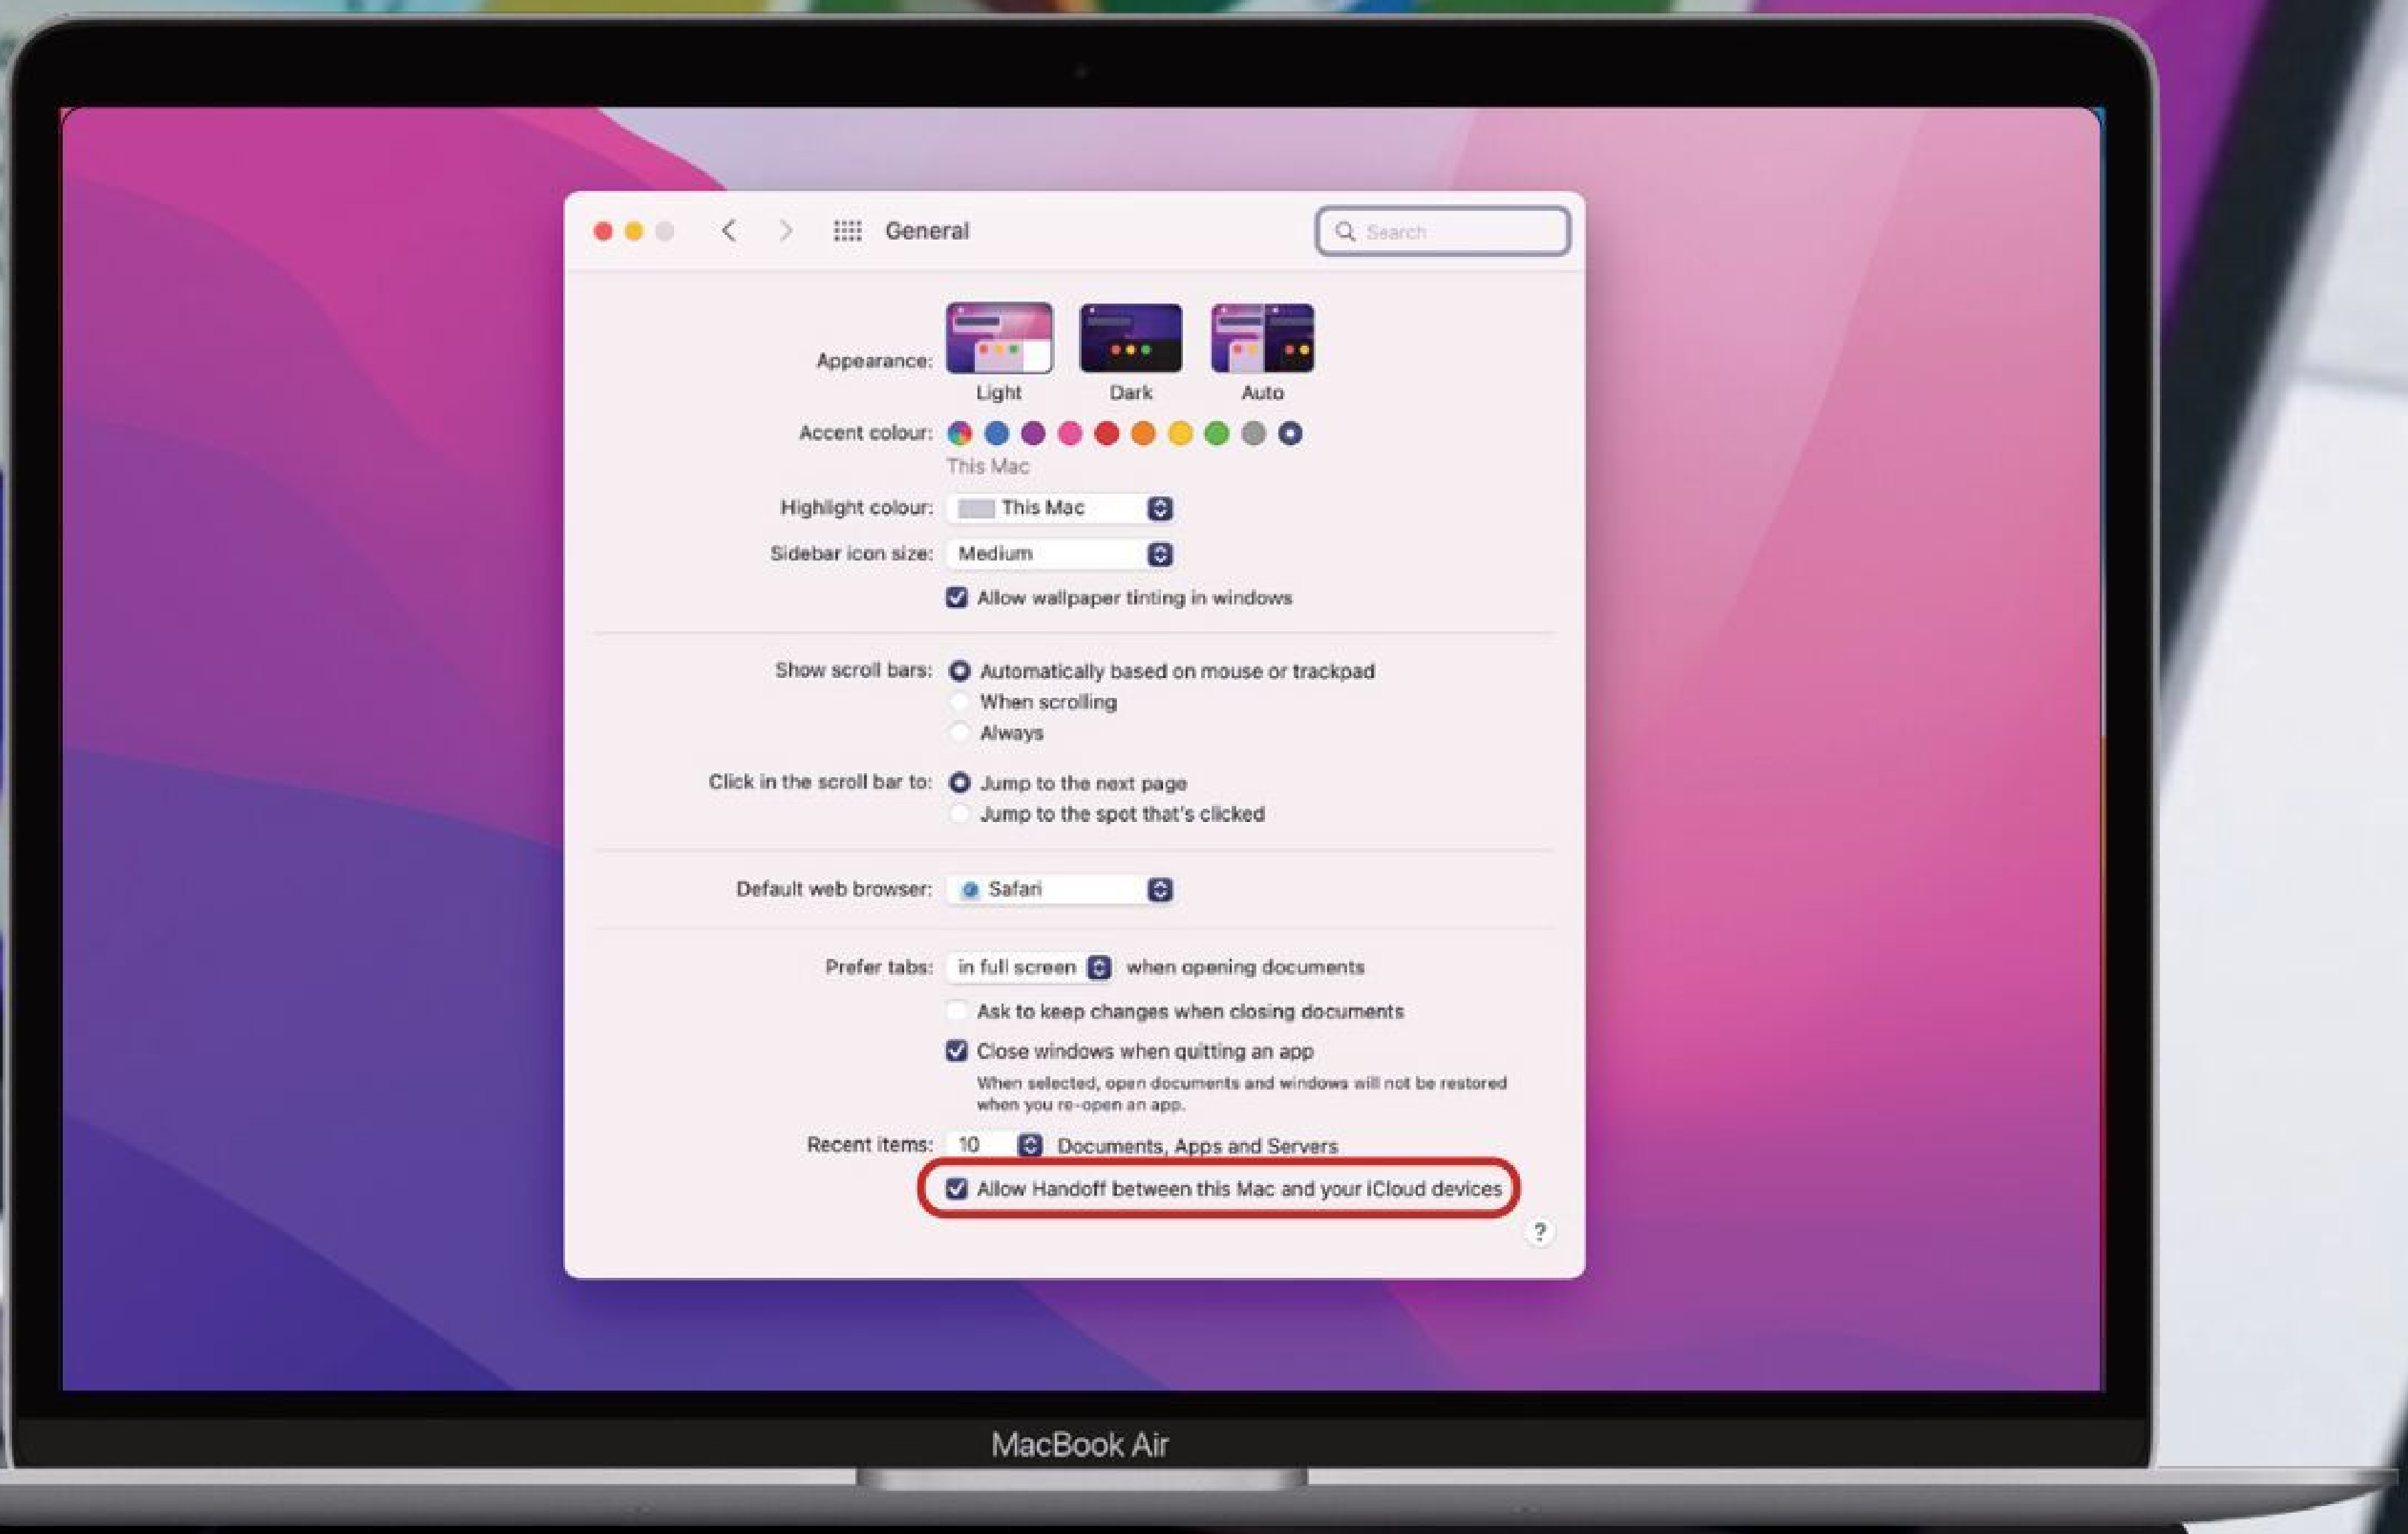
Universal Control On Macs and iPads

Universal Control is a new Continuity feature that lets you use a Mac and an iPad side by side; using your Mac's keyboard and mouse/trackpad. You can control up to three computers and tablets with one set of input devices.

Universal Control is available with compatible Macs and iPads running macOS Monterey and iPadOS 15 respectively. They have to be signed into the same iCloud account, and both must have Wi-Fi and Bluetooth switched on.

When using Universal Control, you can drag your Mac's pointer off the Mac's screen and onto the iPad's screen, and then operate the iPad with the keyboard and mouse/trackpad from your Mac. Unlike Sidecar, Apple's earlier Continuity feature that let you use your iPad as a second screen for your Mac, Universal Control lets you use your iPad's own apps and features, and even drag files between your computer and your tablet.

Here's how to set up and use Universal Control.



Appearance:
Accent colour: This Mac
Highlight colour: This Mac
Sidebar icon size: Medium
☑ Allow wallpaper tinting in windows
Show scroll bars: ● Automatically based on mouse or trackpad
○ When scrolling
○ Always
Click in the scroll bar to: ● Jump to the next page
○ Jump to the spot that's clicked
Default web browser: Safari
Prefer tabs: in full screen when opening documents
☐ Ask to keep changes when closing documents
☑ Close windows when quitting an app
When selected, open documents and windows will not be restored when you re-open an app.
Recent items: 10 Documents, Apps and Servers
☑ Allow Handoff between this Mac and your iCloud devices

On Your Mac

- Open System Preferences from the Apple menu (top left), and click General.
- Switch on 'Allow Handoff between this Mac and your iCloud devices' by clicking the box next to this option.

Using Universal Control

Having set up Universal Control, place your iPad next to your Mac. With your Mac's mouse or trackpad (on a desktop or notebook Mac), move your pointer off the screen. A bar appears showing a connection with your iPad has been made. Continue moving your pointer until it appears on your iPad. You can then use your pointer to open and close apps, click links, drag files between your iPad to your Mac and more; while your keyboard can type in text fields on your iPad. To return control to your Mac, just move your pointer back onto the Mac's screen again. It works with up to three devices, so add another if you wish.

System Requirements

- **Macs**

MacBook Pro (2016 and later)
MacBook (2016 and later)
MacBook Air (2018 and later)
iMac (2017 and later)
iMac (5K Retina 27-inch, Late 2015)

Handoff: ●

iCloud account. The app you need appears in the app switcher and in the Dock on a Mac.

Cursor and Keyboard: ●

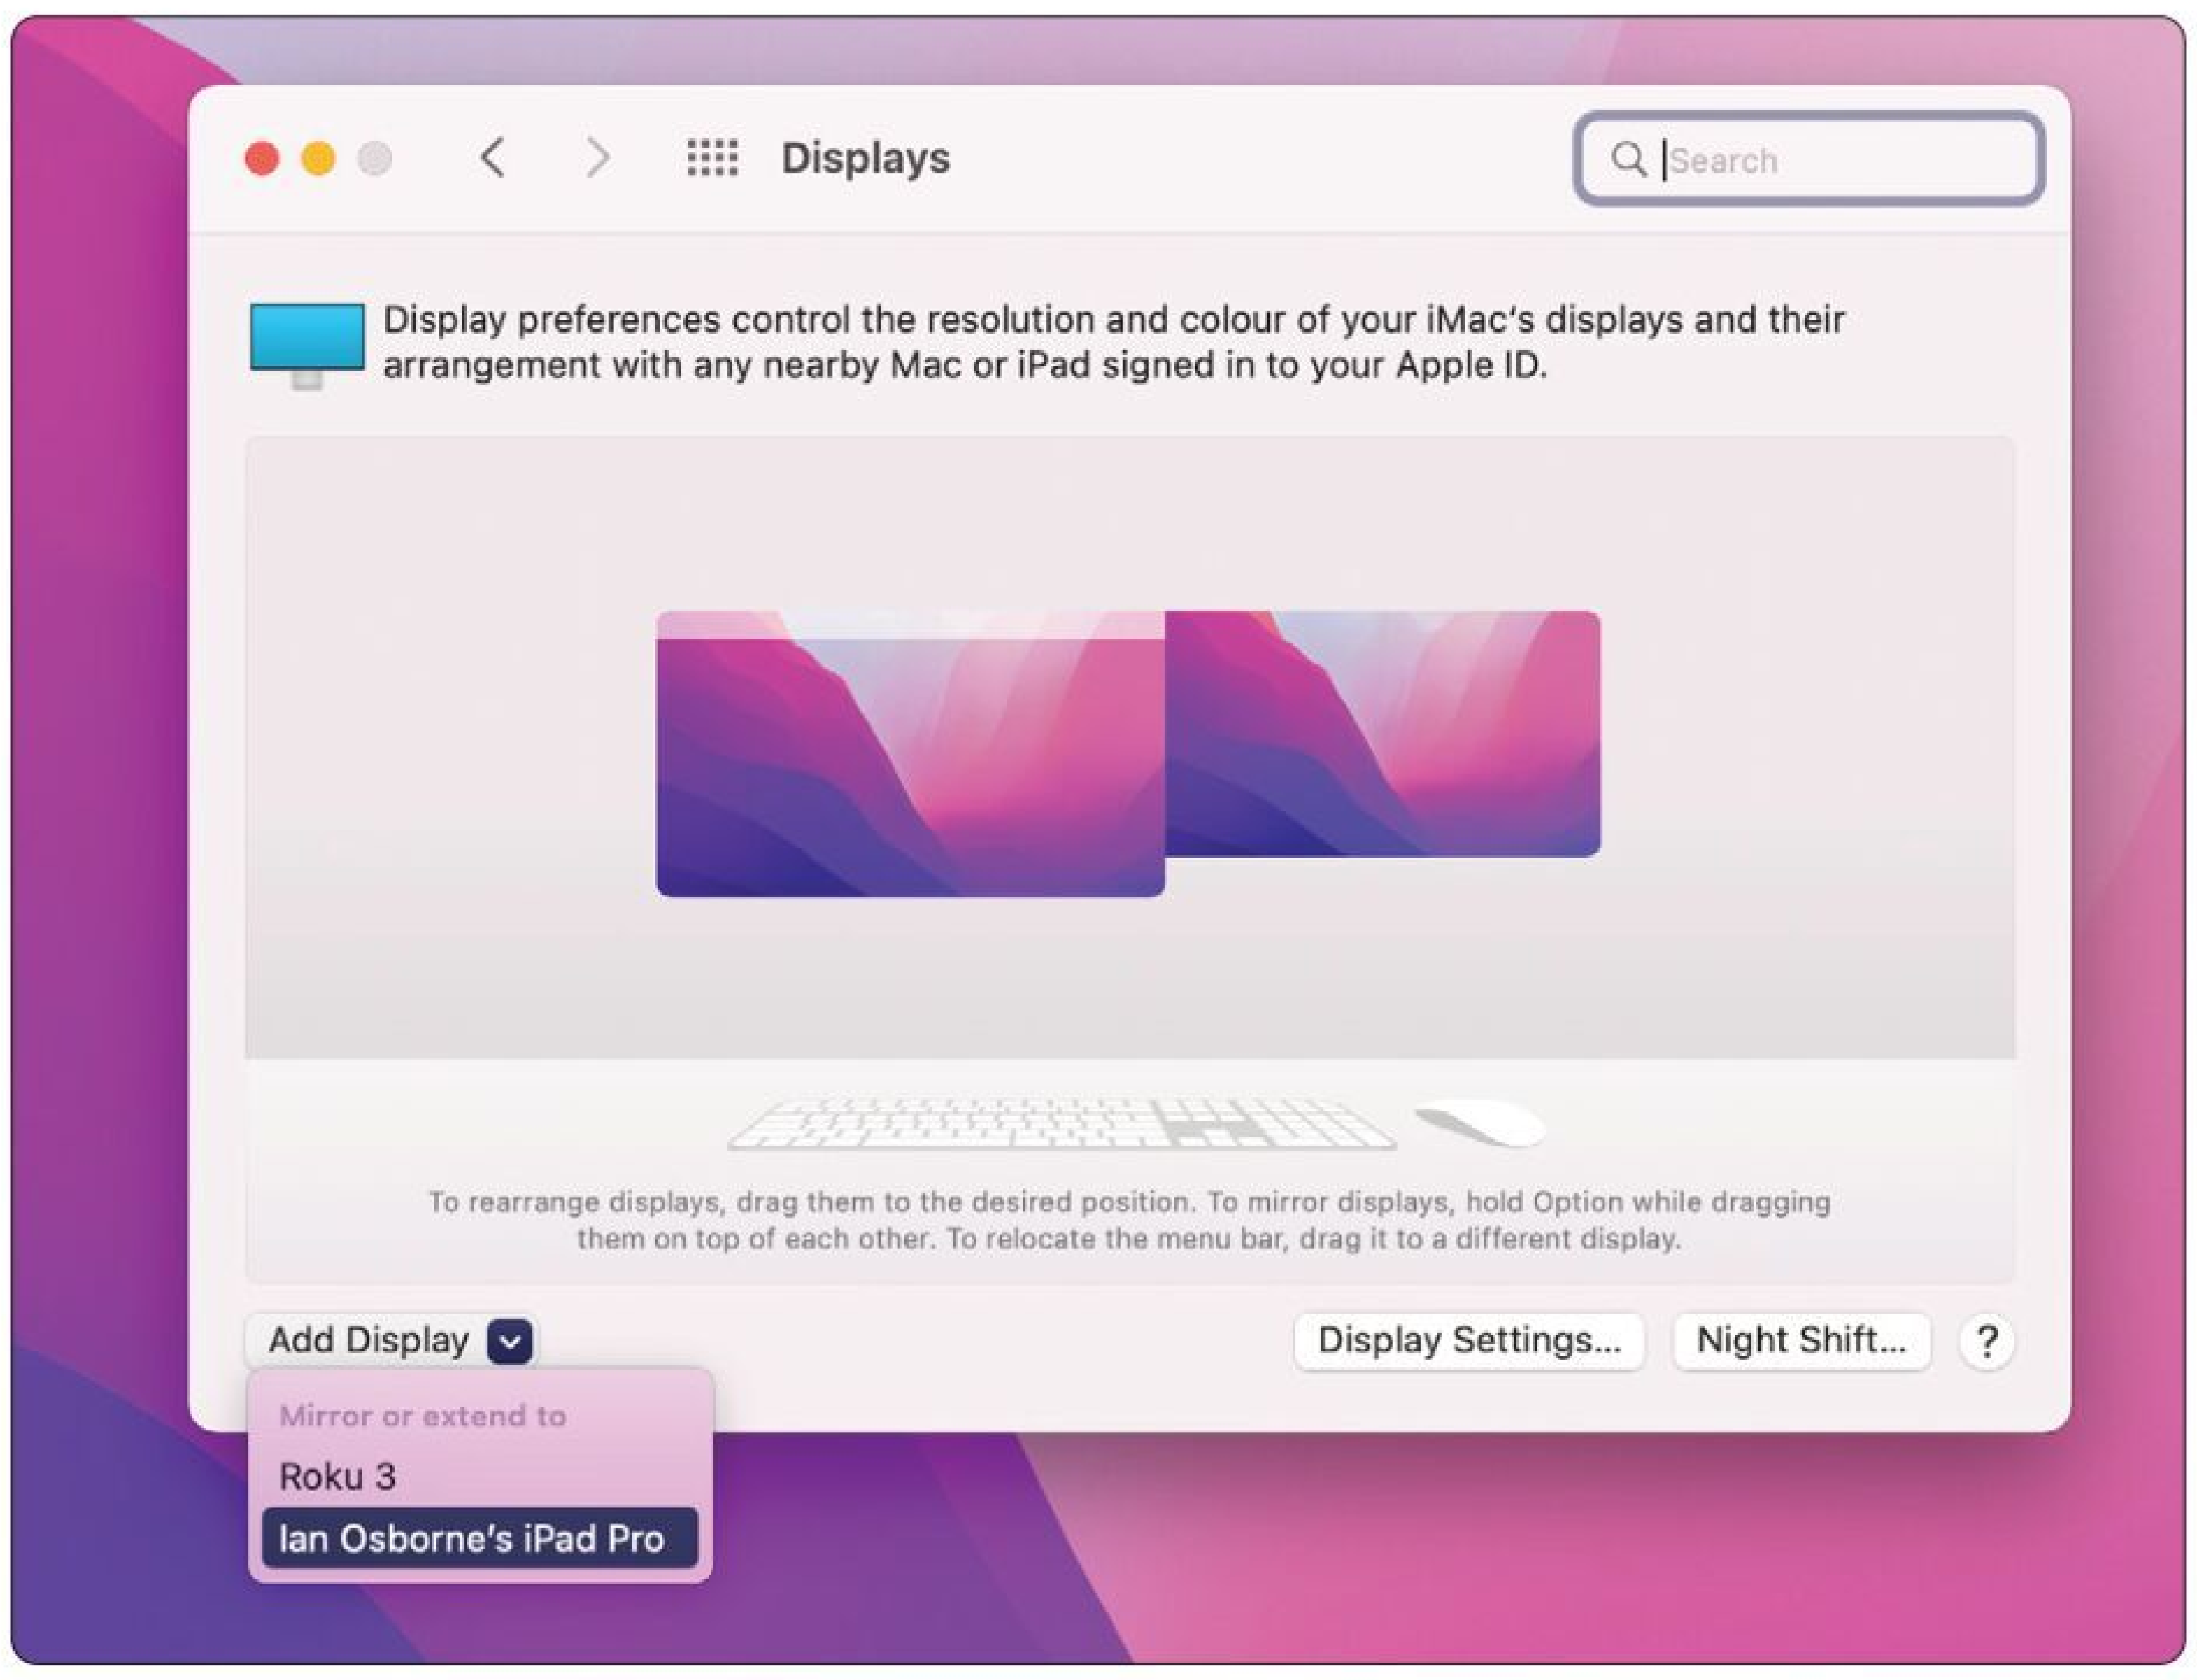
Allow your cursor and keyboard to be used on any nearby Mac signed in to your iCloud account.

On Your iPad

- Go to Settings > General > AirPlay & Handoff, and switch on Handoff.
- Turn on the Cursor and Keyboard option underneath it.

Sidecar: With Your iPad

If your Mac and iPad are recent enough, you can use your iPad as a second screen for your Mac; expanding your desktop space. This is especially good news if you also use an Apple Pencil. You can draw on your iPad, using it as a high-resolution input device for your Mac. Just the thing for budding artists.



Display preferences control the resolution and colour of your iMac's displays and their arrangement with any nearby Mac or iPad signed in to your Apple ID.

To rearrange displays, drag them to the desired position. To mirror displays, hold Option while dragging them on top of each other. To relocate the menu bar, drag it to a different display.

3 There's a brief flash, and your Apple devices connect; sharing screen space between your Mac and your iPad. Your iPad can now be used as an input device or second – or even third or fourth – screen.

4 You can drag and drop windows and files between your Mac's screen and your iPad. If you need to access your iPad as a tablet, swipe up from the foot of the screen. You can relaunch Sidecar by tapping the Sidecar icon in the Dock.

Using the iPad as an Input Device.

With Sidecar, you can also use your iPad as a graphics tablet. According to Apple, any Mac app that supports stylus input works in this way, but the company has also come up with a preliminary list of apps that you can use with the Mac, iPad, and Apple Pencil:

- Adobe Illustrator
- Affinity Designer
- Affinity Photo
- Cinema 4D
- CorelDRAW
- DaVinci Resolve
- Final Cut Pro
- Maya
- Motion
- Painter
- Principle
- Sketch
- Substance Designer
- Substance Painter
- ZBrush

System Requirements.

To use Sidecar, your Mac must meet the following requirements;

- iMac 27-inch 2015 or later
- Mac mini 2018 or later
- Mac Pro 2019 or later
- MacBook Pro 2016 or later
- MacBook Air 2018 or later
- MacBook 2016 or later

Continuity Camera
Use That Photo

Continuity Camera lets you take a photograph using your iPhone or iPad and have it appear instantly on your Mac. It works with Finder, Mail, Messages, Notes, Pages, Keynote, and Numbers. It's a great way of adding a photo to your designs, emails, presentations and more, and it's easy to set up and use too.

The Greatest Cafe in Town!

There's always a warm welcome at Joe's Cafe. Great food, great company and good value

Joe's Cafe, 23 Fore Street, Anytown, Devon

Joe's Cafe cooks the best breakfasts in Anytown. With succulent sausages, beautiful bacon, tantalising tomatoes and marvellous mushrooms, it really sets you up for a hard day's work.

You can choose between white or brown toast, and our baked beans and hash

3 The photo instantly appears on your Mac, in the application you chose to import it to. You can edit and use it like you would any other photo. The pic isn't retained on your mobile device though, so if you want it there too, you might be better off taking a photo in the traditional manner.

Scanning Documents.

In addition to taking photos, you can also use Continuity Camera to scan documents in the same way. Just select Scan Documents from the menu covered in Step 1, switch to the device you wish to use and then frame the document on the screen until it's covered with a yellow box. It's then scanned and your Mac imports it.

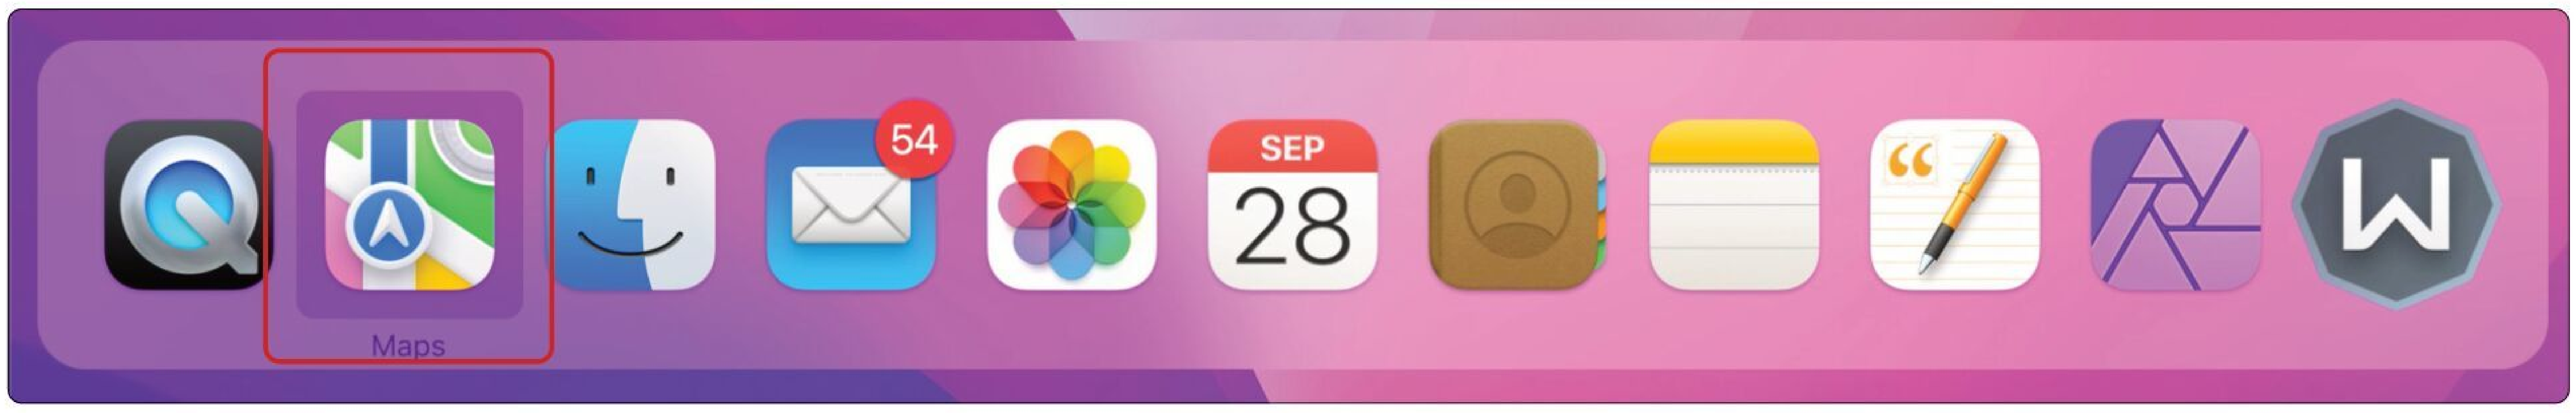
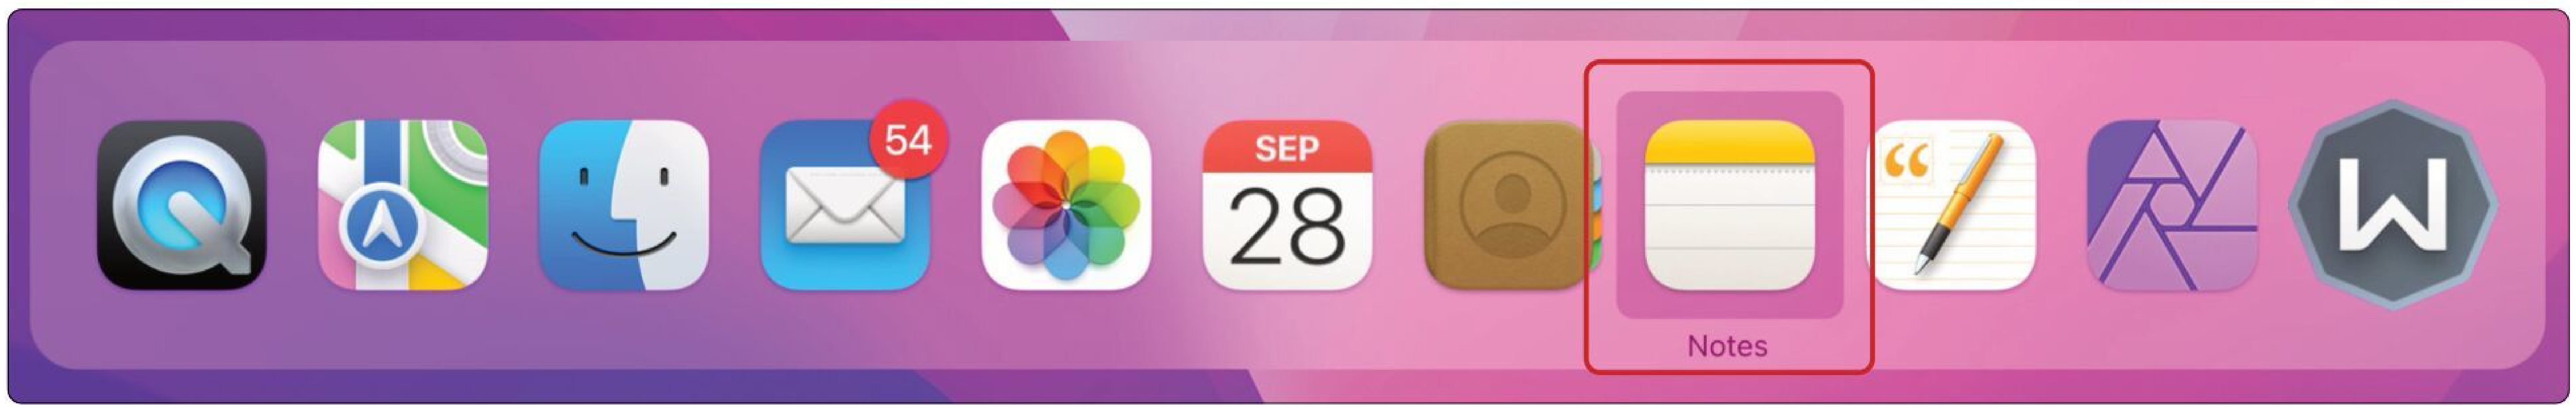
The App Switcher
Speed Your Workflow

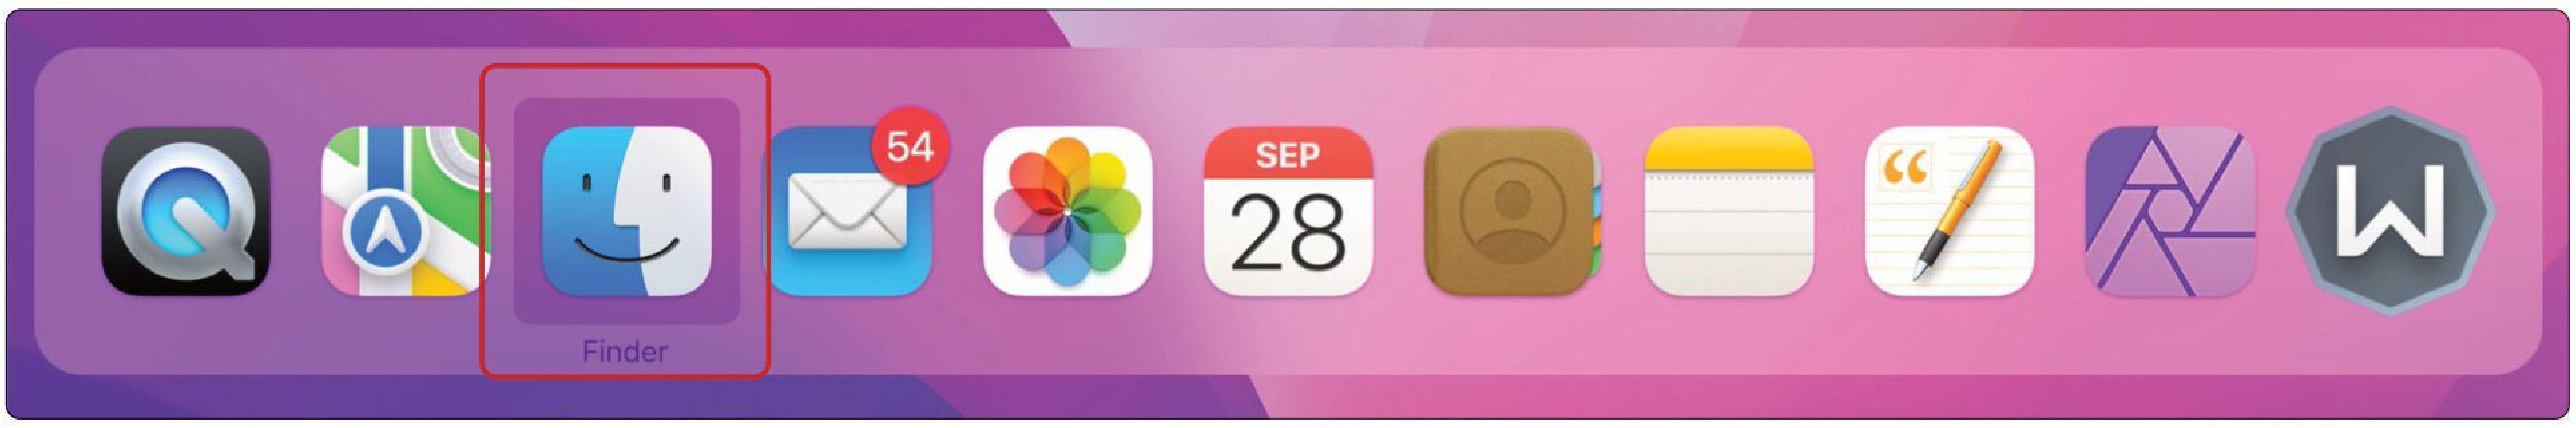
With App Switcher you can toggle between apps that are currently open and running on your Mac without taking your hands off the keyboard. It's a really great feature that significantly speeds your workflow if you use it on a regular basis. If you don't use the App Switcher already, you should give it a try.



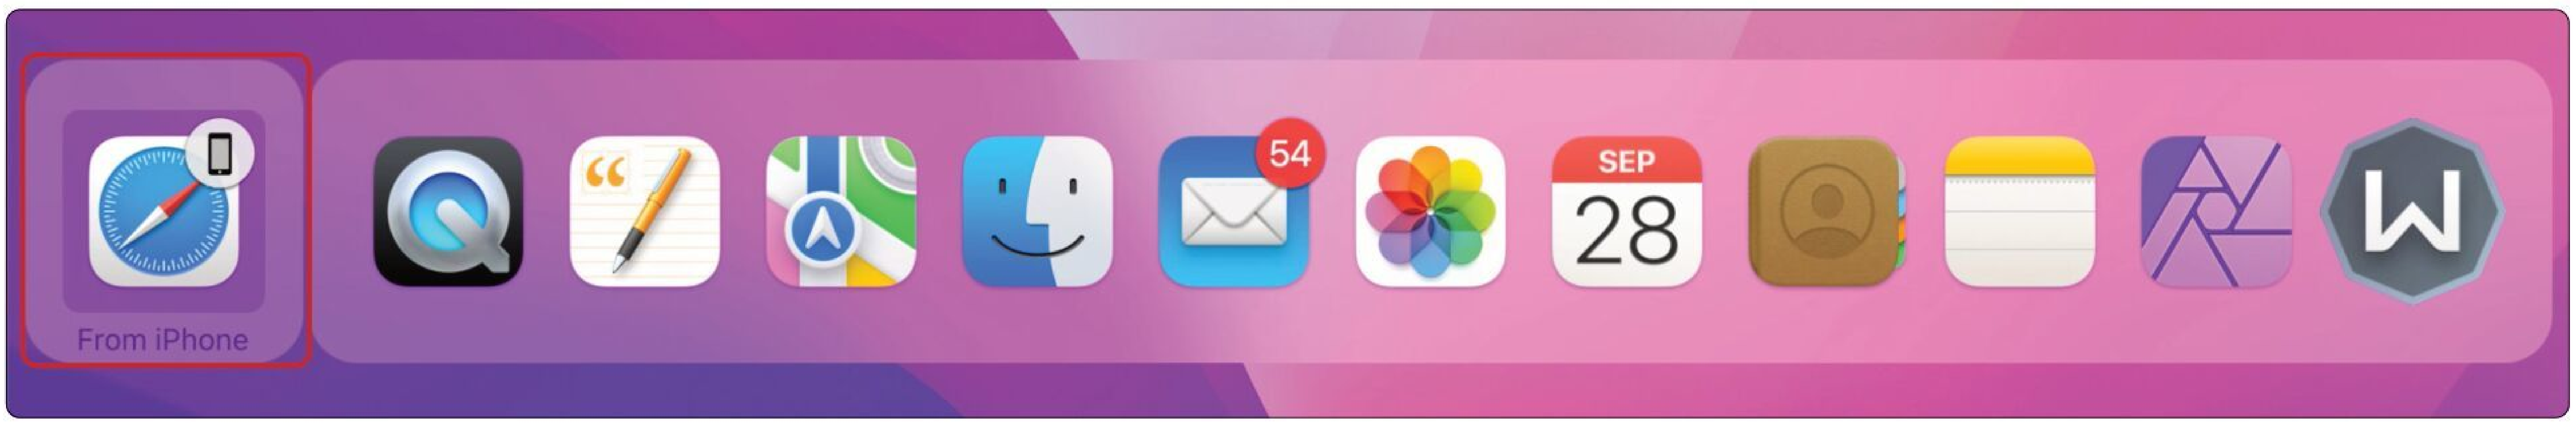
1 The App Switcher is easy to use. Hold the cmd key and press Tab. A window showing the icons of all your open apps is displayed in a floating panel in the centre of your desktop. If you release the keys, they disappear again.



2 You can toggle through these apps by repeatedly pressing the Tab key and releasing cmd when you've highlighted the app you want. This app is then brought to the front of your Mac, so you can make use of it straight away.



3 You can move forwards or backwards through the list of open apps using the arrow keys at the bottom right of your keyboard, or to the left of the numeric keypad on a large keyboard. Alternatively, just click on one with your pointer.



4 If you see an icon on the left with a badge in the corner, it means you have that app open on another Apple device. Click it to open it on your Mac too, showing the same document, page or site as it does on your mobile device.

Using iCloud For Storage & Syncing

With Apple's iCloud service, you can store documents and data on a 'cloud server', that is, a storage facility accessed over the Internet. Files stored on iCloud can be worked on using any device with a browser anywhere in the world, and you can sync settings and information over iCloud too. Here's how it works.

Cancel
Move

Are you sure you want to remove "Mountaineering Photos" from iCloud Drive?

This item will be moved to this Mac and will no longer be available in iCloud Drive on any of your devices.

3 You can organise your iCloud folder like any other folder, including creating new folders within it. To move files into a new folder in your iCloud Drive, just drag and drop them to where you want them, just like you would with any other Finder folder.

4 To move files out of iCloud storage and back to your hard drive, drag them out of the iCloud folder and onto your desktop or into a folder that isn't in your iCloud Drive. Confirm the move when you're asked to and the files are removed from your iCloud storage.

Store original photos and videos on this Mac. Choose this option if you want to access full-resolution versions of your entire library, even when offline.

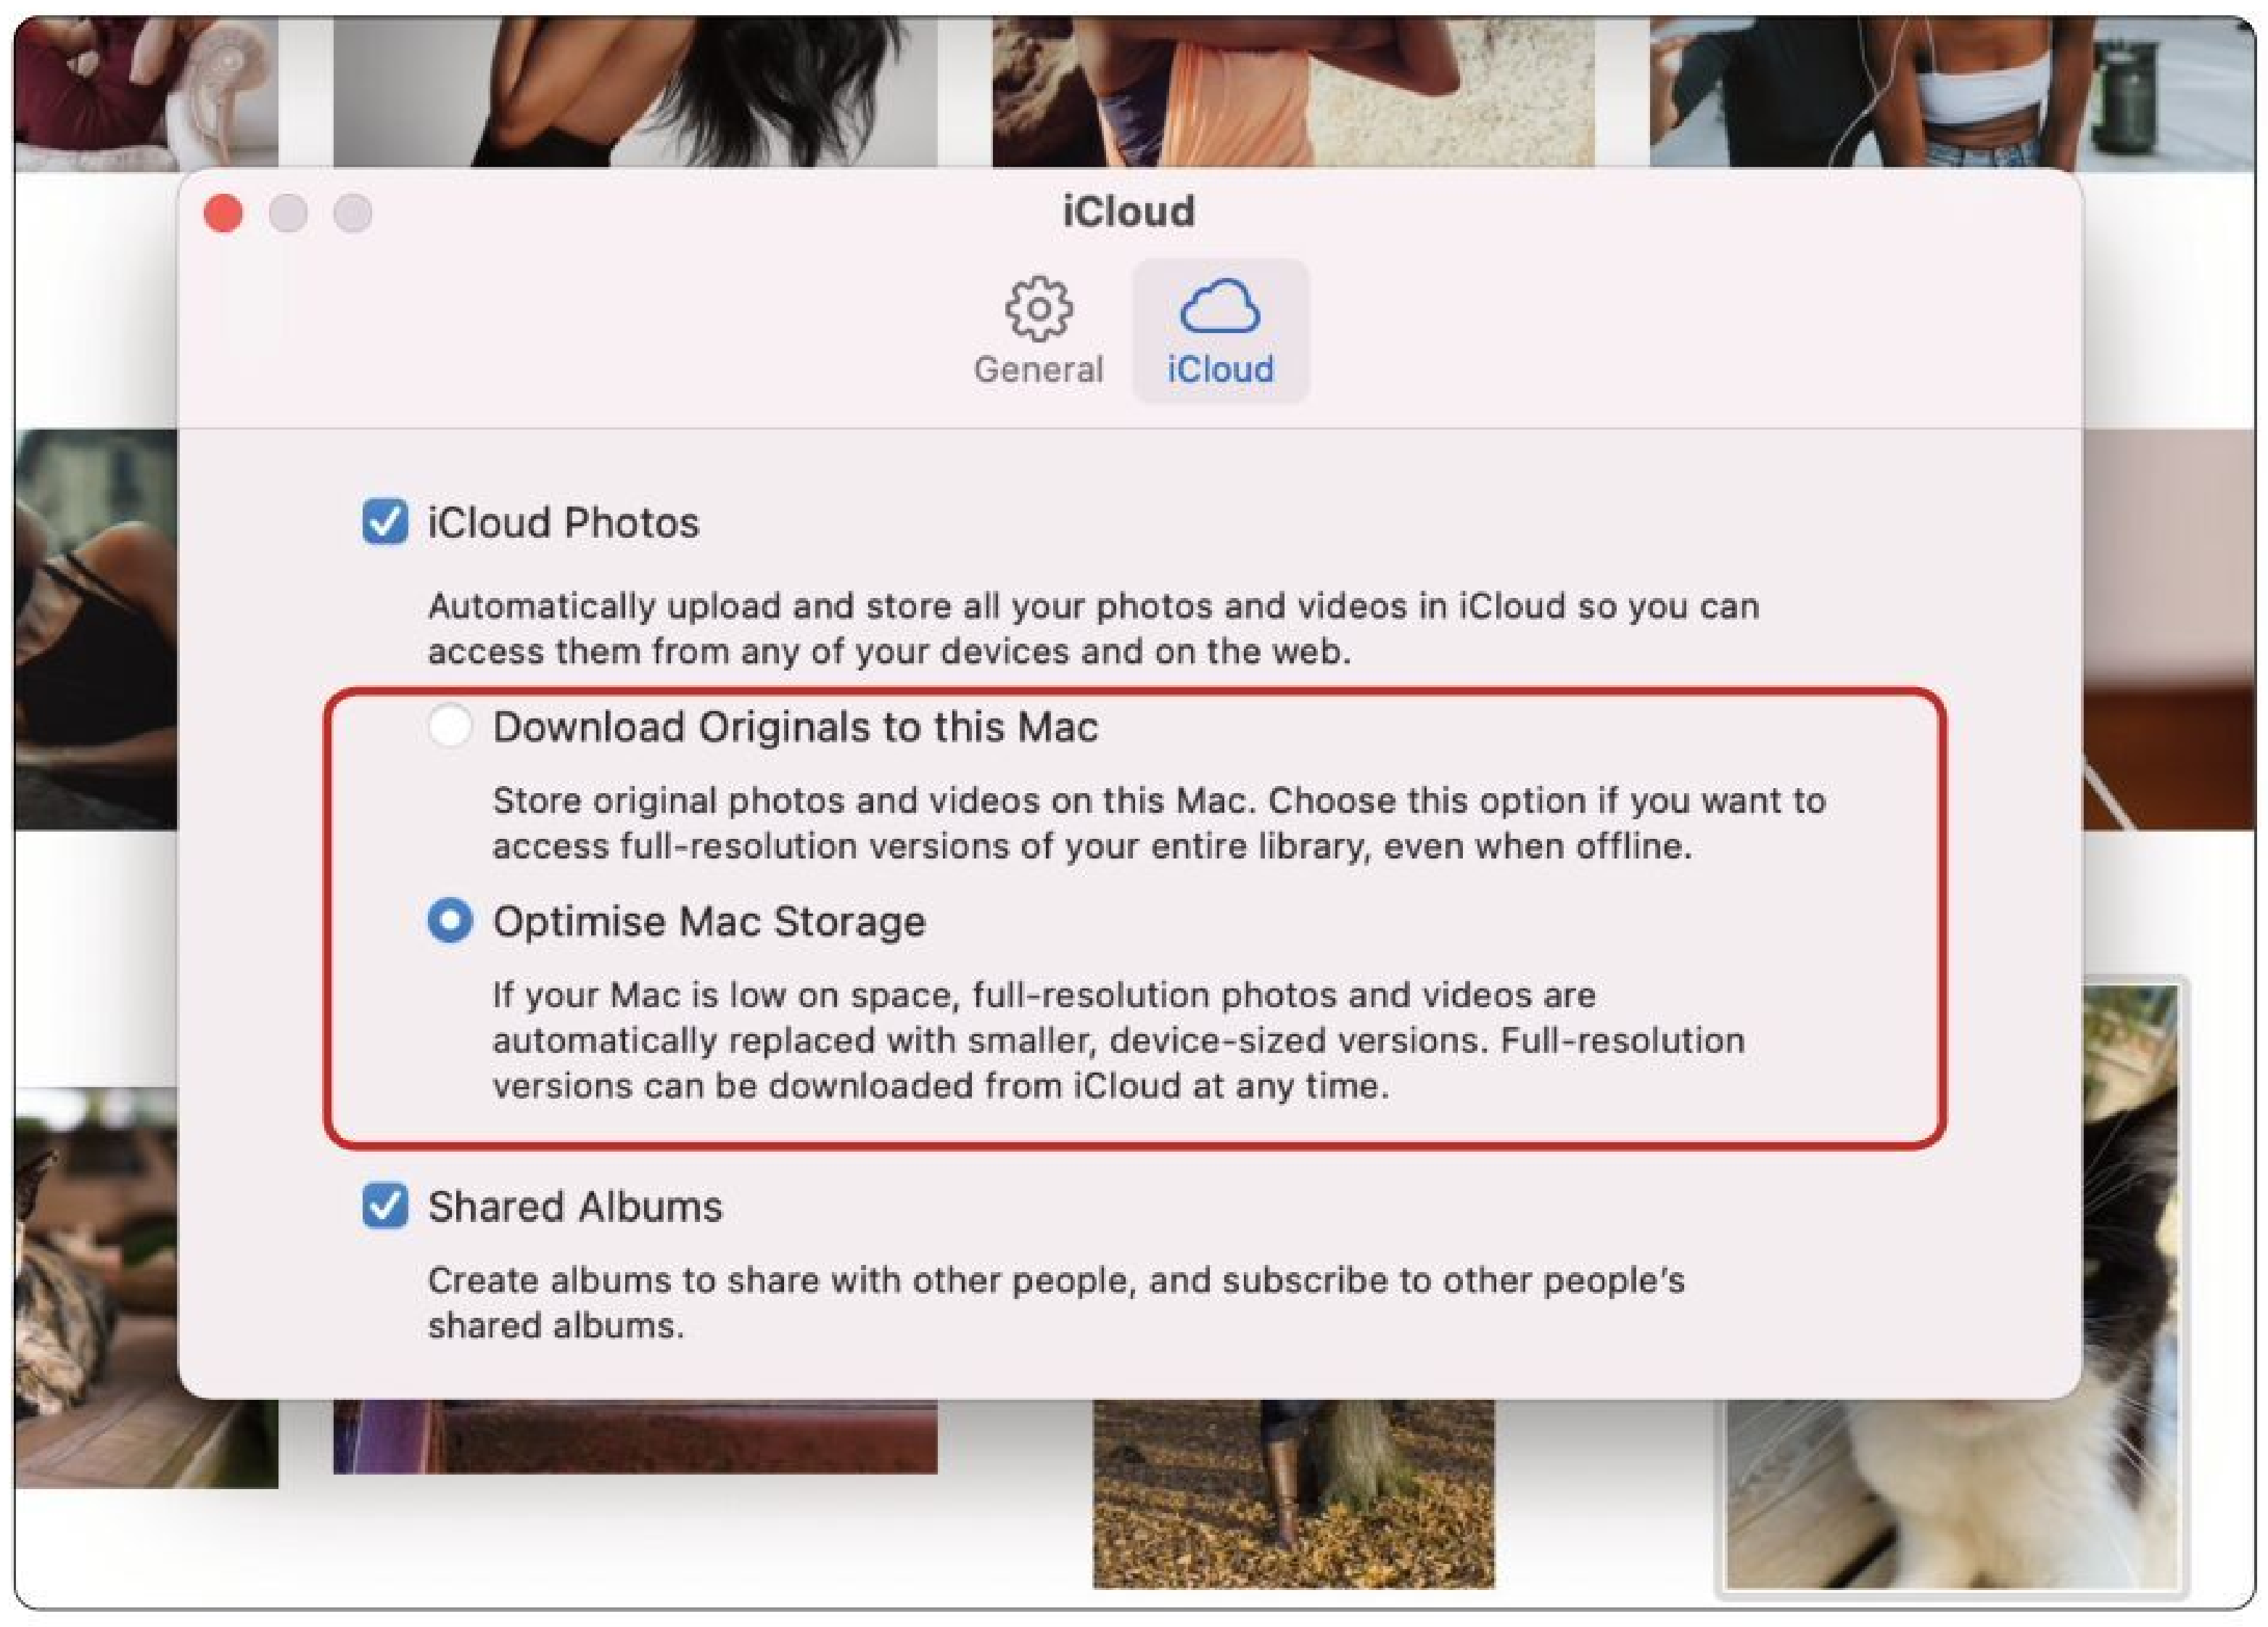
● Optimise Mac Storage

If your Mac is low on space, full-resolution photos and videos are automatically replaced with smaller, device-sized versions. Full-resolution versions can be downloaded from iCloud at any time.

☑ Shared Albums

Create albums to share with other people, and subscribe to other people's shared albums.

2 In the Preferences window, click on iCloud and then check the box labelled iCloud Photos. Your photos are uploaded to your iCloud. This may take some time.



iCloud
General
iCloud

☑ iCloud Photos

Automatically upload and store all your photos and videos in iCloud so you can access them from any of your devices and on the web.

○ Download Originals to this Mac

Store original photos and videos on this Mac. Choose this option if you want to access full-resolution versions of your entire library, even when offline.

● Optimise Mac Storage

If your Mac is low on space, full-resolution photos and videos are automatically replaced with smaller, device-sized versions. Full-resolution versions can be downloaded from iCloud at any time.

☑ Shared Albums

Create albums to share with other people, and subscribe to other people's shared albums.

3 You can choose between 'Download Originals to this Mac', to keep a backup copy of your library on your Mac and 'Optimise Mac Storage' to leave it all on the cloud.

4 Now do the same on any other Macs you have. Any duplicates should be resolved by iCloud as you go. Naturally, you only need a backup of your library on one Mac.

Sharing an iCloud File.

You can share a file in your iCloud Drive just by sending someone a link. Right or Ctrl-Click on the file and select Share > Share File. From the window that pops up, choose a means of sending the link. You can select whether the people to whom you send the link can make changes to the file or only view it.

Optimise Mac Storage

Do you want to merge your bookmarks and Reading List with iCloud?

Your information on this Mac will be uploaded and merged with the bookmarks and Reading List stored in iCloud.

The full contents of iCloud Drive will be stored on this Mac if you have enough space. Older documents will be stored only in iCloud when space is needed.

iCloud Storage: 50 GB (23.18 GB Available)

Find Safari and check its checkbox. You can now access your bookmarks and reading list on your other Apple devices, as long as they're linked to the same iCloud account and also have Safari ticked. Click OK to merge information, should the box appear.

Password

pajce5-fevquj-jemG… Strong Password

Safari created a strong password for this website.

This password will be saved to your iCloud Keychain and will AutoFill on all your devices. Look up your saved passwords in the Passwords pane of System Preferences or by asking Siri.

1 When you sign up for an account on a website in Safari, maybe to join a forum or register for a newsletter, Safari suggests a password to use. You can use that password at the click of a button.

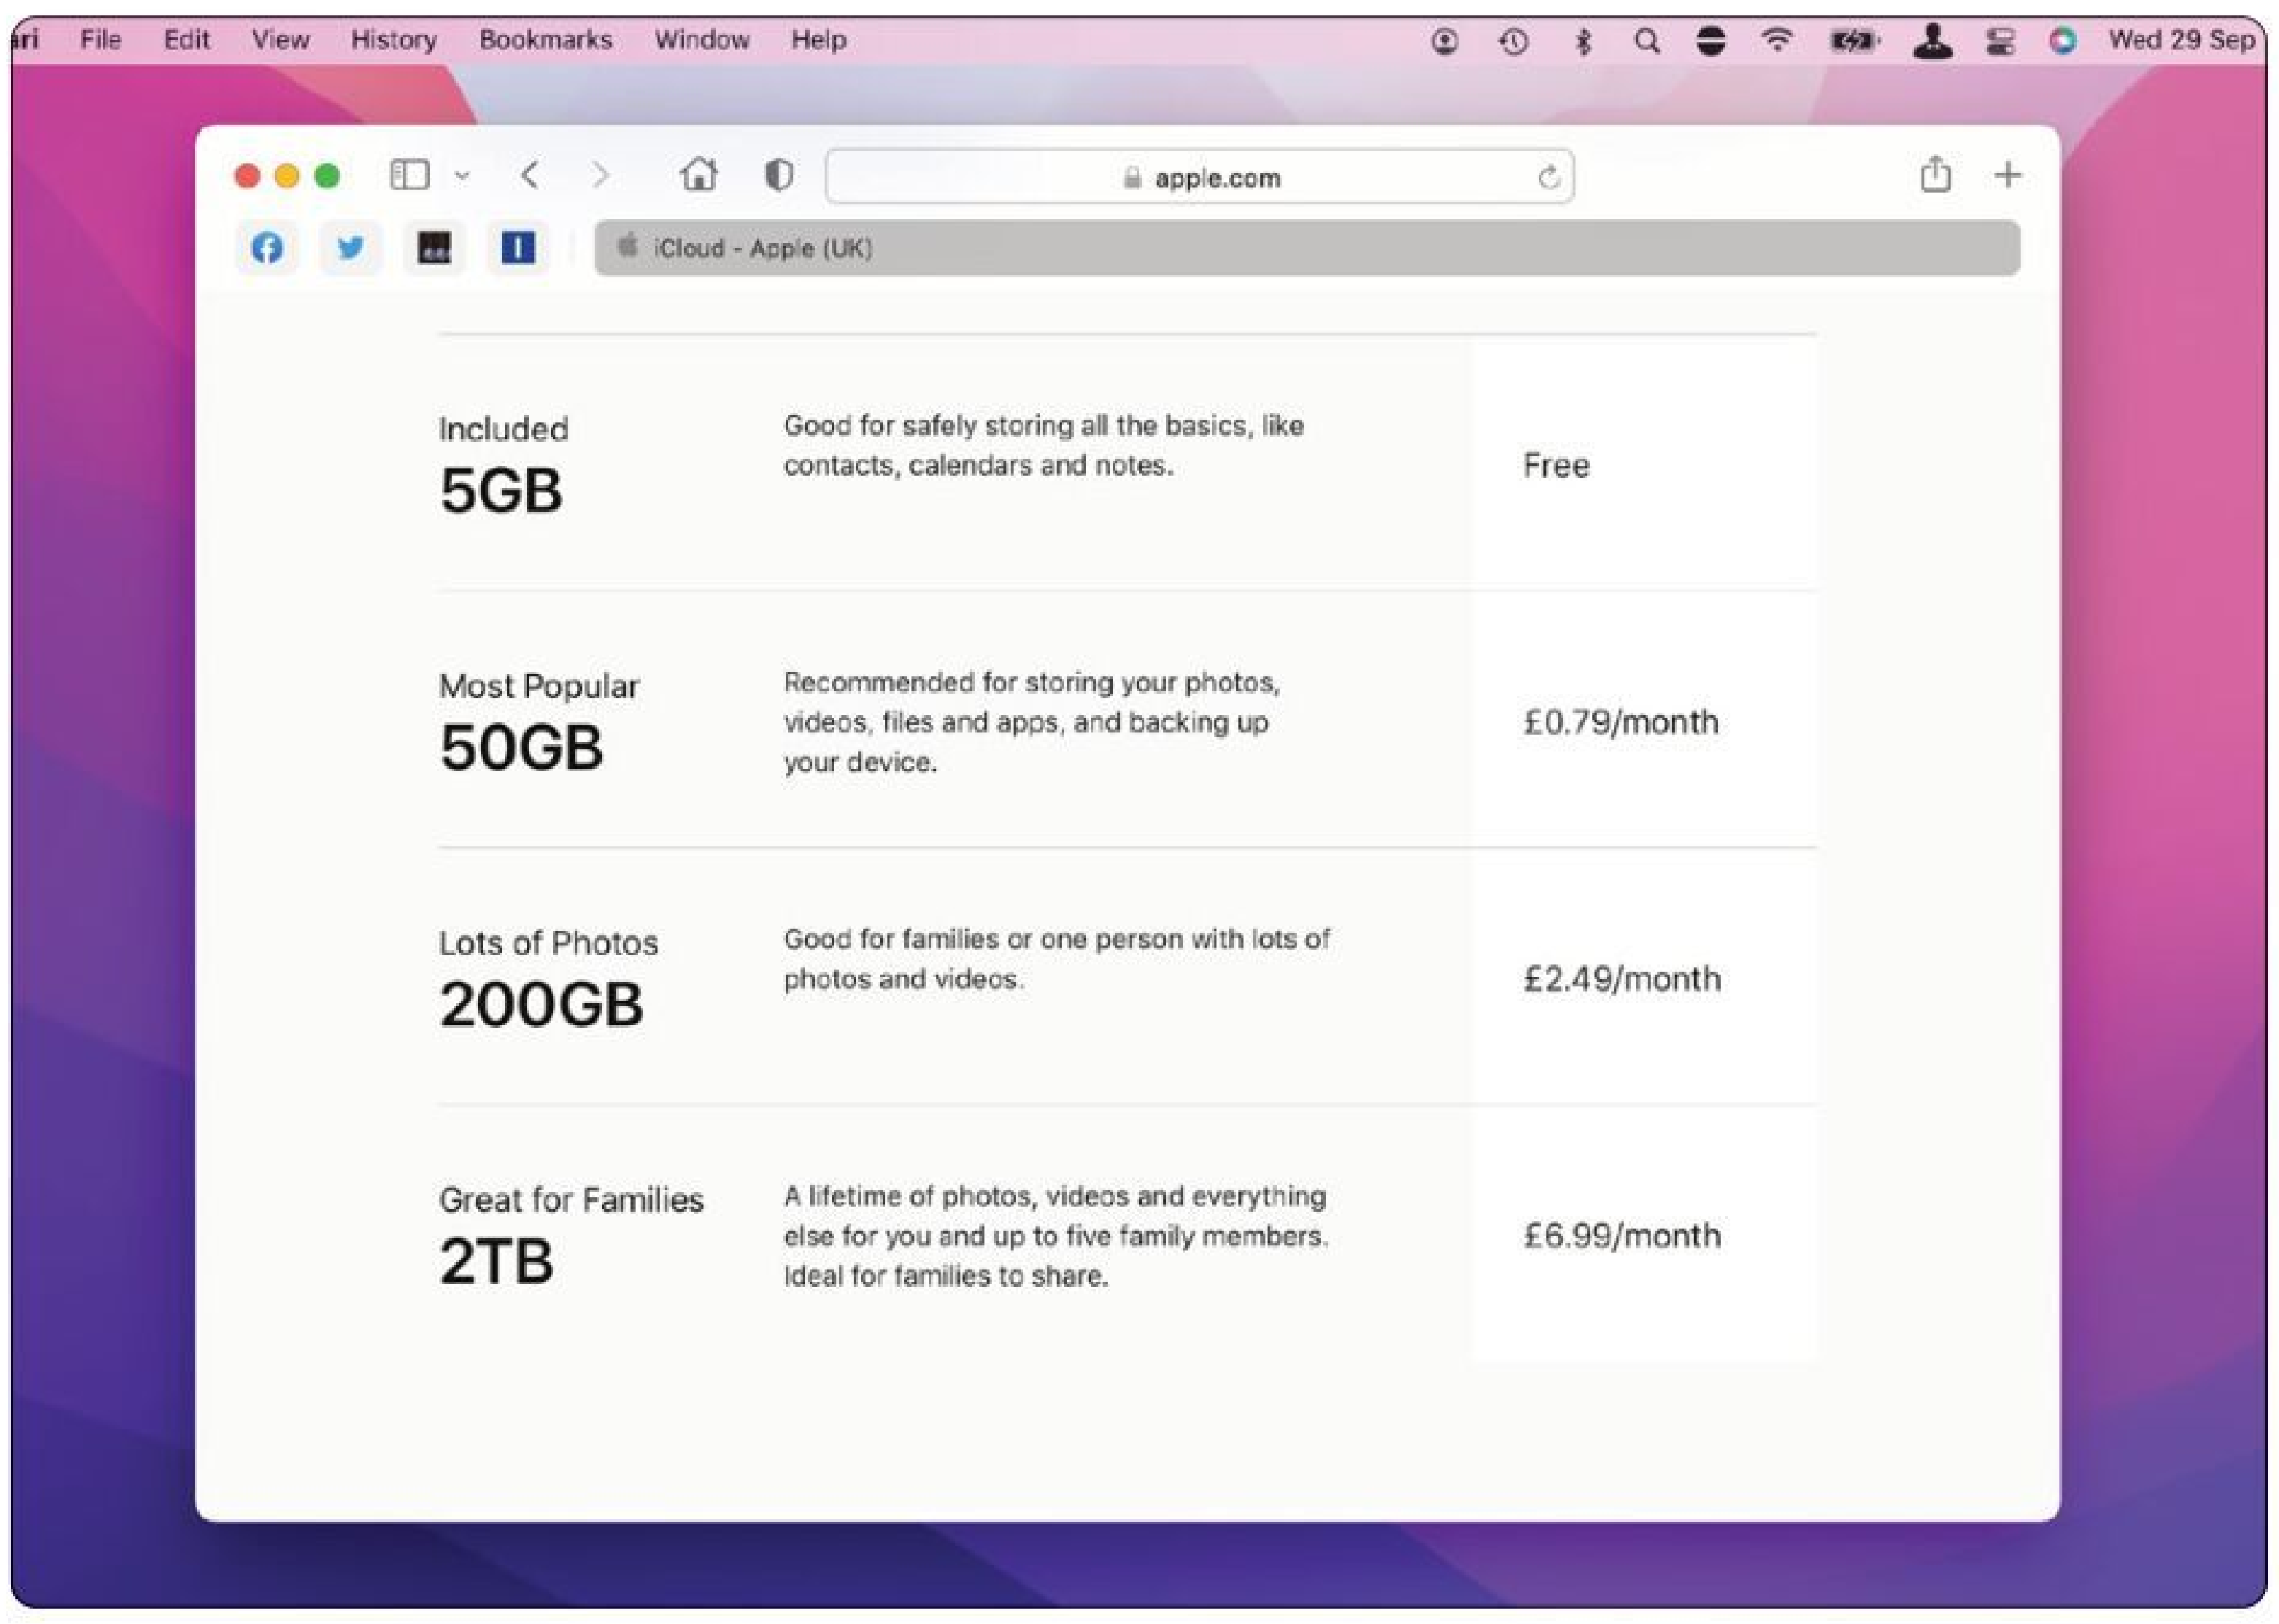
If you decide you have more storage space than you need and want to downgrade to a cheaper plan, click the Downgrade Options button in the bottom-left. You can then choose a cheaper plan, and will see a warning if you're currently using more space than is in the new plan.

Apple’s iCloud+ Service



Included 5GB	Good for safely storing all the basics, like contacts, calendars and notes.	Free
Most Popular 50GB	Recommended for storing your photos, videos, files and apps, and backing up your device.	£0.79/month
Lots of Photos 200GB	Good for families or one person with lots of photos and videos.	£2.49/month
Great for Families 2TB	A lifetime of photos, videos and everything else for you and up to five family members. Ideal for families to share.	£6.99/month

1 iCloud+ is a new service offering new iCloud features for subscribers to iCloud. You can’t get it with the free 5GB you have with your Apple account, but if you pay for more space – at whatever level – the iCloud+ features are yours.

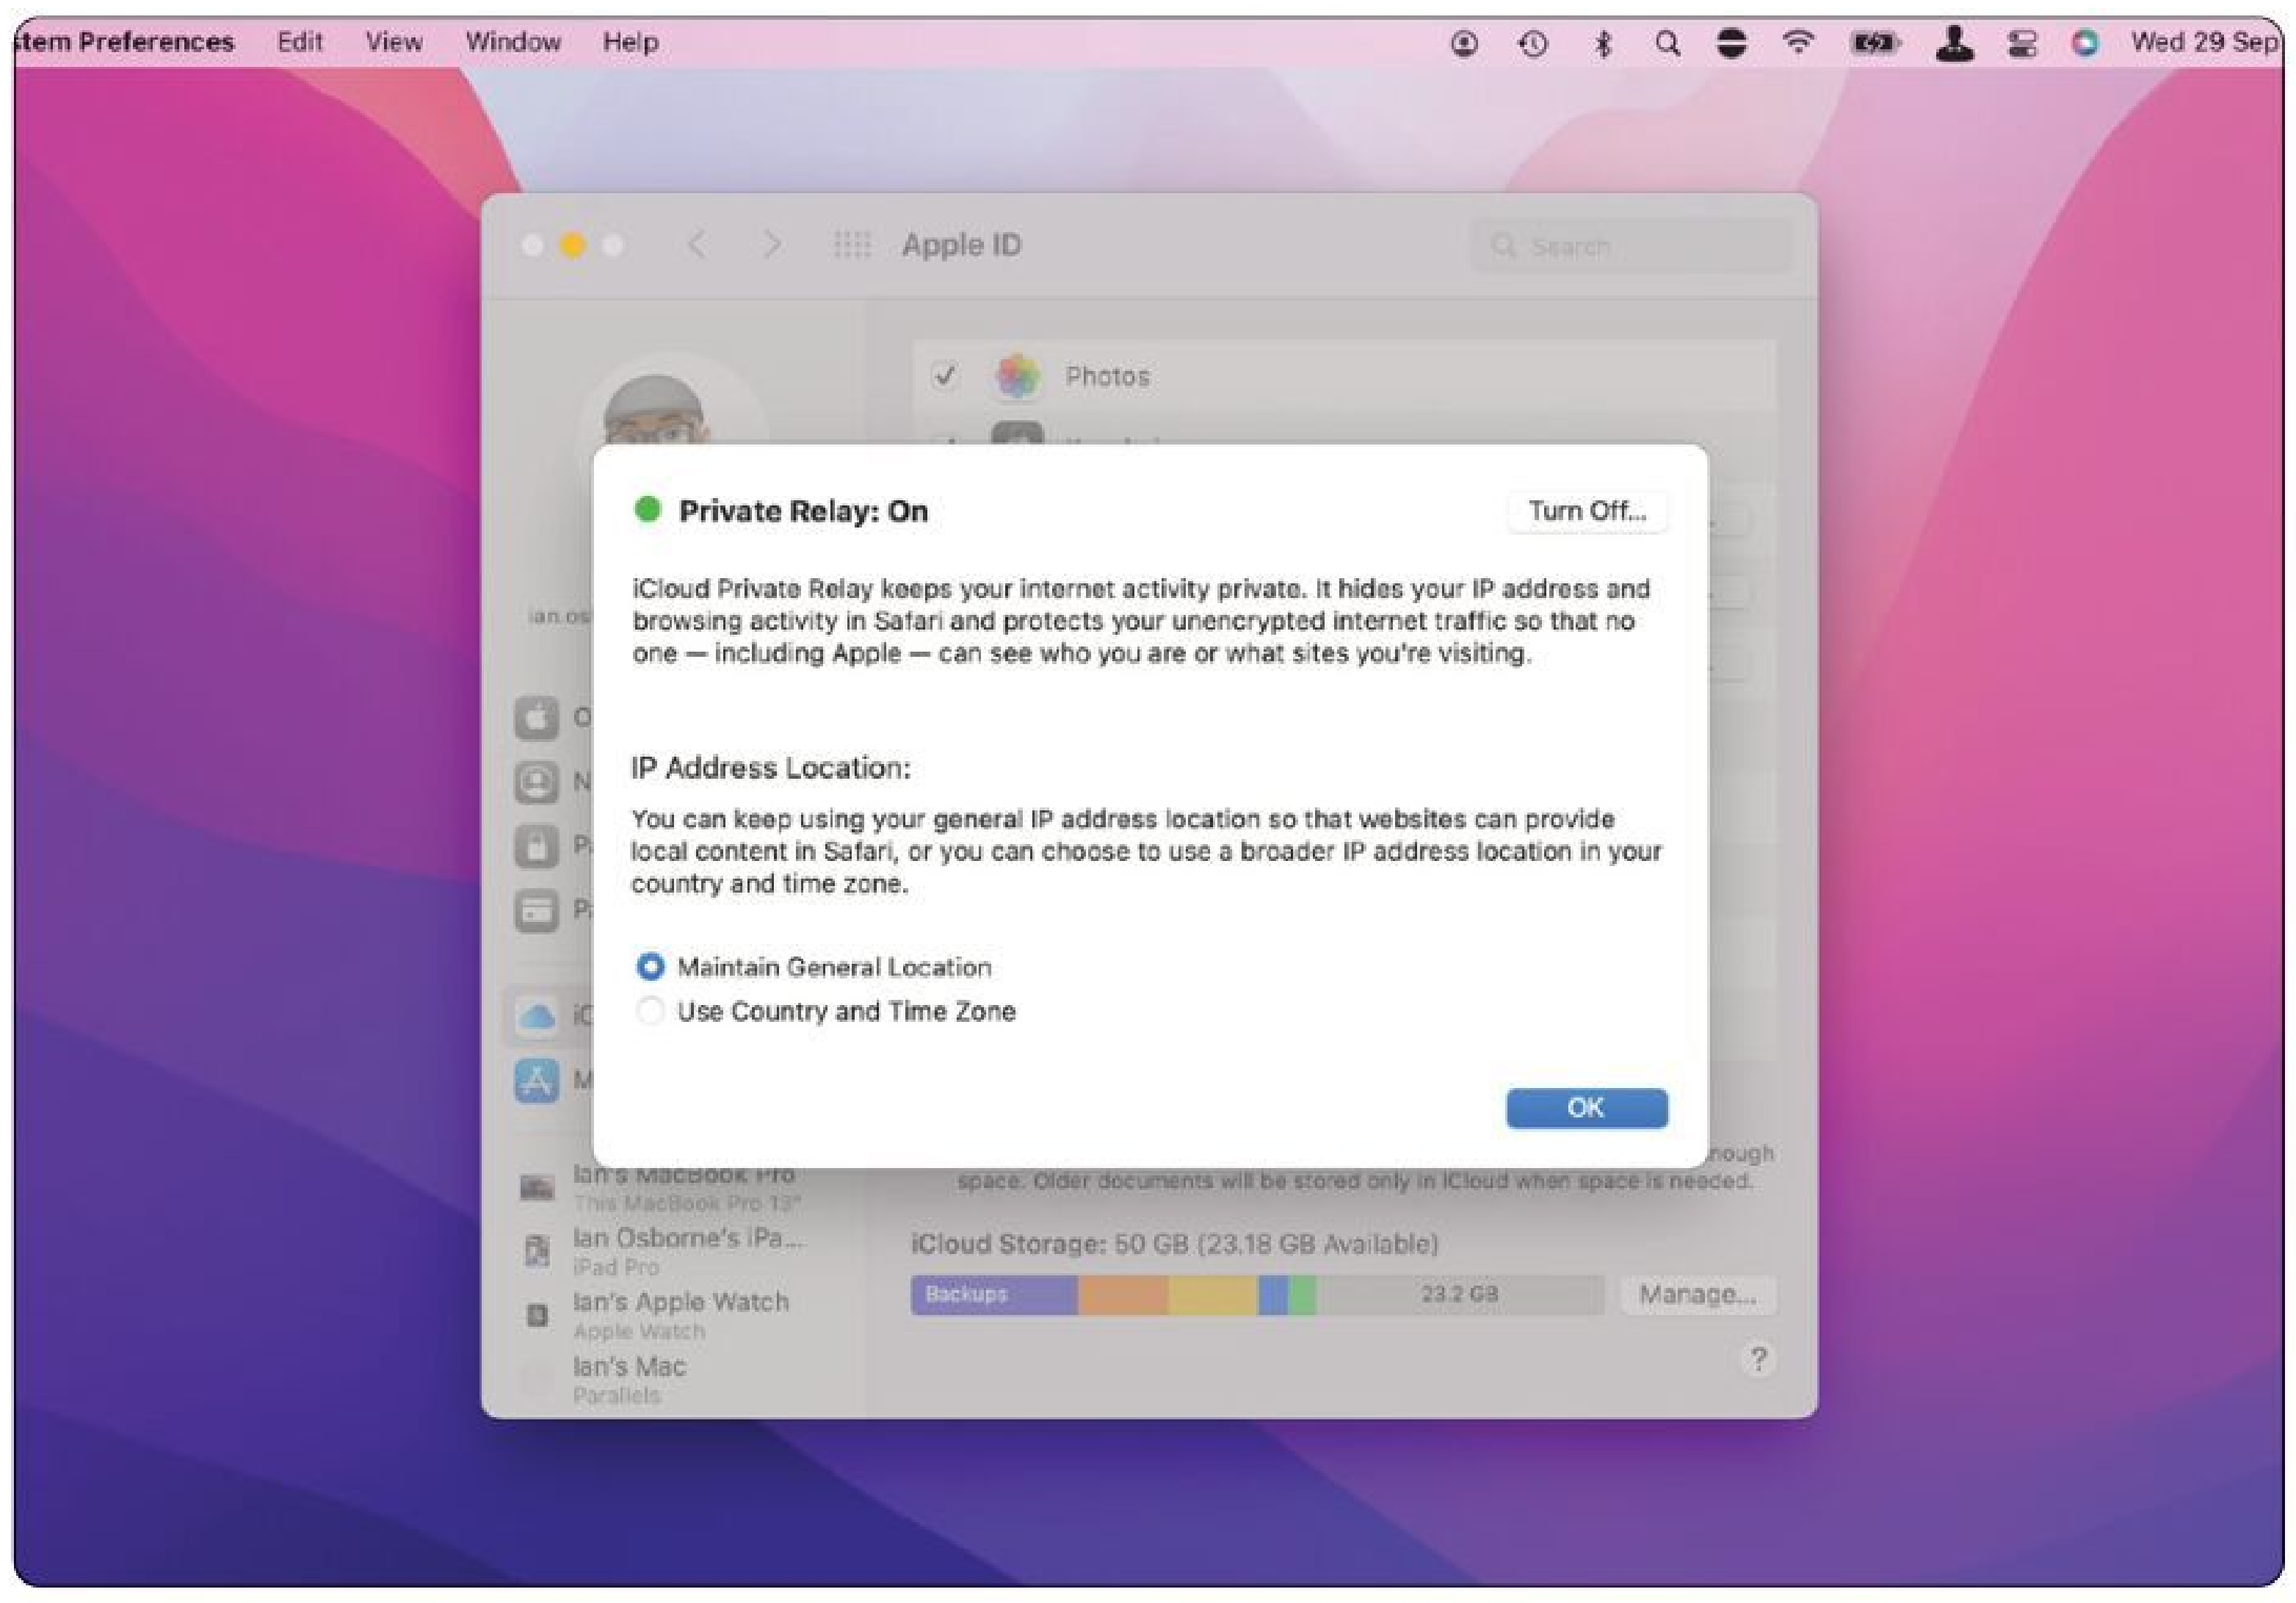
☑ Notes

☑ Optimise Mac Storage
The full contents of iCloud Drive will be stored on this Mac if you have enough space. Older documents will be stored only in iCloud when space is needed.

iCloud Storage: 50 GB (23.18 GB Available)

2 iCloud Private Relay routes your web-browsing traffic through a relay to hide your IP address (Internet Protocol, the identifier on your networked devices), your location and your browsing habits. It encrypts your data too.



Private Relay: On

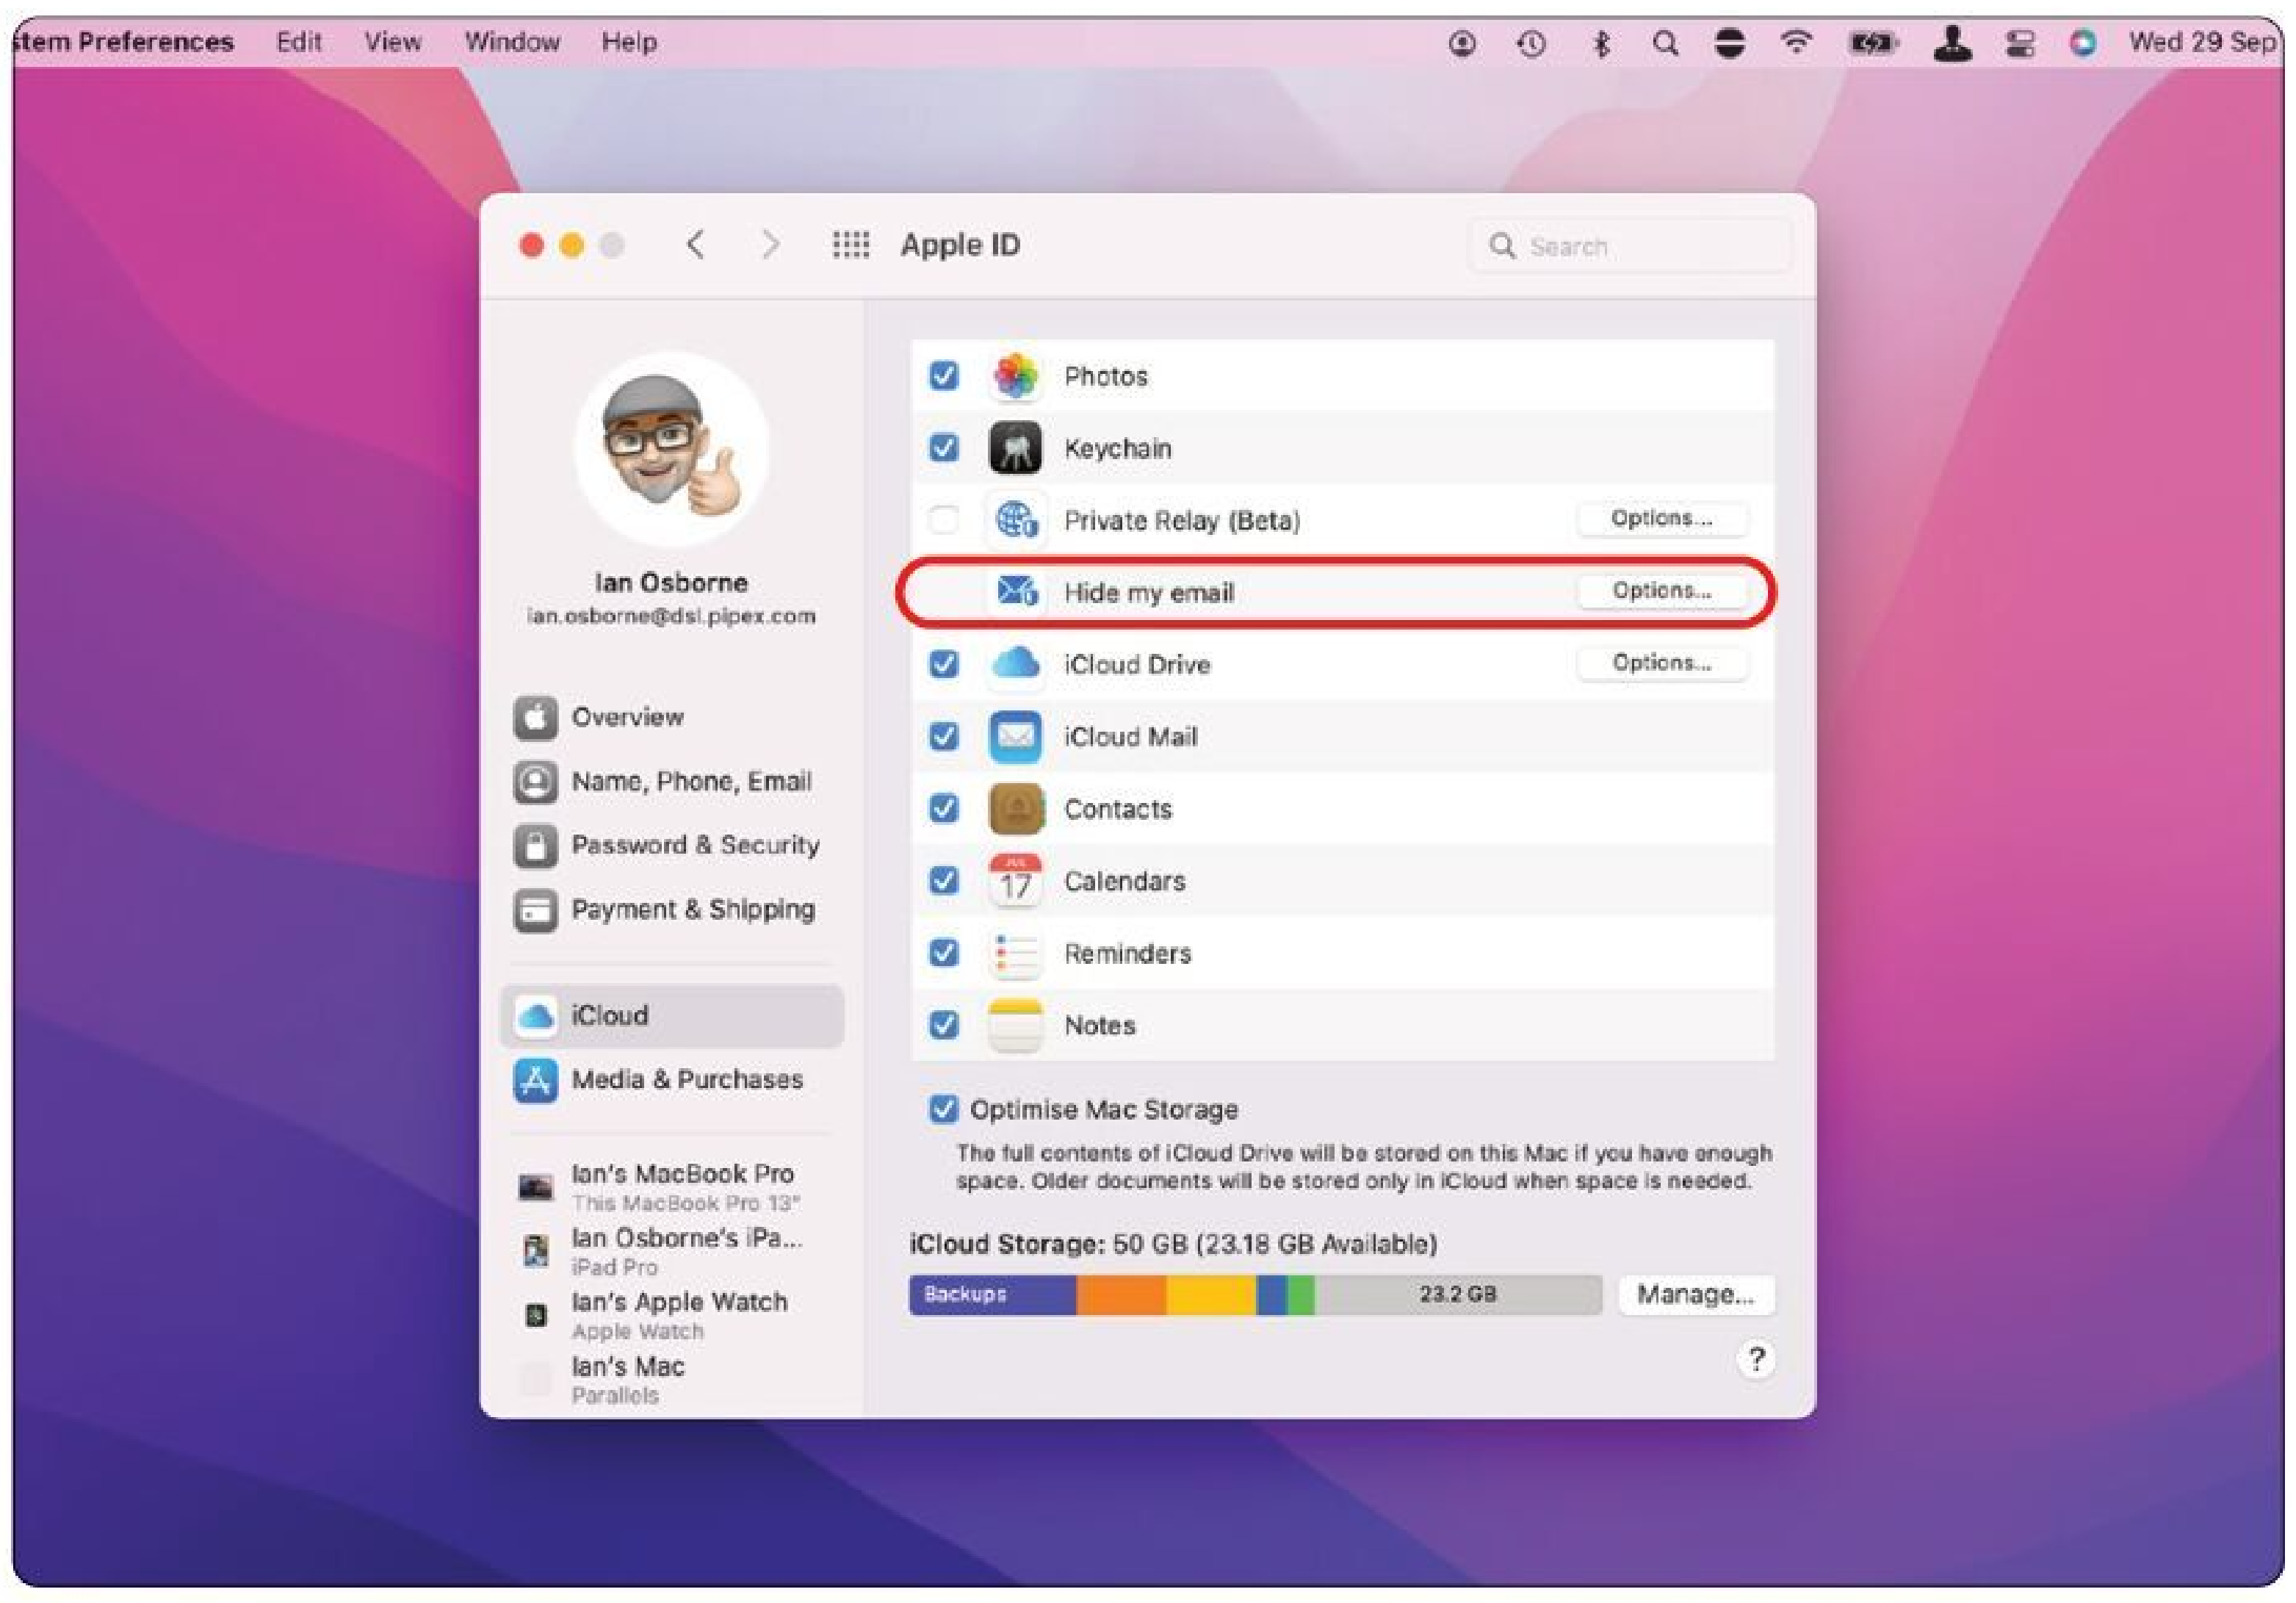
iCloud Private Relay keeps your internet activity private. It hides your IP address and browsing activity in Safari and protects your unencrypted internet traffic so that no one — including Apple — can see who you are or what sites you're visiting.

IP Address Location:

You can keep using your general IP address location so that websites can provide local content in Safari, or you can choose to use a broader IP address location in your country and time zone.

● Maintain General Location
○ Use Country and Time Zone

3 To activate it, go to System Preferences > Apple ID and, under Private Relay, tick the checkbox to its left and click the Options button to its right. From there, you can turn the Private Relay on and off, and read about the feature.



☑ Photos
☑ Keychain

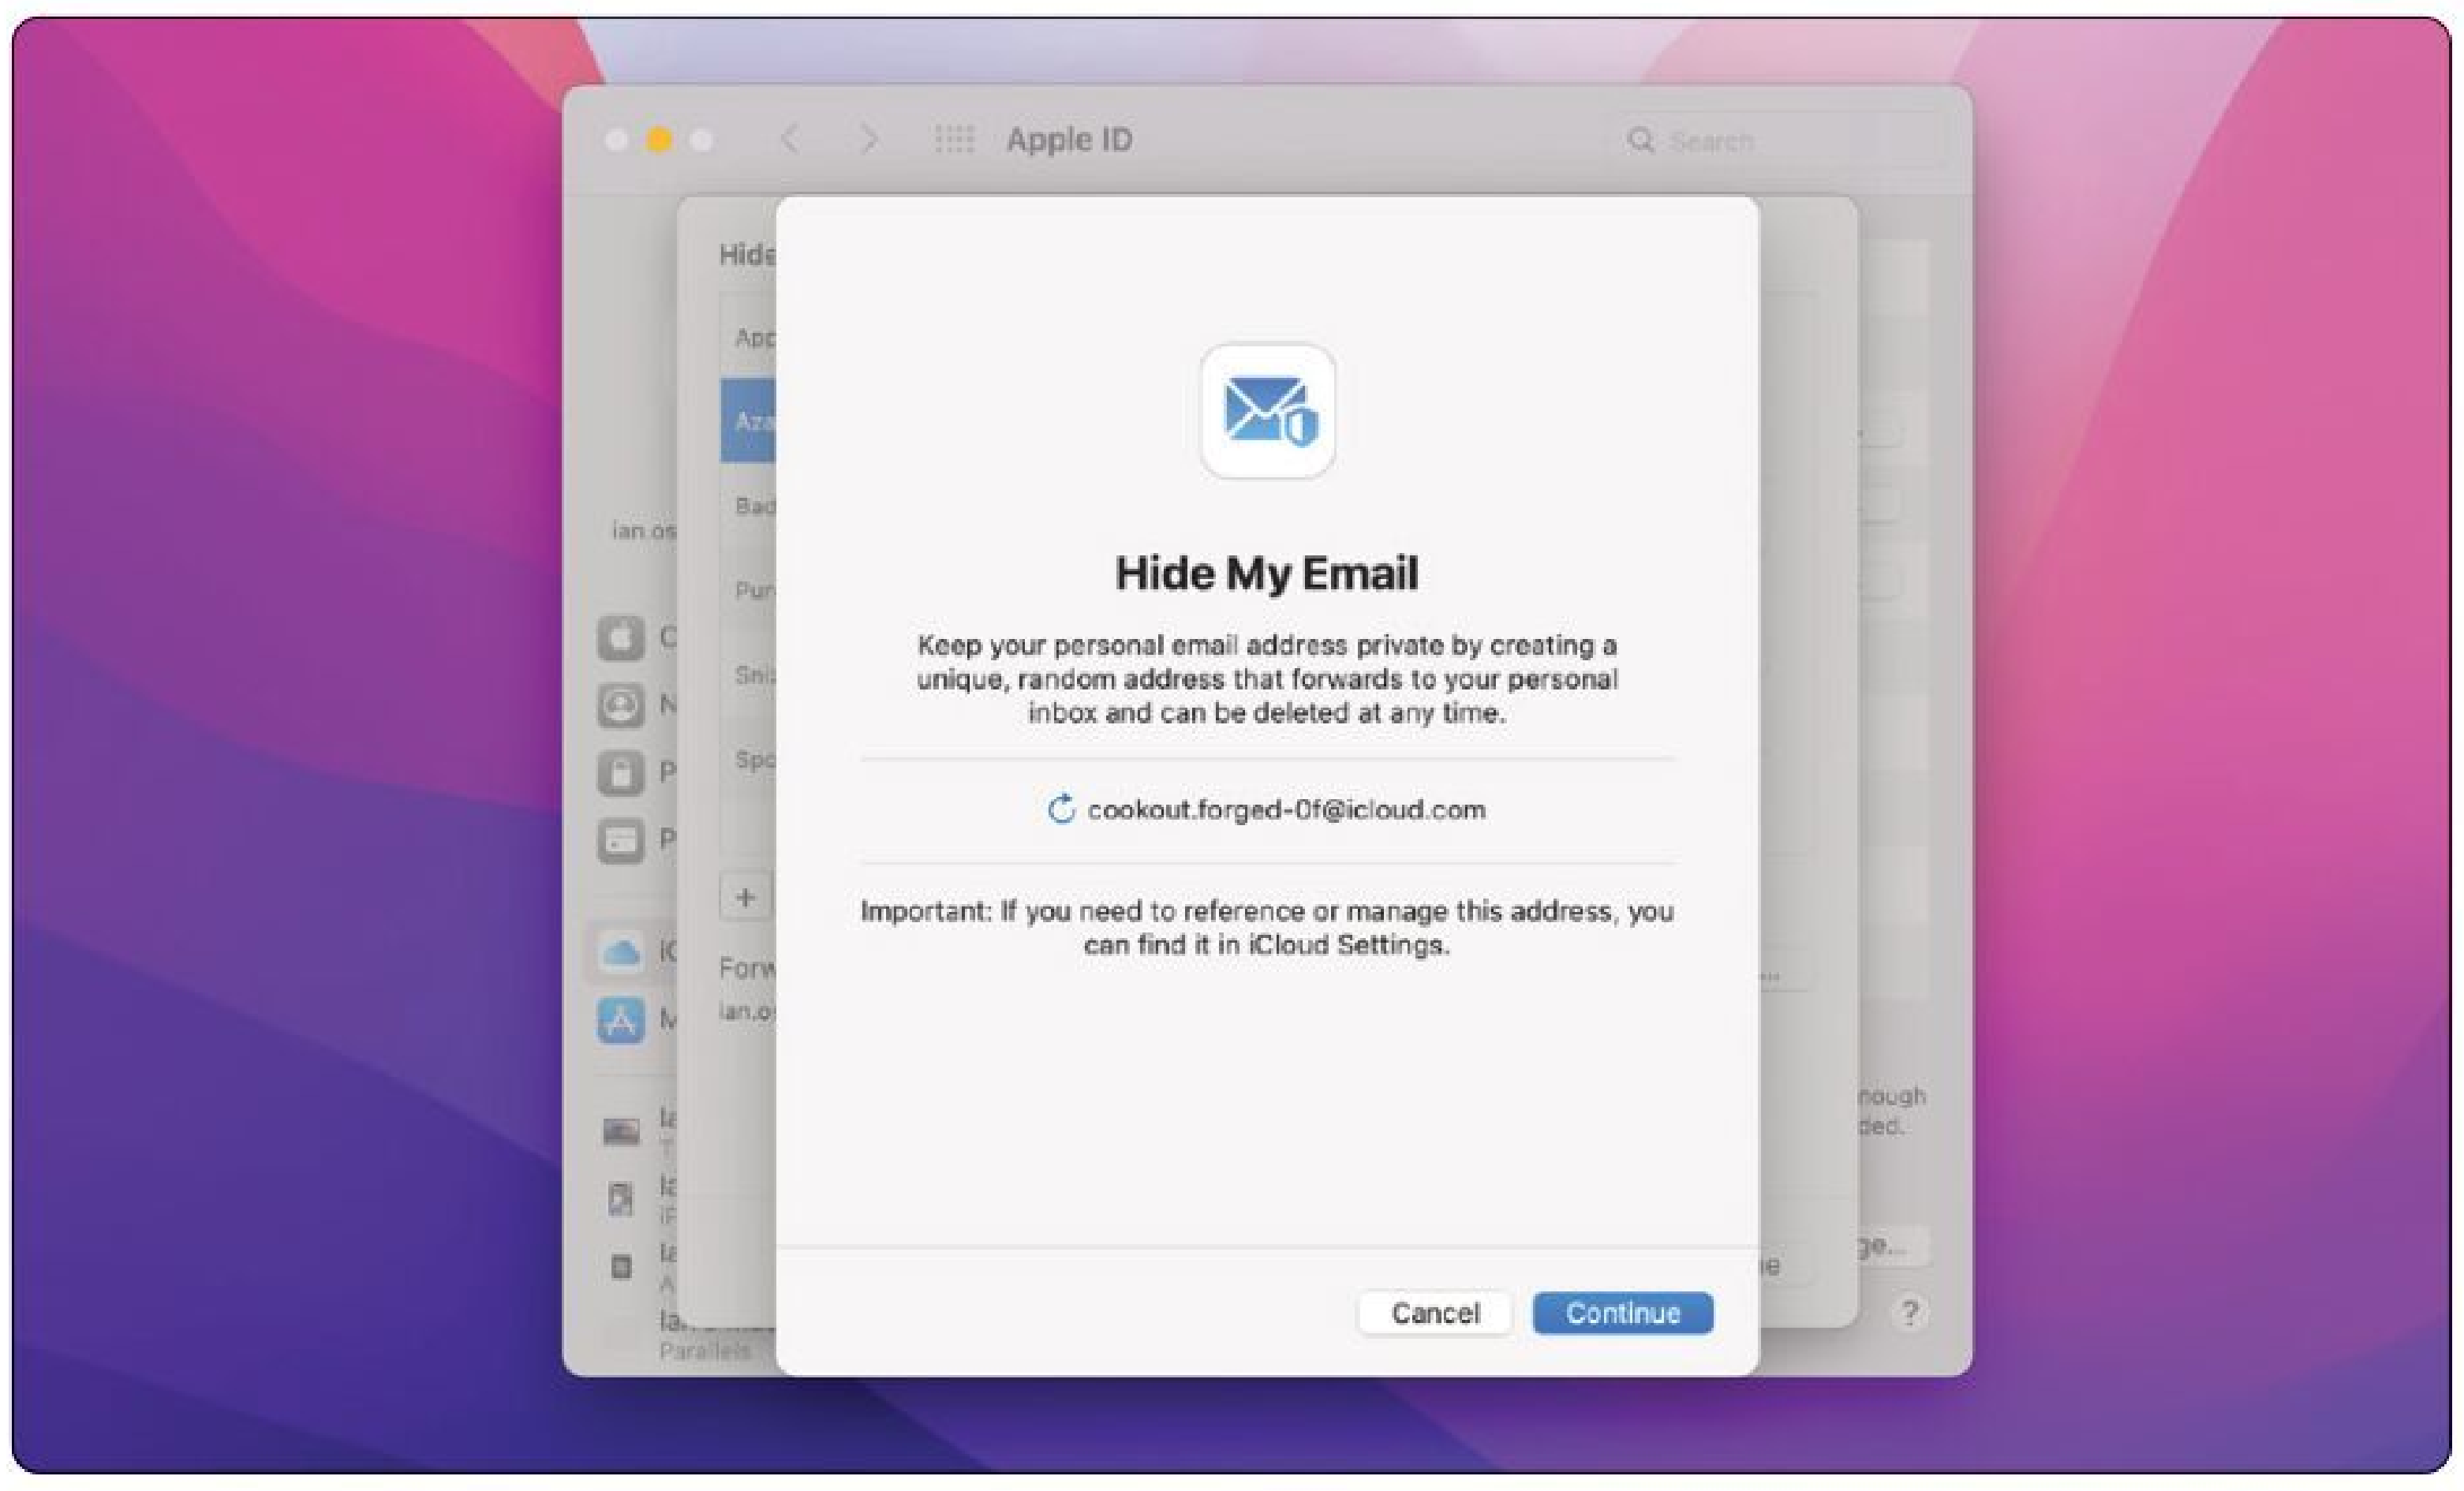
☑ Optimise Mac Storage
The full contents of iCloud Drive will be stored on this Mac if you have enough space. Older documents will be stored only in iCloud when space is needed.

iCloud Storage: 50 GB (23.18 GB Available)

4 Hide my email is also in System Preferences > Apple ID. It generates a random email address connected to your own email account. Use it for mail subscriptions and competitions, and if you’re getting too much spam - delete it.



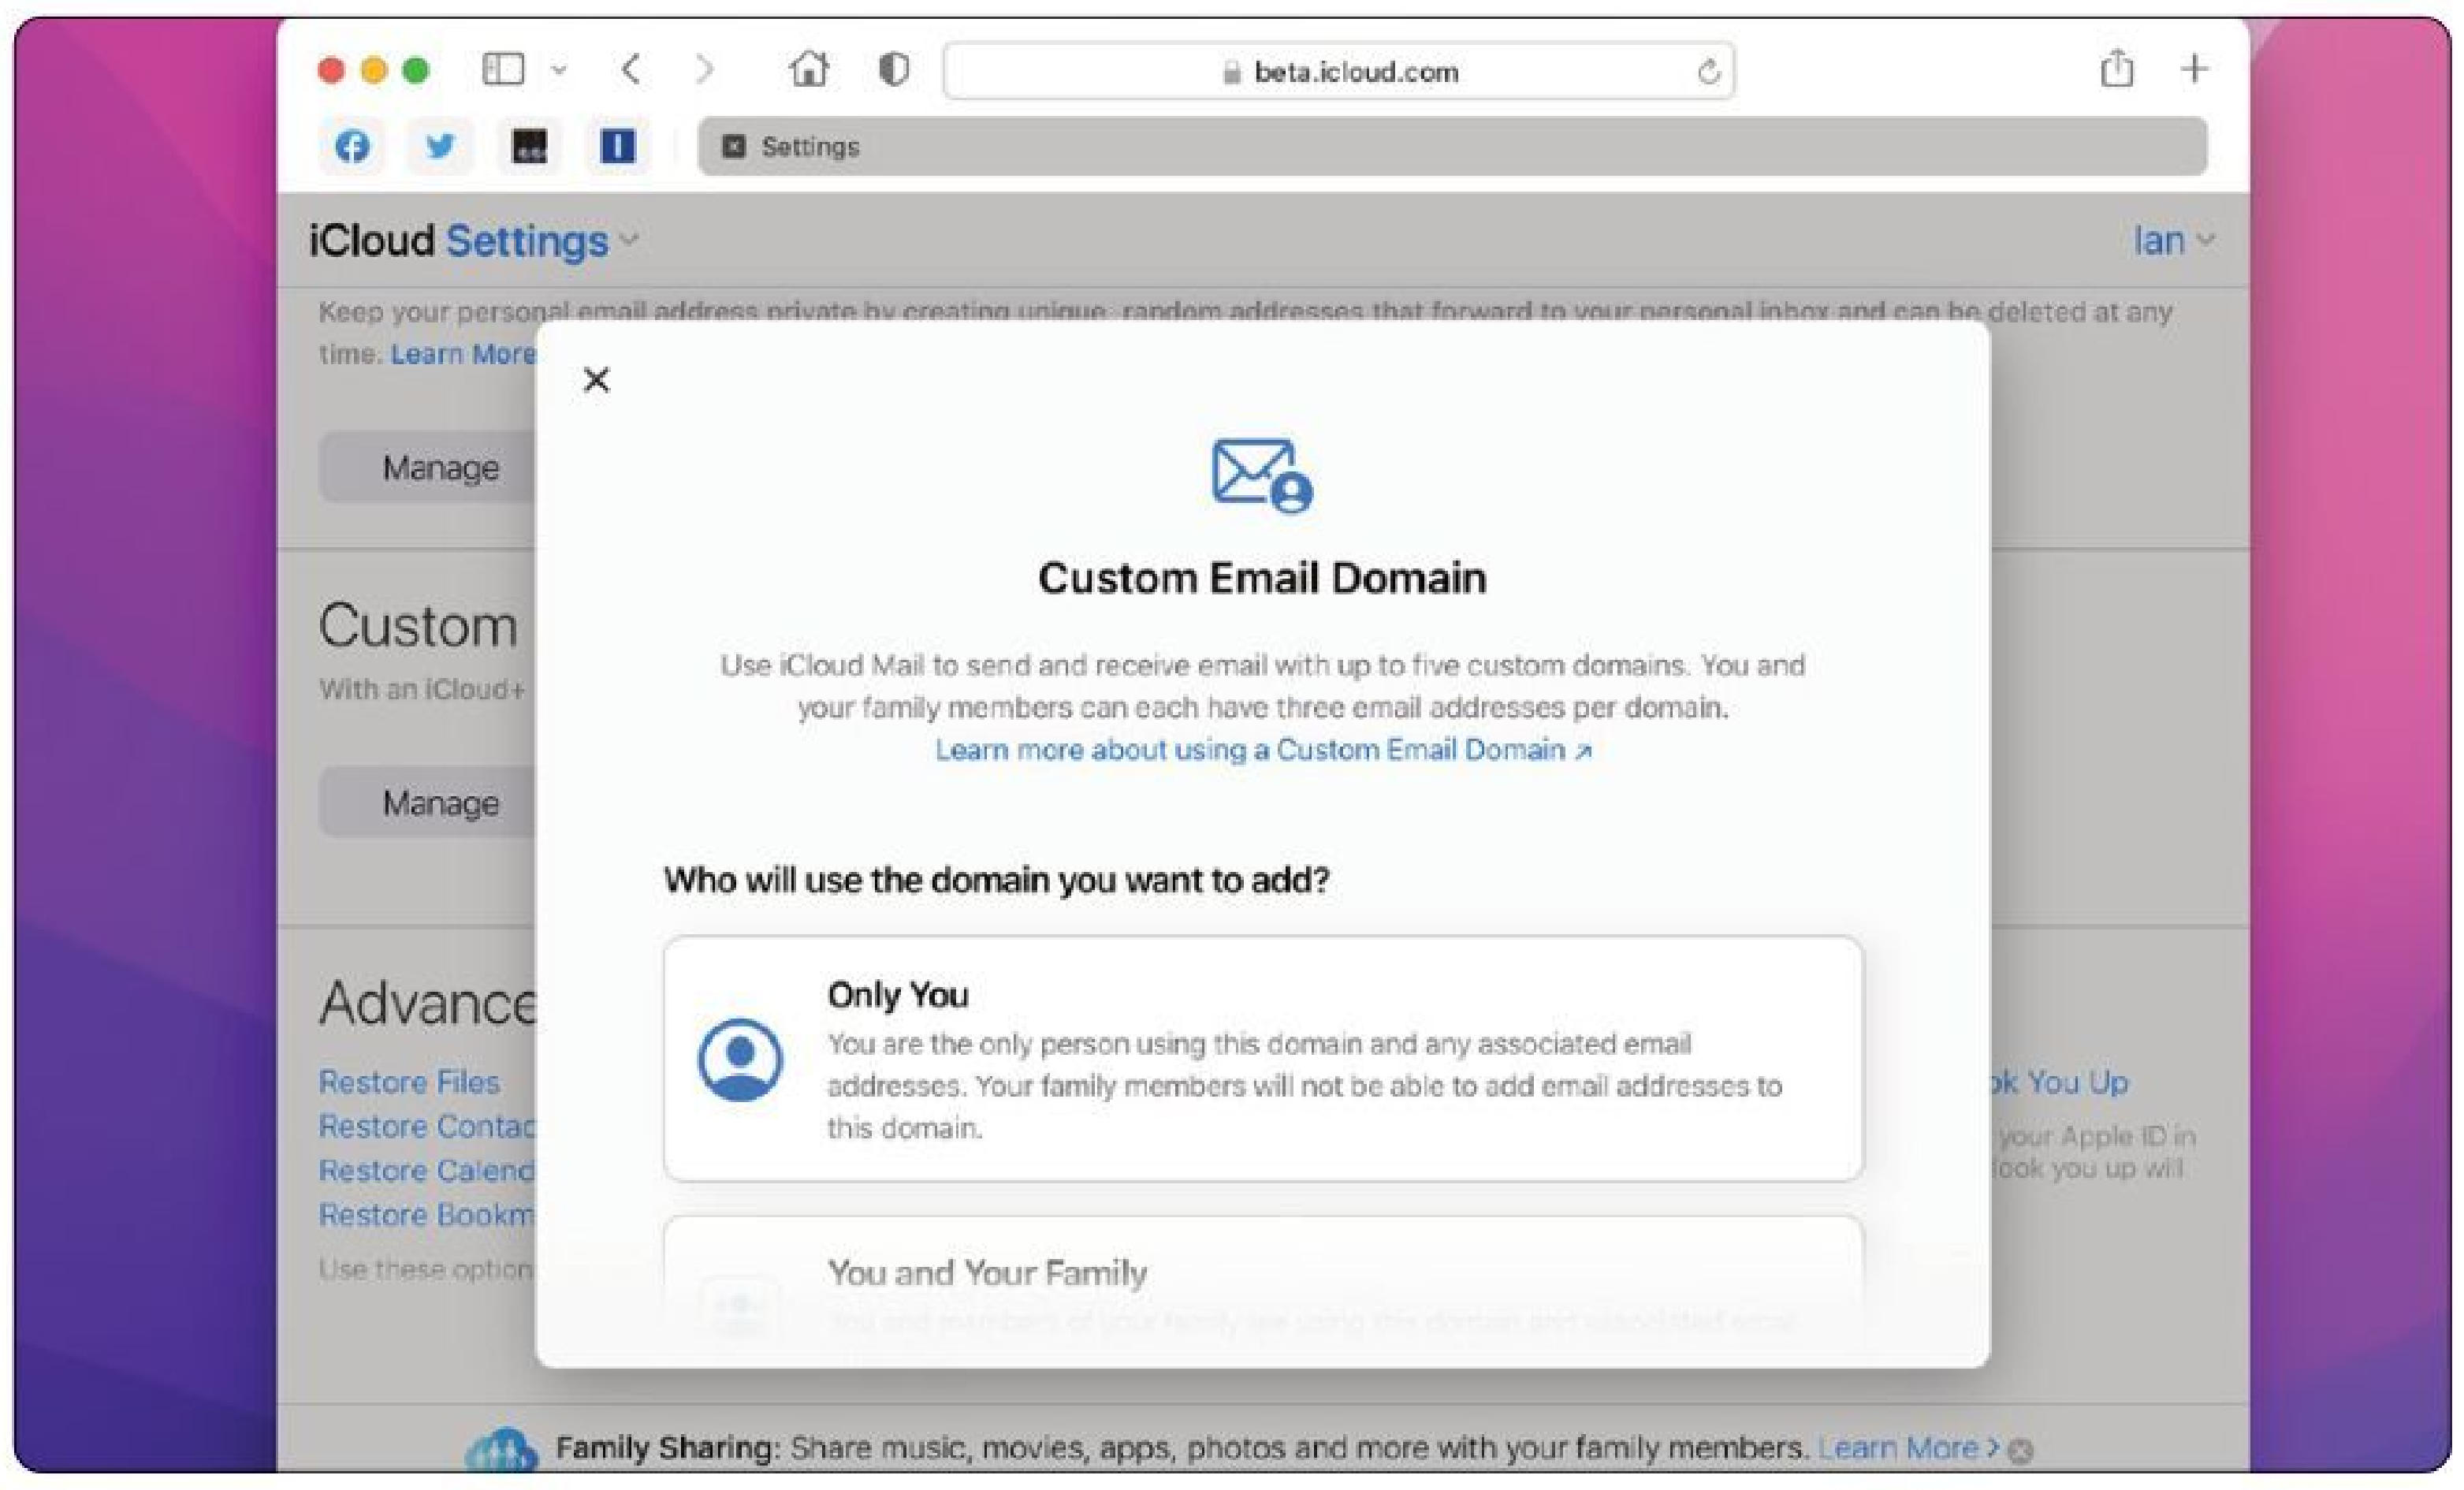
Hide My Email

Keep your personal email address private by creating a unique, random address that forwards to your personal inbox and can be deleted at any time.

cookout.forged-0f@icloud.com

Important: If you need to reference or manage this address, you can find it in iCloud Settings.

5 Click Options, then the ‘+’ icon on the left of the new window to create a new random email address, which you can use to sign up to newsletters, register for accounts and more. You can manage your generated emails here too.



Custom Email Domain

Use iCloud Mail to send and receive email with up to five custom domains. You and your family members can each have three email addresses per domain.
Learn more about using a Custom Email Domain ↗

Who will use the domain you want to add?

Only You
You are the only person using this domain and any associated email addresses. Your family members will not be able to add email addresses to this domain.

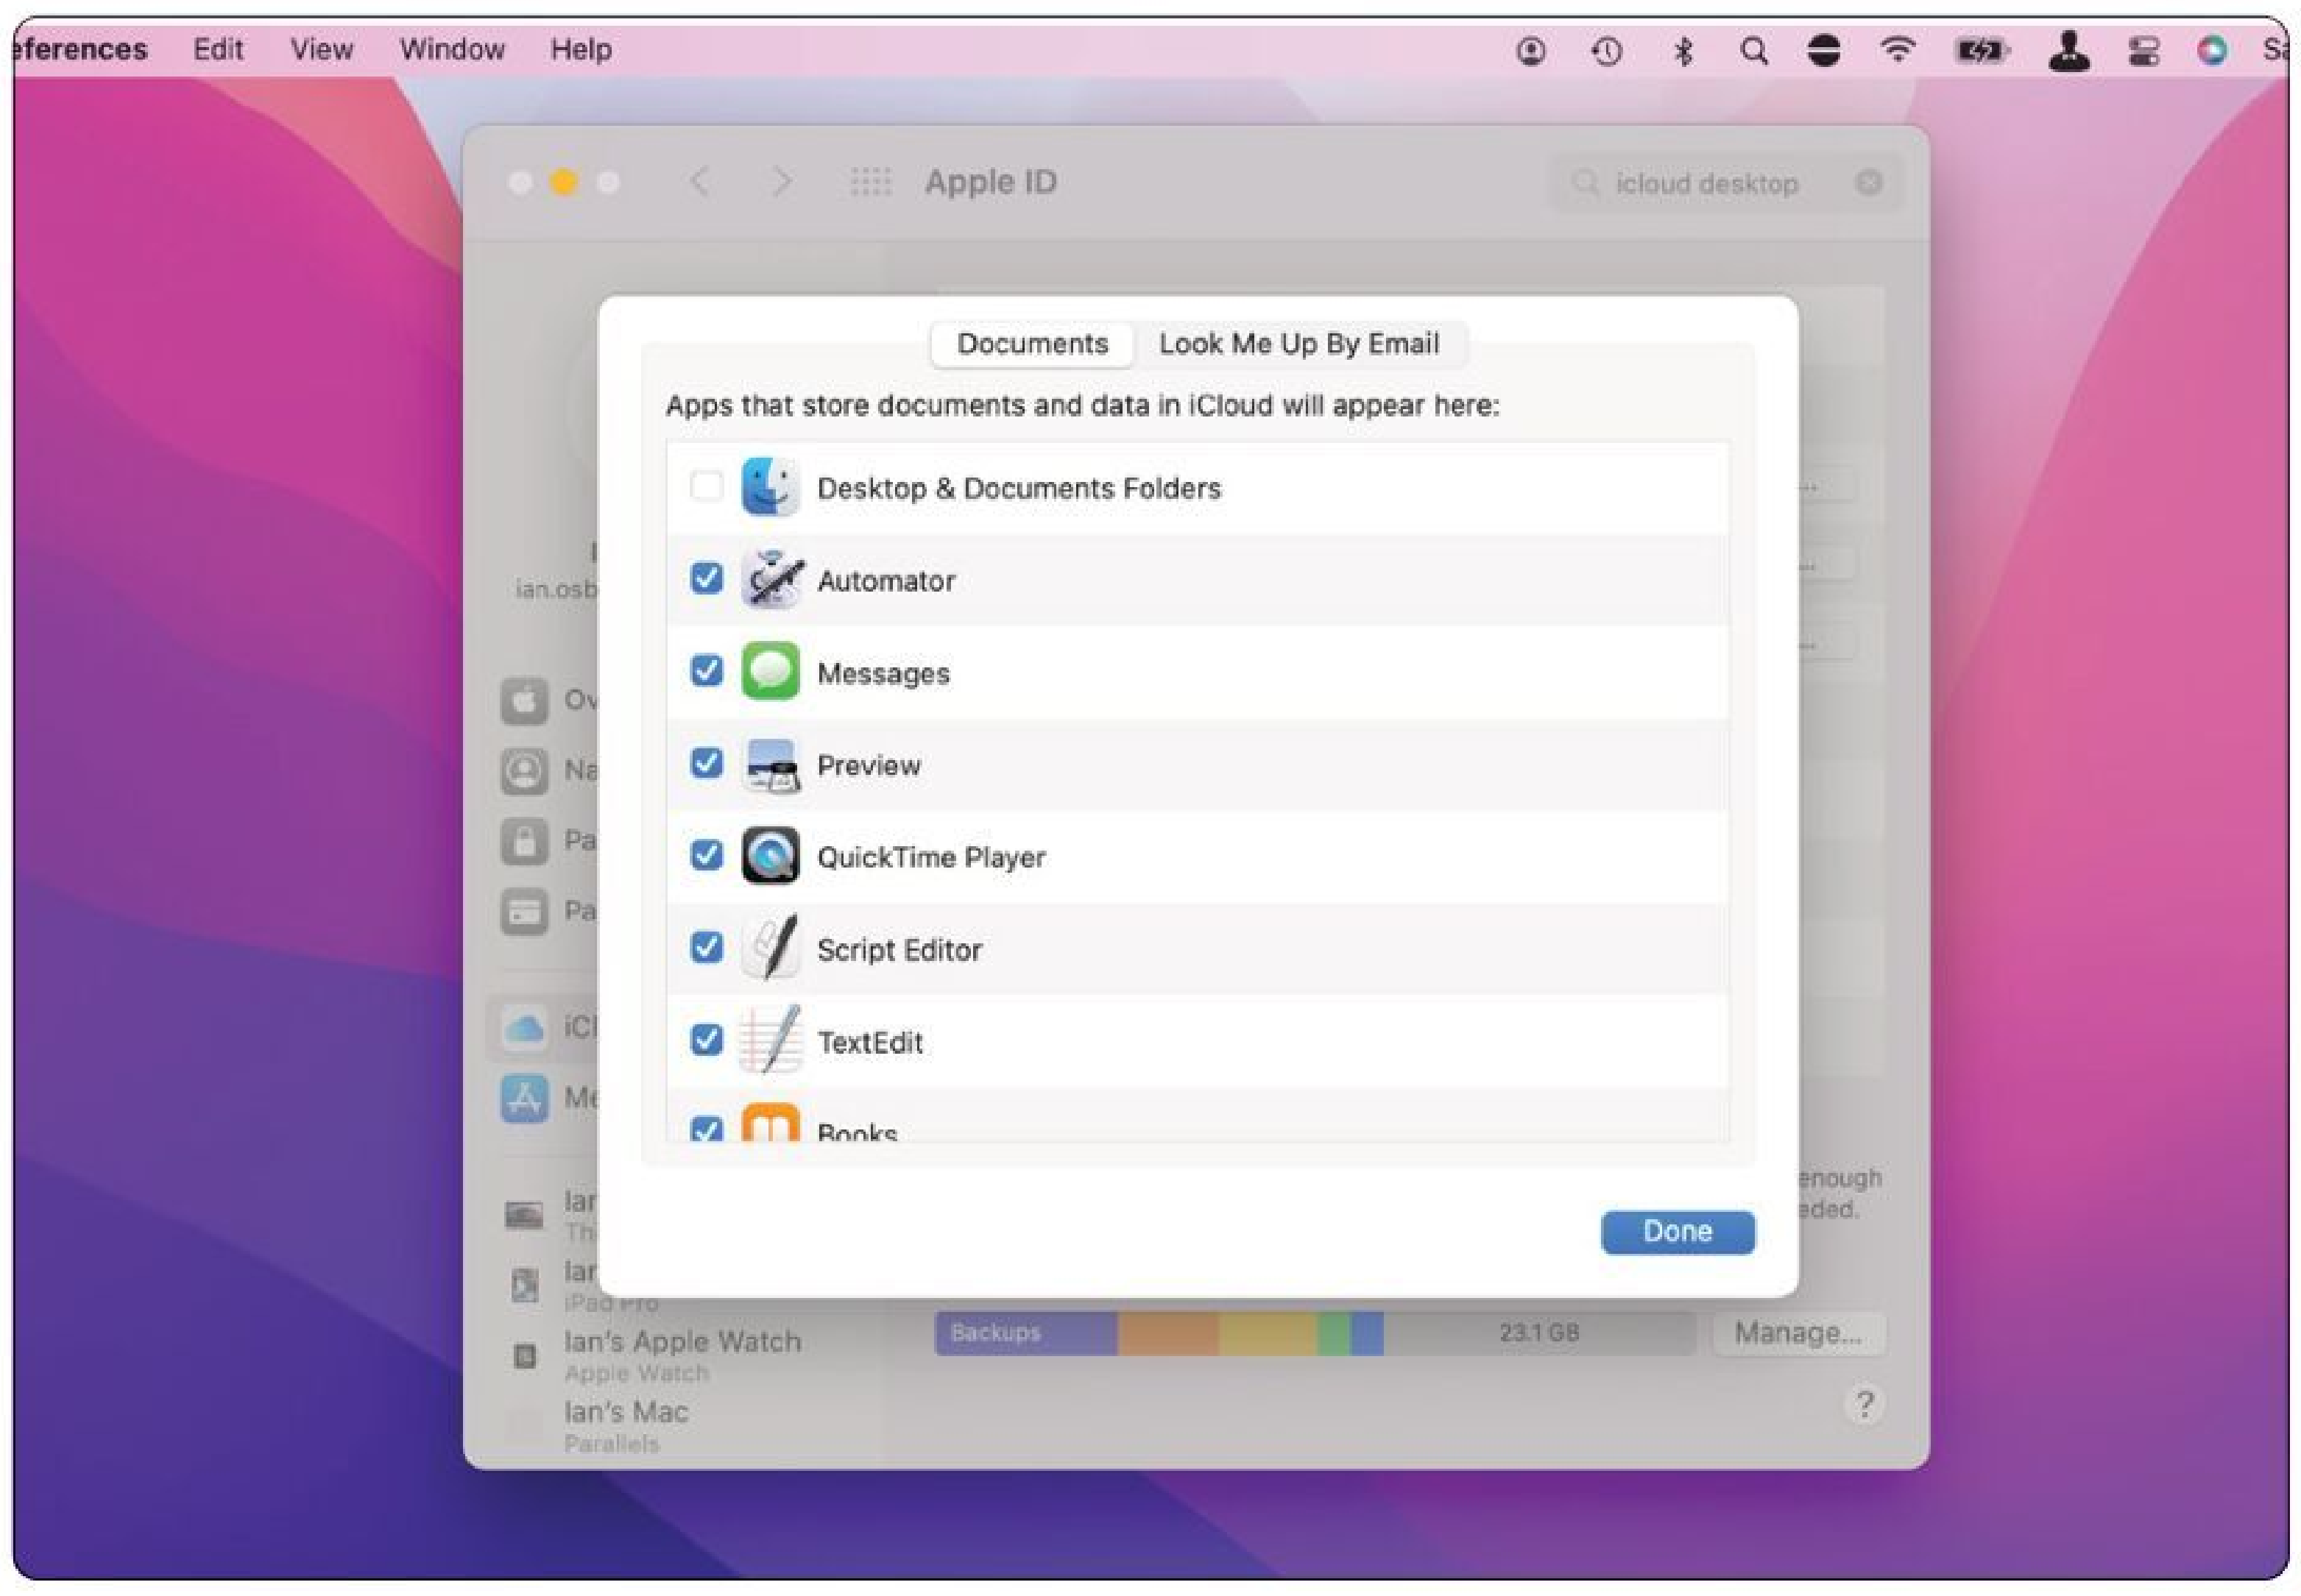
You and Your Family

Family Sharing: Share music, movies, apps, photos and more with your family members. Learn More >

6 With iCloud+, you can use up to five custom domains to send and receive email with iCloud Mail. Go to www.icloud.com, click Account Settings and under Custom Email Domain, click the Manage button. Follow the on-screen instructions.

iCloud Desktop Documents & Folders

With macOS and iOS, you can not only store your documents on your iCloud but also files and folders that are found on your desktop. It's done automatically, so a file on your Mac's desktop is accessible from your iOS device and other Macs. Here's how to use the iCloud Desktop.



Apple ID
icloud desktop
Documents
Look Me Up By Email
Done
Manage...

Apps that store documents and data in iCloud will appear here:

- ☐ Desktop & Documents Folders
- ☑ Automator
- ☑ Messages
- ☑ Preview
- ☑ QuickTime Player
- ☑ Script Editor
- ☑ TextEdit
- ☑ Books

1 To switch on iCloud Desktop Documents and Folders, open System Preferences and click on Apple ID > iCloud. Click on the Options button next to iCloud Drive, then check Desktop & Documents Folders. It may take time to set up.

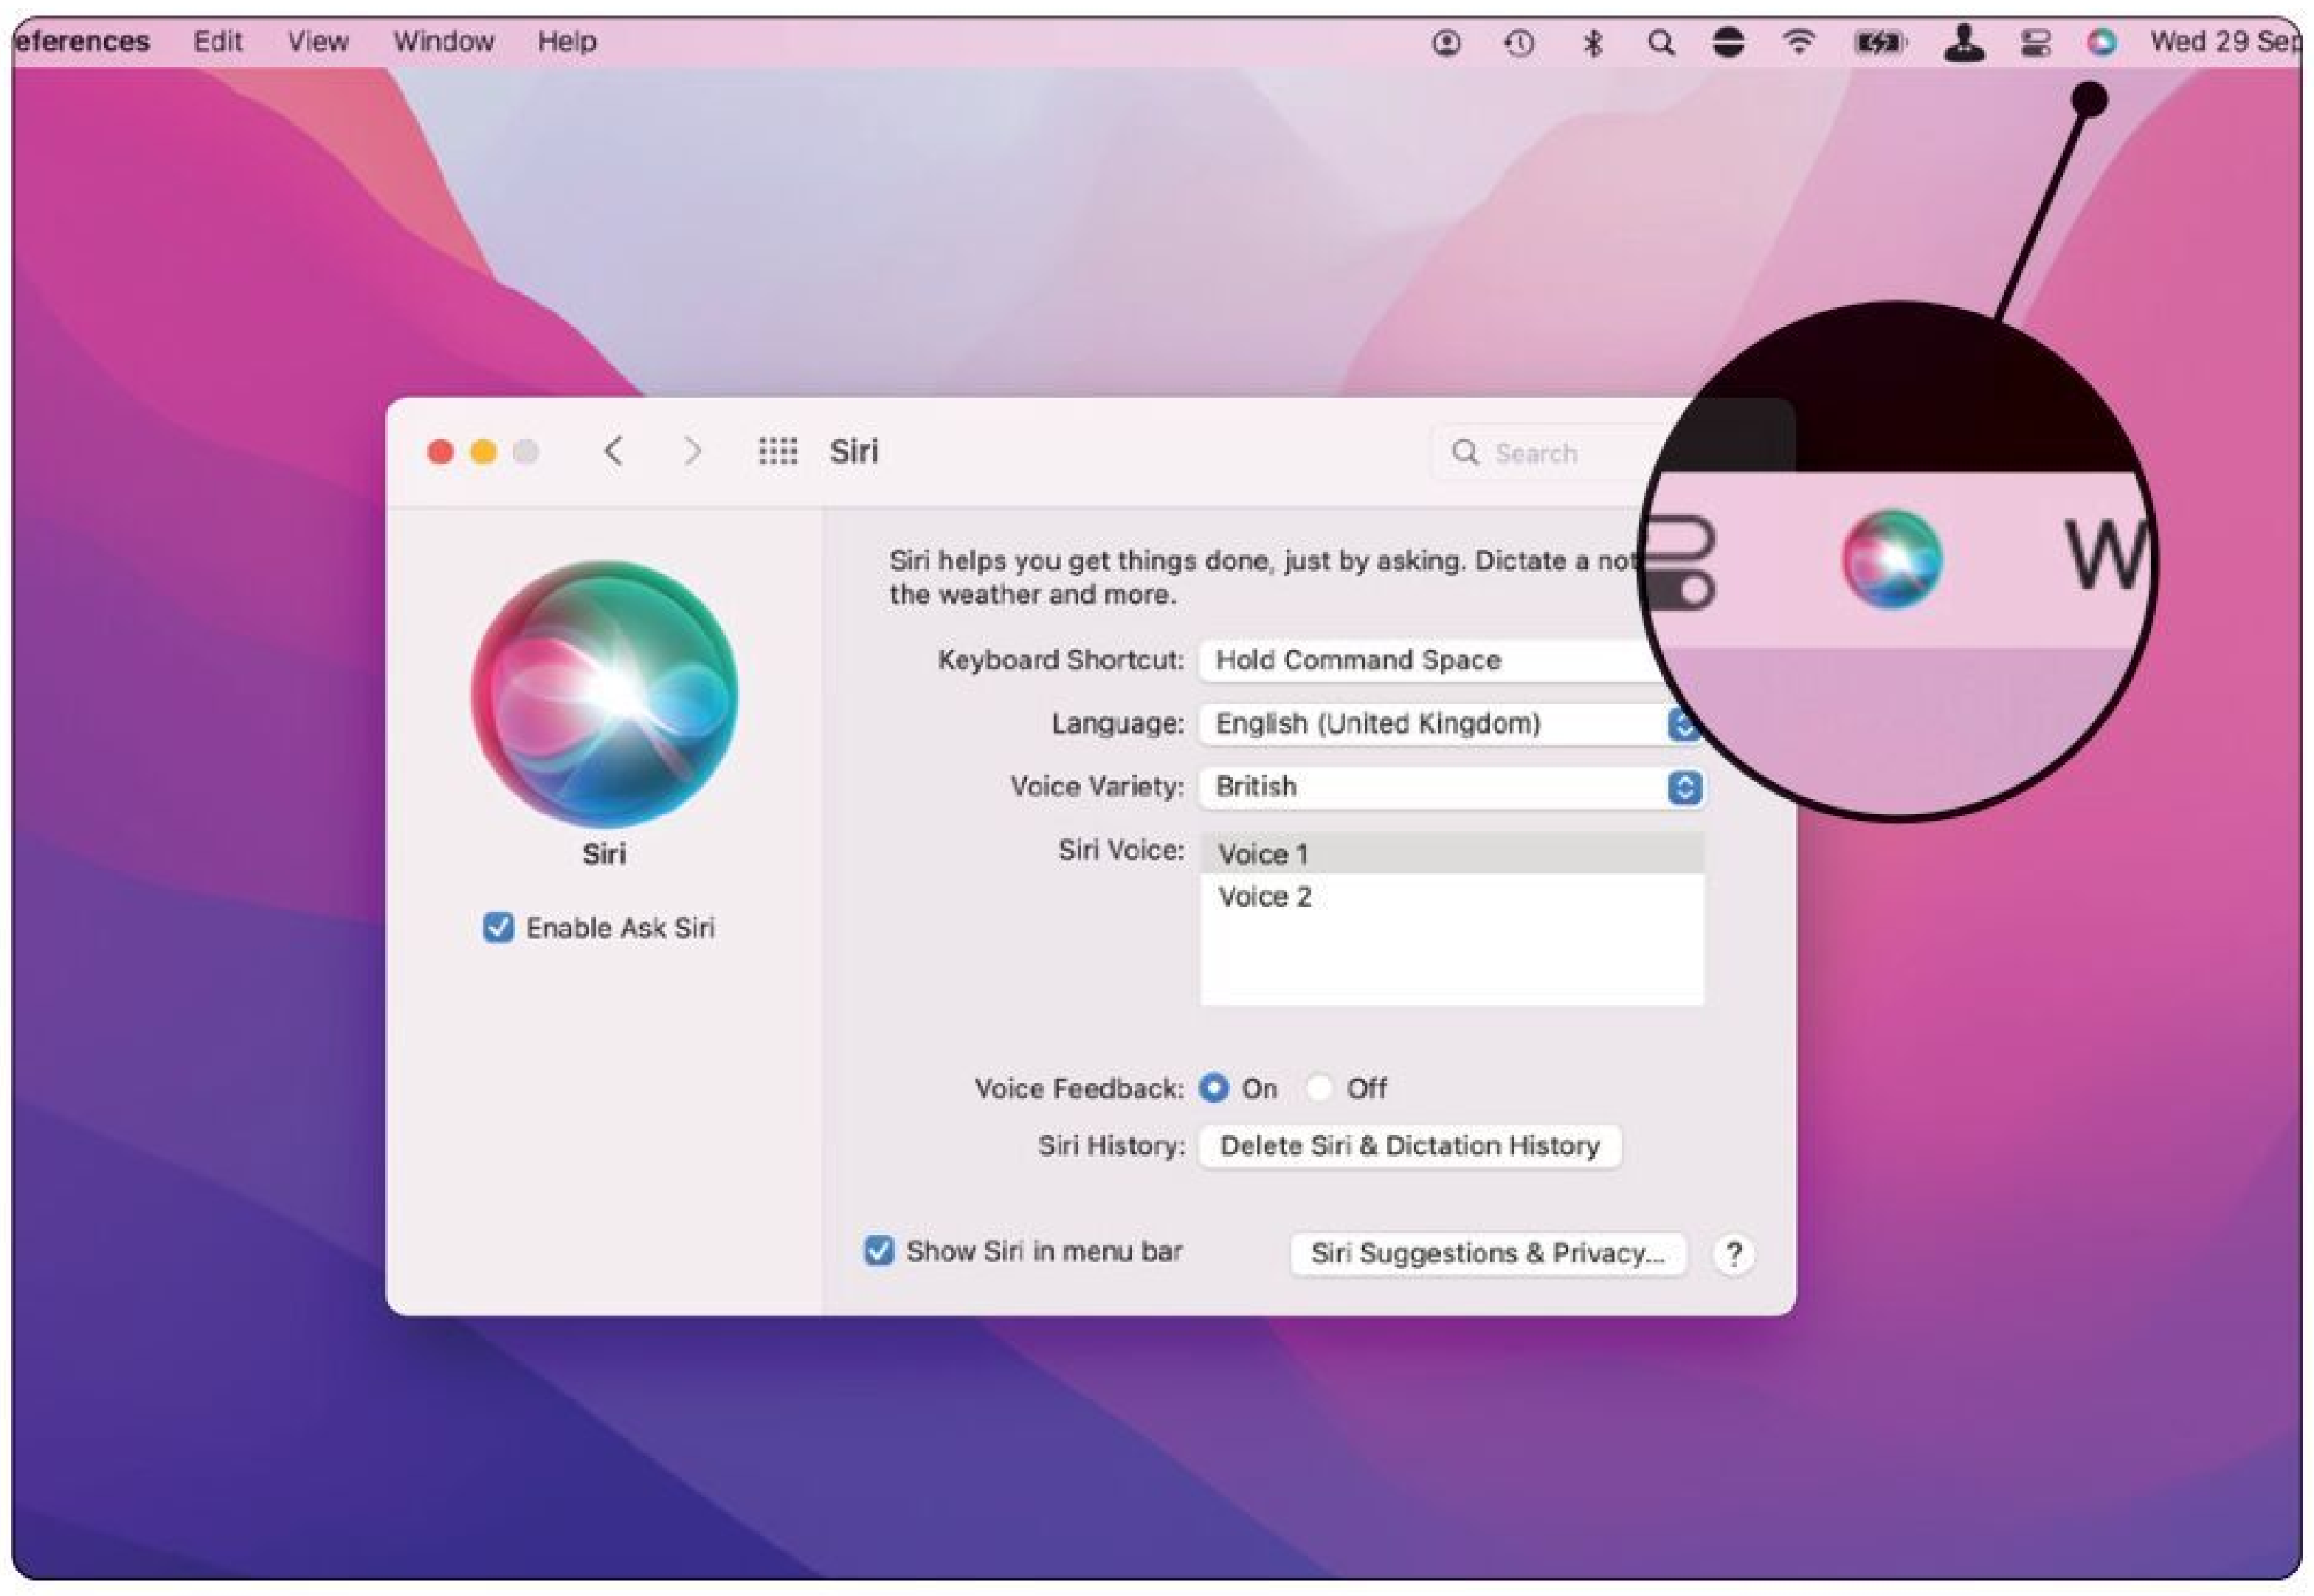
4 You can also access your Desktop documents and folders using the website. Just point your browser at www.icloud.com and sign in. Open the iCloud Drive and the Desktop folder is there. You can do this on any Internet-capable device with a web browser.

The Siri Feature
Your Digital PA

Apple's digital personal assistant lets you communicate with your computer by speaking, just like you do with the iPad and iPhone. Siri can organise your day, access your apps and even share a joke or two. Here's a look at what the Siri digital assistant can do for you and your Mac, and how to make the most of it.

Setting Up Siri



Siri helps you get things done, just by asking. Dictate a not… the weather and more.
Keyboard Shortcut: Hold Command Space
Language: English (United Kingdom)
Voice Variety: British
Siri Voice: Voice 1 / Voice 2
Voice Feedback: ● On ○ Off

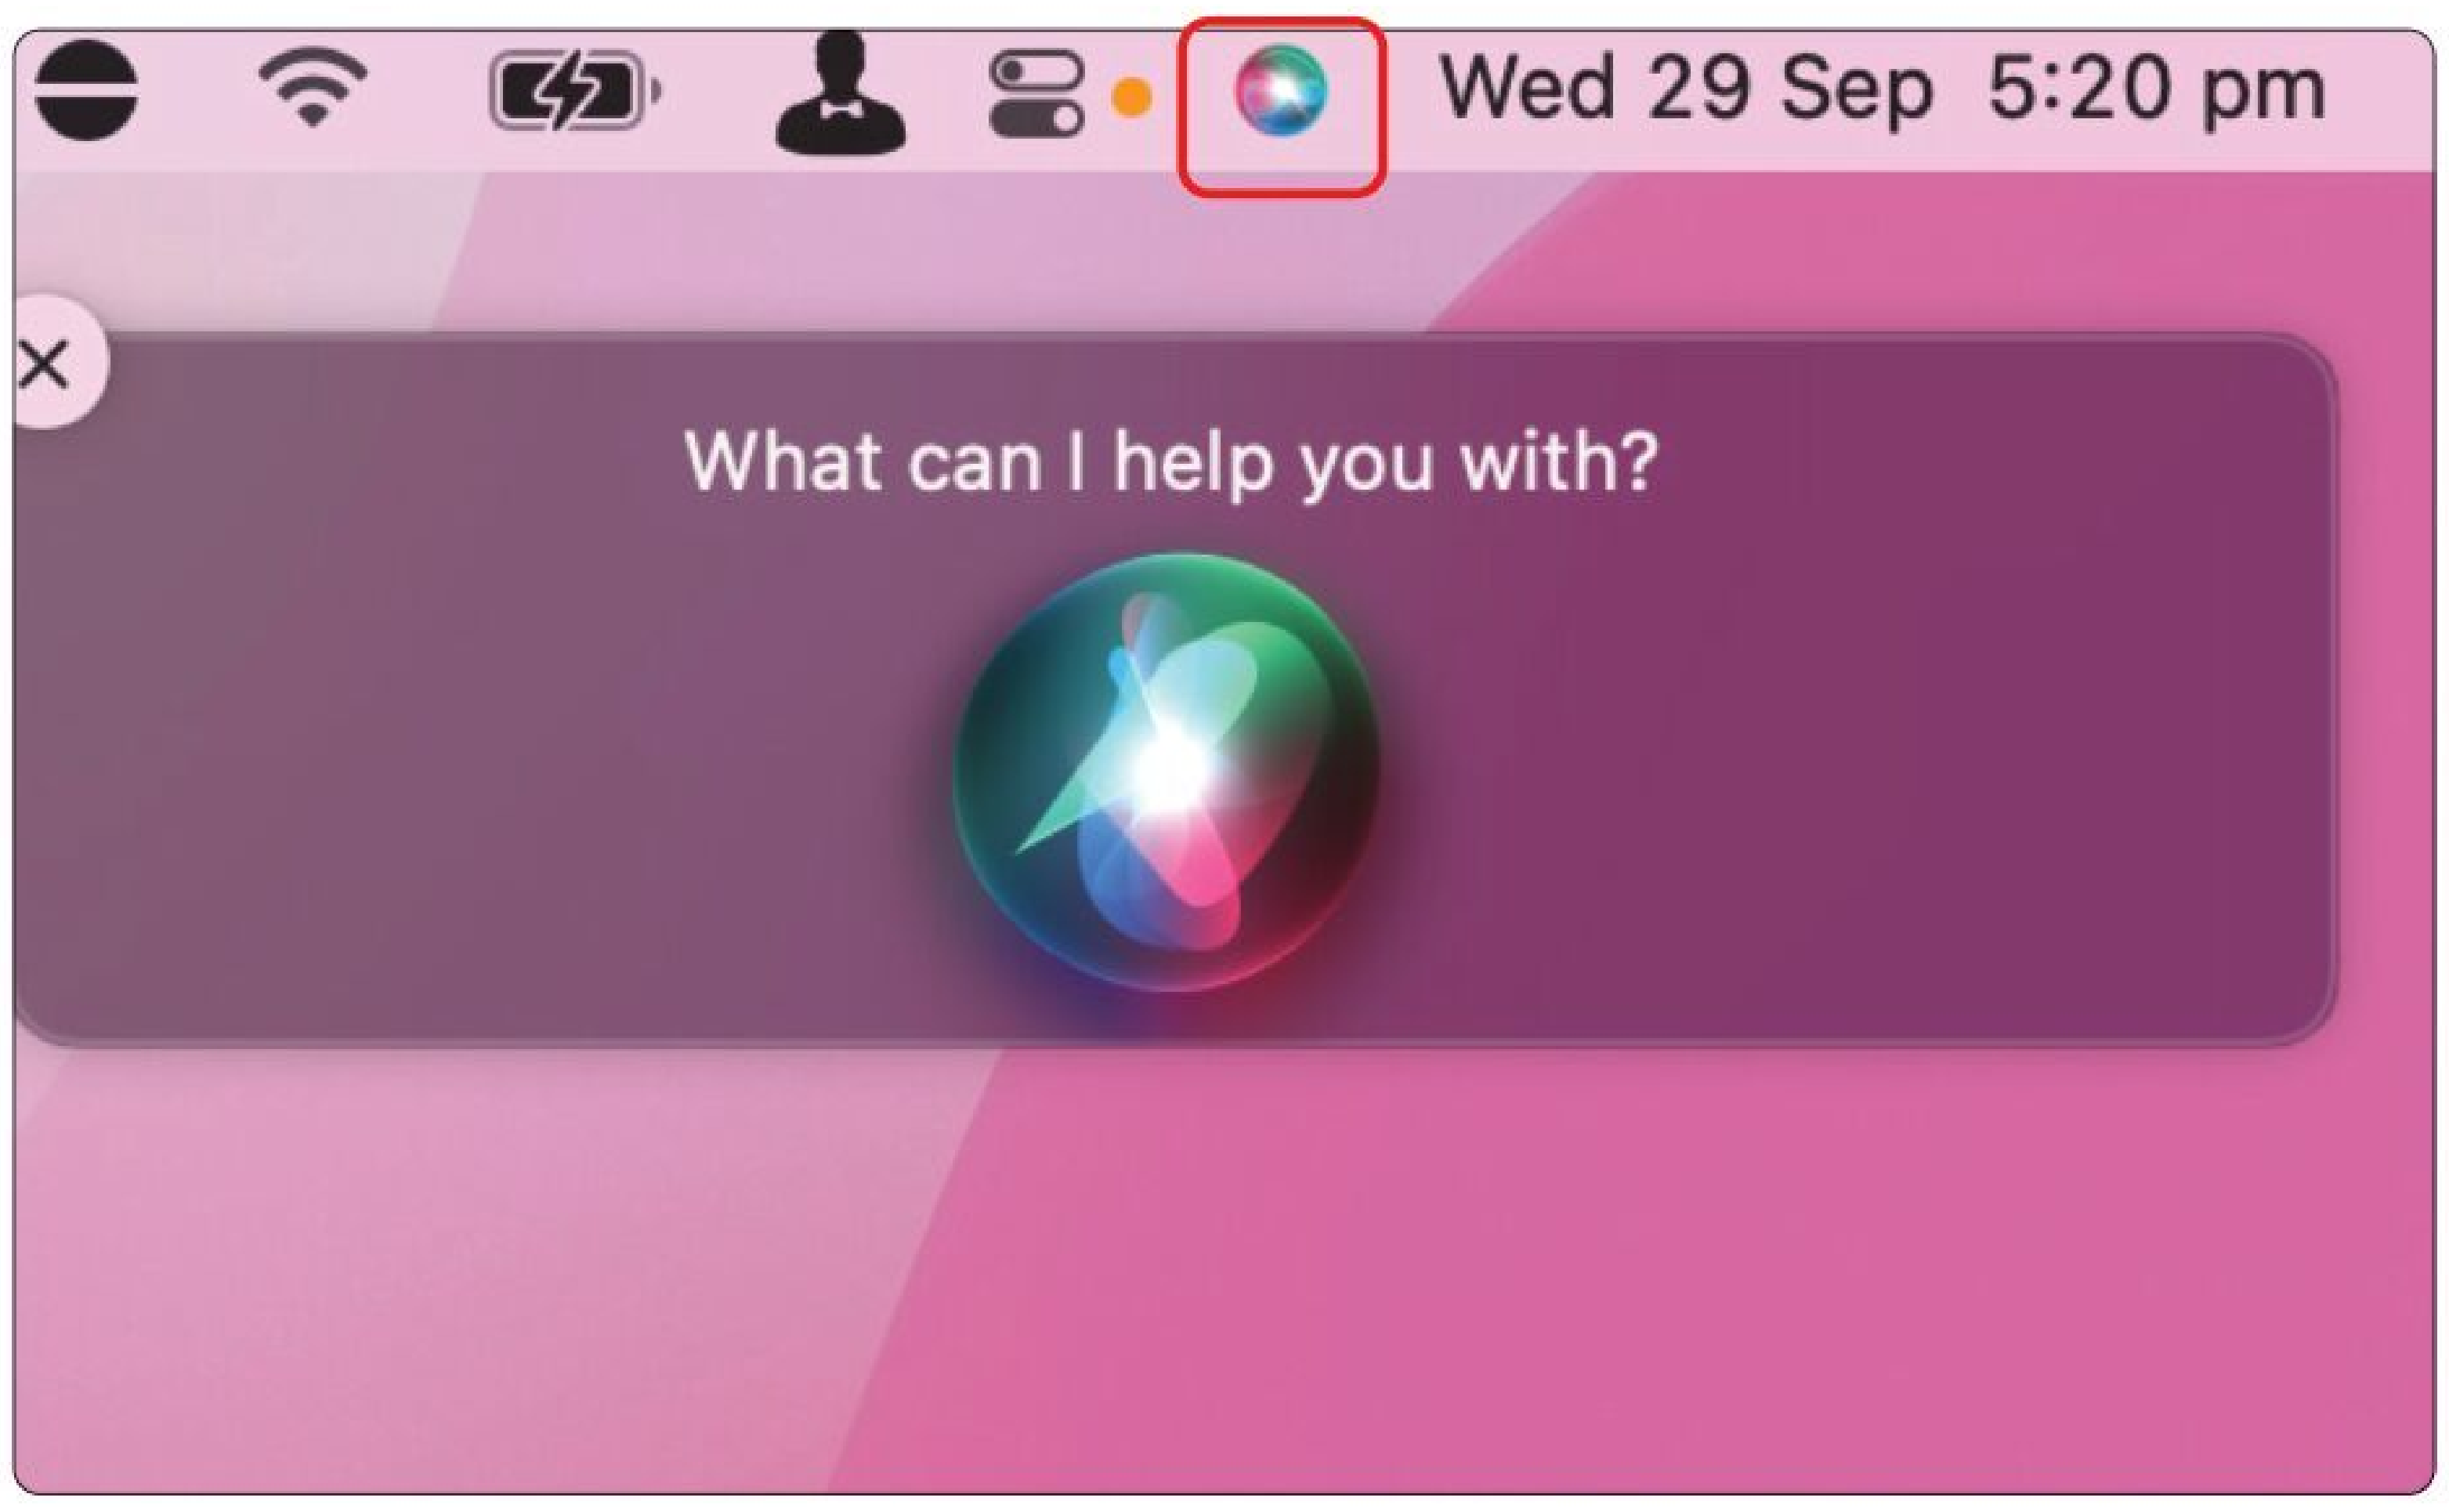
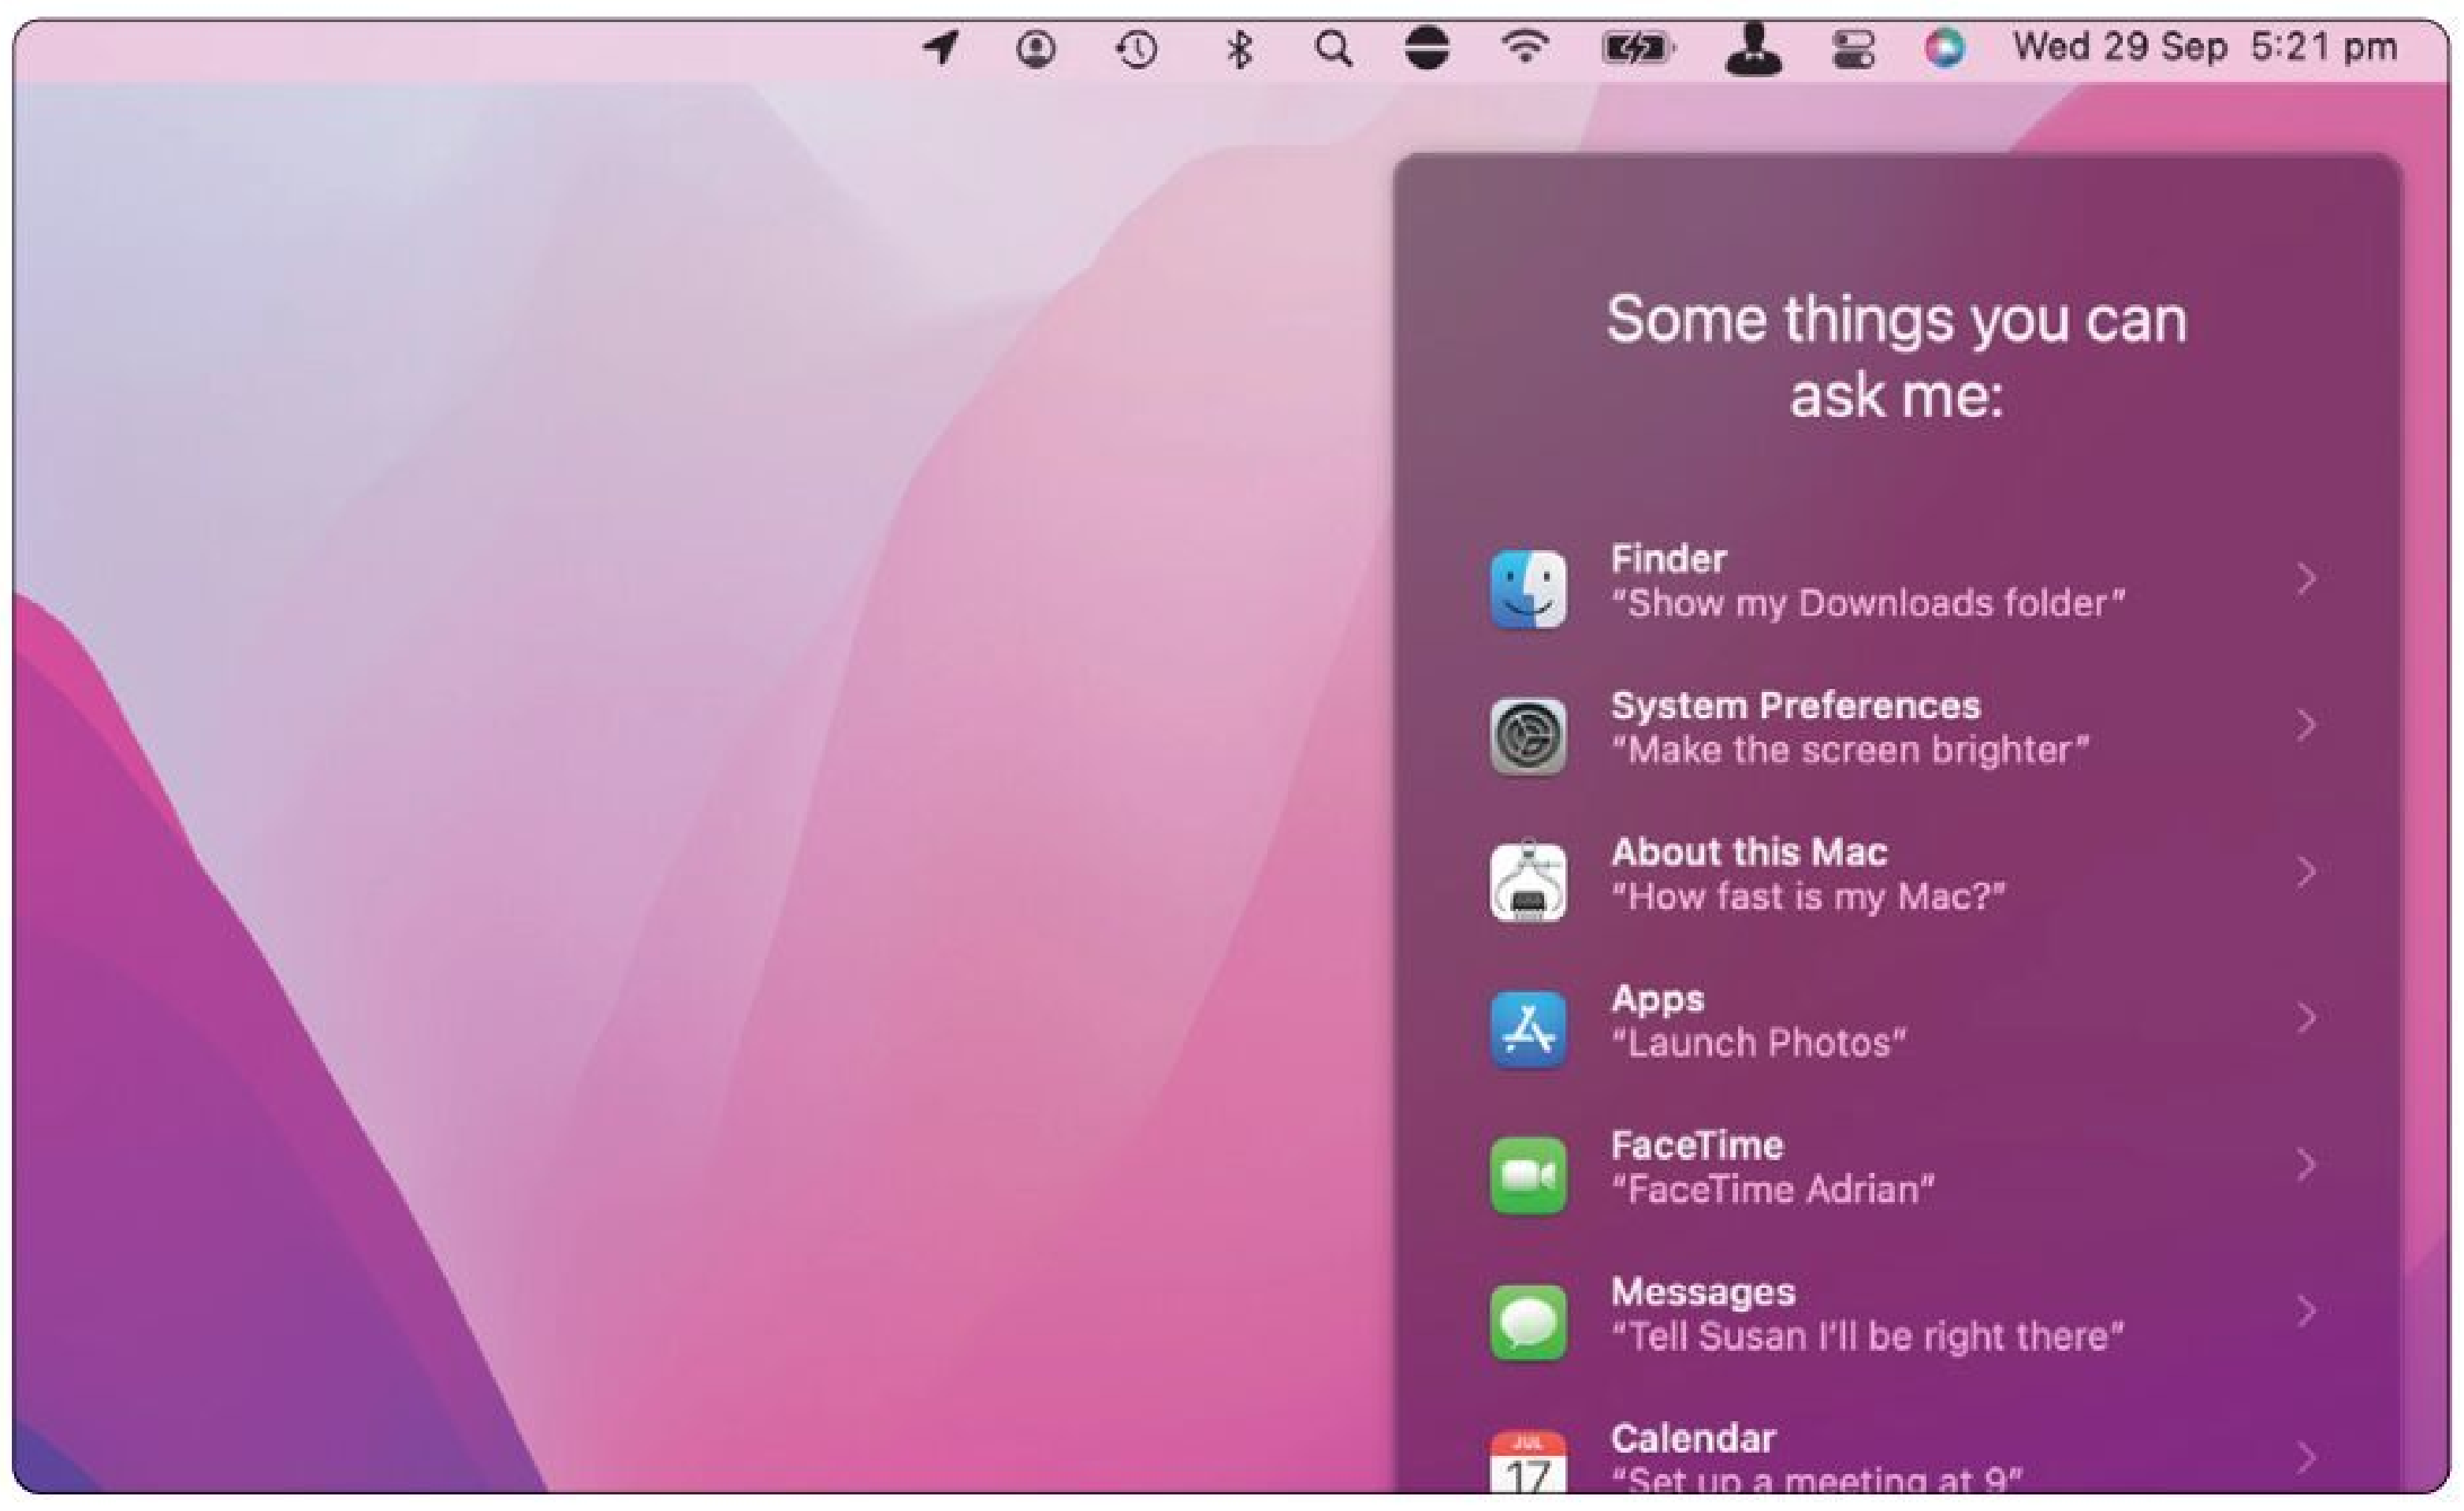
English (Singapore)
English (South Africa)

2 You can change the language that Siri understands and also speaks in using the pull-down menu. You can also change the English language voice from a British male to a female voice and a different accent, and set up a keyboard shortcut for Siri if you wish.



What can I help you with?
Wed 29 Sep 5:20 pm

3 To launch Siri, click on the icon in the Dock, click on the menu bar icon if you've opted for one or press the keyboard shortcut, again if you have one set up. A Siri window appears in the top right corner of the screen.



Some things you can ask me:
Finder "Show my Downloads folder"
System Preferences "Make the screen brighter"
About this Mac "How fast is my Mac?"
Apps "Launch Photos"
FaceTime "FaceTime Adrian"
Messages "Tell Susan I'll be right there"
Calendar "Set up a meeting at 9"
Wed 29 Sep 5:21 pm
JUL
17

4 Using Siri requires an Internet connection, so your Mac can send your voice message to Apple's servers to be analysed. If you don't currently have an Internet connection, you cannot use Siri until you take your Mac back online again.

MESSAGES
To: James Gale

Send a Message: You can send a message using Siri, instead of looking up the person in Contacts and then typing the message itself. Just say, "Send a message to X", and Siri will find the person and ask what you want to say. Speak your message and you can then check and send it.

What is 12 km in miles

Calculator
12 kilometres =
7.46 miles

Conversions: You can use Siri to do conversions between weights, length, time, currencies and more. Just ask, for example, 'What is 12 kilometres in miles?', and Siri tells you. It's great for currency conversions when shopping online.

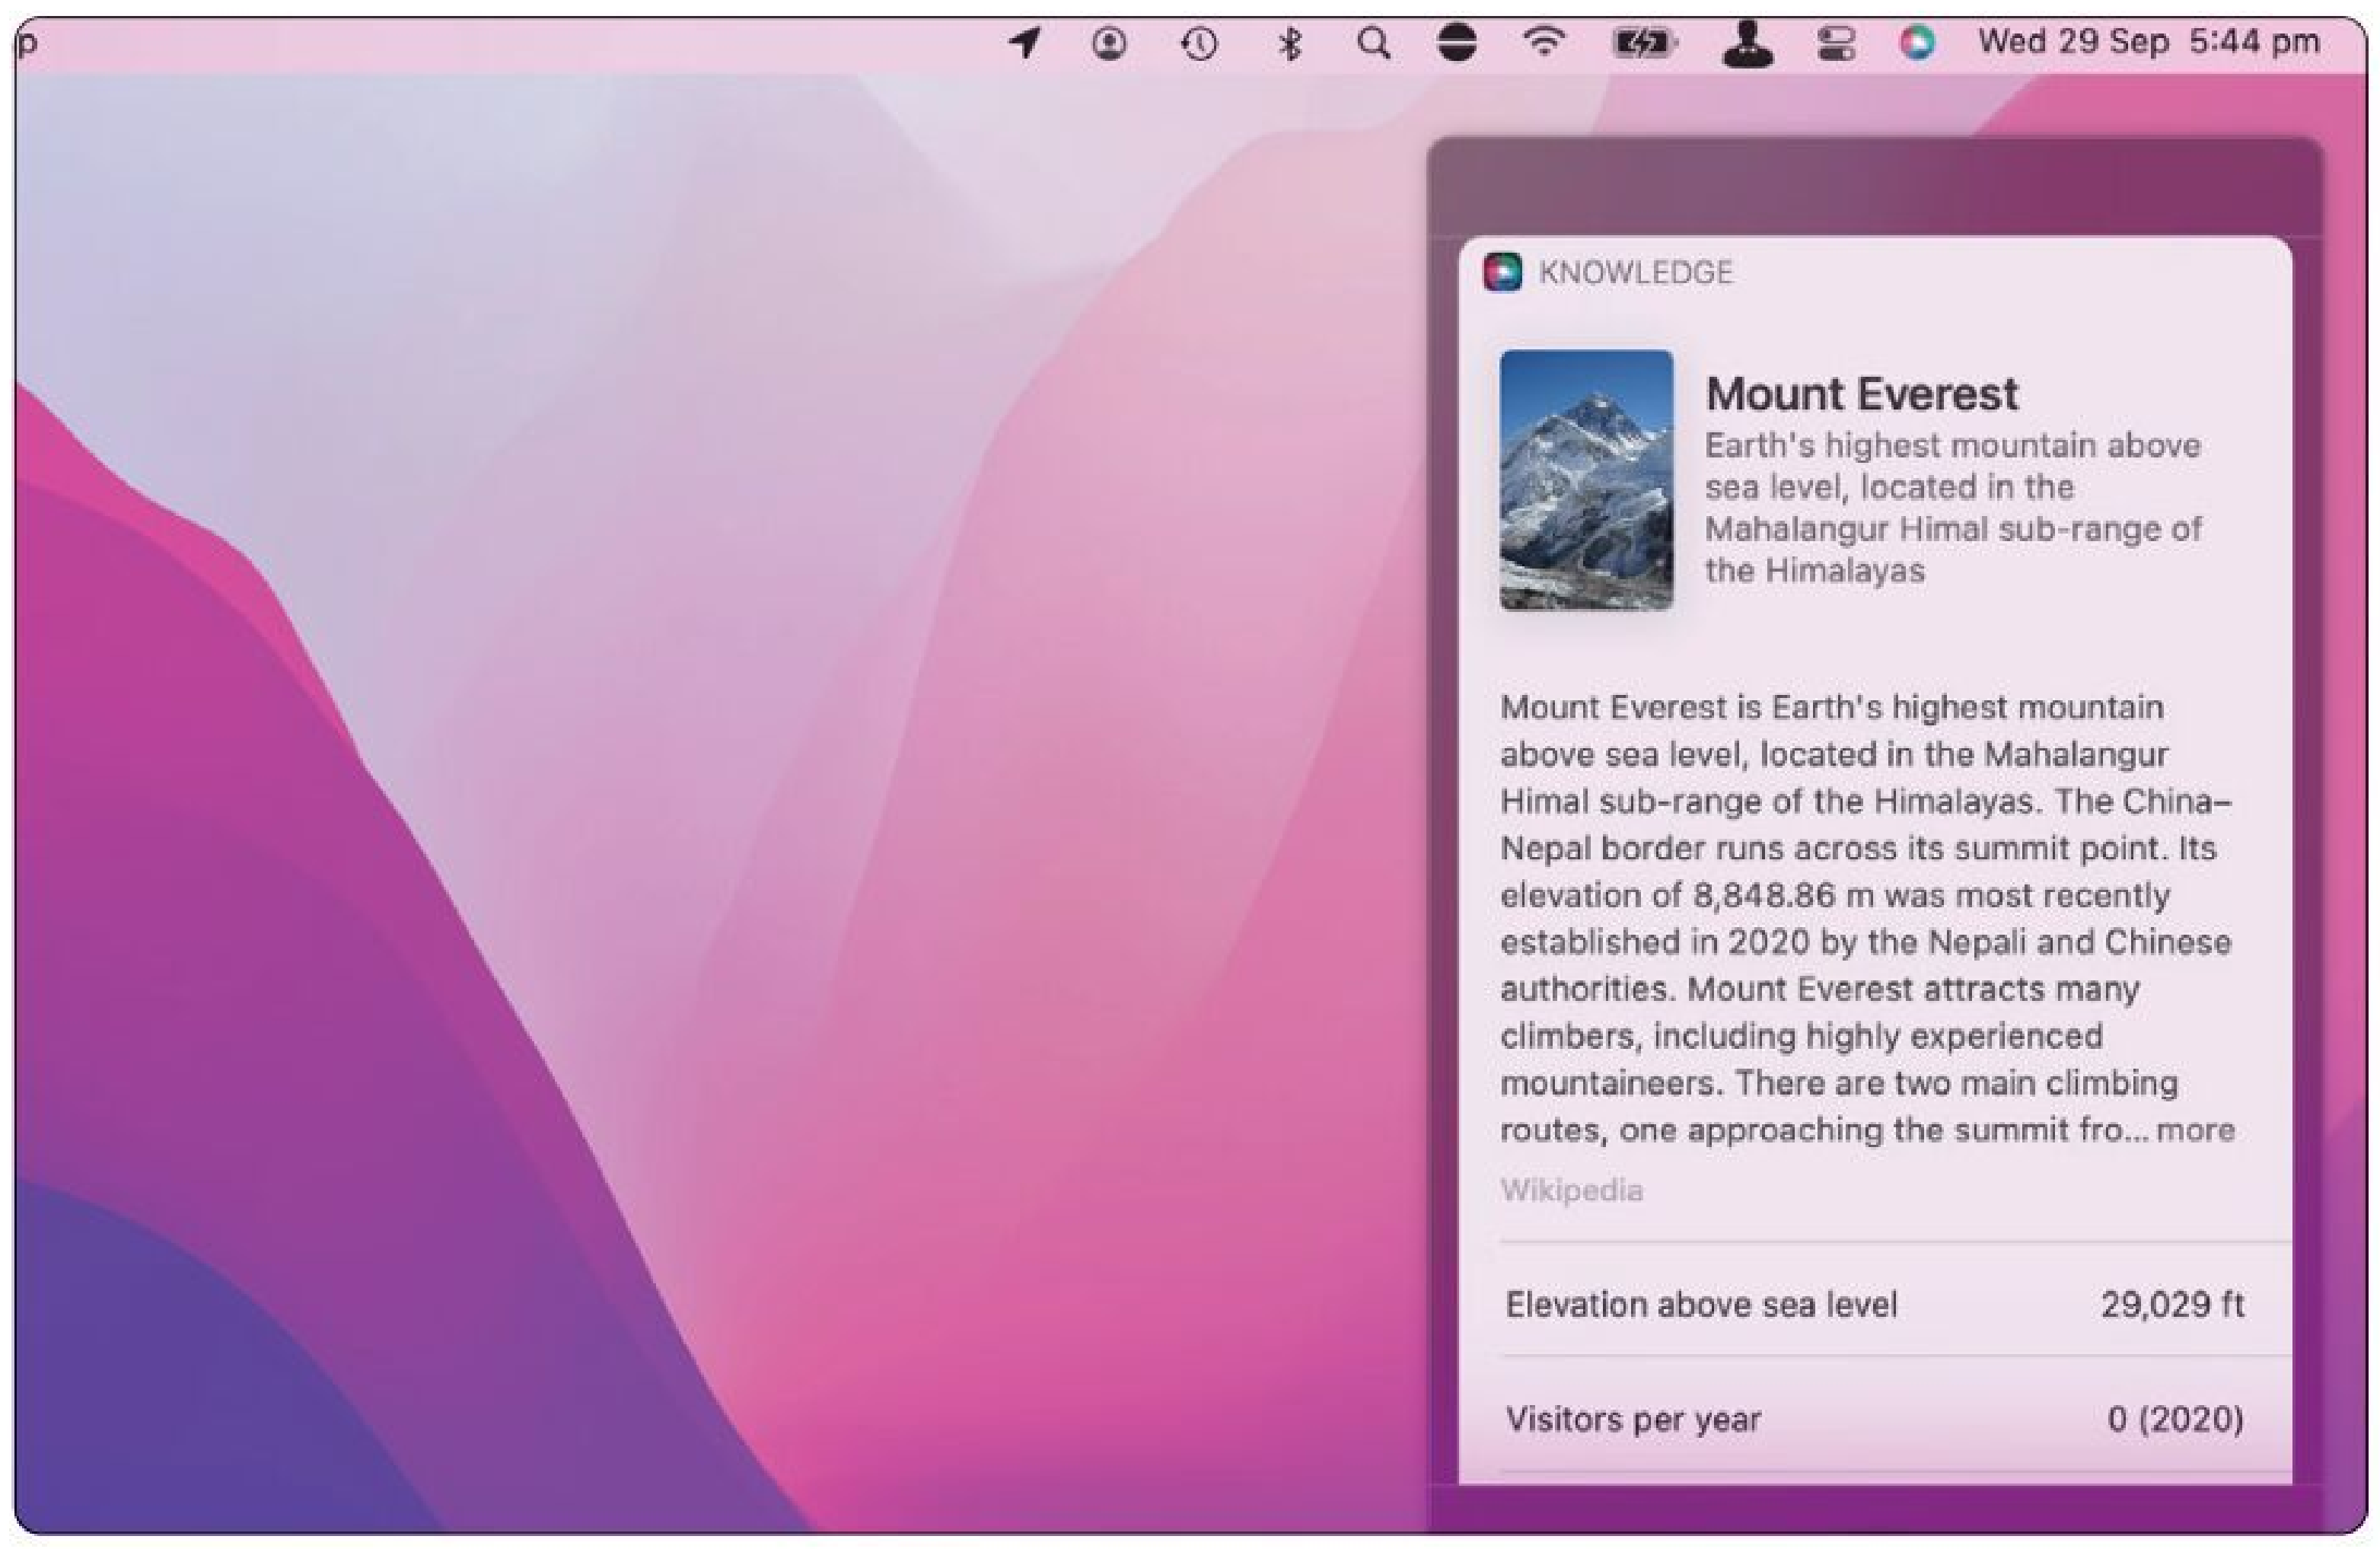
Calculations: Siri can get information from a lot of macOS's preinstalled apps. For example, you can make calculations and conversions using Siri, which harnesses the power of the Calculator app.



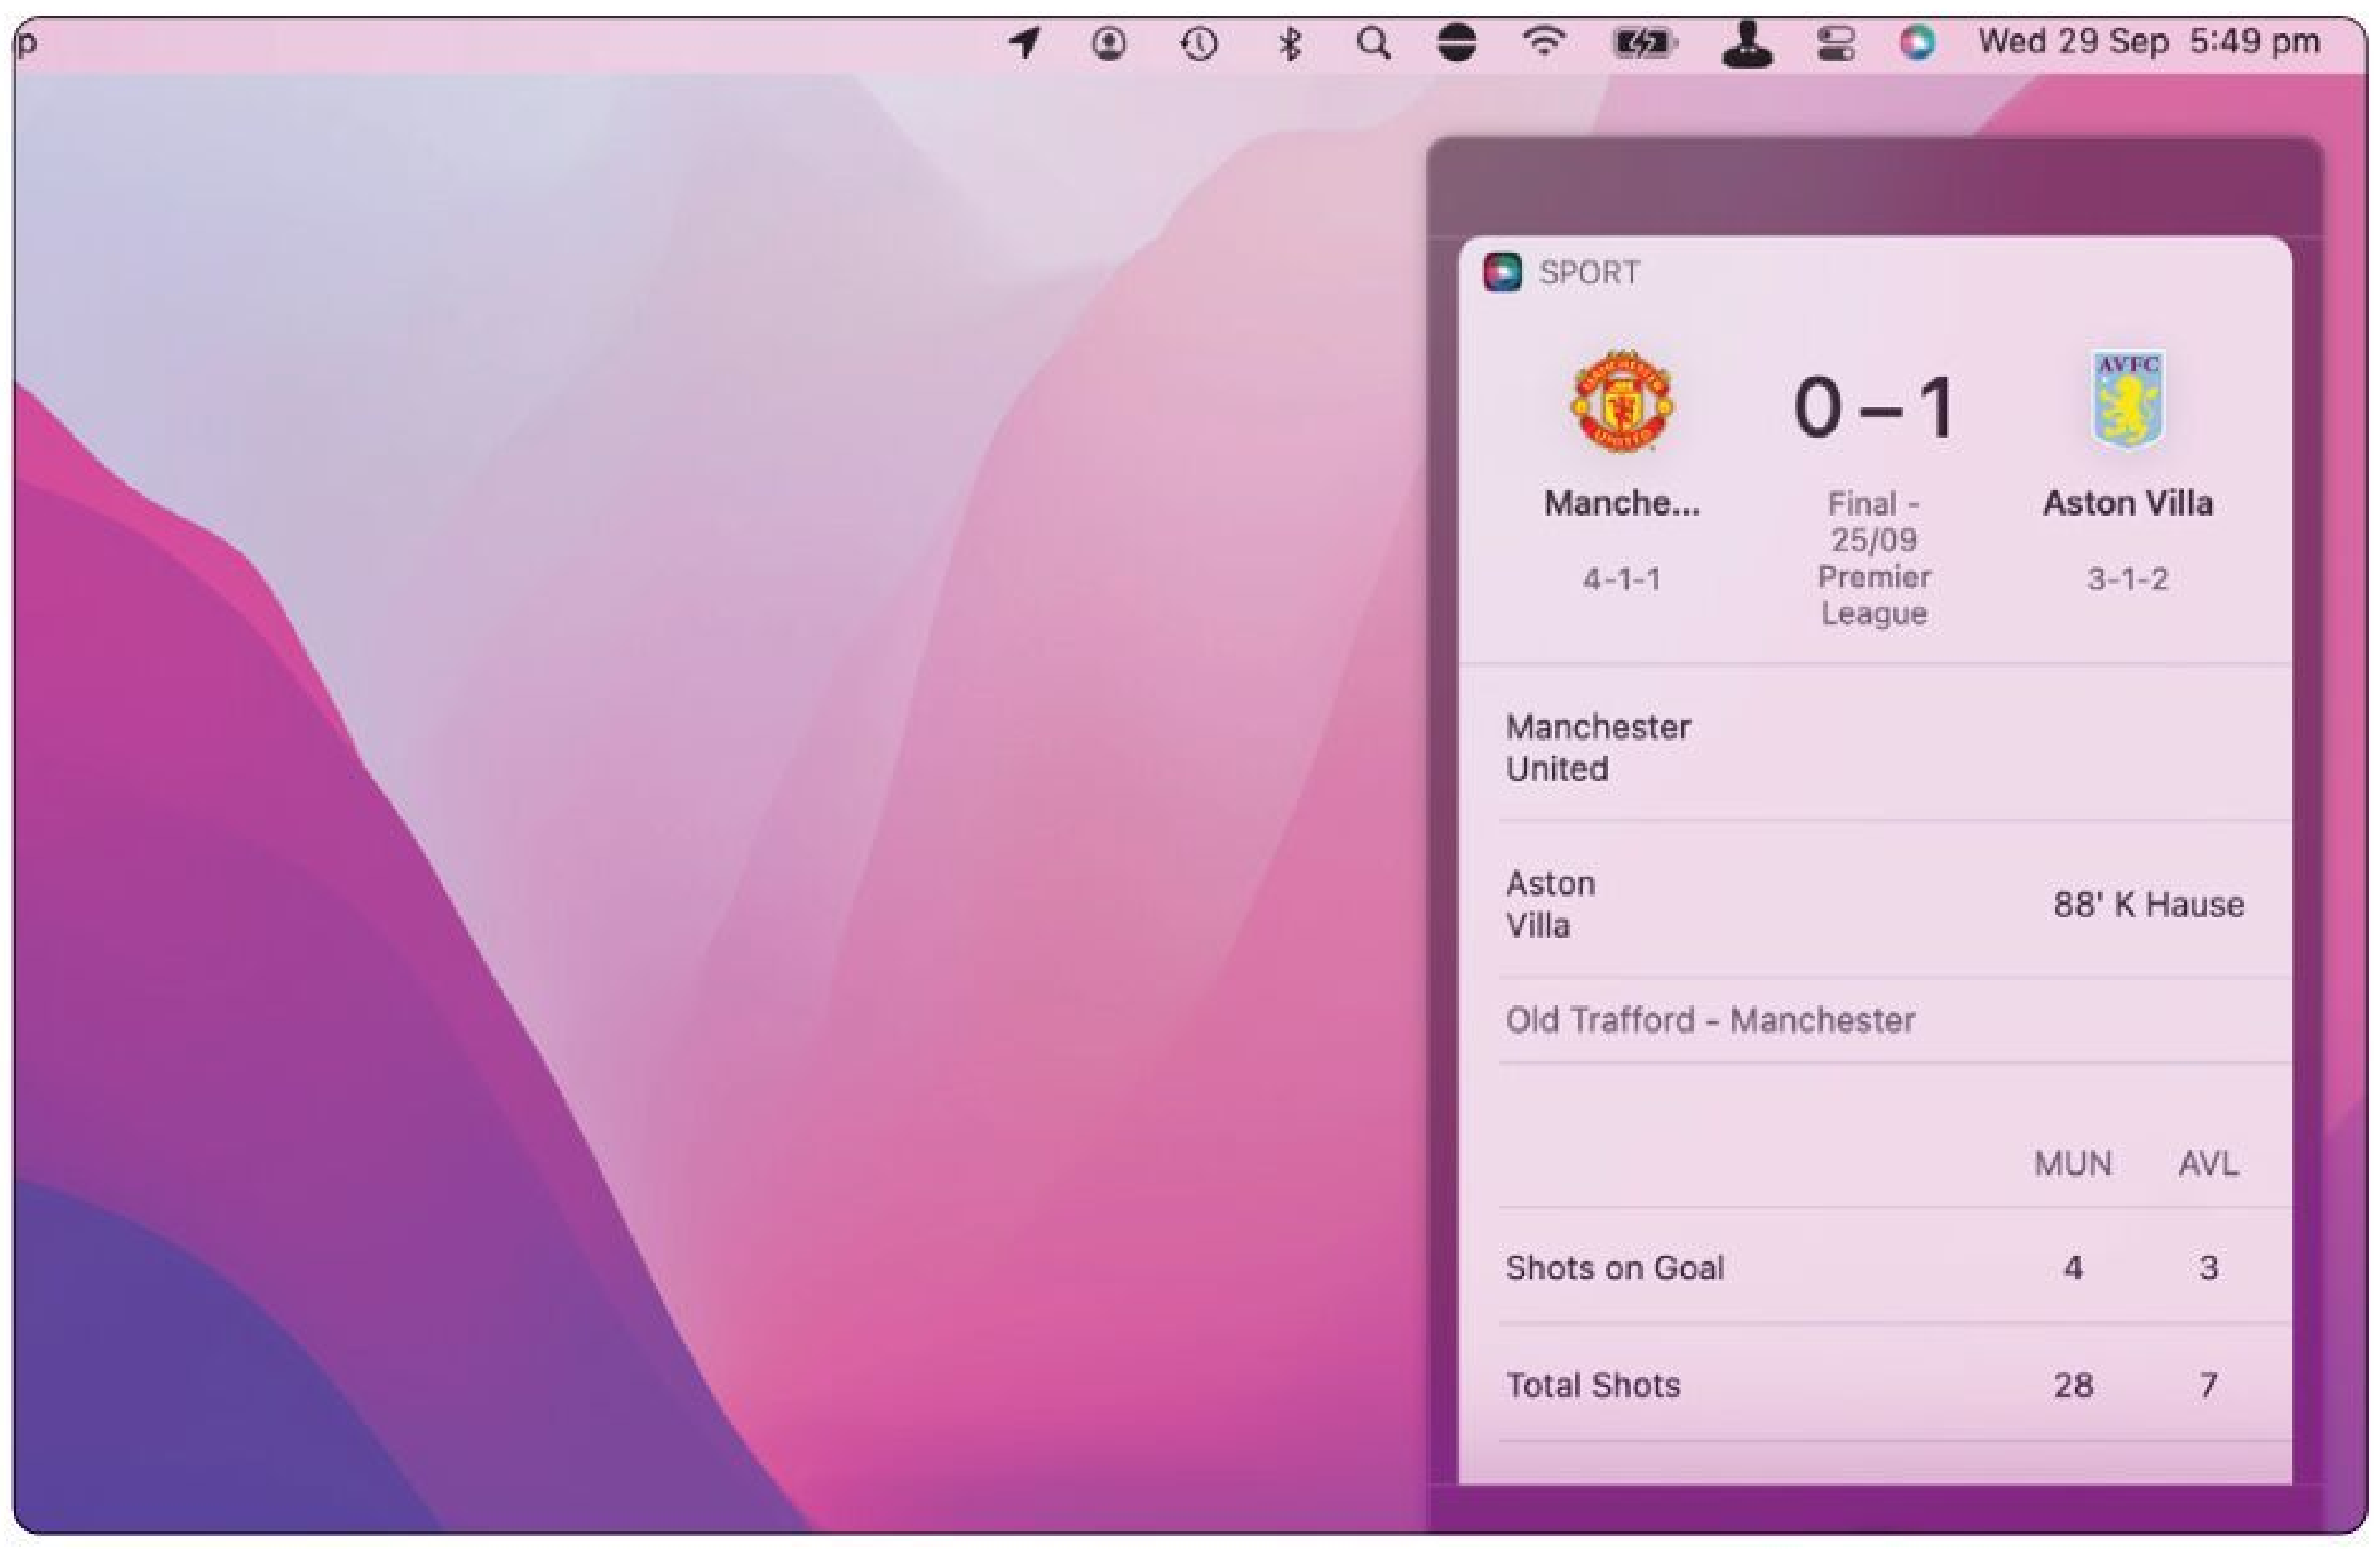
Mount Everest
Earth's highest mountain above sea level, located in the Mahalangur Himal sub-range of the Himalayas

Mount Everest is Earth's highest mountain above sea level, located in the Mahalangur Himal sub-range of the Himalayas. The China–Nepal border runs across its summit point. Its elevation of 8,848.86 m was most recently established in 2020 by the Nepali and Chinese authorities. Mount Everest attracts many climbers, including highly experienced mountaineers. There are two main climbing routes, one approaching the summit fro... more

Wikipedia

Elevation above sea level	29,029 ft
Visitors per year	0 (2020)

General knowledge: If you have a question to ask, such as 'What is the height of Mount Everest', or 'How far is it from Sydney to Melbourne?', you'll get an answer. Siri draws knowledge from websites such as Wikipedia.



Manche...	0 – 1	Aston Villa
4-1-1	Final - 25/09 Premier League	3-1-2

Manchester United

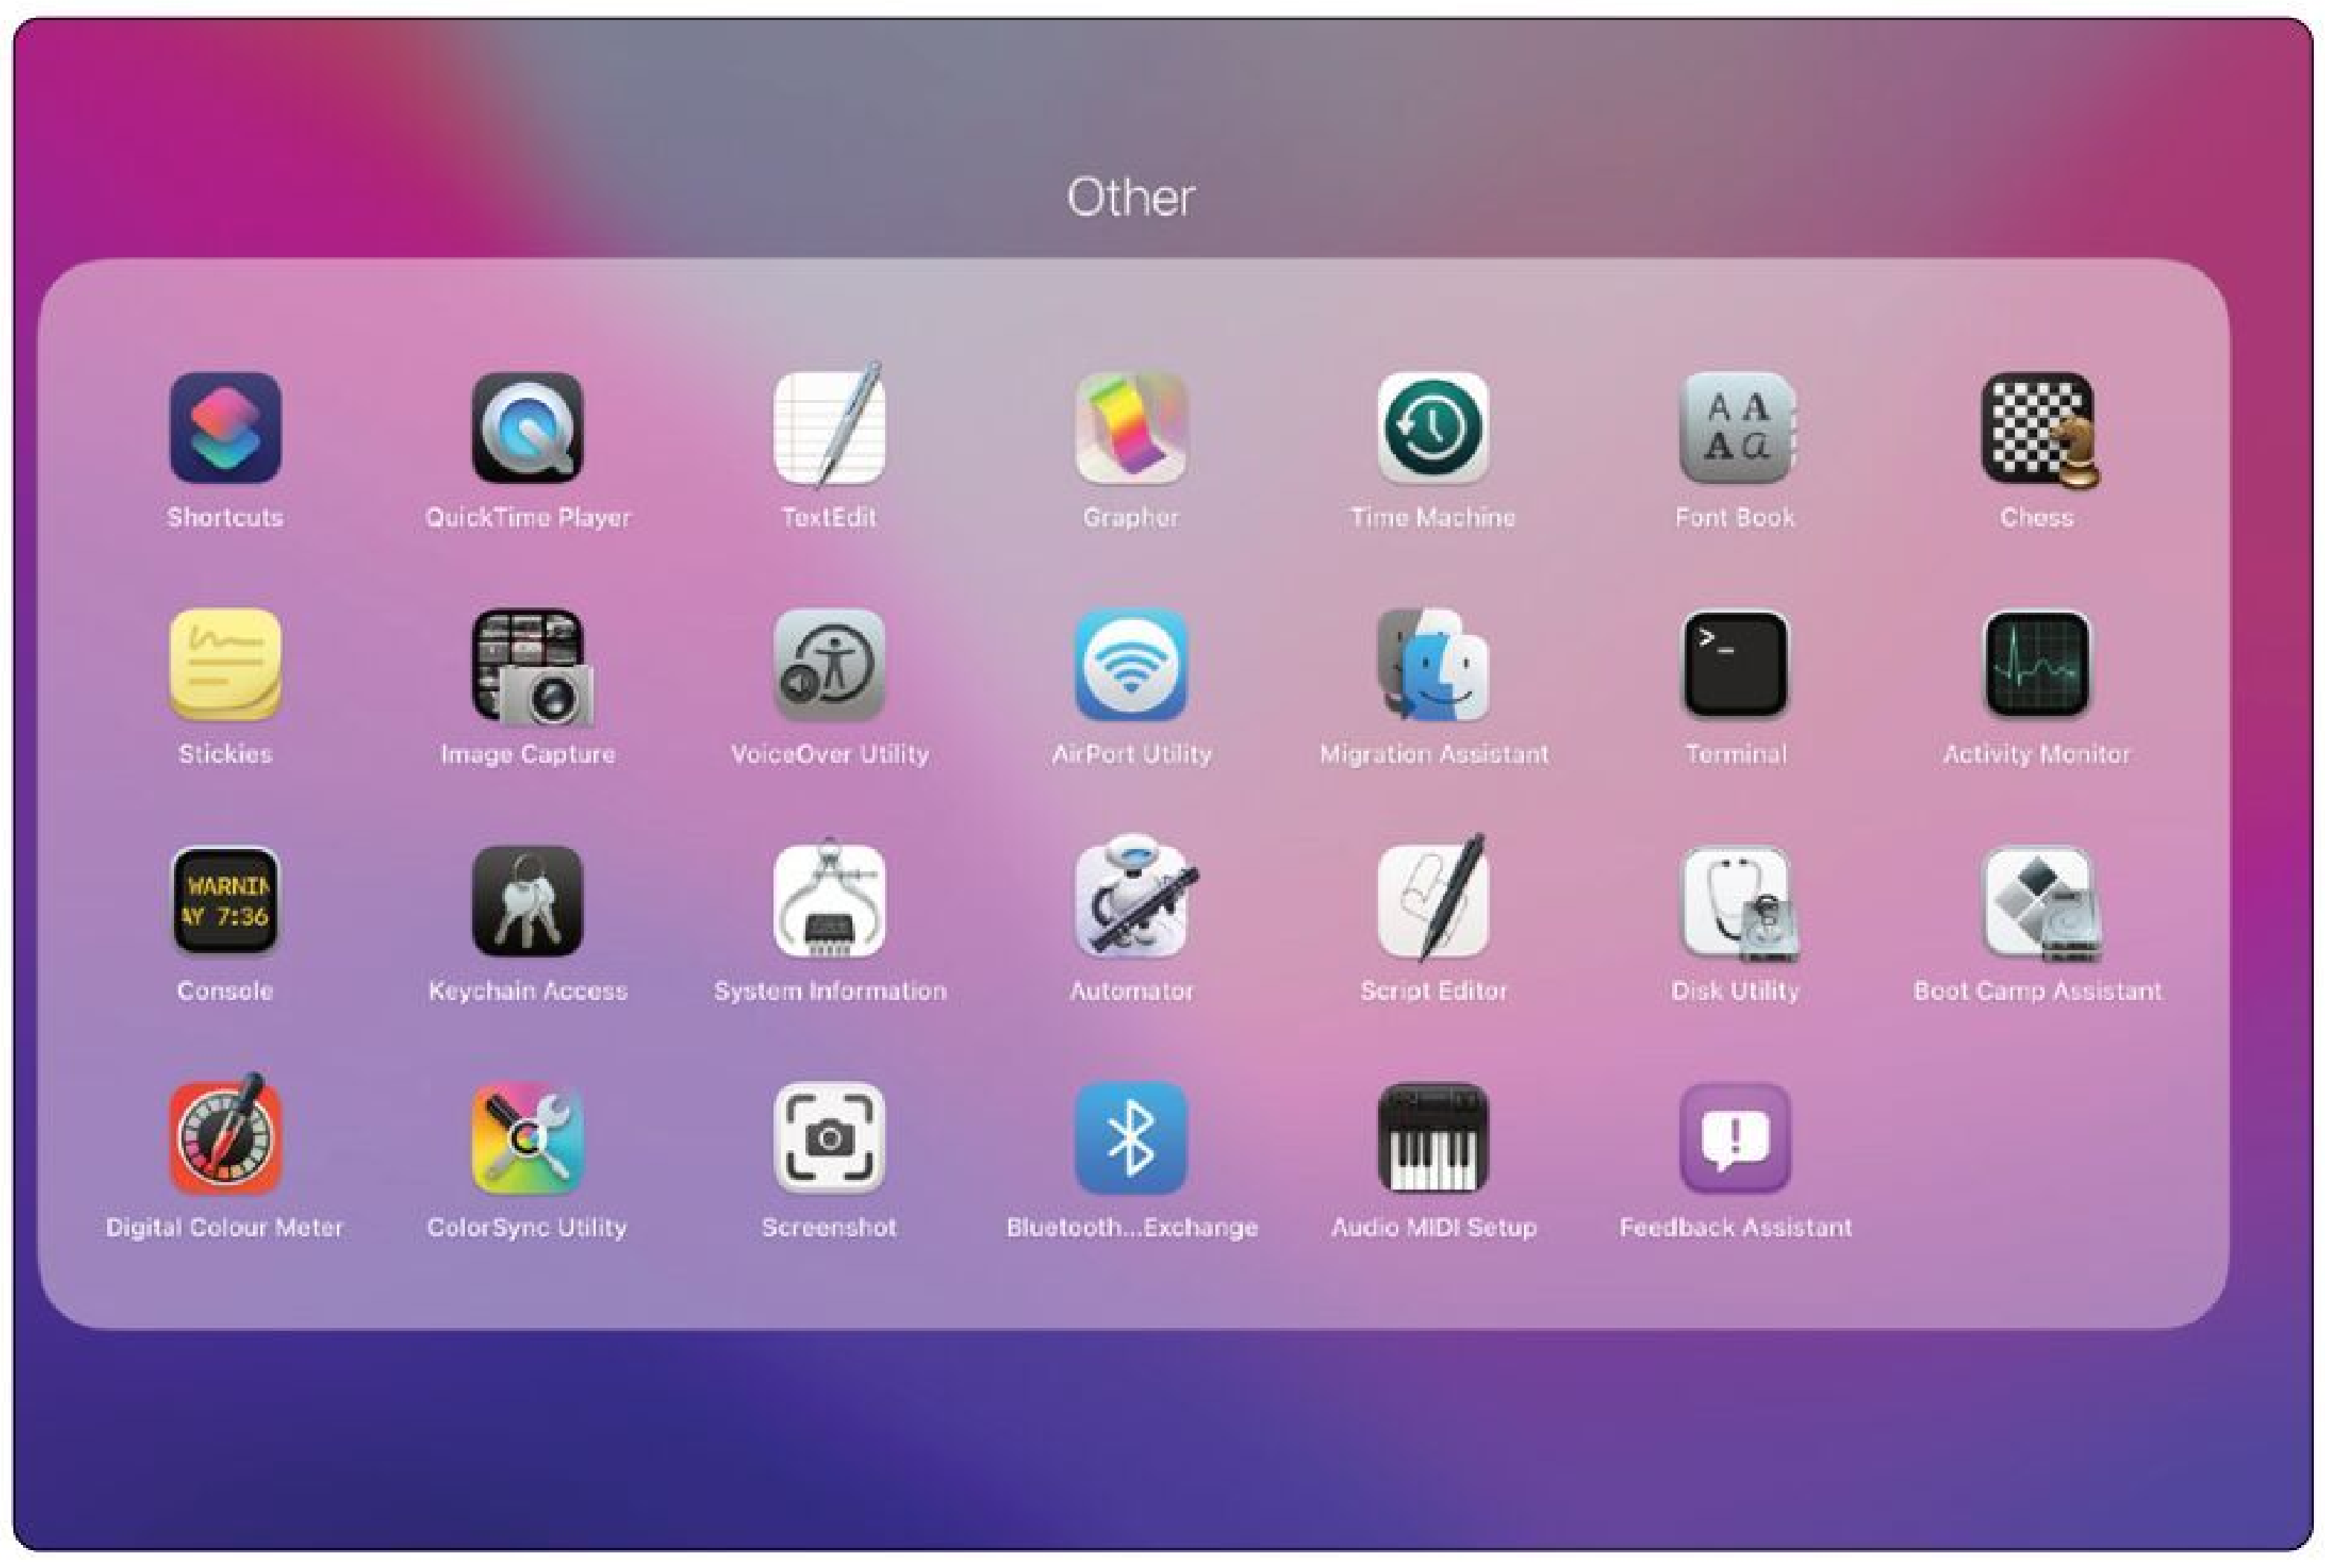
Shortcuts
On Your Mac Studio

Shortcuts was first released on the iPhone and iPad, but with the release of macOS Monterey, it has come to the Mac as well. Shortcuts group instructions on your Mac, meaning you can execute a series of functions with a single command. You can use pre-built shortcuts, or design your own.

Getting Started with Shortcuts



Other
Shortcuts
QuickTime Player
TextEdit
Grapher
Time Machine
Font Book
Chess
Stickies
Image Capture
VoiceOver Utility
AirPort Utility
Migration Assistant
Terminal
Activity Monitor
Console

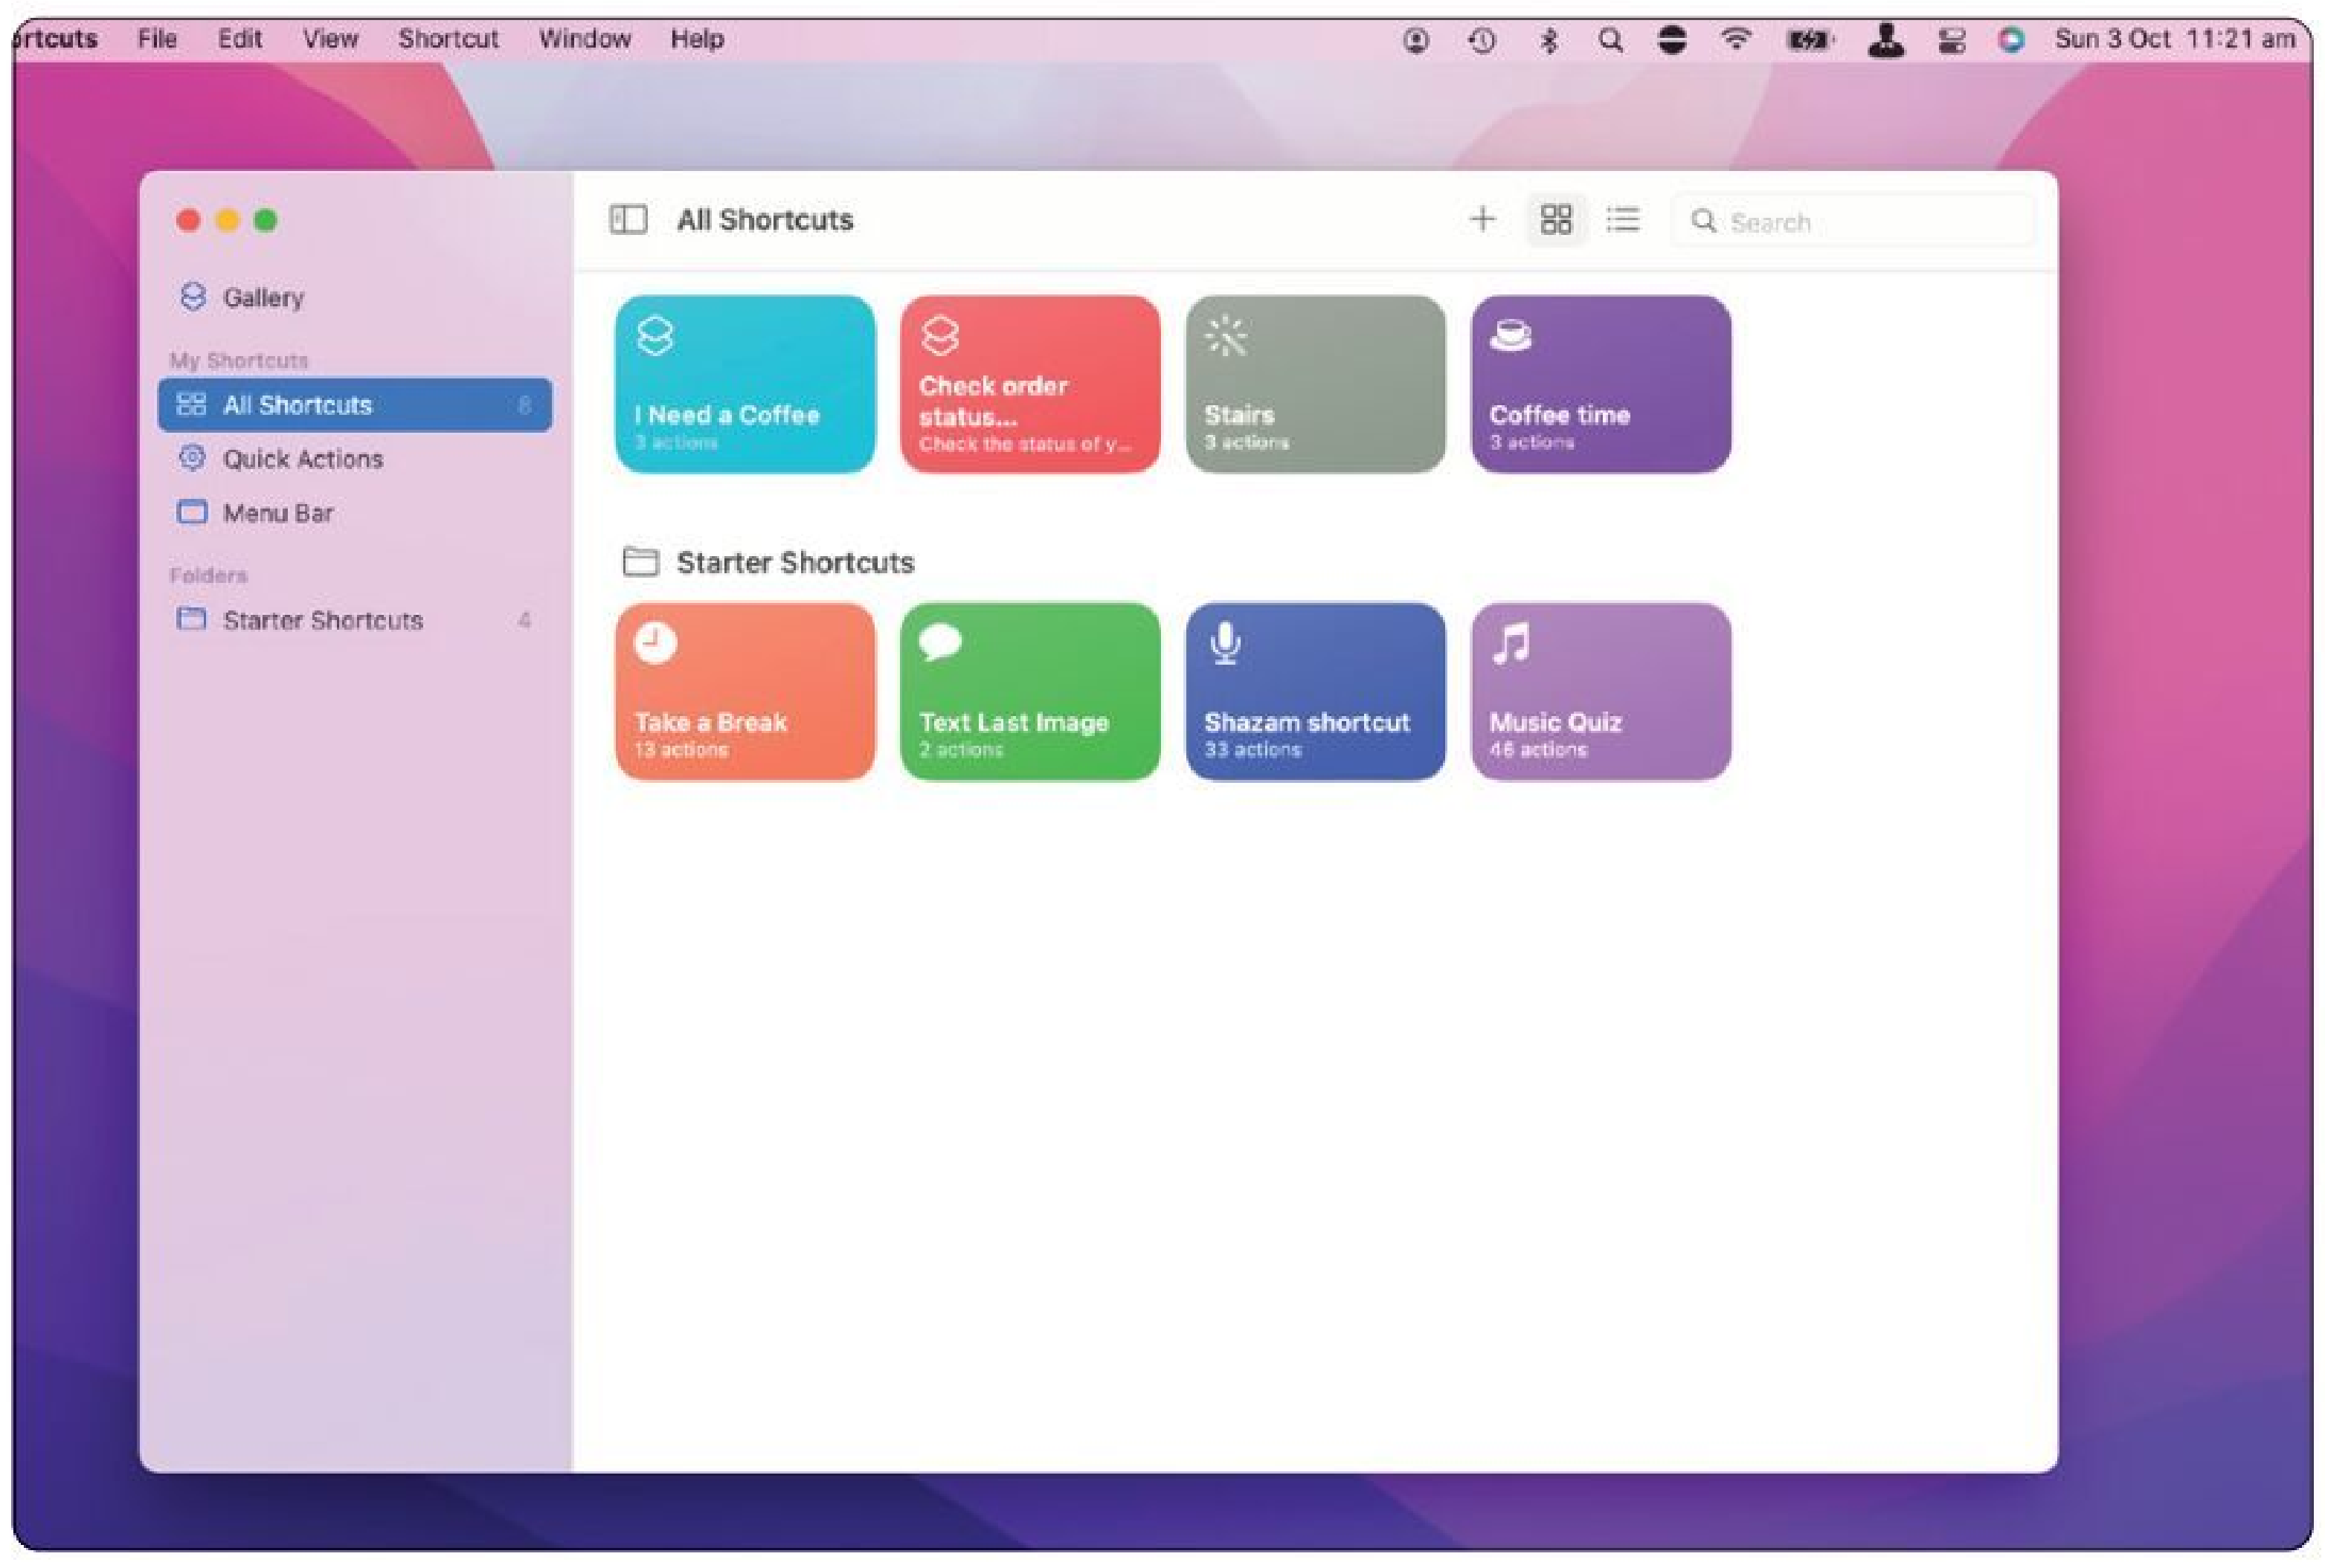
Automator
Script Editor
Disk Utility
Boot Camp Assistant
Digital Colour Meter
ColorSync Utility
Screenshot
Bluetooth...Exchange
Audio MIDI Setup
Feedback Assistant

1 The Shortcuts app comes preinstalled with macOS Monterey. It's can be found in Applications > Other. You can open it through a Finder window, by using the Launchpad or simply by typing 'Shortcuts' into the spotlight search.



All Shortcuts

Set variable Options Count to Number

Options Count × Rounds

Comment
Multiplying 'Options Count' by 'Rounds' returns the total number of songs needed for the game. (e.g. 5 songs/round × 5 rounds = 25 songs)

Find All Music where
All of the following are true
Media Kind is Music and
Is Not Explicit and
Has Album Artwork
Add Filter
Sort by: Random
Limit: ☑
Items: Total Songs To Get

Set variable Songs to Music Found

5 It takes time and practice to get the most from the Shortcuts app. A good way to learn about it is to download a complicated Shortcut from the Gallery, and open it in the editor by double-clicking on it. You can then inspect its functions.

Launch Using Siri.

Shortcuts are built to be launched by Siri, using the shortcuts' name as a command. We called our shortcut 'I Need a Coffee', so if we open Siri and use that phrase, the shortcut is executed and we're shown the local cafés.

Recipe: ALMOND SANDWICH BISCUITS
Preparation time: 15 MINS MAKES 12
Cooking time: 15 MINS

Method:
1. Heat the oven to 180°c
2. Line a baking sheet with silicone liner
3. In a food processor – mix the flour, ground almonds and butter to a breadcrumb consistency.
4. Add the caster sugar + mix until the dough comes together
5. Roll out ½ the dough + cut 12 out using medium cutter, place on baking sheet.
6. Roll out the marzipan + cut 12 shapes out using next size smaller cutter.

Ingredients:
3oz Butter
4oz Plain Flour
3oz Ground Almonds
2oz Caster Sugar
3oz Marzipan

10 You can copy and paste text in Live Text regardless of what font it's written in, and you can even take a photo of handwriting and turn it into editable text. Again, though, you might have to make edits and corrections after pasting.

Focus
Reduce Distractions

Focus takes Do Not Disturb to the next level, with customisable categories that let you concentrate on what's important at the time. For example, a Work focus can block social media and leisure apps, but let through things that might be relevant to your job. You can set up multiple categories, or 'focuses', and choose to have them activate automatically if you wish.

iPad Apps On A Mac Studio

The Mac Studio and the top-of-the-range iPad Pro use the same processor, an ARM-based chip from Apple Silicon rather than Intel. Other iPads currently on sale also use Apple Silicon processors, such as the A13, A14 and A15. As a result, you can use iPad apps on your Apple Mac Studio!

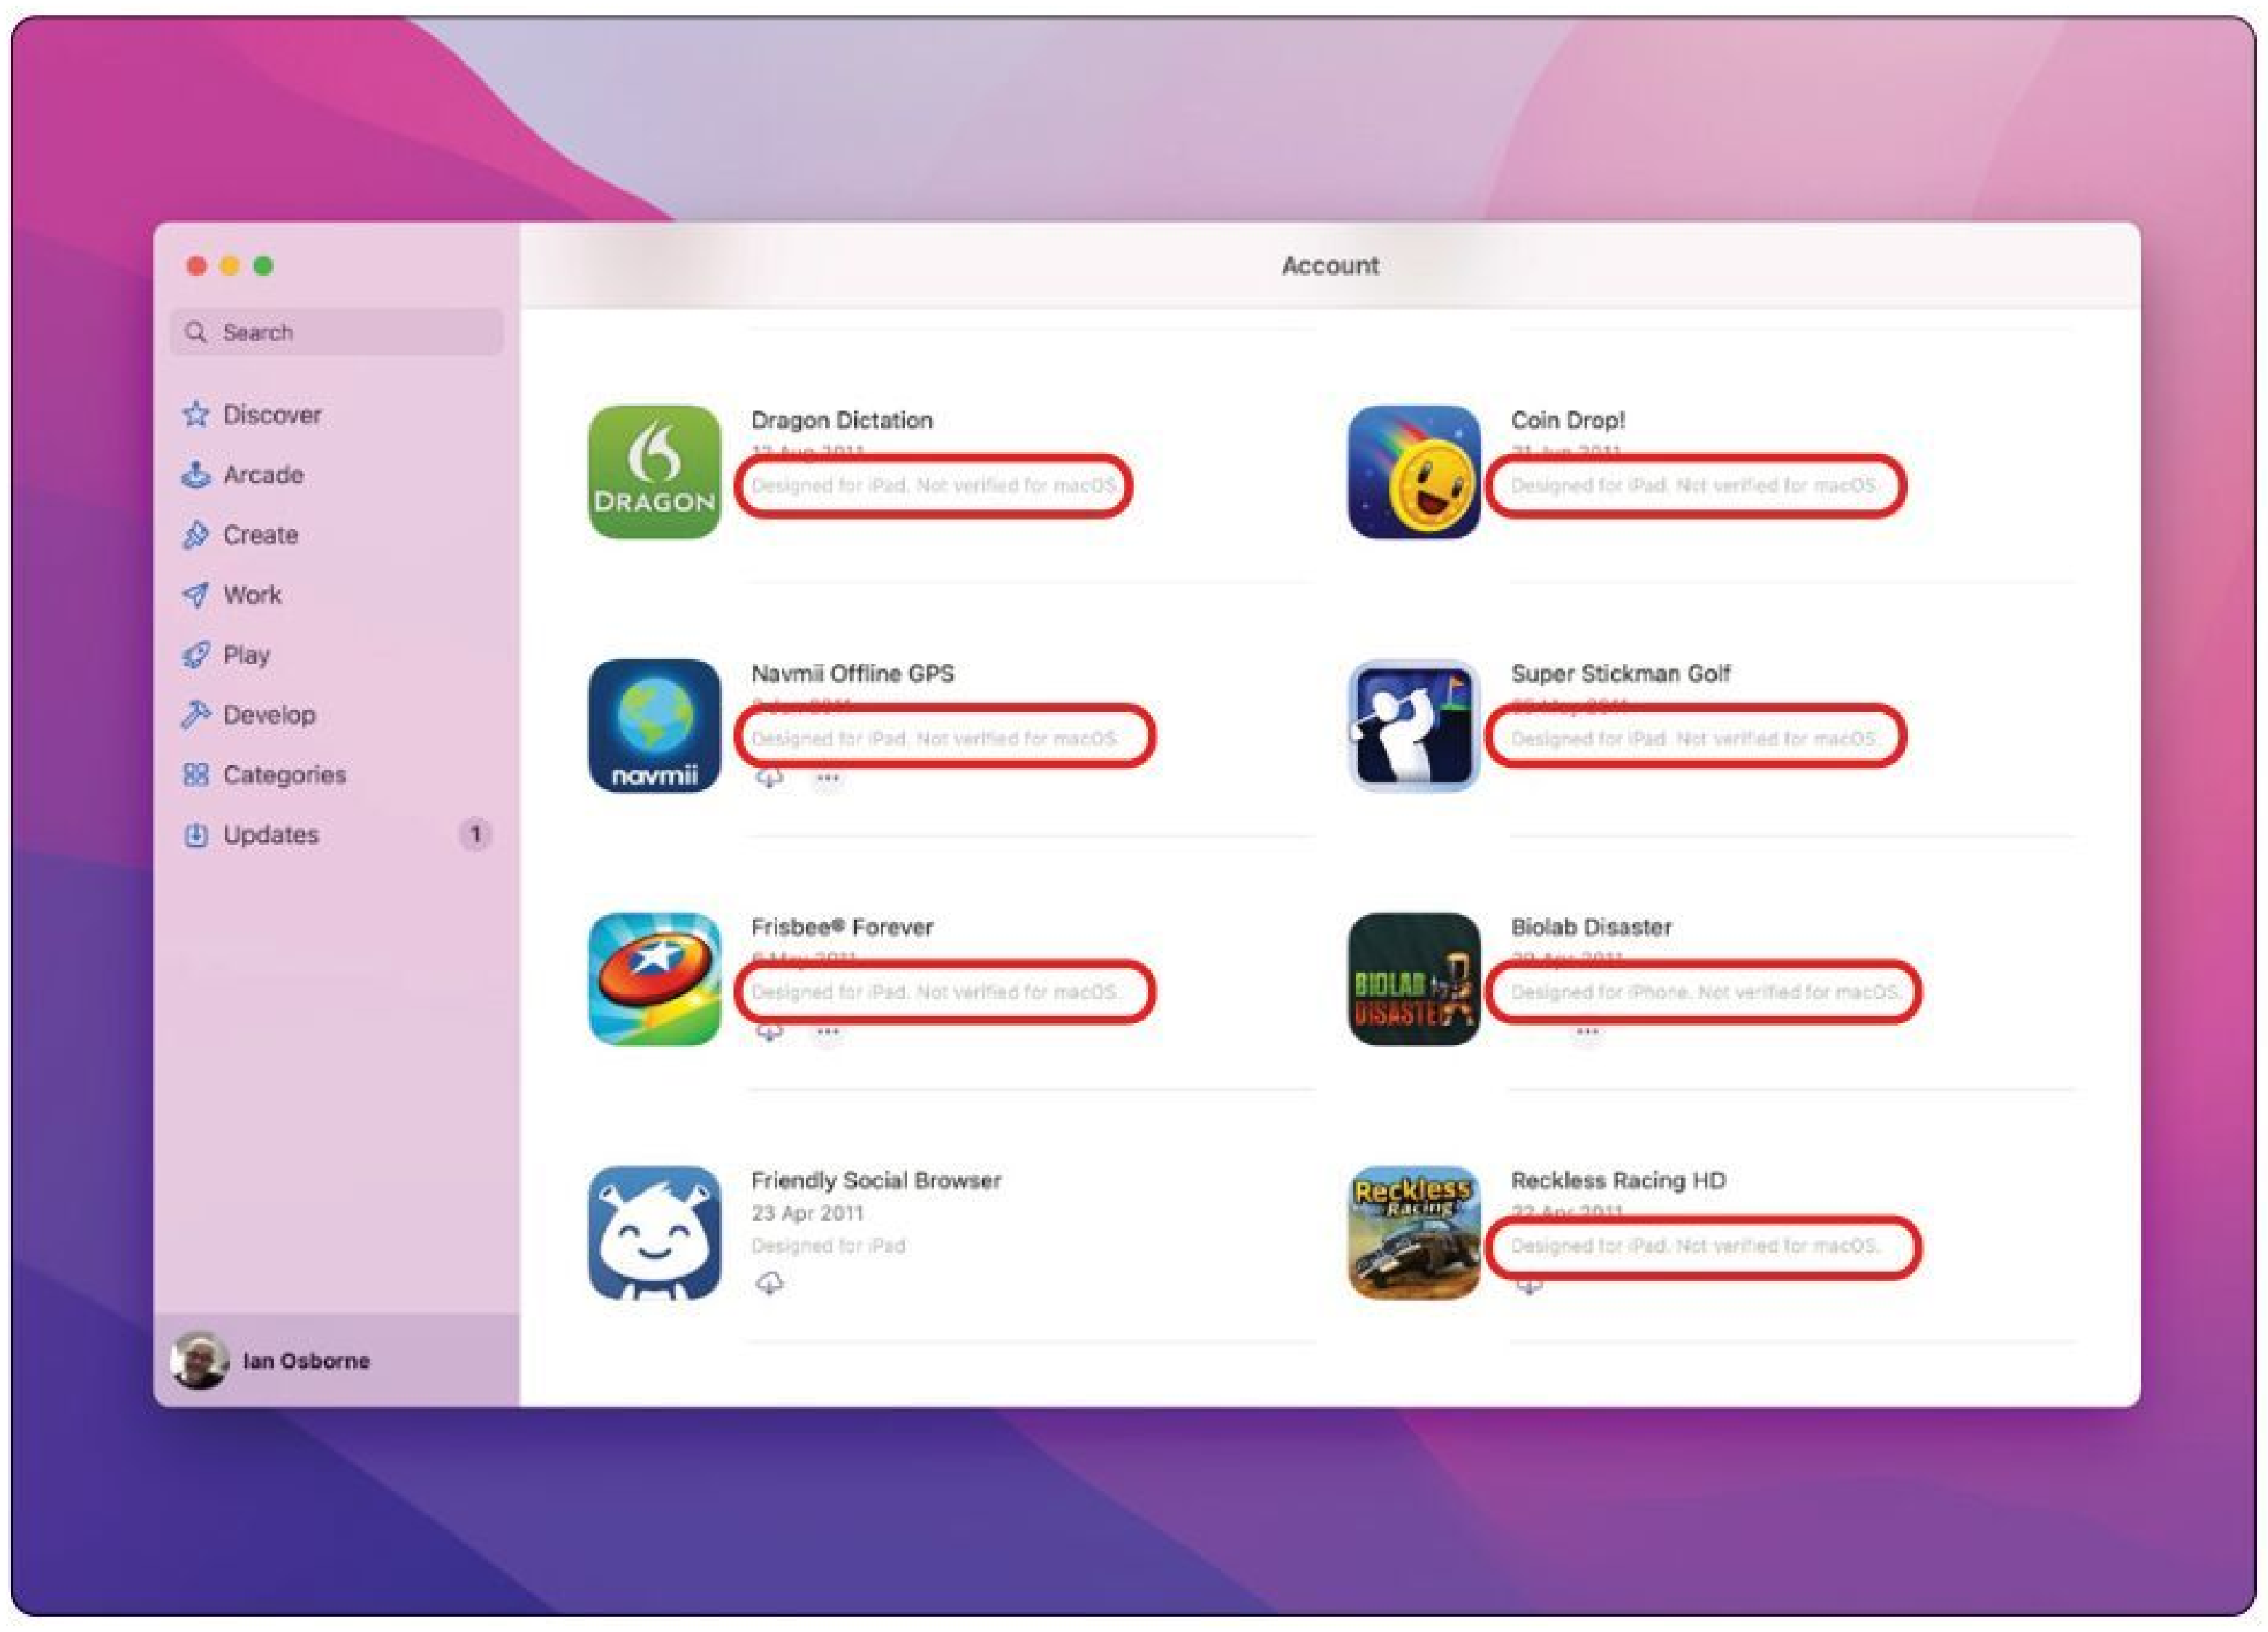
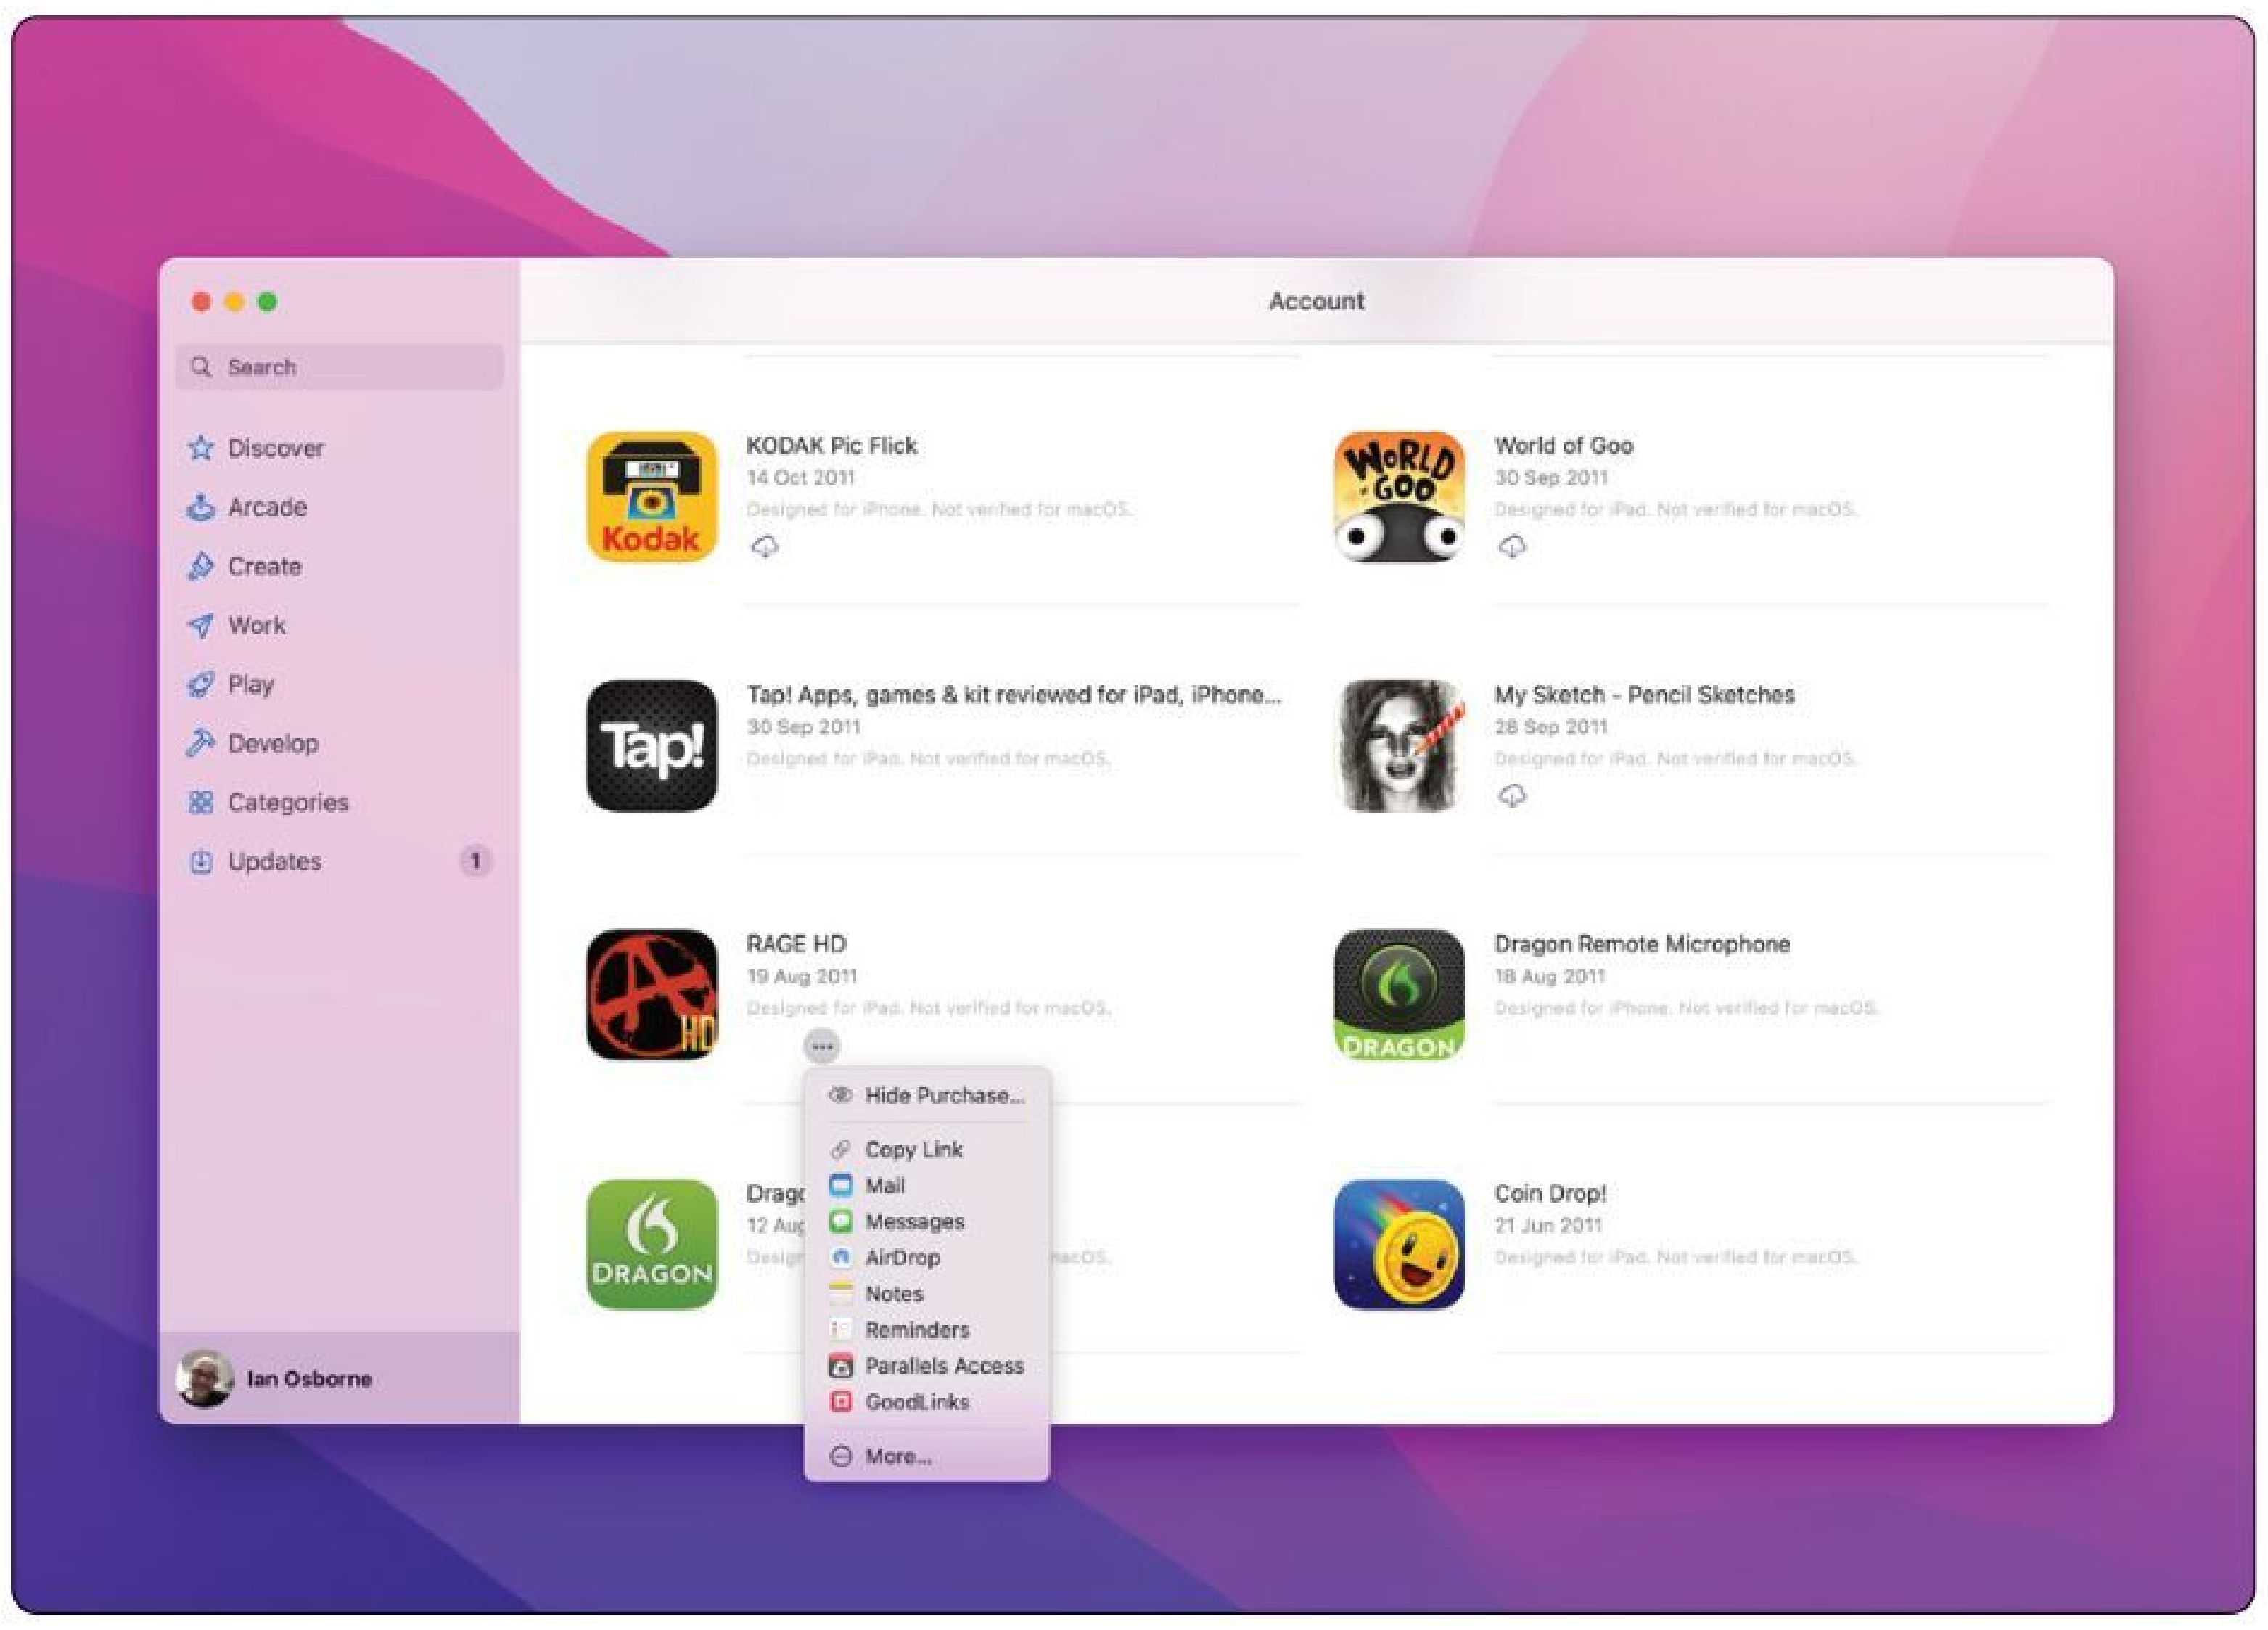
- Play your own music in the background.
- Support for iPod library access (OS 3.0 exclusive).

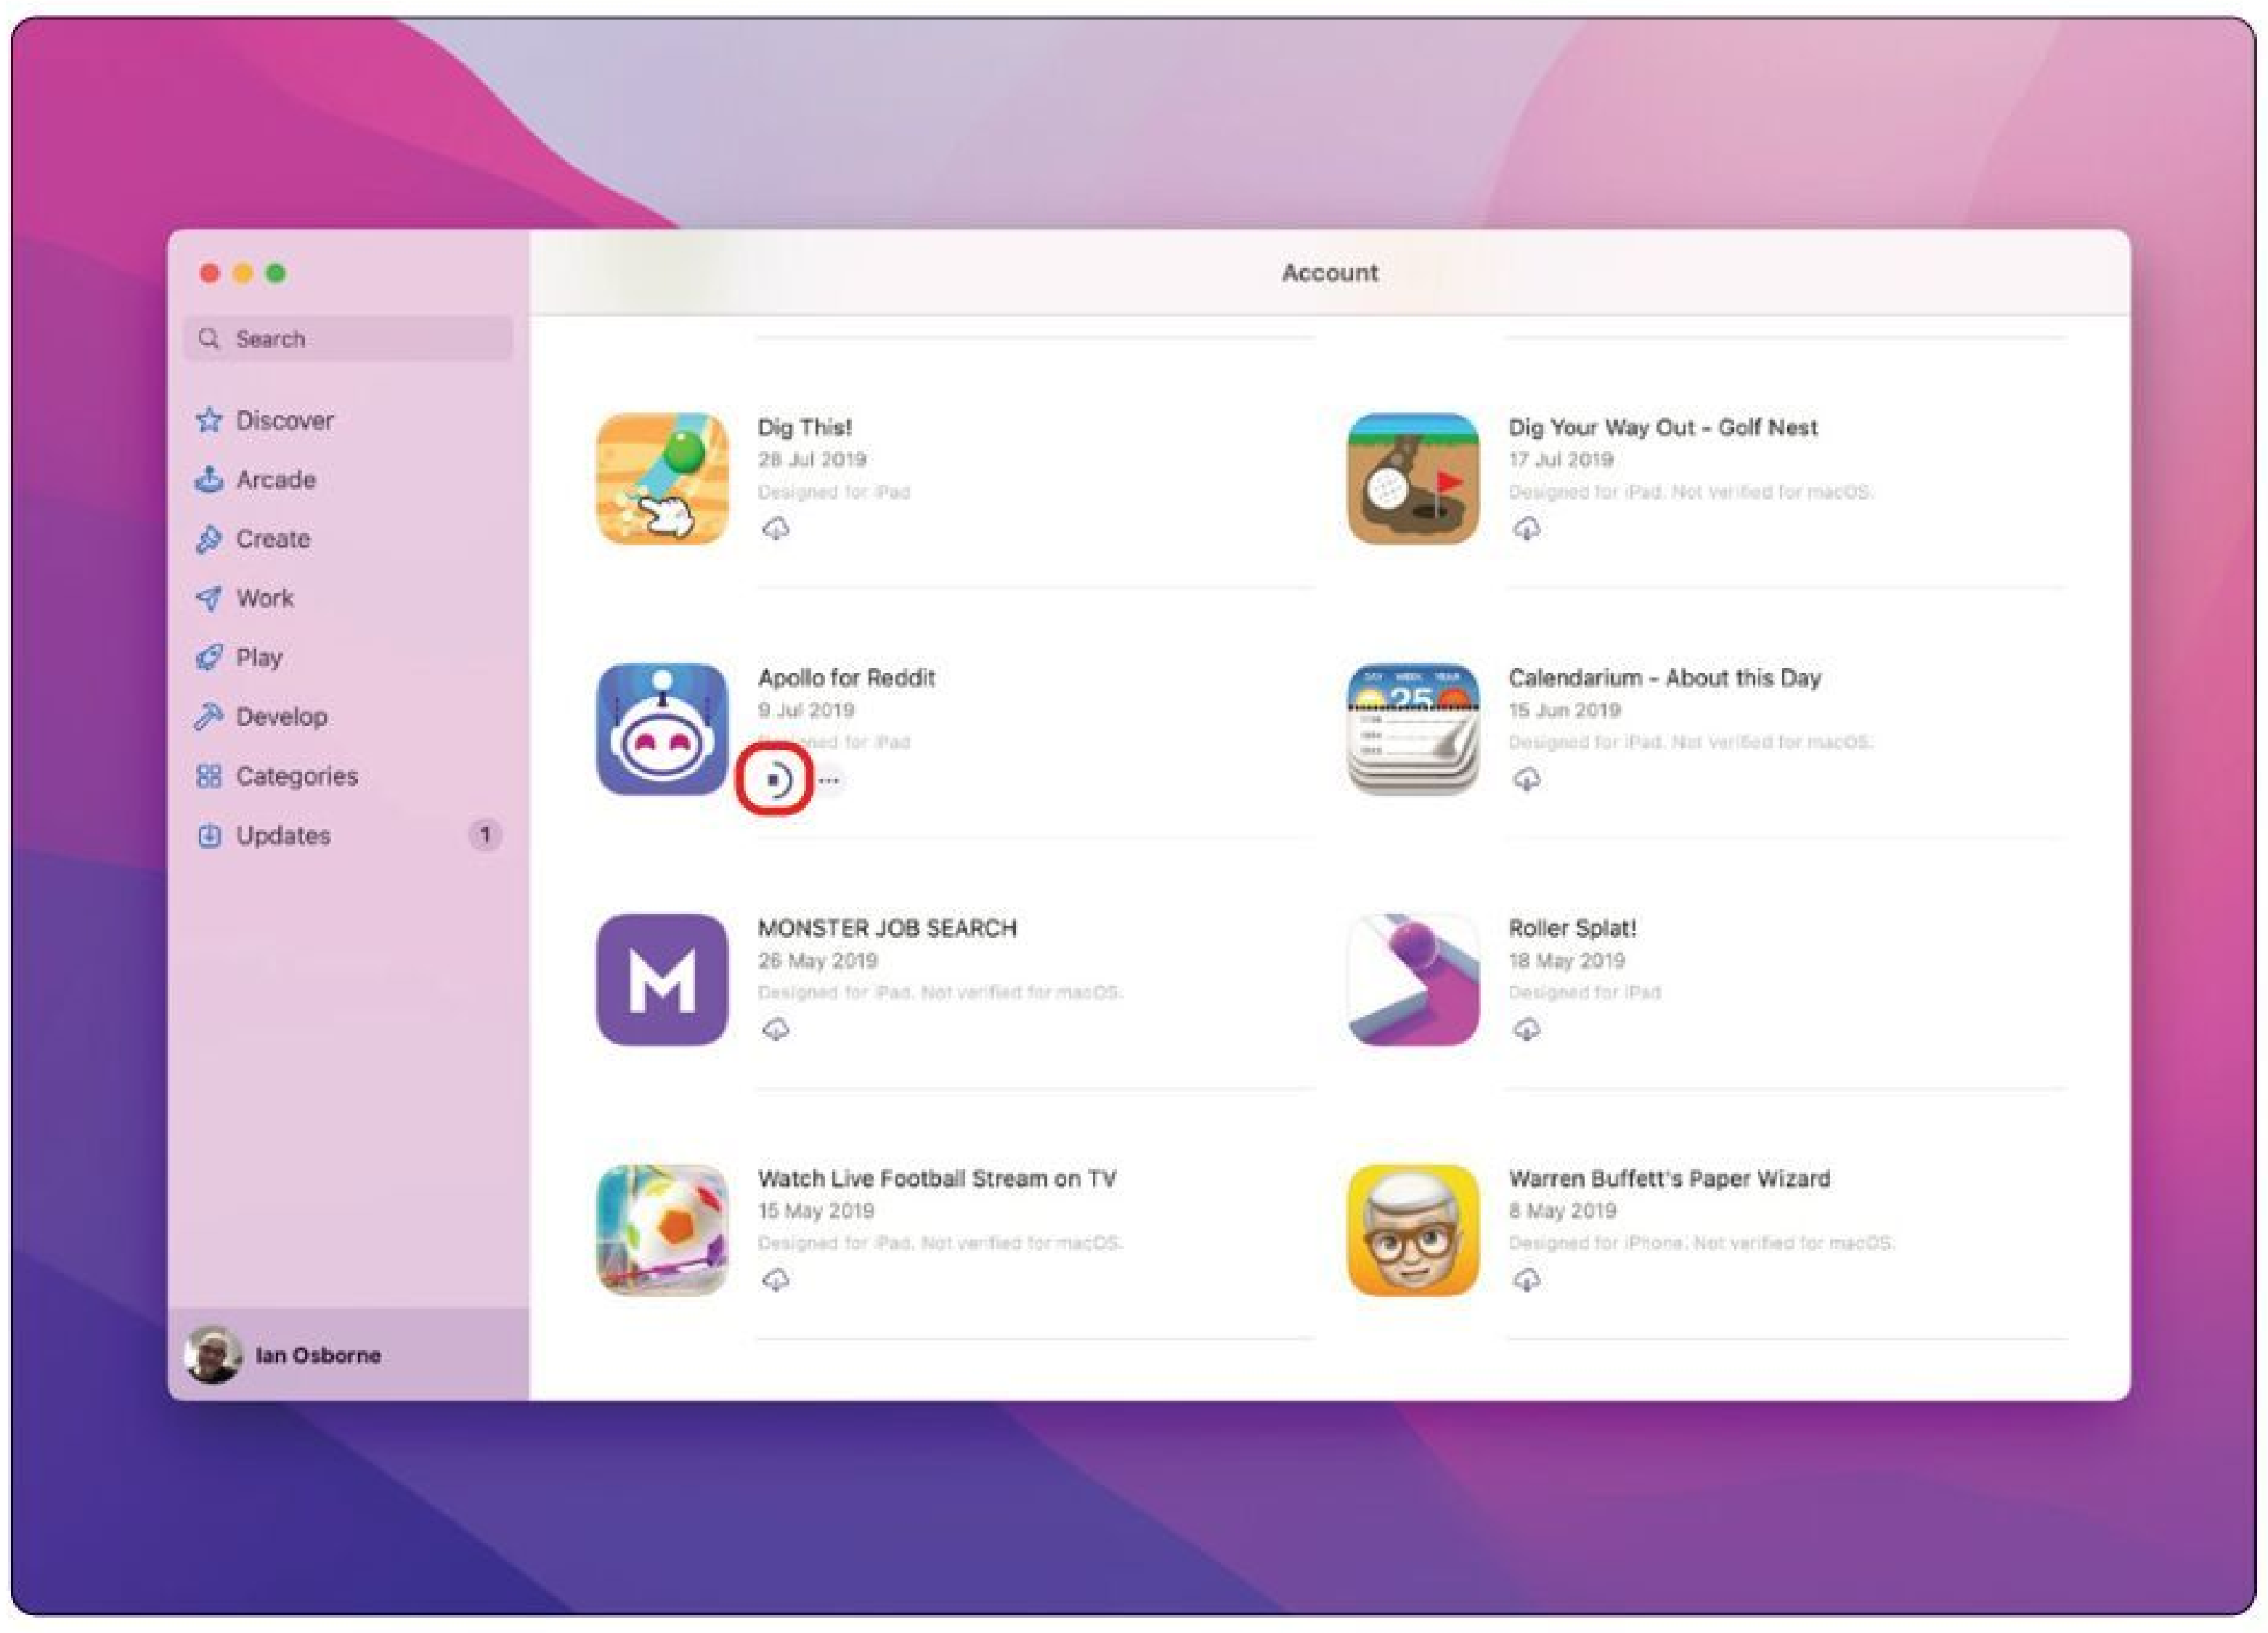
4 If an app doesn't have a cloud, it's either no longer on the App Store or it's too old to run on your Mac. Either way, it cannot be downloaded. Click on it to open its page and you're told as much.



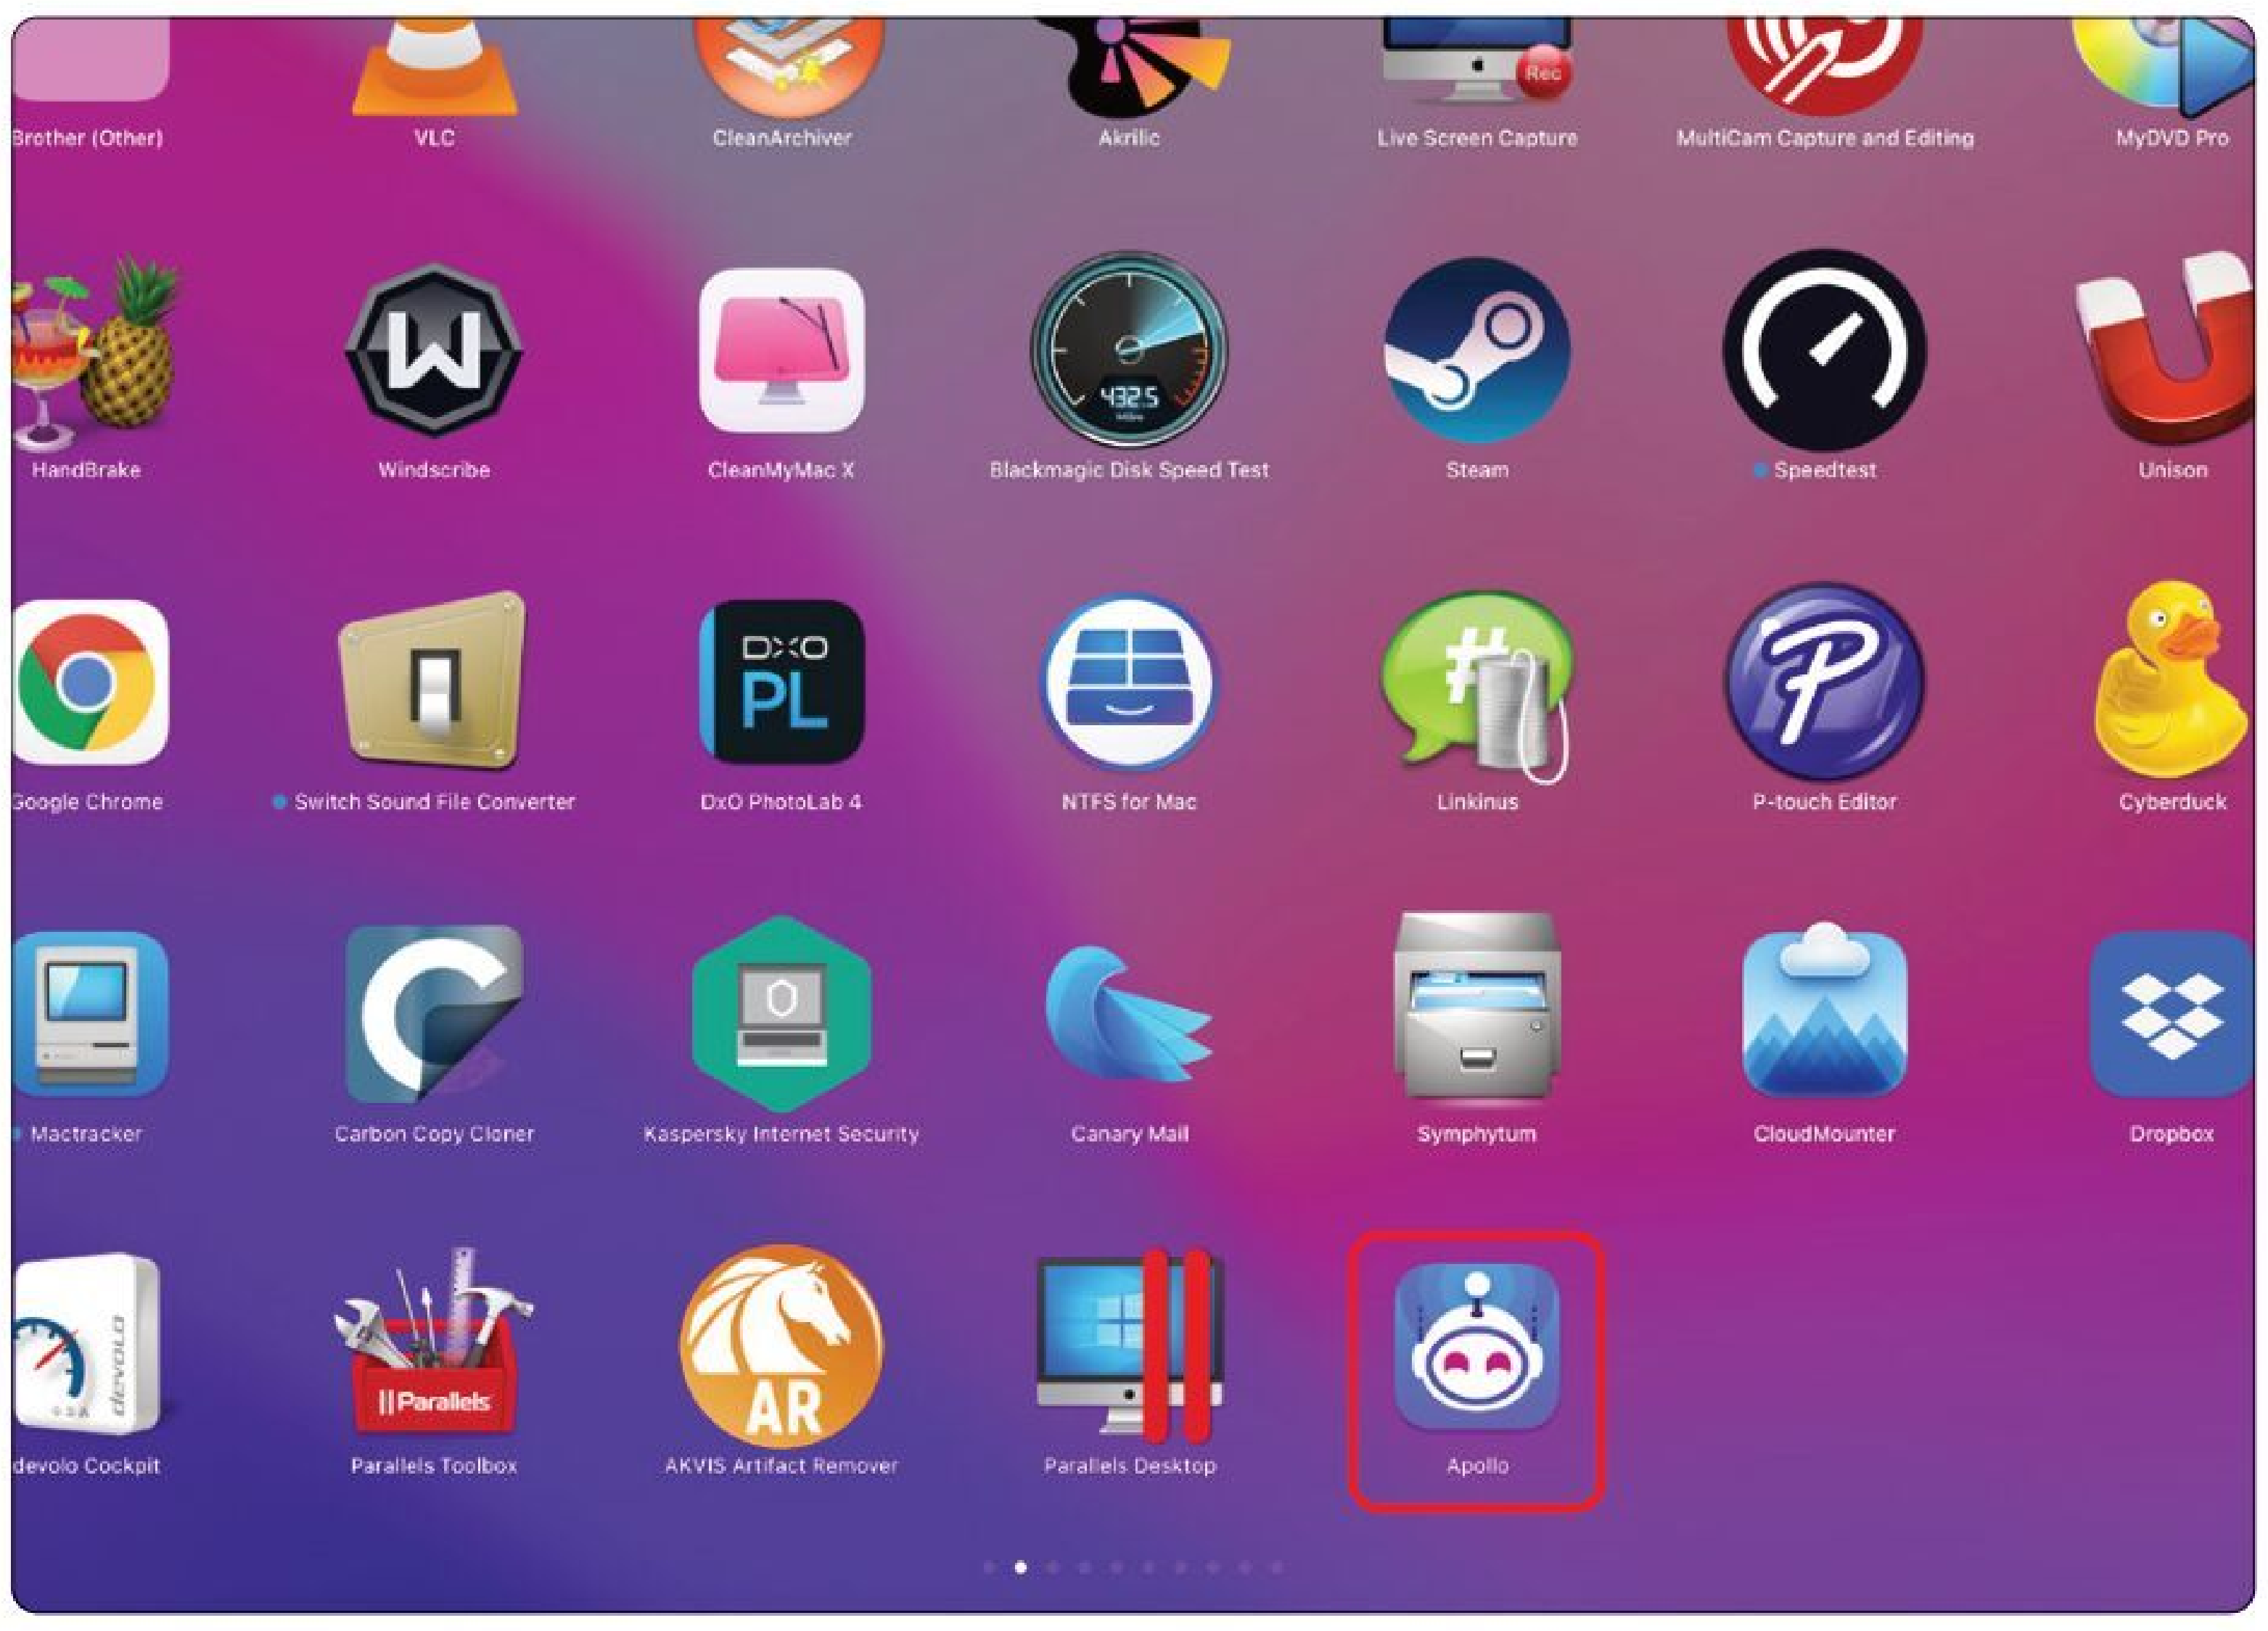
5 'Designed for iPad. Not verified for macOS' means it's not been tested on a Mac. It might well still run, but the user experience might be poor. For example, touch controls might not translate well to the Mac.



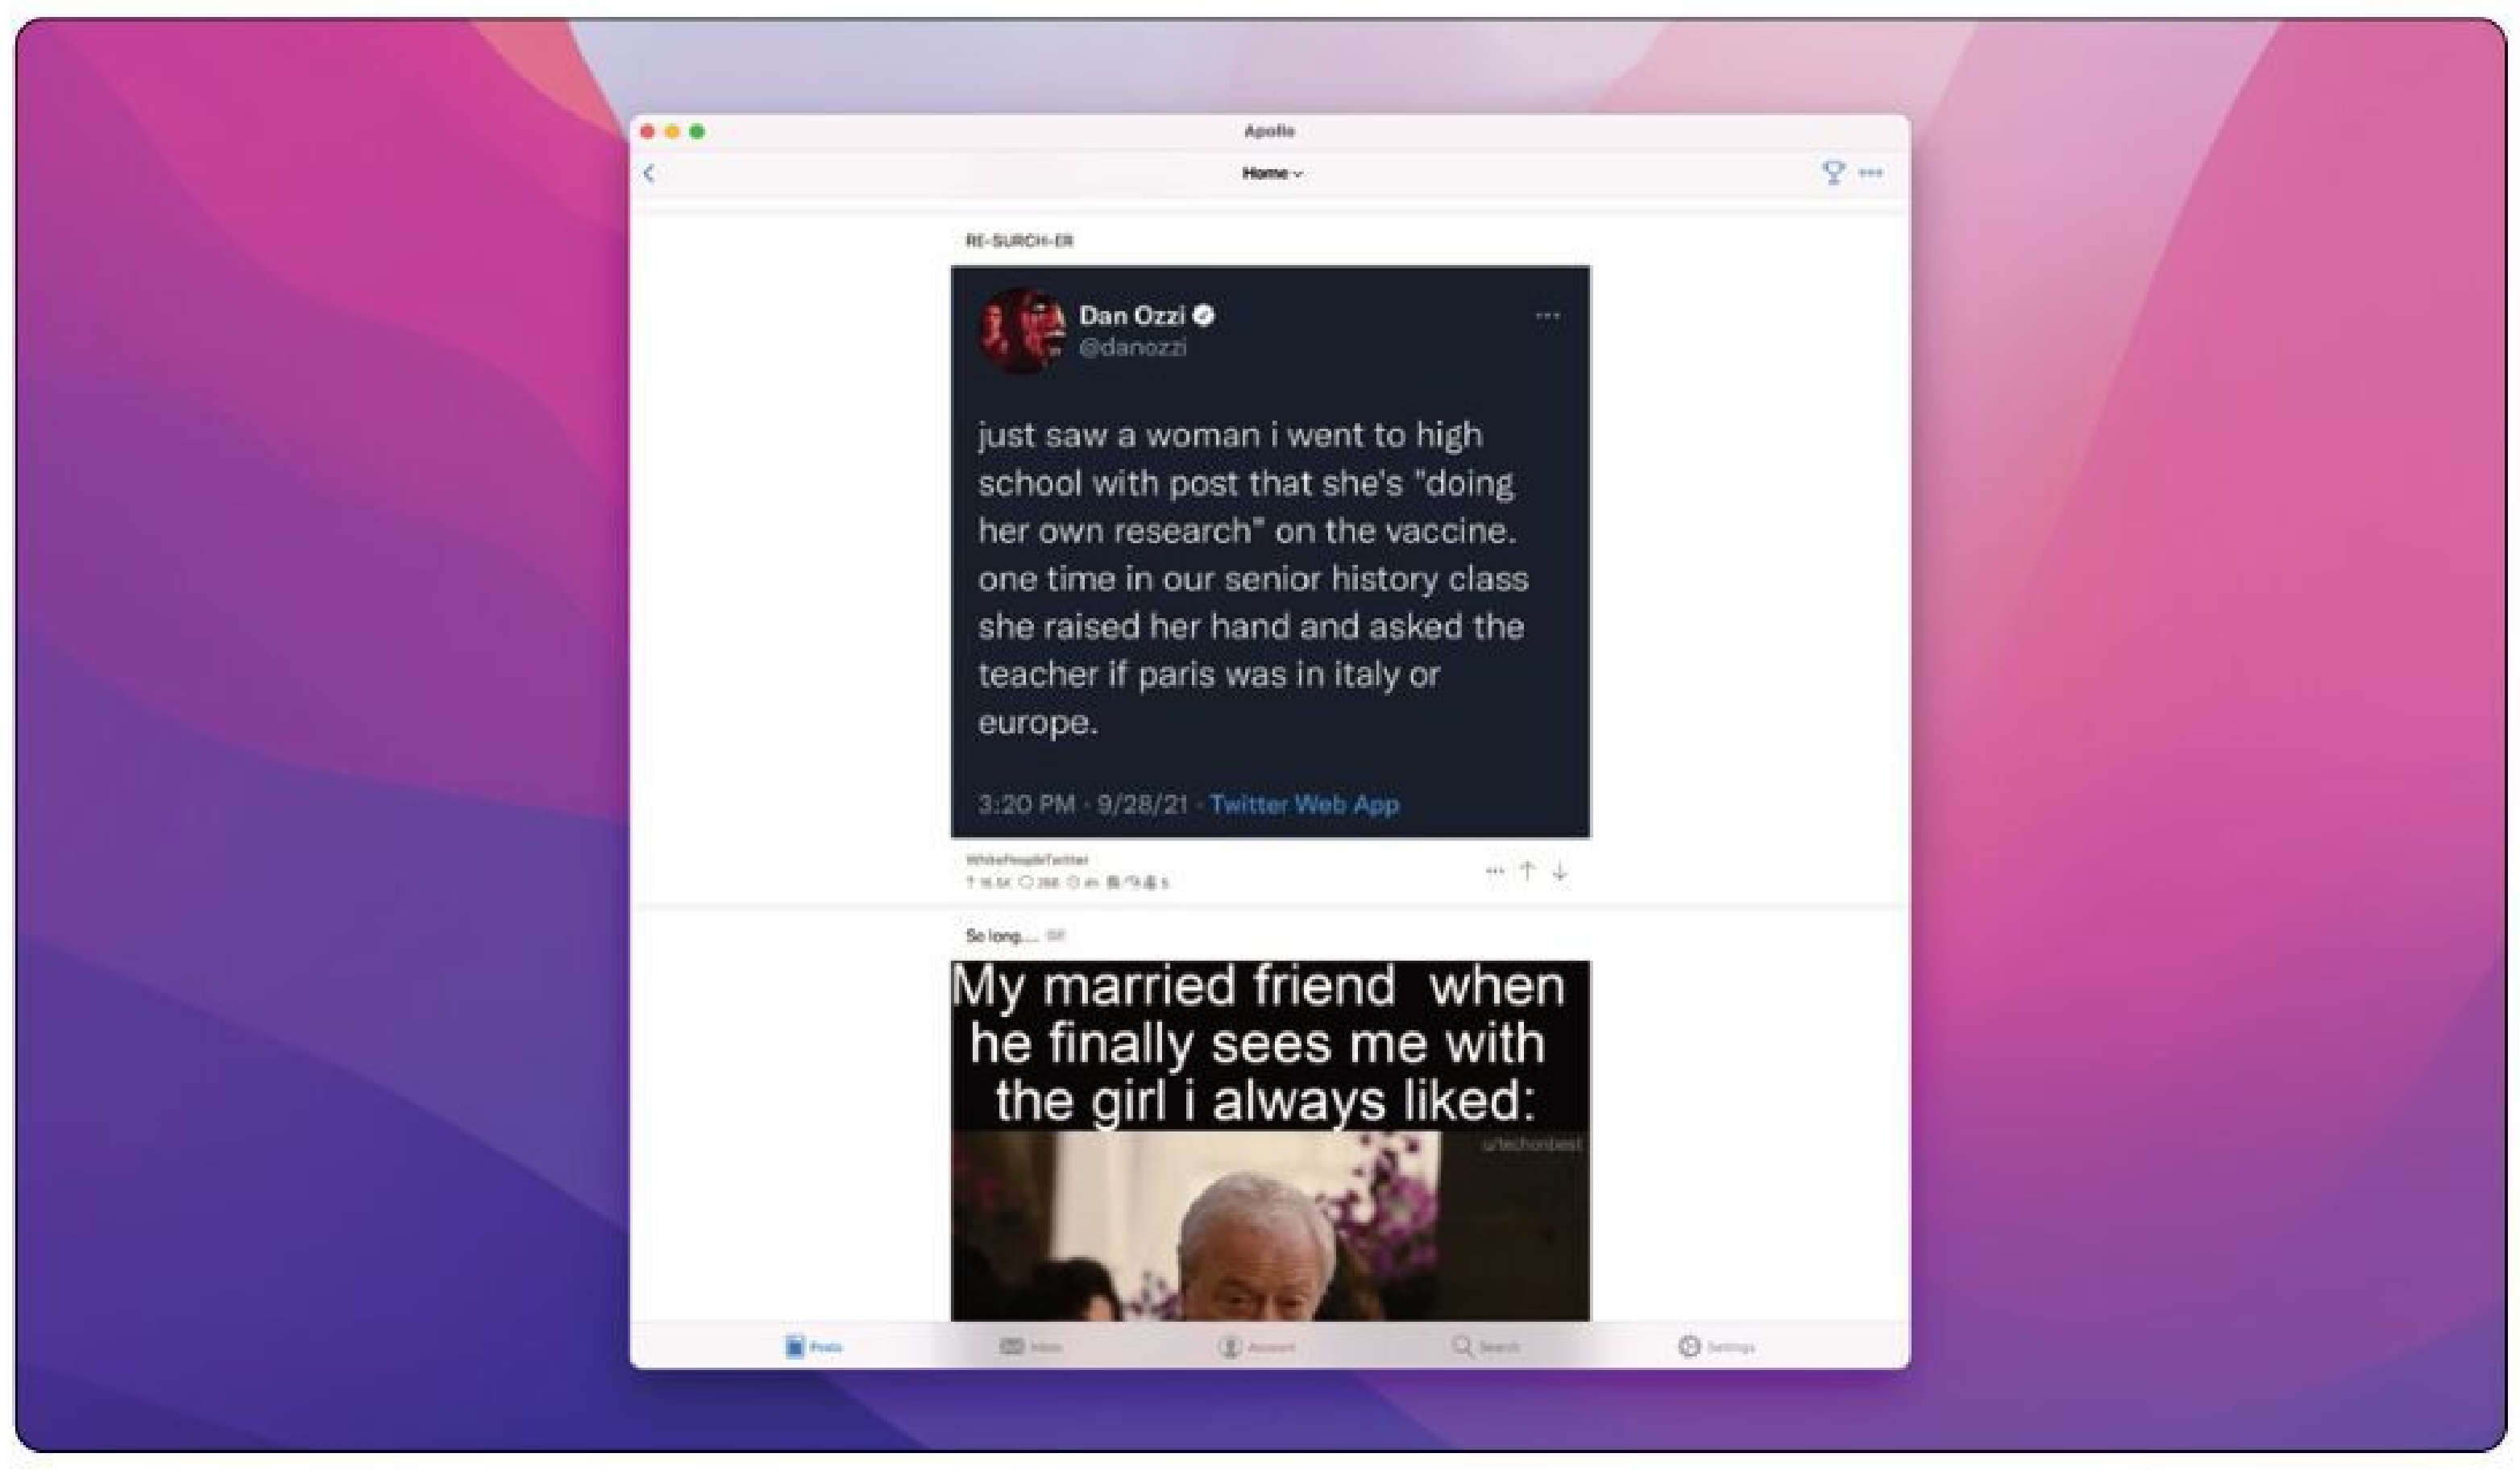
6 Some apps have a three-dots icon under them. Click on this for a contextual menu offering the chance to copy its App Store link, send it via Mail, Messages or AirDrop, make a new Note or Reminder of it and more.



7 When you've found a mobile app you'd like to have on your Mac, click the small cloud underneath it to download it. As you'd expect, a circle gradually fills around a Stop icon. When complete, it's downloaded.



8 When an app has downloaded, you can click the Open button in the App Store to launch it. Otherwise, you can open it in Launchpad, the Applications folder or the Spotlight feature; just like any other app on your Mac.



Dan Ozzi
@danozzi

just saw a woman i went to high school with post that she's "doing her own research" on the vaccine. one time in our senior history class she raised her hand and asked the teacher if paris was in italy or europe.

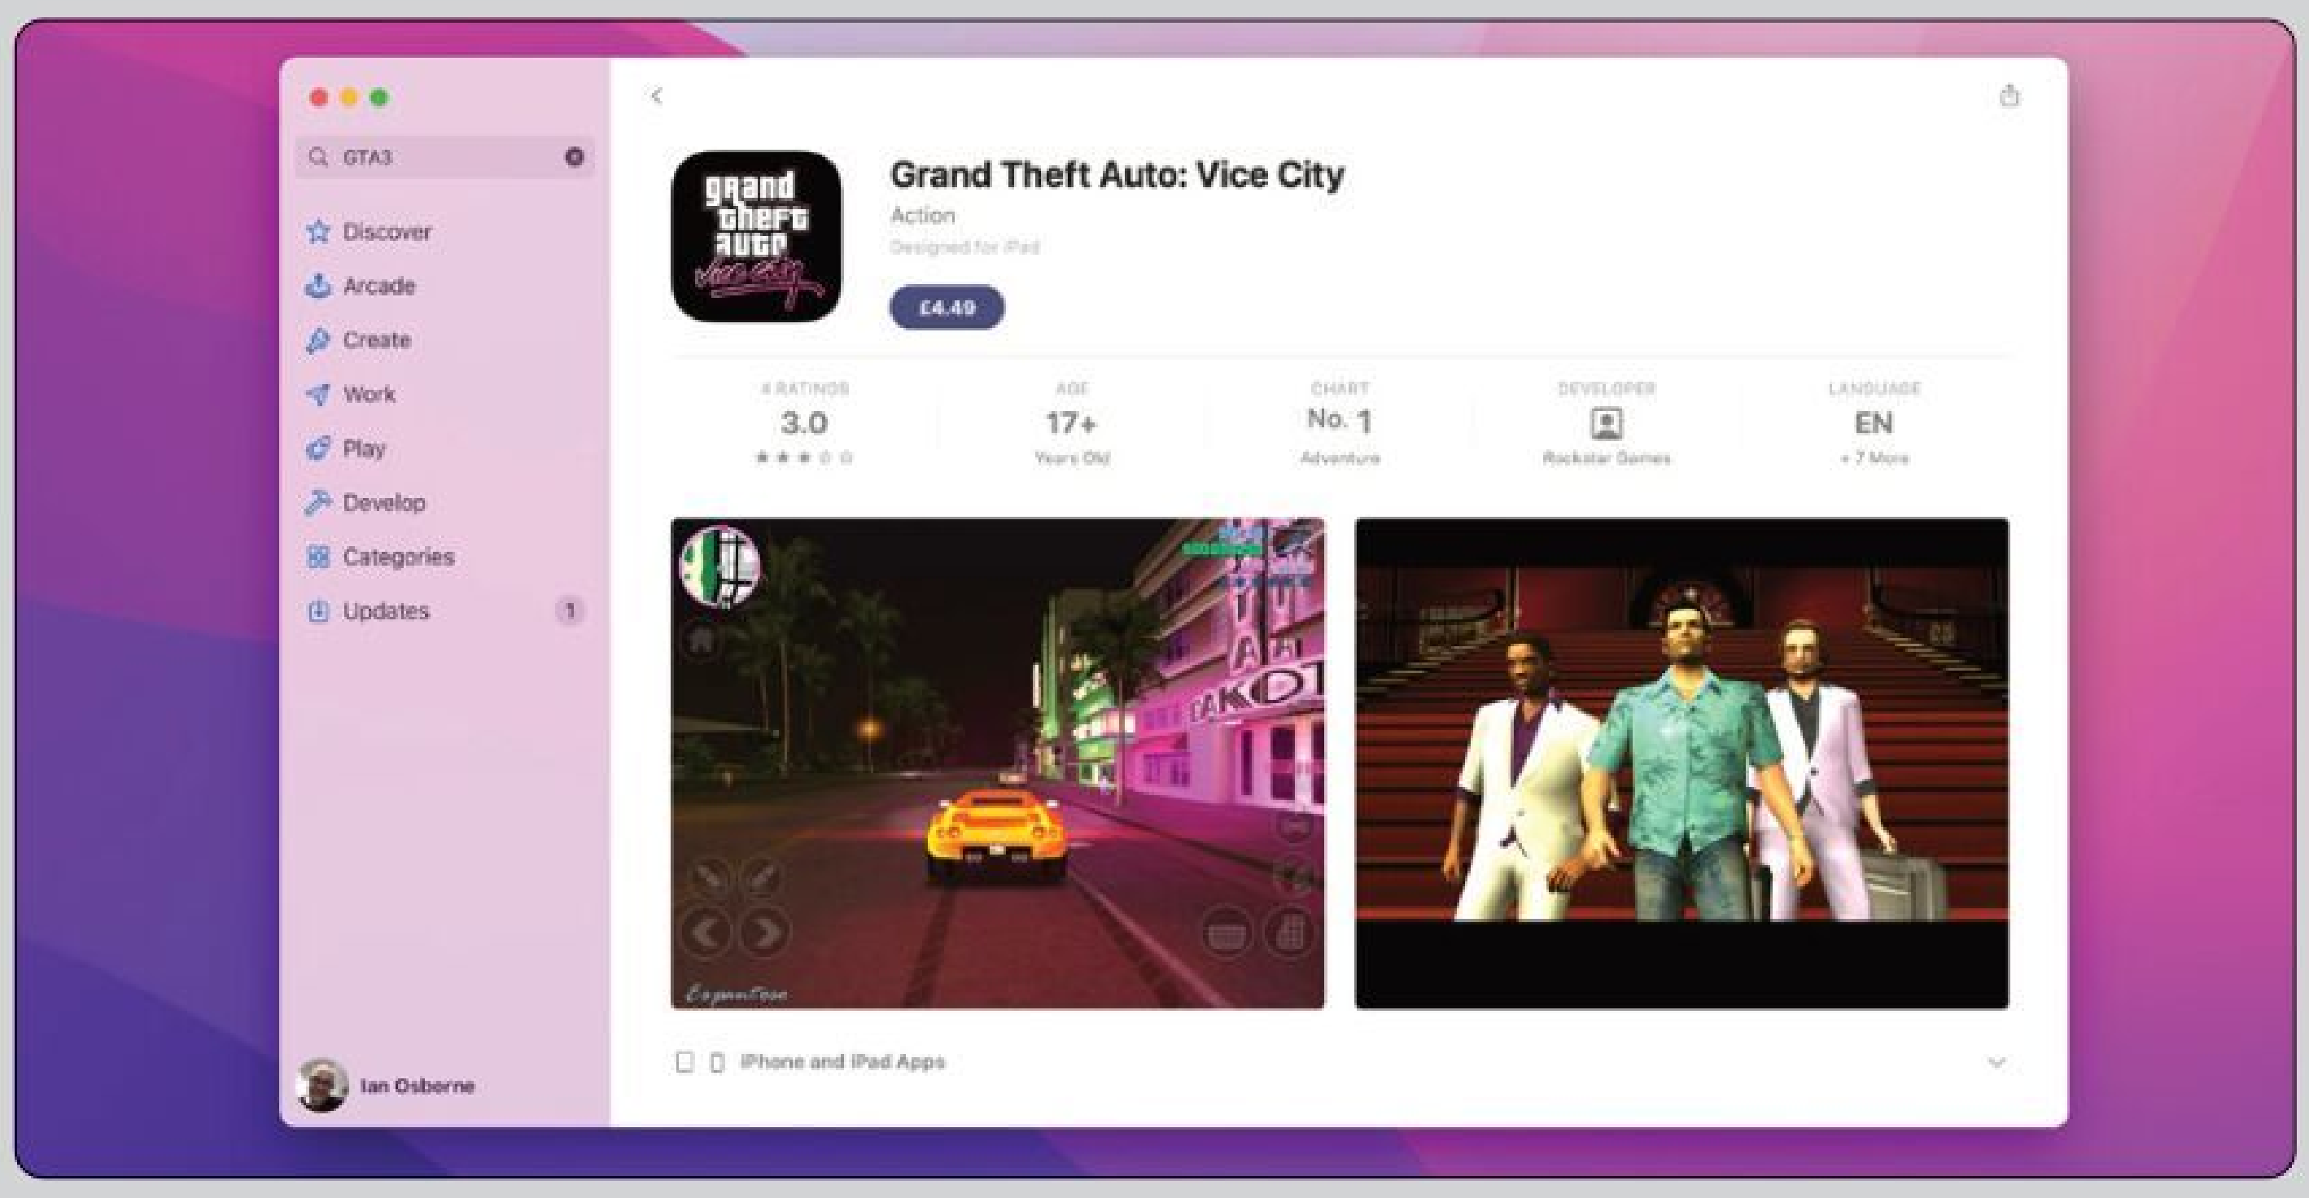
3:20 PM · 9/28/21 · Twitter Web App

My married friend when he finally sees me with the girl i always liked:

9 When you've launched an iOS or iPadOS app on your Mac, you can use it just like any other app. A mouse click replaces a tap, trackpad gestures replace on-screen gestures. The experience might not be perfect, as the interface was designed with touchscreen mobile devices in mind, but it should work just fine.

Search for an App.

If you want to download a mobile app to your Mac which you don't own on your iPad or iPhone, you can search for it in the App Store, and click the iPhone & iPad Apps button to see mobile apps answering that search query. Then you can buy and download them as you would a Mac app.



The Time Machine Back Up & Restore

It's always a good idea to back up your data to guard against disk failure and accidental deletion. macOS Monterey has a built-in backup system called Time Machine. With it, you can retrieve files that have been lost or corrupted, and even reinstall an entire system after a major drive problem. Here's how to do it.

Getting started

1 Connect an external hard drive, via USB, FireWire or Thunderbolt, to your Mac. It should be at least the size of your Mac's hard drive. The larger the drive, the further back in time you will be able to store backups. Now open System Preferences and click on Time Machine in the bottom row.

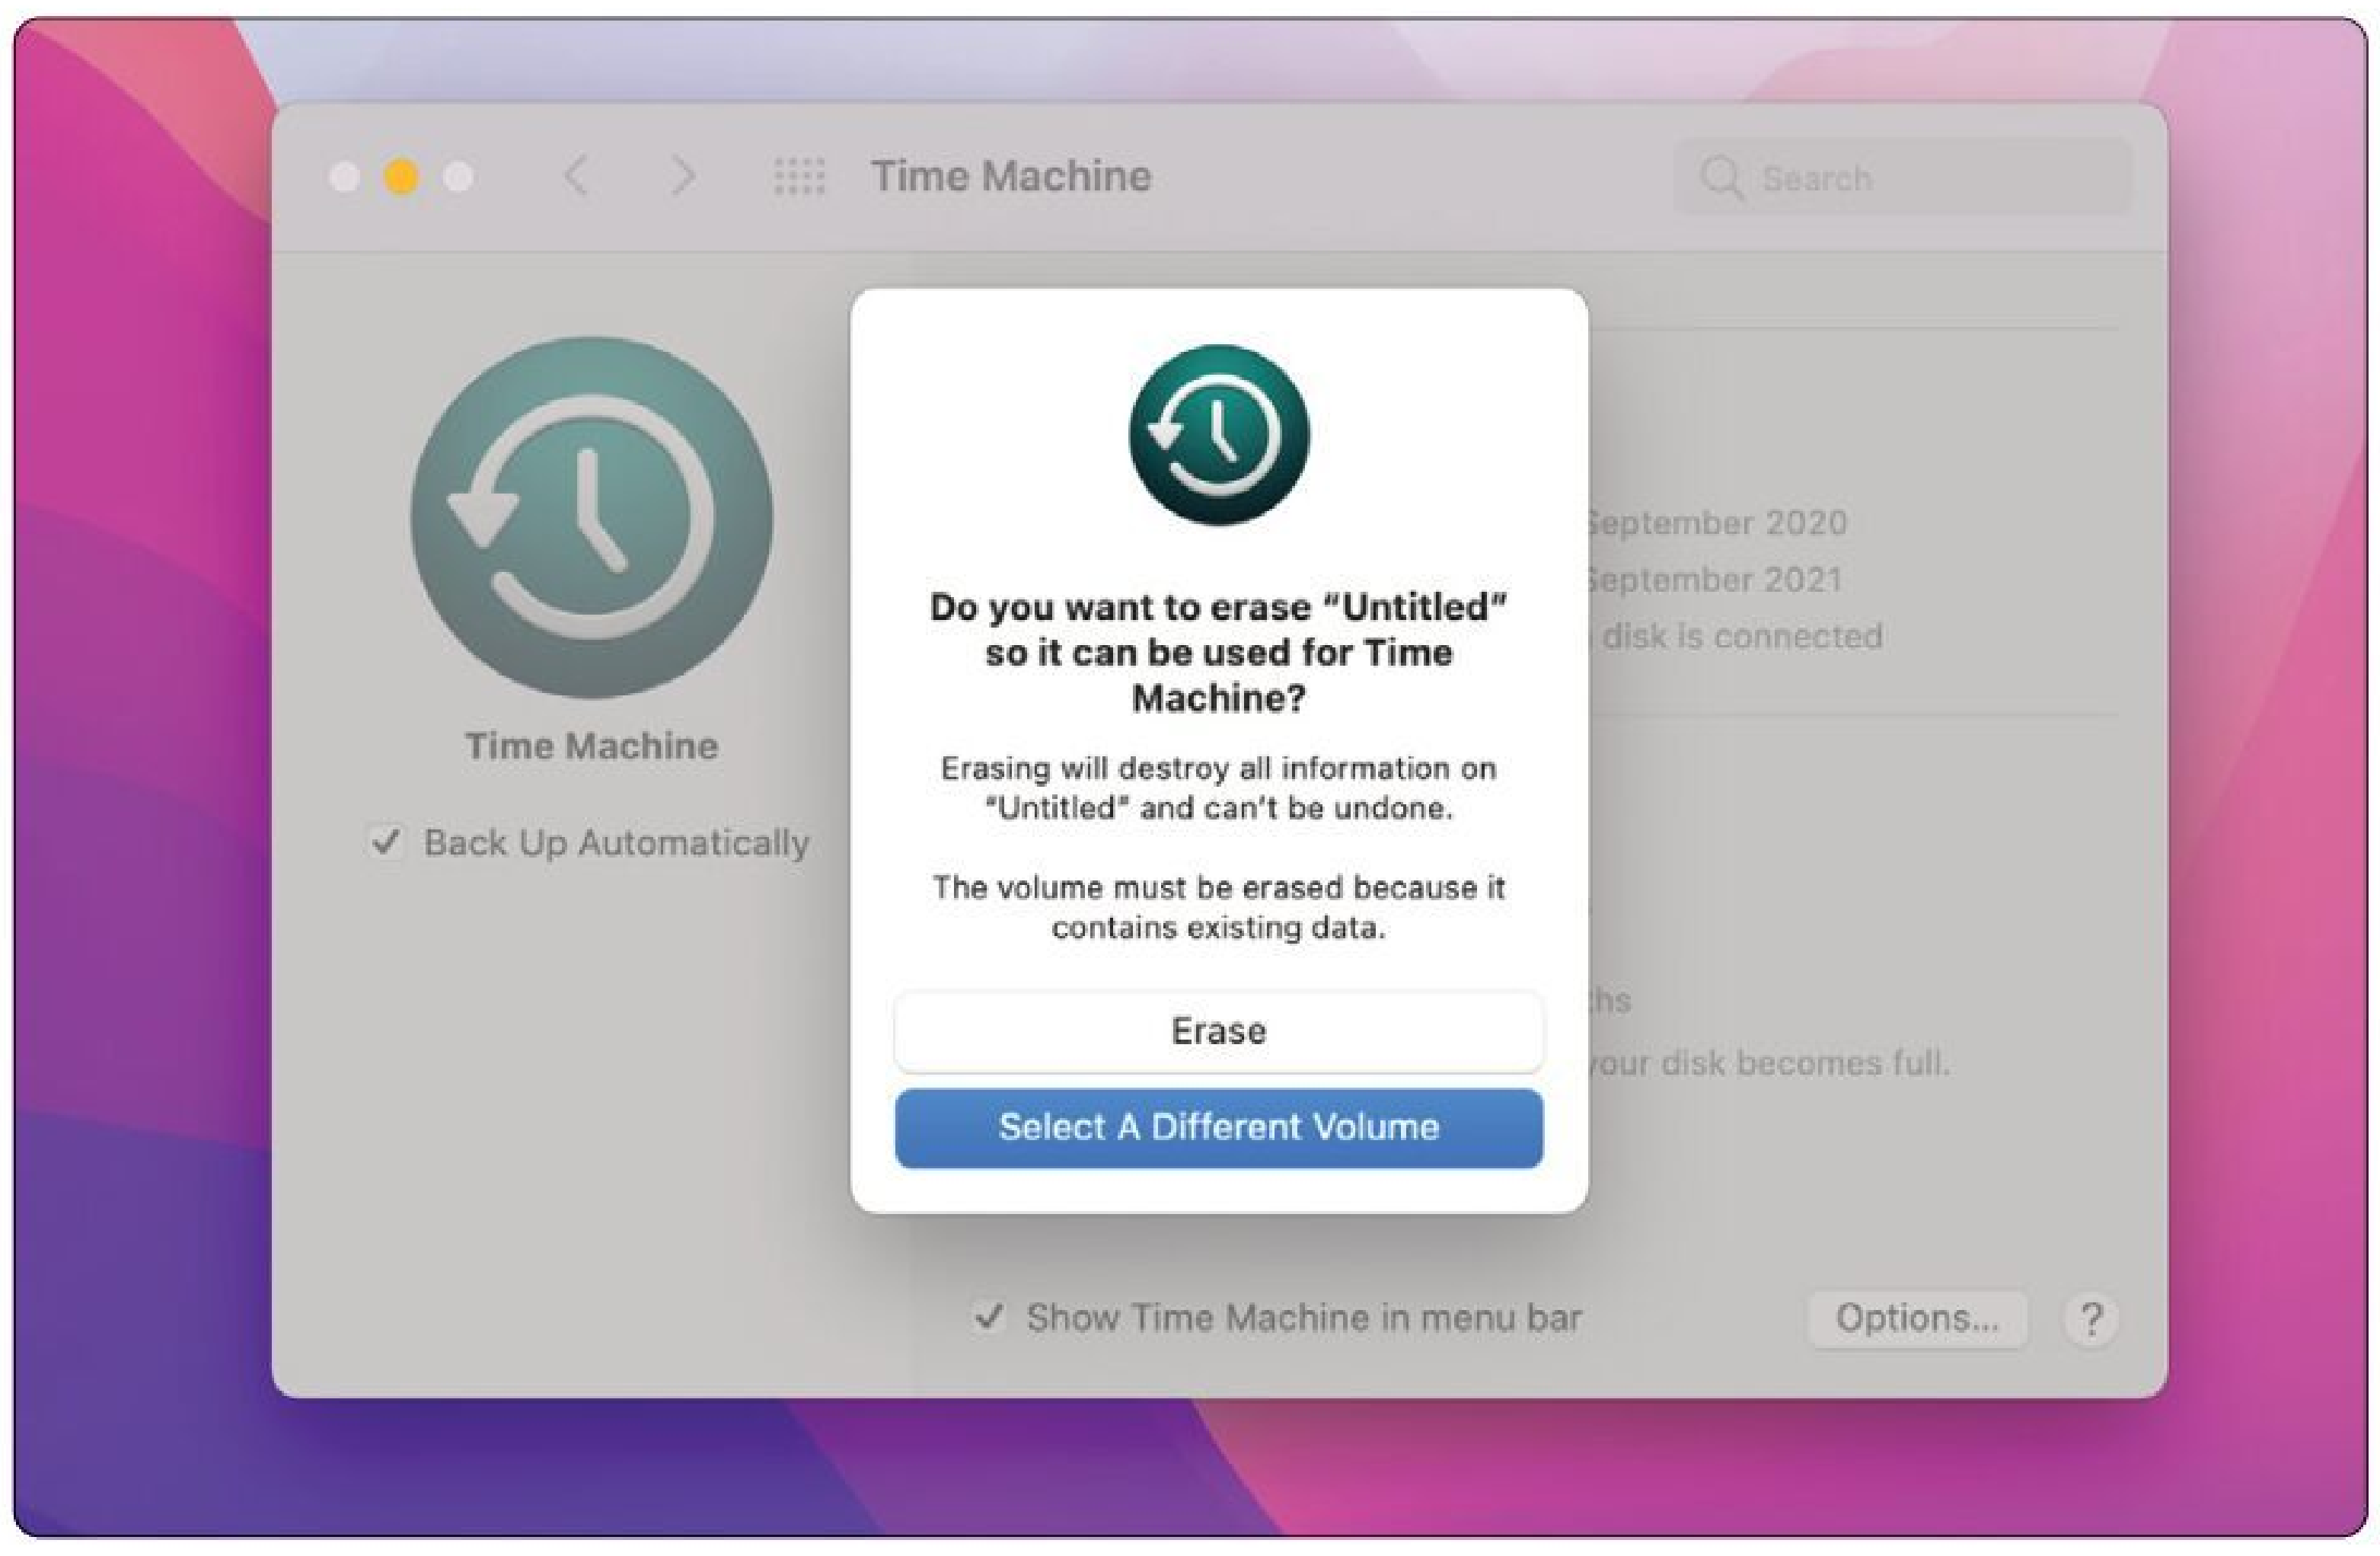
Use Disk
Options...

2 Click the Select Disk... button and you will be presented with a window listing your connected drives. Select the drive on which you would like to store your backups. If your external drive isn't already formatted as 'Mac OS Extended (Journaled)', Time Machine invites you to erase and reformat it.



Do you want to erase "Untitled" so it can be used for Time Machine?

Erasing will destroy all information on "Untitled" and can't be undone.

The volume must be erased because it contains existing data.

✓ Back Up Automatically

✓ Show Time Machine in menu bar
Time Machine
Search
Erase
Select A Different Volume
Options...
?

3 If you choose to reformat your disk, all data currently on the drive is wiped. You might get a pop-up asking if you would like to use the connected drive with Time Machine. Click Decide Later so the Time Machine settings can be configured to your requirements first.

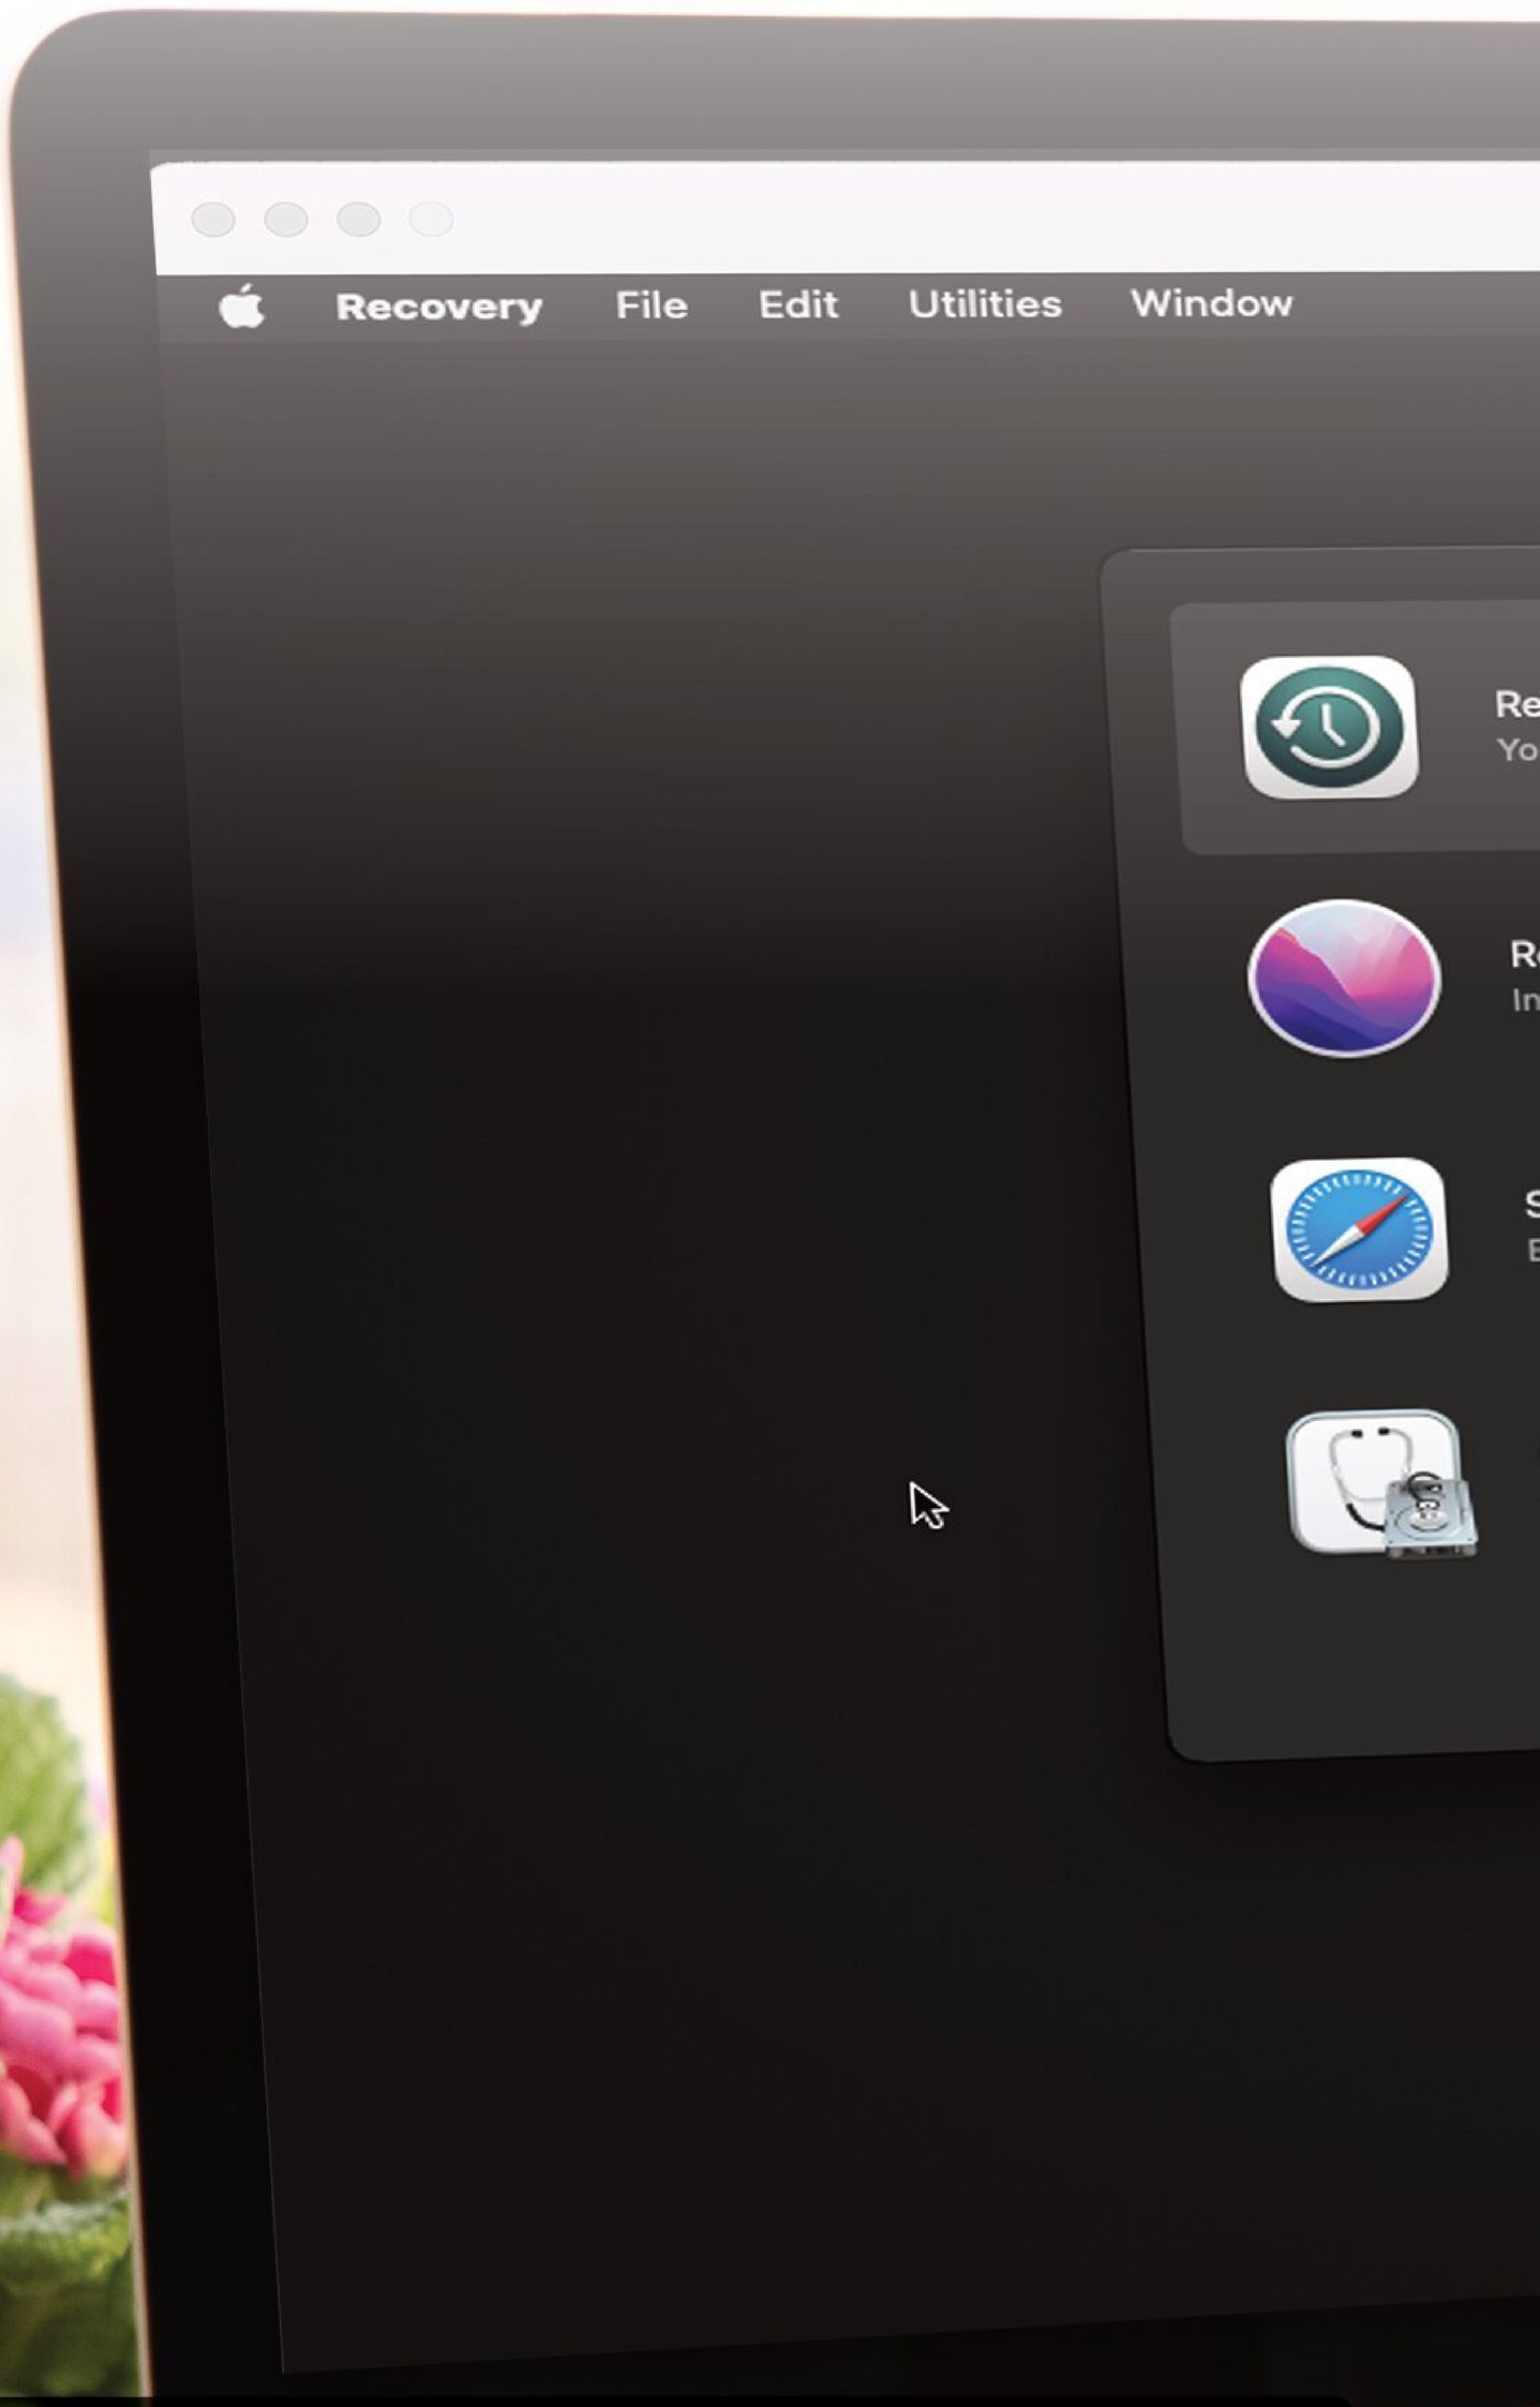
Restore

5 To retrieve a file from Time Machine, Choose Enter Time Machine in the Time Machine menu and then navigate to the file you want. You can get hold of an older version of a current file or one you've deleted. When you've found it, highlight it and press Restore.

6 It's important that you keep your Time Machine backups separate to your data files. Never, for example, partition a hard drive and keep data on one partition and Time Machine backups on the other. If you do, both your data and your backups are lost if the hard drive fails.



Restoring a Mac from a Time Machine Backup

If something has gone very wrong with your Mac, and you want to wipe your hard drive clean and reinstall from a Time Machine backup, this is what you should do. Naturally, to restore from a backup you need to actually have a backup, and anything you've done on your Mac between the last time you ran Time Machine and the time when you restore to your last backup, will be lost. That's why you should back up on a regular basis.

- First of all, make sure a notebook Mac is powered using the power adapter, and regardless of what Mac you have, make sure your Time Machine backup drive is connected.

- Power down your Mac, count to ten then switch it on again and immediately press cmd-R. Hold these keys until the Apple logo appears on the screen.

- Your Mac boots up into Recovery Mode. Click on your name in the macOS Recovery window, then click Next. Enter your administrator's password, and click Next again.

- On the next screen, you're offered four options; Restore from Time Machine, Reinstall macOS Monterey, Safari and Disk Utility. If you think reinstalling macOS over the top of your current install, keeping your files and folders as they are will work, do this. But if you've tried this, or you're sure your system is beyond help, go for Restore from Time Machine. Click Continue.

- After a screen of information on what restoring a Time Machine backup will do, click Continue if you're sure you want to proceed with it.

- You must now select the drive containing your Time Machine backups. Click on your Time Machine drive – and if it isn't there, make sure it's plugged in – then click the Continue button.

- The drive is scanned for Time Machine backups. Choose the most recent backup made before your problems started; click on it and then click Continue.

- Now select the drive you want to install the Time Machine backup on. This is presumably your hard drive, but you could install it on a secondary drive if you wanted. If you have FileVault turned on, you have to enter your password again to unlock the disk.

- The system is restored, and you're invited to restart. Once you do, your Mac should be up and running again.

External Hard Drives Advice

A word to the wise about external Time Machine hard drives. It's tempting to get a huge drive and partition it, with your data on one side and your Time Machine backups on the other. This is a really bad idea. If your external drive fails, you lose not only your data, but also your backups of that data. It's best to make sure everything – your boot drive and any data drives you use – is backed up, but do it on a different drive.

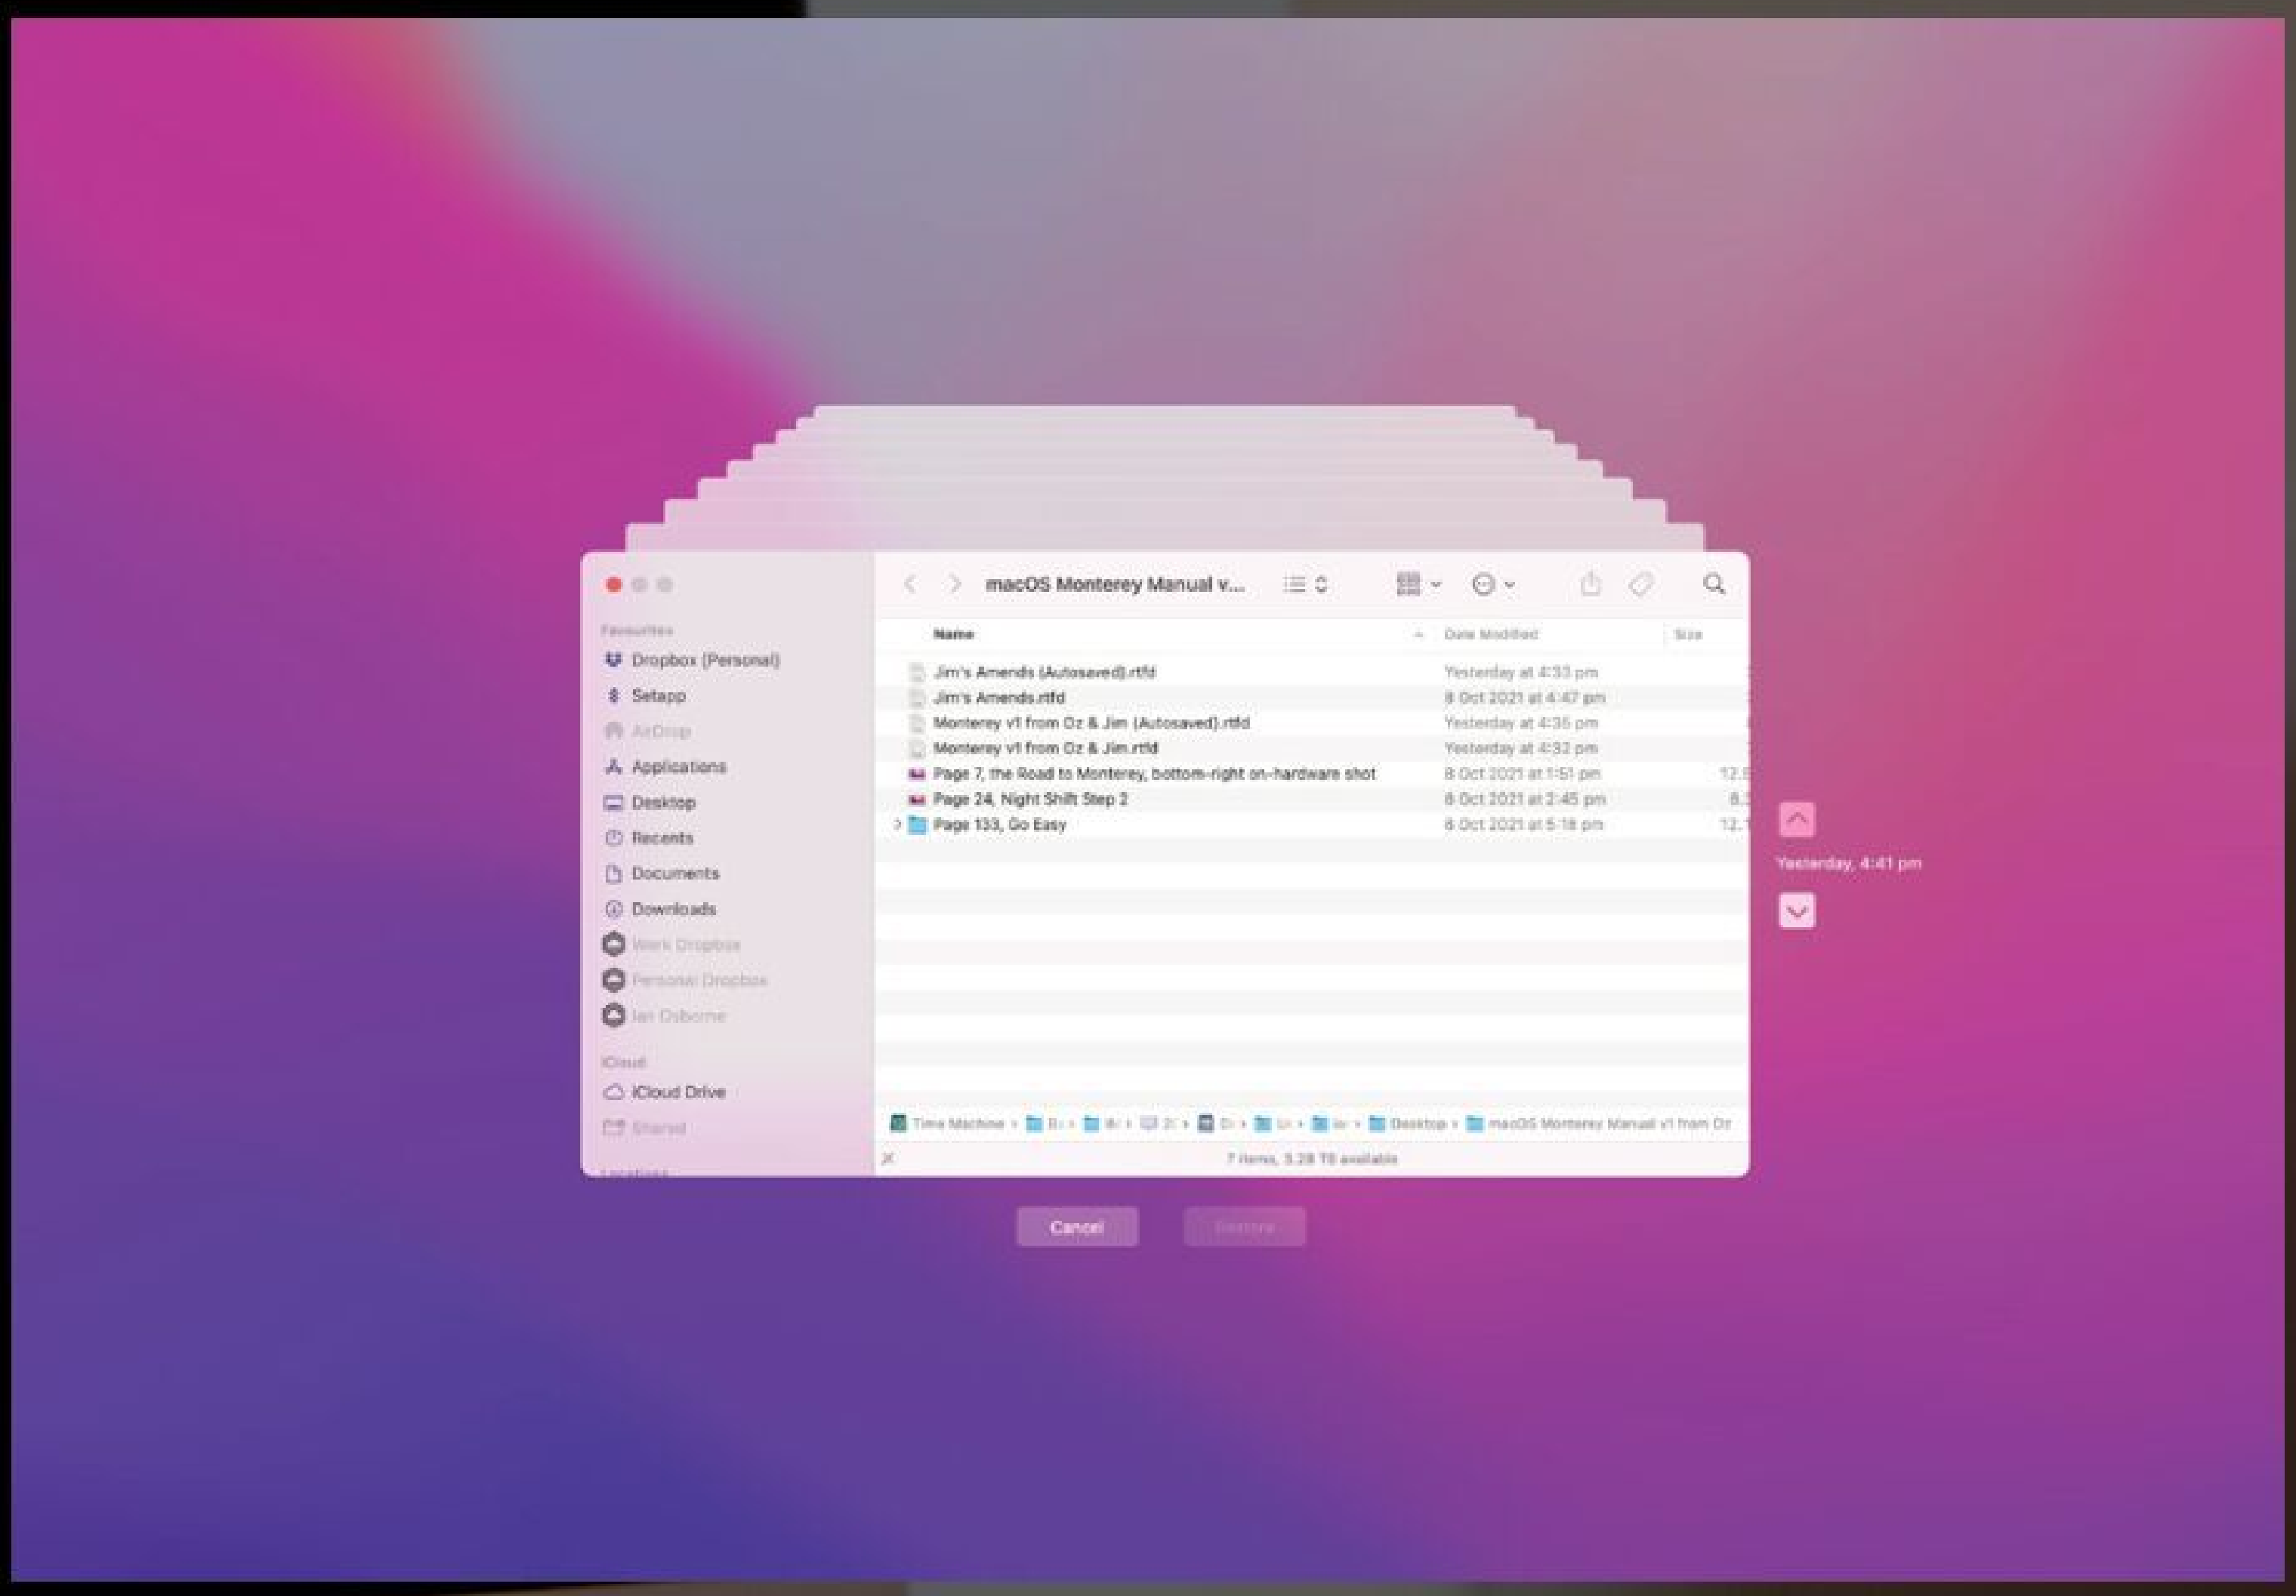
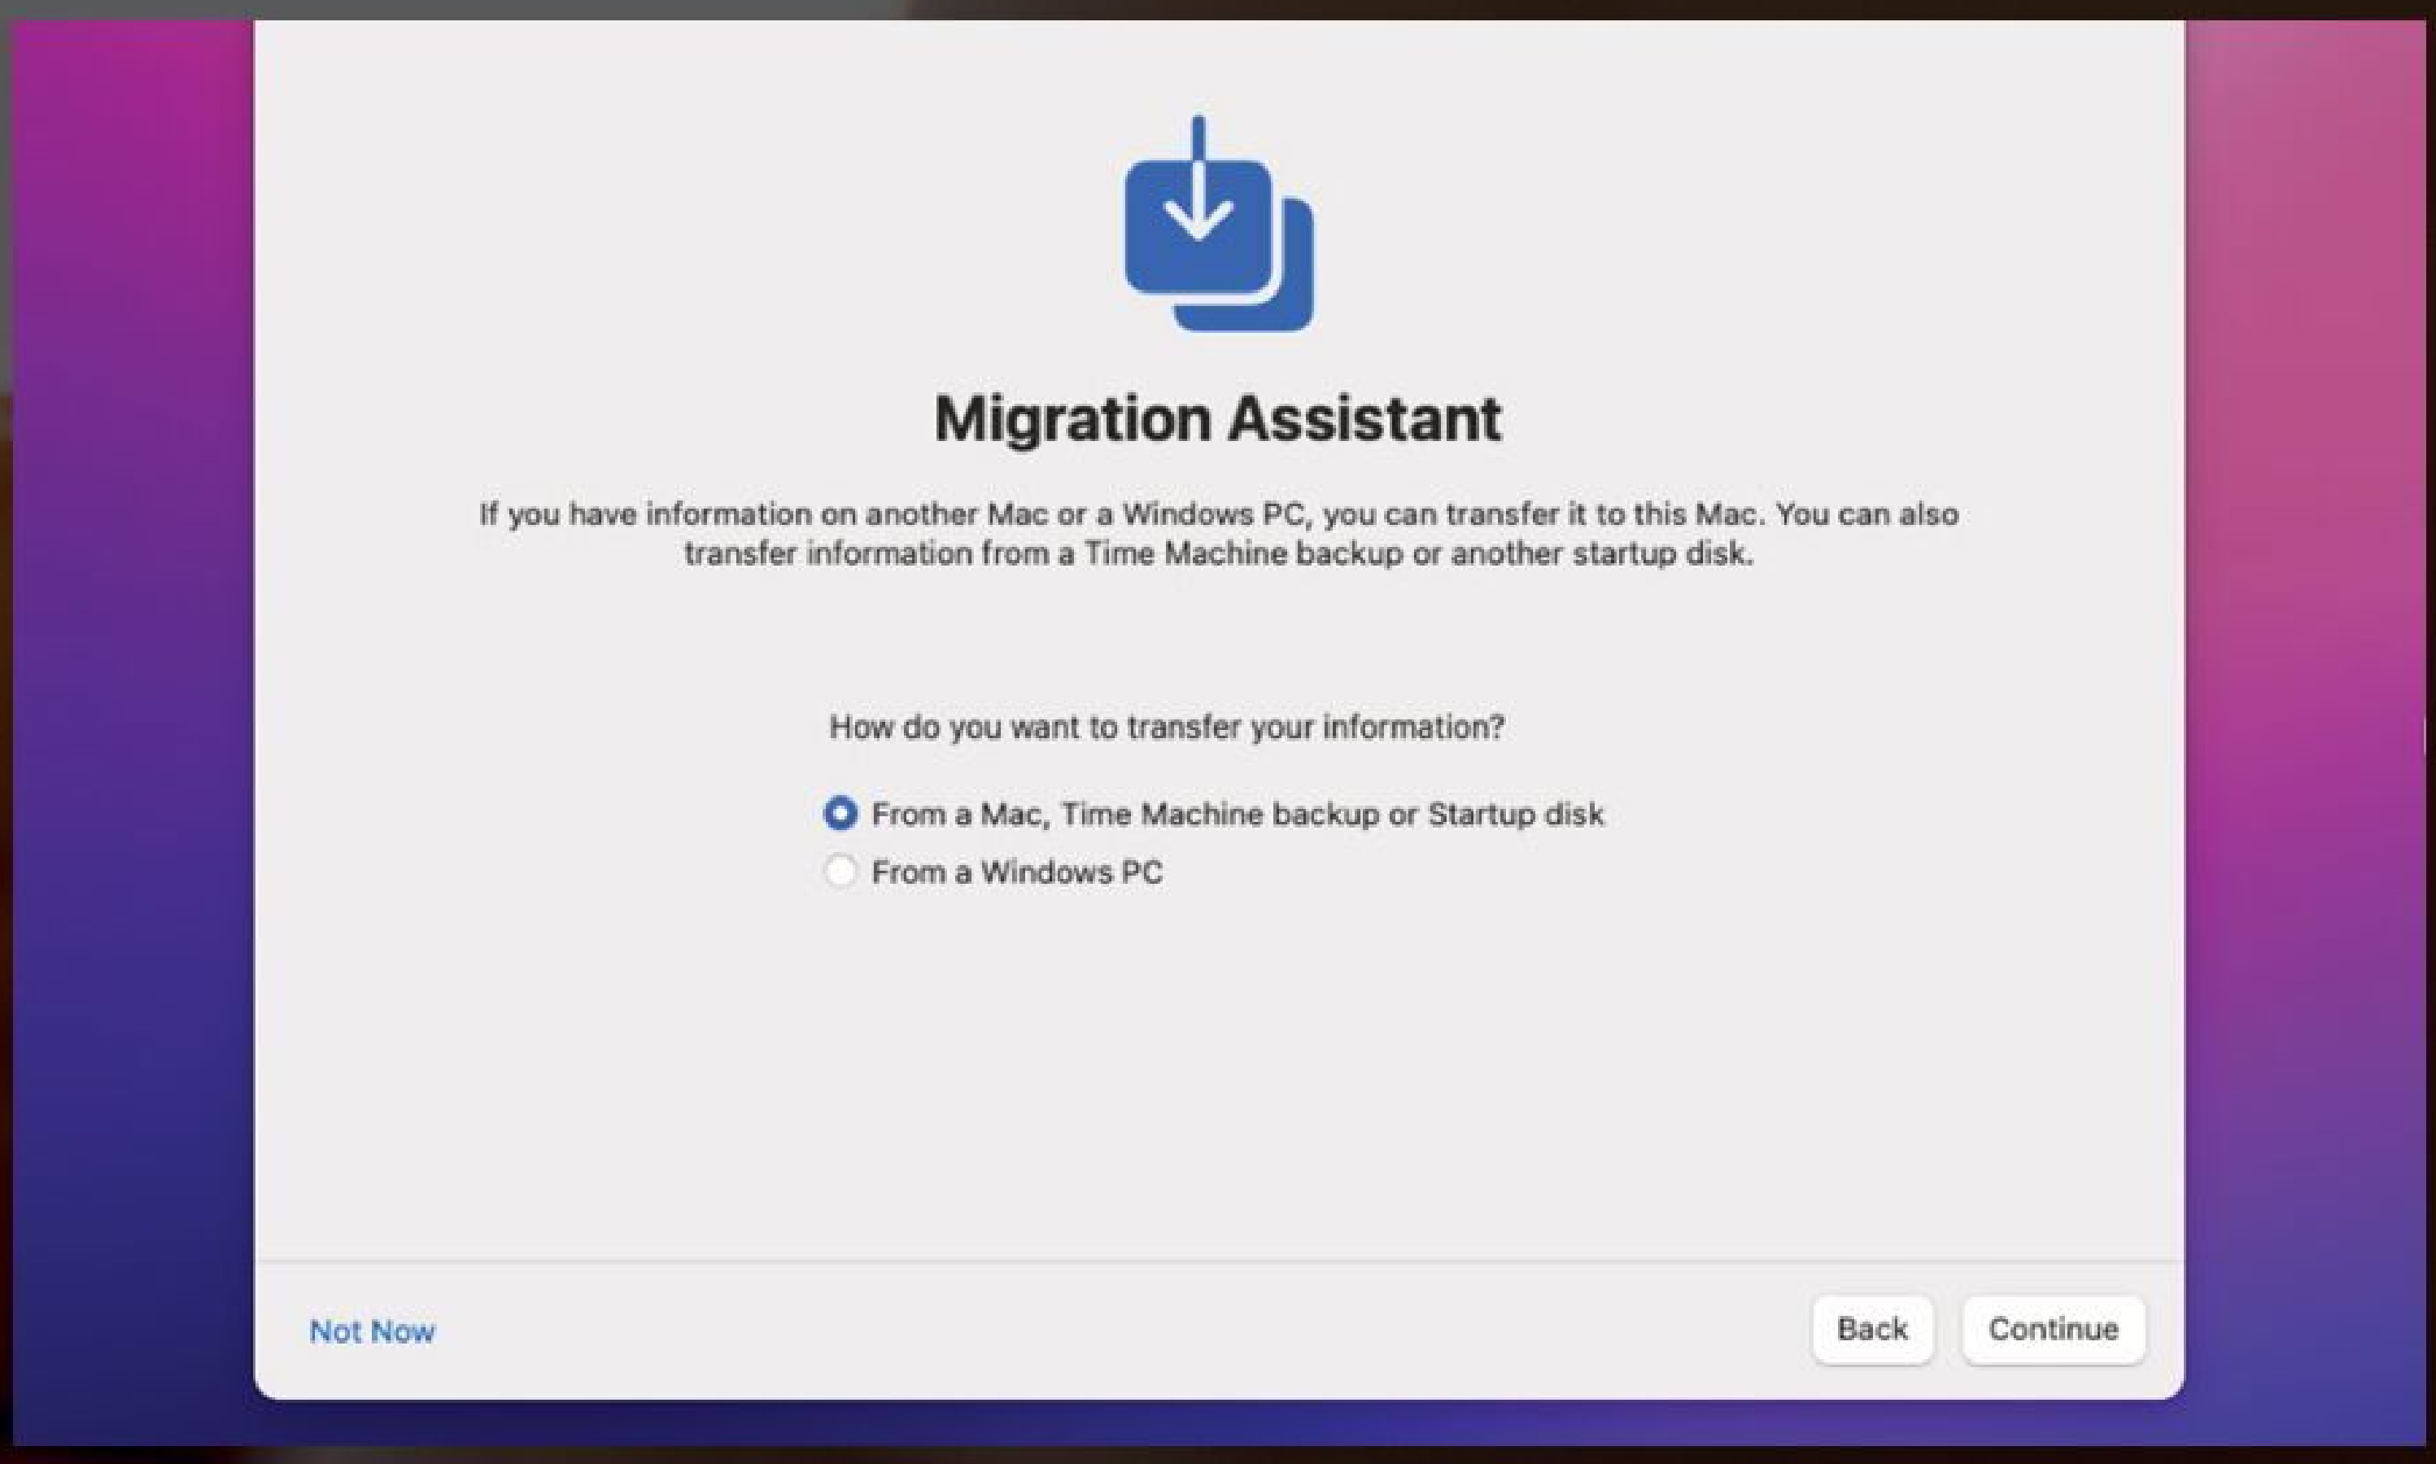
Which Backup?

When restoring a Time Machine backup, you don't have to use the most recent one. If your Mac started giving you grief last Tuesday, for example, you might prefer to use the last backup on Monday evening, and see if that solves the problem. Any documents created or edited after this backup won't be carried over, of course, but you can always delve back into Time Machine and recover individual files.



Setting Up a New Mac from a Time Machine Backup

If you've bought a new Mac and want to set it up using a Time Machine backup from your old one, follow the First-Time Setup guide until you get to this step, the Migration Assistant. Click on the first option, which includes transferring from a Time Machine backup, then Continue. Follow the on-screen instructions to have your files, folders and settings transferred to your new Mac from Time Machine.



Migration Assistant

If you have information on another Mac or a Windows PC, you can transfer it to this Mac. You can also transfer information from a Time Machine backup or another startup disk.

How do you want to transfer your information?

The Keyboard Customised Shortcuts

While Apple's classic pointer-driven interface is great for pretty much everything, you can make using your Mac even more quick and efficient by memorising a few simple keyboard shortcuts. The macOS has dozens of pre-configured keyboard shortcuts. Here are some of the most useful and most used shortcuts on your Mac.

Finder Shortcuts

These shortcuts are available when you're using Mojave's Finder features, like windows and folders.

Command + [	Go to the previous folder
Command +]	Go to the next folder
Command + ↑	Navigate up one level
Command + ↓	Navigate down one level
Option + Double click.	Open the selected folder in a new window and close the current window
Command + Double click	Open selected folder in a new tab
Command + Tab	Cycle forward through your opened applications
Command + Shift + Tab	Cycle backward through your opened applications
Space	Launch Quick Look
Command + A	Select all items in Finder
Command + Option + A	Deselect any selected items
Command + N	Open new Finder window
Command + Shift + K	Open Network window
Command + I	Get info on an item
Command + J	Show view options
Command + Option + Esc.	Force quit an application
Command + Delete	Move the selected item to Trash

Common Application Shortcuts

Not every application supports every one of these shortcuts, but where they do, they come in very useful.

Command + `	Cycle through open App windows
Command + H	Hide the current window
Command + Option + H	Hide all open windows
Command + M	Minimise the current window
Command + Option + M.	Minimise all windows
Command + W	Close the selected window
Command + Option + W	Close all windows
Function + F3	Launch/Quit Mission Control

File and Folder Shortcuts

You can cut, copy, paste, duplicate, open files and folders directly from the keyboard, using these handy shortcuts.

Command + Shift + Delete	Empty Trash
Command + drag file/folder	Move the selected item to another location
Option + drag file/folder.	Copy item to another location
Command + L.	Make alias of selected items
Command + D	Duplicate the selected item
Command + C.	Copy the selected item
Command + X.	Cut the selected item
Command + V.	Paste copied/cut item
Command + Z.	Undo action
Command + Shift + N.	Create new folder
Command + Option + N	Create new Smart folder
Command + O	Open the selected item
Shift + Command + /	Show the Help menu
Command + ,	Open App Preferencer

Desktop Shortcuts

With these shortcuts, you can access Mission Control, your application windows and hide/show the Dock.

Function + F10	See all Application windows
Function + F11 -	Show the Desktop
Option + Command + D	Toggle Dock On/Off
Control + ←	Move to space on left

Mission Control Shortcuts

When you're in Mission Control, these shortcuts help you navigate your way around your desktop and apps.

Control + →	Move to space on right
Control + #	Switch to a specific numbered (#) desktop

Screenshots

There are plenty of reasons why you might want to take a screenshot on your Mac. This is how you do it.

Snap selected area	Cmd-Shift-4 and drag over an area while dragging, hold the space bar to move the selected area, hold Shift to change size in one direction only or Option to start selecting from the centre
Snap a window	Cmd-Shift-4, press space bar and click on the window
Snap entire screen	Cmd-Shift-3
New screenshots options	cmd-Shift-5

Display and Accessibility Shortcuts

These shortcuts control your display, and also features associated with Apple's Accessibility options.

F1	Decrease screen brightness
F2	Increase screen brightness
Command + F5	VoiceOver on/off
Option + Command + F5	Display Accessibility controls
Command + Option + 8	Zoom On/Off
Command + Option + +	Zoom in
Command + Option + -	Zoom out

Document Shortcuts

These shortcuts come in very handy when you're creating or editing a document, and they work in most apps.

Command + I	Italicise the selected text, or turn italics on or off
Command + U	Underline the selected text, or turn underlining on or off
Command + T	Show or hide the Fonts pane
Command + D	When saving a document, this selects the Desktop folder
Command + Control + D	Highlight a word and this shortcut shows its definition
Command + Shift + :	Display the Spelling and Grammar pane
Command + ;	Spellcheck the document
Option + Delete	Delete the word to the left of the cursor
Control + H	Delete the character to the left of the insertion point. Or use Shift + Delete
Control + D	Delete the character to the right of the cursor
Fn + Delete	Forward delete on keyboards without a Forward Delete key
Control + K	Delete the text between the cursor and the end of the line or paragraph
Fn + Up Arrow	Scroll up one page
Fn + Down Arrow	Scroll down one page
Fn + Left Arrow	Move to the beginning of a document
Fn + Right Arrow	Move to the end of a document
Command + Up Arrow	Move the cursor to the beginning of the document
Command + Down Arrow	Move the cursor to the end of the document
Command + Left Arrow	Move the cursor to the beginning of the current line
Command + Right Arrow	Move the cursor to the end of the current line

Boot, Sleep and Shutdown Shortcuts.

These are not strictly speaking keyboard shortcuts, but are used when starting or shutting down your Mac to access various options. Some of these options are especially useful if you have a problem with your Mac.

Power Button (⏻)

Press once	Put Mac to sleep
Press again	Wake Mac up
Hold	Force Mac shutdown
Command + Control + ⏻	Force Mac to restart

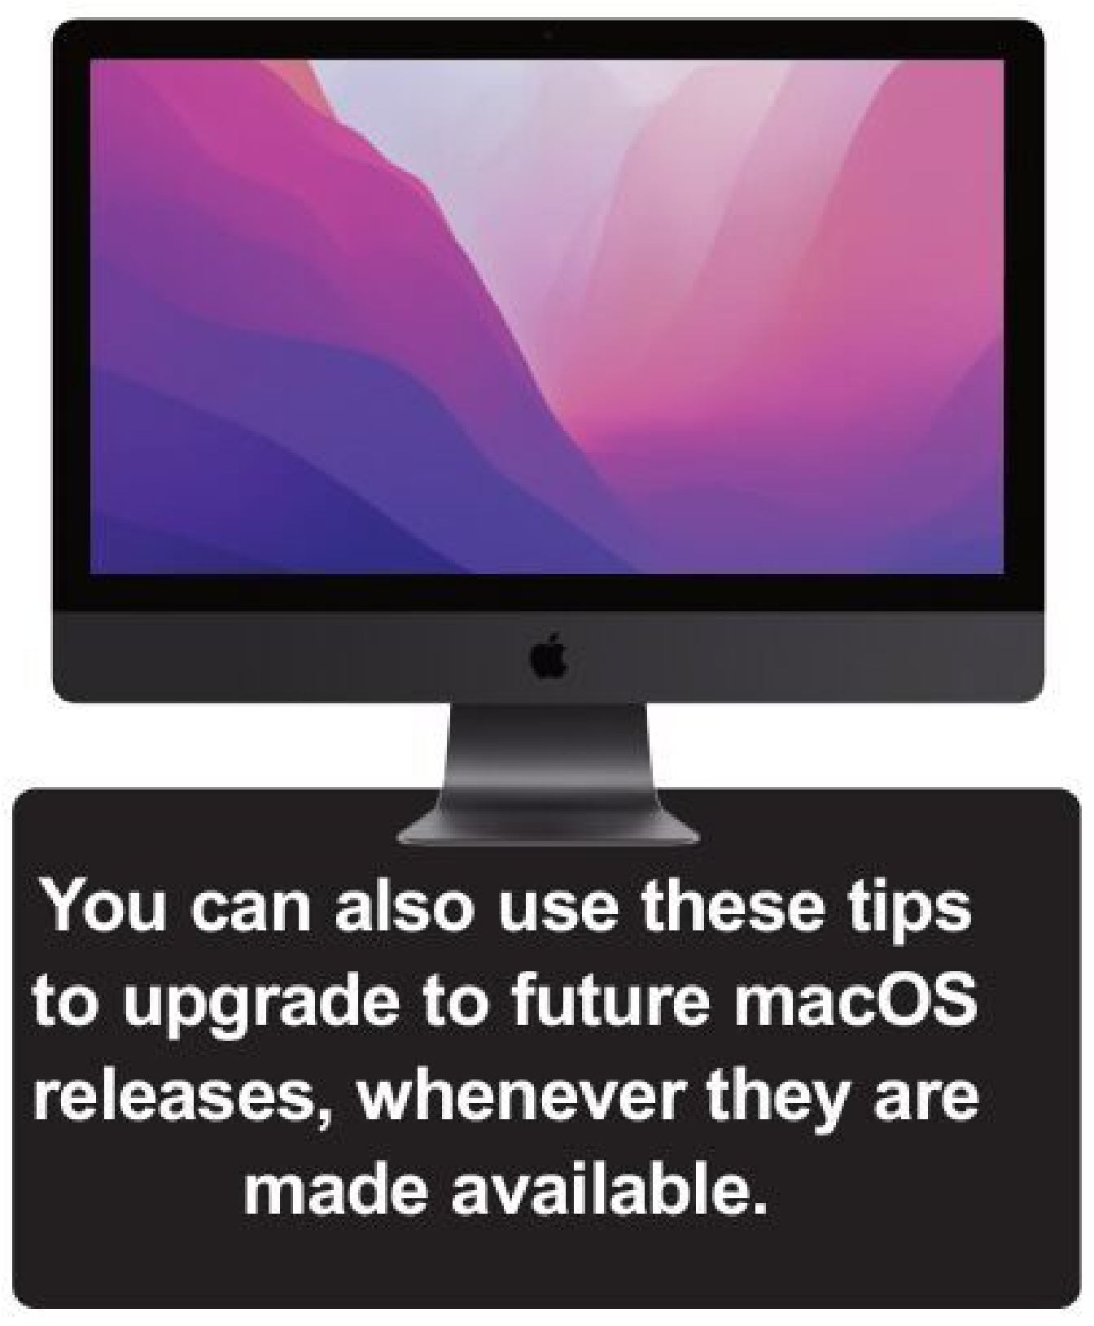
While Starting

Option (hold)	Display bootable volumes
Shift (hold)	Start in Safe Mode
Left Shift (hold)	Bypass automatic login
C (hold)	Boot from other media
T (hold)	Start in FireWire target disk mode
N (hold)	Start from NetBoot server
X (hold)	Force Mac startup
Command + R (hold)	Start in Recovery Mode
⏏ (hold)	Eject discs

Shutting Down

Control + ⏏	Show restart/sleep/shutdown
Command + Option + Control + ⏏	Quit all of your opened applications
Shift + Control + ⏏	Put displays to sleep
Command + Shift + Q	Log out
Command + Shift + Option + Q	Log out (immediately)

Update macOS To Monterey



You can also use these tips to upgrade to future macOS releases, whenever they are made available.

If your Mac is running an older version of the operating system, you're probably keen to upgrade to the latest release of macOS Monterey. It's completely free of charge, and as long as your Mac meets the minimum system requirements, it's very easy to do. To update your Mac to macOS Monterey, you need an Internet connection, and it's best to plug in your charger too.

macOS Monterey beta
12.0 — 11.71 GB

Another update is available.

Software Update
This Mac is enrolled in the Apple Beta Software Programme

Use of this software is subject to the original licence agreement that accompanied the software being updated.

☐ Automatically keep my Mac up to date

2 Open System Preferences from the Apple menu, the Dock or LaunchPad (it doesn't matter which), and click on the badged Software Update icon. It checks for an update, then tells you what it is. Click the Upgrade Now button.

Minimum Requirements For macOS Monterey.

Apple can't support older Macs forever, and in the step up to macOS Monterey, a few models have been left behind. If you're running macOS Big Sur on a 2014 or early 2015 iMac, a MacBook Air from 2014 or earlier or a first-generation, 2015 MacBook, for example, you're out of luck. But if you have one of the models listed below, you can upgrade to the latest version of macOS right now. If you're unsure which model of Mac you have, click on the Apple icon in the menu bar (top left), and select About This Mac.

MacBook	Early 2016 and later
MacBook Air	Early 2015 and later
MacBook Pro	Early 2015 and later
Mac Pro	Late 2013 and later
Mac mini	Late 2014 and later
iMac	Late 2015 and later
iMac Pro	2017 and later

Make a Backup Before You Start.

Upgrading the macOS operating system is a big step, so as always, before making any major change to your computer, it's a good idea to make a backup of your data using Time Machine. The upgrade is a very safe process and won't damage your files by itself, but there's always the unexpected risk of a drive failure or a power cut during the installation process, which could leave your Mac crippled. In the unlikely event of this happening, you can simply restore your Time Machine backup to your Mac and try again.

Unlock with Apple Watch

If you own an Apple Watch you can unlock your Mac with it instead of typing your password. You need to check the box in System Preferences > Security & Privacy > General. You still need your password after restarting, though.

System-Wide Translation.

Offline printer issues

You can translate any piece of text on your Mac by highlighting it, right-clicking and selecting the Translate option, which is found near the top of the contextual window that pops up. Almost any text you can highlight can be translated.

English (US)

If some of the things you're trying to print...

Spanish

Si algunas de las cosas que está intentando imprimir no se están imprimiendo o si sus impresoras se desconectan, es posible que deba verificar la forma en que Google Cloud Print está configurado para su red.

28 September 2021 at 10:51 am

Offline printer issues

If some of the things you're trying to print aren't being printed or if your printers go offline, you may need to check the way that Google Cloud Print is set up for your network.

Check ports

For Cloud Print to work on your network, make sure you have the following:

- Ports 80 and 443 open to allow HTTP and HTTPS traffic
- Port 5222 open to allow XMPP message traffic

Check firewalls

Your router might include a firewall or use IP filtering. Sometimes these applications block your printing jobs from being completed. To fix this issue, follow these steps:

1. Access your router.
3. Select the firewall configuration.
4. Allow traffic on port 5222.

You can change the language the text is translated into using the pull-down above the translated text. Click the Play icon to have it read out to you, and the buttons to replace the text with the translation or copy it to your clipboard.

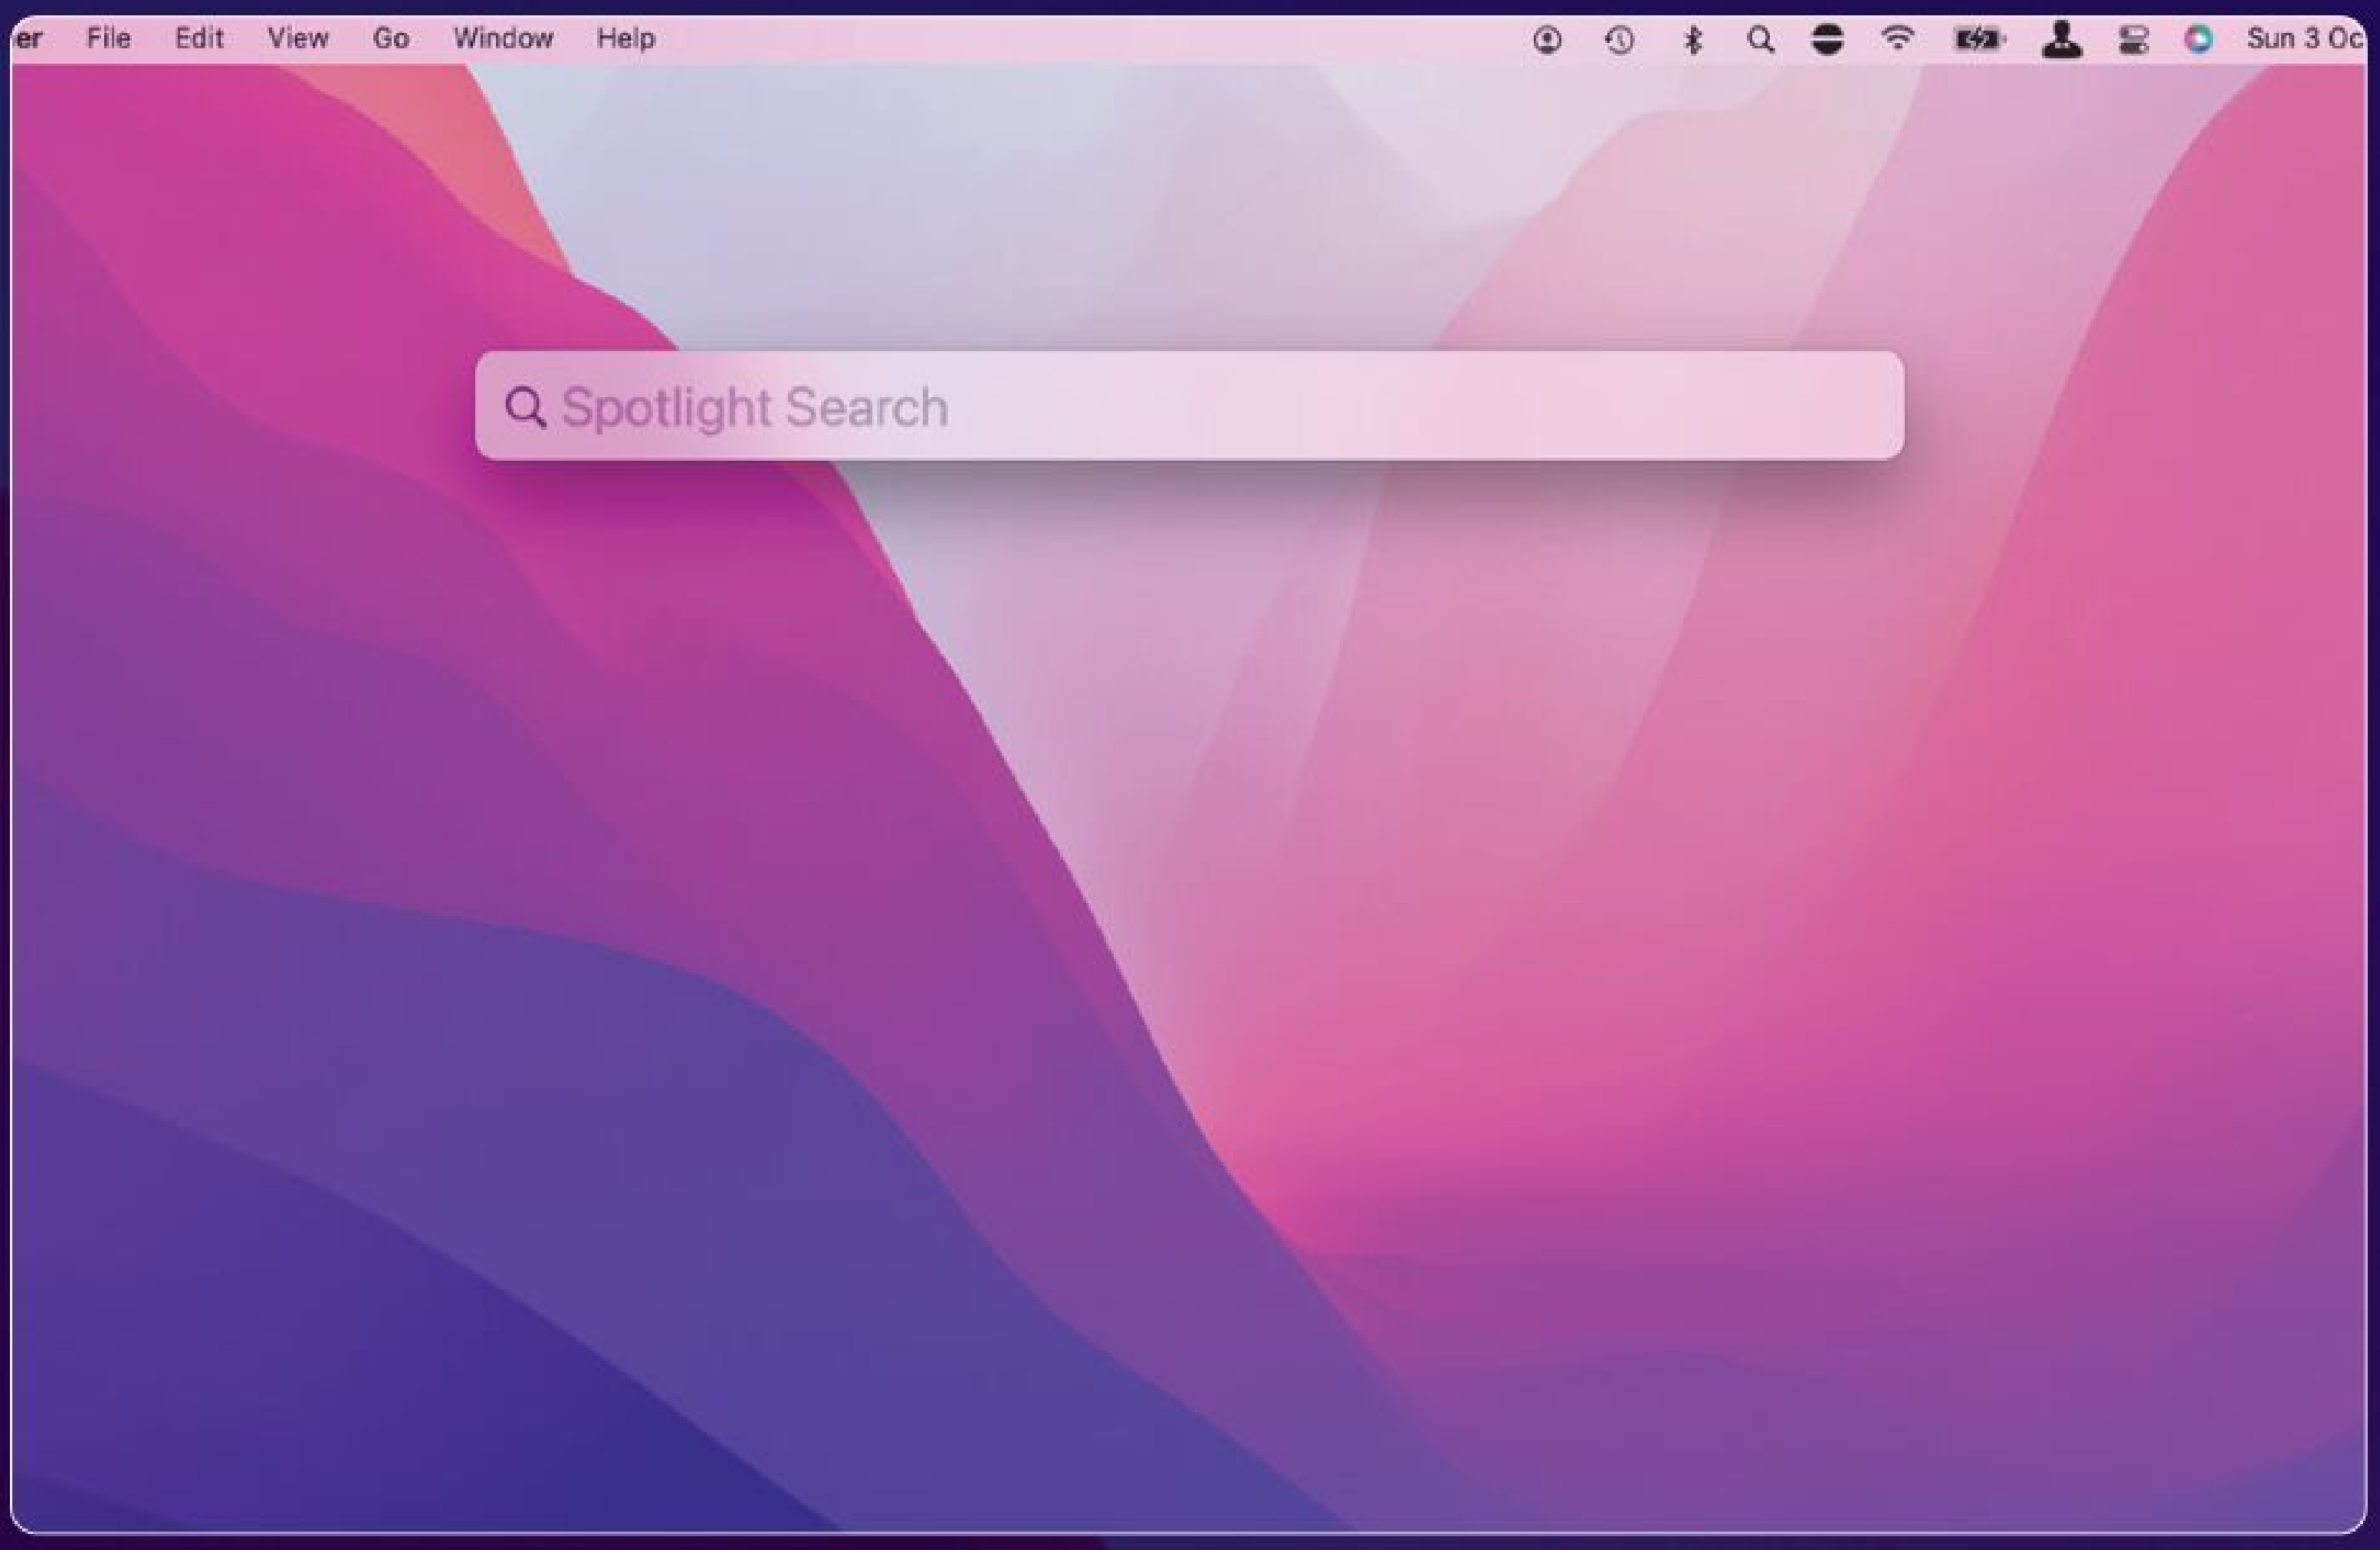
Do Not Disturb
On



Spotlight Search

Quick Do Not Disturb

If you hold down the Alt key, then click on the date and time in the menu bar (top-right corner), you can instantly activate the Do Not Disturb mode. You can tell by the crescent moon icon appearing in the top menu bar. Repeat to turn off again.

Quick Spotlight

You can access the Spotlight feature quickly and easily by pressing cmd and the Space Bar. The Spotlight window appears, which you can drag around the desktop if you wish. To dismiss it again, click anywhere on the desktop.

☐ When a new tab or window opens, make it active
☑ Use ⌘-1 to ⌘-9 to switch tabs

Go to Folder

Select Go to Folder in the Finder's Go menu, or press Shift-cmd-G, and a window pops up. Type the name of the folder you want and you're offered options. Select one to open that folder without going through Finder windows.

Turn off Coloured Safari Toolbar

If you dislike the coloured tabs and toolbar in Safari, open Safari's preferences and click on Tabs. Uncheck the box marked 'Show Colour in Tab Bar', and the top of a Safari window no longer takes its colour from the website being displayed.

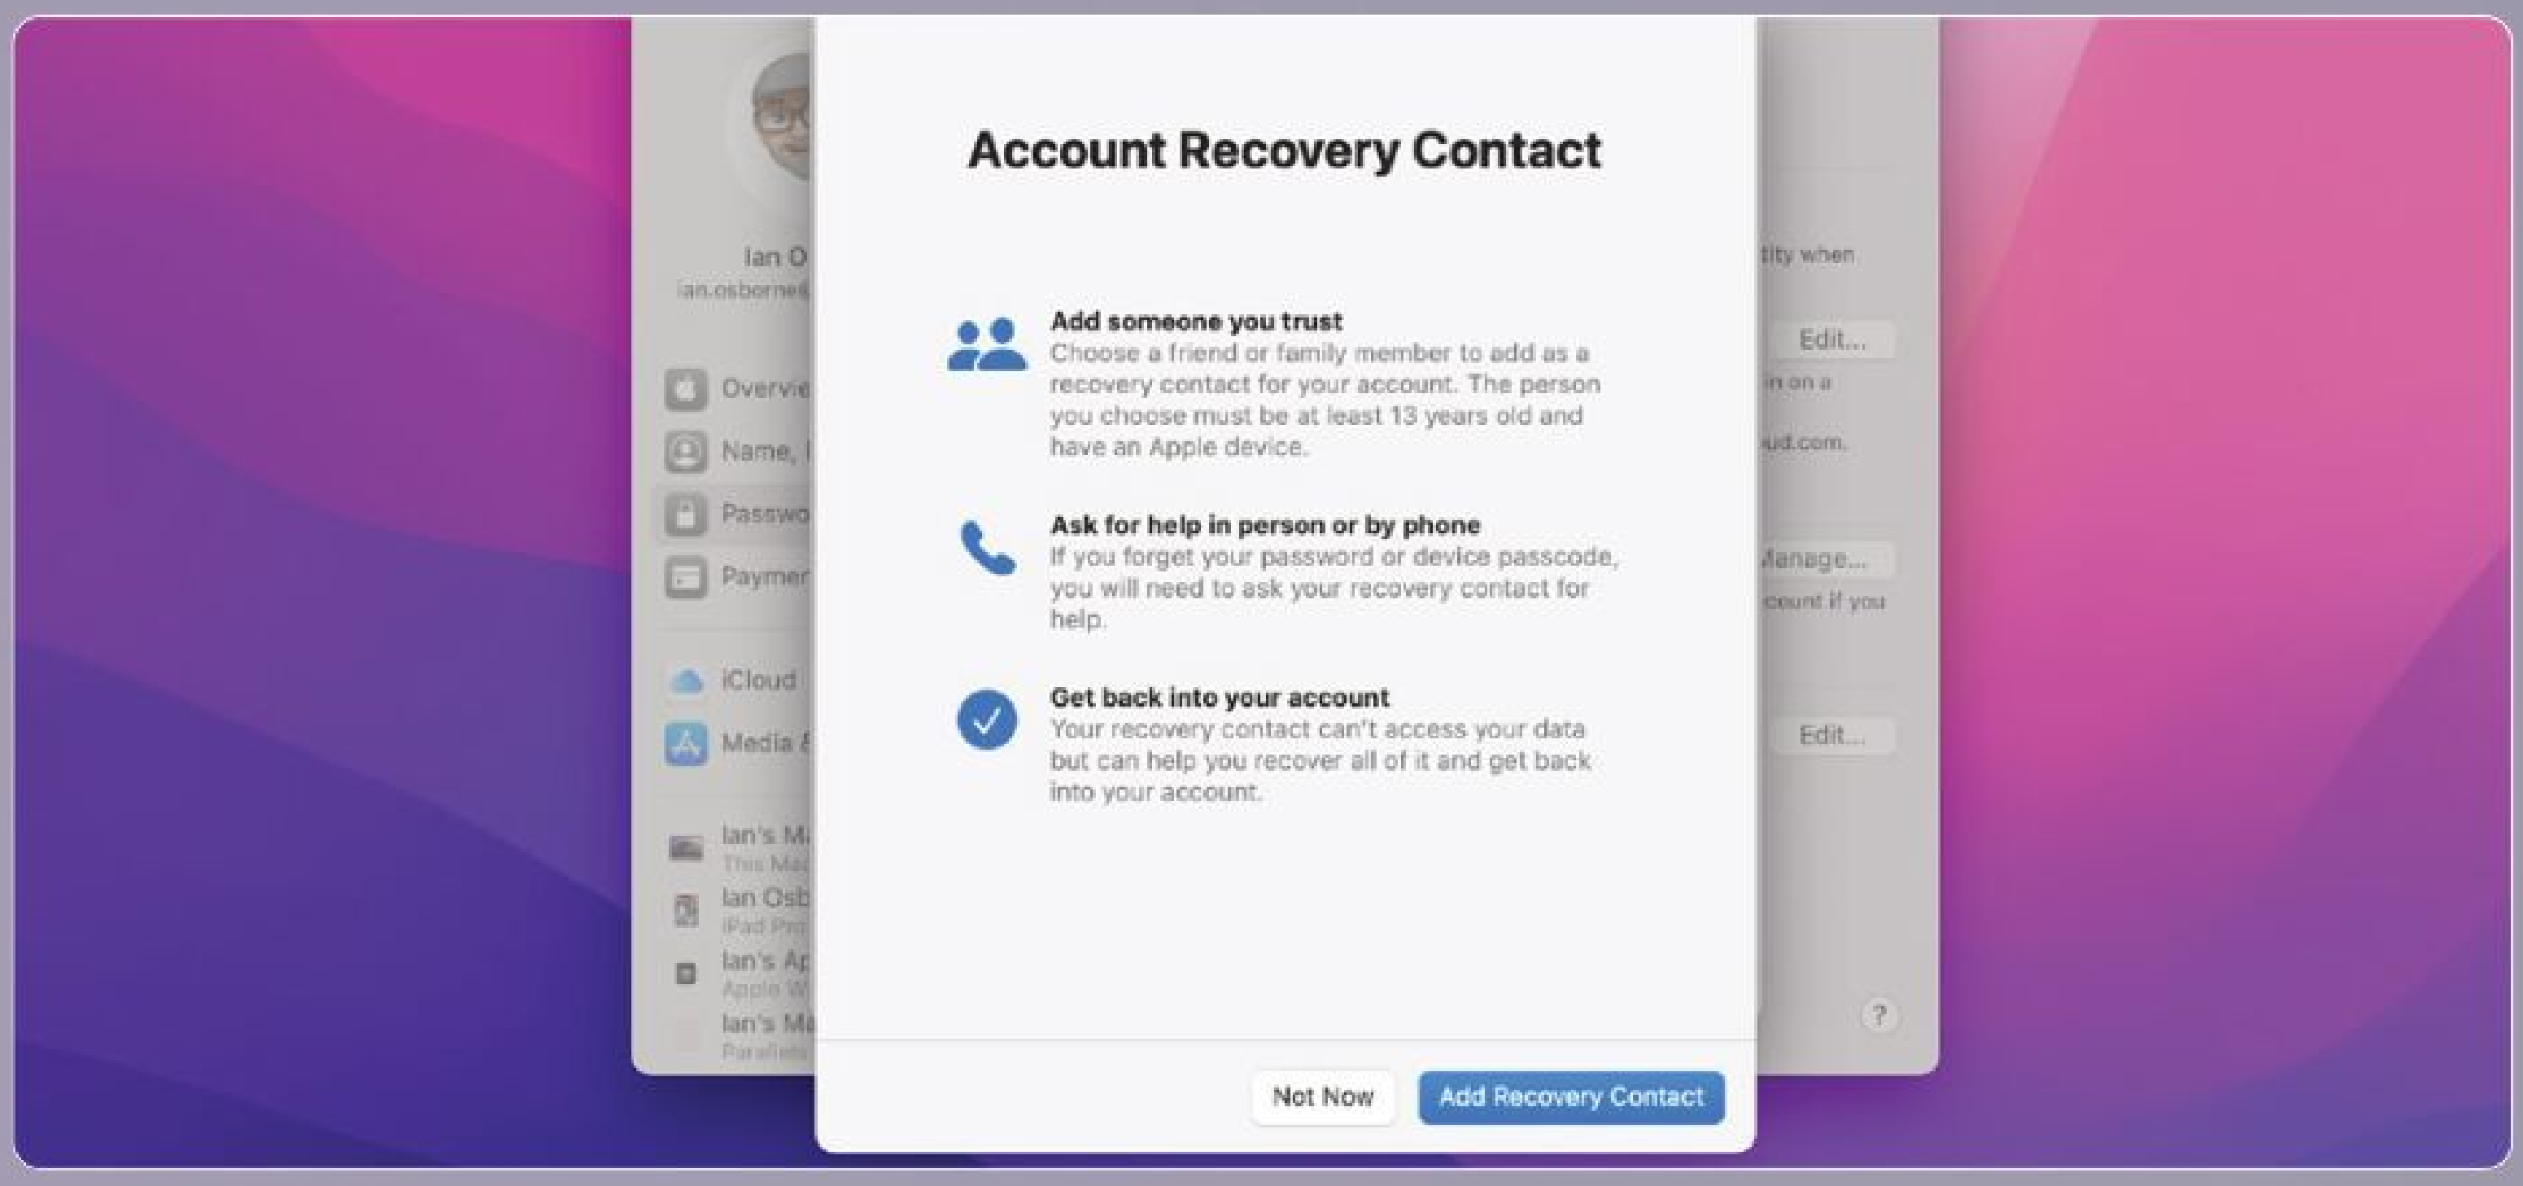
☑ Optimise Mac Storage
The full contents of iCloud Drive will be stored on this Mac if you have enough space. Older documents will be stored only in iCloud when space is needed.

iCloud Storage: 50 GB (23.07 GB Available)

What happens to your iCloud data if you forget your password or device passcode? You can recover it if you set up a recovery contact. Open System Preferences > Apple ID and click Password & Security in the sidebar.



Account Recovery Contact

Add someone you trust
Choose a friend or family member to add as a recovery contact for your account. The person you choose must be at least 13 years old and have an Apple device.

Ask for help in person or by phone
If you forget your password or device passcode, you will need to ask your recovery contact for help.

Get back into your account
Your recovery contact can't access your data but can help you recover all of it and get back into your account.

Not Now
Add Recovery Contact

Under Account Recovery, click the Manage button. Read about the service in the window that pops up, and then click the + icon below the Recovery Assistance panel. Choose someone with an Apple device, and they can help you get your account back, but can't see your data themselves.

Maintenance and Troubleshooting

Macs are well known for their stability and reliability, but even so, things can and do occasionally go wrong. Don't panic though, we've put together a guide to solving some of the most common issues you might have on your desktop or notebook Mac. So if you're having trouble, take a look at these tips and guides. They might solve your problem and save you a trip to the Apple Store.

Modern computers like the Mac are amongst the most complicated machines ever designed. It's an amazing testament to the quality of both the Mac hardware and software that they're usually so stable and reliable. However, no machine can ever be 100 percent perfect. If your Mac stops working, the screen freezes up, there's a battery problem or other such issues, you don't always need to call the Genius Bar to get it fixed. There are a number of things you can try for yourself that might help and could save you the cost of a service call.

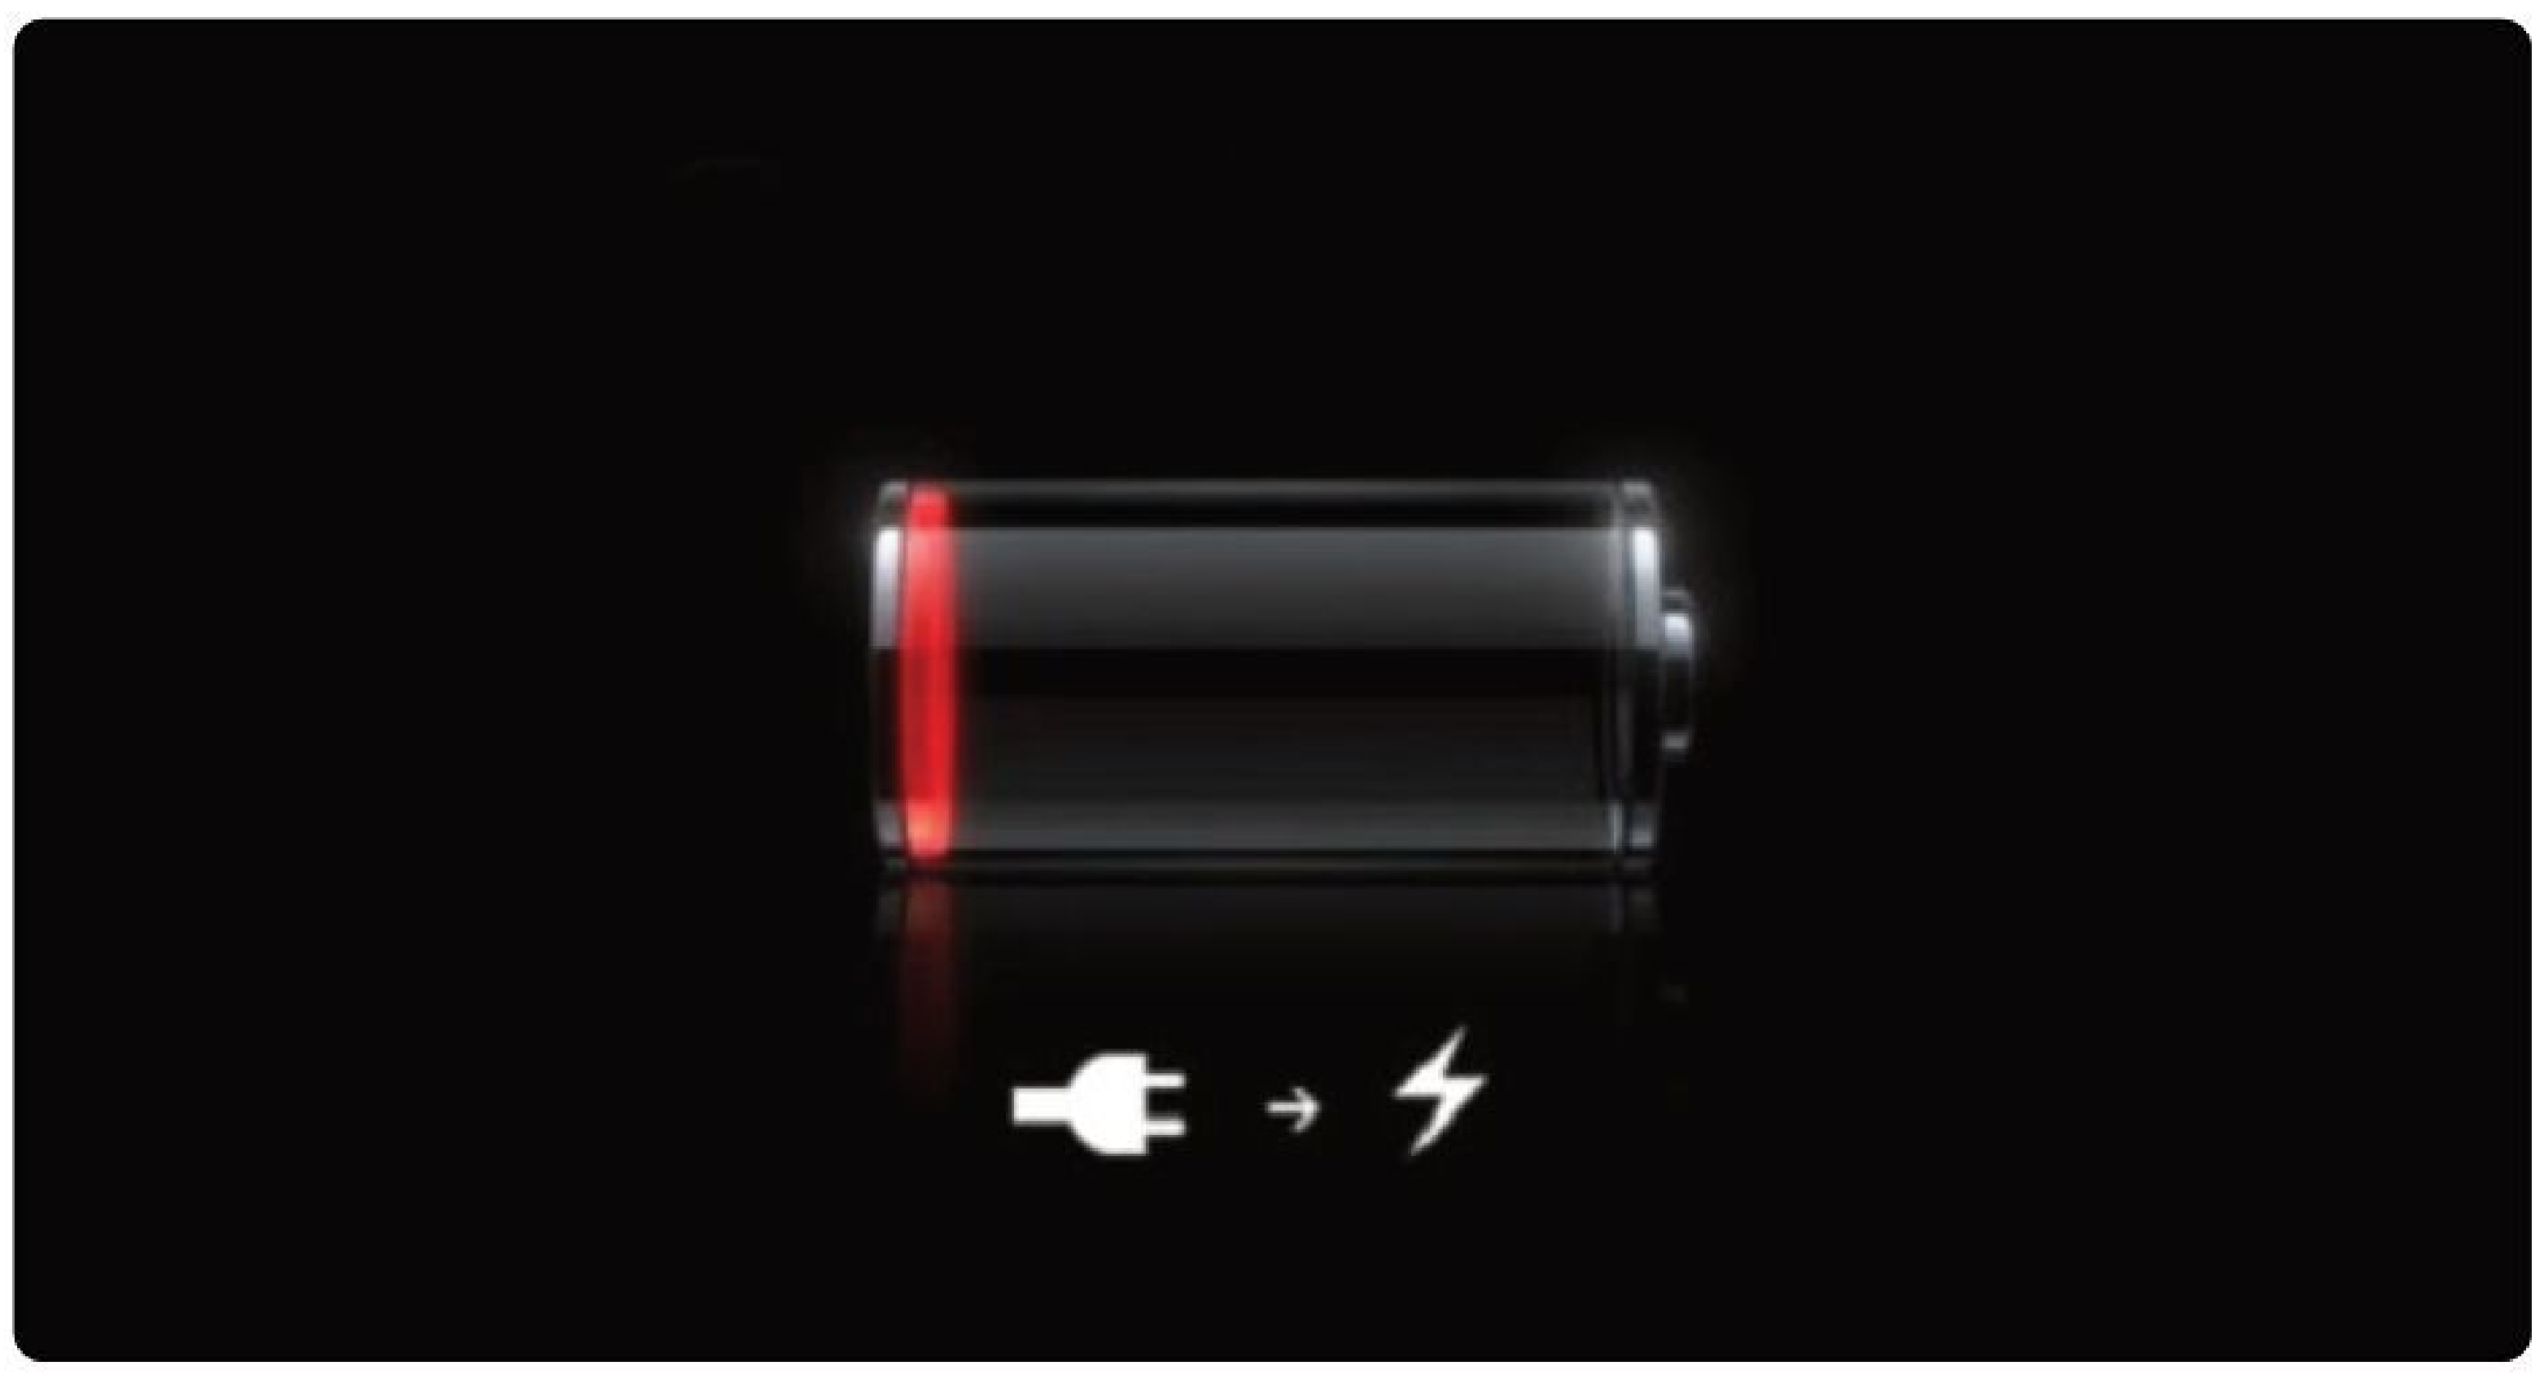
2 If the problem occurs only when you use a particular application, try updating it. Open the App Store and check for updates or use the option in the app's menu on the top bar, found next to the Apple menu. If you still have problems with that app, try reinstalling it. Drag it into the trash, empty the trash then reinstall the app.

If Your Mac Won’t Start

If your Mac fails to start or it won’t finish booting up, try these simple fixes to get you back up and running once more.

1 Make sure the power cable or adapter is plugged into your Mac and a mains power outlet and make sure your mains electricity is working. This sounds silly but you’d be surprised how many people call computer service centres during a power cut.



2 For notebooks, check whether the battery needs to be charged. Plug it into the mains. If the light on the power adapter glows amber, it’s charging. Let it charge up for about 30 minutes and then try starting it up again. You should only use the charger that came with your Mac.

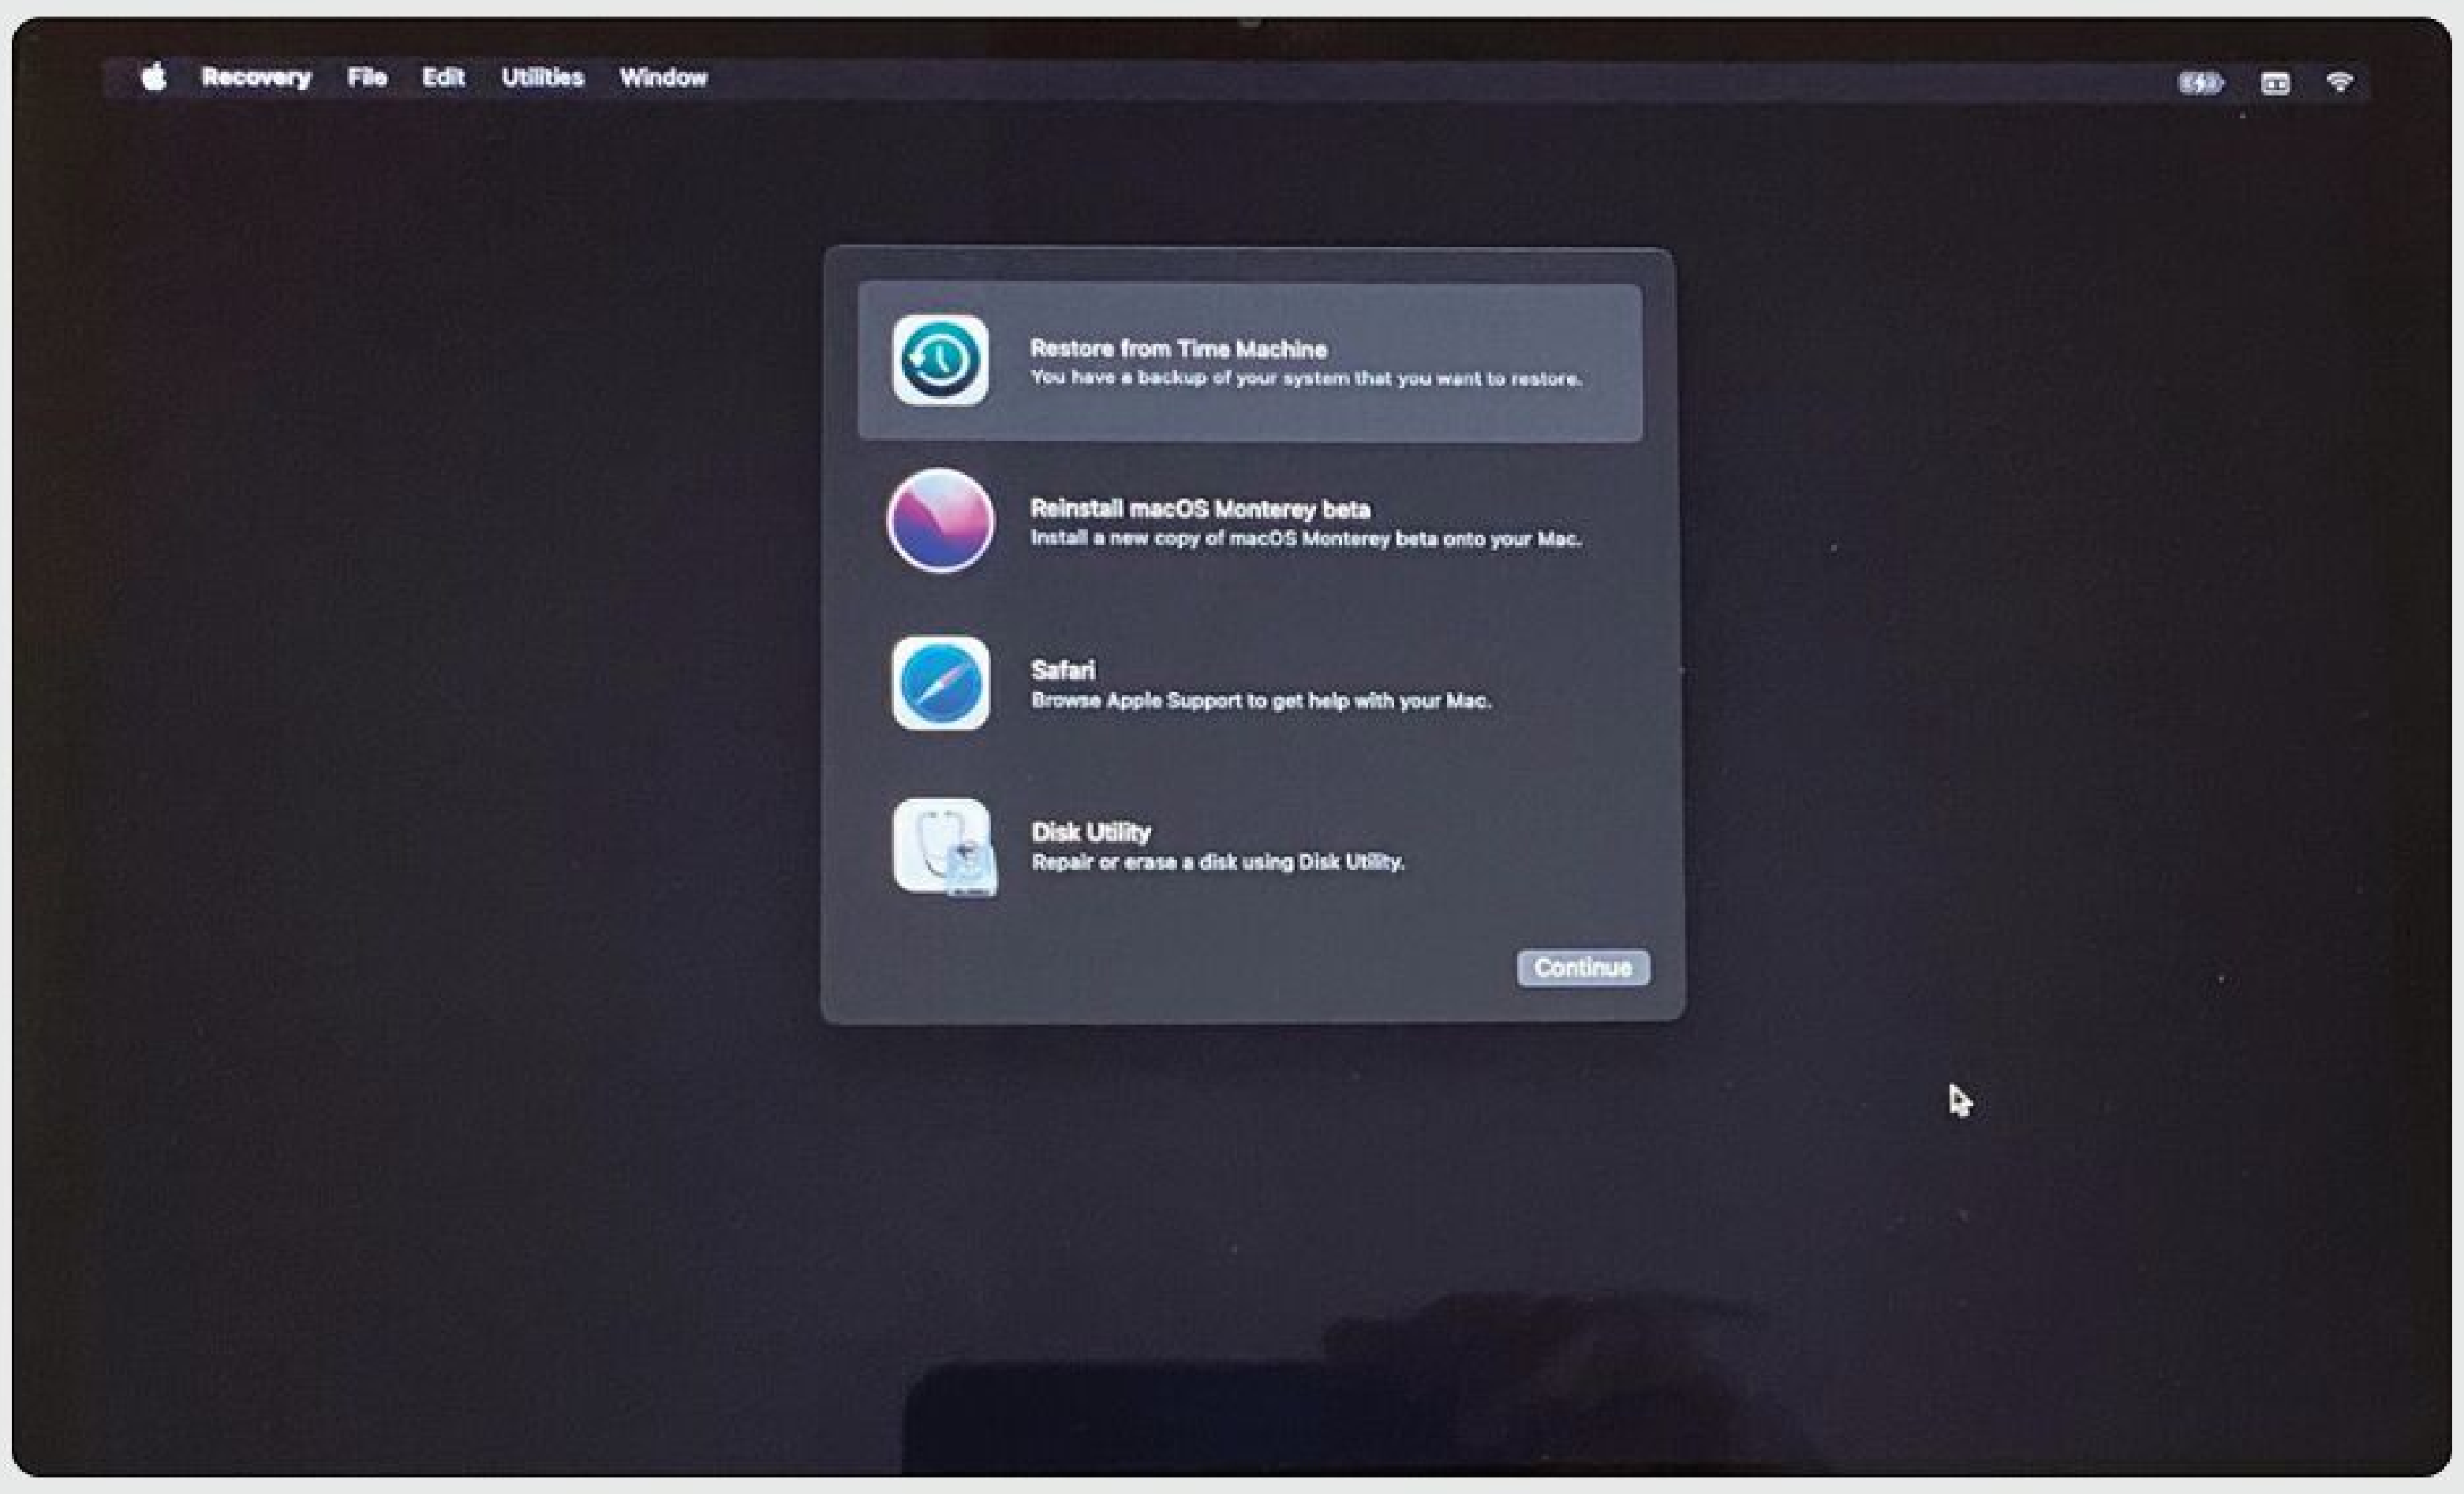
3 Again for notebooks, if the charger fails to start charging or simply stops charging, and you don’t see the indicator light on the power adapter turn on when you plug in the power cord, try unplugging and replugging the power cord to reseat the USB-C or MagSafe plug.

4 If the problem persists and you can find no way of fixing it, book a Genius Bar appointment at your local Apple Store. Here Apple’s team of experts can talk you through the problem and if they can’t solve it, they can advise as to whether a repair is needed.

Using the Recovery Drive.

If your Mac won’t boot up, help is at hand. Recent versions of OS X and macOS have their own Recovery Drive.

If your Mac begins to start up but won’t finish, stopping perhaps on the grey screen or giving you a folder with a question mark on it, try rebooting from the Recovery Drive. Press the power button to turn off the Mac, then turn it on again whilst holding cmd-R.



You have a backup of your system that you want to restore.

Install a new copy of macOS Monterey beta onto your Mac.

Browse Apple Support to get help with your Mac.

Repair or erase a disk using Disk Utility.

Let go when you see the Apple logo. Your Mac boots using its Recovery Partition; enter your admin password. You can use Disk Utility or research a problem in Safari. Use the Apple menu to restart your Mac, and it should boot normally.

Problems with Wi-Fi

Wi-Fi is usually reliable, but sometimes problems occur. If you're having issues, here's how to troubleshoot it.

1 First make sure the router you're trying to connect to is switched on and has a wireless access point. Usually there are indicator lights on the front that tell you this, so check in the manual. If there seems to be a problem, restart your router by switching it off and on again.

2 Check the Wi-Fi status icon in the menu bar. It can have up to four bars indicating signal strength. If signal strength is low, try moving closer to the router. Remember, the signal can be blocked by thick walls or other obstructions, so moving around in the room might help.

The volume /dev/rdisk1s7 appears to be OK.
```

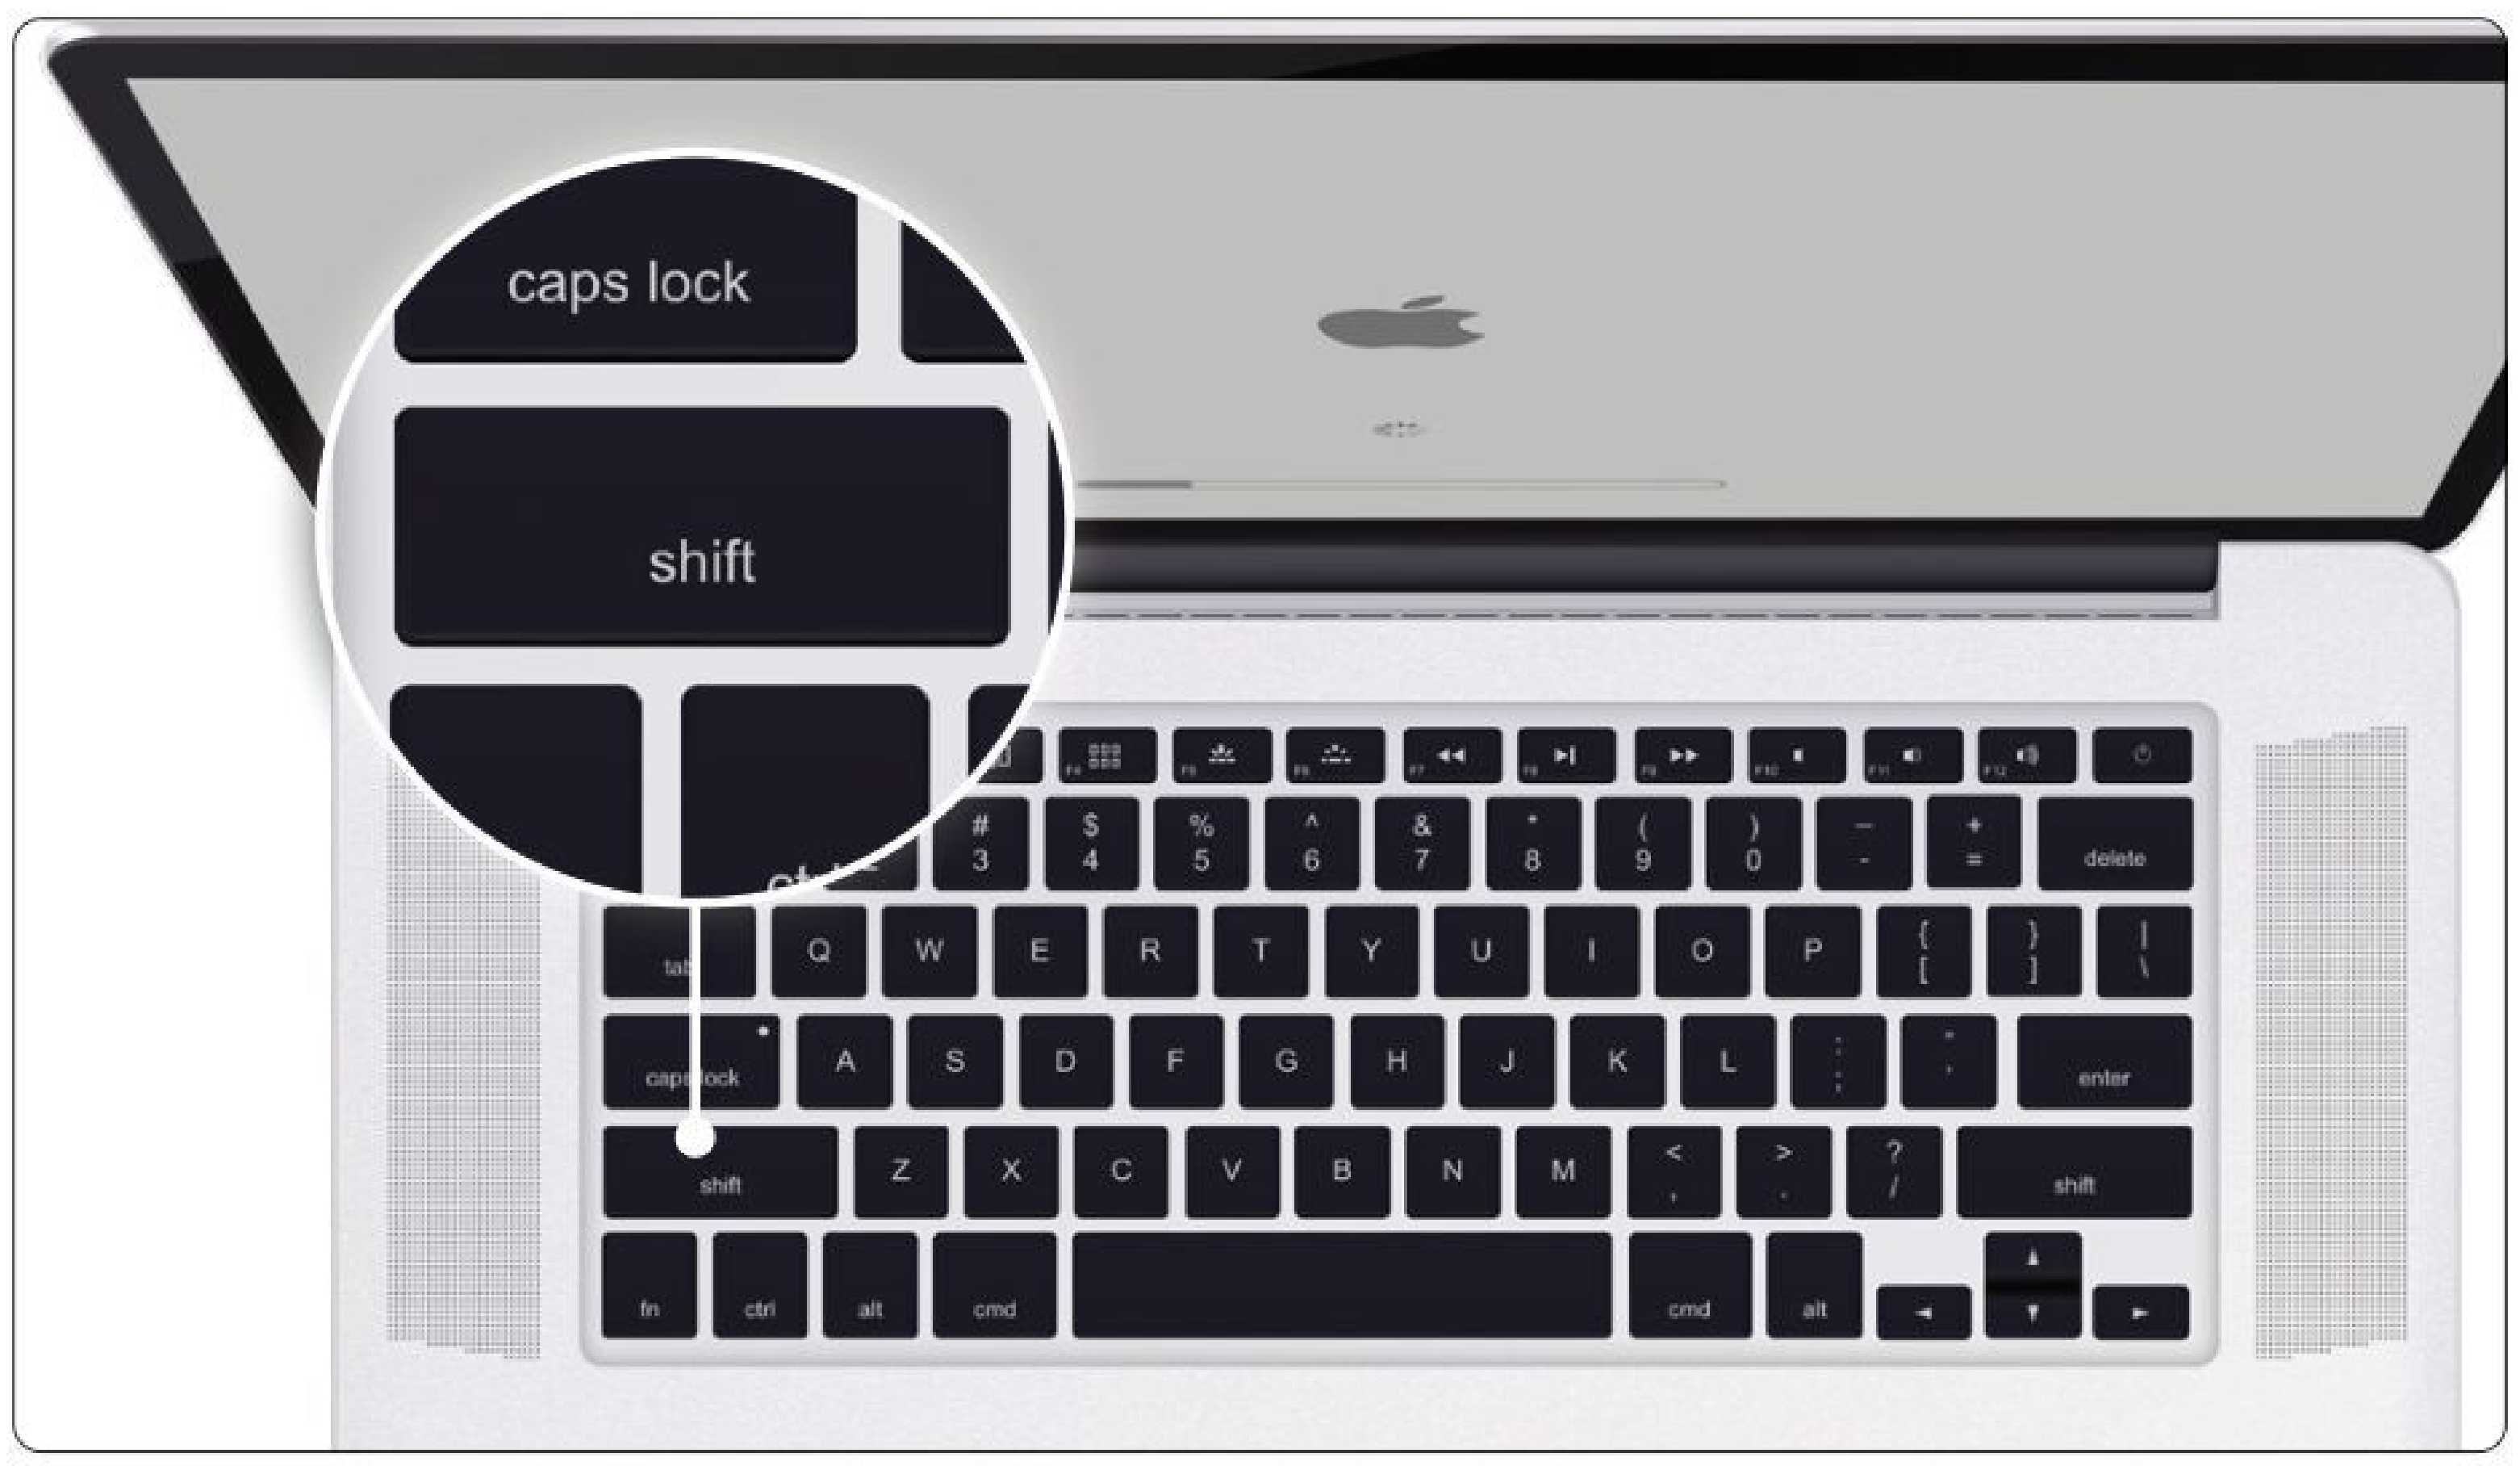
3 When you're done, click the triangle next to Show Details to see what was repaired. Please note that you can also run First Aid from the Recovery HD. This might be necessary if you're having difficulties booting your Mac.



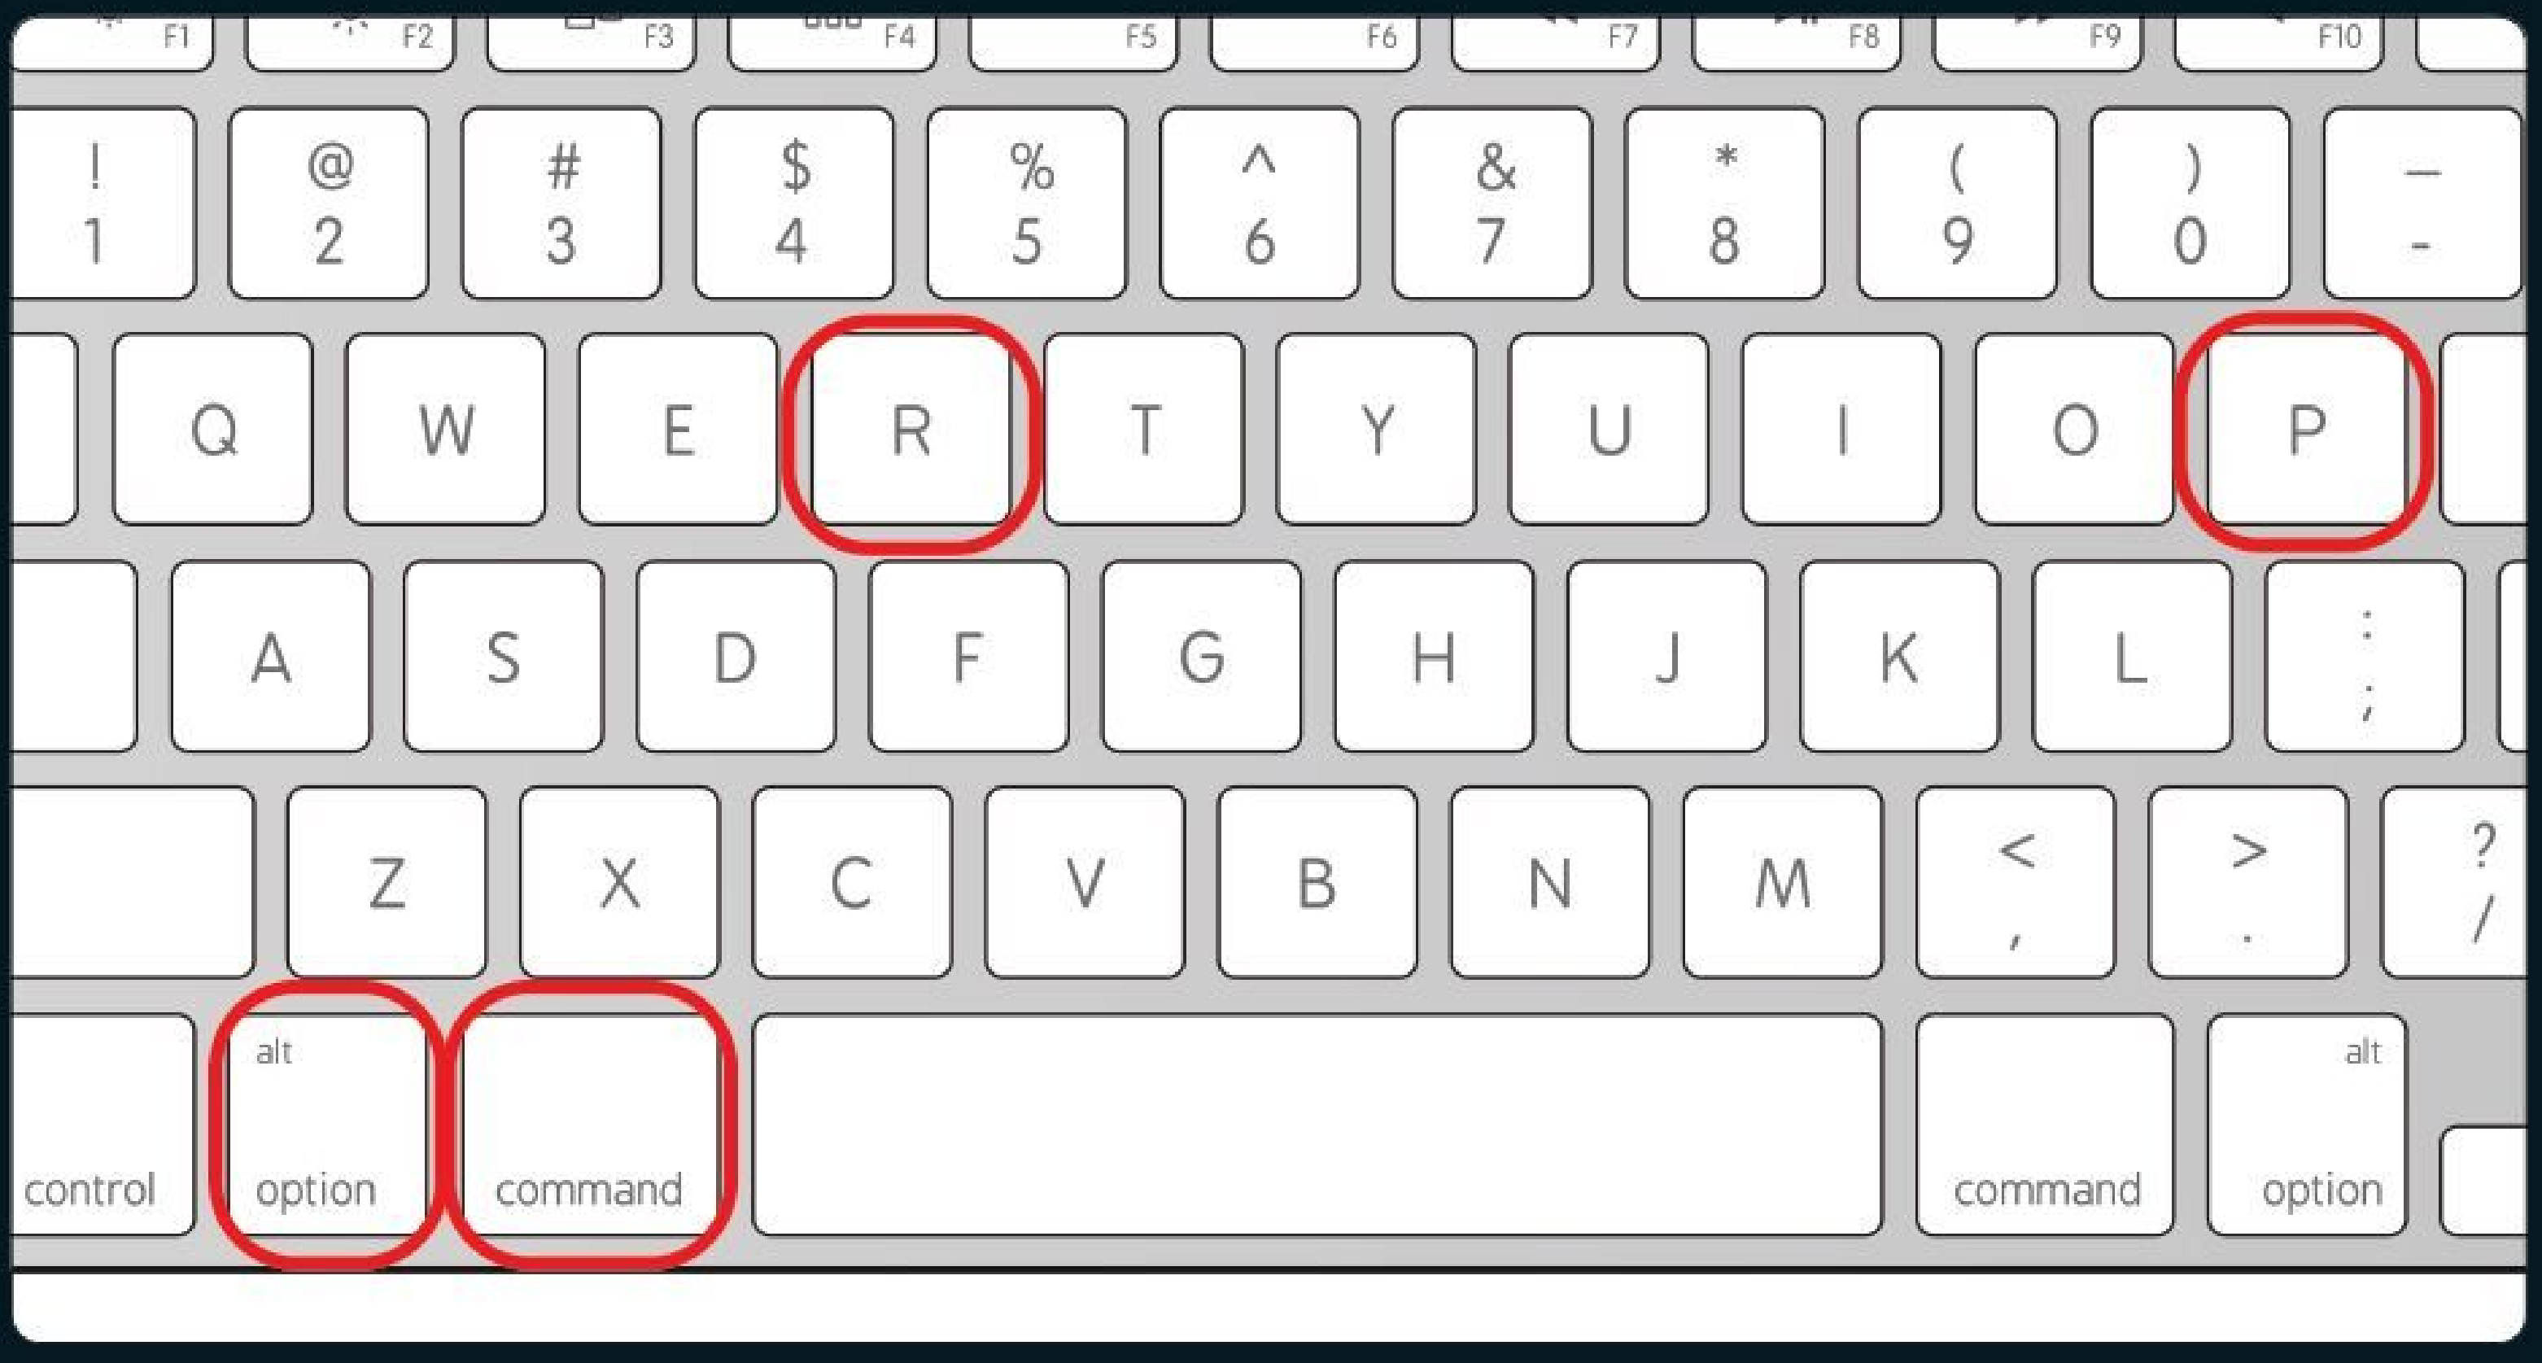
Boot into Safe Mode: Booting into Safe Mode, sometimes called a 'safe boot', runs an automatic startup check and can repair problems. Restart your Mac whilst holding the Shift key. Enter your password and the Mac checks your disks (it might take a while). When it's done, reboot your Mac.

Ejecting an Optical Disk: If you have an older Mac that still has a CD/DVD drive and a disc gets stuck, shut down your Mac. Boot it up again with the mouse button or trackpad button held down. This forces the optical drive to eject a stuck disc during the startup sequence.

Reset NVRAM.

Resetting the NVRAM, also called PRAM, can solve a range of problems if your Mac is misbehaving. Just follow these steps.

NVRAM stores information such as speaker volume, screen resolution, startup disk solution and more. If you're having problems with any of these things, try resetting your NVRAM. First of all, you must shut down your Mac in the usual way.



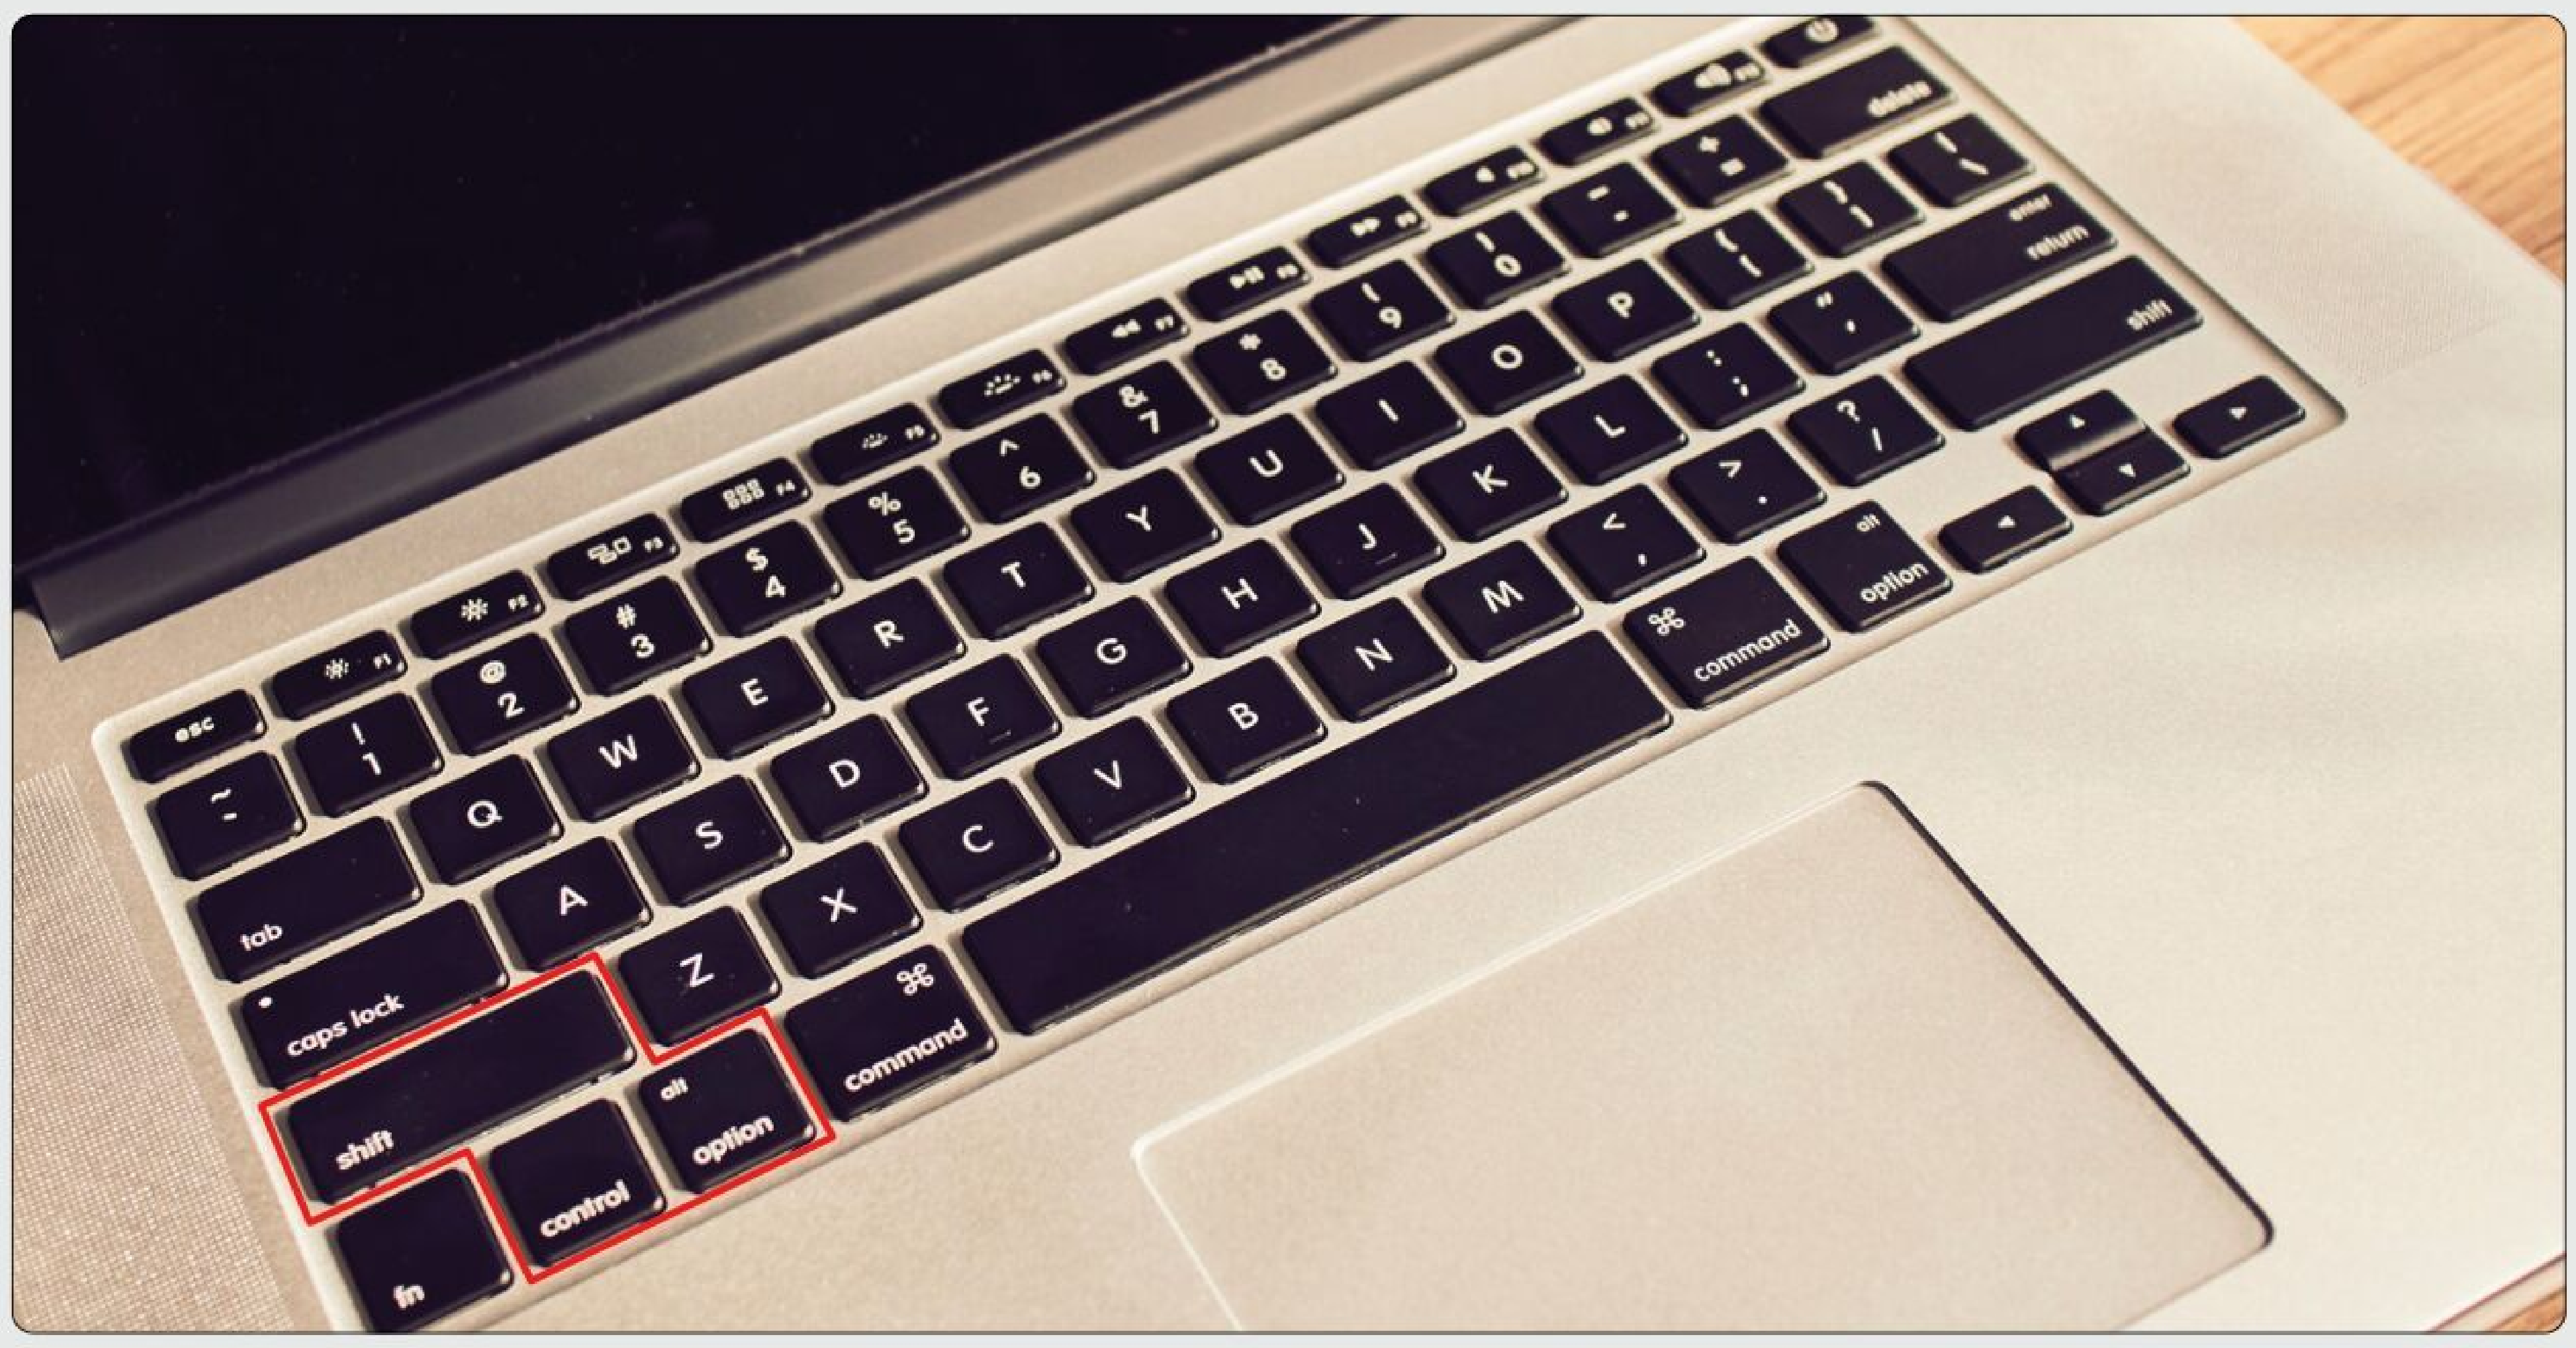
Turn on your Mac and as soon as you hear the startup chime, press and hold the cmd+OPT+P+R keys. The computer restarts once more and you hear a second startup chime. At this point, release the keys and let your computer restart as normal.

Reset the SMC.

Your Mac's SMC (System Management Controller) deals with hardware issues. Here's how to reset it.

If your Mac is displaying minor hardware issues such as fans running at high speed or expansion ports not working, try resetting the SMC. For a desktop computer, turn it off and unplug it from the mains. Wait 15 seconds, then plug it in and power it up again.

For a notebook Mac, unplug its charger and power it off. Plug the charger back in again, then press and hold Shift+Control+Option on the left side of the notebook's keyboard and also the power button. Release all the buttons and then press power again to start up your MacBook.



Glossary of Mac and Computing Terms

We've tried to keep this guide as jargon free as possible, but inevitably there are some words and phrases that might still seem mysterious to the newcomer. Where that's the case, this glossary should help. If you're confused by a technical term, take a look; you might just find the definition you need in here.

A

Accessibility: A series of tools and features designed to make an Apple device such as the Mac and mobile devices easier to use by those with disabilities such as vision or hearing impairments. You can find the Mac's Accessibility features and customise them in System Preferences.

AirPlay: A protocol for streaming sounds and video from an Apple device to a set of compatible speakers, or a device such as an Apple TV. It's wireless, and easy to use as well.

AirTag: A small Bluetooth device that can be tracked using the Find My app. It's used to locate property like keys or luggage.

App: Short for 'application', another name for a computer software program. Your Mac comes with a selection of pre-installed apps, and you can buy more from the Mac App Store.

App Store: The App Store is where you can download free and paid programs to your device using your Apple ID. You can access it through the application that comes bundled with your Mac.

Apple ID: This is the email address and password that you have registered with Apple. It's required to access many online applications on your Mac, including iTunes, App Store and Books.

Apple Menu: The menu that's opened by clicking on the Apple icon in the left of the menu bar. It gives access to system functions such as Preferences, App Store, Force Quit and more.

Apple Silicon: Apple's new series of processors, used in the latest Macs. They replace the older, Intel CPUs previously used.

B

Bluetooth: Bluetooth is a wireless technology used to link and exchange data with another compatible device. It has a range of approximately eight metres (25ft). The Mac supports many Bluetooth devices, including headphones, keyboards and fitness trackers.

Books: This is Apple's eBook application, which is available for free from the App Store and is also bundled with recent versions of macOS. It handles the standard electronic publishing formats protected by FairPlay DRM, and also PDF documents. It was introduced in 2010 along with the iPad.

Browser: An app used to access websites found on the worldwide web. The Mac comes with Apple's Safari browser preinstalled, but others are available in the App Store.

C

Calendar: This is one of Apple's preloaded apps. Use it to keep track of events, invitations, and reminders on your Mac, iPhone, iPod touch and iPad.

Closed Clamshell Mode: By connecting your notebook Mac to a display, an external keyboard and a controller such as a mouse or Magic Trackpad, you can use it like a desktop computer, with the notebook closed.

D

Desktop: A computer that's designed to be used on a desk while plugged into the mains, at home or in the office, as opposed to a notebook or laptop. Apple's range of desktop computers is the iMac, the Mac mini and the Mac Pro.

Dock: The opaque strip at the bottom of the screen. Apps in the dock are easy to access and open, and you can customise it to best suit your requirements. Apps that are currently running are also shown in the dock.

E

Emoticon: A small drawing used to augment a message or text. Typically, these are yellow faces showing a variety of expressions.

F

Facebook: Currently the most popular social networking site on the Internet. Add your Facebook account to your list of Internet Accounts in System Preferences and you can share material directly to it using the macOS Share button.

FaceTime: You can make video and audio calls to other Apple devices using the FaceTime app. These are made over the Internet so are free unless using mobile data.

Finder: The Finder is the Mac's user interface. It deals with management of folders, windows, menus and more. Its feature set has grown over the years, with recent introductions including tabbed Finder windows and tags.

Folders: A folder is a container for a group of apps or files. You can create one by using Finder's File menu, or right-clicking on the desktop and using the contextual menu. You can drag items into and out of a folder.

Force Quit: The act of forcing an application to close down, perhaps because it's crashed or frozen. It's achieved by right-clicking its dock icon, or opening the Apple menu and selecting Force Quit. Unfortunately, unsaved work will be lost.

G

Gestures: These are actions performed with your fingers on the Mac's trackpad. You can use gestures on a notebook trackpad, an Apple Magic Trackpad or to a limited extent, an Apple Magic Mouse.

Gumdrops: A colloquial term for the three coloured buttons found in the top left corner of an app or finder window. They close the window (red), minimise the window (yellow) or switch to and from full-screen mode (green)

H

HTML: Hypertext Markup Language, the standard for building websites, and a cornerstone technology of the worldwide web.

I

iCloud: The collective name for Apple's online services, it replaced MobileMe and integrates with all iOS/iPadOS and macOS/OS X Mac computers.

iMessage: A text message that's sent from one Apple device to another. iMessages use the Internet rather than the mobile phone network, so they're sent free of charge from iPhones and iPads.

iOS: Apple's mobile operating system. iOS is the software that powers the iPhone, iPod touch, iPad and Apple TV.

iPadOS: The latest operating system used by the iPad. It evolved from iOS.

iTunes: Apple's abandoned music playing software, which was also used to activate and sync iPads and iOS devices. In macOS Catalina, iTunes was replaced by three new apps; Music, TV and Podcasts.

L

LaunchPad: Found in the dock represented by a rocket icon, the LaunchPad is an easy way of opening apps. It resembles and behaves like an iOS Home screen.

Lightning: The cable connection used by modern iPads and iPhones. It replaces the old 30-pin dock connectors, and is used to charge these mobile devices and sync them with your Mac.

Location Services: Features and software on your Mac that pinpoint and use your current location. The Maps app is one example.

M

macOS: Formerly known as OS X, macOS is the operating system on which the Mac runs. The current version of macOS is Monterey. Like most recent versions of macOS, Monterey is a free upgrade.

Mail: The Mac's bundled email client. It can handle a wide range of email accounts, including Apple iCloud accounts, Microsoft's and Google's mail services, Yahoo email accounts and those accounts that are provided by your Internet Service Provider. Third party email apps are available.

Menu Bar: The macOS Menu Bar sits atop the desktop, at the top of the screen. On the left are pull-down menus, which vary according to what app you're using. On the right are menulets and controls, along with info such as the time and date.

Messages: One of Apple's built-in apps that handles SMS text messages and MMS multimedia messages.

MMS: Multimedia Messages (MMS) supports images, videos, sound, contact cards, and location data. Sent and received via the Messages app on the Mac to other Macs and mobile cell phones.

Monitor: Also called a display, this is an external screen that's essential for Mac minis and Mac Pros. You can also add a monitor to an iMac or notebook Mac as a second or even primary display.

Mouse: A controller used to move your pointer around your Mac's screen, and to select options using the mouse buttons. A mouse is traditionally used with a desktop computer such as the iMac or Mac Pro, but if you don't like trackpads, you can use one with your notebook too.

N

Notebook: A portable computer, sometimes called a laptop. Notebooks can be mains or battery powered and have their own built-in screen, which folds down for portability. Apple's notebook range includes of the MacBook, MacBook Air and MacBook Pro.

Notification Centre: A list of recent notifications, accessible by clicking on the icon in the top-right corner of the Mac's desktop.

P

Photo Stream: Part of iCloud, Photo Stream stores your last thirty days or 1000 photos online and on your iOS/iPadOS devices, and all your photos on your Mac.

Photos: A bundled Mac application that lets you store, manage and edit your photo collections and share them with your other Apple devices using iCloud.

Q

QuickTime: Apple's 2D video and graphics player, used to play movies and other video on your Mac.

R

Retina Display: This is Apple's term for its high-resolution screens. The pixels are so small it's impossible to distinguish between them at a normal viewing distance, making the on-screen images very smooth and clear.

Right Click: On a two-button mouse, a right-click is a click with the right-hand mouse button instead of the left. On a Mac, with a trackpad or Magic Mouse, a right-click is achieved by holding the Control button and clicking, or setting up the device so a two-fingered click or a click on the right-hand side of the Magic Mouse or Trackpad delivers a right-click.

S

Safari: Apple's web browser, similar in function to Microsoft Explorer or Google Chrome. It's available for both Macs and iOS/iPadOS devices, and it lets you surf the worldwide web.

SharePlay: A feature that lets you share movies and music while in a FaceTime chat. All parties in the chat enjoy the same media, which is played in sync so no one's a few seconds ahead or behind.

Siri: Apple's voice activated digital assistant. You can give Siri spoken instructions and the service replies by giving you the information you asked for; or by activating the requested Mac function.

SMS (Short Message Service): Text messages sent from the Messages app from a Mac's Messages app or mobile device such as the iPad or iPhone to other cell mobile phones.

T

Tablet: A computer in a flat, 'tablet' form factor, such as the iPad. While the iPad is the most popular tablet computer, other models are available.

Text Field: Any area of the screen where you can add text. For example, when completing a web form, there are text fields for things like your name, address and more. Tap on a text field to bring up the cursor, so you can start typing.

Thunderbolt: A high-speed connectivity port offered on recent Macs. A Thunderbolt port can carry a video signal as well as data, so it can be used for an external display.

Touch Bar: The very latest models of the MacBook Pro replaces the function keys with a touch-sensitive screen which displays functions and controls according to the app or feature you're currently using. It also has a Touch ID fingerprint scanner for unlocking your Mac.

Trackpad: The controller device used in notebook Macs. You control your on-screen pointer by dragging your finger across the trackpad. Apple's Magic Trackpad is available for desktop computers.

Twitter: One of the most popular social networks built around a follower/following system rather than friends, with messages limited to 280 characters. There's an official Twitter app for the Mac, and several third party options for sending Tweets too.

U

URL: Uniform Resource Locator, the address used to access a web page. For example, Apple's URL (its website) is www.apple.com.

USB: (Universal Serial Bus) an industry standard for connecting computers and peripherals introduced in the mid-Nineties. The latest version, USB-C, has a similar plug to Thunderbolt 3, and is compatible with Thunderbolt 3 ports.

V

VPN: (Virtual Private Network): This provides secure access over the Internet to private networks, such as the network at your company or school.

W

Wi-Fi: A wireless means of getting onto the Internet or connecting two devices. At home, your Wi-Fi network is established through your router. Whilst away from home, you might have access to public Wi-Fi networks like those offered in coffee shops or libraries.

Y

YouTube: The Internet's most popular video viewing and sharing service. Owned by Google, you can access YouTube through a web browser, or through a dedicated app available for the Mac, iPhone, iPad or iPod Touch.
